VOLUME II

MINGACHEVIR – 2026

CHAIRS OF THE ORGANIZING COMMITTEE:

- | | |
|--------------------------|---|
| Assoc. Prof. Anar Eminov | - Chair, Rector of Mingachevir State University |
| Prof. Dr. Bayram Yilmaz | - Chair, Rector of Dokuz Eylul University. |

ORGANIZING COMMITTEE:

- | | |
|---------------------|--|
| Natavan Namazova | - Deputy Chair, Vice-Rector for Science and Innovation Affairs of Mingachevir State University, PhD in Economics, Associate Professor; |
| Ramil Hasanov | - Head of the Department of Scientific Research and Innovation of Mingachevir State University; |
| Ceyhun Mahmudov | - Advisor on Teaching Organization and Management Affairs of Mingachevir State University, PhD in Economics, Associate Professor; |
| Gunel Karimli | - Chief Specialist of the Department of Scientific Research and Innovations of Mingachevir State University; |
| Elvin Mammadzade | - Advisor on Social Affairs of Mingachevir State University; |
| Murat Ata | - Dokuz Eylül University, School of Foreign Languages, Lecturer at the Foreign Languages Department; |
| Xayala Abdullayeva | - Senior Lecturer at the Department of Foreign Languages, Mingachevir State University; |
| Gulshan Nasirova | - Lecturer at the Department of Foreign Languages, Mingachevir State University; |
| Azad Mirzabayov | - Department of Quality Assurance and Sustainable Development |
| Elnur Khalilov | - Head of the Information Technology Center of Mingachevir State University; |
| Gurban Gurbanzade | - Deputy Head of the Business World and Alumni Relations Department of Mingachevir State University; |
| Gunesh Shafagatov | - Chair of the Student Scientific Society (SSS) of Mingachevir State University; |
| Samira Ahmadova | - Mingachevir State University, Head of International Relations and Cooperation; |
| Parviz Mammadrzayev | - Mingachevir State University, Coordinator for International Relations and Cooperation. |

EDITORIAL BOARD:

Doctor of Philological Sciences, Prof. Azad Mammadov	- Head of the Department of General Linguistics, Azerbaijan University of Languages
Doctor of Philological Sciences, Prof. Nigar Veliyeva	- Professor at the Azerbaijan University of Languages
Assoc. Prof. Lala Gurbanova	- Head of the Department of Indo-European Languages, Institute of Linguistics
Prof. Dr. Fatma Feryal Çubukçu	- Head of the Foreign Language Education Department, Dokuz Eylül University
Prof. Dr. Leyla Harputlu	- School of Foreign Languages, Lecturer at the Foreign Languages Department, Dokuz Eylül University
Prof. Dr. Yeşim Bektaş Çetinkaya	- School of Foreign Languages, Lecturer at the Foreign Languages Department, Dokuz Eylül University
Prof. Dr. Hatice İrem Çomoğlu	- School of Foreign Languages, Lecturer at the Foreign Languages Department, Dokuz Eylül University
Asst. Prof. Dr. Gülşah Külekçi	- School of Foreign Languages, Lecturer at the Foreign Languages Department, Dokuz Eylül University
PhD in Philology Mayıl İsmayilov	- Associate Professor at the Department of Foreign Languages, Mingachevir State University
Assoc. Prof. Zenfira Azizova	- Associate Professor at the Department of Foreign Languages, Mingachevir State University
Sitorakhon Ganijonova	- ESL Teacher, Uzbekistan State World Languages University
Kyriakos Stefanos ILIOU	- Lecturer, University of Wolverhampton, United Kingdom
Assoc. Prof. Vafa Maharramova	- Head of the School of Lifelong Learning; Mingachevir State University
Ph.D. in Philology Elshad Allahverdiyev	- Senior Lecturer at the Department of Foreign Languages, Mingachevir State University
Prof. Alaa Garad	- President, Stirling Centre for Strategic Learning and Innovation
William J. Crawford	- Professor in applied linguistics, TESL in the department of English at Northern Arizona University
Pierre Chabal	- Full Professor of Political Science, Université Le Havre Normandie
Tulen A. Berkhatkyzy	- Lecturer, Kyzylorda University named after Korkyt Ata
Aiswaria G. Shajan	- Senior Lecturer, Resource Person (Academic), National Testing Service-India, CIIL
Peyman G.P. Sabet	- Lecturer, Curtin University.

OPENING – PLENARY SESSION

ANAR EMINOV

Rector of Mingachevir State University

MAHIRE HUSEYNOVA

Vice-Rector for International Relations at Azerbaijan State Pedagogical
University

APPLIED LINGUISTICS AND DISCOURSE STUDIES

THE LINGUISTIC ANALYSIS OF THE CATEGORY OF POSSESSION IN THE SOCIO-ECONOMIC DISCOURSE OF AZERBAIJAN

Chinara Zahid SHAHBAZLI

PhD in Philology, Assoc. Prof., Department of Languages, Baku Business University

E-mail: chinara.shahbazli@mail.ru

ORCID ID: [0009-0005-0137-608X](https://orcid.org/0009-0005-0137-608X)

Abstract: This article presents a linguistic analysis of the category of possession in the socio-economic discourse of Azerbaijan. The study reveals that the category of possession functions not only as a structural unit expressing grammatical relations but also as a means carrying significant functional-semantic load in the discursive construction of socio-economic realities. In socio-economic texts, possessive forms systematically express concepts such as collective identity, national belonging, institutional affiliation, and social responsibility.

The research demonstrates that the category of possession is realized at morphological, syntactic, and lexical-semantic levels, thereby shaping the pragmatic orientation of discourse. In particular, the intensive use of linguistic units expressing collectivity ("we," "national," "public") contributes to the formation of inclusivity strategies and the discursive construction of social solidarity. At the same time, possessive constructions carry certain ideological nuances, reflecting power relations and institutional hierarchies through language.

Thus, the findings indicate that the category of possession functions as a multi-level and multifunctional linguistic phenomenon in the socio-economic discourse of Azerbaijan, playing a significant role not only grammatically but also pragmatically and ideologically.

Keywords: Category of possession, socio-economic discourse, national identity, collective responsibility, Azerbaijani linguistics, discourse analysis, economic communication.

AZƏRBAYCANIN SOSIAL-İQTİSADI DİSKURSUNDA MƏNSUBİYYƏT KATEQORİYASININ LİŊVİSTİK TƏHLİLİ

Çinarə Zahid ŞAHBAZLI

Filologiya üzrə fəlsəfə doktoru, dos., Dillər kafedrası, Bakı Biznes Universiteti

E-mail: chinara.shahbazli@mail.ru

Xülasə: Bu məqalədə Azərbaycanın sosial-iqtisadi diskursunda mənsubiyyət kateqoriyasının linqvistik təhlili aparılmışdır. Tədqiqat nəticəsində müəyyən edilmişdir ki, mənsubiyyət kateqoriyası yalnız qrammatik münasibətləri ifadə edən struktur vahid kimi deyil, həm də sosial-iqtisadi reallıqların diskursiv konstruksiyasında mühüm funksional-semantik yük daşıyan vasitə kimi çıxış edir. Sosial-iqtisadi mətnlərdə mənsubiyyət formaları vasitəsilə kollektiv identiklik, milli mənsubiyyət, institusional aidyyət və sosial məsuliyyət kimi anlayışlar sistemli şəkildə ifadə olunur.

Araşdırma göstərir ki, mənsubiyyət kateqoriyası morfoloji, sintaktik və leksik-semantik səviyyələrdə reallaşaraq diskursun pragmatik istiqamətlənməsini müəyyənləşdirir. Xüsusilə kollektivlik bildirən dil

vahidlərinin ("biz", "milli", "ictimai") intensiv istifadəsi inklüzivlik strategiyalarının formalaşmasına və sosial həmrəyliyin diskursiv şəkildə qurulmasına xidmət edir. Bununla yanaşı, mənsubiyyət konstruksiyaları müəyyən ideoloji çalarlar daşıyaraq güc münasibətlərinin və institusional iyerarxiyanın dil vasitəsilə təcəssümünü təmin edir.

Beləliklə, əldə olunan nəticələr göstərir ki, mənsubiyyət kateqoriyası Azərbaycanın sosial-iqtisadi diskursunda çoxsəviyyəli və çoxfunksiyalı dil hadisəsi kimi çıxış edərək həm qrammatik, həm də pragmatik və ideoloji aspektlərdə mühüm əhəmiyyət kəsb edir.

Açar sözlər: Mənsubiyyət kateqoriyası, sosial-iqtisadi diskurs, milli identiklik, kollektiv məsuliyyət, Azərbaycan dilçiliyi, diskurs analizi, iqtisadi kommunikasiya.

Introduction

In contemporary linguistics, the category of possession is regarded not only as a means of expressing grammatical relations, but also as a discursive manifestation of social, economic, and cultural realities. In societies undergoing dynamic socio-economic transformations, such as Azerbaijan, the linguistic expression of possession plays a significant role in the formation of both individual and collective identity. From this perspective, the study of the possessive category is not limited to a structural-semantic framework; it also requires the examination of its functional and pragmatic properties within discourse.

Azerbaijan's socio-economic discourse encompasses various communicative environments, including official administrative language, economic policy texts, media discourse, and everyday communicative practices. Within these environments, possessive relations are expressed at different levels-morphological, syntactic, and lexico-semantic. For instance, constructions such as "our economy," "the country's resources," and "the company's strategy" not only denote ownership relations but also reflect concepts such as collective responsibility, national identity, and institutional belonging.

It should be noted that the category of possession in socio-economic discourse carries ideological implications and may also express certain power relations and hierarchical structures. In this regard, the selection and use of linguistic units are determined not only by grammatical rules but also by social context, communicative intent, and the speaker's position. In particular, the prevalence of collective possessive forms (e.g., "we," "national," "public") in official and economic discourse serves to construct the idea of inclusiveness and unity through linguistic means.

The main objective of this study is to comprehensively analyze the linguistic features of the possessive category in Azerbaijan's socio-economic discourse and to identify its structural, semantic, and pragmatic aspects. The study will examine the means of expressing possession, their functions in discourse, and their socio-cultural implications. In addition, a comparative approach will be applied across different types of discourse in order to reveal similarities and differences in the usage of the possessive category.

Methodology and Materials

The present study is based on a qualitative and comparative linguistic methodology aimed at analyzing the category of possession in the socio-economic discourse of Azerbaijan. The research employs descriptive, structural, semantic, and discourse analysis methods to identify the grammatical and functional characteristics of possessive constructions in contemporary Azerbaijani socio-economic communication.

The empirical materials consist of authentic socio-economic texts, including official reports, business correspondence, media publications, institutional documents, and economic articles

published between 2015 and 2025. These sources provide representative examples of possessive structures functioning within professional and institutional discourse.

The theoretical framework of the research is grounded in functional linguistics, cognitive semantics, and discourse analysis. The study demonstrates that possessive constructions in Azerbaijani socio-economic discourse fulfill not only grammatical functions but also important semantic and pragmatic roles related to ownership, institutional affiliation, economic relations, and professional communication.

Discussion

The Functional Role of the Category of Possession in Socio-Economic Discourse

Language is a reflection of the socio-cultural, political, and economic life of society. The expression of socio-economic processes through language and their internalization in public consciousness is of significant importance both for the transmission of information and for the formation of national identity. This approach is associated with theoretical frameworks explaining the relationship between language and thought, particularly the ideas proposed by Sapir (Sapir, 1921) and Whorf (Whorf, 1956). In this context, the category of possession is not only a grammatical function but also a means of expressing public consciousness and collective identity.

Socio-economic reforms and regional development programs implemented in the Republic of Azerbaijan require specific linguistic structures and functions in discourse. In this regard, the use of the possessive category reveals the national and social nuances of economic discourse. The relationship between discourse and social practices is explained within the framework of Critical Discourse Analysis by Fairclough (Fairclough, Norman, 1995).

In the Azerbaijani language, the category of possession is primarily expressed through personal suffixes and lexical means indicating ownership. At the morphological level, forms such as *-ım/-im*, *-ımız/-imiz*, *-ınız/-iniz* are widely used. These structural features are related to the agglutinative typology of Turkic languages and have been extensively studied by Johanson (Johanson, 2009) and Lewis (Lewis, 2002).

In socio-economic texts, grammatical forms of possession emphasize collective belonging and a national perspective. For instance, constructions such as “the development of our economy,” “the welfare of our people,” “the future of our country,” and “the potential opportunities of our regions” express not only grammatical possession but also collective identity. This approach is linked to the concept of national identity (Anderson, 1983) and demonstrates the role of language in shaping public consciousness.

These expressions do not only serve a morphological function but also convey notions of national identity and collective responsibility. The ideological function of language and its relation to social structure are extensively discussed within Critical Discourse Analysis by Fairclough (Fairclough, Norman 1995). From a syntactic perspective, complex phrases such as “the economic policy of our state” and “the welfare and social protection of our people” more strongly emphasize the category of possession and enhance the pragmatic force of discourse.

The category of possession in socio-economic discourse also functions to present national identity and economic resources within a national context. Expressions such as “the natural resources of our country” and “the potential of our people” present economic indicators as an integral part of national identity, aligning with sociolinguistic studies emphasizing the relationship between language and ideology (Sapir, 1921; Whorf, 1956).

The category of possession highlights that economic development is achieved not only through state activity but also through the efforts of all citizens. Frequently used expressions in official documents and speeches-such as “The policy of our state serves the welfare of our people” and “The development of our regions is the responsibility of every citizen”- demonstrate the discursive construction of social responsibility. This structure foregrounds the ideological function of language and corresponds to approaches explaining institutional discourse formation (Dijk, 2006).

Such expressions evoke a sense of responsibility in the reader, highlighting the collective nature of economic development. In media discourse, the category of possession is used to create an emotional and ideological bond with the audience. This approach holds a significant place in Critical Discourse Analysis, which examines the social function and ideological orientation of discourse (Fairclough, 1995), as seen in expressions such as “The new opportunities of our regions increase the welfare of our people” and “The initiatives of our youth are the backbone of national economic development.”

The category of possession integrates individual and group interests with national goals. The reader or listener is positioned as a participant in the economic process: “The startup initiatives of our youth influence the economic future of our country.” Such discursive strategies align with theoretical approaches emphasizing the role of language in the formation of national identity (Anderson, 1983).

The category of possession is used in state speeches, official documents, and media to shape public perception of economic processes. For example, expressions such as “our path” and “our strategy” in official speeches strengthen the idea of collective purpose and unity. In media texts, constructions such as “the development prospects of our regions” and “programs for the welfare of our people” enhance social solidarity and public responsibility.

This category generates a sense of belonging and responsibility in readers and listeners, emphasizing the national character of economic processes. The relationship between language, social consciousness, and ideology is widely discussed in sociolinguistic approaches (Van Dijk, 2006). The category of possession also strengthens the ideological and motivational aspects of economic policy.

In Azerbaijani socio-economic discourse, the category of possession does not merely perform a grammatical function. It serves as a linguistic means of expressing national identity, collective responsibility, and economic development. Therefore, its study is important not only at the morphological level but also within discursive and socio-linguistic frameworks. Approaches concerning the social function of language (Sapir, 1921; Whorf, 1956) further reinforce these conclusions.

Conclusion

Within the scope of the present study, the linguistic features of the category of possession in Azerbaijan’s socio-economic discourse have been comprehensively analyzed, and its functional-semantic properties have been systematically identified across different linguistic levels. The findings indicate that the category of possession functions not merely as a grammatical device for expressing relational structures, but also as an important pragmatic and ideological mechanism involved in the discursive construction of socio-economic realities.

The analysis demonstrates that the category of possession emerges through the interaction of morphological, syntactic, and lexico-semantic levels, thereby playing a central role in both the

structural organization and content development of discourse. Its realization across multiple linguistic levels enables more precise and effective expression of communicative intentions while ensuring the semantic coherence and cohesion of discourse. In particular, possessive constructions identified in socio-economic texts are context-dependent and functionally motivated, serving the implementation of specific discourse strategies.

One of the key findings of the study is that the category of possession plays a significant role in the formation and reinforcement of collective identity within socio-economic discourse. The pronoun “we” and related linguistic units function as core components of inclusive strategies, contributing to the discursive construction of social solidarity, shared responsibility, and national unity. This demonstrates that possession extends beyond structural and semantic functions and actively contributes to the linguistic realization of social integration.

At the same time, the use of possessive forms in institutional discourse foregrounds its ideological dimension. In texts related to state and economic structures, possessive constructions linguistically encode institutional belonging, distribution of authority, and hierarchical relations. Such structures contribute to the legitimization of power relations and the reinforcement of institutional positions within discourse, thereby confirming the ideological load of the category of possession.

In conclusion, the category of possession in Azerbaijan’s socio-economic discourse can be characterized as a multi-layered, multifunctional, and discourse-constructing linguistic phenomenon. An integrated examination of its grammatical, semantic, pragmatic, and ideological dimensions enables a deeper understanding of the social functions of language. In this respect, the study of the possessive category offers significant theoretical implications not only for linguistics, but also for discourse analysis, sociolinguistics, and economic communication studies.

SYNTACTIC, SEMANTIC, AND PRAGMATIC ASPECTS OF LANGUAGE UNIVERSALS WITHIN THE TEXT

Farida ALLAHVERDIYEVA

Doctor of Philological Sciences, Professor

Azerbaijan University of Languages

E-mail: farida.muhammedali@mail.ru

Abstract: This study focuses on the analysis of language universals at the text level and examines their syntactic, semantic, and pragmatic functions. Particular attention is given to the role of cohesion and coherence in text formation, as well as to the functional characteristics of theme and rheme. The main objective of the research is to identify how language universals are expressed across different languages and to analyze their functional role within the structure of the text.

The findings reveal that despite formal differences between languages, the core structural and functional features of language universals remain largely similar. Cohesion and coherence function as key mechanisms that ensure textual unity by establishing formal and logical connections between sentences. In addition, the principles of theme and rheme contribute to the systematic and coherent presentation of information within the text.

The study applies contrastive and confrontative methods, which have proven to be effective tools for identifying and analyzing universal linguistic features. Overall, the research demonstrates that the study of language universals provides deeper insights into general linguistic patterns and enhances the understanding of the structural and semantic organization of texts.

Key words: language universals, text, cohesion, coherence, theme and rheme, pragmatics

MƏTN DAXİLİNDƏ DİL UNİVERSALLARININ SİNTAKTİK, SEMANTİK VƏ PRAQMATİK ASPEKTLƏRİ

Xülasə: Bu tədqiqat mətn səviyyəsində dil universalilərinin təzahürünün, eləcə də onların sintaktik, semantik və pragmatik funksiyalarının təhlilinə həsr olunmuşdur. İşdə mətnin formalaşmasında koheziya və koherensiyanın rolu, həmçinin tema və rema anlayışlarının funksional xüsusiyyətləri araşdırılır. Tədqiqatın məqsədi müxtəlif dillərdə dil universalilərinin necə ifadə olunduğunu müəyyənləşdirmək və onların mətn daxilində funksional rolunu təhlil etməkdir.

Araşdırma zamanı müəyyən edilmişdir ki, dillər arasında formal fərqlər mövcud olsa da, dil universalilərinin əsas struktur və funksional xüsusiyyətləri oxşar olaraq qalır. Koheziya və koherensiya mətnin bütövlüyünü təmin edən əsas amillər kimi çıxış edir və cümlələr arasında məntiqi və formal əlaqələrin qurulmasına xidmət edir. Eyni zamanda, tema və rema prinsipləri informasiyanın ardıcıl və sistemli şəkildə təqdim olunmasını təmin edir.

Tədqiqatda kontrastiv və konfrantativ metodlardan istifadə olunmuş və bu yanaşmaların dil universalilərinin müəyyənləşdirilməsində effektiv olduğu göstərilmişdir. Nəticə etibarilə, dil universalilərinin öyrənilməsi dilin ümumi qanunauyğunluqlarının daha dərinlən anlaşılmasına və mətnin struktur-semantik təşkilinin izahına mühüm töhfə verir.

Açar sözlər: dil universaliləri, mətn, koheziya, koherensiya, tema və rema, pragmatika

Introduction

Language universals, as one of the most actual and important directions of modern linguistic science, encompass the identification of common structural and functional features existing across different languages. In the context of globalization, the expansion of interlingual relations further increases the significance of this field and makes it necessary to investigate the general regularities

of language. The main aim of the research is to systematically analyze the manifestation of language universals at the text level, as well as their syntactic, semantic, and pragmatic functions. In addition, the objectives of the study include determining the role of cohesion and coherence in the formation of the text, examining the functional features of the theme and rheme principles, and conducting a comparative analysis of these universal relations in different languages. The relevance of the research lies in the fact that the study of language universals is of great importance both for theoretical linguistics and for practical fields-particularly in language learning, translation, and text analysis. From this perspective, the presented work is aimed at a deeper understanding of the universal properties of language and at identifying their functional role within the text.

Methodology

This study is based on a qualitative research design aimed at analyzing the manifestation of language universals at the text level. The research relies on a descriptive and analytical approach to examine syntactic, semantic, and pragmatic functions within texts.

The primary material of the study consists of theoretical linguistic sources and selected text samples. Relevant scientific literature on language universals, text linguistics, and discourse analysis was reviewed and systematically analyzed. The selection of sources was based on their relevance to the research topic and their contribution to the understanding of universal linguistic features.

The study employs descriptive-analytical methods to investigate the role of cohesion and coherence in text formation, as well as the functional characteristics of theme and rheme. In addition, a contrastive and confrontative approach is applied in order to compare how language universals are expressed in different languages and to identify both similarities and structural variations.

Elements of discourse analysis are also incorporated to examine the relationship between linguistic structure and communicative intention. Furthermore, qualitative content analysis is used to interpret semantic and pragmatic aspects of the text.

Overall, this methodology allows for a comprehensive and systematic analysis of language universals, focusing on their functional realization within the structure of the text.

Main part

Language universals, as one of the most important and widely studied fields of linguistic science, encompass the identification of common structures and functions observed in all languages. This concept is not limited only to the formal structure of language, but also includes its semantic, pragmatic, and psychological features. The study of language universals makes it possible to reveal the general regularities of language and to draw comparative parallels between different languages. The first theoretical foundations in this direction were laid in ancient times by Aristotle. By investigating the structure of language and the principles of logical organization of speech, he showed that language units have a systematic character. Later, Plato brought the relationship between language and thought to the forefront and noted that language is not only a means of communication, but also a form of expression of cognition. [10, p.34] These ideas had a significant impact on the development of linguistic science in later periods.

In the medieval and modern periods, the systematic study of the universal principles of language expanded even further. In particular, in the 17th century, representatives of the Port-Royal School argued that language is constructed based on rules common to all languages. This approach further strengthened the theoretical foundations of the universal character of language. In the 20th

century, the theory of universal grammar proposed by Noam Chomsky introduced a new approach to the issue of language universals. [4, p.76] He demonstrated that there are pre-existing universal structures in the human mind for the perception and production of language. This theory made it possible to explain the biological and psychological foundations of language. At the same time, Wilhelm von Humboldt emphasized that language is a dynamic and creative system and made significant contributions to the historical and comparative study of languages. [8, p.92] According to him, language is not merely a ready-made system, but a living mechanism that constantly develops and changes. Thus, the views of scholars from different periods show that language universals are one of the main directions of linguistic science both historically and in modern times, and the study of this field plays an important role in understanding the general nature of language.

The manifestation of language universals at the text level is particularly clearly observed through the concepts of cohesion and coherence. In modern linguistics, a text is regarded not as a mechanical sequence of sentences, but as a complex unit possessing structural and semantic integrity. From this perspective, the formation of a text occurs as a result of the interaction of both formal and semantic relations. Cohesion is the set of linguistic means that constitute the surface structure of the text and connect sentences to one another. These means include conjunctions, pronouns, repetitions, synonymic substitutions, and deictic elements. For example, words such as "this," "that," "here," and "now" create referential relations within the text and maintain connections between sentences. Although such formal linking devices are expressed differently across languages, they serve the same function.

Coherence, on the other hand, encompasses the deep semantic layer of the text and ensures the establishment of logical relations between sentences. Cause-and-effect relations, temporal sequence, comparison, and contrast are among the main elements of coherence. Without these relations, a text may appear formally connected, but it will not achieve semantic completeness. The integrity of a text is ensured precisely by the unity of cohesion and coherence. This issue has been extensively studied in linguistics and is reflected particularly in the theories developed by M. A. K. Halliday and Ruqaiya Hasan. [7, p.20] They evaluated cohesion as one of the main organizing mechanisms of the text and systematically classified its types. Later, the issue of semantic integrity of the text was extensively studied at the discourse level by Teun A. van Dijk. He showed that a text is not only a linguistic unit, but also a structure related to cognitive and social factors. [12, p.47] At the same time, Robert-Alain de Beaugrande identified seven main criteria of textuality and presented cohesion and coherence as key features of the text. [3, p.93]

Thus, the analysis of universal relations at the text level shows that although formal means differ across languages, their functional role and importance in the construction of the text have a universal character.

The analysis of language universals within the text highlights the particular importance of the interaction between syntactic, semantic, and pragmatic functions. These functions demonstrate that language possesses universal features not only in structural terms but also at the levels of meaning and use. Syntactic universals manifest themselves in sentence structure and inter-sentential relations, and subject–predicate relations, as well as coordination and subordination, are characteristic of all languages. Semantic universals, in turn, are related to the construction of meaning within the text and are expressed through categories such as time, space, and cause-effect. The relationship between the denotative and connotative meanings of words enhances the semantic richness of the text. Pragmatic universals reflect the communicative purpose of the text, and in this

respect, the author's intention and the manner of presenting information play a significant role. Within the informational structure of the text, the concepts of theme and rheme occupy a special place; the theme expresses given information, while the rheme conveys new information. These principles were substantiated by Vilém Mathesius [9, p.49] and further developed by Jan Firbas. [6, p.92] At the same time, Simon C. Dik and Ellen F. Prince explained the structuring of information and its distribution within discourse. [5, p.30; 11, p.72] Thus, the integrated analysis of these functions confirms the universal character of language.

Discussion

The findings of this study demonstrate that language universals at the text level are realized through the interaction of syntactic, semantic, and pragmatic functions. The analysis shows that cohesion and coherence serve as fundamental mechanisms ensuring the structural and semantic integrity of the text. Although different languages employ distinct formal means, their functional roles remain largely consistent, which confirms the universal nature of these features.

The role of syntactic structures, particularly subject–predicate relations and coordination and subordination, proves to be essential in organizing textual units. At the same time, semantic categories such as time, space, and cause-effect relations contribute to the meaningful construction of the text. Pragmatic aspects, including communicative intention and information structuring, further support the effectiveness of text production and interpretation.

Special attention is given to the theme–rheme structure, which plays a crucial role in organizing information flow within the text. The analysis indicates that this principle operates universally across languages, ensuring clarity, coherence, and logical progression of ideas. The application of contrastive and confrontative approaches also highlights both similarities and differences in the realization of universal features, reinforcing the idea that universality exists at the functional rather than purely formal level.

These findings are consistent with existing linguistic theories and confirm that language universals are not limited to abstract structures but actively function within real textual contexts. The results contribute to a deeper understanding of how universal principles operate in discourse and support their relevance in both theoretical and applied linguistics.

Conclusion

The conducted research has shown that language universals at the text level manifest themselves as the interaction of syntactic, semantic, and pragmatic functions, and although they are expressed in different forms across languages, their fundamental principles remain similar. The role of cohesion and coherence in the formation of the text is of particular importance, and these factors ensure the integrity of the text both structurally and semantically. At the same time, the analysis of the theme and rheme principles has demonstrated that the presentation of information is structured according to a universal model in all languages, which enhances the coherence and clarity of the text. The study has also determined that contrastive and confrontative approaches are effective methods for identifying language universals. In general, the systematic study of language universals makes it possible to gain a deeper understanding of the structural and functional nature of language, and research conducted in this field opens important perspectives both for theoretical linguistics and for practical applications.

CONSTRUCTING AUTHORITY AND TRUST IN DIGITAL ECONOMIC DISCOURSE: A CRITICAL DISCOURSE ANALYSIS OF AI-RELATED CONTENT ON YOUTUBE

Kyriakos Stefanos ILIOU

Lecturer & PhD Researcher

University of Wolverhampton, United Kingdom

E-mail: iliouk@outlook.com

ORCID ID: 0009-0007-7194-3080

Abstract: As Artificial Intelligence (AI) technology continues to grow at a faster rate than ever before, it has created a wide variety of opportunities for people to make money on-line. These opportunities are being promoted across all types of online media; however, the most common place to see them promoted is on YouTube. As such, YouTube represents a major platform through which stories of financial independence, entrepreneurialism and technological empowerment are created and disseminated. This study reports the results of a Qualitative Critical Discourse Analysis (CDA) of five YouTube videos with over 100 user comments. It examines how authority and trust are socially produced as part of the discursive context surrounding AI-related economic content. Five themes were identified in this research: authority creation, trust and validation, economic aspirations, skepticism and resistance and an emerging authenticity crisis. The results indicate that authority is created through a combination of confidence and accessibility in language use; trust was also found to be co-created through a process called collective validation. Furthermore, the two processes described above are also challenged by users' skepticism of economic reality, their concern about the authenticity of what they see and hear, and their suspicion of commercial intentions behind many

of the videos. Additionally, the researcher asserts that the processes described above illustrate components of a larger populist communicative logic in which complex economic realities are reduced to simple yet aspirational messages.

KONSTRUOWANIE AUTORYTETU I ZAUFANIA W CYFROWYM DYSKURSIE EKONOMICZNYM: KRYTYCZNA ANALIZA DYSKURSU TREŚCI ZWIĄZANYCH ZE SZTUCZNĄ INTELIGENCJĄ NA YOUTUBE

Kyriakos Stefanos ILIOU

Wykładowca i doktorant

Uniwersytet w Wolverhampton, Wielka Brytania

E-mail: iliouk@outlook.com

ORCID ID: 0009-0007-7194-3080

Streszczenie: Wraz z tym, jak technologia sztucznej inteligencji (AI) rozwija się szybciej niż kiedykolwiek wcześniej, stworzyła ona szeroki wachlarz możliwości zarabiania pieniędzy online. Możliwości te są promowane we wszystkich rodzajach mediów internetowych, jednak najczęściej można je spotkać na YouTube. W związku z tym YouTube stanowi główną platformę, za pośrednictwem której tworzone i rozpowszechniane są narracje dotyczące niezależności finansowej, przedsiębiorczości oraz technologicznego empowermentu.

Niniejsze badanie przedstawia wyniki jakościowej krytycznej analizy dyskursu (CDA) pięciu filmów na YouTube, które uzyskały ponad 100 komentarzy użytkowników. Analizuje ono, w jaki sposób autorytet i zaufanie są społecznie konstruowane w ramach dyskursywnego kontekstu treści ekonomicznych związanych z AI. W badaniu zidentyfikowano pięć głównych tematów: tworzenie autorytetu, zaufanie i walidacja, aspiracje ekonomiczne, sceptycyzm i opór oraz pojawiający się kryzys autentyczności.

Wyniki wskazują, że autorytet jest budowany poprzez połączenie pewności siebie i przystępności języka; zaufanie natomiast współtworzone jest poprzez proces określany jako kolektywna walidacja. Jednocześnie oba te procesy są podważane przez sceptycyzm użytkowników wobec rzeczywistości ekonomicznej, ich obawy dotyczące autentyczności przekazów oraz podejrzenia dotyczące komercyjnych intencji twórców. Ponadto badacz stwierdza, że opisane procesy odzwierciedlają elementy szerszej populistycznej logiki komunikacyjnej, w której złożone realia ekonomiczne są redukowane do prostych, lecz aspiracyjnych przekazów.

Słowa kluczowe: analiza dyskursu, media społecznościowe, autorytet, zaufanie, sztuczna inteligencja, gospodarka cyfrowa

Introduction

Artificial intelligence (AI) technology development has had an enormous impact upon modern-day digital communication. This is especially true with regard to new opportunities for economic advancement and entrepreneurialism. YouTube, among other platforms, serves as the primary site at which individuals can find information, advice and strategies for achieving greater financial success. Most YouTube content creators promote AI as a method to generate a high level of accessible and scalable income. They often describe this process using terms such as simple, fast and requiring very little capital.

Because of the ever-increasing number of videos created around this subject, it creates a need to examine how authority and trust are being developed and contested in these digital communities. In most institutions of higher learning or professional organizations, authority is formally recognised. On social media, individuals develop their own levels of authority based on how visible they are to others, how they communicate and how much engagement there is from their audiences. As such, authority is discursively produced as opposed to being institutionally granted.

In this study we explore how authority and trust are both produced and negotiated within the digital community of AI-related economics found on YouTube. Through examining both video content and user comments, we investigate how credibility is established and both supported and undermined by participants in a highly interactive communications system.

Methodology

Research Design. The research design for this study uses a qualitative methodology utilising critical discourse analysis (CDA), where language is seen as a form of social practice contributing to the creation and reproduction of power relationships (Fairclough, 1995). CDA offers an appropriate framework to analyse how authority and trust are created in terms of linguistic and communicative forms in online platforms.

Data Collection. Data collection utilised the following dataset:

- Five YouTube videos, dealing with AI-related economic possibilities (making money using AI; digital entrepreneurship, automation etc.)
- One hundred user comments in total. Twenty comments were selected from each video. The video selection was done by engagement metrics (i.e. number of views and comments); video theme was also used as criteria. Comments were selected based on their visibility and their relation to other users' contributions; comments that sparked discussions and interactions among users or reflected distinct discursive patterns were prioritised.

Analytic Framework. The analysis was performed at five levels:

- Construction of Authority.
- Creation of Trust and Validation.
- Economic Aspirations and Vulnerability.
- Scepticism and Resistance.
- Authenticity and Platform Dynamics.

Illustrative excerpts were selected from the comments analysed above as they represent the most frequent and repeated discursive patterns. All data were publicly available and no personal identifying information was retained.

Results & Discussion

Authority as a Discursive Construction. Authority is constructed across this entire study using combinations of confidence, accessibility and familiarity among content creators' intended audiences. Most commonly content creators were referred to in terms of their status using affective language; i.e., "*a superstar*", "*our YouTube queen*," and "*the best by far*." This has contributed to the development of new forms of personality-based authority in online spaces. At the same time, authority was also demonstrated to be developed through clarity and educational value. For example, "*a simple step-by-step guide that even a senior could understand*" and "*very high-quality explanation*" indicate that content creators are both familiar and accessible. Therefore, while authority is developed primarily through admiration, it is also created through the ability to successfully create practical applications from abstract concepts. Importantly, authority is relational.

While comparing one creator's video to another one's video within the same space, users note that some videos were *"the first that didn't feel like clickbait"*; thereby illustrating that credibility develops through comparison among competitors within the same content ecosystem.

Trust as Collective Validation. Trust is shown to develop collectively through an iterative validation process amongst users. Many user comments serve as testimonials in order to illustrate users' own successes or future successes. For example, *"I did exactly what you told us to do... I'm really happy with the store"* and *"you inspired me to open my YouTube channel"* illustrate how individual experiences become collective evidence of credibility. Additionally, hyperbole concerning the level of users' successes; e.g., *"you literally turned me into a millionaire"* reinforces perceptions of success throughout the community and strengthens beliefs. Therefore, trust is not merely granted but rather developed jointly with user participation and creates a discursively validated environment that normalises and sustains credibility.

Economic Aspiration and Vulnerability. One of the most important themes in the discourse is economic aspiration expressed in conjunction with expressions of uncertainty and vulnerability. Frequently, users articulate themselves as novice learners looking for transformative experiences; examples include *"just lost my 9-to-5... I don't know where to start"* and *"I'm beginning at \$0... I feel stuck"*. Both of these quotes illustrate the socio-economic context under which such content exists. The potential for economic independence and/or alternate sources of income resonate with individuals experiencing economic instability or dissatisfaction with traditional employment structures. Despite these economic realities, the aspirational narratives continue; thus illustrating that the discourse provides not only informational resources but also motivational support.

Skepticism/Discursive Resistance. Opposite to the dominant theme of opportunities provided by this discourse, the study also found significant skepticism and resistance. Users question the practicality of strategies presented and ask *"How can you obtain 10 clients willing to pay 5K?"* or state *"There are more unanswered questions than there are answered ones."* Some users display reflective understanding of the content ecosystem itself. For example, when they say *"to earn money is to teach others how to earn money,"* this illustrates a critique of the self-referential nature of this type of discourse. Finally, economic realism serves as an opposing discourse; when users emphasise competition and effort; e.g., *"Ideas are inexpensive... You're going to compete with millions of other businesses"* and *"Nothing lazy about it: you have to put in a lot of hard work."* This opposition emphasises structural constraints that are typically overlooked in discourse emphasising accessibility and ease.

Authenticity Crisis and Platform Dynamics. An authenticity crisis is evident within the discourse; users question both content creators and comment sections themselves, using phrases like *"about 90% of comments are bots"*, *"it seems like we've run out of real comments lately,"* and *"all bot comments."* Also contributing to distrust in the platform dynamics is the use of promotional strategies used by content creators; e.g., *"probably selling his course."* Overall, this indicates the blended nature of digital communication - content, marketing and economic activity - that affects how trust is formed and contested.

Analytical Synthesis. Overall, the study shows that authority and trust in social media environments are fluid constructs that are continually being built and assessed through an ongoing negotiation of discourse. The processes described here represent a complex interplay between admiration, aspiration, skepticism and reflexive awareness. While content creators build authority through confidence and accessibility, this authority is vulnerable because it is subject to constant

evaluation and challenge from audiences. Similar to authority, trust is maintained via a collective validation process. However, it is disrupted by distrust based upon issues surrounding authenticity, feasibility and commercial motivation. The results show aspects of a larger populist communication logic that simplifies economic complexities into accessible stories of opportunity, agency and low barriers to entry. While non-political, this communication style shares many characteristics with those used during populisms in digital environments particularly in relation to accessibility and questioning existing expert systems.

Conclusion

As shown by this project, authority and trust, when it comes to discourse regarding AI-related economics via YouTube, do not represent stable entities. Instead, they will continue to be created and continuously negotiated within an interactive environment. Confidence, accessibility and audience awareness contribute to establishing one's authority, while collective validation and experiences create and support trusting relationships. Simultaneously, these construction and negotiation processes are also subject to skepticism, economic reality and concerns about authenticity. Therefore, based upon these findings, we can conclude that online discourse represents a dynamic and competitive sphere for creating and challenging influence.

The results of our analysis indicate that the economic discourses studied reflect larger trends in digital communication. For example, we observed increasingly simple and easily accessible stories told to audiences who aspire to be part of them. As a result, the story telling process illustrates characteristics of a populist communicative style. Populist communicative styles, simplify complex systems so that anyone can navigate them and question traditional forms of expert knowledge. These observations highlight the need for future research on how different communicative styles impact public views regarding opportunities, risks and credibility associated with digital economies.

SEMANTIC STRUCTURE OF INTERPERSONAL RELATIONAL VERBS

Shafaqat Abdulla MAHMUDOVA

Doctor of Philology, Professor
Azerbaijan University of Languages

E-mail: shafagat.m@gmail.com

ORCID ID: 0000-0002-8109-9318

Abstract: This article discusses the semantic structure of verbs denoting interpersonal relationships. To date, research in the field of interpersonal relationships, does not allow us to provide an exact definition of this concept. From a linguistic point of view, this category is still poorly understood. Types of interpersonal relationships are presented in different ways. They can be related to acquaintances, primary and secondary relationships, romantic relationships, marital relationships, etc. The evaluative classification method is also distinguished, for example: sympathy-antipathy; business-personal; love-hate. Interpersonal relationships, are understood as a set of mutual relations between people and are characterized by the word "mutual". M. V. Frolova considers the concept of human relations as "relations that are subjectively experienced between people, objectively manifested in the nature and methods of their interaction with each other in the process of joint activity and communication."

Keywords: interpersonal relationships, verb, semantic structure, communication process, anthropocentric units

ŞƏXSLƏRARASI MÜNASİBƏT FEİLLƏRİNİN SEMANTİK QURULUŞU

Şəfaqət Abdulla MAHMUDOVA

Filologiya elmləri doktoru, professor

Azərbaycan Dillər Universiteti

ORCID ID: 0000-0002-8109-9318

Xülasə: Bu məqalə şəxslərarası münasibət feillərinin semantik quruluşundan bəhs edir. Bu günə qədər şəxslərarası münasibətlər sahəsində aparılan tədqiqatlar bu anlayışın dəqiq tərifini təqdim etməyə imkan vermir. Dilçilik baxımından bu kateqoriya hələ də zəif başa düşülmüşdür. Şəxslərarası münasibətlərin növləri müxtəlif yollarla təqdim olunur. Onlar tanışlıqlar, ilkin və ikinci dərəcəli münasibətlər, romantik münasibətlər, nikah münasibətləri və s. ilə əlaqəli ola bilər. Qiymətləndirici təsnifat metodu da fərqləndirilir, məsələn: simpatiya-antipatiya; iş-şəxsi; sevgi-nifrət. Şəxslərarası münasibətlər insanlar arasında qarşılıqlı əlaqələrin məcmusu kimi başa düşülür və "qarşılıqlı" sözü ilə xarakterizə olunur. M. V. Frolova şəxslərarası münasibətlər anlayışını "insanlar arasında subyektiv şəkildə yaşanan, birgə fəaliyyət və ünsiyyət prosesində insanların bir-birinə qarşılıqlı təsirlərinin təbiətində və metodlarında obyektiv şəkildə təzahür edən münasibətlər" kimi nəzərdən keçirir.

Açar sözlər: şəxslərarası münasibətlər, feil, semantik quruluş, ünsiyyət prosesi, antroposentrik vahidlər

Introduction

Types of interpersonal relationships are presented in different ways. They can be associated with acquaintances, primary and secondary relationships, romantic relationships, marital relationships, etc. The evaluative classification method is also distinguished, for example: sympathy-antipathy; business-personal; love-hate. Researchers offer their own classification systems, taking into account other works. Thus, difficulties arise in accurately determining the type of relationship, its emotional background, as well as the strength of the manifestation of certain feelings on both sides. We identify the following five categories in the classification of interpersonal relationships. It reveals the emotional richness of the personality and helps to characterize the person's relationship with himself. The family creates an opportunity to characterize the environment of the child during his development as an individual, as well as the relationship of the already formed individual with this environment. Friends reflect the needs of the

individual. Love interest reveals the individual as a potential partner, future parent. Strangers help to reveal the relationship between the individual and the society surrounding him. Interpersonal relationships are compared to business relationships and cover a wide range of mutual positions, including acquaintance, friendship, love, hostility, and neighborliness.

Discussion

In human relations, the concepts of friend, enemy, familiar person, and stranger are distinguished based on the characteristics of a person's belonging/non-belonging to his/her environment, for example, the distance between his/her environment and others and the presence/absence of mutual sympathy. They demonstrate significant similarities in conceptual, figurative, and value terms in English-language culture. In the concepts of interpersonal relations in English-language culture, the demonstration of friendship and the confrontation of friend and acquaintance are given priority; 2) in the English-language consciousness, the enemy is mainly understood as a specific person who hates the subject; 3) the label of the concept of acquaintance in English is mainly associated with communication in the business sphere; 4) English-speaking society emphasizes the opposition between complete strangers and personal acquaintances. 5. In the thematic field of human relations, situations such as neighborliness, hospitality, gift-giving, heartfelt conversations, and acts of mutual assistance are important. For example, in the norms of hospitality, the priority of observing the norms of etiquette in English is manifested; the British and Americans attach special importance to the aesthetics of giving gifts; in English-speaking communication, heartfelt conversation is not a priority at all. The issue of mutual service in communication practice, the importance of receiving such services through acquaintances, is considered unacceptable in the English-speaking world. In cross-linguistic studies, the study of the semantic aspect of the function of verbs expressing interpersonal relationships is important for the theory and practice of language studies. Interpersonal relationships are understood as a set of various (positive, negative and neutral) interactions between people in the process of communication. Interpersonal relationships at all times have been an important part of people's lives, they give us emotions and experiences necessary for the harmonious development of personality, motivation and simply a sense of satisfaction with life. Verbs express not separate events, but events-situations, events-relations, actions-relations (9. P. 111).

The complexity of verb semantics complicates their classification, and this should be based on the nature of the semantic relations between individual verbs within each class. Combining them into a group or class, representing the stage of generalization, is carried out on the basis of a single semantic feature that serves as a classification factor. To determine the classification features of verbs, various criteria are used, which can be reduced to two main principles: chronological and thematic. The chronological criterion determines the degree of complexity of the semantic composition of the verb meaning, the number of constituent parts of the cases in its semantic structure, and the nature of the relations between these components. This criterion is associated more with the determination of the flow regime than with the specific content of the verb action. In interpersonal relationships, it is important to take into account factors such as social needs, awareness, personal values, and level of development. However, emotions are a key factor due to their universality as a regulatory process in interpersonal relationships, manifesting themselves both verbally and non-verbally. It is important to base them on aspects, specific means of expression that affect their classification both abstractly and concretely.

Main part .According to L.G. Babenko, verbs are divided into three main groups: 1) action and activity; 2) being, state, quality; 3) attitude. Verbs of relation are represented by four subgroups: verbs of interaction, verbs of possession, verbs expressing human relationships.

The material we examine in this article also stems from the classification of verbs expressing interpersonal relationships noted by L.G. Babenko. For example: to love, to be in love, to hate, to cry, to applaud, to laugh, to smile, to ignore, etc. (2, p. 81). According to R.M. Gaysina, verbs united on the basis of a common semantic component of interpersonal relationships are a set of words consisting of several lexico-semantic groups, including verbs of behavior, verbs of feeling, verbs of speech, verbs of sound, etc. (4, p. 104). L.M. Vasilyev notes that emotional verbs expressing interpersonal relationships intersect with other types of verbs, sometimes with verbs of emotional experience and state, sometimes with verbs of speech and behavior, as well as with verbs of intellectual activity (10. p. 108).

M.V. Rumyantseva believes that groups of verbs expressing interpersonal relationships are perceived as categorical-lexical semantics, expressing mutual communication, a relationship formed between someone on some basis, a connection [6, p. 8]. In the research of T.P. Akimova, verbs expressing interpersonal relationships are analyzed as anthropocentric units, since these verbs verbally formalize relationships between people (1. p. 12).

The idea of studying the lexical-semantic space of the language in the aspect of the anthropocentric paradigm is currently widely recognized. The verb process is represented by a class of words that call active action or activity, active or inactive procedural cases. Within the framework of the theories describing the English language, the verb, which is one of the most complex object subjects, is in the center of attention of many linguists. On the one hand, the verb as a part of speech has great potential to express countless actions, expressing the action, state and attitude of the subject, on the other hand, the verb, changing in times, persons and numbers, plays an important inflectional and word-forming role in the English language. According to the research of N. Y. Shvedova, "the most important feature of the verb, as in the word, is its ability to grammatically, formally attribute the named thing to time; this fundamentally distinguishes the verb from all other classes of naming words" (9, p. 410). Interpersonal relations are understood as a set of mutual relations between people and are characterized by the word "mutual". M. V. Frolova considers the concept of interpersonal relations as "relations that are subjectively experienced between people, objectively manifested in the nature and methods of their interaction with each other in the process of joint activity and communication" (3, p. 8). Recently, the idea of the anthropocentricity of language has become generally accepted and is considered the main feature of modern linguistics. Interpersonal relations are one of the main anthropocentric concepts and are an urgent human need. Many scholars consider verbs expressing interpersonal relationships to be anthropocentric units (1, 6, 5, 7) The study of this group of verbs is important not only for linguistics, but also for the development of anthropocentric thinking and intercultural communication. (8, p. 38)

Among the verbs expressing human relationships, let's pay attention to verbs expressing feelings towards another person. People are constantly in contact with each other, during which likes and dislikes, friendship and hostility, love and hatred, kindness and anger arise. When you meet someone you know, you can experience different feelings and emotions depending on your attitude towards that person. Verbs characterizing a person's positive feelings towards other people can be divided into two groups:

A. Verbs characterizing positive feelings and emotions:

Anxiety-anxiety. For example: - All the same Maltsev's tiredness made me nervous and I began to keep a careful eye on the track and the signals ahead.

Be carried away, take a great interest (with), Admire, be delighted (with),

For example: He fell in love with her at first sight faith/belief.

Believe (something, somebody),

Trust, confide (in), be convinced (of),

For example: People should trust each other.

Pity. Sympathise, feel for,

Have compassion for Condole (with) ,

Be thoughtful/worried about,

Show kindness/consideration for и т.д

B. Verbs characterizing negative feelings and emotions:

Disgust Be disgusted, feel disgust (about),

Wrinkle one's nose.

Turn away (from). For example: The room was very dirty, he was disgusted to sit there

Resentment/indignation.

Be filled with resentment,

Be angry (with),

Shout, scream, yell at.

Conclusion

The semantic structure of interpersonal verbs in English includes their meaning, methods of formation, and role in sentences. These verbs can be classified according to the type of action: verbs expressing emotions (e.g., to love, to hate), verbs of interaction (e.g., to meet, to help, to argue), and verbs that maintain relationships (e.g., to accompany, to support, to advise). Interpersonal verbs can be regular or irregular and can also form phrasal verbs, which expands their semantic variability. From the perspective of the structural-semantic approach, the verbal vocabulary of language, which expresses interpersonal relationships, still remains insufficiently studied, and therefore research in the field of verbal semantics is relevant.

Thus, psychological action verbs also have a complex semantic structure. As is clear from the previous description, the properties of "interaction of human relations" and "impact on the object" are an integral part of the group of verbs under study. The property of intention is not integral, but is part of the semantic structure of most verbs in this group. In addition, the analysis of the semantic structure of psychological action verbs showed that the classification of verbs in this group can be based on the property of impact on a certain area of the psyche, which indicates the correlation of the meaning of psychological action verbs with the data of modern psychological theory.

TEXTUAL AND DISCOURSE ANALYSIS OF THE “TRAGIC HERO” AND “THE FALLEN CHARACTER” IN OSCAR WILDE’S THE PICTURE OF DORIAN GRAY

Orzigul Otamurodova MUSAYEVNA

Teacher of Linguistics Department, Karshi State University,
Kashkadarya, Uzbekistan

ORCID ID: 0009-0008-0115-4008

Abstract: This article explores the concepts of the tragic hero and the fallen character in The Picture of Dorian Gray by Oscar Wilde. The main objective of the study is to examine whether Dorian Gray should be understood as a classical Aristotelian tragic hero or as a modern fallen protagonist. To achieve this aim, the research employs comparative literary analysis, psychological criticism, and close textual interpretation. The analysis demonstrates that Dorian Gray embodies characteristics of both literary models. Like a traditional tragic hero, he is gifted with exceptional youth, beauty, privilege, and great potential. However, unlike the heroes of classical tragedy, his downfall is not determined by fate but results from his own moral decline, excessive vanity, selfishness, and pursuit of pleasure. Wilde transforms the conventional structure of tragedy by emphasizing psychological weakness and personal ethical responsibility. Consequently, Dorian Gray emerges as one of the most significant and enduring examples of the fallen modern protagonist in English literature.

Keywords: tragic hero, fallen character, morality, corruption, identity, psychological fragmentation.

OSCAR WILDE'İN DORIAN GRAY'İN PORTRESİ ADLI ESERİNDE "TRAJİK KAHRAMAN" VE "DÜŞMÜŞ KARAKTER"İN METİNSEL VE SÖYLEM ANALİZİ

Orzigul Otamurodova MUSAYEVNA

E-mail: otamurodovaorzigul@gmail.com

ORCID ID: 0009-0008-0115-4008

Özet: Bu makale, Oscar Wilde'ın Dorian Gray'in Portresi adlı eserinde trajik kahraman ve düşmüş karakter kavramlarını incelemektedir. Çalışmanın temel amacı, Dorian Gray'in Aristoteles'in klasik trajik kahraman modeli çerçevesinde mi yoksa modern edebiyatta görülen düşmüş karakter modeli kapsamında mı değerlendirilmesi gerektiğini ortaya koymaktır. Araştırmada karşılaştırmalı edebiyat analizi, psikolojik eleştiri ve metin çözümleme yöntemleri kullanılmıştır. Elde edilen bulgular, Dorian Gray'in her iki modele de ait özellikler taşıdığını göstermektedir. Geleneksel trajik kahraman gibi gençlik, güzellik, ayrıcalık ve büyük bir potansiyele sahiptir. Ancak onun yıkımı kaderden değil, giderek artan ahlaki yozlaşma, aşırı kibir, bencillik ve haz tutkusu sonucunda gerçekleşmektedir. Oscar Wilde, klasik trajedi anlayışını psikolojik zayıflık ve bireysel ahlaki sorumluluk kavramlarıyla yeniden yorumlamaktadır. Sonuç olarak Dorian Gray, İngiliz edebiyatında modern düşmüş karakterin en etkileyici ve unutulmaz örneklerinden biri olarak kabul edilmektedir.

Anahtar kelimeler: trajik kahraman, düşmüş karakter, ahlak, yozlaşma, kimlik, psikolojik parçalanma.

Introduction

The fall of an individual has always been one of the most powerful themes in world literature. From ancient Greek drama to the modern psychological novel, writers have explored how human weakness, ambition, pride, or temptation may destroy a person. Two major literary concepts related to this theme are the tragic hero and the fallen character. Although they share certain similarities, they represent different artistic traditions and moral interpretations.

According to Aristotle, the tragic hero is a noble or respected person whose downfall results from hamartia, often translated as a fatal flaw or tragic error. Such a character usually gains recognition too late, and the audience experiences pity and fear. In contrast, the fallen character is more common in modern literature. This figure may not be noble in social rank, but experiences inner collapse through moral corruption, selfish choices, or psychological fragmentation. (Poetics Aristotle, 1996)

The Picture of Dorian Gray is one of the most significant novels for examining these categories. Published in the late Victorian era, the novel addresses beauty, youth, ethics, art, and social hypocrisy. The protagonist Dorian Gray appears innocent at first, but gradually turns into a destructive and empty person. This paper analyzes whether Dorian Gray should be understood as a tragic hero, a fallen character, or a synthesis of both models.

Discourse analysis and methodology

Many scholars have interpreted Dorian Gray from different perspectives. Some critics focus on Wilde's philosophy of aestheticism, where beauty and art are valued above conventional morality. Others examine the novel as a warning against narcissism, decadence, and self-indulgence. Psychological studies often emphasize identity division represented by the portrait.

Harold Bloom notes that *Dorian Gray* reflects the dangerous tension between appearance and reality. (Bloom, H. (Ed.), 2008) Peter Raby argues that Wilde uses the novel to criticize Victorian social values while simultaneously exploring pleasure and responsibility. Richard Ellmann, Wilde's biographer, connects the novel to Wilde's own intellectual conflicts about art and ethics.

Results

At the beginning of the novel, *Dorian Gray* is presented as exceptionally beautiful, charming, and admired by others. He possesses social privilege and great personal potential. Like the traditional tragic hero, he starts from a high position rather than from misery. His life appears full of promise.

Dorian's fatal flaw is excessive devotion to youth and beauty. After hearing Lord Henry's philosophy about pleasure and aging, he becomes terrified of losing physical attractiveness. He wishes that the portrait would grow old while he remains forever young. This desire becomes the turning point of the narrative. (Wilde Oscar, 2008)

Another tragic quality is recognition. Near the end of the novel, Dorian understands that he has destroyed his soul. However, this awareness arrives too late to save him. Thus, he shares several characteristics of the classical tragic hero.

Although Dorian contains tragic elements, he more strongly resembles the fallen character of modern fiction. His corruption is gradual rather than immediate. He rejects Sibyl Vane cruelly after her poor stage performance, showing emotional shallowness. Later, her death does not reform him. Instead, he pursues pleasure without conscience.

As years pass, rumors spread about his influence on others. He enters secret environments of vice and addiction. Eventually, he murders Basil Hallward, the very artist who admired him sincerely. This act confirms complete moral collapse.

Unlike many tragic heroes who suffer because of one mistake, Dorian repeatedly chooses selfishness. His fall is therefore ethical and psychological. (Ellmann Richard, 1988)

The portrait is the central symbol of the novel. It records every sin, cruelty, and lie committed by Dorian. While his face remains youthful, the image becomes monstrous. The portrait functions as hidden conscience, divided identity, and visible corruption. (Raby Peter (Ed.), 1997)

This symbol allows Wilde to dramatize an inner process externally. Readers see that beauty can conceal spiritual ugliness.

Discussion

The results indicate that *Dorian Gray* exists between two literary traditions. He begins as a tragic hero because he possesses privilege, attractiveness, and a fatal weakness. Yet he develops into a fallen character through repeated immoral decisions.

A key difference between classical tragedy and Wilde's novel concerns causation. In Greek tragedy, fate or divine order often shapes events. In this novel, destruction comes primarily through psychology. Dorian is not cursed by destiny; he is corrupted by vanity, influence, and desire.

Lord Henry plays a major role in this transformation. He encourages Dorian to treat life as an experiment in pleasure. However, responsibility remains with Dorian himself. Wilde suggests that ideas may tempt, but individuals still choose their actions.

The novel also critiques Victorian society. Dorian's appearance protects him from suspicion. Society judges surfaces rather than character. As long as he looks young and elegant, people ignore the possibility of inner corruption. Wilde therefore exposes the hypocrisy of a culture obsessed with reputation.

From a modern perspective, Dorian Gray can also be viewed as a study of narcissism. He loves his image more than truth, relationships, or morality. His inability to accept aging reveals fear of mortality and loss of control. (Joseph, 2007)

Conclusion

Dorian Gray is both a tragic hero and a fallen character, but the second category describes him more accurately. He begins as a gifted and admired young man, yet gradually destroys himself through vanity, selfishness, and moral blindness. Wilde transforms the traditional tragic structure into a modern psychological narrative where inner corruption replaces external fate.

The Picture of Dorian Gray remains important because it warns readers that beauty without ethics is dangerous, pleasure without limits is destructive, and appearances cannot hide truth forever. Dorian Gray's death symbolizes the final victory of reality over illusion. For this reason, the novel continues to be relevant in contemporary literary studies and moral philosophy.

MODALITY AS A CATEGORY OF THE DESCRIBED FACT AND ITS PARTICIPANTS: A CROSS-LINGUISTIC STUDY

Aysel Tarverdi AGHAMALIYEVA

PhD student, Azerbaijan University of Languages,

Khirdalan city, school №1

E-mail: ayselagamalizade2015@gmail.com

ORCID ID: 0009-0003-0778-5576

Abstract: This thesis examines modality as a grammatical category within the system of relations between the described fact and its participants. Modality is defined as a functional-semantic category that expresses the relationship between a subject and a verbal event in terms of desire, ability, and necessity, playing a crucial role in the semantic and pragmatic structure of language (Melchuk, 1998). The study shows

that modality is not only a grammatical unit but also a pragmatic device reflecting the speaker's attitude toward the event, their evaluation, and communicative intention. Therefore, the same sentence can acquire different modal meanings in different contexts. The study distinguishes three main types of modality: desiderative (expressing intention or wish), potential (expressing ability or permission), and debitative (expressing obligation or necessity). A comparative analysis of English, German, Italian, Japanese, and Nenets demonstrates that modality is a universal linguistic phenomenon, but its grammatical realization varies significantly across languages (Bybee et al., 1994). In Indo-European languages, modality is mainly expressed through modal verbs and periphrastic constructions, while in languages such as Japanese and Nenets, it is often encoded through morphological affixation and derivational mechanisms (Comrie, 1989; Payne, 1997). The findings show that modality serves as a key interface between grammar, semantics, and pragmatics. It reflects not only the structure of the event but also the speaker's attitude toward it, making it an essential category for understanding cross-linguistic variation in expressing human cognition and communication.

Keywords: modality, desiderative modality, potential modality, debitative modality, cross-linguistic analysis.

TƏSVİR OLUNAN FAKTIN VƏ ONUN İŞTİRAKÇILARININ KATEQORİYASI KİMİ MODALLIQ: MÜQAYİSƏLİ-DİLDƏNİŞ TƏDQIQATI

Aysel Tərverdi AĞAMALIYEVA

Xırdalan şəhəri, 1 nömrəli məktəb

E-mail: ayselagamalizade2015@gmail.com

ORCID ID: 0009-0003-0778-5576

Xülasə: Bu tezis işi təsvir olunan fakt və onun iştirakçıları sistemi daxilində modallıq kateqoriyasını araşdırır. Modallıq subyekt ilə feil arasındakı münasibəti arzu, bacarıq və vaciblik baxımından ifadə edən funksional-semantik kateqoriya kimi müəyyən edilir və dilin semantik-praqmatik strukturunda mühüm rol oynayır [Melchuk, 1998]. Tədqiqat göstərir ki, modallıq yalnız qrammatik vahid deyil, həm də danışanın hadisəyə münasibətini, qiymətləndirməsini və kommunikativ niyyətini əks etdirən praqmatik vasitədir. Bu səbəbdən eyni cümlə müxtəlif kontekstlərdə fərqli modal mənə qazana bilər. Tədqiqatda modallığın üç əsas tipi – deziderativ (istək bildirən), potensial (bacarıq və ya icazə bildirən) və debitativ (məcburiyyət və vaciblik bildirən) modallıq fərqləndirilir. Bu tiplər insanın daxili niyyəti, bacarığı və xarici məcburiyyətlə bağlı münasibətlərini ifadə edir. İngilis, alman, italyan, yapon, və nenets dilləri əsasında aparılan müqayisəli təhlil göstərir ki, modallıq universal dil hadisəsidir, lakin onun qrammatik ifadə vasitələri dillər üzrə fərqlənir (Bybee et al., 1994). Hind-Avropa dillərində modallıq əsasən modal feillər və analitik konstruksiyalarla ifadə olunur, yapon və nenets kimi dillərdə isə morfoloji şəkildə və derivasiya vasitələri daha çox istifadə edilir (Comrie, 1989; Payne, 1997). Tədqiqatın nəticələri göstərir ki, modallıq qrammatika, semantika və praqmatika arasında keçid yaradan əsas kateqoriyalardan biridir.

Açar sözlər: modallıq, deziderativ modallıq, potensial modallıq, debitativ modallıq, müqayisəli-tipoloji təhlil.

Introduction

In contemporary linguistic theory, grammatical categories are no longer viewed as purely formal structures but as systems encoding semantic and pragmatic relations. One such system is the category of the described fact and its participants, which encompasses grammatical mechanisms expressing how participants relate to events. Within this system, modality plays a central role. It

defines whether a participant is willing, able, or obliged to perform an action. As such, modality is not merely a verbal feature but a complex semantic domain reflecting speaker attitude, participant capacity, and event necessity.

Despite extensive research on modality in individual languages, there is still a need for a unified typological description of how modal meanings are structurally realized across languages. This thesis addresses this gap by comparing morphological and lexical strategies of modal expression. According to Melchuk (1998), the category of the described fact and its participants includes several inflectional subcategories that regulate the relationship between an event and its participants. These include modality, version, obviation, and government. Modality is particularly significant because it directly encodes the participant's involvement in the event from a semantic and pragmatic perspective. Modality is defined as a grammatical-semantic category that expresses the relation between a subject and a verbal event in terms of desire, ability, or obligation (Melchuk, 1998). Three fundamental modal types are identified:

1. **Desiderative Modality** – expresses the subject's intention or desire to perform an action.
2. **Potential Modality** – expresses the subject's ability or permission to perform an action.
3. **Debitative Modality** – expresses obligation or necessity imposed on the subject.

These categories form a semantic continuum from internal motivation to external necessity.

Desiderative modality expresses the subject's internal volition. In many languages, it is associated with verbs such as "want" or "wish," or morphological derivations. In English, desiderative meaning is expressed lexically: *I want to drink*, *She wants to go*. German and Italian show similar patterns: *Ich will gehen*; *Voglio partire*. These constructions require infinitival complements and are syntactically stable. Japanese represents a typologically different system where desiderative meaning is encoded morphologically through the suffix **-tai**: *nomu* → *nomitai* "want to drink", *miru* → *mitai* "want to see" (Comrie, 1989). An important restriction exists: first-person forms are natural, second-person forms are interrogative, and third-person forms require the auxiliary **-garu**, indicating observable desire [Kuno, 1973; Shibatani, 1990]. This demonstrates the interaction between modality and epistemic access.

Potential modality expresses capability, permission, or possibility. It reflects external or internal conditions enabling the subject to perform an action. English uses modal auxiliaries: *can* → ability, *may* → permission. German distinguishes: *können* "ability", *dürfen* "permission" (Helbig & Buscha, 2001). Italian uses: *potere* "can", *dovere* "must/should in some contexts" (Bazzanella, 1995). These forms are syntactically auxiliary-based and do not involve morphological affixation (Bybee et al., 1994).

Debitative modality expresses obligation, inevitability, or necessity. It indicates that the participant is required to perform an action regardless of personal will. This modal meaning is semantically close to English constructions such as *have to* or *must*. In English, debitative meaning is expressed analytically through modal verbs and periphrastic constructions: *I must leave now*, *You have to study*, *They need to work*. German similarly uses modal verbs: *Ich muss gehen*, *Du sollst arbeiten* (Dudenredaktion, 2016). These forms encode obligation as an external necessity imposed on the subject. A clear morphological realization of debitative modality is found in Nenets. In this language obligation is expressed through the suffix **-bcu**, which is attached to the verb stem: **Seda-bcu-v** – "I will have to sew this", **Seda-bcu-r** – "You will have to sew this", **Seda-bcu-da** – "He/She will have to sew this" (Payne, 1997; Ylikoski, 2012). This system demonstrates a fully

grammaticalized expression of necessity embedded in verbal morphology. Example in context: *Numda pevs'um'a, s'engga-bcu-n* "It started to get dark; you will have to stay here overnight".

Debitative modality represents the strongest form of modal necessity. Cross-linguistic evidence shows that Indo-European languages tend to express it lexically, while languages such as Nenets encode it morphologically. This confirms that obligation is a universal semantic category, but its grammatical realization varies typologically.

Modality is fundamentally participant-centered. It does not describe the event itself but the relation between the participant and the event: *He goes* (neutral fact), *He wants to go* (internal motivation), *He can go* (ability / permission), *He must go* (external necessity). Thus, modality modifies the participant's role in the event structure and influences interpretation at the discourse level. Despite structural variation, all languages encode the same semantic oppositions: desire vs non-desire, ability vs inability, obligation vs non-obligation. This confirms the universality of modal cognition in human language (Bybee et al., 1994).

Modality is closely connected with pragmatics because modal expressions often depend on context and speaker intention. The same modal form may convey different meanings in different communicative situations. For example: *You must leave now* (obligation / command) – *You must be tired* (logical conclusion / inference). Although the verb *must* is identical in both examples, the first sentence expresses deontic modality, while the second expresses epistemic modality. Similar examples: *Can you open the window?* (request) – *Can you swim?* (ability). These examples demonstrate that modality cannot be understood solely through grammar. Pragmatic context plays a decisive role in interpretation. Therefore, modality serves as an important bridge between sentence structure and discourse meaning.

Modern spoken language frequently simplifies traditional modal constructions. In colloquial English, forms such as *gonna*, *gotta*, and *wanna* are widely used: *I gotta go*, *You wanna come?* *He might wanna wait*. These reduced forms illustrate that modality remains highly productive in everyday communication. They also show how phonetic reduction and informal usage contribute to language change. In digital communication, modal expressions are often softened through adverbs and abbreviations: *maybe later*, *probably not*, *might do it*. Thus, modality continues to evolve in contemporary discourse.

Modality is one of the most difficult areas for foreign language learners because modal forms often combine grammar, semantics, and pragmatics simultaneously. For example, English learners frequently confuse: *must* vs *have to*, *can* vs *may*, *should* vs *ought to*. Although these forms may appear similar, they differ in degree of obligation, politeness, or speaker attitude. Understanding modality is therefore essential in second language teaching. It enables learners to communicate more naturally, politely, and accurately. For this reason, modality should receive special attention in grammar instruction and comparative language teaching.

Conclusion

This thesis has demonstrated that modality is a universal grammatical category embedded within the system of relations between the described fact and its participants. It expresses three primary semantic domains: desire, ability, and obligation. Cross-linguistic evidence shows that while modal meanings are universal, their structural realization varies significantly across languages. The findings confirm that modality operates at the intersection of grammar, semantics, and pragmatics. It is not merely an auxiliary feature of verbs but a core mechanism through which languages encode human intention, capability, and necessity. The analysis also demonstrates that

modality is dynamic rather than fixed. Historical change, pragmatic reinterpretation, and colloquial innovation continuously reshape modal systems. Consequently, modality remains one of the most productive and theoretically significant categories in linguistic research.

PROBLEMS ENCOUNTERED IN THE CONJUGATION OF VERBS WHOSE THIRD ROOT CONSONANT IS A GUTTURAL CONSONANT IN MODERN HEBREW FUTURE TENSE

Gunay Rashad SAFAROVA

Abstract: In our modern world languages have undergone many changes throughout history, passing through different stages of development. During this period, some languages have either completely fallen out of use and become dead languages (such as Latin), or ceased to be spoken for a certain time and were later revived as spoken languages. Hebrew is one of the languages that was once considered dead. It remained a dead language for nearly 3,000 years before being revived and transformed into a spoken language. In this process, Eliezer Ben-Yehuda played an undeniable role. In order to solve the problems that arose while turning a dead language into a spoken one, the Hebrew Language Committee was established in 1890 at his initiative. Its main goal was to spread the Hebrew language among more people and turn it into a unified means of communication across all social groups. Later, Ben-Yehuda began working on what became his most important project: compiling an explanatory Hebrew dictionary. He created dozens of new

words and terms and shared them with the broader public through the newspaper he published. Although Hebrew vocabulary at the time was not sufficient for modern needs, Ben-Yehuda started publishing a newspaper in Hebrew using the limited number of available words and expressions. Whenever he could not find a word to express a modern concept, he simply created one himself (מאירה מעדיה, להצליח בעברית א). For example:

Workplace (makom avoda – מקום עבודה)

Exhibition (ta'arukha – תערוכה)

Socks (garbayim – גרביים)

Towel (mageva – מגבה)

Word (mila – מילה)

Dictionary (milon – מילון), etc.

Keywords: Hebrew language, verbs, guttural letters, future tense

MÜASİR İBRANİ DİLİNDƏ GƏLƏCƏK ZAMANDA ÜÇÜNCÜ KÖK SAMİTİ BOĞAZ SAMİTİ OLAN FELLƏRİN TƏSRİFİNDƏ ÜZƏ ÇIXAN PROBLEMLƏR

Xülasə: Tarix boyu dillər daim dəyişmiş, müxtəlif inkişaf mərhələlərindən keçmişdir. Bəziləri zamanla gündəlik istifadədən çıxaraq ölü dillərə çevrilmişdir. Latin dili buna ən məşhur nümunədir. Bəziləri isə müəyyən dövrdə unudulsa da, sonradan yenidən dirçəldilmişdir. İvrit dili də bu taleyi yaşamış dillərdən biridir. Uzun əsrlər boyu yalnız dini mətnlərdə qorunan ivrit, təxminən 3000 il ölü dil kimi qaldıqdan sonra yenidən gündəlik danışılacaq dilinə çevrilmişdir.

Bu dirçəlişdə Eliezer Ben-Yehudanın rolu danılmazdır. O, ivritin müasir dövrdə yaşaması üçün böyük mübarizə aparmış, 1890-cı ildə İvrit Dil Komitəsinin yaradılmasına təşəbbüs göstərmişdir. Komitənin məqsədi ivriti geniş kütlələr arasında yaymaq və onu bütün sosial qruplar üçün vahid ünsiyyət vasitəsinə çevirmək idi.

Ben-Yehuda bununla kifayətlənməmiş, ən böyük layihəsinə–izahlı ivrit lüğətinin hazırlanmasına başlamışdır. Müasir anlayışları ifadə etmək üçün söz çatışmazlığı ilə üzləşəndə, o, yeni terminlər yaradırdı. Hətta qəzet nəşr edərək bu sözləri ictimaiyyətə təqdim edir, dilin gündəlik istifadəsini təşviq edirdi. Beləcə, ivrit dilinin söz ehtiyatı zənginləşir, müasir tələblərə cavab verən bir ünsiyyət vasitəsinə çevrilirdi. Məsələn:

İş yeri (makom avoda – מקום עבודה)

Sərgi (ta'arukha – תערוכה)

Corab (garbayim – גרביים)

Dəsmal (mageva – מגבה)

Söz (mila – מילה)

Lüğət (milon – מילון) və s.

Açar sözlər: ivrit dili, fellər, boğaz səsləri (qırtlaq samitləri), gələcək zaman

Introduction

In Hebrew, a verb is called *Poal* (פועל), and all verbs in the language consist of at least three root consonants. In addition, there are also verbs with four root consonants. Based on the characteristics of the consonants they contain; verbs are divided into two groups: regular and

irregular. Verbs that include guttural or weak consonants are called irregular verbs, while those without any guttural sounds are called regular verbs. Depending on whether the doer of the action is known or unknown, verbs can be in the active or passive voice. Here, we will examine the conjugation of active verbs in the future tense. Active verbs appear in the *binyanim* (verb patterns) Paal, Piel, Hifil, and Hitpaal. Verbs form the foundation of Modern Hebrew grammar and appear in different patterns. These patterns are called *binyan* (בִּנְיָן) in Hebrew and are referred to as “bab” in Azerbaijani. Most Hebrew verbs have three root consonants, while only a small number have four. There are seven main binyanim in Hebrew: three actives (Paal, Piel, Hifil), three passives (Nifal, Pual, Hofal), and one reflexive (Hitpaal). In total, there are 11 binyanim in Hebrew, but these seven are the most commonly used forms. Specifically (מאירה מעדיה, להצליח בעברית א):

1. נפעל – פעל: Paal and its passive form Nifal
2. פועל – פיעל: Piel and its passive form Pual
3. הופעל – הפעיל: Hifil and its passive form Hofal
4. התפעל: Hitpaal expresses the reflexive voice and does not have a passive form

However, verbs like these are never conjugated in the Paal pattern. Although they appear formally in the passive structure, semantically they move beyond passivity and express a reflexive meaning.

Brief Information About Guttural Consonants in Hebrew

In Hebrew, consonants are divided into different groups based on certain characteristics, one of which is the group of guttural consonants. This group includes five letters: א, ע, ה, ח, and sometimes ר — *alef*, *ayin*, *he*, *het*, and occasionally *resh*. These consonants do not fully follow some of the standard rules of Hebrew grammar, and for this reason, they give rise to many exceptions within the language's grammatical system.

1

Among these consonants, two-alef (א) and ayin (ע) -do not have independent sounds of their own and are pronounced only together with vowel markings. In general, all words in Hebrew begin and end with consonants. But how are words that begin with a vowel written? In such cases, the consonants alef or ayin are used as carriers. In other words, words that start with a vowel sound in Hebrew are written with either alef or ayin. Guttural consonants also influence the vowels that follow them to some extent. They do not take a dagesh (i.e., they cannot be doubled), and as a result, they often lengthen the vowel that comes after them. Since these consonants do not occur with a simple sheva, they instead take what are called compound shevas (ḥataf vowels). Additionally, guttural consonants can affect the vowel pattern of the definite article as well.

Future Tense in the Paal Binyan – זמן עתיד בבניין פעל

First, let us note that in Hebrew, the future tense is called *zman atid* (זמן עתיד). To conjugate verbs in the future tense, prefixes are used. These prefixes are added according to each personal pronoun:

מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 4¹

אני א	אסגור	אנחנו	נ	נסגור
אתה ת	תסגור	אתם/אתן ת	ת	תסגרו
את ת	תסגרי	הם/הן י	י	יסגרו
הוא י	יסגור			
היא ת	תסגור			

2

Pronunciation:

Ani esgor – I will close

Ata tisgor – you (masculine singular) will close

At tisgeri – you (feminine singular) will close

Hu yisgor – he will close

Hi tisgor – she will close

Anakhnu nisgor – we will close

Atem/Aten tisgeru – you (plural, m./f.) will close

Hem/Hen yisgeru – they (plural, m./f.) will close (מאירה מעדיה, להצליח בפועל ובתחביר)

Verbs in the *Paal* binyan, which serves as the base for other binyanim, are conjugated in the future tense in two main patterns: *Ef'ol* (אפעול) and *Ef'al* (אפעל). Verbs that do not contain any guttural consonants are conjugated according to the *Ef'ol* pattern in the future tense. These verbs are called *Gezrat HaShlemim* (complete/regular verbs) in Hebrew (מאירה מעדיה, להצליח בפועל ובתחביר). For example:

בניין פֻּעַל - גזרת השלמים						
ציווי		עתיד		הווה	עבר	שם גוף
		אפעל	אפעול			
למד!	כתוב!	אלמד	אכתוב	כותב	כתבתי	אני
למדי!	כתבי!	תלמד	תכתוב	כותבת	כתבת	אתה
		תלמדי	תכתבי		כתבת	את
		ילמד	יכתוב		כתב	הוא
		תלמד	תכתוב	כותבים	כתבה	היא
		נלמד	נכתוב		כתבנו	אנחנו
		תלמדו	תכתבו	כותבות	כתבתם/תן	אתם/תן
למדו!	כתבו!	ילמדו	יכתבו		כתבו	הם/הן
שם הפעולה : קתיבה		שם הפועל : לכתוב		השורש : כ.ת.ב.		

3

Conjugation of Verbs with Guttural Consonants in the Future Tense (Paal Binyan)

Verbs in which the second or third root consonant is a guttural consonant, as well as verbs expressing feelings or states, are conjugated in the future tense of the *Paal* binyan according to the

²³ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 8

³ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 8

Ef'al pattern. In general, Hebrew verbs consist of three root consonants, and there are many verbs in which the first, second, or third root consonant is a guttural consonant. These verbs are conjugated in different ways in the future tense depending on their structure. Let us first look at verbs whose first root consonant is a guttural consonant: When such verbs in the *Paal* binyan are conjugated in the future tense, a *sheva* cannot appear under the guttural consonant. Therefore, *hataf* vowels are used instead, which leads to changes in pronunciation. These verbs are called *Pei HaPual Keronit* in Hebrew. Thus, the presence of guttural consonants affects both the vowel pattern and the overall conjugation structure of the verb in the future tense (להצליח בפועל ובתחביר, מאירה מעדיה).

בניין פֿעַל - פ' הפועל גרונית

כאשר האות הראשונה של השורש היא א', ה', ח' או ע' יש שינוי בנטייה רק בזמן עתיד:
 אָסַף, אָהַפֹּד, אָחַשׁוּב, אָעֲבֹד

עבר	הווה	עתיד	ציווי
אָסַפְתִּי	אֹסֵף	אָעֲבֹד	אָסַף
אָסַפְתָּ	אֹסֵף	תָּעֲבֹד	אָסַף
אָסַפְתָּ	אֹסֵף	תָּעֲבֹד	אָסַף
אָסַף	אֹסֵף	נָעֲמֹד	אָסַף
אָסַפְהָ	אֹסֵפִים	נָעֲמֹד	אָסַף
אָסַפְנוּ	אֹסֵפִים	נָעֲמֹד	אָסַף
אָסַפְתֶּם/תן	אֹסֵפִים	תָּעֲבֹדוּ	אָסַף
אָסַפוּ	אֹסֵפִים	נָעֲמֹדוּ	אָסַף

השורש: א.ס.פ. שם הפועל: אָסַף שם הפעולה: חִקֵּה

Examples

Three verbs are given:

לֵאסֹף – to gather, to collect

לַעֲמֹד – to stand

לַחְקֹר – to investigate, to research

In each of these verbs, the first root consonant is a guttural consonant. Since a *sheva* cannot appear under a guttural consonant, *hataf-segol* or *hataf-patah* vowels are used instead. The third verb, לַחְקֹר (“to investigate, to research”), is an exception because its first root consonant is the letter *het* (ח). *Het* is the only guttural consonant under which a *sheva* is allowed. Therefore, in this verb, we can observe a *sheva* appearing under this consonant. As mentioned above, verbs in which the second or third root consonant is a guttural consonant are conjugated in the future tense of the *Paal* binyan according to the *Ef'al* pattern. These verbs are known in Hebrew as *Ayin HaPual Keronit*. For example, here is a case of verbs with a guttural second root consonant (להצליח בפועל ובתחביר, מאירה מעדיה):

בניין פֿעַל - ע' הפועל גרונית

כאשר האות השנייה של השורש (ע' הפועל) היא א', ה', ח', או ע', בעתיד הנטייה תהיה על משקל אפעל: אַעֲמֹל, אַחֲמֹל, אַבְחֹר, אַטַּעַם.

השורש: ב.ח.ר.

עבר	הווה	עתיד	ציווי
בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ	בּוֹחֵר, בּוֹחֶרֶת, בּוֹחֵרִים, בּוֹחֶרֶת	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ
בָּחַרְתָּ, בָּחַרְתָּ, בָּחַרְתָּ	בּוֹחֵר, בּוֹחֶרֶת, בּוֹחֵרִים, בּוֹחֶרֶת	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ
בָּחַרְתָּ, בָּחַרְתָּ, בָּחַרְתָּ	בּוֹחֵר, בּוֹחֶרֶת, בּוֹחֵרִים, בּוֹחֶרֶת	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ
בָּחַרְתָּ, בָּחַרְתָּ, בָּחַרְתָּ	בּוֹחֵר, בּוֹחֶרֶת, בּוֹחֵרִים, בּוֹחֶרֶת	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ
בָּחַרְתָּ, בָּחַרְתָּ, בָּחַרְתָּ	בּוֹחֵר, בּוֹחֶרֶת, בּוֹחֵרִים, בּוֹחֶרֶת	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ
בָּחַרְתָּ, בָּחַרְתָּ, בָּחַרְתָּ	בּוֹחֵר, בּוֹחֶרֶת, בּוֹחֵרִים, בּוֹחֶרֶת	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ	בָּחַרְתִּי, בָּחַרְתָּ, בָּחַרְתָּ

הווה:	פותח, פותחת, פותחים, פותחות
עתיד:	אפתח, תפתח, תפתחי, יפתח, תפתח, תפתחי, תפתחו, יפתחו
ציווי:	פתח! פתחי! פתחו!
שם הפועל:	לפתוח
שם הפעולה:	פתיחה

6

Examples of verbs expressing feelings, states, or qualities conjugated in the future tense according to the Ef'al pattern. These types of verbs are called Mishkal Katel (משקל קטל) in Hebrew. Verbs in this group typically describe emotions, states, or inherent qualities. In the future tense, they are conjugated according to the Ef'al model, following the specific grammatical patterns associated with this structure (מאירה מעדיה, להצליח בפועל ובתחביר).

משקל קטל (גדל)	
עבר:	גדלתי, גדלת, גדל, גדלה, גדלנו, גדלתם/תן, גדלו
עתיד:	משקל אפעל אגדל, תגדל, תגדלי, יגדל, תגדל, תגדלי, יגדלו
אך בהווה הפעלים:	
ישן, שמת, חסר, רעב, קטן, שמו, מלא, צמא נוטים במשקל קטל.	

7

It should be noted that in Hebrew there are four verbs in the Paal binyan which, despite not containing any guttural consonants, are still conjugated in the future tense according to the Ef'al pattern. These verbs are:

- למד – lamad – to learn
- לבש – lavash – to wear
- שכב – shakhav – to lie down
- רכב – rakhav – to ride (a horse)

For example:

⁵ 12 מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד

⁶ 13 מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד

⁷ 16 מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד

It should be noted that in Hebrew, verbs whose third root consonant ends with the letter *he* (ה) are conjugated differently from other verbs. In the *Paal* binyan, when verbs ending in *he* are conjugated in the past tense, the final *he* is dropped and replaced by a *yod* (י). In Modern Hebrew, although some changes have occurred, this *yod* still appears in the past tense forms. This change has a phonological reason: the letter *he* is a guttural consonant, and its pronunciation can create difficulties in articulation in the past tense. Replacing it with *yod* makes pronunciation smoother. For example, the verb **לבנות** - *livnot* ("to build") contains *he* as its third root consonant. In the past tense, it is conjugated as follows:

- בניתי – *baniti* (I built)
- בנית – *banita* (you built, m.s.)
- בנית – *banit* (you built, f.s.)
- בנה – *bana* (he built)
- בנתה – *banta* (she built)
- בנינו – *baninu* (we built)
- בניתם – *banitem* (you built, m.pl.)
- בניתן – *baniten* (you built, f.pl.)
- בנו – *banu* (they built, m./f.)

The letters shown in bold correspond to the *yod* consonant, which functions both as a consonant ("y" sound) and as a vowel indicator ("i" sound). In verbs ending with *he*, this *yod* replaces the final *he* and represents the vowel "i" in pronunciation. If we were to conjugate these verbs without this replacement, as with regular Paal verbs, pronunciation would become difficult and unnatural:

- בנהתי – *banahiti* (I built)
- בנהת – *banahita* (you built, m.s.)
- בנהת – *banahit* (you built, f.s.)
- בנה – *bana* (he built)
- בנתה – *banta* (she built)
- בנהנו – *banahnu* (we built)
- בנהתם – *banahitem* (you built, m.pl.)
- בנהתן – *banahiten* (you built, f.pl.)

⁸ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 8

בנו – *banu* (they built, m./f.)

In this form, we can clearly see how pronunciation becomes heavy and difficult, creating articulation issues. To avoid this problem, Modern Hebrew uses the *yod* replacement, a feature that historically also appears in earlier forms of Hebrew, such as Qumran Hebrew. This rule applies to all verbs whose third root consonant is *he*. Next, we can examine how such verbs behave in the future tense (מאירה מעדיה, להצליח בפועל ובתחביר).

בניין פֻעַל - גזרת ל"י/ל"ה	
עבר:	קניתי, קנית, קנה, קנתה, קנינו, קניתם/תן, קנו
הווה:	קונה, קונה, קונים, קונות
עתיד:	אקנה, תקנה, תקני, יקנה, תקנה, תקנו, יקנו
ציווי:	קנה!, קני!, קנו!
שם הפועל:	לקנות
שם הפעולה:	קנייה

Pronunciation:

Ani ekne – I will buy

Ata tikne – you (masculine singular) will buy

At tikni – you (feminine singular) will buy

Hu yikne – he will buy

Hi tikne – she will buy

Anakhnu nikne – we will buy

Atem/Aten tiknu – you (plural m./f.) will buy

Hem/Hen yiknu – they (plural m./f.) will buy

In Hebrew, there are verbs in the *Paal* binyan that appear to consist of two root consonants, although they actually originate from three root consonants. These are known as *Ayin HaPual Yod* or *Ayin HaPual Vav* verbs. When conjugating such verbs in the future tense, we refer to their infinitive form. The infinitive prefix *lamed* (ל-) is removed, and the remaining stem takes the appropriate future tense prefixes according to the personal pronouns (מאירה מעדיה, להצליח בפועל) (ובתחביר).

בניין פֻעַל - גזרת ע"ו/ע"י

מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 24⁹

מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 22¹⁰

If, in this type of verb, the third root consonant is the letter *het* (ה), then a *pataḥ* vowel (a short "a" sound) is written under the *het*. This is called *pataḥ furtivum*, and it is actually pronounced before the *het* consonant. For example:

לנוח – *lanuakh* – to rest, to relax

Future tense forms:

אנוח – *anúakh* – I will rest

תנוח – *tanúakh* – you (masc. sg.) will rest

תנוחי – *tanúxi* – you (fem. sg.) will rest

ינוח – *yanúakh* – he will rest

תנוח – *tanúakh* – she will rest

ננוח – *nanúakh* – we will rest

תנוחו – *tanúxu* – you (plural m./f.) will rest

ינוחו – *yanúxu* – they will rest

In these forms, the *pataḥ furtivum* appears under the final *het*, but it is pronounced before the consonant, affecting the natural flow of pronunciation in Hebrew.

Future Tense in the Piel Binyan – זמן עתיד בבניין פיעל

In Hebrew, the second active verb pattern (binyan) is known as Piel (פיעל). The future tense of the Piel binyan is formed using the same personal prefixes as in other binyanim in the future tense. These prefixes are added to the verb stem according to the subject (person, gender, and number), while the internal vowel pattern of the verb follows the characteristic Piel structure, which typically involves a strengthened (often doubled) middle consonant (מאירה מעדיה, להצליח בפועל) (ובתחביר).

השורש: ד.ב.ר.		שם הפועל: לדבר		שם הפעולה: דיבור

11

Pronunciation:

Ani adaber – I will speak

Ata tedaber – you (masculine singular) will speak

At tedabri – you (feminine singular) will speak

Hu yedaber – he will speak

Hi tedaber – she will speak

Anakhnu nedaber – we will speak

Atem/Aten tedabru – you (plural m./f.) will speak

Hem/Hen yedabru – they (plural m./f.) will speak

Conjugation of Verbs with Guttural Consonants in the Future Tense (Piel Binyan)

In the *Piel* binyan, verbs whose second root consonant is a guttural consonant are conjugated in the future tense according to a specific pattern. Because guttural consonants influence vowel behavior, the standard *Piel* vowel structure may undergo changes, especially in syllable formation and vowel placement. These verbs are conjugated using the same personal prefixes as in other future tense forms, but the internal structure of the verb adapts to accommodate the guttural consonant. As a result, certain vowel adjustments occur to maintain ease of pronunciation. Below is the general pattern used for this type of conjugation (according to the relevant table):

בניין פיעל - ע' הפועל גרונית (ה, ח, ע, א, ר)

כאשר ע' הפועל ה', ח', או ע' הנטייה היא :

שם גוף	עבר	הווה	עתיד	ציווי
אני	ניִהְלֵתִי	מִנְהֵל	אֶנְהֵל	
אתה	ניִהְלֶתָּ		תִּנְהַל	נְהַלֵּ!
את	ניִהְלֶתְךָ	מִנְהַלְתְּ	תִּנְהַלִּי	נְהַלִּי!
הוא	ניִהְלֶה		יִנְהַל	
היא	ניִהְלֶהָ	מִנְהַלִּים	תִּנְהַל	
אנחנו	ניִהְלֻנוּ		נִנְהַל	
אתם/תן	ניִהְלַתְּם/תֵּן	מִנְהַלֹּת	תִּנְהַלּוּ	נְהַלּוּ!
הם/הן	ניִהְלּוּ		יִנְהַלּוּ	

השורש : נ.ה.ל. שם הפועל : לנהל שם הפעולה : ניהול

12

As can be seen, the only difference between these verbs and regular verbs is that in the future tense, since the second root consonant is a guttural consonant, instead of a sheva, a *ḥataf pataḥ* is used under that consonant. In the *Piel* binyan, verbs whose third root consonant is a guttural consonant (ayin or *ḥet*) are conjugated according to the *Piel-Lamed HaPual Keronit* pattern (with ayin and *ḥet*):

בניין פיעל - ל' הפועל גרונית (ע, ח)

שם גוף	עבר	הווה	עתיד	ציווי
אני	בִּיצַעְתִּי	מִבְצֵעַ	אֶבְצַע/אֶבְצַעַ	
אתה	בִּיצַעְתָּ		תִּבְצַע	בְּצַעֵ!
את	בִּיצַעְתְּךָ	מִבְצַעְתְּ	תִּבְצַעִי	בְּצַעִי!
הוא	בִּיצַעַ (בִּיצַעַ)		יִבְצַע	
היא	בִּיצַעָה	מִבְצַעִים	תִּבְצַעַ	
אנחנו	בִּיצַעְנוּ		נִבְצַעַ	
אתם/תן	בִּיצַעְתְּם/תֵּן	מִבְצַעֹת	תִּבְצַעוּ	בְּצַעוּ!
הם/הן	בִּיצַעוּ		יִבְצַעוּ	

השורש : ב.צ.ע. שם הפועל : לבצע שם הפעולה : ביצוע

13

In the *Piel* binyan, if the third root consonant of a verb is one of the guttural consonants (*ayin* or *ḥet*), a *pataḥ* (short “a” vowel) is written under the final consonant. This is known as *pataḥ furtivum*, and it is pronounced before the consonant, especially in the case of *ḥet*. For example, with the verb:

לבצע – *levatsea* – to carry out, to execute

¹² מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 43

¹³ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 46

Future tense forms:

- אבצע – *avatsea* – I will carry out
 תבצע – *tevatsea* – you (masc. sg.) will carry out
 תבצעי – *tevatsi* – you (fem. sg.) will carry out
 יבצע – *yevatsea* – he will carry out
 תבצע – *tevatsea* – she will carry out
 נבצע – *nevatsea* – we will carry out
 תבצעו – *tevatsu* – you (plural m./f.) will carry out
 יבצעו – *yevatsu* – they will carry out

Here, the *pataḥ furtivum* appears under the final guttural consonant and is pronounced before it, which helps maintain natural and fluid pronunciation in Hebrew.

בניין הפעיל (זמן עתיד) – Future Tense in the Hifil Binyan

In Hebrew, another active verb pattern (*binyan*) is called *Hifil* (הפעיל). The *Hifil* binyan is typically used to express causative actions, meaning that the subject causes someone else to perform an action. The future tense in the *Hifil* binyan is also formed using the same personal prefixes as in other future tense forms. These prefixes are added to the verb stem according to the subject (person, gender, and number).

בניין הפעיל - שלמים				
שם גוף	עבר	הווה	עתיד	ציווי
אני	הפסקתי	מפסיק	אפסיק	
אתה	הפסקת		תפסיק	הפסק!
את	הפסקת	מפסיקה	תפסיקי	הפסיקי!
הוא	הפסיק		יפסיק	
היא	הפסיקה	מפסיקים	תפסיק	
אנחנו	הפסקנו		נפסיק	
אתם/תן	הפסקתם/תן	מפסיקות	תפסיקו	הפסיקו!
הם/הן	הפסיקו		יפסיקו	
השורש: פ.ס.ק.		שם הפועל: להפסיק		שם הפעולה: הפסקה

14

Conjugation of Verbs with Guttural Consonants in the Future Tense (Hifil Binyan)

In the *Hifil* binyan, verbs whose first root consonant is a guttural consonant (especially *alef*, *ayin*, or *het*) are called *Pei HaPual Keronit* (פ"ה גרונית). These verbs are conjugated in the future tense according to a specific pattern, since guttural consonants do not allow a *sheva* under them and therefore cause vowel changes in the prefix position. As a result, instead of the standard vowel structure, *hataf* vowels or modified vowel patterns are used, and the verb form adapts to ensure smooth pronunciation. The conjugation follows the table below (מאירה מעדיה, להצליח בפועל ובתחביר):

בניין הפעיל - פ' הפועל גרונית (א, ע, ח)

שם גוף	עבר	הווה	עתיד	ציווי
אני	האמנתי	מאמין	אאמין	האמן!
אתה	האמנת	מאמין	תאמין	האמיני!
את	האמנת	מאמינה	תאמיני	
הוא	האמין	מאמין	יאמין	
היא	האמינה	מאמינים	תאמין	
אנחנו	האמנו	מאמינות	נאמין	האמינו!
אתם/תן	האמנתם/תן		תאמינו	
הם/הן	האמינו		יאמינו	

השורש: א.מ.ן שם הפועל: להאמין שם הפעולה: אמונה

15

Pronunciation:

- אאמין – *a'amin* – I will believe
 תאמין – *ta'amin* – you (masc. sg.) will believe
 תאמיני – *ta'amini* – you (fem. sg.) will believe
 יאמין – *ya'amin* – he will believe
 תאמין – *ta'amin* – she will believe
 נאמין – *na'amin* – we will believe
 תאמינו – *ta'aminu* – you (plural m./f.) will believe
 יאמינו – *ya'aminu* – they will believe

As can be seen, the only difference between these verbs and regular verbs is that in the future tense, when the first root consonant is a guttural consonant, a *sheva* cannot be used under that consonant. Instead, a *hataf patah* is used. However, if the first root consonant is the guttural consonant *het* (ח), then a *sheva* is used under it, since *het* is the only guttural consonant that allows a *sheva*. This distinction affects pronunciation and helps maintain the phonological rules of Hebrew in verb conjugation.

השורש: ח.ל.ט

עבר:	החלטתי, החלטת, החליט, החליטה, החלטנו, החלטתם/תן, החליטו
הווה:	מחליט, מחליטה, מחליטים, מחליטות
עתיד:	אחליט, תחליט, תחליטי, יחליט, תחליטו, תחליטו, יחליטו
ציווי:	החלט! החליטי! החליטו!
שם הפועל:	להחליט.
שם הפעולה:	החלטה.

16

As can be seen from the table, the first root consonant of this verb is *het* (ח), and *het* is the only guttural consonant under which a *sheva* is allowed. Therefore, in this example, we observe a *sheva* appearing under this consonant. In the *Hifil* binyan, verbs whose third root consonant is a guttural consonant (*ayin* or *het*) are conjugated according to the *Hifil – Lamed HaPual Keronit* pattern (with *ayin* and *het*):

בניין הפעיל - ל' הפועל גרונית (ע, ח)

שם גוף	עבר	הווה	עתיד	ציווי
אני	הבטחתי	מבטיח	אבטיח	הבטח!
אתה	הבטחת	מבטיח	תבטיח	הבטיחי!
אתה	הבטחת	מבטיחה	תבטיחי	
הוא	הבטיח	מבטיח	יבטיח	
היא	הבטיחה	מבטיחים	תבטיח	
אנחנו	הבטחנו	מבטיחות	נבטיח	הבטיחו!
אתם/תן	הבטחתם/תן		תבטיחו	
הם/הן	הבטיחו		יאבטיחו	

השורש: ב.ט.ח שם הפועל: להבטיח שם הפעולה: הבטחה

17

¹⁵ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 52

¹⁶ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 52

In the *Hifil* binyan, if the third root consonant of a verb is one of the guttural consonants (*ayin* or *het*), a *pataḥ* (short “a” vowel) is written under the final consonant. This is known as *pataḥ furtivum*, and it is pronounced before the consonant, especially in verbs ending with *het*. For example:

להבטיח – *lehavtiakh* – to promise

Future tense forms:

אבטיח – *avtiakh* – I will promise

תבטיח – *tavtiakh* – you (masc. sg.) will promise

תבטיחי – *tavtixi* – you (fem. sg.) will promise

יבטיח – *yavtiakh* – he will promise

תבטיחי – *tavtiakh* – she will promise

נבטיח – *navtiakh* – we will promise

תבטיחו – *tavtixu* – you (plural m./f.) will promise

יבטיחו – *yavtixu* – they will promise

Here, the *pataḥ furtivum* appears under the final guttural consonant and is pronounced before it, ensuring smoother and more natural pronunciation in Hebrew.

בניין התפעל (זמן עתיד) – Future Tense in the Hitpael Binyan

In Hebrew, the *Hitpael* binyan (התפעל) mainly expresses reflexive actions, meaning that the subject performs an action on themselves. The future tense in the *Hitpael* binyan is also formed using the same personal prefixes as in other binyanim. These prefixes are added to the verb stem according to the subject (person, gender, and number), while the characteristic *hit-* prefix of the binyan remains part of the structure of the verb (להצליח בפועל ובתחביר). (מאירה מעדיה, להצליח בפועל ובתחביר).

בניין התפעל - שלמים

אנחנו	התלבשנו	מתלבשות	נתלבש	
אתם/תן	התלבשתם/תן		תתלבשו	התלבשו!
הם/הן	התלבשו		יתלבשו	
השורש : ל.ב.ש.		שם הפועל : להתלבש		שם הפעולה : התלבשות

18

Conjugation of Verbs in the Hitpael Binyan with First Root Consonants Zayin, Samekh, Sin, Shin, and Tsade in the Future Tense

¹⁷ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 55

¹⁸ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 58

בניין התפעל - פ' הפועל: ז', ס', צ', ש', שי'

שם גוף	עבר	הווה	עתיד	ציווי
אני	הצטלמתי	משתמש	אשתכל	הצטלם
אתה	הצטלמת	משתמשת	תשתכל	השתמשו
את	הצטלמת	משתמשת	תשתכלי	
הוא	הצטלם		ישתכל	
היא	הצטלמה	משתמשים	תשתכל	
אנחנו	הצטלמנו		נשתכל	
אתם/תן	הצטלמתם/תן	משתמשות	תשתכלו	השתכלו
הם/הן	הצטלמו		ישתכלו	

השורש: צ.ל.ם שם הפועל: להצטלם שם הפעולה: השתכלות

19

In the *Hitpa'el* binyan, verbs whose first root consonant is one of the sibilant consonants (*zayin* ז, *samekh* ס, *sin* ש, *shin* ש, and *tsade* צ) are conjugated differently from regular verbs. In these cases, phonological assimilation occurs, and the consonants within the word undergo a kind of positional change with the *Hitpa'el* prefix *hit-* (הת-). Specifically, the following changes take place:

If a verb begins with *sin/šin* (ש/ס) or *samekh* (ס), these consonants exchange positions with the *tav* (ת) of the *Hitpa'el* prefix:

להשתמש – *lehištameš* – to use

להסתדר – *lehistader* – to get organized / to get along

If a verb begins with *tsade* (צ), it also exchanges position with the *tav* of the prefix, and the *tav* changes into a *tet* (ט):

להצטלם – *lehitstalem* – to have a photo taken / to be photographed

If a verb begins with *zayin* (ז), it exchanges position with the *tav* of the prefix, and the *tav* changes into a *dalet* (ד):

להזדקן – *lehizdaken* – to grow old

Thus, in these cases, the structure of the *Hitpa'el* binyan is modified due to phonological assimilation, ensuring smoother pronunciation while preserving the reflexive meaning of the verb.

שימו לב! ה-ת' של בניין התפעל מחליפה את מקומה ו/או משתנה בגלל קשיי הגייה:

1. כשפ' הפועל היא ס - ס.ב.ל - השתכל (תס < סת)
2. כשפ' הפועל היא ש - ש.מ.ש - השתמש (תש < שת)
3. כשפ' הפועל היא ש - ש.ב.ר - השתכר (תש < שרת)
4. כשפ' הפועל היא צ - צ.ל.ם - הצטלם (תצ < צט)
5. כשפ' הפועל היא ז - ה.ז.ק.ן - הזדקן (תז < זד)

20

As can be seen from the table, verbs that begin with the consonants listed above undergo specific changes in the *Hitpa'el* binyan, and these changes are also reflected in the future tense.

Conclusion

¹⁹ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 60

²⁰ מאירה מעדיה, להצליח בפועל ובתחביר, 2004, ישראל, עמוד 60

In the Northwest Canaanite branch of the Semitic language family, which includes Hebrew, the concept of tense, the *binyanim* (verb patterns), their active and passive forms, and the conjugation of different verb forms in the future tense have always been relevant topics. Even today, these issues remain important. In the study of verbs that played a key role in the development of Modern Hebrew, reference has been made primarily to Hebrew textbooks, various digital resources in Hebrew, as well as ancient religious texts written in Biblical Hebrew. In Modern Hebrew, verbs-especially those containing guttural consonants and their conjugation in the future tense-are of particular importance. Studying these features of the language helps learners acquire it more easily and effectively. In general, it should be noted that research conducted in any language-learning process increases the effectiveness of teaching, contributes to the training of highly qualified specialists, and helps students develop the ability to conduct scientific analysis and make generalizations.

FEATURES OF SAME-ROOT DERIVATIONAL ANTONYMS IN THE AZERBAIJANI LANGUAGE

Gulnara Shamsaddin NASIBOVA

Doctoral candidate, senior lecturer, Ganja State University

E-mail: gulnarnsibova@gmail.com

ORCID ID: 0000-0001-8255-2660

Abstract: Derivational antonyms with a common root are formed in the Azerbaijani language from both nouns and verbs through the use of relevant affixes. In the formation of such antonyms, affixes that generate opposite meanings play a central role. The emergence of these affixes in the language can be explained by the insufficiency of expressing all types of oppositions and contradictions solely through lexically independent antonymic pairs. As the number and complexity of oppositions in the surrounding environment increased, it became inadequate to represent them only by paired lexical antonyms. Consequently, the participation of derivational affixes became necessary for conveying such semantic contrasts more effectively.

Although the origin of antonyms can be traced back to monosyllabic bases, in the course of the typological development of the language, they have undergone an evolutionary process in accordance with the laws of human cognition, continuing their development in derived forms. At the same time, elements

belonging to the monosyllabic stage have preserved their qualitative features. As products of the pre-affixational stage, they retain a certain degree of universality in relation to other languages.

In the Azerbaijani language, the highly productive system of suffixation has significantly influenced the formation of new antonyms. As a result, numerous derivational antonym pairs with a common root have emerged, such as *dağlı-dağsız* (with mountains - without mountains), *yağlı-yağsız* (fatty-fat-free), *adlı-adsız* (named - unnamed), *atalı-atasız* (with a father - without a father), *meşəli-meşəsiz* (forested - without forest), *dayaqlı-dayaqsız* (supported - unsupported), *qorxulu-qorxusuz* (fearful - fearless), and *dadlı-dadsız* (tasty - tasteless).

Keywords: Azerbaijani language, antonyms, semantic features, comparative analysis

AZERBAIJAN TÜRKÇESİNDE AYNI KÖKE DAYALI TÜRETME YOLUYLA OLUŞAN KARŞIT ANLAMLI SÖZCÜKLERİN ÖZELLİKLERİ

Gülnare Şemseddin NESİBOVA

Doktora Adayı, Kıdemli Öğretim Görevlisi, Gence Devlet Üniversitesi

E-mail: gulnarnesibova@gmail.com

ORCID ID: 0000-0001-8255-2660

Özet: Aynı kökten türemiş karşıt anlamlı sözcükler Azerbaycan Türkçesinde hem isimlerden hem de fiillerden ilgili ekler aracılığıyla oluşturulmaktadır. Bu tür antonimlerin oluşumunda, birbirine zıt anlam kazandıran ekler önemli bir rol oynar. Dilde bu tür eklerin ortaya çıkışı, karşıtlık ve çelişkilerin yalnızca bağımsız karşıt anlamlı sözcüklerle tam olarak ifade edilememesiyle açıklanabilir. İnsanı çevreleyen ortamda karşıtlık ve çelişkilerin artması, bunların yalnızca sözlüksel antonim çiftleriyle ifade edilmesini yetersiz kılmıştır. Bu nedenle, söz konusu anlamların aktarımında türetme eklerinin kullanımı zorunlu hâle gelmiştir.

Her ne kadar antonimlerin kökeni tek heceli yapılara dayansa da, dilin tipolojik gelişim sürecinde bunlar düşünce yasalarına uygun biçimde evrim geçirerek türemiş biçimlerde varlıklarını sürdürmüştür. Bununla birlikte, tek heceli döneme ait unsurlar da niteliklerini korumuştur. Bu unsurlar, ek öncesi dönemin ürünü olarak, diğer dillerle belirli bir evrensellik ilişkisini muhafaza etmektedir.

Azerbaycan Türkçesinde yüksek derecede üretken olan son ek sistemi, yeni antonimlerin oluşum sürecine önemli ölçüde etki etmiştir. Bunun sonucunda aynı kökten türemiş çok sayıda antonim çifti ortaya çıkmıştır. Örneğin *dağlı-dağsız*, *yağlı-yağsız*, *adlı-adsız*, *atalı-atasız*, *meşeli-meşesiz*, *dayanaklı-dayanaksız*, *korkulu-korkusuz*, *tatlı-tatsız* gibi.

Anahtar kelimeler: Azerbaycan Türkçesi, karşıt anlamlı kelimeler, semantik özellikler, karşılaştırmalı analiz

Introduction

The emergence of antonyms has occurred in accordance with the human need to reflect opposing relationships formed in connection with objects and phenomena in the surrounding world. The relationship between humans and their environment has never reflected one-dimensional or unidirectional concepts. Therefore, all information has been realized within the framework of positive concepts. Human-environment relations constantly encounter oppositions and contradictions. Language, in turn, forms appropriate words to express these.

As S. Jafarov writes:

“The reason for the emergence of antonymic words in language is the contradictory nature of the world that surrounds us. These contradictions, which form the basis of development, manifest themselves in language through antonyms. Therefore, antonyms constitute one of the most

interesting parts of the vocabulary” (Jafarov, 2007, p. 35).

As indicated here, the unity and struggle of opposites occupy a leading place in the development of the material world. Indeed, without forces of action and counteraction, processes of development in nature and society could not occur. In other words, it is impossible to imagine the development of natural and social phenomena outside the influence of contradictions. The functionality of linguistic information lies in representing relations of action and counteraction through appropriate lexical units.

Regarding the formation and role of antonyms in language, H. Hasanov writes:

“The development and formation of antonyms in language are connected with the contradictory nature of the phenomena and actions to which they belong. This contradiction is expressed through words with opposite meanings. For this reason, they act as the main factor in the emergence of antonyms. Human life experience also plays a role here. People perceive the characteristics and qualities of objects and phenomena in the material world, distinguish them from one another. The concepts expressed by antonyms are related to human work activity, lifestyle, spiritual world, and their attitude toward the surrounding environment” (Hasanov, 2007, p. 5).

B. Khalilov also explains the emergence of antonyms in relation to human life experience. He writes:

“...Antonyms have existed since the formation of human society. As members of society began to comprehend their environment, they started to distinguish good from bad, bitter from sweet, hot from cold, friend from enemy, and light from darkness. The differentiation of such concepts in language has mainly been expressed through complete antonyms” (Khalilov, 2008, p. 190).

Features of Same-Root Derivational Antonyms

Same-root derivational antonyms are formed from both nouns and verbs through the use of appropriate affixes. In their formation, affixes that create opposite meanings play a crucial role. The emergence of such affixes in the language can be explained by the inability to fully express oppositions and contradictions through separate lexical antonyms alone.

The abundance and increasing complexity of oppositions and contradictions in the surrounding environment could not always be conveyed through paired antonymic words. Therefore, the use of specific affixes became necessary to express these concepts. As a result, in the formation of certain groups of antonyms derived from the same root, the participation of affixes became essential.

This tendency in language should not be considered accidental. Rather, it can be viewed as the result of the necessity to express root-internal oppositional and contradictory meanings, characteristic of genetic antonyms, through morphological means, particularly affixation.

In the Azerbaijani language, same-root antonyms formed within nominal parts of speech are created with the participation of the adjectival suffix *-lı* (*-li*, *-lu*, *-lü*) and its opposite *-sız* (*-siz*, *-suz*, *-süz*). M. Huseynzade explains the word-forming function of the suffix *-lı* as follows: “By means of the suffix *-lı*, adjectives expressing quality, taste, place affiliation, family relations, quantitative abundance, character, features, etc. are formed: *güclü* (strong person), *marahlı* (interesting issue), *sədaqətli* (loyal friend), *şüurlu* (conscious work), *üzürlü* (valid reason), *istedadlı* (talented poet); through the suffix *-sız*, adjectives expressing the opposite meanings created by *-lı*, that is, negative meanings, are formed: *dadsız* (tasteless fruit), *taktikasız* (tactless person), *prinsipsiz* (unprincipled action), *susuz* (waterless place), *üzümsüz* (vineyard without grapes)” (Huseynzade, 2007, p. 68).

S. Jafarov identifies six semantic types of word formation through the suffix *-li⁴*, and notes that through the suffix *-siz⁴*, adjectives indicating the absence of an object, and sometimes attributive nouns, are formed (*evsiz, dilsiz, adamsiz, yağsız, acısız, susuz*) (Jafarov, 2007, p. 157).

In Azerbaijani, the adjectival suffixes *-li⁴* and *-siz⁴* primarily attach to nouns and pronouns to form antonymous adjectives. These derived adjectives expressing opposition, when approached from the perspective of contrast, become antonymic pairs. When attached to nouns: *bağ-bağlı-bağsız; dağ-dağlı-dağsız, yağ-yağlı-yağsız, ad-adlı-adsız, ana-analı-anasız, ata-atalı-atasız, meşə-meşəli-meşəsiz, dayaq-dayaqlı-dayaqsız, qorxu-qorxulu-qorxusuz, çiçək-çiçəkli-çiçəksiz, dəstə-dəstəli-dəstəsiz, qonaq-qonaqlı-qonaqsız, məhsul-məhsullu-məhsulsuz, kömək-köməkli-köməksiz*.

When attached to pronouns: *mən-mənli-mənsiz, sən-sənli-sənsiz, o-onlu-onsuz; bu-bunlu-bunsuz*.

These suffixes cannot attach to all nouns in terms of their contrast-forming function, because not all nouns inherently possess contrast. These suffixes can only be attached to those words in which a mutual notion of contrast can be expressed. In this sense, the suffixes *-li⁴* and *-siz⁴* cannot be uniformly attached to all pronouns either, and do not always create contrast.

A certain group of same-root antonyms is formed by attaching the negative suffix to verbs. Same-root antonyms formed to express verbal contrasts are considered grammatical antonyms. The use of such antonyms, especially in spoken language and literary texts, serves to convey contrasts with emotionality and rhetorical force. The expression of verbal contrasts occurs through the use of grammatical suffixes of the verb together with the negative suffix. This word model is formed by the negative suffix preceding, and the grammatical paradigm suffix following. As a rule, the negative suffix is used in the second component. These can be generalized within the following grammatical paradigms:

With the definite past tense suffix: *gəldi-gəlmədi, aldı-almadı, gördü-görmədi, bildi-bilmədi, qandı-qanmadı, qaldı-qalmadı, durdu-durmadı, bildi-bilmədi, oyandı-oyanmadı, dayandı-dayanmadı, başladı-başlamadı, alışdı-alışmadı, döndü-dönmədi, dindi-dinmədi, atdı-atmadı, çıxdı-çıxmadı, qaldı-qalmadı, yandı-yanmadı*.

With the narrative past tense suffix: *görüb-görməyib, alıb-almayıb, gəlib-gəlməyib, çıxıb-çıxmayıb, qalıb-qalmayıb; görüb-görməmiş, alıb-almamış, bilib-bilməmiş, yazıb-yazmamış, gəlib-gəlməmiş, çıxıb-çıxmamış, qalıb-qalmamış*.

With the present tense suffixes: *görür-görmür, gəlir-gəlmir, alır-almır, bilir-bilmir, qanır-qanmır, qalır-qalmır, durur-durmur, bilir-bilmir, oynar-oynamır, dayanır-dayanmır, başlayır-başlamır, alışır-alışmır, dönür-dönmür, dinir-dinmir, yanır-yanmır*.

With the definite future tense suffixes: *alacaq-almayacaq, görəcək-görməyəcək, gələcək-gəlməyəcək, duracaq-durmayacaq, biləcək-bilməyəcək, oynacaq-oynamayacaq, dayanacaq-dayanmayacaq, başlayacaq-başlamayacaq, dönəcək-dönməyəcək, dinəcək-dinməyəcək, yanacaq-yanmayacaq*.

With the indefinite future tense suffixes: *alar-almaz, görər-görməz, gələr-gəlməz, durar-durmaz, biləcək-bilməyəcək, oynacaq-oynamayacaq, dayanacaq-dayanmayacaq, başlayacaq-başlamayacaq, dönəcək-dönməyəcək, dinəcək-dinməyəcək, yanacaq-yanmayacaq*.

With the imperative form of the verb: *alım-almayım, görüm-görməyim, gəlim-gəlməyim; alaq-almayaq, görək-görməyək, gələk-gəlməyək, duraq-durmayaq; gəlsin-gəlməsin, alsın-almasın, bilsin-bilməsin, görsün-görməsin, yazsın-yazmasın, dinsin-dinməsin*.

With the optative (desiderative) modal form of the verb: *ala-almaya, gələ-gəlməyə, bilə-*

bilməyə, görə-görməyə, dinə-dinməyə, yaza-yazmaya, oyana-oyanmaya, dura-durmaya, dönə-dönməyə, qala-qalmaya, çıxsa-çıxmaya, keçə-keçməyə.

With the necessitative modal form of the verb: *almalı-almamalı, görməli-görməməli, bilməli-bilməməli, dinməli-dinməməli, deməli-deməməli, açmalı-açmamalı, çıxmalı-çıxmamalı, baxmalı-baxmamalı.*

With the obligative modal form of the verb: *alası-almayası, görəsi-görməyəsi, biləsi-bilməyəsi, dinəsi-dinməyəsi, çıxası-çıxmayası, baxası-baxmayası, deyəsi-deməyəsi.*

With the conditional modal form of the verb: *alsa-almasa, görsə-görməsə, bilsə-bilməsə, dinsə-dinməsə, çıxsə-çıxmasə, baxsə-baxmasə, desə-deməsə, yesə-yeməsə.*

Since verbs constitute a dynamic part of speech, they are capable of expressing more subtle shades of meaning in language. Therefore, within verbal paradigms, notions of opposition or contradiction can be expressed both in simple forms and through more complex constructions. For example, in the definite past tense paradigm, oppositions and contradictions expressed in complex constructions appear in the following forms: *aldı-aldı, almadı-almadı; gəldi-gəldi, gəlmədi-gəlmədi; gördü-gördü, görmədi-görmədi; bildi-bildi, bilmədi-bilmədi; dedi-dedi, demədi-demədi; baxdı-baxdı, baxmadı-baxmadı.*

In the narrative past tense paradigm, the following expressions are used: *alıb-alıb, almayıb-almayıb, görüb-görüb, görməyib-görməyib; deyib-deyib, deməyib-deməyib; baxıb-baxıb, baxmayıb-baxmayıb.*

In the present tense paradigm, the following expressions are used: *alır-alır, almur-almır; görür-görür, görmür-görmür; deyir-deyir, demir-demir; baxır-baxır, baxmır-baxmır.*

In the definite future tense paradigm, the following expressions are used: *gələcək-gələcək, gəlməyəcək-gəlməyəcək; deyəcək-deyəcək, deməyəcək-deməyəcək; görəcək-görəcək, görməyəcək-görməyəcək; dinəcək-dinəcək, dinməyəcək-dinməyəcək.*

forms: *alsa-alar, almasa-almaz, gəlsə-gələr, gəlməsə-gəlməz, versə-verər, verməsə-verməz, görsə-görər, görməsə-görməz.* In the indefinite future tense paradigm, the following expressions are used: *gələr-gələr, gəlməz-gəlməz, bilməz-bilməz, durar-durar, durmaz-durmaz, dinər-dinər, dinməz-dinməz.*

In the imperative form, the following expressions are used: *bilir-bilsin, bilmir-bilməsin, deyir-desin, demir-deməsin, baxır-baxsın, baxmır-baxmasın, yeyir-yesin, yemir-yeməsin.*

In the conditional modal form of the verb, oppositions and contradictions are also expressed in the following complex

In language, both simple and complex types of expressions denoting opposition and contradiction, when used in contexts of emotionality and imagery, are complemented by certain expressions conveying indefiniteness. For example, the notion of opposition belonging to the simple form of the definite past tense acquires emotionality and figurativeness through corresponding means such as *özü bilər* (it is up to him/her), *bilinmir* (it is unknown), *görünmür* (it is not visible), *fikir vermə* (do not pay attention), *baş qoşma* (do not get involved), etc.: *gəldi-gəlmədi* (*özü bilər*), *aldı-almadı* (*bilinmir*), *gördü-görmədi* (*fikir vermə*), *dayandı-dayanmadı* (*görünmür*), *durdu-durmadı* (*fikir vermə*), *döndü-dönmədi* (*baş qoşma*).

In the complex form of the definite past tense paradigm, similar complementary means are also used: *aldı-aldı, almadı-almadı* (*özü bilər, öz işidir, baş qoşma, fikir vermə*); *gəldi-gəldi, gəlmədi-gəlmədi* (*özü bilər, öz işidir, baş qoşma, fikir vermə, heç gəlməsin*); *baxdı-baxdı, baxmadı-baxmadı* (*özü bilər, öz işidir, fikir vermə, baş qoşma, qoy baxmasın, etc.*).

In the simple form of the narrative past tense, the verb *almaq* (to take) is used in completing expressions of opposition and contradiction: *alıb-almamış* (olsun), *görüüb-görməmiş* (olsun), *demiş(əm)-deməmiş* (olum), *qalıb-qalmamış* (olsun). In the complex form of the narrative past tense, corresponding complementary expressions are also used: *alıb-alıb*, *almayıb-almayıb* (öz işidir, özü bilər, fikir vermə, baş qoşma); *deyib-deyib*, *deməyib-deməyib* (özü bilər, öz işidir, fikir vermə, baş qoşma). In the simple form of the present tense, similar complementary means are also employed: *yazır-yazmır* (söz demə, danışma), *bilir-bilmir* (işin olmasın, danışma).

In the complex form of the present tense, corresponding complementary means are likewise used: *yazır-yazır*, *yazmır-yazmasın* (dillənmə); *yazır-yazmır*, *yazmır-yazmasın* (özü bilər); *deyir-deyir*, *demir-demir* (dilləndirmə); *deyir-demir*, *demir-deməsin* (fikir vermə). Similar indefinite complementary expressions are used in all other tense and form paradigms of the verb as well.

In the simple and complex forms of the definite future tense: *gələcək-gələcək* (bizlik deyil); *gələcək-gələcək*, *gələcək-gələcək* (öz işidir); in the simple and complex forms of the indefinite future tense: *gələr-gəlməz* (özü bilsin), *gələr-gələr*, *gəlməz-gəlməz* (öz işidir); in the simple and complex types of the imperative form: *gəlsin-gəlməsin* (nə deyirsən?), *gəlir-gəlsin*, *gəlmir-gəlməsin* (heç kəsə marağında deyil); in the simple and complex types of the conditional form: *gəlsə(də)-gəlməsə(də)* (gedirik), *bilsə(də)-bilməsə(də)* (fərqi yoxdur); *gəlsə-gələr*, *gəlməsə-gəlməz* (ixtiyar özünüdür), *gəlsə də (olar)*, *gəlməsə də (olar)* (hər iş öz qaydasındadır).

The emotionality, imagery, rhythm, and expressiveness of same-root antonyms are particularly vividly manifested in literary texts. In this regard, the poem of S. A. Nabati, constructed on contrasts, can be presented as an example:

“Saba, tell that rose-faced beloved from me,
Should the nightingale come to the rose garden, or not?
This victim of separation, this long-time sufferer,
Should come to your door for remedy, or not?
May I sacrifice myself for your amber tresses,
Your bud-like lips, your pistachio-like tongue,
That tulip-like face, those musk-like moles –
Should the moth come to your fire, or not?
My eyes long greatly for your languid gaze,
For your sun-like beauty, your sweet words,
I feel ashamed – how shall I tell it to your face?
Should sorrow come to this ailing soul, or not?
Wrap your boxwood-like arms around my neck,
Embrace me, let me hold your slender waist,
Let me kiss your ruby lips and ask your tongue –
Should it come to a dying soul, or not?
Nabati does not desire a world without you –
Its pleasure, honor, glory, and fame;
Nothing remains for him to hope for –
Should this head come to that, or not?” (Nabati, 2004, p. 147).

Conclusion

At the initial stage of antonym formation, oppositions and contradictions were perceived within the same object, action, or phenomenon. Therefore, antonyms expressing two opposite or

contradictory concepts within a single word structure were formed. Genetically rooted primary or monosyllabic antonyms have continued their traditions in corresponding derivative structures during the process of affixation in the language. In the Azerbaijani language, suffixation, characterized by its high productivity, has had a strong influence on the formation of new antonyms. As a result, same-root antonyms such as *dağlı-dağsız*, *yağlı-yağsız*, *adlı-adsız*, *analı-anasız*, *atalı-atasız*, *meşəli-meşəsiz*, *dayaqlı-dayaqsız*, *qorxulu-qorxusuz*, *dadlı-dadsız* have been formed.

THE SOCIOLINGUISTIC LANDSCAPE OF AZERBAIJANI FOLKLORE

Malahat Ramiz BABAYEVA

Doctor of Philosophy in Philology, Associate Professor, Department of Literature
Azerbaijan State Pedagogical University

E-mail: milababayeva@mail.ru

ORCID ID: 0000-0002-3600-8499

Abstract: The article analyzes the sociolinguistic landscape of Azerbaijani folklore within the context of the interaction between language, society, and culture. The study explores the lexical specificity of genres (lullabies, bayatis, laments, meyxana, epics), gender differences, and the manifestations of social hierarchy in speech. Through folklore's function as "language memory," the potential for archaic lexis to reconstruct the lifestyle, legal systems, and religious beliefs of past societies is highlighted. Furthermore, the mechanisms by which the magical (prayers, curses) and didactic (proverbs) functions of language regulate social behavior are analyzed. The conclusion emphasizes that folkloric texts serve as the most vital sociolinguistic archive, preserving the collective consciousness and social identity of the people. This research proves that folklore is not merely artistic but also a significant sociological document.

Key words: Sociolinguistics, folklore, gender, dialectology, hierarchy, archaism, lexis.

AZƏRBAYCAN FOLKLORUNUN SOSİOLİNGVİSTİK MƏNZƏRƏSİ

Məlahət Ramiz BABAYEVA

F.ü. f. d, dos., Ədəbiyyat kafedrası, Azərbaycan Dövlət Pedaqoji Universiteti

E-mail: milababayeva@mail.ru

Xülasə: Bu məqalədə Azərbaycan folklor nümunələrinin sosiolinqvistik xüsusiyyətləri və onların xalqın kollektiv təfəkküründəki yeri tədqiq olunur. Folklor sadəcə bədii irs deyil, həm də müəyyən tarixi-ictimai dövrlərin dil mənzərəsini özündə yaşadan canlı linqvistik arxivdir. Tədqiqat zamanı müxtəlif folklor janrlarında, xüsusilə dastan və atalar sözlərində rast gəlinən dialektizmlər, arxaik formalar və sosial statusu bildirən leksik vahidlər təhlil edilir. Məqalədə vurğulanır ki, folklor mətnləri dilin şaquli və üfüqi diferensiasiyasını, yəni həm regional fərqləri, həm də cəmiyyətin müxtəlif təbəqələrinin nitq xüsusiyyətlərini aydın şəkildə əks etdirir. Koqnitiv və sosiolinqvistik yanaşmalar vasitəsilə folklorun milli kimliyin formalaşmasındakı rolu və dilin daxili strukturu ilə xalqın sosial həyat tərzindəki sıx əlaqə əsaslandırılır. Nəticə olaraq qeyd edilir ki, Azərbaycan folklorunun sosiolinqvistik mənzərəsi dilin tarixi təkamülünü və sosial dəyişikliklərə linqvistik reaksiyasını öyrənmək üçün zəngin mənbədir.

Açar sözlər: Sosiolinqvistika, folklor, gender, dialektologiya, iyerarxiya, arxaizm, leksika.

Introduction

The unbreakable bond between folklore and language is a linguistic manifestation of a society's genetic memory. "Sociolinguistics approaches folkloric texts not merely as examples of artistic creativity, but as living documents that encode the social status, geographical affiliation, and stratification systems of people who lived in a specific period". During their formation, fairy tales, epics, and anecdotes absorb the linguistic habits, professional vocabulary, and dialectal characteristics of their environment. In this regard, folklore is the richest treasure for specialists researching the social and regional variability of language, as language is not artificially polished here; it is preserved as it is—with all its dialectal color and social class distinctions.

Regional affiliation is the "geographical passport" of folklore. Every example of folk creativity carries the air, water, and specific lexicon belonging to a concrete region. Through archaic words and local dialect elements, we can determine where a text originated. For example, the folklore of a community living by the sea is not the same as the language of those in mountainous areas; while the former is dominated by fishing and maritime terms, the latter centers on words related to animal husbandry, shepherding, and highland (yaylaq) life. These dialect elements define the geographical boundaries of that community and draw the borders of their worldview. Local dialects add sincerity and originality to the folkloric text, protecting it from "foreign" influences and restoring local identity.

Social status and stratification constitute the sociolinguistic core of folklore, particularly in the epic genre. In epics, sharp distinctions are drawn between the language of khans, viziers, and shahs and that of the subjects, servants, or simple peasants. The language of the ruling class is more formal, rhetorical, often containing Arabic and Persian elements, and imperative in nature. Their forms of address and speech etiquette serve to emphasize high status. Conversely, the language of the subjects is simple, sincere, rich in domestic lexicon, and more emotional. This sociolinguistic stratification is a linguistic reflection of real social hierarchies in society. In fairy tales, professional terms used by shepherds or craftsmen (e.g., "chomaq" [staff], "yəhər" [saddle], "körük" [bellows]) immediately reveal their social group. Thus, folkloric texts clearly show us not only what past societies spoke about, but also who spoke to whom, how, and in what status. This is the ultimate proof of how closely language is integrated with social structure.

Gender and language (male and female speech)

In folklore, gender roles are clearly expressed through language. Female folklore-represented by lullabies (*layla*), *bayatis*, and laments (*ağt*)-is not just oral literature; it is a linguistic map of the social status, psychological state, and hidden inner turmoils of the Azerbaijani woman formed over centuries. These genres create a communication chain that accompanies a woman's place in society "from the cradle to the grave." From a sociolinguistic perspective, the lexicon used in these texts functions like a specific "sub-language" belonging to the female world. Through this language, women express joy, sorrow, protest, and aspirations that often find no place in official, male-centered epics or historical sources.

Lullabies are the first link in this chain. Here, the relationship established between mother and child is based not only on love but also on the woman's vision of the future. While the lexical content of lullabies is rich in symbols of tenderness like "cradle," "pillow," "flower," and "nightingale," the underlying meaning involves the transmission of social duties. "A mother instills her child's social role while addressing them. For instance, the use of words like 'pasha,' 'bey,' and 'support' in lullabies for male children stems from the woman's desire to ensure her own safety and future status through her offspring. The lullaby is the first social platform where a woman expresses her voice freely".

Bayatis are the most philosophical and emotional part of female folklore. The structure of the *bayati* genre (seven syllables, four lines) allows a woman to express her greatest grief or love in a very brief and sharp manner. Sociolinguistically, words like "strangeness/exile" (*qariblik*), "longing" (*həsrət*), "loyalty" (*vəfa*), and "lamentation" (*fəğan*) occupy a central place. Historically, due to nomadic lifestyles or moving to a different village or family after marriage ("going to a foreign hearth"), Azerbaijani women have approached the theme of *qariblik* with special sensitivity. Figurative expressions like "I am the lover, looking from behind" or "holding the flower in her hand" indicate the woman's status as a passive observer, yet simultaneously show her internal emotional activity. In these texts, natural elements like "mountain," "water," and "mist" are codes symbolizing the woman's psychological state.

Laments (*ağılar* or *şivənlər*) represent the most dramatic and sociologically intriguing aspect of female folklore. In the face of death, a woman does not merely mourn; she "restores" the social role of the deceased within the community. The lexicon used in laments shifts immediately, forming a more rigid and majestic language. The lamenter (*ağıcı*) essentially becomes a social historian. While praising the bravery, hospitality, and lineage of the deceased, she selects words that also serve to protect the status of those left behind. The lament is a ritual where a woman can officially "cry out" and collectivize her internal pain. Within this context, the extinguishing or collapse of symbols like "tribe" (*oymaq-oymaq*), "homestead" (*yurd*), "chamber" (*otaq*), and "lamp" (*çıraq*) expresses the shattering of the family structure.

This triad of lullabies, *bayatis*, and laments completes a woman's life cycle. The language used in these genres-unlike the terminology of the male world-is heavily loaded with metaphorical, emotional, and domestic elements. From a sociolinguistic perspective, this lexicon proves that female folklore is not just "literature"; it is a silent social contract, a form of self-expression, and a carrier of intergenerational emotional memory. Every word in these texts demonstrates a woman's position within the family, her linguistic resistance to social hardships, and ultimately, her unique aesthetic world.

Male folklore-especially in the context of *meykhanas*, heroic epics, and historical legends-is a linguistic system that encodes the power hierarchy of a society, male identity, and strategies for

struggling with the external world. Unlike female folklore, the language here is focused not on the "interior" (home, family, intimate feelings), but on the "exterior" (the square, battle, public prestige, travel). The lexical composition of these genres is built upon a terminology of dominance, competition, and heroism, which sociolinguistically reinforces the man's role as "protector" and "ruler" in society.

The *meykhana* genre is one of the most dynamic and competitive forms of modern male folklore. Sociolinguistically, *meykhana* is a field for a "verbal duel." The lexicon used here directly serves to establish dominance. Terms like "arena" (*meydan*), "rival" (*rəqib*), "not being outspoken" (*söz altda qalmamaq*), and "silencing" (*bağlamaq*) show that in this genre, language is more of a weapon than a tool of creativity. "In *meykhana*, a man attempts to rise in the social hierarchy by demonstrating his intellectual and linguistic superiority. The terminology is often linked to street, neighborhood, and urban culture, reflecting the man's close contact with the external world and his maneuverability in the social 'exterior'".

Heroic epics (such as *The Book of Dede Korkut* or *Koroghlu*) constitute the epic and archaic layer of male folklore. The language of these texts is loaded with terminology related to physical strength, weaponry, and horses. Words like "sword" (*qılınç*), "shield" (*qalxan*), "mace" (*gürz*), "horse" (*at*), "warrior" (*ər*), and "battle cry" (*nəra*) represent not only tools of war but also linguistic symbols of male honor and dignity. In epics, a man's relationship with the outside world is always built upon a trial and conquest. Here, language performs a "dominance" function; the hero confirms his name and status not with words, but with deeds—yet through the epic, hyperbolic language of those deeds. Sociolinguistic analysis shows that the language of epics is built on decisiveness and commands—there is no room for hesitation, as speech performance is directly subordinate to the heroic code.

In legends, terminology related to the external world is grouped around "travel," "exile," "adventure," and "historical fact." This branch of male folklore emphasizes the status of the man as one who knows the world, crosses borders, and brings knowledge (experience) back to the collective. Words like "road" (*yol*), "caravan" (*karvan*), "destination" (*mənzil*), and "country" (*məmləkət*) form the lexical core of legends. In these genres, dominance also appears as "knowledge authority"; the man who has seen the world manages the social memory of the community through the legend he brings back.

Broadly speaking, the linguistic landscape of male folklore is extroverted in character. While the "lullaby" in female folklore was a language of stillness and inner peace, the "battle cry" (*nəra*) in the epic or the "refrain" (*rədif*) in *meykhana* is a challenge and a claim. In these texts, the male language acts as a mechanism that defends, attacks, and defines boundaries. "Dominance is not only physical but also rhetorical—the man who fights best and speaks best stands at the top of the social pyramid. Thus, the lexicon of male folklore is the sociolinguistic manifestation of the roles of 'conqueror,' 'provider,' and 'leader' assigned to men by society". Every element of this language—whether it is the boasting of an epic hero or the sharp irony of a *meykhana* performer—is aimed at protecting the man's prestige in the outside world.

3. Speech Etiquette and Taboos

Sociolinguistics studies the hidden rules within folklore. Euphemisms, one of the most interesting and multifaceted topics in sociolinguistics, represent the "softening" and "veiling" mechanism in language. The emergence of euphemisms in folk language is not an accidental

linguistic event; it is the linguistic reflection of society's fears, beliefs, ethical norms, and internal taboos.

At the root of the euphemism lies the concept of the "magical power of the name," dating back to ancient times. People believed that mentioning the name of a creature or an event meant calling or awakening it. For example, in Azerbaijani folk language and the folklore of many Turkic peoples, the name of the "wolf" (*qurd*) is often avoided directly. It is referred to as "barefoot" (*ayağıyallı*), "curly-tailed" (*quyruğuburulı*), or simply "that known one." This is the impact of taboos on language from a sociolinguistic standpoint. Replacing animal names with euphemisms is an attempt to tame human fear of nature at the linguistic level. Similarly, using expressions like "long one" (*uzun*), "ground-crawler" (*yerləgedən*), or "the one on the ground" for a snake follows this pattern. The goal here is to avoid attracting the attention of the creature and to ward off the evil that may come from it.

Another interesting aspect of euphemisms is their connection to the sociolinguistic hierarchy. For instance, expressions used for poverty, unemployment, or physical disabilities change over time. Using "visually impaired" instead of "blind" or "hearing impaired" instead of "deaf" are modern euphemisms arising from the concept of "political correctness." However, in folk language, these appear in more archaic and figurative forms: "one whose light has faded" (*işığı sönmüş*), "hard of hearing" (*ağır eşidən*), and others.

Social failures and negative situations are also "veiled" with euphemisms. For example, being imprisoned is referred to as "sleeping on the roof" (*damda yatmaq*), "falling inside" (*içəri düşmək*), or "getting into trouble" (*işə düşmək*). This also functions as a kind of secret language (a point where it intersects with argot). In the criminal world or within closed groups, euphemisms also serve as protective codes.

Euphemisms are the "aesthetic surgery" of language. They reveal the worldview, taboos, fears, and the degree of mutual respect within a nation. Sociolinguistics proves that no matter how much we strive to be "plain-spoken," our internal "primitive fear" or "social ethical rules" will always drive us toward indirect paths. A euphemism is not a void in language; on the contrary, it is the most striking example of how language serves as a powerful psychological tool. It lessens pain, covers shame, distances fear, and allows for peaceful communication within society. In this sense, every "indirect path" in folk language is actually the most direct trail leading to the depths of the human soul.

Forms of address in folkloric texts are not merely word combinations; they are linguistic levers that regulate the social architecture, hierarchical order, and ethical code of a society. Addresses such as "ay qız" (hey girl), "oğul" (son), "ağsaqqal" (elder), and "pəhlivan" (hero/wrestler) are codes that immediately determine an individual's place, age, gender, and earned status in society from a sociolinguistic perspective. Through these addresses, distance is established between characters in folkloric texts, respect or pressure is demonstrated, and "ideal types" accepted by collective memory are reinforced.

The address "ağsaqqal" is the indicator of the highest status in Azerbaijani folklore and social life. It symbolizes not just biological age, but also spiritual experience, wisdom, and decision-making power within the community. In fairy tales and epics, the use of "ağsaqqal" by a young person immediately indicates a state of subordination. This address sends the message to the other party: "you are my guide." In a sociolinguistic context, this type of address confirms the status of a "social judge" who resolves conflicts and ensures peace.

The address "oğul" (son) is more complex; it carries functions of both closeness and leadership. In folkloric texts, when an elderly person addresses someone who is not their biological child as "oğul," it expresses a sense of guardianship and a social succession instinct. This is a "credit" given to the youth; meaning, "you are the elder of the future." The address "oğul" also calls the young person to responsibility, compelling them to act in accordance with social norms.

The address "ay qız" (hey girl) is more frequently encountered in the domestic layer of folklore, especially in fairy tales and *bayatis*. Sociolinguistically, this form of address is somewhat informal and sometimes directly emotionally charged. Here, the interjection "ay" serves both to attract attention and to emphasize the youth and grace of the person addressed. However, in many cases, this address is also a form of social control; it implicitly reminds the woman of her "minor" or "dependent" status in society.

4. Functional styles of folklore

Language performs specific functions within society. In folklore, this manifests as follows:

The magical function of folklore constitutes the most ancient, mysterious, and sociolinguistically powerful layer of language. It is based on the belief that language is not merely a means of transmitting information, but a "tool" used to directly transform reality, influence the physical world, and activate supernatural forces. Prayers, curses, charms, and spells are the most striking examples of this "creative" or "destructive" power of language. In these texts, the word is no longer a symbol but an energy; there is an unwavering sociocultural belief that every expression uttered will trigger an equivalent event in the material world.

Prayers represent the "positive magic" side of language. People believe that repeating certain words with a specific rhythm and intonation can shift the universe's energy in their favor. The lexicon used in prayers is built upon words like "light," "abundance," "health," and "refuge." From a sociolinguistic perspective, a prayer is a linguistic bridge an individual builds with a higher power while confessing their own helplessness. Daily expressions like "May your table be full," "May God protect you," and "May your path be open" are essentially shortened prayers that strengthen positive social bonds within society. The goal of this linguistic behavior is to program the future for happiness through linguistic means.

"Curses represent the 'negative magic' or destructive function of language. A curse is the only weapon of a helpless individual-revenge taken through words. Expressions beginning with 'May you sink into the ground,' 'May your lamp be extinguished,' or 'I hope you...' aim to harm the opposite party by focusing linguistic energy on a single point". Sociolinguistically, curses act as a linguistic substitute for the "judicial system" in society; individuals lacking physical power (often women or the oppressed) attempt to restore justice through linguistic aggression. In a society that believes in the power of curses, people regulate their behavior to avoid "falling onto someone's tongue." This demonstrates the power of language to regulate social conduct.

5. Language Changes and Archaisms

Proverbs and sayings are the most condensed and concentrated forms of the experience, life philosophy, and social behavior norms filtered by a nation over millennia. From a sociolinguistic standpoint, these genres play the role of society's "oral constitution." The didactic, or educational, function forms the core of proverbs. While epics educate through broad descriptions and fairy tales through imaginary worlds, proverbs achieve this in the most laconic way—with just two or three words, but with an unshakeable logic. These texts encode the society's moral code and dictate how an individual should survive and establish relationships within a social environment.

In the sociolinguistic structure of proverbs, the principle of "binary opposition" (contrast) is strong: good vs. evil, labor vs. laziness, honesty vs. falsehood. The expression "He who does not labor, shall not eat honey" encodes both an economic truth and a moral value. Here, "honey" is not just food, but a symbol of social welfare and success. The didactic function here does not just give advice; it creates the society's model of the ideal human. The ideal human is patient ("Patience is bitter, but its fruit is sweet"), protects their tongue ("There is a tongue that brings honey, there is a tongue that brings trouble"), is industrious, and honest.

Fairy tales are invaluable in this regard. Through words found in a fairy tale such as *pəşm* (wool), *xurcun* (saddlebag), *tənu* (tandoor/oven), or ancient units of measurement like *batman* and *arşın*, we can reconstruct the domestic life and material culture of past societies. Sociolinguistic analysis shows that the language of fairy tales is not just a collection of stories invented for children, but also a warehouse preserving the technological level, clothing culture, and dietary habits of the period. For example, occupational names in fairy tales such as *çarvadar* (muleteer), *sarrac* (saddler), and *nalbənd* (farrier) provide information about forgotten socio-economic relations.

The reconstruction of the legal system is also hidden within the subtext of these texts. Concepts used in epics and legends, such as *qan bahası* (blood money), *tövbə* (repentance), *biət* (allegiance), and *fərman* (decree), facilitate the study of ancient societies' state administration, systems of punishment and reward, and the legal relations between the individual and the state. A single "proverb" sometimes carries the harshest legal norm of the era ("Blood is not washed away with blood") or principles of collective responsibility ("The eye of the people is a scale"). By analyzing these expressions, sociolinguists "read" the unwritten laws of the past.

Religious beliefs and mythological perceptions are preserved in the deepest layers of folklore, particularly in *bayatis* and prayers. Remnants of pre-Islamic shamanism, Zoroastrianism, or totemism-lexicon related to the cults of "fire," "light," "water," and "mountain"—remain alive in these texts. Expressions such as "The lamp of Truth" (*Haqqın çırağı*), "Bottom of the earth" (*Yerin dibi*), and "Layer of the sky" (*Göyün qatı*) carry the cosmogonic perceptions and belief systems of ancient humans to the present day through linguistic codes. For sociolinguists, this means understanding not just "what" the language says, but also the "sacred" background upon which those words are built.

Folklore also preserves the grammatical archaisms of the language. Ancient dative or locative case suffixes in *bayatis* and forgotten verb forms allow for the tracking of the historical development stages of the language. This is necessary to see how the society's way of thinking has changed. For example, the combination of many words from Old Turkic with metaphors of "strangeness/exile" (*qəriblik*), "mountain," and "road" in *bayatis* demonstrates the psycholinguistic traces of the nation's transition from a nomadic lifestyle to a sedentary one.

Methodology and materials

To determine the sociolinguistic landscape of Azerbaijani folklore, this study employs an interdisciplinary approach utilizing the following scientific methods:

Sociolinguistic analysis: Investigates linguistic units in folkloric texts in relation to social variables such as age, gender, status, and regional affiliation, specifically focusing on address forms and status indicators.

Comparative-typological method: Compares gender-specific genres-female-oriented (lullabies, laments) versus male-oriented (meykhana, epics)-to identify gender-based linguistic differences and communication strategies.

Discourse analysis: Examines folklore as active discourse to uncover latent meanings, power dynamics, and linguistic manifestations of social stratification within narratives.

Descriptive method: Describes the preservation of archaic lexicon and regional dialects in folkloric texts, highlighting their role in reconstructing historical domestic and legal systems.

Functional-pragmatic approach: Analyzes the "transformative power" of speech acts such as prayers, curses, and proverbs, focusing on their function in regulating social behavior and norms.

Discussion

The results of the study show that Azerbaijani folklore is not just an aesthetic phenomenon, but also a living mechanism that protects the social structure of the language. The main points to be discussed are as follows:

Gender and linguistic dominance: The study revealed that while female folklore (*laylas*, laments) is built more upon "internal space" and emotional-psychological lexicon, male folklore (*meykhana*, epics) serves the "external space," competition, and the demonstration of social status. This reflects the linguistic expectations of society regarding gender roles.

Preservation of social hierarchy: The differentiation between the language of the *khan* (ruler) and the *rəyyət* (commoners) in epics shows that language is a tool for drawing social boundaries. This confirms the "social dialect" theory of sociolinguistics through folkloric texts.

Sociological value of archaisms: Archaic words preserved in folklore are not just lexical units but also codes for forgotten legal and domestic relations. For instance, descriptions of "wedding-celebration" (*toy-düyyün*) or "allegiance" (*biət*) rituals in epics allow for the study of public contract forms of the ancient period.

Magical power of the word and social control: Prayers and curses form a system of "linguistic punishment and reward" in society. The fact that people avoid "being cursed" proves that language is a tool of power that directly regulates social behavior.

Role of dialects in identity: Regional folklore samples show that dialect elements are vital for the self-identification of a community. This demonstrates how folklore stubbornly protects local memory and identity against global linguistic standards.

Conclusion

The sociolinguistic approach proves that folklore is not a static and dead heritage, but a living and breathing part of the nation's collective consciousness. Thanks to the memory of language, we are able to reconstruct forgotten domestic elements, archaic legal norms, and ancient religious beliefs. These texts, having passed through the ethical and aesthetic filters of society, have achieved their most perfect, laconic, and effective forms within the language. Consequently, studying folklore through a sociolinguistic prism means rediscovering a nation's soul, history, and social evolution through the signs hidden within the layers of language. This research shows that the word is the greatest cultural power that unites a community, defines its boundaries, and shapes its future.

ORCID ID: 0000-0003-4411-5873

Abstract: This study examines ecological discourse in modern media from an applied linguistics perspective. It aims to explore the language used to express environmental problems and the impact of discourse methods on the perceptions of the problems by the general public. This study will employ qualitative discourse analysis as its methodology, analyzing various media texts related to environmental problems. Findings from this study show that there is an incorporation of metaphoric expressions, evaluation, modal expressions, and the application of frames to emphasize urgency, responsibility, and cooperation in ecological communication. It can be inferred that contemporary media forms play a critical role in the creation of environmental consciousness. The study highlights the importance of applied linguistics in understanding how language influences ecological perceptions and supports sustainability communication. It also demonstrates that linguistic framing can significantly affect audience attitudes toward environmental issues. In conclusion, the study enhances understanding of the connection between language, media and ecology. Furthermore, the study shows that ecological discourse is an interdisciplinary field since it combines both linguistics and environmental science together with media studies.

Xülasə: Bu tədqiqat müasir mediada ekoloji diskursu tətbiqi dilçilik baxımından araşdırır. Tədqiqatın məqsədi ətraf-mühit məsələlərini ifadə etmək üçün istifadə olunan dili və geniş ictimaiyyətin bu məsələləri qavramasına diskurs metodlarının təsirini araşdırmaqdır. Bu tədqiqat metodologiya kimi keyfiyyətli diskurs təhlilindən istifadə edir və ətraf-mühit problemləri ilə bağlı müxtəlif media mətnlərini təhlil edir. Bu tədqiqatın nəticələri göstərir ki, ekoloji ünsiyyətdə təxirəsalınmaz addımları, məsuliyyəti və əməkdaşlığı vurğulamaq üçün metaforik ifadələr, qiymətləndirmə, bədii-ifadə vasitələri və çərçivələrin tətbiqi mövcuddur. Müasir medianın müxtəlif formaları ətraf-mühit şüurunun yaradılmasında mühüm rol oynadığı qənaətinə gəlmək olar. Tədqiqat dilin ekoloji qavrayışlara necə təsir etdiyini və dayanıqlılıqla bağlı ünsiyyəti necə dəstəklədiyini anlamaqda tətbiqi dilçiliyin əhəmiyyətini vurğulayır. Həmçinin, lingvistik çərçivənin cəmiyyətin ətraf-mühit məsələlərinə münasibətinə əhəmiyyətli dərəcədə təsir göstərə biləcəyini nümayiş etdirir. Nəticə olaraq, tədqiqat dil, media və ekologiya arasındakı əlaqəni daha yaxşı anlamağa kömək edir. Bundan əlavə, tədqiqat göstərir ki, ekoloji diskurs həm dilçiliyi, həm də ətraf-mühit elmini media tədqiqatları ilə birləşdirdiyindən fənlərarası bir sahədir.

Açar sözləri: Ekoloji diskurs, tətbiqi dilçilik, media, diskurs təhlili

Introduction

Environmental problems are among the most discussed topics in contemporary world communications, drawing interest on the part of government, researchers, mass media organizations, and society in general (Carvalho, 2008). Issues like global warming, pollution, deforestation, and biodiversity loss have already received extensive consideration in the modern mass media, with language being an integral component of the way these issues are viewed and perceived (Hansen, 2010). Representation of these problems in the language is neither innocent nor neutral and depends on a range of social and communicative factors (Fairclough, 1995).

The term “ecological discourse” can be understood as the use of language in describing environmental issues through diverse media such as journalism, social media, policy, and environmental campaigns (Stibbe, 2015). Studying ecological discourse within applied linguistics is very fruitful because language usage sheds light on many constructions of meaning associated with nature and responsibility.

The application of applied linguistics offers helpful techniques for studying discourse through both functional and sociolinguistic perspectives. These techniques facilitate the study of how vocabulary, grammar, metaphors, and frames contribute to shaping public understanding of the environment (Halliday & Matthiessen, 2014). Specifically, the contemporary media serves as an important vehicle for communicating environmental messages.

This research project is concerned with the examination of ecological discourses in modern media from the viewpoint of applied linguistics, specifically in terms of the linguistic aspects employed in eco-discourse. This research intends to prove the significance of the use of language in creating ecological consciousness in modern-day society.

Materials and Methods

The research design used in this study is qualitative, based on the principles of discourse analysis as part of applied linguistics. In particular, the main objective is to analyze the ways ecological discourse is shaped in contemporary media as well as the techniques that are used to discuss various ecological problems. A qualitative approach is chosen because it provides researchers with opportunities to interpret linguistic activities in communication contexts and not measure them numerically (Creswell, 2014).

Data Collection

The research data consist of a purposively selected corpus of modern media texts related to environmental issues. These include:

- Online news articles from international media platforms (e.g., environmental reports and climate change news)
- Editorials and opinion pieces focused on ecological problems
- Social media posts from environmental campaigns and organizations

Digital environmental awareness materials (e.g., NGO publications and online campaigns)

The texts were selected based on the following criteria:

1. Relevance to ecological or environmental topics (e.g., climate change, sustainability, pollution)
2. Representation of contemporary media communication (published within recent years)
3. Availability in English language to ensure consistency of analysis
4. Diversity of media types to capture different communicative contexts

A total of approximately 20–30 texts were selected to ensure a manageable but representative dataset for qualitative analysis.

Analytical Framework

The study is based on a combination of Systemic Functional Linguistics (SFL) and Critical Discourse Analysis (CDA).

Systemic Functional Linguistics (Halliday & Matthiessen, 2014) is used to analyze how language functions in context, focusing on lexical choices, modality, and transitivity patterns.

Critical Discourse Analysis (Fairclough, 1995) is applied to examine the ideological and social meanings embedded in ecological discourse, particularly how power relations and environmental responsibility are linguistically constructed.

Results and Discussion

Analysis of ecological discourses in contemporary media demonstrated various linguistic and discursive patterns in the formation of discourse concerning ecological matters. The findings showed that language is vital in the construction of meaning in relation to ecology, thus having a direct impact on public consciousness about environmental responsibility.

A feature that stands out clearly is the extensive use of evaluative words. Phrases like "urgent," "critical," "threat," "crisis," and "sustainable" are commonly used in the media and campaign literature. The use of such words creates a sense of urgency, leading the reader to view the issue of the environment as an important global problem. In this way, the language used does not only inform but also evaluates.

Metaphors are another key feature of ecological discourse. Expressions such as "climate crisis," "carbon footprint," "green transition," and "planet in danger" were frequently observed. These metaphors simplify complex scientific phenomena and make them more accessible to a general audience. However, they also frame environmental issues in particular ways—for example, as emergencies requiring immediate action or as burdens to be reduced. This framing influences how responsibility and urgency are perceived.

Modal verbs like "must," "should," "need to," and "have to" are frequently employed in environmental literature. They convey an element of duty and compulsion, serving as rhetorical devices. They are usually employed to make appeals for group or governmental intervention, suggesting that environmental preservation is a community effort.

The analysis also shows that ecological discourse is shaped by different framing strategies depending on the media type. News media tend to present environmental issues in a formal and informational tone, often emphasizing facts and statistics. In contrast, social media content is more emotional and action-oriented, using direct appeals and simplified language to engage audiences. This variation reflects the communicative goals of different platforms.

Ecological language from a sociolinguistic perspective varies depending on the context and the audience that the message is intended for. The language used by institutional authorities like international organizations will be more technical and formal. On the other hand, the language used by activists and social media will be more easily understood and emotional.

These results further suggest that the discourse on ecology is not only descriptive but also very strategic and ideological. Applied linguistics provides a theoretical framework through which the use of metaphor, modality, and evaluation can be understood to build and direct meanings in ecological discourse. Media organizations have a critical role in determining ecological consciousness by choosing particular linguistic elements that frame environmental concerns for their audiences.

The conclusions drawn from this study can be explained based on the theories of applied linguistics and critical discourse analysis, where the focus is placed on the point that language cannot be considered neutral because it is socially and ideologically determined. An example of the importance of this aspect can be seen in the ecological discourse presented in contemporary media where environment-related problems are discussed and guided by linguistic choices.

One interesting point made in this context is that eco-discourse involves a great deal of deliberate simplification and metaphoric representation. The complex processes involved in science and environmental matters tend to get distilled into simple phrases like “climate crisis,” “carbon footprint,” and “green transition.” This facilitates understanding by laypersons but involves oversimplifying the complexities of scientific concepts. As far as applied linguistics goes, this raises several interesting issues concerning clarity versus accuracy.

Another significant aspect is the ideological function of modality and evaluative language. The frequent use of modal verbs such as “must,” “should,” and “need to” constructs a discourse of obligation and urgency. This linguistic pattern does not merely describe environmental action but actively promotes specific behavioral expectations. As a result, ecological discourse often takes on a normative dimension, positioning sustainability as a moral and social responsibility rather than a purely informational topic.

The study also highlights the importance of media variation in shaping ecological meaning. Traditional news media tend to emphasize institutional authority, factual reporting, and expert voices, which contribute to a more formal and controlled discourse style. In contrast, social media platforms encourage emotional engagement, personalization, and direct appeals to action. This contrast reflects broader shifts in contemporary communication, where ecological discourse becomes increasingly participatory and audience-driven.

From a sociolinguistic perspective, the results indicate clear differences in discourse production across institutional and non-institutional actors. Governments, international organizations, and mainstream media often construct standardized environmental narratives that emphasize policy and regulation. Conversely, activist groups and individuals tend to use more emotionally charged and urgent language, aiming to mobilize public action. This diversity

demonstrates that ecological discourse is a contested space where different social actors compete to define environmental reality.

Furthermore, ecological discourse plays a role in identity construction and ideological positioning. Repeated exposure to dominant environmental metaphors and narratives contributes to shaping how individuals perceive their relationship with nature and responsibility toward the environment. In this sense, language not only reflects ecological awareness but actively participates in forming it.

Conclusion

This study examined ecological discourse in modern media from an applied linguistics perspective, focusing on how language constructs and communicates environmental meanings. The analysis showed that ecological discourse is strongly shaped by linguistic strategies such as metaphorical framing, evaluative vocabulary, modality, and discourse framing techniques. These features are widely used across different media platforms to present environmental issues as urgent, important, and socially relevant.

The findings indicate that modern media does not simply report ecological issues but actively participates in shaping public perception of environmental reality. Through specific linguistic choices, media texts influence how audiences understand concepts such as climate change, sustainability, and environmental responsibility. In particular, metaphors and evaluative expressions simplify complex scientific information while also guiding emotional and ideological responses.

The study also highlights the variation in ecological discourse across different communication contexts. Traditional news media tend to rely on formal and informational styles, whereas social media platforms emphasize emotional engagement and direct calls to action. This variation reflects the differing communicative purposes and audience expectations within modern media environments.

From an applied linguistics perspective, ecological discourse can be seen as both informative and persuasive, combining the transmission of knowledge with the promotion of particular attitudes and behaviors. This dual function demonstrates the important role of language in shaping environmental awareness and encouraging sustainability practices.

However, the study is limited by its focus on a relatively small corpus and English-language media sources. Future research could expand the analysis to include multilingual datasets, cross-cultural comparisons, and audience reception studies to provide a more comprehensive understanding of ecological discourse.

Overall, the study confirms that language plays a central role in constructing ecological knowledge and highlights the importance of applied linguistics in analyzing environmental communication in contemporary media.

CLOSING SEQUENCES IN URDU LANGUAGE: THE ROLE OF THANKFULNESS REMARKS AND LONG PAUSES IN TOPIC SHIFTS

Khawaja Umer RASHID

Ph.D. scholar, University of AJ&K, Muzaffarabad

E-mail: rashid.umer291@gmail.com

ORCID ID: 0003 0002 6778 55676

Abstract: The study aims to investigate the practices being followed by speakers during topic shifts in Urdu conversation. The researcher collected the data through recordings of naturally occurring Urdu conversations. The recordings involved conversations conducted between coworkers and colleagues in different communicative settings. These conversations included either two interlocutors or three participants interacting with one another. The data collected was then transcribed using McGregor (1992) and the transcription notation developed by Jefferson (1988). The patterns of topic shifts were analyzed using Conversation Analysis (CA) conventions to identify recurring features associated with topic transition. The analysis of the data revealed that topic shifts were commonly preceded by two prominent patterns. One was the use of a “thankfulness remark,” specifically “Alhumdulillah,” which appeared as a recurring phenomenon before speakers shifted to a new topic. The second prominent phenomenon was the occurrence of long pauses ranging from four to five seconds. These pauses typically occurred in preliminary positions before topic changes were initiated by interlocutors. Therefore, long pauses and thankfulness remarks emerged as significant features of topic transition sequences in Urdu conversations.

Introduction

Topicality in Conversation. Conversations in topics follow a sequence of topics. Usually speaker's conversation does not follow a same line of topic. Rather, speakers engage themselves in multiple topics while having a conversation. Schegloff and Sacks (1974: 243) have described that interlocutors try to consider other speaker's previous conversation and also try to fit their utterance in accordance with the previous utterances. However, the transitions in the topic are quite a regular phenomenon. And while speakers are having a conversation they undergo sequences of topic shifts many times while having a conversation. The studies in CA focus on investigating the patterns of topic transitions in Conversations.

Topic Closing in Conversation. Topic closing refers to the interactional mechanisms used to bring a topic to an end. The **sequential organization** of topic closure has been extensively analyzed in CA research.

Pre-Closing Sequences. Schegloff & Sacks (1973) identified pre-closing sequences as interactional structures signaling the winding down of a topic. Common pre-closing devices include: 1- Minimal responses like: yeah, okay. 2- Acknowledgement tokens like: right and 3- Evaluating summaries which might include "That's interesting" statements.

Drew & Holt (1998) discuss how speakers employ reformulations and assessments as strategies for topic closure. Their study shows that speakers often rephrase key points before concluding, which helps maintain coherence and avoids abrupt endings.

Closing Tokens and Silence. Schegloff (2007) has shown that topic closure is often marked by: 1 - Lapses in conversation 2 - Agreement markers ("Right," "Exactly") 3 - Non-verbal cues (e.g., head nods, changes in gaze). Gardner (2001) has also found that conversationalists use "anyway" or "so" as discourse markers to shift out of topics smoothly.

Transition sequences in conversations. Drew & Holt (1998) have investigated the use of figures of speech in topic transition sequences. The researchers have found that during conversations, speakers occasionally use figurative expressions such as "had a good innings," "take with a pinch of salt," or "come to the end of her tether." The study investigated where in conversation such expressions were used, in terms of their sequential distribution. One clear distributional pattern was found: Figurative expressions occur regularly in topic transition sequences, and specifically in the turn where a topic is summarized, thereby initiating the closing of a topic. The paper discusses some of the distinctive features of the topic termination/transition sequences with which figurative closings are associated, particularly participants' orientation to their moving to new topics. Finally, the interactional use of figurative expressions is considered in the context of instances where their use fails to secure topical closure, manifesting some conflict (disaffiliation, etc.) between the participants. (Figurative expressions, idioms, conversation, topic)

Research Questions

What are the practices followed by Urdu speakers in informal conversations for topic shifts?

Methodology

Data Collection. Data is being collected from the conversation between students at the University of AJ&K, Muzaffarabad.

Research Ethics. Researcher has taken initial consent from the department and then the participants were provided with the consent form to verify their willingness to be a part of the study. All participants are provided with anonymity and the data is being kept restricted to be used only for the research purposes.

Data Analysis

The data is being transcribed by the researcher following McGregor (1992) conventions and Jefferson (1988) notational conventions are being used. Then, patterns are being recognized vis a viz. the research question at hand.

Findings and Discussions

Studies in CA are usually dependent on two forms of data sets. One of them is video recording which provides a detailed outlook of the conversation as gestures, reactions and non-verbal cues are also available for examination while other is audio recording which solely relies on verbal data which is up for analysis. This study uses audio recording as a source of data collection. A total of seven recordings are used for the analysis of the data. The detailed about the participants and data are given below in the table.

Table1: *Distribution of recorded conversations*

Conversation number	Gender	Label	Duration	Relationship
1	M/F	A1 B1	10 mins	Workplace
2	F/F/F	A2 B2 C2	5 mins	Friends
3	F/F	A3 B3	4 mins	Colleagues
4	M/M/M	A4 B4 C4 D4	8 mins	Colleagues
5	F/F	A5 B5	6 mins	Friends
6	F/F	X1 Y1	12 mins	Colleagues
7	M/M	X2 Y2	5 mins	Workplace

The data that is being collected through I-phone mobile recording devices is transcribed for the examination. The data is being transcribed using (Mc-Gregor, 1992) transcription notation. The conventions given by Sacks, Schegloff and Jefferson (1974) are used for conversation analysis.

“Alhumdulilah” as a topic closing sequence:

- 1- A1: Āp apna employee card bnwa lo na::
- 2- B1: Phr aus py āya krum
- 3- A1: Hum::
- 4- B1: Wh myry sy (.) taym mynj nhyrḥ hota: (0.3) mtlb ayk trh [sy]
- 5- A: [acha]
- 6- B: baky jab alhmdlilah achy ja rhy hy
- 7- A: *ma'am* bhy hyrḥ na::
- 8- B: *ma'am* zurtash

In above mentioned conversation where speakers A and B are conversing about A's job and B is suggesting about getting an employee card. A suggests that it is difficult to manage time according to bus timing. In turn (6) speaker closes his turn with uttering thankful remarks (Alhumdulilah is a conventional remark). These marks offer a transition relevance place from where

next speaker can take his/her turn. B takes her turn from there and asks another question which is a different topic opening question, thus initiates a new topic. So, this thankfulness remark provides a concluding point to the conversation and interlocutor switch to a different topic. After that speakers start a new topical thread whereby both starts talking about a coworker. And conversation topic is changed. This topic switching happens after the thankfulness remarks are being given.

- 1- X1: Pypr kysa huwa hy āp ka=
- 2- Y1: =Alhmdulilh acha huwa hy [lykn]
- 3- X1: [hum]hum
- 4- Y1: Wo context wala jw question [tha:]
- 5- X1: [umm]hummm
- 6- Y1: Us mym̐ mym̐ thwda *confuse* hw gya tha::
- 7- Y1: Lykn Alhmdulilh pypr hmara [*overall* acha hw gya hy]
- 8- X1: [Wh tw thyk hy] lykn wh *ma'am* ny ayk kwyscn dya wa tha *proximal* awr *distal* wala wh hm ny prha wa hy ny tha
- 9- Y1: [()]

In the example mentioned above speaker X1 and speaker Y1 are conversing about the paper. X1 asks about the paper and Y1 responds about his paper that it was “okay” except for one question. In turn 7 speaker, again follows the convention of thankfulness by saying *Alhumdulillah*, which again acts as a transition marker and X1 takes that opportunity to take the turn to himself. Otherwise speaker X1 was only responding with acknowledgement tokens because he recognized that speaker Y1’s turn is not over yet. And he, yet, has to add a few things to it. Thus turn 7 is significant because it provides speaker X1 with a cue that speaker Y1 is now closing his turn and he could take the floor to himself. As mentioned in the example X1, similarly, here speakers again get a cue by the use of “*Alhumdulillah*” by the speaker Y1 and X1 initiates new topic where he begins to inquire about a specific question given by the teacher in the exam. In all the cases recorded through the conversations it is noticeable that first speaker closes his turn with thankfulness remarks: *Alhumdulillah*, and provides a topic transition sequence where next speaker introduces a new topic which is done through introduction of a new question. After that interlocutor begin talking about a specific question that was asked in the exam. The difference in this conversation, however, is that a new topic is not totally divergent from original topic under discussion. Rather new topic is being an outcome of the previous topic which speakers were talking about earlier.

Long Pauses in Topic closes Sequences

The recorded conversations have shown that long pauses ranging four to six seconds are frequently found at the topic closing sequences. Out of seven recordings used for the analysis of the data such sequences are reported in three recordings. Six instances are found where speaker closes his/her turn and a long period of silence ranging from 4-6 seconds is followed and then a interlocutors self-select a new topic.

Example 3:

- 7- X1: Ayk tw yh hy by hmary śan mym̐ gustakhy (0.3) khas twr py [myry śan mym̐]
- 8- Y1:[Hehhehheh] yh bhy hy
- 9- X1: [()] (5.0)
- 10- Y1: Ab kl yham̐ bhy āna pr.y ga (.) [ORIC]
- 11- X1:[yh] (0.3) bhy hy
- 12- Y1:[HHRD] yh waly bhy hym̐ awr HHRD waly bhy hym̐

In the above mention example speaker and X and Y are conversing about whether they should be going to a trip or not which is scheduled soon. The end of turn nine is followed by four seconds of silence. This long silence provides an opportunity for the speaker Y to introduce a new topic about an event which is to be organized by the university After turn (9) speakers talk about participating in an event which is to be hosted by the university. Thus, the long silence of four second provides an opportunity for a topic transition here. After that pause conversation flow takes a turn and speakers initiate a new topic.

Example 4:

26- X2: hmyñ jldy jana tha un ka kam krna tha

27- Y2: hehheh (0.5)

28- X2: aysy khar.y hmyñ jysy swagt hw rha hmara (4.0)

29- Y2: [(yh kya)]

30- X2: Ab khayñ gy kya

31- Y2: Yh dykhw kya bna hy (.) pendomonium kya tha

In the above-mentioned example 4: in previous turns speakers were talking about a conference that is scheduled to be held. In turn 28, end of the turn is followed by a long pause after which speaker Y2 tries to take her turn but it can not be heard clearly and Speaker X begins a new topic about what should they eat for the lunch. After that a new topic of discussion is started whereby interlocutors talk about their lunch.

Long pauses generally provide a pause where speakers get a chance to begin a new topic. This pattern is frequently common in the conversations that are being recorded. The pauses act as Transition relevance place where both speakers have access to the floor and usually one of the speakers take this opportunity to take his/her turn and potentially introduce a new topic. In both examples mentioned above, in turn sequences (10) and (30) speakers begin a new topic with a new question. These questions mark the beginning of a new topic which diverges from the previous flow of the conversation. Thus, these long pauses help managing the flow of conversations by changing the direction of the conversations at hand.

Conclusion

In conclusion, the study has found that both long pauses ranging for 5 to six seconds and thankfulness remarks serve as topic transition sequences in Urdu language. “Alhumdulillah” which is a cultural utterance for thankfulness to Almighty serve as an indicator that speaker intends to close the topic here and then a new topic is selected which is a transition from old topic by any one of the interlocutors. Similarly, long pauses in the turn sequences are indicators of topic closures. As, after long pauses interlocutors self-select their turns and begin a new topic for conversation.

THE PRAGMATIC FUNCTION OF DETERMINERS IN ACADEMIC DISCOURSE: A COGNITIVE LINGUISTIC APPROACH

Shalala Anver ALIYEVA

PhD, Asso. Prof., English Grammar Department, Azerbaijan University of Languages

E-mail: aliyeva.shelale@adu.edu.az

ORCID ID: 0000-0003-1292-1117

Abstract: The English determiner system represents one of the most complex areas of linguistic mastery for non-native researchers and students. While traditional linguistics often treats determiners (articles, demonstratives, and quantifiers) as mere grammatical markers, this paper argues for a cognitive-pragmatic perspective. This study examines the role of determiners in maintaining textual cohesion and managing "shared information" within academic writing. By synthesizing the theories of cognitive grammar and corpus linguistics, the research identifies the specific challenges faced by EFL learners in Azerbaijan. The paper proposes a move toward "functional determinism" in teaching, using digital corpora to demonstrate how determiners encode subtle shifts in speaker perspective and noun specificity. The study concludes that an integrated pedagogical model, which links syntax with semantic intention, is necessary for achieving high-level academic literacy.

Key words: determiners, cognitive grammar, academic discourse, textual cohesion, noun phrase specificity.

AKADEMİK DİSKURSDA TƏYİNEDİCİLƏRİN PRAQMATİK FUNKSİYASI: KOQNİTİV LİNQVİSTİK YANAŞMA

Xülasə: İngilis dili determinativlər sistemi (məyyənedicilər) xarici tədqiqatçılar və tələbələr üçün linqvistik mənimsəmənin ən mürəkkəb sahələrindən biridir. Ənənəvi dilçilik determinativləri (artikl, işarə

əvəzlilikləri, kəmiyyət bildirən sözlər) yalnız qrammatik göstəricilər kimi nəzərdən keçirsə də, bu məqalə koqnitiv-praqmatik perspektivdən çıxış edir. Tədqiqat akademik yazıda determinativlərin mətn daxili əlaqəni (koheziyanı) təmin etməkdə və "paylaşılan informasiyanı" idarə etməkdə rolunu araşdırır. Koqnitiv qrammatika və korpus dilçiliyi nəzəriyyələrini sintez edərək, tədqiqat Azərbaycandakı İXD kimi öyrənmələrinin qarşılaşdığı spesifik çətinlikləri müəyyən edir. Məqalə tədrisdə determinativlərin natiqin perspektivini və ismin xüsusiyyətini necə kodlaşdırdığını göstərmək üçün rəqəmsal korpuslardan istifadə edən "funksional determinizm" modelini təklif edir. Tədqiqat nəticəsində qeyd olunur ki, yüksək səviyyəli akademik savadlılığa nail olmaq üçün sintaksisi semantik niyyətlə əlaqələndirən inteqrasiya olunmuş pedaqoji model zəruridir.

Açar sözlər: determinativlər, koqnitiv qrammatika, akademik diskurs, mətn koheziyası, ismi birləşmənin spesifikliyi.

Introduction

The English Noun Phrase (NP) is structured a vital functional category: the determiner. From a structuralist perspective, determiners are defined as closed-class words, including articles, demonstratives, and quantifiers, that precede nouns to clarify their reference and establish their grammatical boundaries within a sentence (Greenbaum & Quirk, 1990). However, in the complex domain of advanced academic research and discourse, determiners play a much more sophisticated and nuanced role. They function as "referential anchors" and "grounding elements" that allow a writer to navigate the delicate distinction between generalized abstract concepts and specific empirical data points. According to Langacker's (1991) theory of Cognitive Grammar, determiners are not merely syntactic placeholders; they are cognitive tools that relate the conceptual content of a noun to the mental space shared by the speaker and the hearer.

Despite their ubiquity and high frequency in both spoken and written English, the determiner system remains one of the most persistent and pervasive sources of error in Azerbaijani EFL (English as a Foreign Language) classrooms. This pedagogical challenge is largely rooted in the profound typological and morphological differences between the English and Azerbaijani languages. While Azerbaijani is an agglutinative language where specificity and definiteness are often handled dynamically through case endings, possessive suffixes, and flexible word order, English relies on a rigid, obligatory determiner slot to signal the cognitive status of a referent (Lyons, 1999). This lack of one-to-one correspondence leads to "negative transfer" or linguistic interference, where Azerbaijani learners frequently omit necessary articles or misapply quantifiers, resulting in semantic ambiguity in academic writing.

Furthermore, the mastery of determiners is intrinsically linked to the development of textual cohesion. As Halliday and Hasan (1976) emphasize, determiners - specifically demonstratives and the definite article - act as cohesive ties that link new information to previously mentioned concepts, creating a "texture" in the discourse. In Azerbaijani higher education, the inability to manipulate these referential tools often leads to fragmented prose that lacks the sophisticated flow required for international publication. This paper, therefore, moves beyond a simple surface-level error analysis. It aims to investigate the profound cognitive burden that the English determiner system places on the L2 learner. By proposing a series of pedagogical solutions rooted in modern linguistic frameworks, such as Corpus Linguistics and Cognitive Functionalism, this study seeks to provide a roadmap for bridging the gap between basic grammatical accuracy and advanced academic literacy.

Theoretical Framework: Cognitive and Functional Perspectives

The linguistic study of determiners has undergone a significant evolution, transitioning from purely formal, structural descriptions toward more nuanced cognitive-functional analyses. While structuralists viewed determiners as grammatical markers required by the syntax of the Noun Phrase (NP), contemporary theorists argue that they are essential semiotic tools that encode the speaker's intent and the listener's cognitive state.

1. Langacker's Cognitive Grammar and the Theory of Grounding

Ronald Langacker (1991), a pioneer of Cognitive Grammar, posits that determiners function as “grounding elements.” According to this framework, a noun in isolation represents only a type of entity (e.g., university), but it does not refer to a specific instance in the real or imagined world. Grounding is the mental process of relating this conceptual content to the speech act's participants (the speaker and the hearer) within a specific “discourse space.”

In academic discourse, the transition from an indefinite to a definite determiner (e.g., from a theory to the theory) signifies more than a grammatical change; it marks a shift in the “mental space” shared by the writer and the reader. The definite article signals that the referent is uniquely identifiable within the current mental model of the discourse (Langacker, 2008). For the EFL researcher, understanding “grounding” is essential; it is the mechanism by which they establish common ground with their audience, ensuring that references to data, methodologies, and previous findings are unambiguous and cognitively accessible.

2. The Specificity Hierarchy and Definiteness

Christopher Lyons (1999) provides a critical distinction between “definiteness” and “specificity,” which is often a point of confusion for L2 learners. While definiteness is a grammatical category signaled by the, specificity is a semantic-pragmatic property. In research writing, this distinction is vital for precision:

Definite but non-specific: Referencing a conceptual ideal (e.g., “*The ideal candidate must possess ICC*”). Here, the is used, but it does not point to a specific individual.

Indefinite but specific: Referencing a particular entity that hasn't been introduced to the reader yet (e.g., “*A certain researcher in Baku has argued...* ”).

The nuances provided by the “specificity hierarchy” allow writers to manage the reader's attention with surgical precision. Failure to master this hierarchy often results in what is known as “referential opacity,” where the reader is unsure if the writer is discussing a general principle or a specific piece of evidence (Abbott, 2006).

3. Quantificational Logic and Attention Management

Determiners also include quantifiers, which operate as cognitive tools for “quantificational logic.” Gundel et al. (1993) introduced the “Givenness Hierarchy,” which suggests that different determiners correspond to different “cognitive statuses” of a noun in the reader's mind. For example, the choice between each and every, often used interchangeably by learners, carries distinct cognitive weights. Each focuses the reader's attention on individual members of a set (distributive focus), whereas every emphasizes the collective whole.

Similarly, demonstratives like this and that serve as “deictic pointers.” In academic prose, this is frequently used for “proximal grounding”-bringing a recently mentioned concept into the immediate focus of the reader's mental space. Masterful manipulation of these deictic determiners is what characterizes “high-level” academic cohesion, distinguishing professional scholarly writing from intermediate-level student prose (Biber et al., 1999).

Material and Methods

The methodological framework of this study is built upon a hybrid approach, combining Contrastive Linguistics and Corpus-Based Error Analysis (CEA). To achieve an objective understanding of the “determiner gap” in the Azerbaijani academic context, the research uses a three-tier investigative model.

1. Typological Contrastive Analysis (TCA)

The first stage involves a structural comparison between the English Determiner Phrase (DP) and the Azerbaijani Noun Phrase (NP) syntax. Unlike English, which uses a rigid, pre-nominal determiner slot, Azerbaijani, an agglutinative language, encodes definiteness and specificity through a combination of:

Morphological markers: The use of the accusative case (e.g., *kitabı* vs *kitab*) to signal definite direct objects.

Lexical markers: The numeral *bir* (one) functioning as a pseudo-indefinite article.

Syntactic positioning: Subject-Object-Verb (SOV) shifts used to prioritize “given” vs “new” information.

The study analyzes these typological discrepancies as the primary source of “negative transfer” in EFL learners.

2. Corpus Material and Selection Criteria

The material for this research consists of two distinct corpora:

The Reference Corpus: Data was extracted from the British National Corpus (BNC), specifically the academic sub-corpus containing approximately 15 million words. This serves as the benchmark for “normative” determiner usage in scholarly writing.

The Learner Corpus (The Focus Group): An ad-hoc corpus was compiled consisting of 80 academic essays and research drafts written by doctoral candidates and senior researchers in Azerbaijani universities. The total word count for this learner corpus is approximately 120,000 words. All participants were at a B2-C1 proficiency level (CEFR) to ensure that errors were not merely the result of basic grammatical ignorance, but rather subtle pragmatic misfires.

3. Methodological Procedure: Error Taxonomy

The data was analyzed using Concordance Software (AntConc 4.0) to identify patterns of determiner misuse. The errors were categorized based on a novel taxonomy developed for this study:

Category A: Omission errors (e.g., absence of the before unique nouns or nouns with restrictive post-modification).

Category B: Overgeneralization (e.g., using the with abstract nouns in a generic sense).

Category C: Quantificational Mismatch (e.g., incorrect use of each/every in distributive contexts).

4. Quantitative and Qualitative Integration

Finally, a statistical analysis was performed to determine the frequency of these error categories per 1,000 words. This quantitative data was then qualitatively analyzed through the lens of Gundel’s Givenness Hierarchy (1993) to understand why certain determiners were chosen over others in specific discursive contexts. This dual-methodology ensures that the results are not just descriptive, but also provide explanatory power regarding the cognitive processes of Azerbaijani EFL researchers.

Results and Discussion: Analyzing the "Determiner Gap"

The corpus-based analysis reveals significant patterns in how Azerbaijani researchers navigate the English determiner system. The quantitative data indicates an average error rate of 12.4 errors per 1,000 words, with a notable concentration in specific syntactic environments.

1. The Persistence of Omission in Restrictive Modification

The most frequent error identified (Category A) was the omission of the definite article in Noun Phrases containing restrictive post-modification (e.g., “Results of the study” instead of “The results of the study”). This stems from a cognitive mismatch: in Azerbaijani, the relationship is established through the genitive-possessive construction (*tədqiqatın nəticələri*), where no separate article is required. Learners often prioritize the lexical meaning of the nouns, neglecting the “grounding” function of the article that signals the unique identity of the results within the discourse (Langacker, 2008).

2. Overgeneralization of Definiteness with Abstract Nouns

Conversely, a high rate of Category B errors (Overgeneralization) was observed. Azerbaijani writers often insert the definite article before abstract nouns used in a generic sense (e.g., “*The education is the key*”). This “hyper-correction” occurs as learners attempt to compensate for the perceived absence of articles in their L1 by over-applying the definite article to concepts that, in English, require a zero article for generic reference. This result aligns with the findings of Sneltram (2018), who noted that L2 writers often use the definite article as a universal marker of “importance” rather than “identifiability.”

3. Pragmatic Shift: From Grammar to Communication

The discussion suggests that the “determiner gap” is not merely a failure of grammatical memory, but a failure of pragmatic alignment. When Azerbaijani researchers fail to use demonstratives like *this* or *these* correctly for anaphoric reference, the cohesion of the academic text suffers. For example, using *it* instead of *this finding* fails to direct the reader’s attention to the specific conceptual block discussed in the previous paragraph. This supports the “Givenness Hierarchy” (Gundel et al., 1993), suggesting that determiners are essential for managing the reader’s cognitive load during the processing of complex information.

Conclusion

The investigation into the English determiner system within the Azerbaijani academic context underscores a fundamental shift in pedagogical necessity. The traditional “rule-based” approach to articles and quantifiers is insufficient for the demands of high-level scholarly communication. This study has demonstrated that determiners are functional “referential anchors” that bridge the gap between abstract thought and specific linguistic expression.

The findings indicate that the primary challenges faced by Azerbaijani EFL learners—namely omission in specific phrases and overgeneralization with abstract concepts—are deeply rooted in typological interference. To address these, this paper proposes a Corpus-Informed Didactic Model. By moving toward “data-driven learning,” where students analyze real-world academic corpora through tools like AntConc, the learner develops a “cognitive feel” for how determiners manage information flow.

Ultimately, for the Azerbaijani academic community to align with international standards (EHEA), English language instruction must treat determiners not as decorative grammar, but as essential tools for textual cohesion and cognitive grounding. Mastering the determiner is a vital step in transforming the Azerbaijani researcher into a truly effective “intercultural speaker” on the global stage.

SATIRE AND THE GROTESQUE AS SOCIOLINGUISTIC MECHANISMS OF SOCIAL CRITIQUE IN AZERBAIJANI AND AFRICAN AMERICAN LITERATURE

Gulnar Mirsalim RZAYEVA

PhD in Philology, Head of the Department of Translation and Philology, Azerbaijan University

Abstract: The present article investigates the functions of satire and grotesque as sociolinguistic instruments of social criticism within two geographically and culturally distinct literary traditions: Azerbaijani literature and African American literature. Both satirical writing and grotesque representation operate as creative modes through which authors articulate social injustice, ideological contradiction, and moral disintegration embedded in the fabric of their respective societies. Rather than examining these modes as purely aesthetic devices, the study foregrounds their sociolinguistic dimension – that is, the ways in which language variation, register shift, and non-standard speech are mobilized to contest dominant discourses and construct counter-narratives.

In the Azerbaijani literary tradition, the works of Jalil Mammadguluzadeh occupy a central position. His dramatic text “The Dead” (Ölülər), along with the prose narratives “The Post Office” (Poçt qutusu) and “Master Zeynal” (Usta Zeynal), deploy carnivalesque hyperbole, dramatic absurdity, and incisive irony to lay bare intellectual stagnation, religious pretension, and the inertia of entrenched communal customs. Through these techniques, the author does not merely entertain but rather calls his readership toward critical self-examination and cultural renewal.

In the African American literary tradition, Toni Morrison's novel “Sula” (1973) engages satirical strategies to interrogate the interlocking structures of racial discrimination, gender constraint, and intra-community conflict. By foregrounding inequality and moral inconsistency through irony, vernacular language, and culturally embedded narrative conventions, Morrison reconfigures satire as an act of resistance and as a vehicle for the assertion of marginalized identities. The comparative dimension of the study reveals that despite the marked divergences in historical circumstance and cultural inheritance, both traditions draw on similar rhetorical resources – humour, linguistic exaggeration, and stylistic incongruity — to engage critically with lived social reality. The findings demonstrate that grotesque and satire function not only as literary genres but as sociolinguistic practices capable of destabilizing hegemonic norms, questioning structures of power, and cultivating a culture of critical thought.

Xülasə: Bu məqalədə satira və qrotesk Azərbaycan və Afrika-Amerika ədəbiyyatlarında sosial tənqidin sosiolingvistik vasitəsi kimi araşdırılır. Hər iki ədəbi ənənə nümayəndələri öz cəmiyyətlərindəki sosial ədalətsizlikləri, ideoloji ziddiyyətləri və mənəvi böhranları bədii dil vasitəsilə ifşa etmişlər. Azərbaycan ədəbiyyatında bu ənənənin ən parlaq nümunəsi Cəlil Məmmədquluzadənin yaradıcılığıdır. Onun "Ölülər", "Poçt qutusu" və "Usta Zeynal" əsərlərində şişirdilmiş personajlar, absurd vəziyyətlər və kəskin istehza vasitəsilə cəhalət, dini riyakarlıq və ictimai durğunluq tənqid edilir. Afrika-Amerika ədəbiyyatında isə Toni Morrisonun Sula romanı irqçiliyi, qadına qoyulan məhdudiyyətləri və icma daxilindəki ziddiyyətləri

satirik üsullarla əks etdirir. Müqayisəli təhlil göstərir ki, hər iki ənənədə yumor, dil müxtəlifliyi və üslub kənarlaşmaları hakim diskurslara qarşı müqavimətin əsas vasitəsinə çevrilir.

Açar sözlər: qrotesk; satira; sosiolinqvistika; Azərbaycan ədəbiyyatı; Afrika-Amerika ədəbiyyatı; linqvistik variasiya; sosial tənqid; Cəlil Məmmədquluzadə; Toni Morrison

Introduction

The interplay between literary form and social reality has long occupied literary scholars and sociolinguists alike. When literature does not merely reflect the world but actively intervenes in it – exposing its absurdities, mocking its pretensions, distorting its familiar surfaces to reveal deeper truths – it enters the terrain of the grotesque and the satirical. This study situates that terrain at the intersection of literary criticism and sociolinguistics, examining how two substantially different literary traditions – Azerbaijani and African American – have developed comparable mechanisms of social critique through the deployment of language as a weapon, a mask, and a mirror.

The two traditions under examination are separated by vast differences in geography, history, language, and the specific conditions of social struggle that each has endured. Yet both have given rise to a body of writing in which humour, exaggeration, linguistic play, and generic distortion serve not merely aesthetic ends but also function as forms of sociolinguistic resistance. This convergence, rather than being coincidental, reflects a broader tendency observable across many world literatures in which communities under social or political constraint develop indirect and creative modes of articulating criticism that cannot be safely expressed through more direct means.

The concept of sociolinguistic dynamics, as employed in this study, refers to the ways in which language variation and usage are embedded within, and actively constitutive of, social relations. When authors choose to write in dialect, to shift register unexpectedly, to layer their texts with ironic double meanings, or to give voice to socially marginalised speakers, they are not making purely stylistic choices but are participating in the negotiation of power, identity, and meaning within their communities. Grotesque and satirical writing, as this study argues, represent particularly rich sites for observing these sociolinguistic dynamics at work.

In the Azerbaijani context, the tradition of Enlightenment satire that emerged in the late nineteenth and early twentieth centuries – of which Jalil Mammadguluzadeh is the foremost representative – deployed the comic and the absurd in the service of a broader project of intellectual and social transformation. In the African American context, Toni Morrison's novels – and *Sula* in particular – draw upon a long tradition of double-voiced narrative, vernacular language, and community-centred storytelling to mount a multifaceted critique of racial and gender oppression. By reading these traditions against one another, this study aims to illuminate both the specific strategies each employs and the shared sociolinguistic logic that underlies their common commitment to critique.

Materials and Methods

The methodological foundation of this study is a comparative literary analysis conducted within a sociolinguistic theoretical framework. The primary textual corpus consists of three works by Jalil Mammadguluzadeh – the drama “The Deads”, the satirical prose piece “The Post Office”, and the short narrative “Master Zeynal” – alongside Toni Morrison's novel “*Sula*”, first published in 1973. These texts were identified as representative examples of grotesque and satirical writing within their respective traditions, and their selection was guided by both their canonical status and their exemplary deployment of the linguistic and rhetorical strategies under investigation.

Two principal theoretical frameworks inform the analysis. The first is the sociolinguistic theory of social identity and language variation, which examines how social positioning shapes and is shaped by speakers' linguistic choices, including their use of dialect, register, accent, and code-switching. In literary texts, this framework allows for analysis of how authors construct socially legible characters through their speech patterns and how linguistic deviation from a perceived norm carries ideological weight. The second framework is the theory of language and power, which investigates how language functions not merely as a vehicle of communication but as a mechanism through which social hierarchies are established, maintained, contested, and occasionally subverted (Satyan, 2019; Spitzmüller & Warnke, 2011).

At the level of interpretive method, the study draws on both hermeneutic-interpretative and sociological approaches to literary analysis. The hermeneutic dimension involves close reading of symbolic structures, characterisation, and narrative voice, situating textual meanings within broader philosophical and cultural contexts. The sociological dimension situates the literary texts within the specific historical and social conditions of their production, reading them as indices of the ideological tensions and social contradictions of their respective eras. Grotesque and satirical elements were identified and analysed as discrete units of meaning within each text, enabling systematic comparison across the two literary traditions (Burke, 1984; Bakhtin, 1984).

Discussion

Grotesque and Satire in the Works of Jalil Mammadguluzadeh

A detailed reading of Mammadguluzadeh's selected works reveals a carefully calibrated use of grotesque and satirical strategies in the service of a sustained social critique. In "The Deads", the playwright constructs a theatrical world in which the boundary between the living and the dead has become metaphorically meaningless: the nominally living characters are spiritually and intellectually inert, while the world they inhabit is characterised by ritual, superstition, and an inability to engage with the present moment. The central conceit of the play – that those who breathe and move are, in any meaningful sense, as dead as those who lie in the grave – is a classic grotesque inversion, one that simultaneously produces black comedy and delivers a devastating critique of cultural stagnation.

The sociolinguistic dimension of this grotesque is evident in the playwright's deliberate use of colloquial and dialectal speech to characterise the figures who embody ignorance and inertia. These characters do not speak in a neutral or elevated register; their language marks them as socially and intellectually limited, as imprisoned within a particular stratum of communal life that has no access to the modernising currents flowing through the wider world. As Guliyev (1992) have noted, this linguistic strategy performs a dual function: it anchors the characters in a recognisable social reality familiar to Mammadguluzadeh's audience, while simultaneously producing the ironic distance necessary for critical reflection. The reader or spectator is invited to recognise these figures from their own community and, in recognising them, to understand what is at stake in the failure to change.

In "The Post Office" and "Master Zeynal", the satirical dimension becomes still more pointed. The bureaucratic incompetence and social indifference depicted in these texts are rendered comic through exaggeration and incongruity, but the comedy is always purposeful: it directs attention to the real costs of ignorance and administrative dysfunction for ordinary people's lives. The use of ironic narrative voice – a narrator who affects neutrality while systematically exposing the absurdity of the situations he describes – is a hallmark of Mammadguluzadeh's prose style and constitutes a

distinctly sociolinguistic register, one that creates meaning through the tension between what is said and what is clearly understood.

Satirical Strategies in Toni Morrison's *Sula*

Toni Morrison's *Sula* operates within a very different literary and social context, but its deployment of satirical strategies is no less sophisticated or purposeful. The novel's opening gambit – the account of how a Black community came to occupy the hilltop district known as the Bottom, a name derived from a white landowner's bitter joke – establishes from its first pages the book's central satirical method: the exposure of the arbitrary and often cruelly ironic nature of the social arrangements that structure everyday life. Morrison demonstrates that the Bottom is not the bottom of anything in any natural or necessary sense; it is the bottom only because those with power declared it so and those without power had no choice but to accept the designation (Morrison, 1973).

This foundational satirical gesture has an explicitly sociolinguistic dimension. Morrison is demonstrating that language – including the seemingly neutral language of naming and classification – is never innocent; it is always implicated in the exercise of power. The name Bottom is not merely a geographical designation but a social judgment, an ideological inscription, and an act of symbolic violence. By foregrounding the history of that naming, Morrison invites her readers to adopt a critical posture toward language itself, to question the meanings embedded in apparently natural designations and to recognise the power relations they encode.

The novel extends this sociolinguistic critique through its treatment of social performance and the language of respectability. The satirical portrait of community women whose investment in the performance of moral propriety – straightened hair, church attendance, appropriate deference – is greater than their commitment to any genuine ethical principle reveals the gap between performed identity and authentic selfhood. This critique operates through the register of irony: Morrison's narrative voice describes these performances with a surface-level neutrality that barely conceals its sardonic awareness of their emptiness. The sociolinguistic import of this irony lies in its demonstration of how dominant social norms are internalised and reproduced through everyday linguistic and bodily practices, and how those practices can become instruments of self-oppression (Morrison, 1973, p. 173).

The figure of Shadrack and his institution of National Suicide Day constitutes what may be Morrison's most audacious satirical and grotesque invention. By creating a character who responds to trauma through the ceremonial ritualisation of death, Morrison introduces a form of black humour that functions simultaneously as social satire, psychological portrait, and cultural commentary. Shadrack's ritual – absurd and darkly comic in its premise – is shown to serve a genuine community function: it provides a framework within which the unspoken fears of a traumatised community can be acknowledged and, to some extent, contained. As Gates (1988) has argued in relation to African American literary traditions more broadly, this kind of double-voiced discourse – in which surface absurdity conceals deeper social meaning – constitutes a culturally specific mode of critique that has developed in response to historical conditions in which direct speech about certain truths was dangerous or impossible.

Comparative Analysis: Convergences and Divergences

The comparative reading of Mammadguluzadeh and Morrison reveals both significant common ground and instructive divergences between the two literary traditions. At the level of shared strategy, both authors mobilise grotesque distortion and satirical irony as instruments of

social critique; both draw on linguistically marked speech to anchor characters in specific social positions; and both employ forms of humour that are simultaneously comic and morally serious. In both cases, the literary text functions as a sociolinguistic arena in which competing discourses are staged, dominant norms are subjected to pressure, and alternative ways of understanding social reality are made imaginatively available to readers.

The most significant divergence between the two traditions lies in the modality and register of their respective critical strategies. Mammadguluzadeh tends toward forms of grotesque that are visible, performative, and carnivalesque in the Bakhtinian sense: his characters are exaggerated almost to the point of caricature, his situations are openly absurd, and the comedy is broadly legible even to audiences without extensive literary education. This approach reflects the specific sociolinguistic conditions of the early twentieth-century Azerbaijani context, in which a largely oral-traditional community needed a form of satire that could communicate effectively through immediately recognisable social types and exaggerated comic situations (Ahmadova, Sh. 2021).

Morrison's satirical mode, by contrast, tends toward subtlety, indirection, and layered meaning. This reflects both the specific traditions of African American literary expression – in which, as Gates (1988) has documented, the deployment of signifying double meanings within apparently conventional narrative surfaces has a long and complex history – and the particular conditions of a writer addressing a community that has had to develop sophisticated strategies for encoding resistance within dominant-language literary forms. Morrison's irony operates beneath the surface of the text; it requires readers to bring to the work a set of cultural competences and a willingness to question what appears merely descriptive or neutral.

Both modalities, however, can be understood within the theoretical framework developed by Bakhtin (1984) in his analysis of carnival, the grotesque body, and heteroglossic discourse. Bakhtin's central insight – that the grotesque and the carnivalesque create temporary spaces in which hierarchies are inverted, taboos are violated, and official discourses are exposed to ridicule – applies to both the theatrical grotesque of Mammadguluzadeh and the narrative satire of Morrison, even though the forms this inversion takes differ markedly between the two. In both cases, what Bakhtin terms heteroglossia – the polyphonic coexistence of multiple, socially differentiated linguistic registers within a single text – serves as the principal vehicle for ideological critique. Language in these texts is never monolithic; it is always multiple, always stratified, and always in conflict with itself (Bakhtin, 1984; Crosby, 2020).

From a broader sociolinguistic perspective, the study affirms that language variation in literature is not an incidental feature of realistic characterisation but a constitutive element of ideological meaning. When Mammadguluzadeh's characters speak in dialect and colloquial register, they are not merely sounding realistic; they are being positioned within a social hierarchy that the text simultaneously depicts and critiques (Pashayev, M. J. 1966). When Morrison's narrator shifts between the vernacular of the Bottom community and a more detached, ironically charged literary register, she is not merely demonstrating narrative range; she is enacting the double consciousness that characterises Black American social experience and literary expression as theorised by Du Bois (1903) and elaborated in the literary domain by Gates (1988).

Conclusion

This study has examined the sociolinguistic dimensions of grotesque and satirical writing in Azerbaijani and African American literary traditions, with particular attention to the works of Jalil Mammadguluzadeh and Toni Morrison. The comparative analysis has shown that, despite the

substantial differences in cultural and historical context that separate these two bodies of literature, both traditions deploy grotesque and satirical strategies as powerful and purposeful instruments of social critique, and that the sociolinguistic dimension of these strategies – their exploitation of linguistic variation, register incongruity, and communicative double meanings – is central to their critical force.

In the Azerbaijani tradition, Mammadguluzadeh's carnivalesque grotesque, his use of colloquial and dialectal speech, and his ironic narrative strategies construct a sociolinguistic space within which the targets of his satire – ignorance, religious pretension, intellectual stagnation – are made visible in their full absurdity and challenged by implication to change. In the African American tradition, Morrison's deployment of vernacular language, symbolic naming, black humour, and ironic narrative voice enables a more subtle but no less devastating critique of racism, gender constraint, and the internalisation of oppressive social norms.

Both traditions demonstrate that the sociolinguistic power of grotesque and satire resides not merely in what they say about society but in how they say it – in the specific ways in which they exploit the resources of language itself to make power visible, to make injustice laughable, and to make possible the imaginative apprehension of alternative social arrangements. The findings of this study thus contribute to an understanding of literary language as a site of social negotiation, and of grotesque and satirical writing as practices that are at once aesthetic, political, and sociolinguistic.

Further research might extend this comparative framework to other non-Western literary traditions – including South Asian, Latin American, or West African – in which analogous sociolinguistic strategies of comic resistance have developed in response to conditions of social and political constraint. Such work would deepen our understanding of the cross-cultural dimensions of satirical and grotesque writing and illuminate the ways in which marginalized communities have consistently found in the resources of language a means of speaking truth to power.

THE ROLE OF IMPLICIT SYMBOLIC FEATURES IN ARABIC AND AZERBAIJANI TEXTS

Zemfira Isakhan ABBASOVA

PhD in Philology, Deputy Dean for Academic Affairs of Faculty of Philology,
Senior Lecturer, Department of Azerbaijani Linguistics, Azerbaijan State Pedagogical University

E-mail: Zemfira.Abbasova@adpu.edu.az

ORCID ID: 0000-0001-2673-8634

Abstract: This study explores the implicit (hidden) features of symbols in Arabic and Azerbaijani literary texts from a comparative semiotic perspective. Symbols function not only as aesthetic devices but also as carriers of deep cultural, philosophical, and emotional meanings. The article examines classical and modern texts, focusing on how implicit symbolism operates within Sufi literature, classical poetry, folklore, and contemporary prose. The research is grounded in semiotic and hermeneutic theories, particularly those developed by Umberto Eco, Yuri Lotman, and Paul Ricoeur. The findings demonstrate that Arabic literature tends to emphasize mystical and metaphysical symbolism, whereas Azerbaijani literature reflects emotionally rich and culturally embedded symbolic systems. At the same time, during the research, it was determined based on the symbol theories of Eastern and Turkish scholars, that implicit symbolism increases the semantic depth of the literary text, serves to preserve cultural codes and plays an important role in the process of intercultural communication. As a result, it is proven that implicit symbolic features act as one of the main components of the linguo-cultural structure of Arabic and Azerbaijani texts and are of great scientific importance in terms of studying national-cultural thinking.

Key words: symbolism, implicit meaning, semiotics, Arabic literature, Azerbaijani literature, implicit symbolism, symbol, linguoculturology, Arabic texts, Azerbaijani texts, cultural code, ethnic thinking, semantic analysis, Eastern literature, Turkish culture, national identity, literary text.

ƏRƏB VƏ AZƏRBAYCAN MƏTNLƏRİNDƏ İMPLİSİT SİMBOL XÜSUSİYYƏTLƏRİNİN ROLU

Zemfira İsaxan ABBASOVA

Fil. f.d., tədris işləri üzrə dekan müavini, baş müəllim, Azərbaycan dilçiliyi kafedrası, Azərbaycan
Dövlət Pedaqoji Universiteti

Xülasə: Məqalədə ərəb və Azərbaycan ədəbi mətnlərində simvolların gizli xüsusiyyətləri müqayisəli semiotik perspektivdən araşdırılır. Simvollar təkcə estetik vasitələr kimi deyil, həm də dərin mədəni, fəlsəfi və emosional mənaların daşıyıcısıdır. Məqalədə klassik və müasir mətnlər araşdırılır, sufi ədəbiyyatında, klassik poeziyada, folklorda və müasir nəsrə gizli simvolizmin necə işlənməsinə diqqət yetirilir. Tədqiqat, xüsusən də Umberto Eko, Yuri Lotman və Pol Riker tərəfindən inkişaf etdirilən semiotik və hermenevtik nəzəriyyələrə əsaslanır. Tapıntılar göstərir ki, ərəb ədəbiyyatı mistik və metafizik simvolizmi vurğulamağa meyillidir, Azərbaycan ədəbiyyatı isə emosional cəhətdən zəngin və mədəni cəhətdən yerləşmiş simvolik sistemləri əks etdirir. Eyni zamanda tədqiqat zamanı Şərq və Türk alimlərinin simvol nəzəriyyələri əsasında müəyyən edilmişdir ki, implisit simvolika bədii mətnin semantik dərinliyini artırır, mədəni kodların qorunmasına xidmət edir və mədəniyyətlərarası kommunikasiya prosesində mühüm rol oynayır. Nəticədə sübut olunur ki, implisit simvolik xüsusiyyətlər ərəb və Azərbaycan mətnlərinin linqvokulturoloji strukturunun əsas komponentlərindən biri kimi çıxış edir və milli-mədəni təfəkkürün öyrənilməsi baxımından mühüm elmi əhəmiyyət kəsb edir.

Açar sözlər: simvolizm, gizli məna, semiotika, ərəb ədəbiyyatı, Azərbaycan ədəbiyyatı, implisit simvolika, simvol, linqvokulturologiya, ərəb mətnləri, Azərbaycan mətnləri, mədəni kod, etnik təfəkkür, semantik analiz, Şərq ədəbiyyatı, Türk mədəniyyəti, milli identiklik, bədii mətn.

Introduction

Since the literary text is not only a system of explicitly expressed ideas, it is considered a complex structure of indirect meanings and cultural codes. At the same time, the literary text does not consist only of the explicitly expressed content of human thought, but also a complex system of signs resulting from the interaction of multilayered meanings. Symbols that perform an aesthetic function in language are symbols. One of the areas where language and culture most closely meet is symbols in literary texts. In this regard, poets and writers connect individual feelings to collective experience through symbols and at the same time can elevate a personal event to a universal meaning. Through symbols, cultural memory turns into a poetic form. Symbols are the most important element of the aesthetic space created through language. They are also not a direct description of reality in artistic thought, but its expansion and deepening in terms of the self. In this regard, symbols are a manifestation of the way a person perceives the world at both the linguistic and cultural levels.

Symbols of a particularly implicit nature, moving away from the external layer of the text, push the reader to carry out the process of interpretation and create a multifunctional semantic structure of the text.

Symbolism is one of the most complex and multilayered elements of literary discourse. Beyond its explicit function, a symbol carries implicit meanings that are not directly stated but emerge through context, cultural codes, and reader interpretation. Implicit symbolism allows authors to communicate abstract ideas indirectly, enriching the semantic depth of a text. Modern semiotics and linguoculturology view symbols as culturally encoded signs that function within broader interpretive systems (Lotman, 1990). Thus, the study of implicit symbolism requires both textual and cultural analysis.

Theoretical Framework

In the Eastern scientific tradition, the concept of a symbol was studied within the semantic possibilities of artistic expression, metaphor and sign long before Western semiotics. Arab

philologists and rhetoricians evaluated the symbol as a means of transmitting hidden meanings, unlike direct expression. Abdulqahir al-Jurjani, a prominent representative of the Arab rhetoric school, notes in his "Theory of Poetry" that the true value of a word does not appear in its apparent meaning, but in the system of semantic relations it creates within the text. According to the scientist, meaning is often formed indirectly, not directly which creates conditions for the emergence of symbolic layers of meaning (al-Jurjani, 1984, p. 112). Touching on the problems of signs and symbols in Arabic linguistics, Al-Jahiz wrote that some meanings are expressed more effectively not through words, but through signs, allusions, and figurative representations. In this regard, the symbol acts as a method of encoding cultural experience by human thought (al-Jahiz, 1968, p. 54). Abu Nasr al-Farabi, a prominent representative of Turkish-Islamic philosophical thought, considered symbolic expressions to be forms of truth presented in accordance with the level of human cognition. In his opinion, artistic images and symbols facilitate the understanding of abstract truths. The problem of symbols in Eastern mystical thought was widely developed, especially in the work of Muhyiddin Ibn Arabi. Ibn Arabi believed that every being existing in nature is a symbol of divine truth and that the visible world is a symbolic expression of the invisible world (Ibn Arabi, 2004, p. 73). Cultural foundations of implicit symbolism in Arabic texts Symbolic thinking in Arabic culture was mainly formed under the influence of desert life, Islamic values and tribal worldview. Most symbols are not presented explicitly in texts; their meaning is revealed through the reader's cultural knowledge. For example, in classical Arabic poetry, the image of the "desert" is outwardly a geographical space, but implicitly expresses the concepts of fate, trial, and spiritual loneliness.

Materials and Methods

The Arab poet Al-Mutanabbi writes: وَمَا الْخَيْلُ إِلَّا كَالصَّدِيقِ قَلِيلَةٌ Here, along with the apparent meaning, the horse becomes a symbol of loyalty and trust. In the Arab poetic tradition, the images of the falcon, eagle, crescent, palm tree and rain also often carry a hidden semantic meaning. In particular, rain is considered an implicit indicator of divine mercy, and the palm tree is the continuity of life. National-cultural characteristics of implicit symbolism in Azerbaijani texts The symbolic system in Azerbaijani literature was formed on the basis of Turkish mythological thought, Islamic culture and folk art. Turkologist Bahaeddin Ogel notes that in the ancient Turkic worldview, natural objects were perceived not only as material beings, but as symbolic manifestations of the cosmic order (Ogel, 1995, vol. 1, p. 217). From this point of view, in Azerbaijani texts: mountain - holiness and homeland; horse - freedom and heroism; wolf – origin and power; pomegranate – unity and fertility; spring – purity and life; bulbul – the soul of a lover; rose – acts as divine beauty. Especially in the work of Mahammad Fuzuli, rose and nightingale motifs are mystical symbols expressing the idea of divine perfection rather than external love. Fuzuli writes: Those who cry out against a rose are always nightingales. In this example, the nightingale acts as a symbol of the human spirit, and the rose is a symbol of divine truth. A comparison of Arab and Azerbaijani symbolism shows that symbols serve to preserve collective memory in both cultures. However, different natural and geographical environments play an important role in the formation of symbolic content. While the desert, camel and date palm are dominant symbols in Arabic texts, mountains, horses and pomegranates predominate in Azerbaijani texts. However, in both cultures, bird images act as a general symbol of freedom, tree life, and water purity. Bahaeddin Ogel, a prominent researcher of Turkish mythology and the symbolic system of thought, notes that in the mythological thinking of the Turkic peoples, natural phenomena and living beings are not just material beings,

but a system of cultural signs formed by the collective consciousness. According to the scientist, images such as mountains, trees, wolves, horses and water have a sacred meaning in Turkish culture and reflect the worldview of the people (Ogel, 1995, p. 214). Yaşar Çoruhlu, a well-known scholar of Turkish culture, writes that symbols are forms of ancient Turkish beliefs transformed into literature and folklore in later periods. Most of these symbols live in texts as hidden semantic structures, not explicit ones (Çoruhlu, 2011, p. 37). Çoruhlu notes: "Turkish symbols represent not only an object, but also cultural memory and social identity" (Çoruhlu, 2011, p. 41). This idea clearly shows the role that implicit symbolism plays in the preservation of cultural memory. Muharrem Ergin, while studying ancient Turkic texts, shows that symbolic expressions are an integral part of the poetic structure of Turkic languages. In particular, in his studies on the Orkhon Inscriptions, he emphasizes that the images of the sky, earth, mountain and wolf are carriers of ethnic identity (Ergin, 2005, p. 18). Turkologist Mehmet Kaplan considers symbols to be a poetic manifestation of national thinking. In his opinion, the images used in a literary text do not only carry an aesthetic function, but also reflect the historical consciousness of the people (Kaplan, 2004, p. 82). Kaplan writes: "The way to understand the culture of a nation is to understand its symbols." This approach is of methodological importance for the comparative analysis of implicit symbols in Arabic and Azerbaijani texts. According to Bahaeddin Ogel, the mountain is a symbol of closeness to God, holiness and power in Turkic mythology. The association of the image of the mountain with the concepts of homeland and national pride in Azerbaijani literature can be seen as a continuation of this tradition (Ogel, 1995, p. 241). Regarding the horse symbol, Yashar Çoruhlu writes that the horse is not just a means of transportation in Turkish culture, but is considered a spiritual continuation of the hero. This feature is clearly observed in Azerbaijani epics, especially in the Kitabi-Dede Gorgud epic (Çoruhlu, 2011, p. 154). Ahat Ustuner, who puts forward important ideas regarding the problem of symbols in modern Turkish linguoculturology, notes that the symbolic content encoded in language units serves to preserve national culture. According to the scientist, symbols are cultural signs located in the semantic layer of the language, and their interpretation requires ethnocultural knowledge (Ustuner, 2019, p. 67). From this point of view, the study of implicit symbols in Arabic and Azerbaijani texts is not only a literary, but also a linguoculturological problem.

The concept of the symbol has been widely discussed in linguistic and philosophical traditions. Ferdinand de Saussure (1916) emphasized the arbitrary nature of linguistic signs, laying the foundation for structural analysis. Charles Sanders Peirce (1931–1958) introduced a triadic model of sign–object–interpretant, highlighting interpretation as a key process. Later, Umberto Eco (1976) conceptualized symbols as open systems of meaning, capable of multiple interpretations. Similarly, Paul Ricoeur (1976) defined symbols as structures that "give rise to thought," emphasizing their hermeneutic dimension.

Implicit meaning, therefore, is context–dependent, culturally coded, reader-oriented

Literature Sufi Symbolism Implicit symbolism reaches its peak in Sufi literature. In the works of Ibn Arabi and Jalal ad-Din Rumi, symbols operate on a mystical level, for example wine – divine truth, beloved – God, journey – spiritual development and etc.

According to Annemarie Schimmel (1975), these symbols form a "mystical language system" that encodes spiritual experience. In classical Arabic poetry: desert – existential solitude, night – sorrow and longing

In modern literature, symbolism becomes more social. Naguib Mahfouz uses urban space as a symbol of societal transformation and identity. Classical Poetry in Azerbaijani classical literature, especially in the works of Nizami Ganjavi and Fuzuli, symbolism forms a coherent poetic system, rose – beauty, nightingale – lover, love – unity of earthly and divine

These meanings are not explicitly stated but implicitly understood within cultural tradition. In folklore, water – life and purification, mountain – sacredness, horse – heroism

In modern prose, authors like Anar and Elchin employ symbolic structures to express psychological and social realities.

Results and Discussion

A comparative analysis shows that, Arabic literature emphasizes mystical and metaphysical symbolism. Azerbaijani literature reflects emotional and cultural symbolism. According to Yuri Lotman (1990), symbols function as carriers of cultural memory, a concept applicable to both traditions.

Conclusion

Implicit symbolic features play a crucial role in shaping the semantic depth of literary texts. They enable indirect communication, activate reader interpretation, preserve cultural meanings. While differing in form and emphasis, both Arabic and Azerbaijani literatures rely heavily on implicit symbolism as a core artistic and cognitive mechanism. The theoretical heritage of Eastern researchers shows that a symbol is not only an artistic tool, but also a semantic mechanism that ensures the preservation of cultural memory. Implicit symbolic features in Arabic and Azerbaijani texts reflect the religious worldview, historical experience and national-cultural value system of the people. The study of hidden symbols allows for a deeper understanding of the linguo-cultural characteristics of the Eastern peoples.

STRUCTURAL-SEMANTIC TYPES OF COMPARATIVE LINGUISTICS

Gulnara Valeh ASLANOVA

Doctor of Philosophy in Philology, Asst. Prof. of the Language Training Center

Azerbaijan State Agrarian University

E-mail: gulnara.aslanova@adau.edu.az

ORCID ID: 0000-0003-2777-2190

Abstract: Structural-semantic types in comparative linguistics classify linguistic units (usually phraseological units or compound words) according to their structural and meaning features. Five main types are distinguished: causal, adverbial, attributive-qualitative, attributive-metaphorical, and attributive-characteristic relationships, which allow for the comparison of semantic patterns across languages.

This article examines Western European borrowings in modern Turkish literary language, providing a brief structural and semantic description and outlining the areas of use of this vocabulary. The study focuses on borrowings from Italian, German, French, and English.

According to many famous Turkologists, the Turkish language, due to a number of reasons, which include, among others, the political course in different periods of Turkish statehood, as well as the rapid technological progress of the 19th-20th centuries, gradually acquired vocabulary in which there was a particular need, since newly emerging concepts and objects of everyday life required names that were previously absent from the language.

Key words: comparison, Western European borrowings, implicative structures, terminology, semantic borrowing.

MÜQAYISƏLİ DİLÇİLİYİN STRUKTUR-SEMANTİK NÖVLƏRİ

Gülnara Valeh ASLANOVA

Filologiya üzrə fəlsəfə doktoru, Dillər Tədris Mərkəzinin dosent əvəzi

Azərbaycan Dövlət Aqrar Universiteti

E-mail: gulnara.aslanova@adau.edu.az

ORCID ID: 0000-0003-2777-2190

Xülasə: Müqayisəli dilçilikdə struktur-semantik tiplər dil vahidlərini (adətən frazeoloji vahidlər və ya mürəkkəb sözlər) struktur və məna xüsusiyyətlərinə görə təsnif edir. Beş əsas tip fərqləndirilir: səbəb-nəticə, zərf, atributiv-keyfiyyət, atributiv-metaforik və atributiv-xarakterik əlaqələr, bunlar dillər arasında semantik nümunələrin müqayisəsinə imkan verir.

Bu məqalədə müasir türk ədəbi dilindəki Qərbi Avropa alınmaları araşdırılır, qısa struktur və semantik təsvir verilir və bu lüğətin istifadə sahələri qeyd olunur. Tədqiqat italyan, alman, fransız və ingilis dillərindən alınmalara yönəlib.

Bir çox məşhur türkoloqların fikrincə, türk dili bir sıra səbəblərə görə, o cümlədən Türkiyə dövlətçiliyinin müxtəlif dövrlərindəki siyasi kurs, eləcə də XIX-XX əsrlərin sürətli texnoloji tərəqqisi səbəbindən tədricən xüsusi ehtiyac duyulan lüğətə yiyələnmişdir, çünki yeni yaranan anlayışlar və gündəlik həyat obyektləri əvvəllər dildə olmayan adları tələb edirdi.

Açar sözlər: müqayisə, Qərbi Avropa alınmaları, implikativ strukturlar, terminologiya, semantik alınma

Introduction

Comparison differs from other units as a linguistic phenomenon in its structural features. It represents a three-part structure at any level: the subject of comparison, the object of comparison, and the basis of comparison. Complex comparative constructions also include an operator, that is, a connecting element that connects the compared parts. Comparative conjunctions usually serve as connecting elements.

We see comparison as a structural-semantic category determined by the systems approach to its study. The systems approach "requires determining the place of the fact of speech in language systems (classification), and for this it is necessary to establish its connections and relationships with language units, to determine its features/characteristics.

"Describing the language system as an indivisible structure, V.V. Babaytseva notes that this system integrates units from various levels: syntactic, morphological, lexical-phraseological, morphemic, and phonetic-phonological. The components of each level are organized into systems, which, in turn, incorporate even more specific subsystems.

These hierarchical systems are not isolated; they are inherently interconnected through the very architecture of the language: units from lower levels serve as the building blocks for those at higher levels. Thus, morphemes are composed of sounds, while words consist of both sounds and morphemes, which are then organized into lexico-semantic groups and structural-semantic classes (parts of speech). Simple sentences, which form the constituents of complex ones, are constructed from word forms and phrases. Finally, the text—as the most complex unit of the language system—is built from simple and complex sentences. It is within the text, to an even greater extent than the sentence, that units from all levels function collectively." [Babaytseva V.V., 2010].

"The principle of systematicity manifests itself across all levels of linguistic analysis. While the concept of language as a system is not new to Russian linguistics, focus on its systemic organization gained particular prominence in the 20th century. A.V. Vaganov noted that human speech is a system of interrelated elements, with syntax playing a central organizational role. Summarizing his discussion of the sentence as the fundamental structural unit of speech, he writes: '...both the articulate sounds that evolve into words, and each individual word itself, are nothing

more than the living members of a complete living entity called the sentence' [A.V. Vaganov, 2004].

The systemic approach involves studying the components (elements) of the system, their interconnections, and relationships, as well as determining the position of both prototypical and transitional, syncretic formations within the linguistic hierarchy. Nevertheless, specific subsystems can be identified at every level of language."

"Structural-semantic types of comparison classify linguistic means of expressing similarity based on both their form (structure) and meaning (semantics). The primary types include causal-consecutive, attributive-qualitative, metaphorical, and comparative constructions utilizing adverbs and conjunctions. These types describe similarities at various levels of language, ranging from individual words to complex sentences.

The systemic approach involves investigating the components (elements) of the system, their interconnections, and relationships, as well as defining the position of both prototypical and transitional, syncretic formations within the linguistic hierarchy. Nevertheless, specific subsystems can be identified at every level of language."

Materials and Methods

A system is an organized set of interconnected and interrelated units (elements, components) at various levels that function as a unified entity. "Units of a lower level constitute the units of a higher level, and conversely, units of a higher level can be decomposed into those of a lower level. Within higher-level constructions, lower-level syntactic units function as elements (components) that enter into syntactic links and relationships with one another."

Transitional and syncretic phenomena unify the language system: "The most vital system-forming factors are isomorphism and transitivity, which ensure integrity and consistency both within and across various levels. Single-level transitional phenomena connect the language system primarily on a horizontal axis, while isomorphic phenomena link it vertically, thereby interconnecting the different linguistic levels."

It is evident from the proposed description of the word that structural and semantic word types are heterogeneous; this heterogeneity within the word structure primarily depends on the nature of the integration and interaction between lexical and grammatical meanings. Semantic word types do not occupy a single plane. The division of words into notional and functional categories, which has been established in Russian grammar since the 18th century, is significant as an indication of the awareness of the structural heterogeneity inherent in various word types.

Seven distinct characteristics of functional words have been identified:

1. Inability to function as independent nominative units: They cannot be used as standalone names or labels.
2. Inability to independently expand a syntagma or phrase: For example, conjunctions (e.g., and), relative words, and prepositions cannot construct or extend a phrase or syntagma autonomously, as they are inherently dependent on other lexical units.
3. Absence of prosodic pauses: In speech, these words are typically not followed by a pause, unless required for specific emphatic justification.
4. Morphological or semantic indivisibility: Most functional words exhibit morphological atomicity or semantic inseparability (compare, for instance, mono-morphemic units like at or here with complex yet semantically unified units like because, in order to, or provided that).

5. Resistance to phrasal stress: They generally do not carry phrasal emphasis, except in rare cases of contrastive focus.
6. Lack of independent lexical stress: Most primitive functional words do not possess an autonomous word-level stress.
7. Uniqueness of grammatical meanings: The grammatical meanings of functional words are unique in that they entirely subsume or "absorb" their lexical content.

Discussion

An analysis of the semantic structure of the word leads to the identification of four primary grammatical-semantic categories of words [Devyatova N.M., 2001].

First, according to the traditional definition, the category of notional words (substantive units) is distinguished. All such words possess a nominative function. Within their structure, they reflect and embody objects, processes, qualities, attributes, numerical relations, and circumstances. They apply to, denote, and define the attributes and processes of reality. Adjacent to notional words are equivalents that occasionally function as substitutes for names; such words are termed pronouns. Collectively, these word categories constitute the fundamental lexical and grammatical core of language. Words of this type form the basis of syntactic units (phrases and sentences) and phraseological series. They serve as the primary constituents of the sentence, and each is capable of forming a complete utterance independently. Most words within these categories represent grammatical complexes or systems of forms (paradigms). The various forms or modifications of a single word are associated with its diverse functions within the speech structure.

Consequently, the term "parts of speech" is particularly appropriate when applied to these classes of words. They constitute the subject-semantic, lexical, and grammatical foundation of speech. According to Potebnya's terminology, these are "lexical words," and in Fortunatov's classification, they are defined as "full words" (polnoznamennye slova).

2. Parts of speech are contrasted with particles, connective words, and functional words. This structural-semantic category of words lacks a nominative function and is devoid of "objective reference." These words establish a connection with the world of reality only through the mediation of notional words (names). They belong to the sphere of linguistic semantics that reflects the most general and abstract categories of existential relations—such as cause, time, space, and purpose. They are closely linked to the "technique" of language, complicating and advancing its structural development.

Connective words are formal rather than "material" in nature. In these units, "material" content and grammatical functions overlap; their lexical meanings are identical to their grammatical meanings. These words occupy the boundary between lexicology and grammar, as well as the threshold between words and morphemes. Consequently, Potebnya referred to them as "formal words," while Fortunatov categorized them as "partial words" (chastichnye slova).

3. The third category of words differs significantly from the previous two structural types: these are modal words. Much like relational words, they lack a nominative function. However, unlike prepositions and functional units, many modal words do not belong strictly to the domain of formal linguistic tools; they possess a more pronounced "lexical" character than relational words. They do not express links or relationships between sentence constituents; rather, modal words are, in a sense, inserted into or superimposed upon the sentence.

They express the modality of communication regarding reality or serve as a subjective-stylistic key for the utterance. They delineate the sphere of the subject's evaluations and

perspectives concerning both reality and the methods of its verbal expression. Modal words indicate the orientation of speech toward reality as conditioned by the subject's point of view; in this regard, they are functionally proximate to the formal meaning of verbal moods. Inserted into or appended to the sentence, modal words transcend the boundaries of both parts of speech and particles, even though they may superficially resemble both.

4. The fourth category of words leads to the sphere of purely subjective, emotional, and volitional expressions. If we apply the term in a somewhat broader sense, interjections belong to this fourth structural type of words. They are sharply distinguished from other lexical units by the intonational and melodic characteristics of their forms, the absence of cognitive value, their syntactic irregularity, and their inability to form combinations with other words. Furthermore, their morphological indivisibility, affective coloring, and direct correlation with facial expressions and expressive gestures set them apart.

Interjections express the subject's emotions, moods, and volitional impulses, yet they do not define or name them. They are closer to expressive gestures than to notional words (names). Whether interjections constitute sentences remains a subject of debate; however, it is difficult to deny that interjectional utterances function as "sentence equivalents" in terms of their meaning and purpose.

Conclusion

Semantic structural types constitute a fundamental concept in comparative linguistic research, facilitating the identification of lexical, syntactic, and phraseological similarities and divergences between languages. The systematic study of these types enables researchers to explore genetic and areal linguistic relationships, cultural influences, and universal linguistic phenomena. Examining this phenomenon through ethnolinguistic, cognitive, and translational lenses allows for a more profound understanding of linguistic architecture and its indispensable role in human communication.

THE ROLE OF THE ENGLISH LANGUAGE IN THE DIGITAL WORLD

Zeynab Kasim AHMADOVA

Senior teacher, Department of Foreign Languages, Sumgayit State University

E-mail: zeyneb.ehmedova@sdu.edu.az

ORCID ID: 0009-0005-2113-1733

Abstract: This article examines the role of the English language in the digital world. It highlights the historical factors that contributed to its global dominance. The study explores how English became a lingua franca in digital communication. It analyzes the distribution of online content across different languages. The research emphasizes the imbalance in access to digital information. English is identified as a key factor in digital inclusion and exclusion. The article discusses the importance of English in information technology and programming. It also examines its role in digital education and online learning platforms. The economic implications of English proficiency are analyzed. The study highlights how language skills influence employment opportunities. Cultural exchange in the digital world is explored in relation to English. The article addresses concerns about cultural homogenization. It also considers the preservation of linguistic diversity. The role of English in social media communication is examined. The study explores new forms of digital language and expression. Scientific communication and research are analyzed in the context of English dominance. The article highlights challenges faced by non-native English speakers. It also discusses digital governance and language policies. The importance of multilingual approaches is emphasized. The impact of artificial intelligence on language use is examined. The article considers future trends in digital communication. It highlights the need for inclusive language practices. The study concludes that English will remain a dominant global language. However, it emphasizes the importance of supporting other languages. The article provides insights into the relationship between language and globalization.

Key words: English language, digital world, globalization, communication, multilingualism

RƏQƏMSAL DÜNYADA İNGİLİS DİLİNİN ROLU

Zeynab Qasım ƏHMƏDOVA

Baş müəllim, Xarici dillər kafedrası, Sumqayıt Dövlət Universiteti

E-mail: zeyneb.ehmedova@sdu.edu.az

ORCID ID: 0009-0005-2113-1733

Xülasə: Bu məqalə ingilis dilinin rəqəmsal dünyadakı rolunu araşdırır. Tədqiqat bu dilin global üstünlüyünü formalaşdıran tarixi amilləri vurğulayır. Məqalədə ingilis dilinin rəqəmsal ünsiyyədə lingua franca kimi necə formalaşdığı izah olunur. Onlayn məzmunun müxtəlif dillər üzrə paylanması təhlil edilir. Rəqəmsal informasiyaya çıxışda mövcud olan qeyri-bərabərliklər diqqətə çatdırılır. İngilis dili rəqəmsal inklüzivlik və eksklüzivlik baxımından əsas faktor kimi qiymətləndirilir. Məqalədə informasiya texnologiyaları və proqramlaşdırmada ingilis dilinin rolu geniş şəkildə izah olunur. Eyni zamanda onun rəqəmsal təhsil və onlayn öyrənmə platformalarındakı əhəmiyyəti araşdırılır. İngilis dili biliyinin iqtisadi təsirləri təhlil edilir. Dil biliklərinin məşğulluq imkanlarına təsiri göstərilir. Rəqəmsal dünyada mədəni mübadilə ingilis dili kontekstində öyrənilir. Mədəni homogenləşmə ilə bağlı narahatlıqlar qeyd olunur. Dil müxtəlifliyinin qorunması məsələsinə diqqət yetirilir. Sosial mediada ingilis dilinin rolu araşdırılır. Rəqəmsal ünsiyyədə yeni dil formalarının yaranması izah edilir. Elmi kommunikasiya və tədqiqat sahəsində ingilis dilinin üstünlüyü təhlil olunur. Qeyri-ana dili kimi ingilis dilində danışanların qarşılaşdığı çətinliklər göstərilir. Rəqəmsal idarəetmə və dil siyasətləri müzakirə olunur. Çoxdilli yanaşmaların əhəmiyyəti vurğulanır. Süni intellektin dil istifadəsinə təsiri nəzərdən keçirilir. Gələcəkdə rəqəmsal ünsiyyətin inkişaf istiqamətləri təhlil edilir. Inklüziv dil praktikalarının vacibliyi qeyd olunur. Məqalə ingilis dilinin gələcəkdə

də dominant mövqedə qalacağını göstərir. Bununla yanaşı, digər dillərin dəstəklənməsinin zəruriliyi vurğulanır. Tədqiqat dil və qloballaşma arasındakı əlaqəyə dair mühüm nəticələr təqdim edir.

Açar sözlər: ingilis dili, digital dünya, qloballaşma, kommunikasiya, çoxdillilik

Introduction

The rapid expansion of digital technologies has fundamentally transformed communication, knowledge dissemination, and global interaction. Within this transformation, the English language has emerged as a dominant medium across digital platforms. Its widespread use is closely linked to historical, economic, and technological factors that have positioned it as a global lingua franca. In the digital world, English functions not only as a tool for communication but also as a gateway to information and innovation. A significant portion of online content is created and distributed in English, reinforcing its central role in digital environments. This prevalence influences how users access, interpret, and share information. As a result, proficiency in English often determines the extent to which individuals can participate in digital spaces. Scholars argue that language plays a crucial role in shaping digital inclusion and exclusion (Crystal, 2011). The dominance of English can facilitate global communication while simultaneously marginalizing non-English speakers. This dual effect highlights the complexity of language dynamics in the digital age. Furthermore, English serves as a common ground for international collaboration in fields such as science, technology, and business. Consequently, its role continues to expand alongside technological advancements. The integration of English into digital tools and platforms further reinforces its importance. Understanding this role is essential for analyzing broader trends in globalization and communication. Therefore, examining the position of English in the digital world offers valuable insights into contemporary society.

Methodology and Materials

This study is based on a qualitative research methodology and employs descriptive and analytical methods to examine the role of the English language in the digital world. The research relies primarily on secondary data sources, including academic books, scholarly articles, international reports, and statistical publications related to digital communication, education, technology, and globalization. A comprehensive literature review was conducted to identify the main factors contributing to the dominance of English in online environments and to evaluate its impact on information access, digital communication, scientific research, economic participation, and cultural exchange. Through content analysis and comparative evaluation of existing studies, the research explores both the advantages of English as a global lingua franca and the challenges it creates for linguistic diversity and digital inclusion. The findings presented in this study are derived from the synthesis and interpretation of relevant theoretical and empirical sources, providing a broad understanding of the significance of English in contemporary digital society.

Results and Discussion

The historical development of English as a global language predates the digital era but has been significantly amplified by it. The expansion of the British Empire and later the global influence of the United States contributed to the spread of English worldwide. These historical processes established English as a language of trade, diplomacy, and education. With the emergence of the internet, this existing linguistic foundation enabled English to dominate online communication. Early digital infrastructures were largely developed in English-speaking countries, which further reinforced its prominence. Consequently, English became embedded in programming

languages, software interfaces, and technical documentation. This early advantage continues to shape digital communication today. Researchers note that linguistic patterns established during the initial stages of technological development often persist over time (Castells, 2010). As a result, English maintains a structural advantage in the digital ecosystem. The globalization of technology companies has also contributed to the widespread use of English. Many leading digital platforms operate primarily in English, even when serving international audiences. This creates a linguistic environment where English proficiency is highly valued. Moreover, the adaptability of English has allowed it to incorporate new technological terms and concepts. This flexibility enhances its relevance in rapidly evolving digital contexts. Therefore, the historical trajectory of English plays a crucial role in understanding its current digital dominance.

In the realm of online content, English occupies a central position across websites, social media platforms, and digital publications. Studies indicate that a large percentage of web content is written in English, despite the growing diversity of internet users (W3Techs, 2024). This imbalance affects how information is produced and consumed globally. Users who are proficient in English have greater access to a wide range of digital resources. Conversely, those who lack English skills may face limitations in accessing critical information. This disparity contributes to what is often referred to as the “digital language divide.” The dominance of English also influences search engine algorithms and content visibility. English-language content is more likely to be indexed and prioritized by major search engines. As a result, knowledge dissemination is often skewed toward English-speaking audiences. Social media further amplifies this trend by promoting content that reaches broader global audiences. English serves as a bridge language that enables communication among users from different linguistic backgrounds. However, this can also lead to the homogenization of cultural expression. Local languages may be underrepresented in digital spaces as a result. Efforts to promote multilingual content are increasing but have not yet fully addressed the imbalance. Therefore, the role of English in online content remains both influential and contested.

The influence of English is particularly evident in the field of information technology and software development. Most programming languages use English-based syntax and keywords, making it an essential skill for developers worldwide. This standardization facilitates collaboration across international teams. Technical documentation, tutorials, and support forums are also predominantly available in English. As a result, developers who are proficient in English can more easily acquire new skills and solve technical problems. The use of English in coding environments creates a shared linguistic framework for innovation. However, it also presents challenges for non-English-speaking programmers. They must learn both technical concepts and a foreign language simultaneously. This dual learning process can be a barrier to entry in the tech industry. Despite this, many developers successfully navigate these challenges through education and practice. The global nature of the tech industry further reinforces the importance of English. Companies often require English proficiency for employment and collaboration. This requirement reflects the language’s role as a standard medium of communication. Additionally, open-source communities rely heavily on English for coordination and knowledge sharing. Consequently, English remains deeply embedded in the technological infrastructure of the digital world.

In digital education, English plays a significant role in shaping access to knowledge and learning opportunities. Many of the world’s leading online courses and educational resources are offered in English. Platforms such as massive open online courses (MOOCs) often use English as

the primary language of instruction. This allows learners from different countries to access high-quality education. However, it also creates challenges for those who are not proficient in English. Language barriers can limit comprehension and participation in online learning environments. Despite the availability of subtitles and translations, the quality and accessibility of these resources vary. Researchers emphasize that language proficiency is a key factor in educational success in digital contexts (Selwyn, 2016). English proficiency can enhance academic and professional opportunities in a globalized world. At the same time, reliance on a single dominant language may reduce linguistic diversity in education. Efforts to localize content and promote multilingual education are gaining importance. Educational institutions are increasingly recognizing the need for inclusive language policies. Nevertheless, English continues to serve as a primary medium for knowledge dissemination. Its role in digital education reflects broader patterns of globalization and inequality. Therefore, addressing language barriers is essential for achieving equitable access to education.

The economic implications of English in the digital world are also significant. English proficiency is often associated with better employment opportunities and higher income levels. In the digital economy, many jobs require communication with international clients and teams. As a result, English serves as a valuable professional skill. Companies operating in global markets often use English as their working language. This facilitates cross-border transactions and collaboration. Freelancers and remote workers particularly benefit from English proficiency. It allows them to access a wider range of job opportunities on global platforms. However, this also creates disparities between those who have access to English education and those who do not. The digital economy thus reinforces existing inequalities related to language skills. Governments and organizations are investing in English education to enhance workforce competitiveness. At the same time, there is growing recognition of the need to support multilingualism. Balancing these priorities is a key challenge in the digital age. English remains a dominant force in shaping economic participation. Its influence extends across industries and geographic boundaries. Therefore, understanding its economic role is crucial for analyzing digital globalization.

Cultural exchange in the digital world is also deeply influenced by the dominance of English. Digital platforms enable the sharing of ideas, values, and cultural products across borders. English often serves as the medium through which this exchange occurs. This facilitates global understanding and interaction. However, it can also lead to the dominance of certain cultural perspectives. English-language content may overshadow local cultures and languages. This raises concerns about cultural homogenization and loss of diversity. Scholars argue that language is closely linked to cultural identity (Kramsch, 1998). The widespread use of English can influence how cultures are represented and perceived. At the same time, digital tools provide opportunities for cultural preservation and promotion. Communities can use English to share their traditions with a global audience. This creates a complex dynamic between globalization and localization. The role of English in cultural exchange is therefore multifaceted. It enables communication while also shaping cultural narratives. Efforts to promote linguistic diversity are essential in maintaining cultural balance. Digital platforms play a key role in supporting these efforts. Ultimately, the interaction between English and culture reflects broader global trends.

The impact of English on digital communication is evident in everyday interactions on social media and messaging platforms. Users from different linguistic backgrounds often adopt English as a common language. This facilitates real-time communication across borders. The informal nature

of digital communication has also led to the emergence of new linguistic forms. Abbreviations, emojis, and hybrid language patterns are common in online interactions. English plays a central role in shaping these digital communication styles. The influence of English can be seen in internet slang and popular expressions. This creates a shared digital culture among users worldwide. However, it can also lead to the erosion of local linguistic practices. Younger generations may prioritize English over their native languages in online communication. This shift has implications for language preservation and identity. At the same time, digital communication allows for creative language use and innovation. Multilingual users often blend languages in unique ways. This reflects the dynamic nature of language in the digital age. English remains a key component of this evolving landscape. Therefore, its role in digital communication continues to expand and adapt.

The role of English in digital research and scientific communication is particularly significant. Academic publications, conferences, and research collaborations often use English as the primary language. This facilitates the exchange of knowledge across international boundaries. Researchers who publish in English can reach a wider audience. This increases the visibility and impact of their work. However, it also creates challenges for non-native English speakers. They may face difficulties in writing and publishing their research. Language barriers can affect the quality and accessibility of scientific communication. Despite these challenges, English remains the dominant language of academia. Many prestigious journals require submissions in English. This reinforces its status as a global language of knowledge. Efforts to support multilingual research are growing but remain limited. Translation tools and language support services are helping to address these issues. Nevertheless, English continues to shape the structure of global research networks. Its role in scientific communication is both enabling and restrictive. Understanding this dynamic is essential for promoting inclusive knowledge production.

Digital governance and policy-making are also influenced by the use of English. International organizations and regulatory bodies often use English in their communications. This facilitates coordination and decision-making across countries. However, it may also limit participation from non-English-speaking stakeholders. Language barriers can affect the inclusiveness of digital policy discussions. Ensuring linguistic diversity in governance is therefore an important challenge. English remains a practical tool for global communication, but it should not exclude other languages. Policymakers are increasingly recognizing the importance of multilingual approaches. This includes providing translations and supporting local language use. Digital platforms themselves play a role in shaping language policies. Their design and algorithms influence which languages are prioritized. English often receives preferential treatment due to its global reach. This has implications for digital rights and access. Addressing these issues requires a balanced approach to language use. English will likely remain central, but it must coexist with other languages. Therefore, inclusive language policies are essential for effective digital governance.

The future of English in the digital world is closely tied to technological innovation and globalization. Advances in artificial intelligence and machine translation are changing how languages are used online. These technologies have the potential to reduce language barriers. However, they also rely heavily on English data for training and development. This reinforces the dominance of English in digital systems. At the same time, there is growing support for linguistic diversity in technology. Developers are working to include more languages in digital tools and platforms. This could lead to a more balanced linguistic landscape. Nevertheless, English is likely to remain a key global language. Its adaptability and widespread use make it resilient to change.

The challenge lies in ensuring that other languages are not marginalized. Promoting multilingualism will be essential in the future digital world. Education, policy, and technology all play a role in this process. English will continue to evolve alongside digital innovation. Its role may change, but its importance is unlikely to diminish. Therefore, understanding its future trajectory is critical for global communication.

Conclusion

In conclusion, the role of the English language in the digital world is both extensive and complex. It serves as a primary medium for communication, education, and innovation. Its dominance is rooted in historical, technological, and economic factors. While it facilitates global interaction, it also raises issues of inequality and cultural representation. The digital language divide highlights the challenges faced by non-English speakers. Efforts to promote multilingualism are essential for addressing these challenges. English will continue to play a central role in shaping digital environments. However, its dominance must be balanced with support for linguistic diversity. This requires collaboration among governments, institutions, and technology developers. Understanding the role of English is crucial for navigating the digital age. It influences how information is created, shared, and accessed. Its impact extends across all aspects of digital life. Therefore, it remains a key subject of study in contemporary research. The future of digital communication will depend on how language diversity is managed. English will remain important, but it should not be exclusive.

ORCID ID: 0000-0002-2613-1071

Abstract: In the context of modern globalization, English has become one of the main means of international communication and involves not only grammatical and lexical knowledge but also ethical behavior and communicative norms. This article examines the concept of speech etiquette in English, its main characteristics, socio-cultural functions, and application in different communication situations. The study analyzes etiquette expressions such as greetings, forms of address, farewells, expressions of gratitude,

apologies, requests, and offers. It also examines the differences between formal and informal communication and the role of politeness strategies in interaction. Particular attention is paid to the use of expressions such as "Hello," "Hi," "Good morning," "Good afternoon," "Good evening," and "How do you do?" in different social and communicative contexts. The analysis demonstrates that speech etiquette plays an important role in regulating social relationships, maintaining mutual respect, and establishing appropriate social distance during communication. In addition, certain differences between English and Azerbaijani speech etiquette are considered. The findings show that effective international communication requires foreign language learners to acquire not only linguistic knowledge but also the ethical, social, and cultural norms accepted in the target language. Understanding and appropriately applying these norms can improve communication, reduce cultural misunderstandings, and contribute to successful intercultural interaction.

Keywords: speech etiquette, communication norms, politeness strategies, English language, communication, discourse

İNGİLİS DİLİNDƏ ETİKET VƏ ÜNSİYYƏT NORMALARI

Vəsilə Novruz RAZİMİ

Kitabxana və Elektron Resurslar şöbəsinin müdiri,
Dil, Ədəbiyyat və Onların Tədrisi Texnologiyaları kafedrasının baş müəllimi,

Xülasə: Müasir qloballaşma şəraitində ingilis dili beynəlxalq ünsiyyətin əsas vasitələrindən biri kimi yalnız qrammatik və leksik bilikləri deyil, həm də etik davranış və kommunikativ normaları əhatə edir. Bu məqalədə ingilis dilində nitq etiketi anlayışı, onun əsas xüsusiyyətləri, sosial-mədəni funksiyaları və müxtəlif ünsiyyət situasiyalarında istifadəsi araşdırılır. Tədqiqatda salamlama, müraciət formaları, vidalaşma, təşəkkür, üzrxahlıq, xahiş və təklif kimi etik ifadələr təhlil edilir. Eyni zamanda, rəsmi və qeyri-rəsmi ünsiyyət arasında fərqlər və danışq zamanı nəzakət strategiyalarının rolu izah olunur. İngilis dilində "Hello", "Hi", "Good morning", "Good afternoon", "Good evening" və "How do you do?" kimi ifadələrin müxtəlif sosial və kommunikativ şəraitlərdə istifadəsinə diqqət yetirilir. Araşdırma göstərir ki, nitq etiketi insanların sosial münasibətlərinin tənzimlənməsində, qarşılıqlı hörmətin qorunmasında və ünsiyyət zamanı uyğun sosial məsafənin müəyyənəşdirilməsində mühüm rol oynayır. Bundan əlavə, ingilis və Azərbaycan dillərində nitq etiketi arasında mövcud olan bəzi fərqlər nəzərdən keçirilir. Məqalənin nəticələri göstərir ki, xarici dil öyrənən şəxslərin yalnız dil qaydalarını deyil, həm də həmin dildə qəbul olunmuş etik və mədəni normaları mənimsəməsi effektiv beynəlxalq ünsiyyət üçün vacibdir.

Açar sözlər: nitq etiketi, ünsiyyət normaları, nəzakət strategiyaları, ingilis dili, kommunikasiya, diskurs

Introduction

Language is not only a means of transmitting information but also an important tool for regulating social relations. In this regard, the concept of speech etiquette occupies a special place in linguistics. Etiquette and communication norms in English serve as an essential mechanism for maintaining mutual respect, social distance, and cultural values among individuals. In the modern era, the expansion of international relations necessitates the acquisition of proper and ethical communication skills in English. This involves not only linguistic knowledge but also mastery of communicative behavior norms (1, p.72). As noted in semiotics, any behavioral norm necessarily

requires the presence of communication participants—namely, the addresser and the addressee. The individual who follows these norms is considered the addresser, while the addressee may be either an individual or society as a whole (2, p.107). Observance of behavioral norms within society is regarded as an indicator of a person's cultural development. Individuals acquire etiquette norms at different levels and apply them according to specific situations.

Materials and Methods

The study employs a descriptive, analytical, and comparative approach to examine etiquette and communication norms in the English language. The research focuses on the linguistic, social, and cultural aspects of speech etiquette and its role in effective communication. Particular attention is paid to the use of greetings, forms of address, farewells, expressions of gratitude and apology, requests, offers, and other polite expressions in different communicative situations.

The materials of the study consist of theoretical works on linguistics, speech etiquette, communication, semiotics, and intercultural communication, including the works of Adilov, Ağayeva, and Verdiyeva (1982), Formanovskaya and Akshina (1982), Ovchinnikov (1981, 1985), Scheflen and Scheflen (1972), and Shcherba (1947). These sources were used to identify the main characteristics and functions of etiquette expressions and communication norms.

A comparative method was applied to identify similarities and differences between English and Azerbaijani speech etiquette. Particular attention was given to the influence of social status, age, familiarity, gender, kinship, and the degree of formality on the choice of linguistic expressions.

The study also analyzes examples of English greeting and farewell formulas, including "Good morning," "Good afternoon," "Good evening," "Hello," "Hi," "How do you do?" "Goodbye," "See you later," and "Cheerio." These expressions were examined according to their stylistic characteristics, communicative functions, and appropriate contexts of use.

The contextual analysis method was used to determine how the meaning and function of etiquette expressions may change depending on the communicative situation. In addition, historical and socio-cultural aspects of etiquette were considered to demonstrate how communication norms have developed and changed over time.

The analysis is aimed at demonstrating that successful communication in English requires not only grammatical and lexical competence but also an understanding of social and cultural norms. Therefore, the study considers speech etiquette as an important component of communicative and intercultural competence.

Discussion

In modern globalization, etiquette and communication norms in English play a crucial role in international communication, as language functions not only as a medium of information exchange but also as a system regulating social relations. Speech etiquette represents a set of polite behavioral rules accepted within a particular linguistic environment and includes forms of address, greetings and farewells, expressions of gratitude and apology, requests and offers, as well as compliments and responses to them. Dialogues used in various communicative situations clearly reflect established and stable speech behavior patterns. Observations show that each language contains certain universal and polysemantic formulaic expressions, which can acquire different meanings depending on the context. For instance, the widely used English expression "*Good morning*" may convey not only the meaning of greeting but, in certain contexts, also function as a form of farewell.

One of the essential components of behavior in English society is speech etiquette norms. Comparative analysis of different cultures reveals interesting distinctions. For example,

Azerbaijanis typically use expressions such as *"I am very pleased"* when meeting someone, and the interlocutor responds similarly. In English, however, the expression *"How do you do?"* is used in such situations, which functionally corresponds to greeting and introduction formulas in Azerbaijani.

In any specific communicative situation, speech behavior is determined by factors such as the degree of familiarity, gender, age, social status, and kinship relations, which necessitate the selection of appropriate linguistic means. Accordingly, farewell expressions in English differ stylistically and are used in various communicative contexts. Neutral expressions such as *"Goodbye"* or *"Goodbye for the present"* are widely used in most situations. In formal contexts, expressions like *"Good morning," "Good afternoon,"* and *"Good evening"* are more common, particularly in business and official environments. In informal and friendly contexts, expressions such as *"So long," "See you soon," "See you later,"* and *"Cheerio"* are used among friends, relatives, or peers. Additionally, *"Bye-bye"* is typical of informal communication and is frequently used in everyday speech.

Forms of address, greetings, and farewells represent the most stable and standardized elements of communication and typically occur at the beginning and end of a communicative act. These elements primarily reflect social relations and are used within strict social norms. Society expects these expressions to maintain consistent meaning and function. The choice of a particular form depends on several factors, primarily the social status and prestige of the interlocutors, as well as their mutual relationships. Age is also an important factor influencing the selection of these forms.

Historical comparisons show that etiquette practices have evolved over time. For instance, in Western societies, the intensity of greeting rituals has gradually decreased since the Middle Ages. What once involved elaborate ceremonial gestures has been simplified over time—from formal bows to removing hats, then to slight gestures, and eventually to simple nods of the head (4, p.79). Social norms and customs regulate societal life and are closely connected with the process of socialization. Etiquette rules differ across cultures, and understanding them is essential for effective intercultural communication. In communication, participants select lexical means depending on situational factors and communicative intentions such as requests, commands, or appeals. Greetings play a crucial role in establishing contact, defining the situation, and setting the tone of interaction. Common English greeting formulas include *"How do you do?"*, *"Good morning," "Good afternoon," "Good evening," "Hello,"* and *"Hi."* The expression *"How do you do?"* is closely associated with formal introductions and is typically used when two individuals are introduced by a third person. The response is identical: *"How do you do?"* A smile may also accompany or replace this expression. While some researchers consider it universal, others classify it as formal. Time-related greetings such as *"Good morning," "Good afternoon,"* and *"Good evening"* are neutral and can be used regardless of social distinctions. However, scholars such as R. Brown and M. Ford note that these forms are more formal than *"Hello"* or *"Hi"* and are less frequently used. The choice of greeting is influenced by familiarity and social hierarchy. The most common greeting is *"Hello"* which is stylistically neutral and widely used in both formal and informal contexts, including conversations with friends, family, and strangers. It is also common in telephone conversations and service encounters, for example: *"Hello, can I help you?"* This form is not significantly affected by age or social status differences.

Among younger speakers, "Hi" is more commonly used than "Hello". It is considered a shortened form of "How are you?" and is typically used among people of similar age or social status. Expressions like "Hi" and "Hi, folks" convey friendliness, trust, and a desire to establish rapport. These greetings are often accompanied by gestures such as raising a hand with the palm forward. After greetings like "Good morning" it is common to ask "How are you?" or "How are things with you?" Although these questions appear to seek information, they primarily function as polite expressions rather than genuine inquiries. Responses are usually brief and formulaic, such as "Very well, thank you," "I am OK," or "Just fine."

Conclusion

Speech etiquette reflects the cultural identity of a society, encompassing traditions, customs, and lifestyle. Introduction is also an important element of etiquette, enabling individuals to establish social connections. It may occur directly or through a third party. In English culture, mediated introductions are generally preferred. The analysis demonstrates that etiquette and communication norms in English are not merely mechanical uses of linguistic forms but represent complex social and cultural relationships. Speech etiquette manifests itself throughout all stages of communication, particularly in greetings, forms of address, and farewells, ensuring respect, appropriate social distance, and ethical interaction. In conclusion, mastering etiquette and communication norms in English is essential for effective and successful communication. Their proper understanding and application enhance individuals' ability to interact in international environments, regulate social relations appropriately, and promote intercultural understanding.

LANGUAGE, IDEOLOGY AND COMMUNICATION: EXPLORING SOCIOLINGUISTIC APPROACHES

Nigar Fikrat HABIBULLAYEVA

PhD in Linguistics, associate professor, head teacher,

Department of Languages, Azerbaijan University of Tourism and Management

E-mail: nigar.habibullayeva@atmu.edu.az

ORCID ID: 0009-0006-9692-185X

Abstract: Language is not only a system of communication but also a social phenomenon deeply embedded in human interaction. This article explores the relationship between language and society through key sociolinguistic approaches. It examines how social factors such as class, gender, age, ethnicity, and context influence language use and variation. Sociolinguistics seeks to understand why people speak differently in different situations and how language both reflects and shapes social identities. The study highlights major theoretical perspectives, including variationist sociolinguistics, interactional sociolinguistics, and critical sociolinguistics, each offering unique insights into language behavior. It also considers the role of language in constructing power relations, maintaining cultural norms, and facilitating social change. By analyzing real-life communication patterns, sociolinguists reveal how language functions as a marker of group membership and a tool for negotiating meaning in everyday life. Furthermore, the article discusses issues such as language policy, multilingualism, and language attitudes in modern societies. Overall, sociolinguistic approaches provide a comprehensive framework for understanding the dynamic interplay between language and social structures, emphasizing that language is both shaped by and actively shapes the society in which it is used.

Introduction

Language and society are inseparable. Every time people speak, they reveal not only information but also aspects of their identity, background, and social relationships. Sociolinguistics, a field at the intersection of linguistics and social sciences, studies how language operates within social contexts. It aims to explain patterns of language variation and the reasons behind them, focusing on how social factors influence linguistic choices. Although research into discourse has

been ongoing for over half a century, interest in this field remains unabated. It's worth noting that discourse is a communicative phenomenon; the word comes from the French word "discourse," meaning speech, text, or a type of speech or text.

One of the central concerns of sociolinguistics is language variation. People do not speak in the same way all the time; instead, their language changes depending on factors such as social class, age, gender, and region. For example, pronunciation, vocabulary, and grammar may differ between urban and rural speakers or between younger and older generations. These variations are not random but systematic and meaningful.

Methodology and Materials

Social class often plays a significant role in shaping language use. Individuals from different socioeconomic backgrounds may use distinct linguistic forms, which can signal their social position. Similarly, gender influences communication styles, with studies showing differences in politeness strategies, tone, and conversational patterns.

1. Variationist Sociolinguistics

This approach focuses on identifying patterns of language variation and linking them to social variables. It relies on quantitative methods to analyze how often certain linguistic features occur in different social groups. The goal is to demonstrate that language variation is structured and predictable.

2. Interactional Sociolinguistics

Interactional sociolinguistics examines how meaning is created in everyday conversations. It emphasizes context, including tone, gestures, and shared knowledge. This approach shows that communication is not just about words but also about how those words are interpreted within specific social situations.

3. Critical Sociolinguistics

Critical sociolinguistics explores the relationship between language and power. It investigates how language can reinforce social inequalities or challenge them. For instance, the dominance of certain languages or dialects in education and media can marginalize speakers of less prestigious varieties.

Discussion

Language is a powerful marker of identity. Through language, individuals express who they are and which groups they belong to. Accents, dialects, and even word choices can signal cultural background, nationality, or social affiliation. People may adjust their speech to fit different contexts, a phenomenon known as code-switching, especially in multilingual societies.

In many parts of the world, multilingualism is the norm rather than the exception. Sociolinguistics studies how multiple languages coexist and interact within a single community. Language policies, often implemented by governments, play a crucial role in shaping linguistic practices. These policies can promote certain languages while limiting others, influencing education, media, and public life.

In one of his early works, the German scholar and researcher T. van Dijk first presented "Discourse," whose main goal was to identify and demonstrate the role and place of discourse in language and society. T. Van Dijk distinguished two different definitions of discourse: the first as a generally accepted definition and the second as a theoretically chosen definition. First, he believed that discourse is a communicative event occurring between a speaker and a listener. Communicative action can also be verbal or written, and can have verbal and nonverbal components. His subsequent

approach to discourse is more narrow, defining discourse as a written or oral text with only a verbal component. While “discourse” is synonymous with the public language used in everyday conversation, the theoretical definition of “discourse” encompasses the following three important aspects: 1. language 2. opinion, attitude 3. interaction. (Dijk & Kintsch, 1998, p.11)

According to T.A. van Dijk, the functioning of language in society is determined not only from a pragmatic perspective but also by certain social factors (speakers' opinions, ethnic status, etc.). He distinguishes between the terms discourse and text, considering discourse a process associated with speech, an actual speech act, while text is a concept associated with the language system, or linguistic knowledge and linguistic competence.

According to M. Foucault, discourse is both an active element in the construction of society and, at the same time, dependent on society. Discourse is an expression of the power of communication and refers to everything that can be thought, written, or said about a particular topic or event. In his work "L'ordre du discours," M. Foucault analyzes texts methodologically with important observations, distinguishing two types of text-primary and secondary-while emphasizing the role of discourse in text formation. Discourse is language in social use. Discourse analysis differs from linguistic analysis in that it focuses more on what constitutes "expressions, statements," rather than how they are formed. (Dijk & Kintsch, 1998, p.27)

M. Foucault offers two definitions of discourse: 1. In a broader sense, discourse is the use of language in certain forms of social practice. 2. In a narrower sense, discourse is language used to convey social practice from a certain point of view. Discourse creates, reproduces, and transmits certain thoughts, social connections, and also the knowledge system of a native speaker. (Dijk & Kintsch, 1998, p.35)

In recent decades, we have seen a more systematic focus on the details of cognitive representation and process, particularly in the United States, under the term "social sensemaking or perception." "Social perception" is a social factor, given that people are always or increasingly influenced by others, while the theoretical cognitive focus of many studies remains more individualistic, even in studies such as "attitude" and its influence on "behavior." Furthermore, social perception is generally studied outside of real-world social and political contexts, focusing on information rather than social beliefs such as knowledge and ideology.

Within the framework of socio-cognitive theory, we can confirm that context is not part of the social situation, but merely a subjective model of the situation. This model of context, which plays a central role in the mental process, also includes the formation and perception of discourse. This model explains why discourse in the same social situation not only exhibits similarities based on socio-cultural knowledge but is also unique. For each communicative situation, participants in the model know which situation is currently appropriate for each participant.

The primary function of the context model is to construct discourse in a form that is optimally appropriate for a social situation. This also means that context theory creates a foundation for discourse.

Some discourse researchers tend to equate discourse with a specific textual structure determined by social context. Text and discourse are interconnected, and this coherence is created at both the linguistic and extralinguistic levels, where communicative and cognitive coherence merge. Discourse can be viewed as both a process and a result. To understand the relationship between society and its members, as well as between society and discourse, we must also analyze the socio-cognitive interface (domain). The arguments needed for this analysis are as follows:

1. Concepts such as "action" and "actor" are themselves important cognitive indicators. Concepts of condition, consequence, plan, intention, goal, and even the concept of action are mental representations or properties of thinking.

2. Interaction, coordination of actions, and strategic adaptation of actions to a social context also require mental representations of actors, as well as inherent indicators of the situation or context.

3. Social micro- and macro-connections are determined by the membership of social actors and their actions, which create social relations, processes, or structures-which are also necessary for the cognitive indicator. Group members must share common views about society and also perceive the actions of other members of society in the same way.

4. This point refers to verbal interaction and discourse, where structure, meaning, planning, and concepts must be formulated according to the cognitive approach of the mind, including specific and general knowledge and other social beliefs.

In listing these arguments, our goal is to demonstrate the connection between society and its participants, as well as between society and discourse. We believe that knowledge of language and discourse is an important indicator of the social perception of groups and their members. Knowledge, values, norms, attitudes, and ideology are different types of social representation or social perception. These social perceptions play an important role in constructing a personal model.

Determining the social role of discourse also requires an analysis of the micro (i.e., local) and macro (global) structures of society, that is, individual social actors and their interactions, on the one hand, and social groups, movements, organizations, and their relationships, such as power and dominance, on the other.

Sociolinguistic approaches provide valuable insights into the complex relationship between language and society. By examining how language varies across different social contexts and how it reflects identity and power, sociolinguistics helps us better understand human communication. Ultimately, language is not just a tool for conveying information-it is a dynamic social practice that both influences and is influenced by the world around us.

However, it should be noted that the distinction between micro and macro is purely analytical. Scholars are less interested in individual, personal discourse than in the characteristics of general discourse, as they believe this type of discourse can contribute significantly to such important societal issues as social inequality, gender issues, ethnicity, and so on. Macro-social indicators of society remain the primary goal and task of discourse analysts. Here, we can observe or analyze abstract structures and how they operate in social practice in general, in discourse, and especially in specific situations.

In the last decade, the diversity of approaches to discourse and its study has shifted to a completely new plane, and today has entered a stage known as the discursive-cognitive paradigm. Thus, in the creation of discourse, attention is now directed not only to the exclusively social situation, but also to the decisive role of the communicative situation. This is a dilemma arising from two different approaches to discourse within the framework of critical discourse studies – the social and the socio-cognitive approach. Some researchers prefer an exclusively social approach (Chilton, 2004, p. 50), while others prefer an approach known as socio-cognitive (Hall, 2003, p. 20-30)

It should be noted that the socio-cognitive approach does not completely reject the social approach; it is about the more priority position of society or the individual ability of a person in the

formation of discourse. Although the perspective of "social perception" appears more social in its consideration of how society influences its participants, the theoretical cognitive focus of these studies remains more individualistic, even in studies such as "attitude" and its influence on "behavior." Social perception is more often studied outside the social and political context, and is more interested in the acquisition and analysis of information than in the content (essence) of social beliefs such as knowledge and ideology. On the other hand, in America, we see a more socially oriented approach in social psychology, such as social representation analysis, intergroup relations, and social identity theory. Not surprisingly, proposals for interpreting various perspectives on social perceptions and representation soon emerged.

Within the framework of context theory, a list of similar studies in social psychology suggests a new approach to social psychology research, where context is constructed from people's conversations.

Participants in a conversation obviously have different social roles and personalities, try to create an impression on other participants in the conversation, can show aggression or dissatisfaction with the opinions of others, exert influence, follow communication norms, assume the knowledge of the listener, etc.

Based on these listed factors, we can assume how productive social-psychological research can be for a clearer and more detailed study of the context, its categories, and the ways in which it influences the creation and perception of text and conversation.

M. Foucault views discourse as an implicit phenomenon that must have an argumentative structure and be able to align with the discipline, its methods, and underlying beliefs. (Chilton, 2004, p. 65-67)

In his famous work, "The Archaeology of Knowledge," Foucault describes knowledge as a process that enables people to think, understand, and analyze various historical events and situations (Crystal, 2012, p.151). Thanks to this, individuals can view and analyze these events from various perspectives. Foucault calls this "archaeology." He also creates a "constructive method," which includes a group of concepts such as certainty, discourse analysis, formation, and archive.

The central task in understanding the essence of any society is to understand and study the foundations of that society's discourse. He believes, for example, that psychological discourse allows psychologists to take control of people, and even transport them to another place or space, which usually occurs against their will. (Crystal, 2012, p.150-158)

Previously, we noted the typology of knowledge, its types, and described each. We also want to highlight two important types of knowledge that are an integral part of constructing discourse

1. Personal or group knowledge about specific events; mental model
2. Socially or culturally shared, common knowledge; social representation

Personal knowledge is based on short-term memory and most often relates to personal events and encompasses a small circle, such as family members, friends, etc. Collective knowledge refers to important historical or political knowledge shared by a large group of people, a nation, or a people. Socially or culturally shared knowledge is the result of studying and perceiving public discourse. This type of knowledge is more often reproduced in social memory and is specific to a specific nation or group of people sharing a common language and culture.

Conclusion

Language, discourse, and knowledge are integral parts of human perception. Knowledge is a concept or perspective that people acquire through experience, skills, and abilities. Foucault's

approach analyzes specific forms of knowledge, as well as the interplay of linguistic and social practices. The relationship of knowledge to reality is based not on the truth that knowledge asserts, but on the fact that knowledge itself strives to be true.

WOMEN'S SOLIDARITY IN NEOLIBERAL INSTITUTIONS THROUGH DIGITAL ACTIVISM: RECLAIMING VOICE AND AGENCY IN HIGHER EDUCATION

Gunel ALASGAROVA

Ph.D. candidate in Educational Studies,
The Ohio State University, Columbus, USA

E-mail: gunelalasgarova@gmail.com,

ORCID ID: 0000-0003-4743-8467

Abstract: This paper examines how digital feminist activism challenges neoliberal norms in higher education by fostering new forms of solidarity among women scholars. Grounded in feminist theory and critiques of institutional neoliberalism, the study explores both the affordances and limitations of online resistance. Using qualitative content analysis, the research analyzes tweets posted between late 2024 and the end of 2025, focusing on selected hashtags such as #WomenSolidarity, #WomenEmpowerment, #WomenInAcademia, and #HeForShe. The findings reveal two dominant thematic clusters: Celebration of Success, where women actively affirm and uplift one another's achievements, and Shifting Agendas, which captures a move from individual academic concerns toward broader coalitions and sociopolitical engagement. These patterns demonstrate how digital platforms enable collective visibility, emotional support, and strategic resistance against neoliberal pressures in academia. At the same time, the study highlights the fragility of digital solidarity, as online engagement remains vulnerable to fragmentation and co-optation. The turbulence of 2025 illustrates that feminist activism is not static but adaptive, evolving in response to shifting political and institutional contexts. Overall, the paper argues that digital feminist

activism constitutes a critical space for reclaiming voice, building community, and holding institutions accountable.

Key words: Women's Solidarity, neoliberal higher education, digital activism, online resistance, networked communities

NEOLIBERAL İNSTİTUTLARDA RƏQƏMSAL AKTİVİZM VASİTƏSİLƏ QADIN HƏMRƏYLİYİ: ALİ TƏHSİLDƏ SƏSİN VƏ AGENTLİYİN YENİDƏN ƏLDƏ EDİLMƏSİ

Günəl ƏLƏSGƏROVA

Təhsil Araşdırmaları üzrə Ph.D. namizədi
Ohayo Dövlət Universiteti, Kolumbus, ABŞ

Xülasə: Bu məqalə ali təhsildə neoliberal normalara qarşı çıxan və qadın alimlər arasında yeni həmrəylik formalarını təşviq edən rəqəmsal feminist aktivizmin rolunu araşdırır. Feminist nəzəriyyə və institusional neoliberalizmin tənqidi çərçivəsinə əsaslanan tədqiqat, onlayn müqavimətin həm imkanlarını, həm də məhdudiyyətlərini təhlil edir. Keyfiyyətli məzmun analizi metodundan istifadə olunaraq, 2024-cü ilin sonu ilə 2025-ci ilin sonu arasında paylaşılan tvitlər araşdırılmış, #WomenSolidarity, #WomenEmpowerment, #WomenInAcademia və #HeForShe kimi seçilmiş heşteqlərə diqqət yetirilmişdir. Nəticələr iki əsas tematik istiqaməti üzə çıxarır: Uğurların qeyd olunması, burada qadınlar bir-birinin nailiyyətlərini aktiv şəkildə dəstəkləyir və dəyərləndirir; və Gündəliyin dəyişməsi, hansı ki, fərdi akademik məsələlərdən daha geniş koalisiyalara və sosial-siyasi iştiraklara doğru yönəlməni əks etdirir. Bu nümunələr göstərir ki, rəqəmsal platformalar akademiya neoliberal təzyiqlərə qarşı kollektivlik, emosional dəstək və strateji müqavimət imkanları yaradır. Eyni zamanda, tədqiqat rəqəmsal həmrəyliyin kövrəkliyini də vurğulayır, çünki onlayn iştirak parçalanma və mənimsənilmə risklərinə açıqdır. 2025-ci ilin gərginliyi göstərir ki, feminist aktivizm statik deyil, dəyişən siyasi və institusional kontekstlərə uyğun olaraq inkişaf edir. Ümumilikdə, məqalə iddia edir ki, rəqəmsal feminist aktivizm səs bərpası, icma quruculuğu və institutların məsuliyyətə cəlb edilməsi üçün mühüm bir məkan yaradır.

Açar sözlər: Qadın həmrəyliyi, neoliberal ali təhsil, rəqəmsal aktivizm, onlayn müqavimət, şəbəkələşmiş icmalar

Introduction

This paper investigates how women in higher education, particularly those navigating the constraints of neoliberal academic institutions (Martin, King, & Cooney, 2025), cultivate solidarity through digital activism. As universities increasingly adopt market-driven logics that emphasize competition, productivity, and individual achievement, opportunities for genuine community-building and collective resistance often diminish. This neoliberal shift disproportionately affects women, especially women of color, immigrants, and those from historically marginalized backgrounds, reinforcing isolation and institutional silencing (Evans, 2015).

The central objective of this inquiry is to understand how digital spaces serve as platforms for women in academia to reclaim agency, build networks of solidarity, and resist institutionalized forms of oppression (Hancock, 2011). By examining examples of online feminist activism, such as hashtags like #MeTooPhD, #BlackInTheIvory, and #AcademicTwitter, this paper explores how digital platforms can become counter-publics where women share experiences, offer mutual support, and organize around common goals.

This inquiry also aims to critically assess whether and how such acts of digital resistance translate into material or cultural changes within academic institutions. Specifically, it seeks to address the following questions: *What are the affordances and limitations of digital activism in challenging neoliberal norms in higher education, especially after COVID-19?* By centering the voices and strategies of women engaging in digital activism, this study contributes to broader conversations about equity, resistance, and the future of feminist organizing in higher education.

Theoretical and Practical Argument

This paper is grounded in a critical feminist framework that interrogates the effects of neoliberalism on higher education and explores the possibilities of digital feminism as a means of resistance (Tax, 2022). Neoliberalism, as a political and economic rationality, has reshaped higher education into a competitive, market-oriented system where individuals are evaluated primarily by their productivity, output, and economic value. As scholars such as Brown (2015) and Giroux (2002) argue, neoliberalism reduces universities to spaces of commodification, eroding the social and public purposes of education and transforming students, faculty, and administrators into consumers and service providers.

Within this neoliberal regime, women, especially those at the intersections of race, class, and sexuality, often face compounded forms of marginalization. The system's emphasis on individual success and meritocracy obscures structural inequalities, rendering experiences of discrimination and exclusion as personal failures rather than institutional issues. This depoliticization of academic labor makes it increasingly difficult for women to build solidarity, speak out collectively, or challenge oppressive structures from within. Feminist theorist Sara Ahmed (2017) conceptualizes this dynamic through the figure of the "feminist killjoy," whose refusal to comply with institutional norms becomes a political act of resistance and survival.

In contrast to isolating institutional logics, digital feminism offers alternative spaces for collective visibility, resistance, and care. Building on the work of Sarah Banet-Weiser (2018), this paper engages with the concept of networked feminism, which refers to the use of digital technologies to create feminist communities, circulate stories, and organize campaigns. Online platforms, such as Twitter, Instagram, and blogs, enable women in academia to share testimonies, amplify each other's voices, and mobilize against structural harms. Hashtag movements like #MeTooPhD and #BlackInTheIvory have shown how digital activism can unmask systemic injustices that are often silenced within the confines of the university.

At the same time, nowadays digital feminist activism operates within a complex terrain. It exists within platforms that are themselves shaped by neoliberal logics of visibility, branding, and commodification. As such, digital activism can be vulnerable to performance, backlash, and institutional co-optation. While some forms of visibility may offer empowerment and validation, others may result in increased surveillance, emotional labor, or professional risk for women who speak out.

Thus, the philosophical and theoretical basis of this inquiry lies in the tension between neoliberal individualism and collective feminist resistance, and in the ambivalent role of digital spaces as both sites of empowerment and constraint. This duality prompts us to examine: To what extent can digital activism genuinely challenge the neoliberal norms that structure higher education, and what are its limitations in doing so?

Literature and/or Sources to Support the Argument/Analysis

A growing body of scholarship has documented the transformation of higher education under neoliberalism. Brown's "Undoing the Demos" (2015) provides a foundational critique, arguing that neoliberal rationality reduces all aspects of academic life to market logic, where value is measured by output, efficiency, and entrepreneurial self-management. Brown contends that this shift erodes democratic ideals, replaces collective responsibility with individual competition, and undermines the public mission of education. Similarly, Giroux (2014) warns of the rise of the "corporate university," where faculty and students are subjected to austerity, surveillance, and precarious labor conditions. These structural dynamics disproportionately affect women, whose caregiving, mentoring, and emotional labor often remain invisible and undervalued in performance metrics.

Feminist scholars such as Ahmed S. have highlighted how institutional structures perpetuate inequality under the guise of neutrality and meritocracy. In *Living a Feminist Life* (2017), Ahmed traces how women who challenge institutional norms are often dismissed, pathologized, or forced out, despite policies that claim to promote diversity and inclusion. Her notion of the "complaint as feminist pedagogy" is especially relevant to understanding digital activism: when institutions fail to listen, women turn to online platforms to be heard, to find each other, and to resist.

Digital spaces have become key terrains for this kind of feminist resistance. Banet's "Weiser's Empowered: Popular Feminism and Popular Misogyny" (2018) offers a compelling framework for analyzing what she calls networked feminism—a form of activism rooted in the affective and communal dimensions of online engagement. Hashtag campaigns such as #MeToo, #MeTooPhD, #WhyIDidntReport, and #BlackInTheIvory have brought personal narratives of gendered and racialized harm into public view, challenging the silence and complicity of academic institutions. These movements serve not only as archives of resistance but also as forms of collective memory, political consciousness-raising, and emotional solidarity.

The digital realm also offers a space for what Adrienne Shaw (2014) terms "participatory resistance," where the act of sharing, retweeting, or commenting becomes a mode of collective meaning-making. However, as Tressie McMillan Cottom (2015) and Safiya Noble (2018) remind us, digital platforms are not neutral. They are structured by algorithms, corporate interests, and surveillance regimes that can undermine feminist resistance by amplifying certain voices while silencing others. Moreover, women who participate in digital activism often encounter online harassment, professional backlash, and the burden of emotional labor—especially those who are Black, Indigenous, or queer.

Empirical studies and qualitative research have also begun to document how digital activism affects women's lives in higher education. For instance, Kelsky's (2018) crowdsourced blog "The Professor Is In" and the associated #MeTooPhD movement collected hundreds of testimonies from women facing sexual harassment and institutional betrayal in academia. Similarly, the #BlackInTheIvory hashtag, launched by Black academics in 2020, created an online archive of racial microaggressions, discrimination, and isolation, prompting many universities to release statements, form task forces, or initiate new equity programs—though the depth and permanence of such responses remain questionable. Digital activism became a virtual "Women's March," uniting women across campuses and countries in acts of solidarity and resistance.

These sources collectively provide a layered, interdisciplinary foundation for examining the affordances and limitations of digital activism as a feminist response to neoliberalism in higher education. They highlight not only the power of visibility and storytelling but also the risks and contradictions inherent in resisting institutional power through digital means.

The key question is: What are the affordances and limitations of digital activism in challenging neoliberal norms in higher education, especially after the 2024 elections and what are the central themes of solidarity?

Materials and Methods

In this study, I analyzed several hashtags that reflect women's solidarity in academia. I looked at how often they were used, what themes emerged, and how these digital spaces contribute to feminist solidarity within neoliberal universities. I chose women's tweets from the United States. I conducted a content analysis of tweets shared between late 2024 and all of 2025, which coincided with the beginning of a new government regime.

Data sources and sample: I've collected around 200 tweets using the Twitter API, like #WomenSolidarity, #Womenempowerment, #WomenInAcademia, #HeForShe, #AcademicTwitter. My focus is on both the content and context of these tweets - looking at their meaning, emerging trends, and how women's solidarity appears across them. Only publicly available accounts open to a wider audience were included, and I removed all identifying details when using examples.

Why X: I chose X, formerly Twitter, for two reasons: first, it's a potentially democratic platform where people can challenge dominant ideologies and express resistance. Second, it has been one of the most active spaces for feminist social movements. However, it also has its downsides- first, some people have even lost their jobs over what they posted online. The focus on likes and views can end up reinforcing the same competitive, market-driven culture that many users are trying to resist.

Data analysis: For data analysis, I used an inductive approach centered on the theme of women's support and solidarity. Tweets about empowerment and collective support were coded thematically using NVivo. Two major themes emerged -first, celebration of success, or women celebrating women, second Shifting Agendas. The data collection and analysis process took about a month, combining both NVivo coding and manual review.

Findings and Results

The first pattern that emerged from my content analysis was what I call "celebration-based support." This aligns with Can and Kınıkoğlu's (2025) and Talbot and Pownall's (2021). findings. Most of these tweets focused on celebrating women academics - announcing publications, new job positions, conference talks, or promotions. Many also highlighted women keynote speakers, shared job opportunities, or simply expressed encouragement for other women's successes. This celebration theme was the most dominant across the dataset, making up more than half of all references. The hashtag functioned as a tool to promote women's empowerment and highlight diversity within an increasingly neoliberal academic system. Together, these posts created a vibrant digital culture of appreciation-filled with congratulatory messages like *"Join us in celebrating..."*, *"Proud to announce..."*, or *"What an amazing achievement!"*

My second main finding is that 2025 was an incredibly turbulent year for higher education. We saw a wave of policy shifts and political tension that deeply affected the academic world. This was the year when major restrictions began on Diversity, Equity, and Inclusion programs-some were even shut down completely. There were also reports of international students facing visa revocations and, in some cases, arrests. At the same time, debates around gender policies and even the possible closure of the U.S. Department of Education became heated.

My second finding reveals a noticeable shift in the tone and focus of online activism in 2025. Unlike previous years, when women in academia actively supported one another and spoke out on

issues of gender inequality, this time the discussions were far more politically charged. Instead of conversations about harassment, bias, or academic hazing, the majority of tweets revolved around national politics, policy debates, and institutional survival.

At the same time, many of the women scholars and activists who had once been vocal online appeared to retreat into silence. Whether out of fatigue, fear of backlash, or a sense of strategic caution, their absence was strongly felt. This combination-heightened political polarization and the quieting of long-standing feminist voices-suggests that 2025 was a year when digital resistance became more fragmented and cautious than before.

Conclusion

The year 2025 has been an extremely turbulent one for all of us. It brought polarization, uncertainty, and social division that also affected academia. In this atmosphere, feminist activism in higher education became fragmented-partially silenced by institutional pressures, and partially absorbed into broader activist movements that were trying to address not only educational but also national and global challenges.

Digital feminist resistance, which had once been a powerful space for connection and protest, also faced new forms of restriction-through censorship, reduced visibility, and algorithmic control. Yet, despite these barriers, digital platforms continued to serve as spaces of solidarity, where women could share their experiences, raise their voices against injustice, and support one another across borders.

My paper explores how digital feminist activism both challenges and adapts to neoliberal norms in higher education. It highlights the tensions between empowerment and control, and points to the transformative potential of collective digital resistance in reshaping academic institutions and sustaining feminist solidarity in difficult times.

Emergent Propositions and Implications of the Argument

This inquiry suggests that digital activism offers both powerful possibilities and complex limitations for feminist resistance within neoliberal institutions of higher education. On the one hand, digital platforms enable women, particularly those marginalized by race, sexuality, class, or nationality, to transcend institutional silos, build transnational communities of solidarity, and amplify shared experiences of injustice. These online networks function as vital counter publics, allowing feminist actors to bypass bureaucratic gatekeeping, challenge dominant narratives, and mobilize collective knowledge and emotional labor.

The use of hashtags such as #MeTooPhD, #AcademicTwitter, and #BlackInTheIvory demonstrates how personal testimonies, when shared collectively, can catalyze broader conversations around institutional accountability, harassment, racial injustice, and epistemic exclusion in the academy. These digital actions also highlight the importance of storytelling as a form of feminist praxis, where visibility, affect, and connection become political tools for reimagining what justice and belonging can look like in academic spaces.

At the same time, the inquiry reveals the limits of digital feminist activism in fundamentally transforming neoliberal institutions. While online visibility can raise awareness, it does not guarantee structural change. Universities may engage in performative allyship or superficial policy shifts without addressing the root causes of inequality. Furthermore, the commodification of digital labor—the pressure to “perform” activism for institutional recognition, likes, or career advancement—risks replicating the same neoliberal logics that activism seeks to resist.

The reliance on digital platforms also places a heavy emotional and professional burden on those who speak out. Women who engage in digital activism often do so at personal cost, facing online harassment, institutional retaliation, or burnout from the constant labor of care and advocacy. These dynamics point to a pressing need for more sustainable, intersectional, and institutionally supported forms of solidarity, ones that recognize the value of feminist labor not only online but within the policies, cultures, and structures of academic life.

Ultimately, this analysis calls for a dual approach: recognizing the transformative potential of digital feminist activism, while also remaining critically aware of its limitations under neoliberal conditions. It urges higher education stakeholders- faculty, administrators, and policymakers, to move beyond symbolic gestures and engage meaningfully with the critiques raised by online feminist movements. Without this deeper reckoning, the emancipatory promise of digital activism risks being contained by the very structures it seeks to dismantle.

Importance of the Argument for Higher Education: This inquiry holds significant importance for the future of higher education because it brings into focus the ongoing tension between institutional commitments to equity and the structural realities of neoliberalism. As universities increasingly adopt diversity rhetoric while continuing to operate under metrics-driven, corporatized models, the gap between symbolic inclusion and substantive justice grows wider. Understanding the role of digital feminist activism in this context allows us to critically assess how resistance is formed, sustained, and potentially co-opted within the academic landscape.

Digital activism provides a critical platform for faculty, staff, and students to name and challenge institutional failures, particularly those that impact women and minoritized groups (Talbot & Pownall, 2021). By centering voices that are often excluded from traditional channels of power, digital feminist movements disrupt hierarchies of knowledge and amplify epistemologies of care, embodiment, and relationality, values often sidelined in neoliberal academia. These movements also serve as informal accountability mechanisms, revealing how institutions respond, or fail to respond, to harm.

For higher education practitioners and leaders, the growing prominence of digital activism demands new forms of engagement, transparency, and responsiveness. Institutions must not only listen to the voices raised online but also integrate them into policy, practice, and culture. This requires a shift from performative allyship to structural transformation, redefining what counts as labor, whose knowledge is valued, and how communities are supported in their pursuit of justice.

Moreover, this argument encourages higher education to move beyond narrow understandings of “activism” as disruptive or external to academic life. It invites institutions to recognize activism as a form of scholarship, care work, and community-building that enriches the university’s public mission. By embracing the critical insights offered by digital feminist activism, higher education can move closer to its aspirational ideals of equity, inclusion, and democratic engagement.

In this way, the study not only contributes to scholarly conversations on feminism, digital media, and neoliberalism but also offers a timely intervention into the lived realities of academic life, highlighting how collective resistance, even when mediated through screens and hashtags, holds the potential to reimagine the future of the university.

GENDER-BASED LINGUISTIC LEARNING PREFERENCES IN EFL CLASSROOMS: A COMPARATIVE LINGUISTIC STUDY OF AZERBAIJANI UNIVERSITY STUDENTS

Khayala Ramiyaddin ABDULLAYEVA

PhD in philology, Senior teacher, Mingachevir State University

E-mail: xayala.abdullayeva@mdu.edu.az

ORCID ID: 0009 0006 2392 6123

Abstract: The contemporary educational environment requires the implementation of student-centered approaches in foreign language teaching. In English as a Foreign Language (EFL) classrooms, learners demonstrate different learning preferences and communication styles depending on various sociolinguistic and educational factors. One of the most significant factors influencing language learning strategies is

gender. Male and female learners often show different attitudes toward vocabulary acquisition, reading, writing, listening, and interactive learning activities. Understanding these differences is essential for developing effective teaching methodologies in higher education.

This study investigates gender-based learning preferences among Azerbaijani university students studying English in non-specialized faculties at Mingachevir State University. Female students studying in teacher education programs tend to prefer reading-based learning, vocabulary memorization, and writing activities, whereas male students studying engineering and economics demonstrate greater interest in audiovisual and interactive learning methods such as films, music, games, and digital technologies.

Keywords: EFL learning, gender differences, communication strategies, Azerbaijani students, English language teaching, learning preferences, applied linguistics

EFL SİNİFLƏRİNDƏ GENDER ƏSASLI DİLÇİLİK ÖYRƏNMƏ ÜSTÜNLÜKLƏRİ: AZƏRBAYCAN UNIVERSİTET TƏLƏBƏLƏRİNİN MÜQAYİSƏLİ DİLÇİLİK TƏDQIQATI

Xəyalə Ramiyəddin ABDULLAYEVA

Filologiya üzrə fəlsəfə doktoru, Baş müəllim, Mingəçevir Dövlət Universiteti

Xülasə: Müasir təhsil mühiti xarici dil tədrisində tələbəyönümlü yanaşmaların tətbiqini tələb edir. İngilis dilinin xarici dil kimi tədris olunduğu (EFL) auditoriyalarda tələbələr müxtəlif sosiolinqvistik və pedaqoji amillərdən asılı olaraq fərqli öyrənmə strategiyaları və kommunikasiya üslubları nümayiş etdirirlər. Dil öyrənmə strategiyalarına təsir göstərən əsas amillərdən biri gender faktorudur.

Bu tədqiqat Mingəçevir Dövlət Universitetinin qeyri-ixtisas fakültələrində təhsil alan Azərbaycanlı tələbələr arasında gender əsaslı öyrənmə üstünlüklərini araşdırır. Müəllimlik ixtisası üzrə təhsil alan qız tələbələr əsasən oxu, yazı və lüğət əzbərləmə fəaliyyətlərinə üstünlük verdikləri halda, mühəndislik və iqtisadiyyat ixtisaslarında təhsil alan oğlan tələbələr film, musiqi, oyun və rəqəmsal texnologiyalar vasitəsilə öyrənməyə daha çox maraq göstərirlər.

Tədqiqat "Xarici dildə işgüzar və akademik kommunikasiya 1,2" fənni üzrə təhsil alan tələbələr arasında keçirilmiş sorğu əsasında aparılmışdır. Nəticələr göstərir ki, gender fərqləri motivasiya, kommunikativ kompetensiya, sinifdaxili iştirak və lüğət mənimsənilməsinə əhəmiyyətli təsir göstərir. Məqalədə nəticə olaraq qeyd edilir ki, EFL müəllimləri müxtəlif öyrənmə üstünlüklərinə uyğun çevik və diferensiaslaşdırılmış tədris strategiyalarından istifadə etməlidirlər.

Açar sözlər: EFL tədrisi, gender fərqləri, kommunikasiya strategiyaları, Azərbaycan tələbələri, ingilis dili tədrisi, öyrənmə üstünlükləri, tətbiqi dilçilik

Introduction

The rapid development of globalization and digital communication has significantly transformed the role of foreign language education in higher education institutions. English has become an international language of communication, science, technology, and professional interaction. Consequently, universities are expected to provide students with effective communicative competence and practical language skills necessary for academic and professional success.

In modern EFL classrooms, learners demonstrate different language learning preferences depending on social, psychological, educational, and cultural factors. Gender is considered one of the major variables influencing language acquisition, communication strategies, classroom

interaction, and learning motivation. According to Brown (2014), male and female learners may differ in their attitudes toward classroom participation, language anxiety, and learning styles.

In Azerbaijani higher education institutions, especially in non-specialized faculties, gender-related learning preferences can be clearly observed in EFL classrooms. Female students studying in pedagogical specialties often demonstrate stronger interest in reading comprehension, vocabulary memorization, note-taking, and writing-based learning activities. These students tend to learn language structures through repetition, written exercises, and academic tasks.

Male students studying engineering, economics, and technical specialties, on the other hand, usually prefer interactive and technology-based learning methods. Audiovisual materials such as films, songs, games, digital platforms, and online communication environments appear to increase their motivation and participation during EFL classes. Such differences may influence communicative competence, classroom interaction, and academic achievement.

Previous studies in applied linguistics and sociolinguistics indicate that gender influences language learning strategies and communicative behavior in educational environments (Hyland, 2019). Researchers also emphasize the importance of student-centered methodologies that take into consideration learners' individual preferences and motivational factors.

The present study aims to analyze gender-based learning preferences among Azerbaijani university students studying English as a foreign language in non-specialized groups at Mingachevir State University. The article specifically investigates how female and male students differ in vocabulary learning, communication strategies, reading and writing activities, and digital learning preferences.

Materials and Methods

The present research is based on mixed qualitative and quantitative research methods. The study was conducted among undergraduate students studying in non-specialized faculties at Mingachevir State University during the 2025–2026 academic year.

The participants of the study consisted of students enrolled in the course "Business and Academic Communication in a Foreign Language." The survey involved students from different academic groups representing pedagogical, economics, and engineering specialties.

The research sample included:

- 14 female students from the AƏ (Azerbaijani and literature)-25 group;
- 5 male students from the Rİ (Math and information)-25 group;
- 3 male and 22 female students from the XD (English language)-23 group;
- 8 male students from economics specialties EE (Electroenergetics Engineering) -25;
- 6 male students from engineering specialties KM (Computer Engineering) -25.

Female participants were mainly studying in teacher education programs at the Pedagogical Faculty, whereas male students represented engineering and economics specialties. The diversity of participant backgrounds allowed a comparative analysis of gender-based learning preferences in EFL classrooms.

The main research instrument used in the study was a classroom survey questionnaire prepared by the researcher. The survey aimed to identify students' learning preferences, communication styles, motivational factors, and attitudes toward different EFL learning activities.

The questionnaire included both closed-ended and open-ended questions. Students were asked about:

- preferred language learning methods;

- vocabulary acquisition strategies;
- attitudes toward reading and writing activities;
- interest in films, music, games, and digital learning tools;
- classroom participation preferences;
- communication confidence in English.

Sample survey questions for female students included:

1. Do reading and writing activities help you learn English more effectively?
2. How do you usually memorize new vocabulary?
3. Do you prefer note-taking and written exercises during English classes?
4. Which activities help you improve academic communication skills?
5. Do you feel more confident during written assignments or oral presentations?

Sample survey questions for male students included:

1. Do films, music, or games help you improve English communication skills?
2. Which digital tools motivate you during English lessons?
3. How often do you use online videos or social media for language learning?
4. Do interactive classroom activities increase your participation?
5. Which activities help you improve speaking and listening skills more effectively?

During the survey process, female students from the AƏ (Azerbaijan and literature) -25 and Rİ (Math and Information)-25 groups generally demonstrated stronger interest in vocabulary memorization, reading tasks, and written exercises. Most participants stated that repeated writing and note-taking helped them remember new words more effectively.

Male students from the XD-23 (English language) group and economics specialties expressed greater interest in audiovisual and interactive learning methods. Several students noted that films, English songs, online games, and YouTube videos increased their motivation to participate in classroom discussions.

The collected data were analyzed using descriptive analysis methods. Students' responses were categorized according to gender and learning preferences. Comparative analysis was also employed to identify similarities and differences between female and male learners.

APA 7 citation standards were applied throughout the study. Ethical considerations such as voluntary participation and confidentiality were also maintained during the research process.

The present research is based on mixed qualitative and quantitative research methods. The study was conducted among undergraduate students studying in non-specialized faculties at Mingachevir State University during the 2025–2026 academic year.

The participants of the study consisted of 60 undergraduate students enrolled in the course "Business and Academic Communication in a Foreign Language." Among the participants, 32 were female students studying in teacher education programs at the Pedagogical Faculty, while 28 were male students studying engineering and economics specialties.

The main research instrument used in the study was a classroom survey questionnaire prepared by the researcher. The survey aimed to identify students' learning preferences, communication styles, motivational factors, and attitudes toward different EFL learning activities.

The questionnaire included both closed-ended and open-ended questions. Students were asked about:

- preferred language learning methods;
- vocabulary acquisition strategies;

- attitudes toward reading and writing activities;
- interest in films, music, games, and digital learning tools;
- classroom participation preferences;
- communication confidence in English.

Sample survey questions included:

1. Which activities help you learn English vocabulary more effectively?
2. Do you prefer reading and writing activities or audiovisual learning materials?
3. How often do you use films, music, or games for English learning?
4. Which classroom activities increase your motivation to communicate in English?
5. Do you feel more confident during written or oral communication tasks?

The collected data were analyzed using descriptive analysis methods. Students' responses were categorized according to gender and learning preferences. Comparative analysis was also employed to identify similarities and differences between female and male learners.

APA 7 citation standards were applied throughout the study. Ethical considerations such as voluntary participation and confidentiality were also maintained during the research process.

Results and Discussion

The findings of the study demonstrate significant differences between female and male students regarding language learning preferences and communication strategies in EFL classrooms.

Female students studying in pedagogical specialties showed greater interest in reading comprehension, vocabulary memorization, note-taking, grammar exercises, and academic writing activities. Most female participants stated that they learn vocabulary more effectively by writing words repeatedly, preparing vocabulary lists, and reading academic texts.

The survey results also revealed that female students generally feel more confident during written communication tasks than oral interaction activities. Many participants emphasized that written exercises help them organize their ideas more systematically and improve grammatical accuracy.

Male students studying engineering and economics specialties demonstrated different learning preferences. Most male participants preferred learning English through audiovisual and interactive activities such as films, music, games, YouTube videos, and online communication platforms. These students reported that technology-based learning environments increase motivation and classroom participation.

The study further showed that male students participate more actively during speaking-based and interactive classroom activities. Gamification, role-play exercises, and multimedia tasks appeared to contribute positively to communicative competence and classroom engagement.

The results support previous findings in applied linguistics research suggesting that gender influences language learning strategies and communication behavior (Brown, 2014). According to Hyland (2019), learner-centered approaches that consider students' individual learning styles contribute significantly to language acquisition and motivation.

Another important finding of the research is that digital educational technologies positively influence both female and male students, although the forms of engagement differ. Female learners tend to use digital tools for reading and vocabulary development, whereas male learners utilize audiovisual content for communication practice and listening comprehension.

The findings indicate that EFL teachers should adopt differentiated instructional strategies in multilingual and interdisciplinary classrooms. Combining traditional academic activities with

technology-based interactive methods may help increase motivation and communicative competence among diverse learner groups.

Conclusion

The present study examined gender-based linguistic learning preferences among Azerbaijani university students studying English as a foreign language in non-specialized faculties at Mingachevir State University. The research findings demonstrated noticeable differences between female and male students in terms of language acquisition styles, classroom participation patterns, and preferred learning strategies.

The analysis revealed that female students tend to achieve better results through traditional and text-oriented learning approaches such as reading academic materials, writing exercises, note-taking, vocabulary memorization, and structured classroom activities. Female participants were generally more attentive to grammatical accuracy, written assignments, and detailed textual analysis. This tendency may be associated with stronger concentration on verbal and written communication, greater patience in repetitive language practice, and higher motivation toward academically organized learning environments. As a result, female students often demonstrate more consistent engagement in reading comprehension and writing-based EFL tasks.

In contrast, male students showed a stronger preference for visual, auditory, and technology-supported learning environments. Films, digital games, music, multimedia materials, interactive platforms, and audiovisual communication activities were identified as the most motivating tools for male learners. The findings suggest that male students participate more actively when language learning is presented through dynamic and visually stimulating methods rather than through purely text-based instruction. In many cases, visual memory and rapid information processing appear to support male students' vocabulary retention and listening comprehension skills, especially in technology-enhanced learning contexts. Their ability to memorize expressions, dialogues, and pronunciation patterns through repeated audiovisual exposure may positively influence communicative performance in EFL classrooms.

The study further confirms that gender-related learning preferences significantly affect classroom interaction, communicative competence, motivation, and overall language performance. Female students generally demonstrate stronger performance in academically structured tasks requiring reading and writing skills, whereas male students tend to perform more effectively in speaking-oriented, visual, and interactive communication activities. These distinctions indicate that linguistic learning preferences are shaped not only by individual cognitive factors but also by sociocultural and educational experiences influencing language behavior among university students.

The findings emphasize the necessity of adopting flexible and student-centered teaching methodologies in higher education institutions. Relying exclusively on traditional teaching methods may reduce the motivation of visually oriented learners, while overdependence on digital tools may not fully satisfy students who prefer analytical reading and writing practices. Therefore, an effective EFL classroom should combine traditional linguistic instruction with modern interactive and multimedia-based approaches. Integrating reading and writing exercises with audiovisual materials, digital applications, collaborative tasks, and communicative activities can create a more balanced and inclusive learning environment for both genders.

Moreover, the research highlights the importance of comparative linguistic perspectives in understanding gender-based learning behavior in EFL education. The differences observed between female and male students demonstrate that language acquisition processes are multidimensional and

influenced by cognitive, psychological, and communicative preferences. Consequently, curriculum designers and language instructors should consider these gender-related tendencies while preparing teaching materials, selecting classroom strategies, and evaluating learner performance.

Future studies may focus on larger participant groups from different Azerbaijani universities and may also investigate cross-cultural similarities and differences in gender-based linguistic learning preferences. Further research could additionally explore the impact of artificial intelligence tools, digital learning environments, and social media platforms on the development of communication strategies and language acquisition patterns among male and female EFL learners.

Abstract: This article explores the critical function of metacognitive strategies in advancing the lexical competence of English as a Foreign Language (EFL) learners. While intermediate proficiency often focuses on vocabulary breadth, achieving advanced mastery requires a shift toward "lexical depth," including nuanced understandings of collocation, register, and semantic prosody. Drawing on the frameworks of Flavell, Oxford, and Anderson, the study examines how metacognitive regulation – planning, monitoring, and evaluation – serves as a catalyst for autonomous learning. It further integrates the Involvement Load Hypothesis to demonstrate how high-effort cognitive tasks enhance long-term retention. By synthesizing empirical evidence and pedagogical models like CALLA, the article argues that explicit training in "thinking about thinking" is essential for overcoming the "intermediate plateau" and preventing lexical fossilization. The findings suggest that when learners transition from passive exposure to proactive, reflective management of their mental lexicon, they achieve the linguistic precision necessary for professional and academic success.

Key words: metacognitive strategies, cognitive load, advanced proficiency, lexical competence, ILH

Theoretical basis

Lexical competence encompasses not only vocabulary breadth (number of words known) but also its depth (knowledge of collocations, connotations, register, and usage). So, advanced lexical competence in English as a Foreign Language requires a transition from simple word recognition to the mastery of “depth”, which includes the complex combination of collocations, register, and semantic prosody. Unlike students with lower proficiency, Advanced EFL learners need strategies to handle academic, technical, and idiomatic language encountered in complex texts, discussions, and professional settings, where a lack of precision and accuracy can result in significant misunderstandings.

To bridge the gap between intermediate fluency and professional mastery, learners must move beyond passive exposure toward active, reflective management of their mental lexicon. This transition is facilitated by metacognition, a concept first introduced by John Flavell, that involves a learner’s conscious awareness and regulation of their own cognitive processes through planning, monitoring, and evaluation (Flavell, 1979). Metacognition is often defined as “thinking about

thinking". In foreign language learning, metacognitive strategies oversee other strategies (cognitive, memory, etc.), making them particularly powerful for self-directed improvement.

Rebecca Oxford's taxonomy classifies strategies into "direct" (memory, cognitive, compensation) and "indirect" (metacognitive, affective, social) because they provide the fundamental scaffolding for learning without directly involving the target language (Oxford, 1990). These strategies include consolidating one's learning through the connecting of new information with existing knowledge, as well as the constant cycle of planning, monitoring, and evaluating. By applying these strategies, learners do not just encounter a lexical item; they consciously decide how to encode it, monitor their success in using it, and evaluate whether their current study methods are yielding the desired results.

Neil Anderson further develops the model by distinguishing five components: preparing/planning, selecting/using strategies, monitoring use, orchestrating strategies, and evaluating effectiveness (Anderson, 2002a). The learner dynamically switches between different tools depending on the task's complexity. For an advanced learner, this might involve using contextual guessing to maintain reading flow, followed by a metacognitive "check" using a corpus to verify a word's technical usage in a specific professional domain. This self-regulatory cycle – preparing, selecting, monitoring, orchestrating, and evaluating – transforms the learner from a passive recipient of information into an autonomous researcher. Finally, metacognitive strategies act as the catalyst that transforms vocabulary acquisition from rote memorization to the field of deep, functional expertise, ensuring that students can handle critical linguistic demands of sophisticated professional and academic environments. In other words, metacognition helps learners move beyond passive encounters to active, reflective management of word learning.

One of the crucial factors in vocabulary retention is the "involvement load" of the learning task. According to the Involvement Load Hypothesis (ILH), developed by Laufer and Hulstijn, the effectiveness of a vocabulary task is determined by the "load" of mental effort it requires (Laufer and Hulstijn, 2001). This theory moves beyond simple exposure, implying that retention is a direct result of the motivational and cognitive energy employed during a task. Involvement Load Hypothesis suggests that involvement is a motivational-cognitive construct consisting of three components.

1. **Need** represents the drive to understand a word; for advanced learners, this is often a "self-imposed" urge as they realize that a specific technical term is essential for their professional discourse.
2. **Search** involves the active inquiry of a word's meaning or its L2 translation, such as using a corpus or a dictionary.
3. **Evaluation** constitutes the highest level of cognitive engagement, requiring the learner to assess the word's "compatibility" with a specific context or to create an original sentence that follows the word's collocational and grammatical patterns.

Metacognition plays a vital role in maximizing this involvement load. An advanced student with high metacognitive awareness does not simply complete a task; they intentionally select or modify tasks to increase their level of involvement. For example, while a traditional fill-in-the-blank exercise may provide a low involvement load (moderate Need, zero Search, low Evaluation), a metacognitively-directed learner might choose to write an original argumentative essay using a specific set of target academic words. This self-directed task increases the evaluation component to

its maximum, as the learner must constantly monitor whether the word choice accurately conveys their goal and complies with professional registers.

Furthermore, the integration of digital tools and interactive applications has revolutionized how involvement load is calculated in modern EFL contexts. Digital environments can be built to demand higher levels of search and evaluation through gamified "information gaps" or collaborative wikis. In such settings, the metacognitive "orchestration" described by Anderson becomes essential; the learner must monitor their cognitive load to ensure that the task remains challenging enough to provoke retention but not so difficult that it causes frustration (Anderson, 2002a). Eventually, the ILH provides a quantitative prism through which we can understand why metacognitive strategies are so effective: they naturally motivate the learner toward high-load activities, ensuring that the "mental traces" left by new lexical items are deep, lasting, and readily accessible for future use.

Metacognition is divided into metacognitive knowledge (declarative, procedural, and conditional knowledge about oneself and strategies) and metacognitive regulation (Flavell, 1979). This segmentation provides a comprehensive plan for how advanced learners master the English lexicon. Metacognitive knowledge, serving as the cognitive foundation, consists of *declarative knowledge* (the awareness of specific strategies, such as knowing that "semantic mapping" exists), *procedural knowledge* (the technical skill required to execute those strategies), and *conditional knowledge* (the sophisticated understanding of *when* and *why* to use a particular tool). For advanced EFL learners, metacognitive knowledge helps to avoid the misuse of learning techniques, ensuring that the student does not use a basic repetition strategy when the task demands deeper semantic analysis.

Another component of metacognition – metacognitive regulation – acts as the active management system that puts this knowledge into practice through a cyclical process of *planning*, *monitoring*, and *evaluation*. During the planning phase, the learner acts as a strategist, setting specific lexical goals and allocating cognitive resources before a task begins. This might involve deciding to focus exclusively on specific vocabulary while reading to better understand the content or the author's attitude and standpoint. Such process demonstrates that the learner's attention is not scattered but is instead directed toward the most relevant linguistic features of the text.

The monitoring phase is perhaps the most significant for real-time lexical development, as it involves the constant tracking of comprehension and the "noticing" of gaps. An advanced learner engages in a continuous internal dialogue, questioning whether their interpretation of a multi-word expression matches with the surrounding context. If a discrepancy is detected, the monitoring process activates a "repair strategy," such as re-reading or consulting a specialized corpus. This timely quality control is what allows learners to catch the smallest errors in connotation or register before they become fossilized in their oral or written speech production.

Finally, the evaluating phase transforms every linguistic encounter into a data point for future growth. After completing a task, the learner assesses not only whether they understood the vocabulary, but whether the strategies they chose were efficient. If a learner discovers that their attempt to guess from context led to a persistent misunderstanding of a technical term, they might evaluate that strategy as "low-reliability" for that specific genre and adjust their future planning to prioritize dictionary verification. This reflective loop creates a self-correcting system, enabling the advanced learner to reach a level of lexical precision that mimics native-speaker intuition through deliberate, conscious effort.

Empirical evidence

The empirical evidence provided by Rasekh and Ranjbari (2003) serves as a cornerstone for the argument that lexical growth does not come from only exposure, but it is a result of deliberate, explicit training in metacognition, i.e. "thinking about learning." By utilizing the Cognitive Academic Language Learning Approach (CALLA) over a ten-week period, the researchers demonstrated that students who were taught to externalize their internal cognitive processes – through systematic goal-setting and the use of reflective learning logs – achieved higher vocabulary retention compared to those receiving traditional instruction. This study emphasizes that when learners are equipped with a "strategy toolkit" and the metacognitive oversight to manage it, they move from rote memorization to a state of cognitive autonomy, where the responsibility for foreign language acquisition shifts from the instructor to the learner.

Beyond the Iranian context, a wider body of research suggests that the frequency and quality of metacognitive strategy use have a direct relevance to a learner's vocabulary size and overall proficiency. In reading-based tasks, metacognitive prompts – such as digital annotations or "check-in" questions – function as scaffolding that prevents passive reading and activates "incidental learning" by forcing the brain to notice and process unfamiliar lexis. This is particularly important for self-regulated learning; students who can accurately monitor their comprehension gaps are more likely to engage in the "deeper processing" necessary to move a word from short-term recognition to long-term productive use. In such environments, metacognition acts as a stimulus that upgrades every encounter with the target language, ensuring that no lexical item remains a "dead end" in the learner's mind.

For advanced EFL learners, the role of metacognitive training becomes even more specialized, serving as a primary defence against "lexical fossilization" and the "intermediate plateau". At this level, errors are often subtle – misusing a word's register or misunderstanding the associative meaning of lexical items. Metacognition allows these learners to perform "linguistic investigation", using self-evaluation to identify and correct errors that have become rooted over years of study. By consciously monitoring their output in speaking and writing, advanced learners can intentionally push their boundaries, combining sophisticated academic vocabulary and idiomatic expressions with their productive repertoire to achieve a high level of accuracy and native-speaker-like competence.

Finally, the integration of metacognitive instruction into the EFL curriculum aligns with broader trends in writing skills development and communicative fluency. When learners are taught to plan their lexical choices and evaluate the impact of those choices on their writing and audience, the result is a notable increase in lexical sophistication and rhetorical effectiveness. This self-aware approach to language production ensures that new vocabulary is not just "stored" in the learner's brain but is functionally integrated into their identity as a communicator. By promoting and encouraging these high-level regulatory habits, educators empower students to navigate the lexical nuances of professional and academic settings, transforming the challenge of vocabulary acquisition into a manageable, lifelong process of intellectual refinement.

The empirical data on metacognitive strategies reveals a specific order of how advanced learners achieve lexical mastery. Research into upper-intermediate learners, conducted at the University of Danang (UD-UFLS), pointed out that metacognitive strategies were not only the most frequently used but also served as the main indicator of vocabulary size (Nguyen, 2024). However, memory and social strategies, which are often employed at an early stage of language learning, were of little relevance to lexical volume at the advanced level. This means that as learners

progress, the cognitive demand of rote memorization turns out to be less effective than the closer analysis provided by metacognition. The ability to consciously manage one's learning path and self-regulate becomes the drive for growing the mental lexicon when simple exposure and social interaction no longer sufficient for overcoming the lexical plateau.

Moreover, research further proves the necessity of making a shift from incidental strategy use toward explicit, structured training. Studies including the CALLA (Cognitive Academic Language Learning Approach) model concluded that when students complete the five-stage cycle of Preparation, Presentation, Practice, Evaluation, and Expansion, they achieve considerably higher rates of long-term retention unlike their peers who received traditional instruction. By bringing the "internal" mental processes of advanced learners to the surface and making them visible, language instructors build a scaffold that allows students to transform from passive recipients of vocabulary lists into active, strategic managers of their own development. This explicit instruction in metacognition is particularly important for mastering the depth of vocabulary – such as style and collocation – which requires the high-level cognitive engagement that the CALLA framework aims to maintain.

However, despite considerable benefits and the proven effectiveness of these strategies, research underlines the importance of reflection and determines its absence or inadequate reflection in both teaching and learning practices. Foreign language learners generally demonstrate higher proficiency in planning and performance stages and can monitor their comprehension fairly effectively; however, the post-task evaluation phase is frequently neglected. Evaluation is typically identified as the least utilized component of metacognition, which means that learners miss an opportunity for deep processing. Without the critical reflection on the effectiveness of strategies and task outcome, learners are not able to shape their approach, often referring to the same inefficient techniques and strategies. It is of the utmost importance for advanced EFL learners to close this gap, as post-task evaluation helps learners notice the gap, promotes the correction of fossilized errors and develops the process of adjusting lexical accuracy and appropriacy required in professional and academic settings.

Norbert Schmitt's taxonomy of Vocabulary Learning Strategies (VLS) represents a sophisticated framework for understanding how learners move from basic word recognition to deep linguistic mastery (Schmitt, 1997). This system divides the learning process into 2 strategies:

1. **discovery strategies** (which are used when a learner first meets an unfamiliar word)
2. **consolidation strategies** (which focus on the long-term retention and integration of that word into the learner's mental lexicon).

For advanced EFL learners, the transition from discovery to consolidation is characterized by a move away from partial learning toward a "depth of processing" that ensures the word is not just stored, but is functionally available for more sophisticated communication.

The progressive use of strategies is inherently related to learner proficiency, particularly as individuals break through the intermediate plateau. Novice learners often tend to employ "shallow" or mechanical strategies, such as rote memorization, repetitive writing, and the frequent use of bilingual dictionaries to find direct L1 equivalents. While these methods are efficient for building a basic high-frequency vocabulary, they lack the cognitive load necessary to build strong neural connections. Consequently, words learned through these mechanical means often fall into disuse or become prone to "lexical fossilization," where the learner understands the word's basic meaning but remains unable to apply it with the correct collocation or within the appropriate context.

In contrast, advanced learners stand out by giving preference to cognitively demanding, "deep-processing" strategies that emphasize the structural and semantic relationships within the language. This includes morphological analysis – breaking words down into roots, prefixes, and suffixes to unlock meaning – and the creation of original, context-rich sentences that reflect professional or academic standards. Most importantly, advanced proficiency is characterized by the utilization of metacognitive consolidation strategies. These learners do not just study language; they study their own study techniques, consciously linking their strategy choices to their communicative success.

The distinction between proactive and passive engagement marks a significant divide in the effectiveness of vocabulary acquisition, particularly regarding how learners decode the lexical structures of the English language. Passive strategies, often characterized by implicit learning through extensive exposure to media – such as watching films, listening to podcasts, or reading for pleasure – definitely provide an immersive lexical environment and contribute to a closer familiarity with the target language. Adopting these strategies provide a steady stream of input that allows learners to notice repeated structures and shared morphemes across different words. However, while this type of engagement encourages incidental awareness, it is not cognitively challenging enough to move a learner from passive recognition to a sophisticated analytical understanding of linguistic roots.

In contrast, proactive engagement involves an explicit, intentional focus on the “physical” and etymological specifications of words. Deep-processing strategies, such as etymological analysis and morphological breakdown, create favourable conditions for learners to move beyond the denotational meaning of a lexical item. For example, by studying the etymology (Latin or Greek origins) of a term, or analysing how prefixes and suffixes change its grammatical function, learners construct a morphological map that can further be used as a template or pattern when learners encounter unfamiliar subject-specific or academic vocabulary and match the new lexical items to the existing morphological map. Research shows that only these proactive, high-effort strategies bridge learners’ receptive morphological knowledge with their broader analytical skills.

Passive immersion to the target language is generally not efficacious; so, the transfer to proactive involvement is crucial for the advanced learners to break through the lexical plateau. Proactive strategies require a higher level of metacognitive awareness. Reading process changes passive comprehension to active and conscious interrogation of the text. Similarly, the process of vocabulary acquisition is stimulated and accelerated by metacognitive analysis and is turned into a systematic discipline where learners do not only memorize definitions but they work out a framework that helps them decode a bigger number of related lexical items. As a result, learners achieve a level of lexical independence that could not be reached by passively “consuming” lexical items.

Pedagogical implications

Practical implementation of metacognitive strategies becomes a core prerequisite for successful foreign language acquisition. As it has already been mentioned above, advanced learners need to transform their general language study habits into meticulous language and skills analysis. Based on what has been said, we can formulate certain strategies that can help learners become more proficient both as language learners and language users.

Outlining targets. Learners may create personal vocabulary lists where lexical items are classified according to the level of difficulty, contextual occurrence, topic, frequency, etc. Students

may also find it necessary to set SMART – Specific, Measurable, Achievable, Relevant, and Time-bound – goals. Such goal-setting ensures the shift from vague improvement to strategic mastery of the target language. For example, a learner may plan to accurately use 50 subject-specific collocations by the end of the month.

Comprehension monitoring. Instead of passive reading, learners enter into a continuous internal dialogue to check their comprehension. They consult dictionaries to verify the meaning of lexical items and match the dictionary meaning with what they know about the word. Keeping lexical notebooks is also a useful strategy to monitor comprehension. In such journals, students usually note different shades of meaning, example sentences, etc. Learners question and assess if the word's register matches the formality of the text, whether the lexical item fits the context, and how the meaning of the target item may vary from context to context.

Multiple strategy management. In order to optimize the process of vocabulary acquisition, advanced learners can combine several strategies and achieve better results. For example, morphological deconstruction can be integrated with contextual guessing and mnemonic imagery. Moreover, learner encourage themselves to integrate new vocabulary into their speaking, monitor fluency disruptions, and evaluate processes of language production. Multiple strategy management may require the simultaneous coordination of cognitive and metacognitive strategies.

Evaluation and reflection. Advanced learners regularly (weekly, monthly, etc.) evaluate their linguistic performance as well as the use of vocabulary learning strategies, which helps them monitor their progress and adjust the implemented strategies. One of the strategies for effective evaluation and further reflection is reflective journals (both traditional and digital) that allow learners collect evidence of vocabulary use through productive language skills and assess their own growth.

Think-aloud Protocols. The Think-aloud is one of the metacognitive strategies where language instructors, as well as learners themselves, verbalize cognitive process while reading, inferring meaning from context, analysing language in context, etc. This strategy allows learners monitor their cognition, notice gaps, and identify thinking processes and strategies that may need improvement.

It is noteworthy to mention corpus consultation among the strategies promoting lexical growth of advanced students. Learners at this level of language proficiency are commonly guided by the language instructors to use corpora for closer lexical analysis and the monitoring of the usage of lexical items in a variety of contexts. Tools like BNC, COCA, and so on, make an irreplaceable asset for the verification of usage patterns and collocations empirically. Apart from this strategy, learners may also benefit from metacognitive discussions within the learning context, when they share their strategy experience with their peers, evaluate them collectively and adopt those strategies that received positive reviews from other students. By treating the language as a data set to be analysed through corpus consultation and peer discussions, learners develop a sophisticated, evidence-based mastery of the English language.

Thus, the integration of these strategies into the classroom through the CALLA-inspired framework provides the structured scaffolding necessary to foster this high level of autonomy. Teachers serve as models, utilizing explicit "think-alouds" to demonstrate how an expert navigates a dense academic passage or handles an ambiguous idiom. As the curriculum progresses, the instructional "scaffolding" fades, pushing students toward independent expansion where they apply their metacognitive toolkit to authentic materials, such as peer-reviewed journals or professional

reports. This pedagogical cycle, supported by digital tools for tracking and reflection, ensures that the "reflection gap" is closed. By making self-assessment and strategy evaluation a mandatory component of the learning process, educators help advanced EFL learners overcome fossilization and move toward a native-like lexical competence characterized by depth, precision, and communicative confidence.

Conclusion

In summary, the development of advanced lexical competence is not merely a byproduct of extensive language exposure but the result of deliberate, strategic self-regulation. The transition from basic word recognition to functional expertise depends on a learner's ability to move beyond mechanical memorization toward deep-processing strategies, such as morphological analysis and corpus consultation.

Key takeaways from the research indicate that:

- **The Reflection Gap:** While many advanced learners are proficient at planning and monitoring, the "evaluation" phase remains underutilized, representing a missed opportunity for correcting deep-seated or "fossilized" errors.
- **Proactive vs. Passive Engagement:** Passive immersion (media consumption) is insufficient for high-level mastery; learners must engage in proactive, high-load cognitive activities to build lasting neural connections.
- **Instructional Impact:** Systematic pedagogical frameworks, such as the CALLA model, empower students to take ownership of their progress, transforming them from passive recipients into autonomous researchers.

Ultimately, by integrating metacognitive toolkits into the EFL curriculum, educators can provide the necessary scaffolding for students to navigate the complexities of the English language. This reflective approach ensures that vocabulary acquisition becomes a lifelong process of intellectual refinement, allowing learners to communicate with the accuracy and confidence of a native-like speaker.

REPETITIONS IN ENGLISH LINGUISTICS

Rufat Mammad IBRAHIMOV

Senior teacher, PhD candidate, Sumgayit State University

E-mail: rufat.ibrahimov@sdu.edu.az

ORCID ID: 0000-0001-5768-3752

Abstract: The era of globalization is also affecting linguistics – borders are disappearing, social networks are making communication more accessible, and the use of international languages is becoming more widespread. Among these languages, English undoubtedly leads the way. The emergence of

misunderstandings during communication between speakers of different levels of knowledge, both at the academic and business levels, has prompted researchers to conduct various studies and look for solutions to the problems that arise. Because the lack of coherence within the text during both oral and written communication raises questions. For this reason, text linguistics has become one of the leading areas of linguistics in recent years. The article examines the role of lexical repetitions in text creation by providing examples from poems and works covering different periods. The activity of synonymous rows in the creation of simple and semantic repetitions is examined. In linguistics, cohesion is considered as a set of means that connect the components of the text. During the research, it is proven that repetitions, which are one of the means used in text creation and ensure the cohesion of text parts, actually serve to complete text parts as a structure. It is clear from the examples presented that the repetition element manifests itself within a paragraph, but can also be observed in other parts of the text and poems.

Key words: repetitions, semantics, cohesion, English language, text creation, synonymic line.

İNGİSLİS DİLÇİLİYİNDƏ TƏKRARLAR

Rüfət Məmməd İBRAHİMOV

Baş müəllim, doktorant, Sumqayıt Dövlət Universiteti

E-mail: rufat.ibrahimov@sdu.edu.az

ORCID ID: 0000-0001-5768-3752

Xülasə: Qloballaşma dövrü öz dəsirini dilçilik elminə də göstərməkdədir – sərhədlər itir, sosial şəbəkələr ünsiyyəti daha da əlçatan edir, beynəlxalq dillərdən istifadə geniş vüsət alır. Bu dillər arasında sözsüz ki, liderlik İngilis dilinin üzünə düşür. Fərqli bilik səviyyəsinə malik dildəşiyicilərinin istər akademik, istərsə də işgüzar səviyyədə ünsiyyəti zamanı anlaşılmaqlıqların yaranması tədqiqatçıları müxtəlif araşdırmalar aparmağa, yaranan problemlərin həll yollarını axtarmağa vadar etdi. Çünki istər şifahi, istərsə də yazılı ünsiyyət zamanı mətn daxilində bağlılığın olmaması suallar yaradır. Bu səbəbdən son illər mətn lingvistikası dilçiliyin qabaqcıl sahələrindən birinə çevrilmişdir. Məqalədə fərqli dövrləri əhatə edən şəxslər və əsərlərdən nümunələr gətirməklə leksik təkrarların mətnyaratmada rolu tədqiq olunur. Sadə və semantik təkrarların yaranmasında sinonimik cərgələrin fəaliyyəti araşdırılır. Dilçilikdə koheziya mətnin komponentlərini əlaqələndirən vasitələr toplusu kimi qəbul edilir. Araşdırma zamanı mətnyaratmada istifadə olunan və mətn hissələrinin koheziyasını təmin edən vasitələrdən olan təkrarların əslində mətn hissələrini bir struktur kimi tamamlamağa xidmət etməsi sübuta yetirilir. Təqdim olunan nümunələrdə aydın olur ki, təkrar elementi abzas daxilində özünü göstərir, amma mətnin və şeirlərin digər hissələrində də müşahidə oluna bilər.

Açar sözlər: təkrarlar, semantika, koheziya, İngilis dili, mətnyaratma, sinonim cərgə.

Introduction

Semantic repetitions are used to create cohesion (connection) between text units in text creation. The distinguishing feature of semantic repetitions is that the author uses not the repetition of the same lexical means, but the use of antonymous words in a certain close environment - often in a sentence and in adjacent sentences - in order to more clearly understand the information he wants to give to the recipient and to establish a coordinating function of that information. Another type of semantic repetition is formed by using words that are not synonyms or antonyms, but are related to each other according to the text and are important in creating information necessary for the context in a close environment. The proximity of the words used in such repetition is perceived associatively, the main content is given based on the general picture.

Speaking about the morphological means of cohesion, G. Kazimov, indicating that such means are divided into three groups according to their nature and that one of these groups is words used in a synonymous position, writes: *"All main parts of speech actively participate in connecting the components of the text. The idea expressed in one sentence is remembered, noted, or referred to in the next sentence (or in one of the following sentences) by some means. True synonymy (synonymous words) also plays a role in this situation, but words that are not members of the synonymous series can also perform this function"* (Kazimov, 2000). British researchers M.K. Halliday and R. Hasan note: *"Cohesion is a semantic entity that exists within a text and determines the text. The dependence of the translation of one element on another during discourse is called cohesion."* (Halliday & Hasan, 1976).

Materials and methods

Repetitions, which are used in text creation and are one of the means of ensuring the cohesion of text parts, actually serve to close and complete text parts as a structure. K. Abdullayev notes: *"it is necessary to specifically mention repetition as a text-forming factor in the structural plan"* (Abdullayev, 2012). From a system point of view, if a syntactic part does not have repetition, it will remain as an open structure. An open structure prevents the completion of the information provided by the text, causes its incompleteness. In this case, communicative completeness is not formed. A. Novikov emphasizes that repetitions play a unique role in poetic text: *"Repetition acts as a thematic sign of the image, realizes the mechanism of quantization of the image, and activates the mechanism of associative connection between the microcontexts in which repetitions are included"* (НОВИКОВ, 1983).

Various types of lexical repetitions, including simple lexical repetitions, are widely used in William Blake's poems. The analysis shows that these repetitions play an important role in the poet's creative process and act as the main means of cohesion. In the research materials the poem "The Blossom" by W. Blake and the story "Love of Life" by Jack London have been investigated from linguistic point of view.

Discussion

Let's consider specific examples. W. Blake's poem "The Blossom" begins with the lexical repetition of the word "merry". In the first line, the lexical repetition aims to make the sparrow more cheerful, and the author uses the type of contract repetition here. The sparrow, which was very cheerful, sat under the lush green leaves of the rose (so green). In the next line, the poet uses synonymous repetition (happy) to create cohesion with the previous line. However, the synonymous repetition does not refer to the sparrow, but to the rose. The joy creates a closed context in terms of belonging to both objects. If the joy of the rose arises from the sparrow sitting under its leaves, the joy of the sparrow is related to both finding a place to sleep and to the raspberries under the leaves. The sparrow found both food and a place to sleep. Although the author observes and narrates this scene, the event belongs to the series "Songs of Innocence" and expresses the world of a child and the child's attitude to events.

*Merry Merry Sparrow
Under leaves so green
A happy Blossom
Sees you swift as arrow
Seek your cradle narrow
Near my bosom. (Blake)*

In the first line of the next stanza of the poem, cohesion is again created with the first line. This cohesion is realized by synonymous repetition. It is known that the word *merry* is polysemantic and one of its meanings is beautiful. The word *pretty* also has a similar meaning. The poet uses simple contact lexical repetition in the first line of the second stanza. The second line of this stanza is the same as the second line of the first stanza. If we separate the text units in the poem as clauses, the cohesion created by the syntactic repetition between the two units becomes apparent. The raspberry is also under the leaves of the rose.

Pretty pretty robin
Under leaves so green
A happy blossom
Hears you sobbing sobbing
Pretty pretty
Near my bosom (Blake)

The third line of both stanzas is also the same. Another syntactic repetition is noted.

As a text unit, each sentence conveys a complete thought to the recipient. It serves to form and complete the general information for a larger text by being processed in a certain environment and sequence with other sentences. Therefore, completion of meaning should be expected within the context and paragraph. Let's look at examples from "Love of Life" by Jack London: "*The man who followed **slipped** on a smooth boulder, **nearly fell**, but recovered himself with a violent **effort**, at the same time uttering a sharp exclamation of pain. He seemed **faint** and **dizzy** and put out his free hand while he **reeled**, as though seeking **support** against the air. When he had steadied himself he stepped forward, but **reeled** again and **nearly fell***" (London)

The example uses the verbs *to slip*, *to fall*, *to support*, *to reel*, *to be dizzy* and etc. Although not all of these verbs are included in the synonymous series, the author was able to give both the starting point of the event, the sequence of its continuation, and finally, the end, by repeating them. This context is taken from a paragraph in the story. Since the last sentence of that paragraph serves to establish a connection with other parts of the text, we have removed it from the example. A paragraph is a syntactic structure organized at a higher level than a sentence. The element of repetition appears within a paragraph. In fact, this idea cannot be doubted. If repetition is recorded within a sentence, in neighboring sentences, then the use of repetition in a paragraph, which has a certain number of sentences, is also undoubtedly present. (Abdullayev, K. (2012))

In the above example, the author uses synonymous repetitions to describe and repeat the incident of the hero slipping and almost falling. The hero, who regains his balance through serious effort, wants to continue on his way. However, he almost falls again. At this time, he staggers, sways, his head spins, and tries to catch something in the air with his hands to maintain his balance. He again stops himself from falling. If in the first case the cause of the almost fall was slipping, in the second case it is not the cause but the result of the event that occurred due to the first cause. This conclusion is clarified in the next paragraph. The main information given to the recipient in the paragraph of completeness of synonymous repetitions is two. The first completed information is the impossibility of moving forward despite the slip and subsequent restoration of balance. The second cannot move from his place. The second information is the second's unwillingness to fall into the water. If he were on land, this event could have happened. (Kazımov, Q. (2000))

"*The man stood still for fully a minute, as though debating with himself. Then he called out: - I say, **Bill I've sprained my ankle.***" (London)

Synonymous repetition is also widely used when describing a characteristic feature of an image. In such cases, synonymous repetitions are used within the same sentence. At the same time, the author repeats those words in other parts of the text in order to emphasize the specificity of this feature. Synonymous repetition is used within a larger syntactic unit than a paragraph.

*"The man watched him go, **limping grotesquely and lurching forward withstammering gait up the slow stope** toward the soft sky-line of the lowlying hill. He watched him go till he passed over the crest and disappeared."* (London)

The example uses the synonyms limping and stumbling. This repetition describes Bill's gait. One of these words (limping) is introduced into the story in the first paragraph. However, in the first paragraph, limping is attributed to both people. Towards the end of the story, factual information about Bill's lameness is provided in the second person. However, the author's use of the repetition of the word limp and its synonyms in providing this information serves other purposes. One of these purposes is to point out that the man who slipped and broke his leg is bound to be lame, and to compare him to the first man in this respect. If the second man slipped in the water and broke his leg, the first man is already lame. The lame man only abandons his companion who may eventually become lame. He abandons him because he may be lame, and at that time he does not even think about his own lameness.

Despite the fact that the first is lame, the second one considers him stronger and lets him go ahead. However, the development of events brings him to that position, and he finds himself in a worse, more ridiculous situation than his companion.

*"With a desperation that was madness, unmindful of the pain, he hurried up the slope to the crest of the hill over which his comrade had disappeared – **more grotesque and comical by far than that limping, jerking comrade.**"* (London)

In this passage, the author uses synonymous repetition to describe the situation in which the second person finds himself. The fact that the second person finds himself in such a situation does not deter him from his goal. The aim of the story is to convey to the reader that main character will be a limp, a stumble or even a crawl the rest of the way. Continuing on his path in this way, he completes the path and wins the fight, unlike the lame Bill. As can be seen, synonymous repetitions play an important role in the formation of conceptual information by creating connections between different parts of the text.

In a literary text, there is a main goal directly related to the text. The structure and creation of the entire text are also based on this. As the text moves towards the end, the concretization of the main idea becomes stronger. The ending allows for the introduction of new repetitions. However, the new repetitions at the end of the text serve to complete the context in which they are used; they do not lead forward, that is, towards the beginning of the text. Such a lead is created only with the help of equivalent words, synonymous repetitions. For a clearer explanation of the issue, let us consider a specific example - the last paragraph of the story "Love of Life".

*"The scientific men were discreet. They let him alone. But they privily examined his bunk. It was **lined with hardtack**: the **mattress** was **stuffed with hardtack**; every **nook and cranny** was filled with **hardtack**. Yet he was sane. He was taking precautions against another possible **famine** – that was all. He would recover from it, the scientific men said; and he did, ere the Bedford's anchor rumbled down in San Francisco Bay."* (London)

Result

Here we face with a lexical repetition of the word **hardtack** (rusk). If this word is used in the previous paragraph of the text, it is not connected to the beginning of the text as a lexical repetition as a repeated word. The connection arises from the synonymy of the word rusk, the gender-species comparison. Rusk is food and it is possible to store it for a long time. This person, who has endured the hardships of hunger for a long time, views hunger as a great danger and takes precautions to fight it. He begs for rusk from sailors and collects these rusks as food instead of eating them. The repetition of the word rusk in the last paragraph is a repetition used to reinforce information. However, this repetition acts as a synonym for the words food and food and is connected to the previous parts of the text along this line. Such a connection is more consistent with coherence.

The last paragraph contains two more forms of repetition. This is the repetition of the name of the object in the hero's room that allows him to hide the biscuit. Here, the fact that the objects allow him to fulfill the purpose is taken as the basis, and the names of these objects are also repetitions obtained by replacing them with equivalents.

Thus, it is emphasized once again that repetition is an important tool for reinforcing factual information, and its importance in shaping the text is proven theoretically and practically. By applying the results obtained in language lessons, oral and written communication, it is possible to improve knowledge and skills in English at both professional and amateur levels.

CHARACTERISTICS OF ECONOMIC TERMS USED IN ENGLISH AND AZERBAIJAN

Sevinj Ibadulla SALIMOVA

Ph.D., associated professor, Department of English Lexicology

Azerbaijan University of Languages

E-mail : sevinc.selimova@adu.edu.az

ORCID ID: [0009-0005-1152-2562](https://orcid.org/0009-0005-1152-2562)

Abstract: Terms are created in the process of various scientific and technical discoveries. As society develops, it becomes necessary to increase the number of terms in various fields of the language. Most of the

terms used in the Azerbaijani language, including economic terms, are of borrowed origin, but there are also terms of national origin. Terms of national origin are more related to humanitarian fields such as linguistics, literary studies, history. For example : adjective, definition, angle, etc. Most of the terms borrowed from European languages have both international character and are used as in the source language: bank, dividend, etc. Terms always have a precise meaning, an independent and clear content. It is monosemantic and expresses any concept precisely, unambiguously and independently. Regardless of the text in which it is used, it is understood in the same sense everywhere. Terms are mainly monosemantic, functionally limited, stylistically neutral and precise. Economic terms, as a type of terms, are a special terminological lexicon that directly belongs to the field of economics. Like other terms, they do not have an emotional tone in terms of style, but are neutral in nature.

Key words: term, economy, discoveries, political and cultural relations, financial-banking sector

İNGİLİS VƏ AZƏRBAYCAN DİLLƏRİNDƏ İSTİFADƏ OLUNAN İQTİSADI TERMINLƏRİN XÜSUSİYYƏTLƏRİ

Sevinc İbadulla SƏLİMOVA

Fil. f. d., dos., İngilis Dilinin Leksikologiyası kafedrası, Azərbaycan Dillər Universiteti

E-mail: sevinc.selimova@adu.edu.az

ORCID ID: 0009-0005-1152-2562

Xülasə: Terminlər müxtəlif elmi və texniki kəşflər prosesində yaranır. Cəmiyyət inkişaf etdikcə dilin müxtəlif sahələrində terminlərin sayının artırılması zərurəti yaranır. Azərbaycan dilində istifadə olunan terminlərin əksəriyyəti, o cümlədən iqtisadi terminlər, mənşəcə götürülmüşdür, lakin milli mənşəli terminlər də mövcuddur. Milli mənşəli terminlər daha çox dilçilik, ədəbiyyatşünaslıq, tarix kimi humanitar sahələrlə əlaqəlidir: sifət, tərif, bucaq və s. Avropa dillərindən götürülmüş terminlərin əksəriyyəti həm beynəlxalq xarakter daşıyır, həm də mənbə dilində olduğu kimi istifadə olunur: bank, dividend və s. Terminlər həmişə dəqiq mənaya, müstəqil və aydın məzmunla malikdir. O, monosemantikdir və istənilən anlayışı dəqiq, birmənalı və müstəqil şəkildə ifadə edir. Hansı mətndə istifadə olunmasından asılı olmayaraq, hər yerdə eyni mənada başa düşülür. Terminlər əsasən monosemantik, funksional cəhətdən məhdud, stilistik cəhətdən neytral və dəqiqdir. İqtisadi terminlər, bir növ termin kimi, birbaşa iqtisadiyyat sahəsinə aid olan xüsusi terminoloji leksikondur. Digər terminlər kimi, onlar da üslub baxımından emosional tona malik deyil, lakin təbiətə neytraldır.

Açar sözlər : termin , iqtisadiyyat , kəşflər , siyasi və mədəni əlaqələr , maliyyə- bank sektoru

Introduction

The terms that have emerged in Azerbaijani linguistics are not only terms of Arabic and Persian origin, but also the establishment of economic, political and cultural relations with Western countries and the rapid development of these relations have led to the introduction of new borrowed words and terms into the vocabulary of the Azerbaijani language. The number of terms that came from Western European languages in the Azerbaijani language is not small, these terms have also passed into our language through the Russian language. For example, in the Azerbaijani language *barel*, *auksion*, *kredit*, *birja*, etc. Terms such as are used by almost everyone, but very few people know the exact meaning of these terms.

In recent times, the digitalization of the economy and the acceleration of the transition process from the traditional economy to the digital economy have also affected the increase in the volume of e-commerce.

Terms related to the financial and banking sector of our economy are the majority in our language. This is due to the fact that after gaining independence, leading European financial institutions participated in the establishment of the financial and banking infrastructure in our country, and leading European banks played a role in the development of the banking sector. The establishment of close relations with European countries in this area has led to the arrival of terms of European origin, mainly from English, related to the banking and financial sector in our language. New borrowings in economic vocabulary, terms and words used in the language of the press such as *market, marketing, kredit, biznes, kommersiya, eksport*

In some cases, common words take on new meanings in economics. For example: in Azerbaijani new meaning of “*kölgə* - “*kölgə, iqtisadiyyatı*»(in English *shadow economy*), the word «*pəncərə*» - «*güzaştli kreditlər pəncərəsi*», new meaning of the word «*oyun*» - «*xalis oyun*», «*birja oyunu*» .

Materials and methods

Among economic terms in Azerbaijani language , there are also words with borrowed prefixes. For example *aviakassa, avialayner, avtonom, aqrotexniki; monoqrafiya, makromühit, mikromühit, dezodorasiya, devalvasiya* , etc

Sometimes none of the components of the term originally belongs to the source language. For example, disintegration, which is used in Azerbaijani and English, is a term formed on the basis of the French “*dez*” and Latin “*integratio*” words. In Latin, “*integratio*” means “to restore”, “to fill”. The word disintegration is “disintegration” in English, and “*désintégration*” in French. In order to better understand the terminology field of linguistics, it is necessary to clarify the essence of most of the terms related to this field. Because without explaining the meaning of individual terms used in terminology, it may be somewhat difficult to fully and clearly imagine this or that terminological idea. In this regard, it is appropriate to explain some of the most important functional terms that are often found in terminology. For example, excise duty - in Latin “*accido*”, in French “*accise*” - means “to deduct”, an indirect tax imposed on some consumer goods and services; it is added to the price of the goods or service tariff and, thus, is paid by consumers. Auditing is the process and system of assessing the compliance of management activities with certain criteria, norms and standards.

In term creation using the semantic method, a new cross-domain homonym term is formed as a result of a change in the semantics of the term. For example, In Azerbaijani the word “*kredit*” is from English word “credit” and it is polysemantic word and it has more than 15 meanings in the Azerbaijani language : 1. İnam, etibar. 2. Yaxşı imic, yaxşı ad, nüfuz. 3. Şan, şöhrət, şərəf. 4. Hörmət. 5. Ali məktəbdə zaçot balı. 6. Zaçot. 7. Kredit, borc. 8. Gəlirə yazılmış məbləğ. 9. Bankda hesab. 10. Mühasibat kitabının sağ tərəfi. 11. İnanmaq, etibar etmək. 12. Nüfuzu qaldırmaq. 13. Kreditləşdirmək, kredit vermək, pul buraxmaq, borc vermək. 14. Mənfəət bölməsinə yazmaq. 15. zaçot qəbul etmək, kurs keçmək .

The first meaning of this word is “faith, trust”. Another terminological meaning is “a debt given in money or in kind”. The term has been motivated by the meaning of “debt” and has passed into public terminology. Credit refers to the exams, acceptable tests and debts related to the student’s curriculum. As can be seen, the term has taken on a new semantic meaning, and a homonym term has emerged between the fields of economics, finance and pedagogy.

Another example: In Azerbaijani “*dəyər*” means “price, price”, “value, importance, dignity, quality”. In the economic field, this word means “a certain amount of abstract labor spent on the

production of a commodity and materialized in this commodity”, and as a financial term, it means “the price of any asset expressed in money”, “the paid or agreed price of a produced asset, including all costs”.

Let's look at a number of other economic terms in the Azerbaijani language.

Akselator- An economic model that makes the volume and dynamics of investment dependent on the demand for consumer goods.

Audit- The process and system of assessing the compliance of management activities with certain criteria, norms and standards. The basis of the audit is the mutual interest of the state, the management of the enterprise and its owners (depositors, shareholders).

İnvestisiya (ing. *investment*)- It consists of financial resources, as well as material and intellectual assets, invested in entrepreneurial and other types of activities for the purpose of obtaining income (profit) or social benefit.

Lizing- The purchase of assets - mainly buildings, equipment and vehicles - by leasing companies; these companies lease these assets to customers for a fee. Leasing is a form of financial leasing and involves the purchase of any equipment or property by the leasing company and its use (rent) to the lessee for an agreed period of time.

Lisenziya- Permission for individuals or organizations to use an invention, knowledge, experience, etc. to perform a certain task. Credit - A financial service that allows an individual or legal entity to purchase products, raw materials, goods, etc. and pay for them after a certain period of time.

Barel- A commonly accepted unit of measurement for the volume of oil, equal to 159 liters (0.159 m³) or approximately 35 imperial gallons (42 US gallons).

Boutique – small fashionable store, boutique . A boutique differs from a store in its luxury and design. The goods offered for sale here belong to selected companies. In small fashionable stores, the price attracts attention with its higher price than in an ordinary store. There is no corresponding lexical equivalent in the Azerbaijani language. Therefore, it is given in the form of an explanatory or definitive text: small fashionable store.

Results and Discussion

The creation of economic terms by the semantic method manifests itself differently at different stages of the development of the terminological system. The most productive period of their transformation into terms, that is, of common words, on the basis of changes in the semantics of common words, coincides with the period of the formation of a new terminological system. Thus, “terms are created on the basis of existing words and words acquire new meanings”.

Let's look at some economic terms used in economic terminology in English and Azerbaijani: coin-sikkə, client-müştəri, benefit-fayda, bonus-mükafat, balance-qalıq, allotment-bölgü, allowance-güzəşt, accumulation-yığım, account-hesab, abundance-bolluq, category-dərəcə, crash-iflas, corvee-biyar, crisis-böhran, damage -zərər, ziyan, work-iş, debt-borc, deduction -ayırma, demand-tələb, base-baza, farm-ferma, fashion-moda, fee-qonarar, hire-muzd, kind-növ, label-yarlıq, labour-əmək, list-siyahı, loss-zərər, market-bazar, means-vəsait və s.

Another example: “menecment (manage) is an English word meaning "management". This word, which has entered the economic terminology of the English language, denotes a set of principles, forms, methods and means of managing production and production personnel using the achievements of management science. As a general word, it is used in the sense of "management".

The economic development strategy of our state is being implemented on new grounds, economic relations with other countries are increasing. In this regard, new economic terms are entering the scientific terminology. These terms are different in terms of origin:

1. National
2. Taken from Turkic languages
3. European origin

Economic terms that arise on the basis of the internal capabilities of our language are created using lexical, morphological, syntactic methods. Since these methods are different, it is expected that the terms correspond to the phonetic, grammatical structure of our language, and that they are also characterized by such features as conciseness and concreteness. These terms, which are in the form of words and word combinations, are expressed with words that are national, but have gained generality

Another example is the word "capital". This word came to English from Latin (*capitalis*). It means "fundamental". In current economic terminology, it refers to money, land, and materialized labor as a complex economic category. The word capital, understood by everyone, is also understood as money collected for the purpose of accumulation as a general word" (Həsənov, 2005, s. 49)

Firm (Italian *firma*) – the most generalized name of an enterprise, company, economic society, commercial organization. The following types of firms are distinguished: affiliated – close, related firms merged into a larger, main company in the form of a branch, subsidiary; broker-commercial firms pursuing commercial goals and

In the Azerbaijani language, there is a similarity in the pronunciation of the terms *serviz* and *servis*. Both of these terms are derived from the same root. This term *servitum* meant "servitude, slavery". Later, it acquired the meanings of "service, care", which underwent semantic changes. For example, the appreciation of the dollar led to an increase in car service costs. In this context, the term *servis* means "service, care". The explanatory dictionary notes that the term *service* expresses the meanings of tea service, food service. Thus, service is a household service to the population (economics), marketing activity (economics) that provides a complex service aimed at improving the production and sale of goods, in sociology, a "sociological survey"; in culinary terms, service is used in the meaning of "a set of dishes or tea utensils (utensils) for a certain number of people.

Let's now have a look at some expressions used in English : *to meet the national manpower needs* to meet the country's need for labor; need for cash; need for materials; need for raw material; actual need; borrowing need; capacity need; consumer need; consumption need; current need; daily need; daily living needs; essential need; subsidy need; uncovered needs; fuel need; future needs; general need; growing need; likely needs; manpower need; material need material need ; minimum need minimum need ,etc.

In English and Azerbaijani, one can also find the names of various organizations in which economic terms are used. For example: Regional Development Agency-Regional İnkişaf Agentliyi; İqtisadi Əməkdaşlıq Təşkilatı (ECO) etc. Economic terms are widely used in news about the economy in the Azerbaijani language press and on various websites. Let's look at some examples taken from the press and websites.

For example: Qazaxıstan Respublikasının *əmtəə istehsalçıların* Azərbaycan Respublikasında *İqtisadi-ticarət missiyası və birgə biznes-forumu* keçirilib.

Neft İxrac Edən Ölkələr Təşkilatı (OPEC) və "OPEC"-ə daxil olmayan bəzi istehsalçı ölkələrdən ibarət "OPEC+" qrupu, 5 oktyabr 2022-ci il tarixində qəbul etdiyi "il sonuna qədər gündəlik 2 milyon barel azaltmaq" qərarına əlavə olaraq *hasilatı* may ayından etibarən Bu, könüllü olaraq gündəlik təxminən 1.6 milyon barrel azaltma qərarını təsdiqlədi.

Söhbət zamanı Azərbaycanın və Gürcüstanın birgə həyata keçirdiyi *enerji infrastruktur layihələrinin*, əhəmiyyəti vurğulandı. Ölkələrimizin birlikdə reallaşdırdıqları *enerji layihələrinin* Avropanın *enerji təhlükəsizliyində* böyük rol oynadığı və bu *enerji resurslarına tələbatın* artdığı qeyd olundu

Some economic terms have exact equivalents in both languages. For example:

Quota-kvota; quota sample-nümunəvi ölçü ; quota system-kvota sistemi. Here the word *Quota*(kvota) exists in both languages.

Conclusion

Terms constitute the vast majority of lexical units of every modern language that serves the requirements of advanced science and technology. In general, terms are lexical units that are easily created and quickly accepted by everyone. Terms are unambiguous and belong to a specific field of science. In particular, they are used in a scientific style. In the process of term creation in Azerbaijani and English, semantic, morphological, calculus, syntactic methods are used.

The scope of use of terms is very limited. They are used only within one or another narrow framework of science. The following are characteristic features of terms: accuracy, concreteness, brevity, uniqueness, naming, systematicity, comprehensibility, few components, single-variant, non-synonymity, limitation of use, conscious determination, etc. The development and improvement of terminology plays an unparalleled role in the general cultural rise of the people and the enrichment of their language. Terminology refers not only to names and words related to individual fields of science and technology, but also to new words created in the language to express concepts that arise in a broader sense. A term is a word that arises on the basis of the development of science and technology.

The vocabulary of the English language is distinguished by its diversity. In this language, there are many borrowings from different languages even at the level of common words of the language. The aspect mentioned in the terms is at a higher level. As a result, direct borrowings are more common in English. A large part of international economic terms is not related to any modern language, but is mainly formed from a combination of elements belonging to Greek and Latin. The widespread use of any word, its transfer from one language to another, and its eventual transformation into an international term are related to the concept, event, and process it expresses.

THE ETYMOLOGICAL STUDY OF THE SUFFIX “-LAY” IN THE WORKS OF ALOV SAT ABDULLAEV

Sabina MUKHTAROVA

Young researcher, Research Laboratory “Applied Issues of the Azerbaijani Language”

Baku State University

E-mail: Sabina_mehdi1@mail.ru

ORCID ID: 0000-0002-1856-2648

Abstract: The presented study systematically analyzes the theoretical significance of Ə. Abdullaev’s research in Azerbaijani linguistics, particularly in the field of etymology. Based on his article “The suffix -lay and the etymology of the words *elə* and *belə*,” the origin, formation mechanisms, and semantic features of the demonstrative pronouns “*elə*” and “*belə*” are examined within a broad scholarly context.

The research shows that Ə. Abdullaev critically approaches existing etymological theories, explicitly rejecting interpretations that explain these words through Iranian languages or the postposition “*ilə*,” and substantiates this position with solid linguistic arguments. At the same time, he proposes an alternative hypothesis supported by extensive factual material drawn from various Turkic languages and dialects.

According to the author’s conclusion, the demonstrative pronouns “*elə*” and “*belə*” originated from the combination of the pronouns “*bu*” and “*o(l)*” with the comparative-similar suffixes “-lay” and “-ley.” In the subsequent phonetic evolution, these forms underwent structural changes and acquired their modern shape. This interpretation is further reinforced by the existence and parallel usage of different variants of the -lay suffix across Turkic languages.

The study concludes that the theoretical model proposed by Ə. Abdullaev is grounded both in linguistic logic and extensive comparative material, making it a significant contribution to etymological research and to the development of Azerbaijani linguistics in this field.

Keywords: Azerbaijan, language, etymology, suffix, linguistics.

ALÖVSƏT ABDULLAYEVİN YARADICILIĞINDA “-LAY” ŞƏKÇİSİNİN ETİMOLOJİ TƏDQIQI

Səbinə MUXTAROVA

Gənc tədqiqatçı, “Azərbaycan dilinin tətbiqi məsələləri” elmi-tədqiqat laboratoriyası

Bakı Dövlət Universiteti

E-mail: Sabina_mehdi1@mail.ru

ORCID ID: 0000-0002-1856-2648

Xülasə: Təqdim olunan araşdırmada Ə. Abdullaevin Azərbaycan dilçiliyində, xüsusilə etimologiya sahəsində apardığı tədqiqatların elmi-nəzəri əhəmiyyəti sistemli şəkildə təhlil edilir. Müəllifin “-lay şəkilçisi və *elə*, *belə* sözlərinin etimologiyası” adlı məqaləsi əsasında “*elə*” və “*belə*” işarə əvəzliliklərinin mənşəyi, formalaşma mexanizmi və semantik xüsusiyyətləri geniş elmi kontekstdə araşdırılır.

Tədqiqatda göstərilir ki, Ə. Abdullaev mövcud etimoloji konsepsiyalara tənqidi yanaşaraq, xüsusilə bu sözlərin İran dilləri ilə əlaqələndirilməsi (“*ilə*” qoşması əsasında izah edilməsi) yanaşmaları elmi

argumentlərlə əsaslandırılmış şəkildə rədd edir. Eyni zamanda, müxtəlif türk dilləri və dialektlərindən gətirilən zəngin faktoloji materiallar əsasında alternativ konsepsiya irəli sürülür.

Müəllifin qənaətinə görə, “elə” və “belə” işarə əvəzlilikləri “bu” və “o(l)” əvəzlilikləri ilə bənzətmə-müqayisə mənalı “-lay”, “-ley” şəkilçilərinin birləşməsi nəticəsində yaranmış, sonrakı fonetik inkişaf prosesində isə struktur dəyişikliklərinə məruz qalaraq müasir formaya düşmüşdür. Bu yanaşma türk dillərində -lay şəkilçisinin müxtəlif variantlarının mövcudluğu və paralel işlənməsi ilə də təsdiqlənir.

Araşdırma nəticəsində belə qənaətə gəlinir ki, Ə. Abdullaevin irəli sürdüyü nəzəri model həm linqvistik məntiqə, həm də geniş müqayisəli materiala əsaslandığı üçün etimoloji tədqiqatlar kontekstində mühüm elmi dəyərə malikdir və Azərbaycan dilçiliyində bu istiqamətin inkişafına əhəmiyyətli töhfə verir.

Açar sözlər: Azərbaycan, dil, etimologiya, şəkilçi, dilçilik

Introduction

Although Azerbaijani linguistics began to enter its formative stage in the nineteenth century, the twentieth century is characterized as a period marked by particularly rapid development and systematic scholarly consolidation within the field. During this time, a number of prominent scholars emerged who played a decisive role in the establishment of the Azerbaijani school of linguistics. Among them, Doctor of Philological Sciences and Professor A. Abdullaev occupies a distinctive and significant position.

Alovşet Zakir oğlu Abdullaev was born on February 17, 1920, in the village of Məlikçobanı in the Shamakhi district. In 1939, he graduated from the Shamakhi Pedagogical Technical School with distinction. After engaging in pedagogical activity for a period in the village of Göylər, he was admitted to Baku State University in 1940.

Following the early years of his education, with the outbreak of World War II, he was conscripted into military service; however, as a result of injuries sustained in combat, he was discharged from the army in 1942. In the post-war period, he resumed his higher education and, in 1950, graduated from the university with distinction, after which he was admitted to postgraduate study.

In 1954, he defended his Candidate of Sciences (PhD-equivalent) dissertation entitled “Specific Constructions in the Modern Azerbaijani Language,” and in 1964, he completed his doctoral dissertation on “Subordinate Complex Sentences in the Modern Azerbaijani Language.” In recognition of these achievements, he was awarded the academic degree of Doctor of Philological Sciences, and one year later, the academic title and position of Professor were formally conferred upon him.

A. Abdullaev conducted extensive and impactful scholarly research across various domains of Azerbaijani linguistics, producing substantial studies on different aspects of the language. The investigation of etymological problems occupies a prominent place within his academic work.

Distinguished by profound theoretical expertise in the relevant field, a systematic approach to the analysis and correlation of linguistic data, and a strong linguistic intuition, the scholar’s article entitled “The Suffix -lay and the Etymology of the Words ‘elə’ and ‘belə’” is of particular scholarly significance in this respect.

Etymological Studies

In addition to his productive research across various domains of linguistic science, A. Abdullaev succeeded in reconstructing the general panorama of linguistics corresponding to a particular historical period. Such a systematic approach is, in fact, characterized by a high degree of intellectual and methodological complexity, as it requires the researcher to engage comprehensively

with a broad range of scholarly sources spanning an extensive temporal framework, as well as to possess an integrated understanding of the intellectual legacy of diverse authors.

This kind of multifaceted and demanding scholarly activity is not accessible to every researcher, as success in this area presupposes solid foundational training, a well-developed theoretical framework, and interdisciplinary, integrative knowledge. Within this context, A. Abdullaev's article entitled *"The Development of Our Linguistics during the Years of Soviet Rule"* is of particular relevance and scholarly value, as it reflects the developmental dynamics of Azerbaijani linguistics over the first four decades of Soviet governance (Abdullaev, 1967).

A. Abdullaev is among the scholars distinguished by fundamental studies encompassing various branches of Azerbaijani linguistics. Within his scholarly legacy, the investigation of the etymological problems of the Azerbaijani language occupies a significant place.

Among the defining features of his work in this field are his profound theoretical grounding, his ability to systematically compare and correlate relevant linguistic data, and his highly developed linguistic intuition. It is precisely the synthesis of these qualities that renders his article *"The Suffix -lay and the Etymology of the Words 'elə' and 'belə'"* a noteworthy and relevant contribution to the scholarly community (Abdullaev, 1992).

In the aforementioned article, the author conducts an etymological analysis of the demonstrative pronouns *"elə"* and *"belə,"* which are widely used in Turkic languages, and systematically reviews the existing scholarly approaches in this direction. Within the framework of the study, various hypotheses proposed in Turkological research regarding the origin of these lexical units are presented. The author critically evaluates most of these approaches.

In particular, the position of F. D. Ashnin is analyzed within the context of scholarly polemics. According to his view, the aforementioned pronouns were formed as a result of the combination of simple demonstrative pronouns with the word *"xıl"* used in Iranian languages (Ashnin, 1958). A. Abdullaev, however, does not consider this interpretation to be well-founded and argues that the lexical item *"belə"* has existed in the language system since the earliest periods. Furthermore, the author emphasizes that the presentation of the word *"xıl"* in the dative case rather than the nominative form is also not convincing from a scholarly perspective (Mukhtarova, 2023).

The second scholar to whom A. Abdullaev refers is V. Kotvich. Referring to the position of Jean Deny, the linguist noted that the words *"böyle," "şöyle,"* and *"öyle"* were formed by the addition of the postposition *"ilə"* to the corresponding demonstrative pronouns. However, A. Abdullaev raises objections to this approach on scientific grounds. First, the author does not consider it correct to present these words as adverbs of manner, and in some cases as pronouns; in his view, these lexical units should, in essence, be regarded exclusively as demonstrative pronouns. Secondly, it is not possible to observe any semantic traces of the postposition *"ilə"* in the given examples, which constitutes one of the weak points of the proposed etymological explanation. A view that partially corresponds to this position is attributed to L. A. Pokrovskaya. According to her, the words *"böölə," "ölə,"* and *"şöölə"* in the Gagauz language emerged as a result of adding the grammaticalized form of the postposition *"ilə"* to the demonstrative pronouns *"bu," "o,"* and *"şu."* The author characterizes these words as pronominal adjectives and pronominal adverbs functioning attributively (Pokrovskaya, 1964).

A. Abdullaev, however, adopts a critical stance toward this explanation as well, noting that the proposed semantic interpretation does not fully correspond to the actual meaning of the words. Another significant objection concerns their characterization as both pronouns and adjectives. In

fact, the words “elə” and “belə” should be regarded solely as demonstrative pronouns. Their use in a sentence in the functions of attribute or adverbial modifier of manner does not alter their grammatical nature; on the contrary, in such cases, the pronoun assumes the functions of an adjective or an adverb, respectively.

The second scholar to whom A. Abdullaev refers is V. Kotvich. Referring to the position of Jean Deny, the linguist noted that the words “böyle,” “şöyle,” and “öyle” were formed by the addition of the postposition “ilə” to the corresponding demonstrative pronouns. However, A. Abdullaev raises objections to this approach on scientific grounds. First, the author does not consider it correct to present these words as adverbs of manner, and in some cases as pronouns; in his view, these lexical units should, in essence, be regarded exclusively as demonstrative pronouns. Secondly, it is not possible to observe any semantic traces of the postposition “ilə” in the given examples, which constitutes one of the weak points of the proposed etymological explanation.

A view that partially corresponds to this position is attributed to L. A. Pokrovskaya. According to her, the words “böölə,” “ölə,” and “şöölə” in the Gagauz language emerged as a result of adding the grammaticalized form of the postposition “ilə” to the demonstrative pronouns “bu,” “o,” and “şu.” The author characterizes these words as pronominal adjectives and pronominal adverbs functioning attributively (Pokrovskaya, 1964).

A. Abdullaev, however, adopts a critical stance toward this explanation as well, noting that the proposed semantic interpretation does not fully correspond to the actual meaning of the words. Another significant objection concerns their characterization as both pronouns and adjectives. In fact, the words “elə” and “belə” should be regarded solely as demonstrative pronouns. Their use in a sentence in the functions of attribute or adverbial modifier of manner does not alter their grammatical nature; on the contrary, in such cases, the pronoun assumes the functions of an adjective or an adverb, respectively.

A. Abdullaev notes that, from a historical perspective, the words “belə” and “elə” were formed as a result of the combination of the demonstrative pronouns “bu” and “o(l)” with the suffix -lay, which expresses a meaning of comparison or similarity. In later stages, these lexical units underwent certain phonetic transformations and acquired their modern phonetic form: *bulay* – “like this,” *olay* – “like that.”

In order to substantiate this concept, the author presents an extensive factual base. Thus, the existence of various phonetic and morphological variants of the suffix -lay in Turkic languages is noted: -layın, -ley, -la, -lə, -le, -tayın, -təkin, -tay, -day, -tək, -dək, etc. (Dmitriev, 1960). The parallel use of these variants across different Turkic languages indicates their semantic equivalence.

At the same time, A. Abdullaev does not consider the classification of these units as adverbs to be scientifically justified and emphasizes that such an approach leads to a distortion of their grammatical nature (Musaev, 1964).

The systematic presentation and scientific-logical analysis of extensive linguistic material related to Turkic languages and their dialects demonstrate the validity of A. Abdullaev’s views concerning the suffixes -lay and -ley. According to the author’s approach, this suffix is not limited to pronouns; it can also attach to nouns and adjectives, thereby forming the meaning of comparison or similarity expressed by the postposition “kimi” in modern Azerbaijani.

A. Abdullaev’s research in the field of etymology is of particular scientific value. In particular, the role of the suffixes -ay and -ley in the formation of the demonstrative pronouns “elə”

and “belə” is explained and substantiated within a theoretical framework, as well as on the basis of extensive factual material drawn from various Turkic languages.

According to the author’s conclusion, the demonstrative pronouns “o” and “bu,” in combination with the suffixes -lay and -ley, initially formed corresponding structures; in the subsequent process of phonetic development, the loss of the final consonant “y” resulted in the formation of the modern demonstrative pronouns “elə” and “belə.”

One of the scholar’s noteworthy studies in the field of etymology concerns the toponym “Yessentuki.” Taking as a basis the fact that this name is used both as the name of a river and of a city, the author systematically presents the various viewpoints existing in the scholarly literature regarding its origin. In this context, the positions of such researchers as K. F. Gan, D. D. Pagirev, the Karachay scholar U. B. Aliyev, I. M. Miziev, S. Aliyarov, and B. A. Nikonov are examined and critically evaluated.

A. Abdullaev, however, concludes that this toponym was formed as a result of the combination of two lexical units of Mongolian origin: “yesen” meaning “nine” and “tuğ” meaning “flag.” According to the author, the plausibility of this etymological explanation can be supported by the historical settlement of Mongolian-origin peoples, particularly the Kalmyks, in the Stavropol region, as well as by the usage of these terms within that geographical area.

Conclusion

As can be seen, when determining the origin of a toponym, A. Abdullaev does not confine himself solely to linguistic material, but also draws upon historical, geographical, and ethnographic sources. It is precisely this comprehensive approach that ensures the accuracy, logical consistency, and scientific validity of his etymological research.

ORCID ID: 0000-0002-4648-7266

Abstract: This article examines the verbalization of the concept of “knowledge” in English and Uzbek paremiology within the framework of the anthropocentric paradigm of modern linguistics. Particular attention is given to the relationship between language, culture, and human cognition, as well as to the role of proverbs in reflecting national worldview, cultural values, moral principles, and social attitudes. A comparative analysis of English and Uzbek paremiological units demonstrates that knowledge is regarded in both cultures as an essential and highly valued resource that is more lasting and meaningful than material wealth. However, the conceptualization of knowledge reveals certain cultural differences. English proverbs tend to associate knowledge with individual experience, practical achievement, intelligence, personal development, and success. Uzbek proverbs, in contrast, more frequently connect knowledge with morality, enlightenment, education, social responsibility, family harmony, and spiritual values. Both traditions emphasize lifelong learning and establish a clear opposition between knowledge and ignorance. The findings demonstrate that paremiological units function as important linguistic and cognitive codes through which cultural experience and collective values are transmitted from generation to generation. Thus, the study confirms that the concept of knowledge occupies a significant position in the linguistic worldview of both English- and Uzbek-speaking communities.

Key words: anthropocentric paradigm, concept of knowledge, category of evaluation, system of values, linguoculturology, phraseological units, paremiology, linguistic consciousness

İNGİLİZ VE ÖZBEK PAREMİOLOJİSİNDE “BİLGİ” KAVRAMININ SÖZLÜ İFADESİ

ORCID ID: 0000-0002-4648-7266

Özet: Bu makalede, modern dilbilimin antropomerkezci paradigması çerçevesinde “bilgi” kavramının İngiliz ve Özbek paremiolojisindeki sözlüksel, anlamsal ve kültürel özellikleri karşılaştırmalı olarak incelenmektedir. Çalışmada dil, kültür ve düşünce arasındaki karşılıklı ilişki ile atasözlerinin toplumların dünya görüşünü, kültürel değerlerini, ahlaki ilkelerini ve sosyal tutumlarını yansıtmadaki rolü ele alınmaktadır. İngiliz ve Özbek dillerindeki paremiolojik birimlerin incelenmesi, her iki kültürde de bilginin maddi zenginlikten daha değerli ve kalıcı bir unsur olarak kabul edildiğini göstermektedir. Bununla birlikte, bilgi kavramının kültürel açıdan değerlendirilmesinde belirgin farklılıklar bulunmaktadır. İngiliz

atasözlerinde bilgi çoğunlukla bireysel deneyim, pratik başarı, zekâ, kişisel gelişim ve yaşamda karşılaşılan sorunların çözümüyle ilişkilendirilirken, Özbek atasözlerinde bilgi daha çok ahlak, eğitim, aydınlanma, manevi değerler, aile ve toplumsal sorumlulukla bağlantılı olarak sunulmaktadır. Her iki dilde de bilgi ile cehalet karşıtlığı önemli bir tema oluşturmakta ve yaşam boyu öğrenmenin gerekliliği vurgulanmaktadır. Sonuç olarak, paremiolojik ifadeler yalnızca dilsel birimler değil, aynı zamanda toplumların tarihsel deneyimlerini, kültürel değerlerini ve kolektif dünya görüşünü kuşaktan kuşağa aktaran önemli lingvokültürel ve bilişsel kodlar olarak değerlendirilmektedir.

Anahtar kelimeler: antropomerkezci paradigma, bilgi kavramı, değerlendirme kategorisi, değerler sistemi, dil ve kültür bilimi, frazeolojik birimler, paremioloji, dilsel bilinç.

Introduction: The Linguistic Worldview and the Concept of Knowledge

The connection between language, culture, and thought has been one of the central topics in linguistics since the studies of Wilhelm von Humboldt. The linguistic worldview reflects how people understand and interpret reality through language, shaped by their historical and cultural experience.

An important part of the linguistic worldview is the paremiological worldview, which includes proverbs and sayings. These units preserve traditional wisdom, cultural values, and social attitudes. Because of their stability, proverbs help reveal the mentality and worldview of a nation.

This study explores the concept of “knowledge” in English and Uzbek paremiological units from a comparative linguocultural perspective. It examines how knowledge is represented in proverbs and phraseological expressions in both languages. The research also analyzes the relationship between knowledge, wisdom, labor, and morality.

English proverbs often present knowledge as power and practical success, while Uzbek proverbs connect knowledge with morality, enlightenment, and social harmony. Despite these differences, both cultures highly value knowledge and regard it as more important than material wealth. Therefore, paremiological units reflect not only language but also the cultural identity and values of a society.

Materials and Methods

The materials of the study consist of English and Uzbek proverbs and paremiological units representing the concept of “knowledge”. The selected linguistic material was collected from English and Uzbek proverb collections, phraseological dictionaries, linguistic studies, and relevant scholarly sources dealing with paremiology, linguoculturology, and conceptual analysis. Particular attention was given to proverbs in which knowledge is explicitly or implicitly associated with education, wisdom, experience, labor, morality, wealth, ignorance, and human development.

The study employs a comparative linguocultural approach to identify similarities and differences in the verbalization of the concept of “knowledge” in English and Uzbek. The analysis is based on descriptive, semantic, comparative, and contextual methods. The descriptive method was used to identify the linguistic forms through which the concept is expressed. Semantic analysis was applied to determine the meanings and evaluative characteristics associated with knowledge. Comparative analysis was used to establish common and culture-specific conceptual features in the two languages. A linguocultural approach was employed to interpret paremiological units in relation to the cultural values, traditions, and worldview of English- and Uzbek-speaking communities.

The analysis focused on the semantic fields surrounding knowledge and examined its relationship with such concepts as wisdom, experience, education, morality, labor, wealth, and

ignorance. The evaluative meanings of the selected proverbs were also considered in order to determine whether knowledge is presented as a positive social and intellectual value. Through this methodology, the study aims to reveal how linguistic expressions encode culturally significant perceptions of knowledge and how paremiological units contribute to the formation and transmission of collective cultural consciousness.

Discussion: Interpretation of Data and Comparative Analysis

The analysis shows that both English and Uzbek cultures highly value knowledge over material wealth. However, English proverbs more frequently criticize foolishness, reflecting an individualistic and competitive attitude toward intelligence, while Uzbek proverbs focus more on the moral and social importance of knowledge.

Both cultures emphasize lifelong learning. English proverbs such as “Learning has no limit” highlight continuous self-improvement, whereas the Uzbek proverb “Beshikdan qabrgacha ilm izla” (“Seek knowledge from the cradle to the grave”) reflects the influence of Islamic traditions and respect for education throughout life.

Another common theme is the opposition between knowledge and ignorance. In Uzbek culture, knowledge is often described as light: “Bilim – aql chirog‘i” (“Knowledge is the lamp of the mind”). Similarly, English proverbs connect knowledge with enlightenment and practical success, for example, “Knowledge is a treasure, but practice is the key to it.”

Both traditions also compare knowledge with wealth. English proverbs describe knowledge as lasting and valuable, while Uzbek proverbs often place spiritual and intellectual wealth above material possessions. For instance, “Bilim baxt keltirar, boylik esa – tashvish” (“Knowledge brings happiness, wealth brings worry”) reflects a cultural preference for wisdom over riches.

English and Uzbek proverbs differ in their social interpretation of knowledge. English paremias sometimes associate wisdom with individual experience and caution, while Uzbek proverbs connect knowledge with family harmony and social responsibility. Age and education are also important themes. English sayings such as “You can’t teach an old dog new tricks” emphasize adaptability, whereas Uzbek proverbs stress the lasting value of education gained in youth.

Proverbs function as cultural and cognitive codes that preserve national identity, moral values, and social norms. They reflect the experiences, traditions, and worldview of each nation. Despite cultural differences, both English and Uzbek paremiological systems present knowledge as a universal and essential value that guides human life and social development.

Conclusion

The comparative analysis demonstrates that the concept of “knowledge” occupies an important position in both English and Uzbek paremiological worldviews. In both linguistic traditions, knowledge is represented as a valuable and enduring resource that contributes to individual development, social progress, and successful human activity. The analyzed proverbs also establish a clear opposition between knowledge and ignorance and emphasize the importance of continuous learning and the acquisition of experience.

At the same time, the study reveals several culture-specific differences in the conceptualization of knowledge. English paremiological units tend to emphasize individual intelligence, practical experience, personal achievement, adaptability, and the utilitarian value of knowledge. Uzbek proverbs, in contrast, more frequently associate knowledge with moral development, enlightenment, education, spiritual values, family harmony, and social responsibility. These differences reflect distinctive cultural traditions and systems of values.

The findings confirm that paremiological units represent more than stable linguistic expressions. They serve as important linguocultural and cognitive codes that preserve historical experience, transmit social norms, and reflect the collective worldview of a community. Therefore, the study of knowledge-related proverbs provides valuable insights into the interaction between language, culture, cognition, and social values. Further comparative research involving other languages and concepts may contribute to a deeper understanding of the ways in which culturally significant concepts are verbalized in different linguistic communities.

LINGUO-COGNITIVE ANALYSIS OF FAMILY VALUES IN THE ENGLISH AND UZBEK LINGUISTIC PICTURES OF THE WORLD

Sitora Asrorovna RUZIYEVA

PhD., professor of Samarkand State University named after Sharof Rashidov

Department of English language, linguistics and literature

Samarkand, Uzbekistan

E-mail: Sitoraruzieva8@gmail.com

ORCID ID: 0009-0003-8819-4961

Abstract: This article explores the conceptualization of family values within the English and Uzbek linguistic pictures of the world through a linguo-cognitive lens. Family is a fundamental concept in any culture, yet its linguistic encoding varies significantly based on historical, social, and religious paradigms. By analyzing proverbs, idiomatic expressions, and lexical hierarchies, the study identifies that English family values lean toward nuclearity and individual autonomy, whereas Uzbek values emphasize multi-generational collectivism and strict hierarchical respect (*izat*). The findings contribute to cognitive linguistics and cross-cultural communication by highlighting how language structures reality.

Keywords: Cognitive linguistics, family values, linguistic picture of the world, English language, Uzbek language, conceptualization, proverbs.

İNGİLİS VƏ ÖZBƏK DİLLƏRİNİN DÜNYA MƏNZƏRƏSİNDƏ AİLƏ DƏYƏRLƏRİNİN LİNGVO-KOQNİTİV TƏHLİLİ

Özet: Bu makale, İngiliz ve Özbek dil dünyası tablolarındaki aile değerlerinin kavramsallaştırılmasını dil-bilişsel bir bakış açısıyla incelemektedir. Aile, her kültürde temel bir kavramdır; ancak dilsel kodlanması tarihsel, sosyal ve dini paradigmalara bağlı olarak önemli ölçüde farklılık gösterir. Atasözleri, deyimler ve sözlüksel hiyerarşilerin analizi yoluyla çalışma, İngiliz aile değerlerinin çekirdek aile yapısına ve bireysel özerkliğe yöneldiğini, Özbek değerlerinin ise çok kuşaklı kolektivizmi ve katı hiyerarşik saygıyı (izzat) vurguladığını tespit etmektedir. Bulgular, dilin gerçekliği nasıl yapılandırıldığını vurgulayarak bilişsel dilbilim ve kültürlerarası iletişime katkıda bulunmaktadır.

Anahtar Kelimeler: Bilişsel dilbilim, aile değerleri, dilsel dünya tablosu, İngilizce, Özbekçe, kavramsallaştırma, atasözleri.

1. Introduction

The "linguistic picture of the world" refers to the specific way a speech community perceives and categorizes reality through its language. Among the universal concepts, **FAMILY** occupies a central position. However, the cognitive processing of this concept is heavily influenced by the cultural-historical context.

In the Western tradition (English), family is often viewed through the lens of individualism and the nuclear unit. In contrast, the Eastern tradition (Uzbek) perceives family as an expansive, hierarchical network rooted in Islamic and Turkic traditions. This study seeks to conduct a linguo-cognitive analysis to uncover the underlying mental structures that define "family" in these two distinct cultures.

2. Methods

The study utilizes a **mixed-methods approach** combining:

- **Conceptual Analysis:** Identifying the core and periphery of the "Family" concept.
- **Comparative-Linguistic Method:** Analyzing equivalent and non-equivalent idioms and proverbs in English and Uzbek.
- **Corpus Analysis:** Utilizing digital corpora to identify the frequency and collocational patterns of family-related terms (e.g., *father*, *mother*, *ota*, *ona*).

- **Data Source:** A selection of 150 lexical units and 100 paremiological units (proverbs) from both languages.

3. Results

The analysis reveals distinct cognitive models for family values:

3.1. The English Model: Independence and Equality

- **Nuclear Focus:** Linguistic structures prioritize the "Immediate Family" (parents and children). The term "Extended Family" often implies a secondary degree of closeness.
- **Privacy and Space:** Proverbs like *"Every dog is a lion at home"* or *"A man's house is his castle"* emphasize domestic autonomy and the privacy of the nuclear unit.
- **Bilateral Lineage:** English kinship terminology is relatively simplified, often using the same terms for maternal and paternal relatives (e.g., *aunt*, *uncle*).

3.2. The Uzbek Model: Hierarchy and Continuity

- **Vertical Hierarchy:** The Uzbek language maintains a rich system of address reflecting age and status (e.g., *aka* for older brother, *uka* for younger brother, *opa* for older sister).
- **Sacredness of Parents:** The concept of "Ota" (father) as a mountain and "Ona" (mother) as a garden is a recurring cognitive metaphor.
- **Collectivism:** Uzbek proverbs such as *"Ota rozi — Xudo rozi"* (If the father is pleased, God is pleased) demonstrate that family values are intrinsically linked to religious and social obligations.

3.3. Comparative Table of Values

Value Category	English Linguistic View	Uzbek Linguistic View
Structure	Nuclear, Individualistic	Extended, Collectivistic
Hierarchy	Low-distance, Egalitarian	High-distance, Age-based
Responsibility	Self-reliance	Mutual support / Filial piety
Key Metaphor	Home as a "Private Fortress"	Parents as "Sacred Pillars"

4. Discussion

The linguo-cognitive differences identified are rooted in the **Individualism vs. Collectivism** dichotomy.

In English, the concept of family is cognitively mapped as a support system that fosters individual growth. If a family member interferes with individual autonomy, it is linguistically characterized as "toxic" or "overbearing."

In Uzbek, the family is cognitively mapped as a "Macro-Organism." The individual exists only as a part of the whole. The linguistic picture of the world in Uzbek places "Family Honor" (*nomus*) and "Ancestral Respect" at the center. The use of specific honorifics and the complexity of kinship terms (e.g., distinguishing between paternal and maternal grandparents) indicate a higher cognitive salience of lineage.

5. Conclusion

The linguo-cognitive analysis demonstrates that while the biological concept of family is universal, its cultural valuation is unique to each language.

1. **English** family values emphasize the independence of the individual and the sanctity of private domestic life.
2. **Uzbek** family values prioritize the preservation of hierarchy, respect for elders, and the continuity of the collective unit.

Understanding these mental models is essential for avoiding intercultural pragmalinguistic failure in diplomatic, business, and social interactions between English and Uzbek speakers.

ORCID ID: [0009-0004-7092-6316](https://orcid.org/0009-0004-7092-6316)

Abstract: This article examines the role of idioms in the English language and cultural communication. It analyzes the semantic features of idioms, their usage in everyday communication, and their connection to culture. The study also discusses the challenges idioms create for language learners and their importance in intercultural communication. The findings show that idioms enrich language expressiveness and play a significant role in developing cultural awareness. Language is not only a system of grammar and vocabulary but also a reflection of culture, history, and social interaction. Idioms add color, depth, and nuance to speech, reflecting the values and traditions of English-speaking societies. Mastering idioms is a crucial step toward achieving fluency and understanding authentic materials like films and books. The integration of idioms into language learning environments enhances both communicative competence and cultural sensitivity.

Keywords: idioms, English language, cultural communication, phraseology, figurative expressions, language learning, intercultural communication.

İNGİLİS DİLİ VƏ MƏDƏNİ ÜNSİYYƏTDƏ İDİOMLARIN ROLU

Xülasə: Bu məqalə ingilis dilində idiomların rolunu və mədəni kommunikasiyanı tədqiq edir. Burada idiomların semantik xüsusiyyətləri, gündəlik ünsiyyətdə istifadəsi və mədəniyyətlə olan əlaqəsi təhlil olunur. Tədqiqatda, həmçinin idiomların dil öyrənənlər üçün yaratdığı çətinliklər və mədəniyyətlərarası ünsiyyətdəki əhəmiyyəti müzakirə edilir. Araşdırmanın nəticələri göstərir ki, idiomlar dilin ifadəliyini zənginləşdirir və mədəni maariflənmənin inkişafında mühüm rol oynayır. Dil təkcə qrammatika sistemi deyil, həm də mədəniyyət və tarixin əksidir. İdiomlar mədəniyyətlərarası ünsiyyətdə həm köməkçi, həm də problemli ola bilər, bu da linqvistik biliklərlə yanaşı mədəni kompetensiyanın vacibliyini vurğulayır. İdiomlar təhsil prosesində vacib komponent hesab olunur. Onların öyrənilməsi həm də mədəniyyətlər arasında körpü rolunu oynayır.

Açar sözlər: idiomlar, ingilis dili, mədəni kommunikasiya, frazeologiya, məcazi ifadələr, dil öyrənilməsi, mədəniyyətlərarası ünsiyyət.

Introduction

Language is not only a system of grammar and vocabulary but also a reflection of culture, history, and social interaction. One of the most expressive and culturally rich elements of any language is idioms. Idioms are fixed expressions whose meanings cannot be understood literally. In the English language, idioms play a significant role in both everyday communication and cultural expression. They add color, depth, and nuance to speech and writing, while also reflecting the values and traditions of English-speaking societies.

Semantic and Structural Features of Idioms

Fixed Structure: Idioms generally possess fixed structures that cannot be altered grammatically or lexically. Their components are structurally bound, meaning that replacing a word with a synonym often destroys the idiomatic meaning.

Figurative Meaning: Their meanings are symbolic or metaphorical, diverging significantly from the literal definitions of the individual words that compose them.

Cultural Specificity: Many idioms are deeply rooted in a particular culture, reflecting the values, traditions, and historical experiences of that specific society.

2. Origins and Historical Roots of Idioms

Idioms frequently emerge from historical events, professional fields, or daily life experiences:

Sports Origins: For example, the phrase 'The ball is in your court' originates from the sport of tennis, signifying that it is someone's turn to take action.

Historical Practices: The expression 'Bite the bullet' is linked to historical medical practices where patients bit on a bullet to endure pain during surgery without anesthesia.

Domestic History: The idiom 'Burn the midnight oil' dates back to times when people used oil lamps to work late into the night.

3. Importance of Idioms in Language Learning

Mastering idioms is a vital step toward achieving fluency in English: **Naturalness:** They help speech sound more natural, authentic, and fluid, similar to that of a native speaker. **Emotional Expression:** Idioms allow for the effective conveyance of complex emotions and

attitudes that literal language may lack. **Comprehension Skills:** They are essential for fully understanding authentic materials such as films, literature, and news media.

4. Learning Strategies and Challenges

Idioms are among the most challenging areas for language learners because their meanings are unpredictable and cannot be translated directly. To learn them effectively:

Contextual Learning: Idioms should be studied within a context rather than in isolated lists.

Real-life Application: It is crucial to apply them in real-life situations to reinforce memory.

Visual and Narrative Methods: Using visual aids or story-based techniques makes them easier to remember.

Comparative Analysis: Comparing them with similar expressions in one's native language can be highly beneficial.

5. Role in Intercultural Communication

While idioms enrich communication, they can lead to misunderstandings for those unfamiliar with them. For instance, taking the phrase 'it's raining cats and dogs' literally would lead to a complete misunderstanding. Therefore, idioms should be used with caution when communicating with non-native speakers and explained when necessary.

Methodology and materials

This study employs a qualitative analysis of common English idioms and their usage in various communicative contexts. The research analyzes secondary sources including linguistic textbooks, phraseological dictionaries, and previous studies on intercultural communication (McCarthy & O'Dell, 2002). The semantic features and cultural origins of selected idioms were examined to determine their impact on language learners' fluency and cross-cultural understanding.

Discussion

Idioms are phrases or expressions that have figurative meanings different from the literal meanings. For example, "spill the beans" means to reveal a secret (Seidl & McMordie, 1988). Idioms have key characteristics like fixed structure and cultural specificity. They make speech more natural and fluent (Carter & McCarthy, 2006). Native speakers often use them unconsciously. Idioms often originate from historical events or traditions. For example, "bite the bullet" is linked to historical medical practices (Gibbs, 1994). For English learners, idioms are difficult because their meanings are unpredictable and they cannot be translated directly. Effective communication across cultures requires awareness and cultural competence (Lakoff & Johnson, 1980).

Conclusion

Idioms are an essential part of the English language and a key element of cultural communication. They enrich language by making it more expressive and meaningful. At the same time, they reflect the history, values, and traditions of English-speaking societies (Moon, 1998). Although idioms present challenges for learners, they are crucial for achieving true language proficiency and cultural understanding. Therefore, learning idioms should be an important component of language education.

Selected English Idioms with Azerbaijani Translations

- Break the ice: Gərginliyi aradan qaldırmaq və ya ünsiyyətə başlamaq.
- Spill the beans: Sirri təsadüfən və ya bilərəkdən açıqlamaq.
- A piece of cake: Çox asan olan bir iş və ya tapşırıq.
- Hit the nail on the head: Məsələni tam düzgün izah etmək.
- Under the weather: Özünü fiziki cəhətdən narahat və ya halsız hiss etmək.

- Once in a blue moon: Çox nadir hallarda baş verən hadisə.
- Burn the midnight oil: Gecə saatlarına qədər çox çalışmaq və ya oxumaq.
- Let the cat out of the bag: Sirri qeyri-ixtiyari şəkildə fəş etmək.
- Cost an arm and a leg: Həddindən artıq baha olan bir şey.
- Kill two birds with one stone: Bir işlə eyni zamanda iki nəticə əldə etmək.

DISCOURSE DISPARITIES BETWEEN THE BRITISH TABLOID AND BROADSHEET PAPERS

Targul ALIZADE

Senior lecturer, Baku Engineering University

E-mail: thasimova@beu.edu.az

ORCID ID: 0009-0006-0260-5793

Abstract: This article examines the discursive disparities between British tabloid and broadsheet newspapers in their coverage of Brexit, one of the most significant political events in recent British history. Drawing on a qualitative discourse-analytical approach, the study investigates how leading tabloids (*The Sun*, *Daily Mail*, *Daily Express*) and broadsheets (*The Guardian*, *The Times*, *Financial Times*) constructed contrasting narratives of the United Kingdom's withdrawal from the European Union. The analysis considers lexical choices, framing strategies, and multimodal elements such as images and layout. Findings suggest that tabloids predominantly employed sensationalist and populist rhetoric, often appealing to nationalism, sovereignty, and emotion, while broadsheets adopted a more analytical and institutionally focused style, emphasizing economic stability, governance, and policy processes. These differences highlight the distinct journalistic cultures of the British press and demonstrate how newspapers not only inform readers but also actively shape public perceptions of political events. By illustrating the contrasting communicative strategies of tabloids and broadsheets, the article contributes to a deeper understanding of media discourse and its role in the construction of political meaning.

This study examines the discursive differences between British tabloids and broadsheets in their coverage of Brexit. Using selected articles and headlines from 2016–2020, the research compares tabloids

(*The Sun*, *Daily Mail*, *Daily Express*) with broadsheets (*The Guardian*, *The Times*, *Financial Times*). A qualitative discourse-analytical approach grounded in Critical Discourse Analysis was employed to analyse language, framing, cohesion, and visual elements. Findings show that tabloids relied on sensationalist, emotional, and populist rhetoric, while broadsheets adopted analytical, institutional, and informational reporting. The study highlights contrasting journalistic approaches and suggests further research on media effects, broader corpora, and digital or cross-national comparisons.

Key words: tabloids; broadsheets; media discourse; framing; rhetoric; multimodal analysis

BRİTANIYA TABLOİD VƏ BROADSHEET QƏZETLƏRİ ARASINDA DİSKURS FƏRQLƏRİ

Tərgül ƏLİZADƏ

Baş müəllim, Bakı Mühəndislik Universiteti

ORCID ID: 0009-0006-0260-5793

Xülasə: Bu məqalə Brexit kimi müasir Britaniya tarixinin ən mühüm siyasi hadisələrindən birinin işıqlandırılmasında Britaniyanın tabloid və broadsheet qəzetləri arasındakı diskursiv fərqləri araşdırır. Keyfiyyət yönümlü diskurs-analitik yanaşmaya əsaslanan tədqiqat aparıcı tabloid qəzetlərin (*The Sun*, *Daily Mail*, *Daily Express*) və broadsheet qəzetlərin (*The Guardian*, *The Times*, *Financial Times*) Birləşmiş Krallığın Avropa İttifaqından çıxışını necə fərqli narrativlərlə təqdim etdiyini təhlil edir. Araşdırmada leksik seçimlər, çərçivələmə strategiyaları, eləcə də şəkillər və səhifə dizaynı kimi multimodal elementlər nəzərə alınır. Nəticələr göstərir ki, tabloidlər əsasən sensasion və populist ritorikadan istifadə edərək millətçilik, suverenlik və emosional müraciət edir, broadsheet qəzetlər isə daha analitik və institusional yönümlü üslub qəbul edərək iqtisadi sabitlik, idarəetmə və siyasət proseslərini ön plana çıxarır. Bu fərqlər Britaniya mətbuatının müxtəlif jurnalist mədəniyyətlərini əks etdirir və qəzetlərin yalnız məlumat verməklə kifayətlənməyib, həm də ictimai rəyin formalaşmasında aktiv rol oynadığını göstərir. Məqalə tabloid və broadsheet qəzetlərin fərqli kommunikativ strategiyalarını göstərməklə media diskursunun və onun siyasi məna quruculuğundakı rolunun daha dərinlən anlaşılmasına töhfə verir.

Bu tədqiqat Britaniya tabloid və broadsheet qəzetlərinin Brexit mövzusunun işıqlandırılmasında diskursiv fərqləri araşdırır. 2016–2020-ci illərə aid seçilmiş məqalə və başlıqlar əsasında aparılan müqayisə tabloidləri (*The Sun*, *Daily Mail*, *Daily Express*) broadsheet qəzetlərlə (*The Guardian*, *The Times*, *Financial Times*) üz-üzə qoyur. Dil, çərçivələmə, mətnin bağlılığı və vizual elementlərin təhlili üçün Tənqidi Diskurs Analizinə əsaslanan keyfiyyət metodundan istifadə olunmuşdur. Nəticələr göstərir ki, tabloidlər daha çox sensasion, emosional və populist ritorikaya üstünlük verir, broadsheet qəzetlər isə analitik, institusional və informativ reportaj üslubunu mənimsəyir. Tədqiqat jurnalistik yanaşmalar arasındakı ziddiyyətləri vurğulayır və gələcəkdə media təsirləri, daha geniş mətn korpusları, həmçinin rəqəmsal və ya ölkələrarası müqayisələr üzrə əlavə araşdırmaların aparılmasını tövsiyə edir.

Açar sözlər: tabloidlər; broadsheet qəzetlər; media diskursu; çərçivələmə; ritorika; multimodal analiz

Introduction

The United Kingdom's withdrawal from the European Union in 2016, commonly known as *Brexit*, stands out as one of the most consequential political developments in modern British history. Beyond its direct political, social, and economic impact, Brexit also brought into focus striking differences in how British newspapers frame and communicate political events. The country's press has long been divided between the traditions of the tabloid and the broadsheet, a division that

extends well beyond format and audience, shaping style, linguistic choices, and rhetorical practices (Conboy, M. , 2006).

Throughout the referendum campaign and in the years that followed, tabloid newspapers such as *The Sun*, *Daily Mail*, and *Daily Express* tended to favour sensationalist and populist reporting, often stressing themes of national identity, sovereignty, and emotion. In contrast, broadsheets including *The Guardian*, *The Times*, and the *Financial Times* employed a more restrained and analytical style, framing Brexit primarily through political processes, institutional debates, and economic concerns. (Berry, M., Garcia-Blanco, I., & Moore, K. 2016). These divergent approaches reflect not only distinct journalistic cultures but also contrasting ways of addressing and positioning their readerships in relation to political decision-making.

This study investigates the **discursive contrasts** between tabloids and broadsheets during the Brexit period, analyzing their use of language, narrative framing, cohesion, audience orientation, and visual strategies. By doing so, it highlights how the press functions not merely as a channel of information but as a powerful agent in shaping public perceptions of major political events.

Materials and methods

British newspapers are generally divided into two categories: tabloids and broadsheets. The former are smaller in format and usually cover lighter or sensationalist topics such as celebrities, sports, and crime stories, while the latter are full-size, standard newspapers focusing on more serious news. Conboy, M. (2006). . Broadsheets tend to rely on factual reporting and longer sentences, presenting unbiased and well-structured content with complex vocabulary, giving priority to both domestic and international news. (Fowler, R. ,1991). Tabloids, on the other hand, combine fact with emotion, rely on short sentences, and employ biased and emotional language, often mixing stories together in a less structured way. (Sparks, C. 2000).

Tabloids tend to favour brevity, directness, and emotional intensity. Their headlines are short, punchy, and often sensational, designed to provoke strong reactions. Wordplay, metaphor, and evaluative adjectives are common, as seen in slogans such as "*BeLEAVE in Britain*" (The Sun, 2016) or "*Enemies of the People*" (Daily Mail, 2016). Such formulations frame Brexit as a moral and patriotic cause, simplifying complex issues into binary choices. (Bednarek, M., & Caple, H. 2017).

Broadsheets, by contrast, usually adopt a more measured and formal style. Their headlines are longer, descriptive, and focused on information rather than drama. Examples such as "*Brexit: Cameron warns leaving EU would threaten economic stability*" (The Guardian, 2016) or "*Businesses warn of disruption as UK prepares for Brexit transition*" (Financial Times, 2020) reveal an emphasis on institutional processes and rational analysis rather than emotive appeals. (Loughborough University. 2016).

Tabloid discourse often frames Brexit in terms of struggle, opposition, and conflict. Migrants, Brussels bureaucrats, or judges are frequently cast as adversaries, while "ordinary Britons" are depicted as victims or defenders of national sovereignty. A headline such as "*Migrants Take All New Jobs in Britain*" (Daily Express, 2017) illustrates this strategy of scapegoating and dramatization. (Berry, M., Garcia-Blanco, I., & Moore, K. 2016).

Broadsheets, meanwhile, tend to situate Brexit within broader institutional and political contexts. Their framing highlights the internal dynamics of government, parliamentary negotiations, and economic consequences. Headlines like "*May faces fresh cabinet revolt over Brexit deal*" (The

Times, 2019) reflect this analytical focus, portraying events as part of an ongoing political process rather than as moral battles (Machin, D., & Richardson, J. E. 2012).

Because tabloids employ informal language, they frequently use wordplay, alliteration, hyperbole, and slang. Broadsheets, in contrast, rely more heavily on metaphors, rhetorical questions, complex syntax, and statistical evidence. Political speeches are typically reported with journalistic commentary in broadsheets, whereas tabloids often dramatize or simplify political messages. (Johansson, S. 2007).

For instance, a headline from *The Times* reads: “*How two girls were trapped by shame, fear and love of their children*”, which presents information directly without exaggeration. By contrast, *The Sun* ran the headline: “*25 life terms for Brit Fritzl who raped his two daughters 1000 times*”. The use of numbers in the tabloid headline intensifies the shock value and draws the reader’s attention. (Baker, P., Gabrielatos, M., McEnery, T., & Wodak, R. 2013). In broadsheets, perpetrators are anonymized (e.g., referred to as “X”) for ethical and legal reasons, while tabloids openly name them, highlighting sensationalism.

Structurally, broadsheet headlines are longer and more informative, while tabloid headlines are short, bold, and occupy much of the page, often accompanied by large images. (Crystal, D., & Davy, D. 1969). Broadsheets usually follow the headline with a lead paragraph, analysis, commentary, or announcements. Tabloid headlines are more extravagant and noisier, while broadsheet headlines maintain simplicity and reliability. Despite the perception of greater reliability, tabloids cannot be entirely dismissed, as they reflect cultural consumption patterns and attract a large readership through simplified narratives. (Bird, S. E., 1992).

Another feature of British newspapers is their alignment with specific readerships. For example, *The Sun* readers are often associated with working-class Tory supporters, while *The Guardian* attracts middle-class Labour voters. *The Telegraph* appeals to older demographics, while *The Sun* attracts younger readers. Both tabloids and broadsheets use stylistic strategies to resonate with their audiences. For example, *The Sun* frequently inserts the editorial phrase “*The Sun Says*”, reinforcing its partisan stance.

According to Bell Allan, in the British press, tabloids omit determiners before noun phrases more frequently than quality newspapers. In papers such as *The Times*, *The Guardian*, and *The Telegraph*, one can find fewer omitted determiners compared to the *Daily Mail*, *Daily Express*, *Daily Mirror*, and *The Sun*. (Bell, A. 1991)

O’Donnell and Todd make a comparison between *The Guardian* and *The Daily Mirror*. They note that *The Guardian* does not use finite verbs in headlines, whereas *The Daily Mirror* almost never uses verbs at all in its headlines. (O’Donnell).

Floreano, when discussing the differences between British newspapers, points out not only their external appearance but also the number of articles they contain. He also touches upon the linguistic variety across different radio channels. For instance, the **Newsbeat** bulletin on BBC Radio 1 and the **Six O’Clock News** bulletin on BBC Radio 4 are taken as examples. Radio 1 addresses its audience by giving greater prominence to pop music and is linguistically closer to tabloids, whereas Radio 4 is better known for its programmes on news, current affairs, and education. Therefore, it is more closely associated with broadsheets (Floreano, Daniel).

Researchers link sentence variety, the modification of noun phrases, and the use of different tenses to the diversity of readership in British newspapers. Broadsheets are characterised by longer

sentences and a lower frequency of pronouns. From the perspective of noun phrase complexity, however, radio news bulletins resemble tabloids more closely. (Floreano, L. 2000).

Up-market newspapers are particularly known for their advertisements, as they target an affluent and intellectual readership and attract them mainly through advertising. (Johansson, S. 2007). In contrast, down-market newspapers seek to appeal to a broader audience. The main sections of newspapers usually cover business, local news, foreign news, and sport. The business section is reported in greater detail in *The Sun*. (Bird, S. E., 1992). In down-market and mid-market newspapers, the sports section shows the highest proportion of nouns and pronouns. By contrast, in the arts section nouns and pronouns are less frequent, while descriptive expressions and attributive structures are more prevalent. (Halliday, M. A. K., & Hasan, R. 1976). The percentage of attributives is highest in up-market newspapers, lower in mid-market ones, and lowest in down-market publications.

The Guardian, *The Independent*, and *The Times* show similarities in their presentation of arts and sports sections. *The Daily Telegraph*, *The Financial Times*, and *The Guardian* report local news in a similar manner, while business news is presented in comparable ways in *The Daily Telegraph* and *The Financial Times*. (Fairclough, N. 1995). On this basis, it may be argued that up-market newspapers operate with distinctive features, whereas down-market and mid-market newspapers function in broadly similar ways. (Krzyżanowski, M. 2019).

The headlines of British online editions are typically short and serve to capture readers' attention. They also frequently include proper names and abbreviations.

Another characteristic of British newspaper discourse is the translation and adaptation of terms from science, sport, music, the military and other fields. This stylistic device enhances the reader's capacity for thought and association. For instance: **Roisin Murphy review -bombardment by beats, bass and lights** (Baker, P., Gabrielatos, M., McEnery, T., & Wodak, R. 2013).

Here, the word *bombardment* is a military term meaning "shelling" or "bombing". In this context, it is used in the headline to emphasise the scale and dynamism of the event. Sound and light effects are compared to a real dynamic assault and energy. By doing so, the author alludes to the magnitude of the performance and highlights the power of the artist.

Syntactically, British newspapers often employ the passive voice, especially in news reporting, and make heavy use of clichés in politics, sports, economics, and culture. Broadsheets use subordinate and compound sentences, discourse markers such as *although*, *however*, *meanwhile*, and rhetorical verbs like *say*, *declare*, *explain*. In *The Times*, complex sentence structures and subordinate clauses are common, whereas in *The Daily Express*, connections between clauses tend to be looser.

Another distinct feature of British journalism is the frequent use of proverbs, idioms, and abbreviations, which can sometimes dilute expressive value and lead to overused clichés. (Fowler, R. 1991). Tabloids also aim to establish intimacy with readers by using first-person pronouns and emotional direct quotations, as in headlines like: "*Tubby Hubby Divorces Wife Who Lost 900 Lbs: She Weeps: He Liked Me Fat – when no other man wanted me*". (Bird, S. E., 1992).

Thus, the divide between tabloids and broadsheets is not only a matter of format but also of discourse strategies, readership targeting, and ideological positioning.

Results and discussion

The textual organisation of tabloid and broadsheet discourse also diverges. Tabloid articles resemble narratives, often structured around conflict and resolution, and built from short paragraphs

with frequent repetition of slogans or emotive language. This storytelling mode enhances readability and impact.

Broadsheets, however, construct their articles around logical argumentation. Their texts make greater use of connectors (*however, therefore, in contrast*), longer paragraphs, and lexical cohesion through the use of technical terms and synonyms. This style aligns with their emphasis on analysis and nuance.

Tabloids typically address readers as members of “the people,” positioned in opposition to elites, migrants, or external threats. Their rhetoric encourages emotional identification, collective anger, and a sense of shared struggle

Broadsheets, on the other hand, assume an audience that is informed, critical, and interested in the complexities of governance and policy. They reinforce this by incorporating expert voices, statistical evidence, and intertextual references, thus encouraging reflection rather than emotional reaction.

The visual dimension of reporting further accentuates these differences. Tabloids often employ large photographs, dramatic typography, and bold colour schemes to amplify the impact of their narratives. Visual metaphors-such as depicting the EU as a sinking ship-are common tools of persuasion.

Broadsheets generally use images more sparingly, often prioritising charts, graphs, and data visualisations that complement their informational function. The overall design is restrained, supporting an image of seriousness and credibility.

Conclusion

Brexit discourse highlights the enduring divide between British tabloids and broadsheets. Tabloids employed sensational, emotive, and populist strategies, portraying Brexit as a national drama populated by heroes and villains. Broadsheets, by contrast, framed it as a complex political and economic process, favoring institutional analysis and rational deliberation. These contrasting discursive approaches reveal not only different journalistic styles but also different ways of constructing political reality for their audiences.

Ultimately, the press did more than simply report on Brexit -it actively shaped how the event was understood, discussed, and experienced by the public. This divergence between tabloids and broadsheets underscores the central role of discourse in mediating democratic debate in Britain.

BASIC CONCEPTS OF THE PRAGMATIC CATEGORY OF POLITENESS

Aytan Muzaffar RAHIMLI

PhD student of the Department of English Stylistics, Azerbaijan University of Languages

E-mail: ayten.rehimli@student.adu.edu.az

ORCID ID: [0000-0003-1574-1250](https://orcid.org/0000-0003-1574-1250)

Abstract: The study of the basic concepts of the pragmatic category of politeness in linguistics is particularly important, since it explains not only the structure of language, but also its social and communicative function. Knowledge of its pragmatic mechanisms helps speakers avoid conflict and enter into effective dialogue.

This article examines the concept of linguistic politeness as a central category in pragmatics, that is, the study of language in social and interactive contexts. The article focuses on how speakers use language to maintain social harmony, avoid conflict, and regulate interpersonal relationships. It emphasizes that the choice of linguistic forms is influenced by social relations and the image of the speaker and the listener.

In linguistics, polite speech is primarily studied within pragmatics. Its aim is to understand how speakers choose language based on social relations, power, distance, and cultural norms. Politeness is not

simply the use of pleasant words, but strategic social behavior. The main principle of this field is based on the concept of face, developed in particular by Penelope Brown and Stephen Levinson. Practical categories show that language is not only the means of information, but also a means of managing relationships. The same strategy can create different meanings and effects in different cultures.

Consequently, the category of polite speech in applied linguistics is a combination of cognitive, social and cultural elements. In this respect, the analysis of polite speech is related to a comprehensive approach that includes human behavior and social norms together with linguistics.

Key words: polite speech, pragmatic category, linguistic politeness, communication relations, normative behaviors, face theory.

NƏZAKƏTİN PRAQMATİK KATEQORİYASININ ƏSAS ANLAYIŞLARI

Aytən Müzəffər RƏHİMLİ

İngilis dilinin üslubiyyatı kafedrasının doktorantı, Azərbaycan Dillər Universiteti

E-mail: ayten.rehimli@student.adu.edu.az

ORCID ID: [0000-0003-1574-1250](https://orcid.org/0000-0003-1574-1250)

Xülasə: Dilçilikdə nəzakətin praqmatik kateqoriyasının əsas anlayışlarının öyrənilməsi xüsusilə vacibdir, çünki bu, dilin yalnız strukturunu deyil, həm də sosial və kommunikativ funksiyasını izah edir. Onun praqmatik mexanizmlərini bilmək danışanlara münəfiqədən qaçmağa və effektiv dialoqa girməyə kömək edir.

Bu məqalədə linqvistik nəzakət anlayışı praqmatizmdə mərkəzi kateqoriya kimi, yəni dilin sosial və interaktiv kontekstlərdə istifadəsi baxımından öyrənilməsi kimi araşdırılır. Məqalədə nətiqlərin sosial harmoniyanı qorumaq, münəfiqələrdən qaçmaq və şəxslərarası münasibətləri tənzimləmək üçün dildən necə istifadə etdiyinə diqqət yetirilir. Burada linqvistik formaların seçilməsinin sosial münasibətlər və nətiqlə dinləyicinin imicinin fərqiində olduğunu vurğulayır.

Dilçilikdə nəzakətli nitq əsasən praqmatika daxilində araşdırılır. Onun məqsədi nətiqlərin sosial münasibətlərə, gücə, məsafəyə və mədəni normalara əsasən dili necə seçdiyini anlamaqdır. Nəzakət sadəcə xoş sözlərin istifadəsi deyil, strateji sosial davranışdır. Bu sahənin əsas prinsipi, xüsusən də Penelopa Braun və Stiven Levinson tərəfindən inkişaf etdirilən üz anlayışına əsaslanır. Eyni strategiya müxtəlif mədəniyyətlərdə fərqli mənalar və təsirlər yarada bilər.

Ümumiyyətlə, nəzakətli nitqin istifadəsi təhdidlərin azaldılmasını, eyhamlardan və dolaylı strukturlardan istifadəni əhatə edir. Nəzakət dildə düzgün istifadə effektiv ünsiyyətə və anlaşılmaqlığın azalmasına gətirib çıxarır. Nəticə etibarilə, tətbiqi dilçilikdə nəzakətli nitq kateqoriyası koqnitiv, sosial və mədəni elementlərin birləşməsidir. Bu baxımdan da nəzakətli nitqin təhlili linqvistika ilə yanaşı insan davranışını və sosial normaları birlikdə ehtiva edən hərtərəfli yanaşma ilə əlaqədardır.

Açar sözlər: nəzakətli nitq, praqmatik kateqoriya, linqvistik nəzakət, ünsiyyət əlaqələri, normativ davranışlar, üz nəzəriyyəsi.

Introduction

Pragmatics is a branch of linguistics that studies language use and its sociocultural contexts. In pragmatics, politeness is an important part of communication and helps to maintain social relationships and reduce conflicts. In everyday linguistics and social interactions, politeness manifests itself in the form of normative behaviors. Politeness is not only a behavioral norm, but also a social function. It varies depending on society, culture, individual, and situation. "Polite speech, as well as the actions that complement it, have a certain system, like other norms"

(Abdullaeva N, 2020, p.149). Politeness exists in bilateral or multilateral interactions, in this regard, politeness is not an isolated behavior.

From a pragmatic point of view, politeness is not a purely moral constraint, but a tool and strategy for behavior. Its value depends on the actual effects it creates in interactions. The form and expression of politeness vary depending on the social context and specific communication goals. In pragmatics, politeness is considered as a strategy to maintain social relations and minimize aggressive facial expressions during communication. Politeness rules vary depending on different languages and societies. "In each language, there are variations in forms of expression depending on social and cultural differences. This variation is expressed by the term "forms of expression"" (Yaman H, 2023, 134). Languages such as Japanese and Korean emphasize formal politeness to a high degree. In English or Azerbaijani, politeness varies depending on the context and relationship. When addressing a person of higher status, more politeness is used.

Polite speech in the communication process plays a key role in maintaining mutual respect and social harmony between individuals. From a pragmatic perspective, politeness is simply a pragmatic category that takes into account the current situation, context, and the face of the other person. Pragmatic categories refer to the rules and patterns by which language users modulate meaning according to their intentions and circumstances. Within this category, linguistic politeness describes the extent to which a speaker's utterances respect the face of the other person and adhere to social norms. The use of polite words and structures can reduce tension, build trust, and strengthen social relationships. Also, the type of polite speech varies across cultures, and individuals must choose their style of expression according to the situation. Following the principles of politeness in speech makes communication more effective and sincere, and reduces the likelihood of misunderstanding. In addition, the use of polite language reflects culture, social upbringing and the speaker's level of attention to the feelings of others.

Polite speech in any society is considered one of the main elements of effective communication. In pragmatics, politeness is considered a communicative behavior that pays attention to the conditions of conversation, the relationships between people and their social status. Functional categories express how people use language to convey their meanings in accordance with the situation. In this regard, linguistic politeness is related to respecting and protecting the image of another person and is manifested in the choice of words, tone and manner of expression. The use of polite speech not only strengthens human relationships, but also creates a calm atmosphere and greater cooperation between people.

Practical categories include principles and examples based on how people adjust their meaning to suit the situation. In this context, linguistic politeness indicates the speaker's attention to social values and norms, as well as the preservation of the dignity of the audience. Using respectful expressions, appropriate tone, and adhering to social rules can greatly affect the quality of communication. Also, observing politeness in speech increases trust, mutual respect, and reduces conflicts in social relationships.

Linguistic politeness is one of the main pragmatic categories in the study of linguistics and human communication. It can be defined as a set of norms, behaviors, and strategies that regulate communication in a socially acceptable and respectful manner, respecting cultural conventions. This applies not only to the words chosen, but also to tone, context, and manner of expression.

The main goal is cooperative communication, conflict prevention, and the maintenance of interpersonal relationships. Speakers choose strategies appropriate to the situation and topic, using

various linguistic devices such as euphemisms, indirect speech, and expressions of respect. "The correct and appropriate use of address forms is of great importance in terms of speech culture" (Hüseynov S, 2010, 224).

The pragmatic category of politeness is ultimately the main concept that reveals how language functions in social interaction. "The concept of politeness is understood in the context of interpersonal relationships, socio-cultural values, and norms, and encompasses approaches such as mutual speech and face-saving, as well as various interpretations" (Hirik S, 2022, 1164). In general, politeness in linguistics is considered an important pragmatic tool, its main function is to regulate social relations between the speaker and the listener. This is not only manifested in polite expressions in linguistic form, but also reflects the interactive relationship between communicators in terms of identity, status, emotions and social distance. Therefore, politeness research has become an important part of pragmatics.

Politeness strategies are also one of the main aspects of politeness research. "Politeness strategies are methods used to show attention and respect for the feelings, social status and cultural norms of others in communication" (Hüseynova X, 2025, 129). People use different politeness methods in different contexts. For example, in formal environments, people tend to use respectful words, formal titles and formal expressions; in close relationships, they may adopt a more natural and relaxed style of communication. The choice of politeness strategies is often influenced by social distance, power relations and the purpose of communication. A subordinate usually displays more polite formality when talking to a superior, while communication between friends can be more direct.

In addition, the social context significantly influences polite expression. The same words can have completely different pragmatic meanings in different contexts. For example, the simple expression "You have arrived" may simply express a fact in an ordinary situation, but in a specific context it may express welcome, surprise, or even displeasure. This shows that politeness cannot be understood in isolation from certain contexts, but must be analyzed in conjunction with the communication environment, tone, and relationships between the participants.

Cultural factors are also an important aspect that is not taken into account in politeness research. There are significant differences in the understanding and expression of politeness across cultures. For example, some Eastern cultures emphasize modesty, refinement, and collective harmony, while some Western cultures emphasize individual equality and direct expression. Therefore, the same expression can have different effects in different cultures. Failure to take cultural context into account can easily lead to misunderstandings in cross-cultural communication.

In general, politeness as a pragmatic category encompasses not only linguistic forms but also social relations, cultural backgrounds, and communication goals. Understanding politeness requires a comprehensive examination of face-saving behaviors, politeness strategies, social context, and cultural characteristics. The importance of politeness research lies in its discovery that language is not only a means of transmitting information, but also an important tool for maintaining social relations and achieving effective communication.

Linguistic politeness is not universal, but varies greatly across cultures. What may be considered polite in one language or society may be excessive or even offensive in another. "Linguistic politeness has occupied an important place in the study of language from a social perspective, and this phenomenon has even been the subject of intense debate in sociolinguistics and pragmatics" (Fauziati E, 2013). Linguistic politeness is an essential part of effective and

respectful communication. Analyzing it allows us to understand not only how people convey messages, but also how they manage social relationships and the perception of their own and others' faces. Therefore, studying politeness is of great importance in terms of investigating the interaction between language, culture, and social behavior, and in terms of improving interpersonal communication.

The concept of politeness is closely related to the theory of face-treating acts proposed by Penelope Brown and Steven Levinson (1987) (Brown & Levinson, 2014). Penelope Brown and Steven Levinson's model is one of the most influential theoretical frameworks in pragmatics. The two authors distinguish between positive and negative politeness and emphasize the role of linguistic strategy in minimizing actions that create face threat. According to this theory, each individual has a "face" or public image to protect, and politeness strategies serve to protect or respect this face. Face theory provides a framework for analyzing social self-image and face-preserving behaviors in interactions with others. Politeness is used by language users to maintain social relationships, minimize conflict, and promote cooperation in interactions. According to face theory, people try to protect not only their own face but also the face of the other person when speaking. For this reason, polite, indirect, or softening language is often used to reduce the likelihood of hurting or threatening the other person's face. For example, people often use polite requests to show more respect rather than giving direct commands.

From a pragmatic perspective, politeness is closely related to face theory. "Face" refers to an individual's psychological need to gain respect, recognition, and maintain his or her image in social interactions. In the process of communication, people often use various linguistic means to avoid threatening the other person's face. For example, when making requests, criticisms, or refusals, people usually do not use overly direct expressions, but rather use euphemistic, subtle, or conciliatory linguistic strategies to reduce discomfort for the listener. This phenomenon suggests that politeness is not only a linguistic form but also an important mechanism for maintaining social harmony. In linguistic communication, people not only convey information, but also establish, maintain, and regulate social relationships. Politeness emerges as a communication strategy aimed at minimizing conflict, preserving the face of the participants, and ensuring harmony in interaction. In modern linguistics, especially in pragmatics, politeness is considered a functional category related to the use of language in certain contexts. "Forms of behavior and politeness currently accepted in any society are also called etiquette" (Abdullayev N, 2013, 241).

Clarifying the basic concepts of politeness helps us to better understand the mechanisms of linguistic communication, and at the same time opens up interdisciplinary research directions between linguistics, sociology and cultural anthropology. Polite speech reflects the communicative relationship between the speaker and the listener. Social distance, power structures and proximity directly affect the choice of speech strategies.

From a pragmatic perspective, politeness is not simply understood as a moral standard or social etiquette, but rather as a set of linguistic strategies deliberately chosen by speakers to achieve optimal communicative effectiveness. These strategies depend on the social relationship between speaker and listener, the purpose of communication, and the cultural norms that regulate linguistic behavior. "There are three main variables that affect the realization of politeness during interpersonal relationships between participants: power, distance, and coercion" (Park J-R, 2008, 2054).

In the diverse and multicultural context of modern society, the study of politeness goes beyond simple linguistic analysis, offering a valuable academic perspective that combines the understanding of social behavior and cultural norms.

Methodology and Materials

Research in the category of applied politeness is conducted using various scientific methods. One of the most important methods is the descriptive-analytical method, in which the researcher examines and analyzes language samples. In this method, the way polite words and structures are used in conversations is studied. Discourse analysis is also a widely used method in literary studies. In this method, researchers examine the relationship between language, culture, and social relations. Conversation analysis is also used to study how people interact in everyday conversations. This method shows how people maintain social relations by using polite expressions.

Some researchers use the comparative method to study cultural differences in the use of politeness. In this method, different languages and cultures are compared with each other. Some studies also use statistical methods to analyze data and determine the degree of use of polite structures.

The analysis of media texts and social networks is also of great importance in recent studies. Researchers study changes in the use of politeness by examining virtual messages and conversations. Direct observation also helps the researcher to examine the linguistic behavior of individuals in real-world settings. The simultaneous use of qualitative and quantitative methods increases the accuracy of the study. In general, various research methods help to better understand the role of politeness in human and social communication.

Discussion

Polite speech is one of the most important elements in establishing effective communication between people. People use language in everyday life not only to transmit information, but also to establish social relationships, maintain mutual respect and reduce communication tension. Therefore, the style of speech and the degree of politeness in speech play a very important role in the quality of human relationships. Linguistic politeness makes people feel respected, safe and valued, and healthy and constructive communication is established between them.

In linguistics, especially in the field of pragmatism or pragmatics, linguistic politeness is studied as a category of application. Pragmatism studies how language is used in real communication situations and shows that meaning depends not only on words, but also on the conditions of the conversation, the relationship between people and the speaker's purpose. In this context, polite speech is a type of communication behavior that individuals use to maintain the respect of the addressee and prevent conflicts.

Linguistic politeness is closely related to the normative behaviors of society. Every society has a set of social rules and values that individuals are expected to follow in their interactions. These normative behaviors determine what speech is considered polite or impolite. For example, using respectful language, a quiet tone, and taking turns in conversation are among the behaviors that are considered signs of politeness in many cultures. However, standards of politeness vary across cultures, and what is considered polite in one society may have a different meaning in another.

Communication relationships also have a major impact on the type of polite speech. The way people speak to friends, family members, teachers, or strangers varies. The level of intimacy, age, social status, and whether the conversation is formal or informal affect the choice of words and

tone. More respectful language and complex structures are used in formal interactions, while simpler and more informal speech is used in intimate relationships.

Consequently, polite speech is an essential part of human communication and social interactions. Pragmatism suggests that linguistic politeness is not limited to the structure of language alone, but also depends on social conditions and communication goals. Normative behaviors, face theory, and communication relationships all play a role in the formation of polite speech styles. Politeness in speech not only maintains mutual respect, but also helps to create understanding, reduce tension, and strengthen social relationships. In terms of the functions of polite expressions in communication and the speech acts they perform, they can be grouped under two main headings: ordinary expressions and colloquial expressions. "According to their pragmatic functions, depending on the context, they either directly serve to perform a certain speech act, or create or sometimes increase the value of politeness by being added to other speech acts" (Onursal Ayırır İ, 2020, 97).

In the development of society, language is not only an important tool for exchanging ideas, but also an important way to maintain interpersonal relationships. Especially in modern society, people increasingly value polite expressions and normative behavior in language. Polite language can not only shorten the distance between people, but also promote social harmony. Therefore, the study of polite language, pragmatic categories, language politeness, communication relations and normative behavior has significant practical significance. A person who often uses polite language usually gives a cultured and educated impression.

Communication is an interactive relationship between people through language, behavior, and emotions. Good communication can increase understanding and trust, while inappropriate expression can lead to misunderstandings and conflicts. Communication is not only about expression, but more importantly, about listening. Careful listening shows respect and helps us understand the true needs of the other person. Everyone has different upbringings, cultural backgrounds, and ways of thinking. Therefore, we should be tolerant of these differences and avoid bias when communicating. Sincerity is the foundation of good relationships. False and biased behavior will destroy trust between people.

Normative behavior refers to the rules of behavior that members of society should follow in public life. This includes language norms, etiquette norms, and social moral norms. Especially in the internet era, online language needs to be civilized and polite. Harmful attacks, verbal abuse, and the spread of rumors not only harm others, but also affect the social environment. Normative behavior can increase the efficiency of social activity, increase trust between people, and is an important foundation for building a civilized society.

Polite language, linguistic politeness, pragmatic scope, communicative relations, and normative behavior are all closely related to each other. In daily life, we must learn to express ourselves politely, respect others, and regulate our behavior, starting from the details, improving our personal development, and together creating a harmonious and friendly social environment.

Conclusion

In conclusion, we can note that politeness, which is the main pragmatic category in linguistics, is a fundamental mechanism deeply rooted in the structure of verbal communication as a linguistic phenomenon. Politeness facilitates comfortable communication by regulating the tension between the speaker's intention, discourse form, and social relations, minimizing conflict, and maximizing cooperation.

From a pragmatic point of view, the category of politeness exhibits significant dynamism, context-dependence, and cultural relativity. The same linguistic form may have different politeness values in different contexts, but the concept of politeness also differs significantly in different cultures. Therefore, research on politeness cannot remain at the level of static rule descriptions, but must be comprehensively analyzed in conjunction with specific contexts, communicative goals, and social structures. In general, a systematic review of the main concepts of the pragmatic category of politeness helps us to understand the essence of language use more deeply. The explanation of the category of politeness is also of great importance in terms of intercultural communication, discourse analysis, and foreign language teaching.

TEACHING SILENCE: A DISCOURSE APPROACH TO HEMINGWAY'S ICEBERG PRINCIPLE

Khayala Eldar JAFAROVA

PhD in Philology, Associate Professor, Department of Translation and Philology

Azerbaijan University

E-mail: khayala.aliyeva@au.edu.az

Abstract: This study examines silence as a communicative strategy through a discourse analysis of Ernest Hemingway's Iceberg Principle and its pedagogical implications for English as a Foreign Language (EFL) teaching. While traditional approaches to language instruction prioritize explicit verbal expression, this research emphasizes the significance of implicit meaning, omission, and silence in authentic communication. Drawing on selected excerpts from Hemingway's short stories, the study demonstrates how meaning is constructed beyond the surface level through pragmatic inference, contextual interpretation, and indirect discourse. A qualitative discourse analysis is employed to identify patterns such as ellipsis, understatement, and conversational gaps, which function as key elements of meaning-making. The findings reveal that silence operates as an intentional communicative device rather than a lack of expression, requiring active interpretation from the reader or listener. From a pedagogical perspective, the study argues that integrating literary texts characterized by implicit discourse into EFL classrooms can enhance learners' pragmatic competence, interpretive skills, and critical thinking. The paper also proposes practical teaching strategies, including inference-based tasks and guided discussion, to help learners engage with unspoken meaning. Ultimately, the study highlights the importance of incorporating discourse-oriented literary analysis into language teaching to better prepare learners for real-life communication.

Xülasə: Bu tədqiqat Ernest Hemingway-in "Buzdağı prinsipi" əsasında sükutun kommunikativ strategiya kimi rolunu diskurs analizi çərçivəsində araşdırır və onun ingilis dilinin xarici dil kimi (EFL) tədrisində pedaqoji əhəmiyyətini təhlil edir. Ənənəvi dil tədrisi yanaşmaları əsasən açıq və birbaşa ifadəyə üstünlük versə də, bu araşdırma göstərir ki, gizli məna, ixtisar və sükut real ünsiyyətdə mühüm rol oynayır.

Tədqiqat Heminqueyin qısa hekayələrindən seçilmiş nümunələr əsasında səthdən kənar mənanın pragmatik nəticə çıxarma və kontekstual şərh yolu ilə necə qurulduğunu nümayiş etdirir. Keyfiyyət yönümlü diskurs analizi vasitəsilə ellipsis, understatement və dolay ünsiyyət kimi nümunələr müəyyən edilir və bunların məna formalaşdırmadakı rolu araşdırılır.

Nəticələr göstərir ki, sükut sadəcə ifadənin yoxluğu deyil, məqsədli və funksional kommunikativ vasitədir və oxucu və ya dinləyicidən aktiv interpretasiya tələb edir. Pedaqoji baxımdan isə bu tədqiqat vurğulayır ki, gizli diskurs xüsusiyyətlərinə malik ədəbi mətnlərin tədrisə inteqrasiyası tələbələrin pragmatik kompetensiyasını, interpretativ bacarıqlarını və tənqidi düşünmə qabiliyyətlərini inkişaf etdirir.

Məqalədə həmçinin tələbələrin deyilməyən mənanı anlama qabiliyyətini gücləndirən praktiki tədris strategiyaları – inferensiya əsaslı tapşırıqlar və istiqamətləndirilmiş müzakirələr təklif olunur. Nəticə etibarilə, bu tədqiqat dil tədrisində diskurs yönümlü ədəbi analizlərin əhəmiyyətini vurğulayır və dil bilikləri ilə real kommunikasiya arasında körpü yaradır.

Açar sözlər: sükut, diskurs analizi, kommunikativ kompetensiya, Heminquey, Buzdağı prinsipi, pragmatika, ingilis dilinin xarici dil kimi tədrisi

Introduction

In modern language teaching, communicative competence is often associated with fluency, accuracy, and the ability to express ideas clearly. However, real-life communication frequently relies not only on what is said but also on what is left unsaid. Silence, pauses, and implicit meaning play a significant role in discourse, particularly in natural interactions. As noted by Yule (1996), effective communication involves the ability to interpret meaning beyond the literal level, which includes understanding implied and indirect messages. Despite this, silence remains an underexplored element in English language teaching, where explicit verbal production is often prioritized over interpretive skills.

From a discourse-analytic perspective, silence can function as a meaningful communicative strategy rather than a mere absence of speech. It contributes to meaning-making through contextual inference, shared knowledge, and pragmatic interpretation (McCarthy, 1991). In many communicative situations, speakers intentionally omit information, relying on the listener's ability to infer meaning. This aligns with Grice's Cooperative Principle, where meaning is often conveyed implicitly through conversational implicature (Grice, 1975). Therefore, understanding silence requires not only linguistic competence but also pragmatic awareness.

The works of Ernest Hemingway provide an ideal framework for examining this phenomenon. His famous Iceberg Principle suggests that the deeper meaning of a text lies beneath the surface, with only a small portion explicitly stated. According to Hemingway (1994), effective writing involves omission, allowing readers to actively construct meaning through inference. This stylistic approach reflects real-life communication patterns, where individuals frequently rely on indirect expression and unspoken cues.

Moreover, literary discourse offers a rich resource for developing communicative competence in language learners. As Widdowson (2007) argues, authentic texts expose learners to complex language use and encourage interpretive engagement. Incorporating such texts into EFL classrooms can enhance learners' ability to interpret implicit meaning and develop higher-order thinking skills. In particular, texts characterized by silence and understatement challenge students to move beyond surface-level comprehension.

This study aims to analyze silence as a communicative strategy and explore its pedagogical potential in EFL classrooms. The research focuses on how literary discourse can be used to develop learners' pragmatic competence and interpretive abilities. It also seeks to demonstrate that integrating discourse-oriented literary analysis into language teaching can bridge the gap between linguistic knowledge and real-life communication (Aliyev, 2020).

Materials and Methods

This study adopts a qualitative research design based on discourse analysis to investigate silence as a communicative strategy in selected short stories by Ernest Hemingway. Qualitative discourse analysis is particularly suitable for this research, as it allows for an in-depth examination of how meaning is constructed beyond the sentence level through context, implication, and interaction (McCarthy, 1991). The method focuses not only on linguistic forms but also on the pragmatic and functional aspects of language use.

The primary data consist of carefully selected passages from Hemingway's short stories, including "*Hills Like White Elephants* and *A Clean, Well-Lighted Place*". These texts were chosen due to their distinctive minimalist style and extensive use of implicit meaning, ellipsis, and indirect

dialogue, which exemplify the Iceberg Principle (Hemingway, 1994). The selection criteria were based on the presence of communicative gaps, unexpressed meanings, and dialogic structures that require interpretation beyond the explicit text.

The analytical framework of the study is grounded in discourse analysis and pragmatics. In particular, the study draws on the concept of implicature proposed by Grice (1975), which explains how speakers convey meaning indirectly through shared assumptions and contextual cues. Additionally, the analysis incorporates insights from pragmatic theory, emphasizing how meaning is negotiated in interaction rather than directly stated (Yule, 1996).

The analysis focuses on the following key discourse features:

- **Ellipsis and omission** – the deliberate exclusion of information, requiring the reader to infer meaning
- **Indirect speech acts** – utterances where the intended meaning differs from the literal expression
- **Contextual inference** – interpretation based on situational and textual context
- **Pragmatic meaning** – meaning derived from use rather than form

These features were systematically identified and interpreted within selected excerpts to reveal how silence operates as a communicative strategy.

Furthermore, the study integrates a pedagogical dimension by adapting the analyzed excerpts into classroom-based tasks. These tasks include guided interpretation exercises, dialogue reconstruction, and inference-based discussions aimed at developing learners' communicative competence. As noted by Widdowson (2007), exposure to authentic discourse enhances learners' ability to interpret meaning in real communicative contexts. In this regard, literary texts serve as effective tools for bridging the gap between theoretical linguistic knowledge and practical language use.

By combining discourse analysis with pedagogical application, this study not only examines the linguistic features of silence but also demonstrates their relevance for language teaching. This dual approach ensures that the findings are both theoretically grounded and practically applicable in EFL classrooms.

Results and Discussion

The analysis reveals that silence in Hemingway's discourse functions as a powerful communicative tool. In *Hills Like White Elephants*, for instance, the central conflict is never explicitly stated, yet it is clearly understood through fragmented dialogue and pauses. This demonstrates how meaning is constructed through implication rather than direct expression.

From a discourse perspective, silence serves several functions:

- It creates tension and ambiguity
- It encourages reader interpretation
- It reflects real-life conversational patterns

In language teaching, these features can be used to develop higher-order thinking skills. Students exposed to such texts are required to infer meaning, interpret context, and engage critically with language.

Moreover, integrating silence into teaching shifts the focus from purely grammatical competence to pragmatic competence. Learners begin to understand that communication involves not only speaking but also interpreting unspoken cues.

Conclusion

This study demonstrates that silence is not merely the absence of speech but a meaningful and functional component of communication. Through the analysis of Ernest Hemingway's Iceberg Principle, it becomes evident that implicit discourse plays a crucial role in how meaning is created, interpreted, and negotiated. What is left unsaid often carries as much weight as what is explicitly expressed, requiring the reader or listener to engage actively in the process of meaning-making.

From a pedagogical perspective, these findings highlight an important gap in traditional language teaching. In many EFL classrooms, the focus remains largely on grammatical accuracy and explicit expression, while the ability to interpret implicit meaning is often overlooked. However, real-life communication rarely operates at a purely explicit level. Learners who are not trained to recognize indirect meaning, silence, and contextual cues may struggle in authentic communicative situations.

Incorporating literary texts characterized by silence and understatement into language teaching offers a practical and effective solution. Such texts encourage students to think beyond the surface, ask questions, and engage more deeply with language. As a result, learners not only improve their communicative competence but also develop interpretive skills, cultural awareness, and pragmatic sensitivity.

Importantly, this approach also makes the learning process more engaging and meaningful. When students are invited to interpret hidden meanings and discuss multiple possible interpretations, the classroom becomes more interactive and student-centered. This aligns with modern communicative teaching approaches, where the goal is not only to produce language but to understand and use it effectively in context.

Future research may further explore how this approach can be adapted to different cultural and linguistic environments, as the interpretation of silence often varies across cultures. Additionally, there is strong potential for integrating this method with digital and AI-based learning tools, which could support students in analyzing texts, identifying implicit meanings, and receiving interactive feedback. Such developments would open new directions for combining literary analysis with innovative teaching technologies.

Overall, this study suggests that teaching silence is, in fact, teaching deeper communication. By helping learners understand what is not said, we prepare them to function more effectively in real-world communicative contexts.

Results and Discussion

The communicative function of silence becomes particularly evident in the works of Ernest Hemingway, where meaning is often constructed through omission and indirect dialogue. One of the most illustrative examples can be found in "*Hills Like White Elephants*". The dialogue between the characters appears simple and superficial; however, the underlying topic remains unstated:

"It's really an awfully simple operation, Jig," the man said.
"It's not really an operation at all." (Hemingway, 1994)

In this excerpt, the word "operation" functions as a euphemism, and the central issue—abortion—is never explicitly mentioned. The silence surrounding the topic forces the reader to infer meaning through context and pragmatic cues. This aligns with the Iceberg Principle, where the deeper meaning lies beneath the surface (Hemingway, 1994).

Another example of communicative silence can be observed in *A Clean, Well-Lighted Place*, where existential meaning is conveyed through repetition and absence:

"What did he fear?"

"It was not fear or dread. It was a nothing that he knew too well." (Hemingway, 1994)

Here, the concept of "nothingness" is not elaborated directly but is communicated through minimalistic language. The lack of explicit explanation creates a space for interpretation, demonstrating how silence operates as a discourse strategy.

From a pragmatic perspective, these examples illustrate the importance of implicature, as described by Grice's theory of meaning (Grice, 1975). The speakers rely on shared context and indirect expression, which requires the listener (or reader) to actively construct meaning.

In the context of EFL teaching, such texts can be used to develop learners' interpretive and communicative skills. For instance, students can be asked to:

- identify implicit meanings in dialogue
- reconstruct omitted information
- analyze the role of silence in communication

This approach shifts the focus from surface-level comprehension to deeper discourse awareness. As McCarthy (1991) notes, discourse competence involves understanding how meaning is negotiated beyond the sentence level.

Furthermore, incorporating silence into language teaching supports the development of pragmatic competence, which is often neglected in traditional classrooms (Yule, 1996). Learners become more sensitive to indirect communication, cultural nuances, and contextual meaning.

THE FUNCTIONAL FEATURES OF RELATIVE CLAUSES IN CONTEMPORARY ENGLISH DISCOURSE

Sevil Madat RAJABOVA

Doctor of Philosophy (Ph.D) in Philology, Azerbaijan University of Languages

E-mail: rajabo.sevil@adu.edu.az

ORCID ID: 0000-0003-2900-872X

Abstract: Relative clauses constitute one of the most productive syntactic devices in contemporary English discourse. They do not merely modify nouns or provide additional descriptive information; they also organize reference, regulate information flow, support textual cohesion, and contribute to discourse coherence. In modern English, relative clauses function at the intersection of syntax, semantics, pragmatics, and discourse structure. This article examines the functional features of relative clauses in contemporary English discourse, focusing on restrictive and non-restrictive uses, referential specification, information packaging, and discourse-pragmatic interaction. The study argues that relative clauses should not be viewed only as subordinate structures attached to noun phrases. Rather, they should be analyzed as discourse-sensitive constructions that help speakers and writers identify entities, introduce new information, maintain topical continuity, and establish complex semantic relations between propositions. Drawing on English, Russian, and Azerbaijani linguistic scholarship, the article demonstrates that relative clauses perform both grammatical and communicative functions. The analysis is illustrated with short authentic examples from contemporary English usage.

Xülasə: Təyin budaq cümlələri müasir ingilis diskursunda ən məhsuldar sintaktik vasitələrdən biri kimi çıxış edir. Onlar yalnız isimləri təyin etmək və ya əlavə təsviri məlumat vermək funksiyası daşıyır; eyni zamanda referensiyanın təşkilində, informasiya axınının tənzimlənməsində, mətn koheziyasının təmin edilməsində və diskurs koherensiyasının formalaşmasında mühüm rol oynayır. Müasir ingilis dilində təyin budaq cümlələri sintaksis, semantika, pragmatika və diskurs strukturu arasında qarşılıqlı əlaqəni təmin edən mürəkkəb qrammatik vahidlər kimi fəaliyyət göstərir. Bu məqalədə müasir ingilis diskursunda təyin budaq cümlələrinin funksional xüsusiyyətləri, xüsusilə onların məhdudlaşdırıcı və qeyri-məhdudlaşdırıcı işlənmə formaları, referensial müəyyənləşdirmədə rolu, informasiyanın strukturlaşdırılmasına verdiyi töhfə və diskurs-pragmatik amillərlə qarşılıqlı əlaqəsi təhlil olunur. Tədqiqatda təyin budaq cümlələrinin yalnız isim birləşmələrinə bağlanan tabeli strukturlar kimi deyil, diskursla şərtlənən konstruksiyalar kimi öyrənilməsinin vacibliyi əsaslandırılır. Məqalə ingilis, rus və Azərbaycan dilçiliyində mövcud olan nəzəri yanaşmalara əsaslanır və təhlil müasir ingilis dilindən götürülmüş qısa autentik nümunələrlə izah olunur.

Açar sözlər: təyin budaq cümləsi, ingilis diskursu, modifikasiya (təyinetmə), referensiya, informasiya strukturu, koheziya, koherensiya

Introduction

Relative clauses occupy a central place in the grammar of English because they connect nominal reference with clausal predication. In traditional grammar, they are usually described as subordinate clauses that modify a noun or noun phrase. This definition is necessary, but it is not sufficient for discourse analysis. In actual discourse, relative clauses do more than describe an antecedent: they help the speaker or writer determine how much information is needed for

identification, what kind of information should be foregrounded or backgrounded, and how a referent should be connected with the surrounding text.

In contemporary English discourse, relative clauses are especially important because English relies heavily on word order, syntactic embedding and nominal modification. A clause such as *the researcher who designed the experiment* does not simply add information about *the researcher*; it selects one researcher from a possible group and makes that referent discourse-accessible. In another case, *the researcher, who designed the experiment, later revised the method*; the relative clause does not restrict the referent but adds supplementary information. Thus, the difference between restrictive and non-restrictive relative clauses is not only syntactic; it is also semantic and pragmatic.

R. Huddleston and G.K. Pullum define relative clauses as subordinate clauses that contain an overt or covert element interpreted through an antecedent, which explains why anaphoric dependence is one of their essential properties (Huddleston & Pullum, 2005, p. 183). R. Quirk, S. Greenbaum, G. Leech and J. Svartvik also treat relative clauses as postmodifying structures within noun phrases and distinguish their restrictive and non-restrictive functions (Quirk et al., 1985, p. 1237). From a typological perspective, E.L. Keenan and B. Comrie show that relative clause formation is connected with the grammatical role of the relativized element, especially through the well-known Accessibility Hierarchy (Keenan & Comrie, 1977, p. 66). These approaches demonstrate that relative clauses are not isolated grammatical forms; they are part of a larger system of reference, modification and discourse organization.

This article aims to analyze the functional features of relative clauses in contemporary English discourse. The main tasks are: first, to describe the structural basis of English relative clauses; second, to explain their restrictive and non-restrictive functions; third, to show how they contribute to cohesion and coherence; and fourth, to interpret their discourse-pragmatic value in modern English texts.

Materials and Methods

This study is based on a qualitative linguistic analysis of relative clauses in contemporary English discourse. The material of the study consists of selected examples of restrictive, non-restrictive and reduced relative clauses used in modern English academic, journalistic, spoken and digital contexts. The examples are not treated as literary-textual evidence, but as illustrative linguistic data used to demonstrate the functional properties of relative clauses.

The methodological framework of the study combines descriptive, functional and discourse-pragmatic approaches. The descriptive method is used to identify the structural features of relative clauses, including relative markers, antecedent relations and syntactic positions. The functional method is applied to explain how relative clauses contribute to reference, modification, information packaging, cohesion and coherence. The discourse-pragmatic method is employed to investigate how relative clauses function beyond sentence boundaries and how they contribute to topical continuity, backgrounding, and referential specification in actual communication.

The analysis also relies on comparative theoretical perspectives from English, Russian and Azerbaijani linguistic scholarship. This allows the study to interpret relative clauses both as grammatical subordinate structures and as discourse-sensitive constructions. The research is theoretical and analytical in nature; therefore, no experimental or statistical method is applied.

The study of relative clauses has a long tradition in English grammar. In descriptive grammar, relative clauses are generally classified according to their relation to the antecedent, the type of

relative marker, and the syntactic role of the relativized element. The most frequent relative markers in English are *who*, *whom*, *whose*, *which*, *that*, *where*, *when* and zero relative forms. Their use depends on animacy, formality, syntactic function and discourse context.

R. Huddleston and G. K. Pullum distinguish between integrated and supplementary relative clauses. Integrated relatives are structurally and semantically integrated into the noun phrase, while supplementary relatives are more loosely attached and add parenthetical information (Huddleston & Pullum, 2005, p. 184). This distinction is important because it avoids the older purely punctuation-based opposition between “defining” and “non-defining” clauses. The difference lies not only in commas but also in the semantic relation between the relative clause and its antecedent.

R. Quirk, S. Greenbaum, G. Leech and J. Svartvik describe relative clauses as a major type of postmodification in the English noun phrase. Their account is significant because it connects relative clauses with noun phrase complexity and textual economy (Quirk et al., 1985, p. 1243). In academic, journalistic and institutional discourse, relative clauses allow writers to compress information that would otherwise require separate sentences. For example, the phrase *policies that affect vulnerable communities* provides a more concise way of identifying the relevant policies than a separate clause, such as *these policies affect vulnerable communities*. This compression is one of the main functional advantages of relative clauses.

Russian linguistic scholarship also provides valuable insights into the study of relative clauses. M. Y. Blokh treats subordinate clauses as part of the system of composite sentence formation and emphasizes the relationship between syntactic dependence and semantic specification (Blokh, 1983, p. 312). I. P. Ivanova, V. V. Burlakova and G. G. Pocheptsov analyze attributive subordinate clauses as structures that specify or characterize the nominal element in the principal clause (Ivanova et al., 1981, p. 242). This approach is relevant to English relative clauses because it shows that relative subordination is both syntactic and semantic: the subordinate clause depends on the main clause structurally, but it also contributes to the referential interpretation of the noun.

Azerbaijani linguistic scholarship is also important for explaining the discourse function of syntactic structures. K. M. Abdullayev, in his studies of text syntax and discourse organization, emphasizes that syntactic units receive their full value within textual relations, not only within sentence boundaries (Abdullayev, 1999, p. 91). This idea is directly applicable to English relative clauses because their function often becomes clear only in relation to the preceding and following discourse. A relative clause may identify a referent, maintain a topic, introduce background information, or create a bridge between two propositions. Therefore, it should be examined not only as a clause type but also as a discourse-forming device.

Structural Features of Relative Clauses in English

Structurally, an English relative clause is linked to an antecedent and contains a relativized position. This position may be filled by an overt relative pronoun or left empty as a gap. For example:

1. *The article that I read yesterday discusses discourse coherence.*
2. *The article I read yesterday discusses discourse coherence.*

In both examples, the relative clause modifies *the article*. In the first sentence, *that* marks the relative clause; in the second, the relative marker is omitted. The omission is possible because the relativized element functions as the object of the verb *read*. In subject relative clauses, however, omission is normally impossible:

3. *The scholar who presented the paper answered the questions.*

4. *The scholar presented the paper answered the questions.* - incorrect in Standard English.

This contrast shows that the syntactic role of the relativized element affects the grammatical form of the relative clause. E. L. Keenan and B. Comrie's Accessibility Hierarchy explains why subject relatives are generally more accessible than object, oblique or genitive relatives across languages (Keenan & Comrie, 1977, p. 66). In English, subject relatives, such as the student who asked the question, are structurally simpler than object relatives, such as the student whom the lecturer praised. Object relatives require the reader or listener to connect the antecedent with a later gap in the clause.

The relative marker also performs functional work. *Who* normally refers to human antecedents, *which* refers to non-human antecedents; *that* may refer to both human and non-human antecedents in restrictive relative clauses; *whose* expresses possession; *where* and *when* relate to place and time. However, these forms are not merely mechanical grammatical choices. They may signal formality, discourse style and the writer's attitude toward explicitness. In formal academic discourse, *which* and *who* often appear in clearly marked relative constructions, while conversation and informal writing frequently allow *that* or zero relatives.

B. A. Fox and S. A. Thompson show that the choice between an overt relativizer and a zero relativizer in English conversation is connected with discourse and prosodic factors rather than with free optionality (Fox & Thompson, 1990, p. 297). This observation is important because it shifts the analysis from grammar as a fixed system to grammar as a discourse-sensitive resource. A speaker may say the book I told you about instead of the book that I told you about because the referent is accessible, the clause is short, and the rhythm of the utterance favors a reduced structure.

Restrictive Function: Identification and Referential Specification.

The most basic function of a restrictive relative clause is identification. It restricts the reference of the antecedent and helps the listener or reader understand exactly which person, object, event, or idea is being referred to. In the sentence "Students who submit their papers late will lose marks," the relative clause *who submit their papers late* restricts the reference of *students* to a particular group. Without it, the sentence would refer to all students.

Restrictive relative clauses are therefore closely connected with referential precision. They answer the implicit question *Which one?* or *What kind?* This function is essential in academic discourse, legal discourse, administrative texts and media language. For example:

The measures that were introduced after the crisis altered the institution's structure.

Here, the relative clause limits the noun *measures*. The sentence does not refer to all measures, but only to those introduced after the crisis. This kind of restriction prevents ambiguity and allows complex references to be expressed economically.

R. Quirk, S. Greenbaum, G. Leech, and J. Svartvik distinguish restrictive relative clauses, which are necessary for identifying the antecedent, from non-restrictive clauses, which provide additional information about an already identifiable referent. (Quirk et al., 1985, p. 1257). This distinction is central to discourse interpretation. If the antecedent is not independently identifiable, the relative clause becomes semantically obligatory. If the antecedent is already identifiable, the relative clause becomes supplementary.

Restrictive relative clauses also contribute to lexical density. Academic English often prefers dense noun phrases because they allow complex information to be packed into a compact structure. For example:

The hypothesis that the authors test in the final section requires further empirical support.

The relative clause *that the authors test in the final section* enables the writer to specify the hypothesis without starting a new sentence. This produces a more cohesive and academically appropriate style.

Non-Restrictive Function: Supplementation and Backgrounding.

Non-restrictive relative clauses, also called supplementary relative clauses, do not identify the antecedent. Instead, they add extra information about a referent that is already identifiable. For example:

The committee, which met on Friday, approved the new proposal.

The relative clause *which met on Friday* does not define which committee is meant. It supplies additional information. This information may be backgrounded, explanatory or evaluative. In written English, such clauses are normally separated by commas. In spoken English, they are often marked by intonation.

R. Huddleston and G. K. Pullum use the terms *integrated* and *supplementary* to emphasize that the distinction is both structural and semantic. (Huddleston & Pullum, 2005, p. 184). Supplementary relatives are less tightly integrated into the noun phrase and resemble parenthetical additions. Their discourse function is to enrich the proposition without changing the basic reference of the antecedent.

Non-restrictive relative clauses are particularly common in academic and journalistic discourse. They allow writers to add contextual information without interrupting the main line of argument. For example:

The corpus, which contains spoken and written texts, provides evidence for register variation.

The main proposition is that the corpus provides evidence. The relative clause supplies background information about the corpus. In discourse terms, the main clause carries the central assertion, while the relative clause provides supporting information.

This function is important for coherence. A writer may use a non-restrictive relative clause to connect the current sentence with previous information. For instance:

The theory was later revised by B. Comrie, who reconsidered several aspects of relativization.

Here, the relative clause maintains the topic and links the scholar with a specific academic action. The clause is not needed to identify B. Comrie, but it strengthens the continuity of discourse.

Relative Clauses and Information Structure.

Relative clauses play a significant role in information structure. They help organize given and new information within the sentence. In many cases, the antecedent represents given or accessible information, while the relative clause adds new specification. However, the relationship is not fixed. Sometimes the antecedent introduces a new referent, and the relative clause immediately anchors it in the discourse. Consider the sentence:

"There are several factors that influence the interpretation of relative clauses."

In this example, the existential construction *there are several factors* introduces new discourse referents. The relative clause *that influences the interpretation of relative clauses* then specifies the nature of those factors. Thus, the relative clause helps integrate new information into the discourse. Thus, the relative clause helps integrate new information into the discourse.

M. A. K. Halliday's functional grammar is relevant here because it treats language as a system of meaning choices shaped by textual, interpersonal and ideational functions (Halliday & Matthiessen, 2004, p. 37). From this perspective, relative clauses are not only syntactic units; they

are resources for organizing information. They allow the speaker or writer to decide what should be treated as central and what should be treated as dependent.

In academic discourse, relative clauses often contribute to thematic progression by linking new information to previously introduced referents. A noun phrase introduced in one sentence may become the antecedent of a relative clause in the next sentence. This creates cohesion through reference. For example:

The study examines several discourse markers. These markers, which occur frequently in academic writing, help organize argumentation.

The relative clause connects *these markers* with their function in academic writing. The result is a smooth transition from one sentence to the next. Such structures contribute to coherence because they show how ideas are logically related.

Cohesion and Coherence Functions.

Relative clauses contribute to cohesion by linking nouns with additional propositions. They create internal textual connections because the relative pronoun or gap refers back to the antecedent. This anaphoric relation is one of the defining properties of relative clauses. R. Huddleston and G. K. Pullum explicitly connect relative clauses with anaphoric interpretation because the relative element receives its meaning from the antecedent (Huddleston & Pullum, 2005, p. 183).

In discourse, this anaphoric relation helps avoid unnecessary repetition. Instead of writing:

The researcher collected the data. The researcher analyzed the data carefully.

A writer may write:

The researcher who collected the data analyzed it carefully.

The relative clause reduces repetition and creates a tighter textual structure. This is a cohesive function. At the same time, the sentence becomes more coherent because the relation between the two actions is syntactically integrated.

Relative clauses also help establish coherence by clarifying logical relations. They may express cause, condition, contrast, or evaluation indirectly. For example:

Participants who had prior experience completed the task more quickly.

Although the relative clause is structurally attributive, it also implies a possible explanatory relation: prior experience may explain faster task completion. This example demonstrates that relative clauses may convey meanings beyond simple description. They may guide the reader toward an interpretation of causal or contrastive relations.

K. M. Abdullayev's view that syntactic structures must be interpreted within the broader text is relevant here (Abdullayev, 1999, p. 91). A relative clause may appear to be a local modifier, but its discourse function depends on the textual context. In one context, it may identify a referent; in another, it may add background information; in a third, it may support argumentation.

Relative Clauses in Contemporary English Registers.

The use of relative clauses varies across registers. In academic writing, relative clauses are frequent because they support precise reference, complex noun phrases and logical compression. Academic discourse often requires writers to define concepts, specify categories, and establish relationships between propositions. Relative clauses serve these functions effectively. In journalistic discourse, relative clauses often provide background information about people, institutions and events. For example:

The minister, who announced the reform last month, defended the decision in parliament.

The relative clause supplies background knowledge and helps the reader identify the relevance of the person. In news discourse, such clauses are useful because they combine information density with narrative flow. In spoken discourse, relative clauses tend to be shorter and more interactionally motivated. B. A. Fox and S. A. Thompson argue that relative clauses in conversation are shaped by the speaker's assessment of the hearer's knowledge and the flow of information (Fox & Thompson, 1990, p. 297). This means that spoken relative clauses often emerge from real-time interaction. Speakers use them when they need to repair, specify, or elaborate on a referent.

In digital discourse, relative clauses remain productive, but they often appear in compressed forms. Reduced relative structures and zero relatives are frequently found in social media, online comments, and informal digital communication, as in *the things I noticed* or *people who know*. These forms show that relative clauses adapt to the economy of digital communication while preserving their basic referential function.

Reduced Relative Clauses and Economy of Expression.

Reduced relative clauses are another important feature of contemporary English discourse. They occur when a full relative clause is shortened, usually by omitting the relative pronoun and a form of *be*. For example:

The data collected during the experiment were analyzed statistically.

This sentence corresponds to:

The data that were collected during the experiment were analyzed statistically.

Reduced relatives are especially frequent in academic and technical writing because they increase lexical density and reduce redundancy. They allow information to be integrated into the noun phrase without the full clausal form. This explains why structures such as *the methods used in the study*, *the participants selected for the interview*, and *the results obtained from the analysis* are widely used in research articles. M. Y. Blokh's treatment of syntactic compression is relevant to this point because he connects sentence structure with the semantic organization of complex information (Blokh, 1983, p. 318). Reduced relatives show how English grammar can condense predication into modification. The result is a more compact and formal style.

However, reduced relative clauses may also create ambiguity if the relation between the modifier and the antecedent is not clear. For example, *students interested in linguistics* are clear, but more complex reduced relatives may require careful reading. Therefore, the functional value of reduced relatives depends on balance: they make discourse economical, but excessive compression may reduce clarity.

Results and Discussion

The analysis shows that relative clauses in contemporary English discourse perform several interconnected functions. First, they identify and restrict reference. This is their most basic semantic function. Second, they add supplementary information without changing the identity of the antecedent. Third, they organize information by distinguishing between central and backgrounded content. Fourth, they support cohesion through anaphoric links. Fifth, they contribute to coherence by integrating propositions and clarifying relations between ideas.

The functional value of relative clauses becomes especially clear when they are examined beyond the sentence level. A purely structural approach can describe the form of relative clauses, but discourse analysis explains why speakers and writers choose one relative structure rather than

another. The choice between *who*, *which*, *that* and zero relative forms is often influenced by register, formality, information status and processing economy.

The contrast between restrictive and non-restrictive relative clauses also illustrates how grammatical structure interacts with discourse function. Restrictive relatives help identify referents; non-restrictive relatives provide additional information about already identifiable referents. This difference affects punctuation, intonation, interpretation and textual organization.

The typological approach of E. L. Keenan and B. Comrie adds another dimension by showing that relative clause formation is constrained by grammatical relations (Keenan & Comrie, 1977, p. 66). The discourse approach of B. A. Fox and S. A. Thompson complements this by showing that relative clauses in actual conversation are shaped by information flow and interactional needs (Fox & Thompson, 1990, p. 297). Together, these perspectives confirm that relative clauses must be studied as both grammatical and communicative structures.

Conclusion

Relative clauses are among the most important grammatical resources of contemporary English discourse. Their function cannot be reduced to noun modification alone. They identify referents, add supplementary information, manage information structure, create cohesion and support coherence. In academic discourse, they contribute to precision and density. In journalistic discourse, they provide background information and maintain narrative continuity. In spoken discourse, they reflect interactional choices and the speaker's assessment of the listener's knowledge. In digital discourse, they adapt to brevity and informal expression.

The article has shown that relative clauses operate at the intersection of syntax, semantics and pragmatics. Their structural form is closely connected with their discourse function. Therefore, the study of English relative clauses should combine traditional grammatical description with discourse-oriented analysis. Such an approach allows us to understand relative clauses not only as subordinate clauses, but also as functional devices that shape meaning in contemporary English communication.

DISCOURSE IN THE LIGHT OF DIFFERENT APPROACHES

MirJamil MirJafar SEYID-RZAYEV

PhD in Philology, Acting Associate Professor
Azerbaijan University of Languages, Baku, Azerbaijan
E-mail: mirjamil.seyid-rzayev@adu.edu.az
ORCID ID: 0009-0005-4237-2237

Abstract: The article examines the essence of the concept of discourse, which constitutes the main direction of modern linguistic research, as well as approaches to its study in linguistics. For this purpose, the paper explores the introduction of the term "discourse" into linguistic science, its different interpretations by various linguists, and the diversity of explanations given to it. The article refers to specific theoretical sources to demonstrate different approaches to understanding, studying, and interpreting discourse. The author evaluates the term "discourse" as a result of an anthropocentric approach to linguistic facts and phenomena. In addition, discourse is explained as a result of socialization, the individual's perception of the surrounding world, and their integration into objective reality. According to the author, discourse arises and is realized within the environment of interpersonal social interaction; therefore, for its materialization, the presence of general background knowledge about the principles of interaction, situational context, and communication is considered a necessary condition. From a cognitive perspective, the interpretation of discourse focuses on the acquisition, storage, and use of knowledge by communicants. Discourse is a form of social behavior involved in shaping the social world (knowledge, people, and the social relations between them), and it serves to establish and maintain social relationships between interlocutors.

Xülasə: Məqalədə müasir linqvistik tədqiqatların ana xəttini təşkil edən diskurs anlayışının mahiyyəti və dilçilikdə onun tədqiqinə yanaşmalar araşdırılır. Bu məqsədlə məqalədə "diskurs" termininin dilçilik elminə gətirilməsi, onun ayrı-ayrı dilçilər tərəfindən fərqli anlaşılməsi və fərqli şərhlərin verilməsi tədqiq edilir. Məqalədə diskurs anlayışı, onun öyrənilməsi və şərhinə fərqli yanaşmaları nümayiş etdirmək üçün konkret nəzəri mənbələrə müraciət edilir. Məqalədə müəllif "diskurs" terminini dil faktları və hadisələrinə antroposentrik yanaşmanın nəticəsi kimi qiymətləndirir. Bundan başqa, diskurs ictimailəşmənin, fərdin ətraf dünyanı qavraması, onun real gerçəkliyə daxil olmasının nəticəsi kimi izah edilir. Müəllifin qənaətinə görə,

diskurs fərdlərarası sosial qarşılıqlı təsir mühitində yaranır və gerçəkləşir və məhz buna görə də onun maddiləşməsi üçün qarşılıqlı təsir, konsituasiya və kommunikasiyanın prinsipləri barədə ümumi fon biliklərin varlığı zəruri şərt kimi göstərilir. Diskursun koqnitiv aspektdən şərhində isə biliklərin qazanılması, saxlanması və kommunikantlar tərəfindən istifadəsi məqamları diqqət mərkəzində saxlanılır. Diskurs sosial dünyanın (bilik, insanlar və onlar arasında sosial münasibətlər) formalaşmasında iştirak edən sosial davranış formasıdır və o, həmsöhbətlər arasında sosial münasibətlərin qurulması və saxlanılmasına xidmət edir.

Introduction

The process of cognitive understanding of the world is reflected in natural language as a complex and multidimensional phenomenon. The anthropocentric paradigm established in modern linguistics creates new methodological opportunities for the unified analysis of human verbal and cognitive activity, as well as for the search for new concepts to describe different types of communication.

The relevance of the topic is determined by the inclusion of discourse as a complex communicative phenomenon within the field of linguistic description. This is conditioned by the fundamental shift that occurred in the basic paradigm of linguistics at the end of the 20th century – from a structural model of description to functionalism, i.e., to the description of language as a functional system.

Modern linguistics is characterized by a preference for studying linguistic phenomena in the context of their realization in speech acts. This, in turn, leads to the conditioning of specific language use by a number of extralinguistic factors, such as the conditions of communicative acts and the social, cultural, and historical environment. This fact significantly increases the relevance of reconsidering linguistic phenomena within a new paradigm.

Research Methods

The interdisciplinary nature of the topic presupposes the use of a comprehensive methodology of discourse analysis. Linguistic analysis methods and techniques were employed to identify the linguistic features of texts at different levels, including structural analysis, philological analysis of text structure, and linguistic discourse analysis.

Despite more than half a century of research history, interest in the phenomenon of discourse within the anthropocentric paradigm has not diminished. Although some issues have been clarified in these studies, others still await solutions. Nevertheless, it should be acknowledged that discourse is widely accepted by most linguists as a complex communicative phenomenon with distinct characteristics. It is defined as a product of speech activity, characterized by a specific context (situation), genre, and ideological affiliation. This view is represented in the works of T.A. van Dijk, W.Kintsch (1998), V.Z. Demyankov (2002), A.E. Kibrik (2003), W. Chafe (1975), and others. Researchers such as E.S. Kubryakova (1999) and V.V. Krasnykh (2003) equate discourse with verbal activity that is directly connected to a specific society and culture and has a unique relation to a particular historical period.

In the modern linguistic tradition, discourse studies are characterized by a broad paradigm, i.e., a multidisciplinary approach in which discourse research is conducted in accordance with major trends and perspectives in related disciplines such as literary studies, linguistics, social semiotics, artificial intelligence theory, psychology, logic, ethnography, political science, etc. The second approach is defined by the unity of two leading perspectives: cognitive and communicative approaches.

It should also be noted that in various branches of linguistics (stylistics, text linguistics, spoken language studies), as well as within cognitive science, discourse studies directly address the linguosemiotic aspect of discourse, thereby distinguishing it from other linguistic phenomena. Unlike text or speech, discourse incorporates the concept of consciousness. The cognitive aspect of discourse research also occupies an important place in modern linguistics. As Y.S. Kubryakova writes, "the recognition of the equal status of communicative and cognitive aspects in discourse studies has become possible only within the cognitive-discursive paradigm" (Kubryakova, 2000, p. 24).

Considering the broad spectrum of discursive approaches, T.A. van Dijk (1998) proposes distinguishing two definitions of discourse. In general, discourse is a complex communicative event that takes place between an addresser (speaker) and an addressee (listener) within a specific temporal, spatial, and contextual framework. A communicative act may be verbal or written and may also include both verbal and non-verbal components (for example, a conversation between friends, a dialogue between passengers in public transport, or reading journal and newspaper articles).

In a narrow sense, discourse is a verbal or written text that includes a verbal component. From this perspective, "discourse" refers to the completed or ongoing "product" of a communicative act, interpreted by recipients (for example, the verbal product of communicative behavior – written or spoken), and its written or oral outcome (Van Dijk, 1998).

According to T.A. van Dijk's theory, the study of language functioning in society should be carried out not only from a pragmatic perspective on discourse, but also by taking into account social factors such as speakers' opinions, interests, attitudes, as well as their social and ethnic status, etc.

Van Dijk also interprets discourse as a social phenomenon. In his view, discourse is a constantly moving flow of speech that integrates the entire diversity of a historical period, including the communicative situation (context) and the individual and social characteristics of interlocutors. Discourse reflects national and universal, as well as individual and specific mentalities and cultures (Van Dijk, 1998, p. 47).

The model of discourse comprehension interacts with its cognitive processing model, and this factor makes it a key subject of cognitive research. Discourse reflects the hierarchical nature of different types of knowledge necessary for the production and comprehension of speech. It also participates in the development of both processes by selecting relevant information and knowledge for communicants within a specific context and according to particular strategies.

When examining the existing meanings of the term "discourse", it should be noted that in the early French linguistic tradition, the term generally referred to conversation, speech, or textual meaning. Discourse was considered inseparable from its lexical meaning and was identified with spoken dialogue or live oral communication.

The term "discourse analysis" was first used in linguistics by Z.S. Harris, who attempted to extend the distributive method from the level of the sentence to larger textual units (Harris, 1952). Considering that until the early 1970s linguistics rarely went beyond the sentence level, this step can be regarded as an innovative and progressive attempt.

J.Habermas was among the first scholars to draw attention to the aspect of discourse directly related to speech and introduced the term from a sociological perspective to define a type of verbal communication that takes into account social norms, rules, and values of social life.

However, E. Benveniste assigned a new terminological meaning to the concept, defining it as “speech appropriated by the speaker” (Benveniste, 1974). Therefore, discourse can be understood as being equivalent to the process of text production by the speaker. In Benveniste’s theory, discourse was contrasted with objective narration, and as a result, the concept of discourse came to be applied to pragmatically conditioned types of speech that differ according to their communicative purposes.

The concept of “discourse” is extremely broad in content and encompasses both linguistic and extralinguistic features. This allows it to be viewed as a phenomenon characterized by semantic coherence, relevance, contextual embeddedness, and its dependence on genre and ideological affiliation, as well as a product of speech activity associated with a specific culture.

Discourse may also be identified with text, although it is necessary to clarify the type of text with which such a parallel can be drawn. It may refer to a text composed of communicative units of language – sentences and their combinations into larger, semantically interconnected units, and so on. In other words, unlike an isolated sentence, discourse is not merely a coherent sequence of sentences but a specific semantic whole characterized by semantic unity (cohesion). This unity, in turn, represents informational coherence, i.e., a platform of knowledge about the world, situational, social, cultural, and other types of knowledge.

To support this idea, we would like to refer to Yu. Rudnev’s statement: “Discourse is a criterion of text; it implies syntagmatic and paradigmatic relations among formal elements that constitute a system (i.e., as both the process and the result of a communicative act), and reveals the pragmatic ideological attitudes of the speaking subject, thereby limiting the potential infinite interpretability of textual meanings” (Rudnev, 2001).

Another aspect of the discursive paradigm, which incorporates an anthropological approach, is based on the idea that discourse largely reflects human spatial existence; therefore, linguistic identity plays an important role here. Discourse is anthropocentric in nature and should be studied in unity with human socio-cultural activity; the opposite approach is considered insignificant.

A.A. Kibrik interprets discourse as a broader concept than text. According to the author, discourse can be understood both as a process of linguistic activity and as its result (Kibrik, 2003). Thus, discourse has two dimensions: on the one hand, it is associated with speech as a concept – namely coherent speech, speech flow, complex syntactic unity, supra-phrasal unity, text, and the production of communicatively coherent speech, characterized by communicative adequacy. This aspect of discourse is expressed through linguistic means and manifests itself in the totality of produced texts.

The second dimension of discourse affects the mental processes of communication participants: ethnic, psychological, and socio-cultural stereotypes and attitudes, as well as strategies for understanding and producing speech. It also determines, when necessary, the tempo of speech, the degree of its situational adequacy, the relationship between the general and the specific, the new (rheme) and the already known (theme), the relationship between unconventional (subjective) and generally accepted elements, explicit and implicit intentions within discourse content, the selection of linguistic means to achieve the final goal of communication, and the determination of the speaker’s point of view, etc.

Therefore, discourse can be regarded as a coherent text taken in its event aspect – a “connected text” that integrates extralinguistic, socio-cultural, psychological, and other factors.

As noted above, some discourse researchers tend to equate it with a specific text structure, which is directly conditioned by social context. For example, according to V.V. Krasnykh,

“discourse is a verbalized activity understood as a combination of process and result, possessing both strictly linguistic and extralinguistic aspects” (Krasnykh, 2003). Therefore, discourse can be considered a single organism in which both linguistic and cognitive aspects of thinking are simultaneously realized.

Discourse is not only a part of communicative verbal interaction but also an integral component of cognition. It is productive and appropriate to regard discourse as a goal-oriented social action, involving human interaction and cognitive processes. It is no coincidence that in modern research, cognitive processes are not considered in isolation but in interaction with discourse, as noted by Y.S. Kubryakova, “at the intersection of cognition and communication” (Kubryakova, 2004, p. 16).

In her cognitive-linguistic study of discourse, Kubryakova also points to the causal relationship between discourse and text, writing: “Text is born in discourse; it is its child” (Kubryakova, 2001, p. 76).

Philosophical concepts of discourse are not directly related to the study of structural principles of text. For example, in M. Foucault’s theory of discourse, questions related to language users or linguistic constructions (speech production, coherence, adequacy, and text comprehension) are entirely absent. This theory is based, first and foremost, on the concept of a “subjectless discourse” (Foucault, 2004, p. 270), which exists at the level of material reality, independent of human speakers (language users) and changing communicative situations.

Thus, Foucault addressed the problem of the implementation of discursive practices, which, according to him, consist of a set of anonymous historical rules defined in time and space and conditioned by the functioning of language within a specific historical, social, economic, geographical, or linguistic context (Foucault, 2004).

In Foucault’s understanding, discursive formations can be interpreted as fields of social practice: “Discourse is not a consciousness that places its project in the external form of language, especially not a speaking subject in that language, but a form of practice with its own rules of connection and continuity” (Foucault, 1996, p. 69).

Discursive practice in Foucault’s research appears as an interdisciplinary, or rather confederative, phenomenon. Therefore, on the linguistic level, only its manifestations in language can be studied. The other aspects of this multifaceted linguo-semiotic phenomenon – psychological, social, historical, and cultural – must necessarily be studied within their respective disciplines. A purely linguistic approach, while important, is far from sufficient to provide a complete account.

Therefore, discourse can be considered as a unified external space in which a network of various temporal and spatial characteristics is located. This allows it to go beyond a single text and penetrate different texts. Discursive practices are understood as a set of anonymous historical rules defined in accordance with the conditions of fulfilling communicative functions within a specific temporal period and within geographical, political, economic, social, or linguistic spaces.

A.Y. Mammadov, who regards the text as a material entity, writes that “discourse is more complex, and in its analysis we must reconstruct the intention and thought of the sender (addresser – S.M.), that is, beyond the explicit information contained in the observable speech work, we must determine what is implied in the text. Thus, the concept of discourse includes extralinguistic factors and rhythms” (Mammadov, 2013, p. 23).

From a semiotic and sociological perspective, discourse analysis is conducted within the framework of discursive practices in which epistemes are structured as invariants of scientific thought in different periods, with the aim of answering the question of how language exists.

At the current stage of the development of discourse analysis, the understanding of the term itself ranges from being almost synonymous with speech or speech flow, complex syntactic unity, or text, to a specific type of mental activity. The interpretation of discourse varies from verbalized consciousness to a complex communicative phenomenon that includes extralinguistic factors influencing its production and perception, from a fixed text representing a dominant model of reality to discourse as a specific dimension of linguistic existence.

As a complex cognitive structure, discourse is governed by several cognitive principles:

1. the principle of iconicity, based on the correspondence between ideas about the world and their representation in language (Kibrik, 2003). According to this principle, the orderliness of the perception of reality is reflected through the specially arranged elements of a text determined by spatial, chronological, causal, or social relations;
2. the principle of division of information into given (theme) (Kibrik, 2003) and new (rheme). In discursive practice, information is transmitted through the synthesis of background knowledge and context.

These principles are inseparably connected with the fundamental nature of logical thinking, where each idea exists as a consequence of the previous one and conditions the next, building knowledge upon the generalization of a set of facts. In particular, the transformation of “real-world scenes” occurs through standardized representations corresponding to typical situations and typical sets of object properties (including scenarios, frames, diagrams, etc.).

Discourse is a synchronic derivative of text and a dynamic procedural phenomenon in which perception is realized. Therefore, it directly influences thought processes, constantly changing and updating the existing set of mental representations. The universal perception of reality is realized through cognitive models, which function as a “container” of human experience and knowledge.

Conclusion

Discourse can be considered both as a process (verbalized speech-thinking activity) and as a result (text), as well as both simultaneously. Discourse is the outcome of an individual’s interaction with society, and its study reveals the role of discourse in shaping and managing the addressee’s thoughts.

Discourse research aims to investigate the pragmatic situation to which it is addressed, thereby clarifying the communicative adequacy of discourse and its effects. On the other hand, discursive practice is oriented toward identifying the strategies used by the addressee to understand discourse within specific contexts, as well as the ways of achieving the communicative goal.

Discourse analysis is carried out within the framework of knowledge construction, and the researcher relies not only on linguistic competence but also on knowledge of the real world, since the processes of speech comprehension and production activate all knowledge systems stored in the human cognitive system.

Discourse is not merely a verbal manifestation of the subject; it is also an indicator of what the subject thinks, knows, and communicates. Discourse is a systematic means of processing linguistic thought as well as empirical experience, where categories of past and future, actual and possible worlds converge under both experiential and ideal conditions, along with rules of interaction and other principles.

Discourse does not possess historical or rhetorical universality; rather, it consists of a limited number of utterances that emerge and are realized within a specific time. Therefore, discourse is the result of cognitive and linguistic processing of empirical experience manifested through propositions within a particular spatio-temporal environment.

STRUCTURAL UNIVERSALISM AND THE LINGUISTIC TAPESTRY: A COMPREHENSIVE ANALYSIS OF CROSS-LINGUISTIC CONVERGENCE

Aisel HASANOVA

The degree of bachelor of arts in English philology with a Minor in Psychology

Department of ILIA STATE UNIVERSITY

E-mail: Aisel.hasanova.1@iliauni.edu.ge

ORCID ID: 0000-0001-2345-6789

Abstract: This research paper provides an extensive examination of the intrinsic structural and cognitive bonds that unify the global linguistic landscape. By synthesizing generative grammar with contemporary phonological research and semantic mapping, the article posits that language is a biological manifestation rather than a purely cultural construct. The study systematically explores the hierarchical development of color terminology and the prevalence of spatial metaphors as empirical evidence of a shared cognitive architecture. Ultimately, the findings suggest that the perceived diversity of modern languages masks a highly consistent deep structure that facilitates cross-cultural cognition, mutual comprehension, and evolutionary social cohesion across diverse human populations. By demonstrating how underlying biological constraints shape diverse linguistic structures, this investigation bridges formal linguistics and cognitive science. The proposed framework highlights the fundamental principles governing human communication, offering critical insights into how innate mental processes structure complex linguistic variations across distinct cultural and geographical contexts worldwide.

Аннотация: В данной исследовательской работе приводится всесторонний анализ внутренних структурных и когнитивных связей, объединяющих мировой языковой ландшафт. Путем синтеза генеративной грамматики с современными фонологическими исследованиями и семантическим картированием в статье утверждается, что язык является биологическим проявлением, а не сугубо культурным конструктом. В исследовании систематически изучается иерархическое развитие терминологии цвета и распространенность пространственных метафор как эмпирическое доказательство общей когнитивной архитектуры. В конечном итоге полученные результаты свидетельствуют о том, что видимое разнообразие современных языков скрывает высокопоследовательную глубинную структуру, которая способствует межкультурному познанию, взаимопониманию и эволюционной социальной сплоченности различных человеческих популяций. Демонстрируя, как базовые биологические ограничения формируют разнообразные языковые структуры, данное исследование связывает формальную лингвистику и когнитивную науку.

Предлагаемая концептуальная модель освещает основополагающие принципы, регулирующие человеческую коммуникацию, и предоставляет важные данные о том, как врожденные ментальные процессы структурируют сложные языковые вариации в различных культурных и географических контекстах по всему миру.

Ключевые слова: языковые универсалии, универсальная грамматика, фонологические ограничения, семантическое картирование, когнитивная архитектура, кросс-лингвистический анализ.

Introduction

The inquiry into the commonalities of human language represents one of the most significant challenges in modern philology. While the surface structures of the world's seven thousand languages offer a spectacle of infinite variety, the underlying mechanisms of communication suggest a profound level of convergence. This study seeks to unravel the threads that connect these diverse systems through the lens of structural universalism.

For decades, the debate between linguistic relativity and universalism has dominated the field. However, recent advancements in neuro-linguistics and computational modeling have provided renewed support for the universalist perspective. We argue that despite the geographical and cultural distances between speech communities, the cognitive blueprints for language remain remarkably consistent across the human species.

I. Theoretical Foundations of Universal Grammar

The concept of Universal Grammar (UG) serves as the cornerstone of this analysis. Proposed by Noam Chomsky, UG posits that humans are born with an inherent set of structural rules that facilitate language acquisition. This innate faculty allows children to navigate the 'poverty of the stimulus' – the fact that they learn complex systems far more quickly than their exposure to language would suggest.

At the heart of UG is the principle of recursion. The ability to nest phrases within phrases is a bond shared by all human languages, from the Indo-European family to the isolated tongues of the Siberian tundra. This recursive nature allows for the generation of an infinite number of sentences from a finite set of rules, optimizing for both clarity of expression and ease of cognitive processing.

Furthermore, the distinction between functional and lexical categories appears to be a universal constant. Every language requires mechanisms to identify the 'actors' (nouns) and 'actions' (verbs) within a narrative. While the morphological marking of these categories varies, the conceptual requirement remains identical.

II. The Biological Constraints of Sound and Phonology

Beyond abstract syntax, language is physically manifest in the human vocal apparatus. The linguistic tapestry is limited by the physiological boundaries of the larynx, the tongue, and the nasal cavity. This shared biology results in phonological universals that act as a shared auditory foundation.

Statistical surveys of phonemic inventories reveal that certain sounds are significantly more common than others. The cardinal vowels, particularly /a/, /i/, and /u/, form the core of most vowel systems due to their acoustic distinctiveness and ease of articulation. Similarly, the presence of 'stop' consonants like /p/, /t/, and /k/ is nearly universal. These sounds represent the most efficient way for the human mouth to interrupt airflow to create meaning.

Moreover, the concept of sonority and the syllable structure follow predictable patterns. The CV (Consonant-Vowel) syllable is the most basic building block of speech, appearing in every known language. This suggests that the rhythmic 'pulse' of human language is a biological constant.

III. Semantic Mapping and the Geometry of Thought

The most profound bonds within the linguistic tapestry are the shared ways in which we conceptualize reality. Semantic mapping refers to the process by which languages categorize the sensory world. Research into basic color terms demonstrated that the evolution of color vocabulary follows a universal hierarchy, starting with black and white, moving to red, and eventually encompassing blue and green.

Additionally, the work on 'Conceptual Metaphors' has shown that human thought is largely metaphorical and that these metaphors are shared across languages. The conceptualization of 'Time as a Space' (e.g., 'the years ahead') appears in cultures that have had no historical contact. These cognitive echoes suggest that the human mind has a preferred geometry for thought, utilizing physical experience to describe internal lives.

IV. Evolutionary Synthesis and Cognitive Symmetry

The evidence presented underscores a singular conclusion: linguistic diversity is a superficial phenomenon resting upon a bedrock of universal constants. The capacity for language emerged as a singular adaptation that remains consistent. This explains the remarkable phenomenon of translatability; even the most culturally specific texts can be rendered into other tongues by reaching the 'deep structure' where universal bonds reside.

Modern neuroimaging has revealed that regardless of the specific language being processed, the same regions of the brain are activated. This neuro-linguistic symmetry proves that the bond of language is deeper than sound; it is a fundamental cognitive process.

Conclusion

In summary, this research has explored the structural, biological, and cognitive threads that constitute the Linguistic Tapestry. From the recursive rules of Universal Grammar to the physiological limits of phonology and shared metaphors, the bonds of language are pervasive. By acknowledging these universals, we gain a deeper appreciation for the unity of the human experience. Language is a bridge that connects every individual to the collective wisdom of the species.

USE OF LANGUAGE SKILLS IN THE CONTEXT OF PROMINENT PERSONALITIES

Sevil Mirhasan ISAYEVA

Lecturer, Mingachevir State University

E-mail: sevil.isayeva@mdu.edu.az

ORCID ID: 0000-0002-8918-7216

Abstract: This article examines the importance of language skills in the context of prominent personalities and their influence on society. The study highlights that effective communication skills play a significant role in shaping leadership qualities, public image, and social impact. Prominent personalities, including political leaders, writers, educators, and public figures, use language as a powerful tool to inspire, persuade, and guide people. The research emphasizes that the proper use of speaking, writing, listening, and critical thinking skills contributes to successful communication and intercultural understanding. In addition, the article discusses the role of language competence in preserving cultural identity and strengthening social relations in the modern globalized world. In the modern era, the expansion of the information environment and the growth of international relations have increased the importance of language skills. The speech culture and communication strategies of prominent personalities significantly influence the development of the younger generation, shaping their worldview and social activity. The article also underlines that language is one of the main tools for expressing intellectual capacity, ethical values, and cultural identity. Proper development of language skills creates broad opportunities for individuals to succeed both in professional activities and social relations. The findings demonstrate that language skills are not only a means of communication but also an essential factor in the development of influential and respected personalities as well as in the progress of society. At the same time, the development of language culture positively contributes to the formation of mutual respect and tolerant relationships among people. The article emphasizes that strong speech and communication skills are considered one of the main indicators of a successful personality in the modern world.

Keywords: language skills, communication, prominent personalities, speech culture, leadership

GÖRKƏMLİ ŞƏXSİYYƏTLƏR KONTEKSTİNDƏ DİL BACARIQLARINDAN İSTİFADƏ

Sevil Mirhəsən İSAYEVA

Müəllim, Mingəçevir Dövlət Universiteti

E-poçt: sevil.isayeva@mdu.edu.az

ORCID ID: 0000-0002-8918-7216

Xülasə: Məqalədə dil bacarıqlarından istifadənin görkəmli şəxsiyyətlərin fəaliyyətində və cəmiyyətə təsirində oynadığı mühüm rol araşdırılır. Tədqiqat göstərir ki, effektiv ünsiyyət bacarıqları liderlik keyfiyyətlərinin formalaşmasında, ictimai nüfuzun yaranmasında və sosial təsirin güclənməsində əhəmiyyətli yer tutur. Siyasi liderlər, yazıçılar, müəllimlər və digər ictimai xadimlər dil imkanlarından insanları ruhlandırmaq, inandırmaq və istiqamətləndirmək üçün təsirli vasitə kimi istifadə edirlər. Məqalədə danışmaq, yazmaq, dinləmə və tənqidi düşünmə bacarıqlarının uğurlu kommunikasiya və mədəniyyətlərarası anlaşma baxımından əhəmiyyəti xüsusi vurğulanır. Bununla yanaşı, qloballaşan dünyada dil sərəfşəsinin milli-mədəni kimliyin qorunmasına və ictimai münasibətlərin möhkəmlənməsinə verdiyi töhfə təhlil edilir. Müasir dövrdə informasiya mühitinin genişlənməsi və beynəlxalq əlaqələrin artması dil bacarıqlarının daha da aktuallaşmasına səbəb olmuşdur. Görkəmli şəxsiyyətlərin nitq mədəniyyəti və ünsiyyət strategiyaları gənc nəslin formalaşmasına, onların dünyagörüşünün inkişafına və ictimai fəallığının artmasına mühüm təsir göstərir. Məqalədə həmçinin dilin insanın intellektual səviyyəsinin, etik davranışının və mədəni dəyərlərinin ifadəsində əsas vasitələrdən biri olduğu qeyd edilir. Dil bacarıqlarının düzgün inkişafı fərdin həm peşəkar fəaliyyətində, həm də sosial münasibətlərində uğur qazanmasına geniş imkanlar yaradır. Tədqiqatın nəticələri göstərir ki, yüksək dil bacarıqları cəmiyyətin inkişafında və sağlam sosial münasibətlərin qurulmasında mühüm amil kimi çıxış edir. Eyni zamanda, dil mədəniyyətinin inkişafı insanlar arasında

qarşılıqlı hörmətin və tolerant münasibətlərin formalaşmasına da müsbət təsir göstərir. Məqalədə vurğulanır ki, güclü nitq və ünsiyyət bacarıqları müasir dövrdə uğurlu şəxsiyyətin əsas göstəricilərindən biri hesab olunur.

Açar sözlər: dil bacarıqları, ünsiyyət, görkəmli şəxsiyyətlər, nitq mədəniyyəti, liderlik.

Introduction

Society cannot develop without education, and education is considered the guarantee of the future. Only an educated and intellectually developed society can achieve progress and success. In this process, language plays a decisive role as one of the greatest strengths of every nation. Language is not merely a means of communication; it is also the foundation of national identity, cultural continuity, and social development. The existence, formation, and progress of society are closely connected with the preservation and development of language.

Language, as the national wealth of a people, also serves as a symbol of statehood. Therefore, protecting its norms, rules, and purity is regarded as the moral responsibility of every citizen. In the modern globalized world, the preservation of national languages and the determination of their future prospects depend greatly on the quality of education and language teaching. The educational process plays a significant role not only in developing communication skills but also in shaping students into intellectually mature and socially responsible individuals.

Speech culture occupies a special place in language teaching. Cultured speech refers to oral and written communication based on phonetic, lexical, grammatical, and stylistic norms of the literary language. Oral speech develops written speech, while written speech, in turn, enriches and perfects oral communication. Thus, both forms of speech contribute to the overall development of communication culture.

Linguistics, as the science of language, investigates language from social, philosophical, and functional perspectives. There is no sphere of human activity where language is not used. Language enables communication among members of society and functions as a social phenomenon. Since language is directly connected with human thought and consciousness, it also plays a central role in intellectual development.

The Azerbaijani language has developed throughout history and possesses a rich phonetic, lexical, and grammatical structure. Its musical harmony, fluency, and expressiveness distinguish it among the world's languages. From ancient times, oral folk literature and later written literature contributed significantly to the development of the language. The "Book of Dede Korkut," one of the greatest monuments of Turkic literature, demonstrates the richness and artistic power of the Azerbaijani language.

The ideas of prominent Azerbaijani intellectuals and statesmen further emphasize the importance of language culture. The great poet Nizami Ganjavi highlighted the significance of meaningful and concise speech, while Mir Mohsun Navvab stressed the ethical aspects of communication and speech culture. National leader Heydar Aliyev considered the preservation of the Azerbaijani language one of the greatest achievements of the Azerbaijani people. These views confirm that language culture has always occupied an important place in Azerbaijani intellectual thought.

In recent years, the integration of Azerbaijan into the Bologna educational process has increased attention toward communicative competence. Modern specialists, regardless of their field, must possess strong oral and written communication skills. Therefore, the development of

communicative competence and literary speech has become one of the main goals of higher education.

This article examines the role of language skills, speech culture, and communicative competence in the context of prominent personalities and modern education. The study highlights the importance of literary pronunciation, language norms, and communication ethics in shaping socially active and intellectually developed individuals.

Materials and Methods

The present research is based on theoretical and analytical approaches related to linguistics, pedagogy, communication studies, and speech culture. Comparative, descriptive, and analytical methods were applied throughout the study. Various linguistic and pedagogical sources concerning language teaching, communicative competence, literary pronunciation, and speech culture were examined and systematized.

Particular attention was paid to the analysis of literary language norms, including phonetic, lexical, grammatical, and stylistic aspects. The study investigated the role of orthoepic norms, stress, and intonation in oral communication and their influence on the effectiveness of speech. Examples from educational practice and public communication were used to illustrate the importance of correct pronunciation and cultured speech.

The works and ideas of prominent Azerbaijani intellectuals and public figures such as Nizami Ganjavi, Mir Mohsun Navvab, and Heydar Aliyev were analyzed in order to reveal the historical and cultural significance of language skills. Their views concerning speech ethics, meaningful communication, and the preservation of language culture formed an important theoretical basis for the study.

In addition, the research considered the modern educational environment and the requirements of the Bologna Process regarding communicative competence. The study explored the necessity for future specialists to express their ideas effectively both orally and in written form. Educational documents, methodological approaches, and linguistic theories related to communication skills were comparatively analyzed.

Theoretical generalization and interpretation methods were also used to summarize the findings and determine the role of language culture in intellectual, moral, and social development.

Results and Discussion

The results of the research demonstrate that language plays a crucial role in shaping human thought, communication, and social interaction. Language functions not only as a means of communication but also as a tool for intellectual development and cultural preservation. The findings show that the proper teaching and learning of language contribute significantly to the formation of educated and socially active individuals.

One of the major findings of the study concerns the importance of speech culture in communication. Speech culture is formed through adherence to literary language norms at phonetic, lexical, grammatical, and stylistic levels. The study reveals that individuals possessing strong communication skills are more capable of expressing their ideas clearly, participating effectively in social interaction, and influencing audiences.

Special attention was given to oral speech and literary pronunciation. It was determined that pronunciation, intonation, and stress greatly influence the quality and effectiveness of communication. Incorrect pronunciation may distort meaning and weaken the emotional and logical

impact of speech. Therefore, observance of orthoepic norms remains one of the most important requirements of cultured communication.

The research also identified certain problems in language teaching and speech culture development. In some cases, insufficient attention is paid to orthoepy in comparison with orthography. This creates pronunciation difficulties and weakens literary speech habits among learners. The absence or limited availability of orthoepic dictionaries in recent years has also created challenges in the teaching process.

The study further demonstrates that communicative competence has become one of the main educational requirements in the modern era. Within the framework of the Bologna Process, future specialists are expected to communicate effectively, express ideas clearly, participate in discussions, and establish productive relationships both in professional and social environments. Communicative competence includes language proficiency, speech culture, professional interaction skills, and the ability to receive and transmit information.

The role of prominent personalities in promoting language culture was also emphasized throughout the research. Classical Azerbaijani poetry has always attached special importance to the ethics of speech and the appropriate use of words. The ideas expressed in literary examples demonstrate that speech should be meaningful, concise, and influential. One of the poetic examples reflecting this idea states:

“It is more pleasant to speak fewer words. Choose words like pearls, speak little, listen little, Let the world be adorned with your few words.”

These lines emphasize the value of meaningful and cultured communication. They encourage individuals to avoid excessive and meaningless speech and to use language carefully and wisely.

Another poetic example highlights the importance of selecting appropriate words while speaking:

“There are words that are improper to say, They should be expressed in another way. Who needs empty and meaningless words? Who will listen to such words?”

These verses show that effective communication requires responsibility, politeness, and awareness of the listener’s perception. The great Azerbaijani poet Nizami Ganjavi advised people to speak meaningfully and avoid empty expressions. His poetic ideas about speech culture and communication ethics remain highly relevant today. In one of his well-known poetic expressions, he wrote:

“It is more pleasant to speak fewer words. Choose words like pearls, speak little, listen little, Let the world be adorned with your few words.”

These lines emphasize the importance of concise, meaningful, and cultured speech. According to the poet, excessive and meaningless speech reduces the influence of communication and weakens its value.

Nizami Ganjavi also stressed the importance of careful word selection and the ethical responsibility of speech:

“There are words that are improper to say, They should be expressed in another way. Who needs empty and meaningless words? Who will listen to such words?”

Through these verses, the poet underlined that communication should be based on wisdom, politeness, and respect for the listener. His ideas concerning concise and wise speech continue to serve as an example for modern generations. Similarly, Mir Mohsun Navvab provided valuable recommendations regarding communication ethics, politeness, and cultured speech. He emphasized

that unnecessary repetition, emotional aggression, and meaningless speech negatively affect communication.

The views of Heydar Aliyev also occupy an important place in the study. According to him, one of the proudest pages in Azerbaijani history is the creation and preservation of the Azerbaijani language. His statements demonstrate the importance of language not only as a communication tool but also as a symbol of national identity, cultural heritage, and social unity.

Abstract: Thus, based on the points discussed and the analysis of relevant linguistic literature, the following conclusions can be drawn:

1. Implicit negation is used by the speaker to express their attitude toward the subject of negation and to convey emotions;
2. In the present article, as well as in linguistic literature, various means of expressing implicit negation have been explained;
3. In spoken discourse, implicit negation is usually manifested through specific intonation, while in written texts it appears through particular word order and contextual means

Key words: implicit negation, explicit negation, the category of negation, rhetorical question, context, irrealis modality

Introduction

In modern linguistics, the problem of “negation” occupies a very important place; however, although many research works have been devoted to this topic, it has still not been sufficiently studied.

The expression of negation in languages of different systems is considered a highly interesting problem and continues to be studied and researched. The scope of issues attracting researchers’ attention in this field is quite broad. These issues primarily include the definition of the concept of negation in different languages, the clarification of meanings of various problems united under the concept of negation, the determination of their scope, the study of means of expressing them in different languages, and the role of negation in sentence structure as a component element, etc.

In this regard, first of all, there arises the necessity to define a precise and unambiguous definition of negation in language. In Ozhegov’s explanatory dictionary of the Russian language, negation is defined as a means expressing negative information through a word or morpheme. For example, in Russian these are the words “нет”, “не”, “ни”. For instance: “Все члены семьи и домочадцы чувствовали, что нет смысла в их сожительстве...” (“All family members and household members felt that there was no sense in their cohabitation...”) (L. N. Tolstoy, *Anna Karenina*, Vol. 1, p. 5); “...каждая несчастная семья...” (“...every unhappy family...”); “...ни наука, ни искусство, ни политика...” (“...neither science, nor art, nor politics...”).

First of all, it should be noted that the concept of negation is a category inherent to all languages. That is, it exists in all languages of the world.

The great Russian scholar A. M. Peshkovsky believed that negation is an element of a sentence that shows the absence of a real connection between phenomena in reality. In modern grammar, negation is described as a special linguistic means used to express the non-existence of certain states in reality.

Two ways of expressing negation are known in linguistics. One of them is explicit (overt), and the other is implicit (covert). For example, in modern English, explicit negation is expressed directly through means such as “no”, “not”, “never”, while implicit negation is expressed through verbs like “fail”, “refuse”, “lack”, or negative prefixes (un-, in-, dis-) and is understood from the context. Let us examine the features of these two types using the English language as an example.

Explicit (Overt) Negation

Definition: Negation is directly expressed in a sentence through specific components such as “not”, “no”, “nobody”, “nothing”, “never”, “neither”.

Features: Negation is clearly visible both syntactically and morphologically.

Examples: "I do not know" (Azerb: I don't know), "There is no time" (Azerb: I have no time).

Implicit (Covert/Hidden) Negation

Features: Although there is no formal negative particle in the sentence, the meaning of the sentence expresses negation.

Means of expression:

Negative-meaning verbs: fail, refuse, lack, deny, ignore.

Prefixes: un-, im-, in-, a-, non-, -less (e.g. unhappy, impossible, careless).

Quantifiers with negative meaning: few, little.

Examples: "He failed to come" (Azerb: He did not come – he was unsuccessful in coming). "She is unhappy" (Azerb: She is not happy).

Main differences: Explicit negation directly says "no", while implicit negation expresses meaning indirectly, and the negative sense is understood from the context.

Implicit negation is sometimes used to create a more emotional or rhetorical effect.

It should be noted that, compared to explicit negation, implicit negation is more difficult to learn. Its interpretation often depends on additional factors such as context, intonation, and the speaker's level of language proficiency. For this reason, implicit negation is more frequently found in spoken language than explicit negation.

In spoken discourse, it is easier to detect implicit negation through intonation than in written form. In written language, this function is performed by context and grammatical constructions. Let us consider an example from Russian literature: "Не платят оброка. Что ты будешь делать?" (Azerb: "They do not pay taxes. What will you do?") (Turgenev, *Fathers and Sons*).

The first sentence contains explicit negation and has only one clear meaning. The second sentence, however, can be interpreted in different ways. Outside of context, it may be understood as a simple question about future actions. However, in context, it loses its literal interrogative meaning and acquires a negative implication such as "you cannot do anything in this situation."

Since the study of implicit negation is scientifically more interesting, we will now examine some constructions that help express hidden negation.

Implicit Negation Constructions

This analysis is based on modern Russian language materials. In modern Russian, the following constructions help to understand implicit negation (translation from Russian into Azerbaijani is ours):

1) Word order, future tense verbs "стать/быть" + personal pronouns

Consider two phrases outside context: "I will start writing" and "Start I writing".

The first sentence is understood as a simple affirmative statement. The second, however, may express implicit negation or ironic rejection (e.g. "I will start writing? As if I need that!").

A similar situation is observed with the construction "буду я": "I will dance" expresses a future action, while "Will I dance!" can imply refusal or negation ("I will not dance at all").

Thus, word order and intonation indicate that a sentence which appears affirmative on the surface may become negative in meaning.

2) Constructions with "очень нужно" + imperfective verbs

Consider:

"It is very necessary to consult" and "It is very necessary to consult (regularly)".

The first sentence is a clear affirmative statement. The second may acquire different meanings, including an ironic or negative one (e.g. “We really need to consult him = We actually don’t need his advice, we can manage ourselves”).

Thus, such constructions can express implicit negation depending on context and intonation.

3) Constructions with the word “охота”

In modern Russian, “охота” can mean “to want” (e.g. “I want to sleep”). However, in negative or rhetorical contexts it may change meaning: “Охота тебе его держать?” (Azerb: “Do you really need to keep him?” / “Why would you keep him?” – Turgenev, *Rudin*).

Here the meaning implies: “You do not need to keep him.”

Thus, “охота” can carry an implicit negative meaning depending on context.

If we analyze these constructions, we can conclude that words with positive meaning may turn into negative ones depending on intonation, word order, and context. Russian verbs such as “буду” and “стану” express intention in their direct meaning, but in expressive or ironic usage they can indicate strong refusal (“I am not going to do it at all”).

4) Constructions with “какой”

In dialogues, “какой” constructions often express implicit negation as a reaction of disagreement or emotional rejection. For example, Arkady in *Fathers and Sons* responds emotionally: he denies being a “great man of the world” and also denies being accustomed to luxury.

Such constructions are often used to express emotional objection rather than literal meaning.

5) Constructions with “куда/где/когда + dative case”

These constructions often express impossibility or lack of ability: “Where could I go after her!” – meaning “I cannot go after her.”

Thus, they express implicit negation through rhetorical structure.

6) Interrogative sentences, rhetorical questions, and the particle “только”

Any interrogative sentence may contain implicit negation. Rhetorical questions differ from real questions because they do not require an answer and often imply negation.

The particle “только” removes ambiguity and strengthens the negative implication: “Why did he do this?” vs “Why did he only do this?” – the second implies that it should not have been done.

7) Constructions with “чтобы”

Such sentences often express strong implicit negation and irreality: “That I should be the first to reconcile?!” → meaning “I will never be the first to reconcile.”

Thus, implicit negation can also be expressed through irrealis modality.

Purpose of using implicit negation

An interesting question is why implicit negation is used instead of explicit negation, which is easier to understand. Most sentences expressing implicit negation are marked by exclamation or question marks, which shows their expressive and intonational function.

Thus, implicit negation is used when it is necessary to express emotions, attitude, or irony clearly and vividly.

The purpose of using implicit negation.

It should be noted that, compared to explicit negation, implicit negation is more complex to acquire. Its comprehension sometimes depends on additional factors such as context, intonation,

and the level of language proficiency. For this reason, implicit negation is encountered more frequently in spoken language than explicit negation.

In oral speech, it is easier to identify implicit negation through intonation than in written language. In written discourse, this function is carried out by context and grammatical constructions. Let us consider an example from Ivan Turgenev's novel *Fathers and Sons*: "Не платят оброка. Что ты будешь делать?" (Azerbaijani: "They do not pay the tax. What will you do?"). In the first sentence, there is explicit negation, and it has only one clear and understandable meaning. The second sentence, however, can be interpreted in different ways. If we look at it outside of context, it may be understood as a question about someone's future plans. However, within the context, this sentence loses its ambiguity and takes on a negative meaning: in the given situation, there is nothing you can do. Since the study of implicit negation is more interesting from a scientific perspective, below we will focus on some constructions that help express hidden negation. One of the interesting questions is what purpose is pursued in the use of implicit negation, which—unlike explicitly expressed negation—requires greater cognitive effort and knowledge.

If we examine the examples given above, we can see that most sentences containing implicit negation are marked with exclamation and question marks. This, in itself, reflects the expression of the language's intonational and expressive functions. Thus, it can be concluded that implicit negation is used when there is a need to clearly express one's attitude or emotions toward a particular situation. It is also used when it is necessary to convey an ironic attitude. A number of researchers have determined that the perception of implicit negation in young children occurs quite differently. For example, based on examples collected from children's literature, it has been established that for understanding implicit negation, intonation is more important than context. Only through intonation is it possible to grasp the correct meaning of a sentence. In turn, only by understanding implicit negation can a text be properly comprehended. Below are examples from children's literature that researchers consider important in terms of how implicit negation is perceived by young children aged 7–8.

- Pulling a sour face, Ron said: "Really?"-what kind of particles are being referred to here? "As if I really needed to swallow Crabbe's nail clippings!" (*Harry Potter and the Chamber of Secrets*, by J. K. Rowling);
- On the way, Totochka attacked some seaweed, sniffing it and tearing it apart with his paws. Eddie asked, "Is it a water rat?" -"As if I would worry about that rubbish!" Totochka replied indifferently. "No, there's something much better here!" (*The Wizard of the Emerald City*, by Alexander Volkov);
- Nils asked hesitantly: "You did wake them up, didn't you?" -"Of course! As if I should pamper them!" (*The Wonderful Adventures of Nils*, by Selma Lagerlöf);
- "Why didn't you look at the elephant?" -"Oh, as if I really needed to look at its ears again! Better let's go drink soda water." (*Dunno in Sunny City*, by Nikolay Nosov);
- "I don't understand who would want to spend their time on melting keys." (*Harry Potter and the Chamber of Secrets*, by J. K. Rowling);
- Knopochka shouted: "Be quiet, Pestrenky! Do you really feel like arguing over every little thing?" (*Dunno in Sunny City*, by Nikolay Nosov).

Methodology and Materials

Thus, we can see that in children's literature there are quite a number of constructions that contain implicit negation. It is essential for young children to understand these constructions. Analysis shows that the comprehension of constructions containing implicit negation increases with age. In general, after the age of six, children begin to understand implicit negation and to distinguish it from affirmation. These results are explained by findings from the University of Montreal, whose analysis shows that children start to grasp implicit negation only around the age of six.

The understanding of implicit negation is also strongly influenced by the specific features of different languages. For example, in English, alongside the grammatical negation expressed by "do not," there exists a parallel verb with inherently negative meaning—"to fail." Compare: *He failed to appear* and *He didn't appear* (Azerbaijani: *O gəlmədi / görünmədi*). This verb can also itself take a grammatical negative form: *Don't fail to let me know* (Azerbaijani: *Mənə xəbər verməyi unutma*).

(Forget) - In English, implicit negation can be expressed through words such as *absence*, *absent*, *to overlook* (to ignore, not to take into account), *to lack* (to be missing, not to obtain), *lack* (absence, deficiency), etc. Compare: *He is not present* (= *He is absent*).

Similar words likely exist in other languages as well. For example, in Russian, one of the most widespread lexical means expressing negation is «нет» ("no," "there is not"; in colloquial speech «нету»). In linguistic literature, there are differing opinions regarding the classification of this word into parts of speech and the determination of its semantics, and this area presents certain difficulties.

Discussion

Indeed, if the word «нет» is used at the beginning or end of a sentence, it may function as a negative particle expressing denial, disagreement, or objection. For example:

"- Slander!" cried Fedulov in a breaking voice. "No, it is not slander. People will not allow lies" (F. Abramov, *Brothers and Sisters*). "- I am not demanding by nature, no" (I. Turgenev). In such cases, the word «нет» can be intensified by particles such as *да*, *уж*, *ну никак*, or by repetition (*нет-нет*).

At the same time, it should be noted that the word «нет» can also function as an impersonal verb, a sentence-word, a concessive conjunction, and even as a noun form. For this reason, it cannot be strictly assigned to a single part of speech. The key point is that «нет» conveys a specific lexical meaning. The phraseological unit «нет-нет (да)» ("now and then") expresses periodicity and, in this case, functions adverbially: "...now and then funeral notices would arrive in Pekashino..." (F. Abramov). This is perhaps the only case where «нет» does not express negation.

In all other cases, «нет» conveys negation, including:

absence: *Совести у тебя нет* (= you have no conscience);

lack of possession: *Opened the шкаф — there are no books*;

refusal, resistance, or protest: *No to nuclear war! No to the arms race! No to the neutron bomb!*

Sentences beginning with «нет» that carry strong evaluative meaning (positive or negative) can easily be transformed into affirmative constructions. For example: "*There is no playwright greater than Shakespeare*" (= Shakespeare is the greatest playwright).

In Russian, another word often used in impersonal sentences and expressing implicit negation is «нельзя» ("it is not allowed," "it is impossible"):

"*You must not drink kvass*" (M. Gorky).

Implicit negation can also be expressed at the level of the whole sentence, where its interpretation depends on context. For example:

"*You would have to search the whole world to find a bathhouse like mine...*" (F. Abramov).

Only from the context does it become clear that implicit negation is conveyed here: such a bathhouse does not exist anywhere.

Implicit negation may also be expressed through *privatives*. In linguistics, *privatives* (from Latin *privativus* -"denying, indicating absence") are words, verbs, or morphemes that express the absence, lack, or removal of a feature, object, or action.

Their main characteristics include:

- **Semantics of absence:** privative words (especially verbs) indicate the non-existence of something;
- **Privative verbs:** often denote the loss or removal of a property (e.g., *to clean* - to remove dirt; *to peel* - to remove the skin);
- **Contextual privatives:** some words express absence only within a specific context.

Conclusion

The variability of means expressing implicit negation through privatives, as well as their interaction with other negation components in extended texts, plays an important role in distinguishing subtle shades of affirmation and negation, including logical and emotional-expressive nuances. This also reveals the richness of functional-semantic and stylistic variation in communication.

Consider the following example:

- "Unfortunately, it is beyond our capacity to dwell extensively on these issues."
- "Unfortunately, it is not possible to dwell on these issues." (= it is impossible)
- "It is not true that it is beyond our capacity to dwell extensively on these issues."

The category of privation can be approached both broadly and narrowly. In a broad philosophical sense, it denotes "absence," non-existence, or deprivation of a material substance. In other words, privatives do not denote the object itself, but rather its absence, deficiency, or lack relative to existing objects.

Applied to parts of speech:

- **Nouns:** express relative absence of material substance;
- **Adjectives:** indicate the lack of expected qualities or features;
- **Verbs:** denote non-performance, interruption, or cessation of an action or state.

Thus, implicit negation and privative structures reflect not only logical negation but also nuanced meanings of absence, deficiency, and expressive evaluation within language.

SOCIAL CONTEXT AND INDIVIDUAL PERCEPTION: THE STUDY OF ENGLISH PUBLICISTIC TEXTS IN A PSYCHOLINGUISTIC DIMENSION

Gulshan Bayram NASIROVA

PhD Student, Institute of Linguistics named after Nasimi

National Academy of Sciences of Azerbaijan

Teacher, Mingachevir State University

E-mail: gulshan.nasirova@mdu.edu.az

ORCID ID: [0009-0008-9266-6403](https://orcid.org/0009-0008-9266-6403)

Astract: This empirical study investigates the intricate relationship between social context and individual cognitive perception within English publicistic texts from a psycholinguistic perspective. Publicistic discourse functions not merely as an informational medium, but as an ideological catalyst that actively shapes societal attitudes and mental representations through strategic framing, evaluative lexis, and metaphoric density (Fairclough, 2015; Chilton, 2004). Utilizing a rigorous mixed-methods research design combining eye-tracking technology, concurrent think-aloud protocols, and psychometric assessments across a corpus of 50 contemporary socio-political texts, this research measures how socio-cultural cues impact real-time reading effort and inferential depth among 40 advanced non-native scholars and 20 native control participants.

The empirical findings reveal that high emotional valence and culture-specific institutional references trigger statistically significant increases in gaze duration ($p < 0.01$) and regression counts ($p < 0.05$), highlighting heightened cognitive load during lexical integration. Furthermore, while advanced non-native readers experience increased processing latency when decoding complex metaphorical clusters compared to native controls, their ultimate thematic retention remains comparable when sufficient contextual scaffolding is provided. This supports the mental models theory of comprehension, verifying that text processing in socio-political domains is an active, socially mediated cognitive construction (Johnson-Laird, 1983; van Dijk & Kintsch, 1983). Practically, these insights offer valuable frameworks for optimizing cross-cultural journalistic accessibility and enhancing critical literacy pedagogy in advanced language classrooms.

Keywords: Psycholinguistics, Publicistic Texts, Social Context, Cognitive Perception, Eye-Tracking, Discourse Analysis, Pragmatic Inference.

SOSIAL KONTEKST VƏ FƏRDİ QAVRAYIŞ: İNGİLİSDİLLİ PUBLİSİSTİK MƏTNLƏRİN PSIXOLİNGVİSTİK ASPEKDƏ TƏDQIQI

Gülşən Bayram NƏSİROVA

Doktorant, AMEA Nəsimi adına Dilçilik İnstitutu

Müəllim, Mingachevir Dövlət Universiteti
E-mail: gulshan.nasirova@mdu.edu.az
ORCID ID: [0009-0008-9266-6403](https://orcid.org/0009-0008-9266-6403)

Xülasə: Bu empirik tədqiqat ingilisdilli publisistik mətnlərdə sosial kontekst və fərdi idrak qavrayışı arasındakı mürəkkəb əlaqəni psixolinqvistik aspektdən araşdırır. Publisistik diskurs sadəcə informasiya vasitəsi kimi deyil, strateji çərçivələmə, qiymətləndirici leksika və metaforik sıxlıq vasitəsilə ictimai rəyi və zehni təmsilləri fəal şəkildə formalaşdıran ideoloji katalizator rolunu oynayır (Fairclough, 2015; Chilton, 2004). 50 müasir sosio-siyasi mətndən ibarət korpus üzərində baxış izləmə (eye-tracking) texnologiyasını, səsli düşünmə protokollarını və psixometrik qiymətləndirmələri birləşdirən ciddi qarışıq üsullu tədqiqat dizaynından istifadə edən bu araşdırma, 40 qabaqcıl qeyri-nöqtəvi (xarici) tədqiqatçı və 20 ana dili daşıyıcısı olan nəzarət iştirakçısı arasında sosial-mədəni ipuçlarının real vaxt oxu sayına və inferensial dərinliyə necə təsir etdiyini ölçür.

Empirik nəticələr göstərir ki, yüksək emosional valentlik və mədəniyyətə xas instusional istinadlar leksik inteqrasiya zamanı idraki yükün artmasını vurğulayaraq, baxış müddətinin ($p < 0.01$) və reqressiya sayının ($p < 0.05$) statistik cəhətdən əhəmiyyətli dərəcədə artmasına səbəb olur. Bundan əlavə, qabaqcıl qeyri-ana dili oxucuları mürəkkəb metaforik qrupları deşifrə edərkən ana dili daşıyıcıları ilə müqayisədə daha uzun emal gecikməsi yaşasalar da, kifayət qədər kontekstual dəstək təmin edildikdə onların son tematika saxlama səviyyəsi bənzər qalır. Bu, mətnin dərk edilməsinin zehni modellər nəzəriyyəsini dəstəkləyir və sosio-siyasi domenlərdə mətn emalının fəal, sosial vasitəçiliklə həyata keçirilən idraki konstruksiya olduğunu təsdiqləyir (Johnson-Laird, 1983; van Dijk & Kintsch, 1983). Praktik olaraq, bu nəticələr çarpaz mədəni jurnalistik əlçatanlığın optimallaşdırılması və qabaqcıl dil siniflərində tənqidi savadlıq pedaqogikasının gücləndirilməsi üçün dəyərli çərçivələr təqdim edir.

Introduction

Publicistic discourse – encompassing editorials, opinion columns, and socio-political essays – serves as a primary conduit between macro-level societal structures and micro-level individual cognition. Unlike purely informative reports, English publicistic texts are inherently evaluative, persuasive, and ideological. Authors intentionally deploy strategic framing, metaphoric clusters, and emotionally charged lexis to shape public opinion and guide behavioral responses (Fairclough, 2015; Chilton, 2004). However, the societal efficacy of publicistic writing cannot be fully understood through textual analysis alone; it requires a rigorous psycholinguistic examination of how individual readers decode, process, and internalize these messages in real time.

From a cognitive perspective, text comprehension is an active constructive process. Readers build mental models by integrating incoming linguistic signals with pre-existing schemata and socio-cultural beliefs (Johnson-Laird, 1983; van Dijk & Kintsch, 1983). When processing English publicistic texts, the human cognitive architecture must manage multiple levels simultaneously: lexical access, syntactic parsing, pragmatic inference, and ideological evaluation (Levelt, 1989; Sperber & Wilson, 1995).

Despite extensive research in media linguistics and cognitive psychology, a critical empirical gap remains regarding how individual cognitive perception intersects with social contexts during publicistic text processing. While macro-level rhetorical strategies are well-documented, few

empirical studies combine quantitative psycholinguistic tracking with practical readability metrics to measure how socio-political texts alter individual mental representations.

This study investigates the precise mechanisms through which social context modulates individual cognitive perception during the reading of English publicistic texts. Specifically, this research aims to: (1) measure how evaluative lexis and ideological framing impact eye-tracking fixation durations and cognitive load; (2) evaluate the processing differences between advanced non-native readers and native controls when resolving pragmatic ambiguities; and (3) establish a practical psycholinguistic framework to optimize publicistic text comprehension and instructional design.

Materials and Methods

This study implemented a rigorous mixed-methods psycholinguistic design, integrating high-precision tracking technologies with qualitative protocol analysis to measure real-time cognitive processing.

- **Corpus Construction:** A specialized corpus of 50 English-language publicistic texts (2023–2025) was compiled from leading opinion platforms (*The Guardian*, *The New York Times*, *The Economist*). Texts were curated around contemporary socio-economic, environmental, and geopolitical themes to ensure uniform topical engagement.

- **Participant Demographics:** A purposive sample of 60 participants was divided into two distinct experimental groups:

1. *Advanced Non-Native Group (n=40):* University-level postgraduate scholars and researchers (C1/C2 English proficiency, aged 22–35).
2. *Native Control Group (n=20):* Native English-speaking professionals of comparable educational backgrounds.

- **Data Collection Instruments:**

3. *Eye-Tracking Metrics:* A desktop eye-tracker (500 Hz) recorded first fixation duration, gaze duration, total reading time, and regression counts specifically isolated around socio-political keywords, ideological buzzwords, and metaphoric constructions.
4. *Think-Aloud Protocols:* Following designated reading blocks, participants verbalized their immediate cognitive impressions, inferential reasoning, and emotional reactions, which were recorded and transcribed for discourse-cognitive coding.
5. *Post-Reading Psychometric Scale:* A 7-point Likert scale instrument assessing perceived persuasive impact, emotional resonance, cognitive difficulty, and alignment with the author's pragmatic intent.

- **Analytical Procedures:** Quantitative eye-tracking metrics were evaluated using repeated-measures ANOVA to determine statistical significance. Qualitative think-aloud transcripts underwent thematic content analysis to classify cognitive schema activation and ideological interpretation pathways.

Results and Discussion

The empirical analysis yielded substantial evidence demonstrating that the socio-cultural framing and evaluative lexis of English publicistic texts directly dictate reader cognitive processing patterns. Eye-tracking data revealed that instances of high emotional valence and loaded socio-political terminology (e.g., *polarization*, *systemic reform*, *geopolitical resilience*, *crisis*) triggered statistically significant increases in gaze duration and regression counts ($p < 0.01$), indicating heightened cognitive effort during lexical integration and pragmatic evaluation.

Comparative analysis between the groups highlighted distinct processing behaviors. Advanced non-native readers exhibited significantly longer processing times and higher regression frequencies when encountering complex metaphoric clusters and culture-specific institutional references compared to native controls. Rather than processing these terms automatically, non-native readers relied heavily on macro-contextual scaffolding provided in the surrounding paragraph to resolve pragmatic ambiguity. This finding aligns closely with the mental models theory of comprehension, verifying that readers construct situation models by actively merging textual input with pre-existing sociocultural knowledge structures (Johnson-Laird, 1983; van Dijk & Kintsch, 1983).

Textual Feature / Psycholinguistic Metric	Advanced Non-Native Readers (n=40)	Native Control Group (n=20)	Statistical Significance (p-value)	Effect Size (Cohen's d)
Mean Fixation Duration (Evaluative Lexis)	285 ms	210 ms	$p < 0.01$	$d = 0.82$ (Large)
Regression Count per 100 Words	14.2	8.6	$p < 0.05$	$d = 0.65$ (Medium)
Metaphorical Inference Processing Time	1,450 ms	980 ms	$p < 0.01$	$d = 0.91$ (Large)
Thematic Retention Score (out of 10)	8.1	9.3	$p > 0.05$ (Not Significant)	$d = 0.35$ (Small)

Practically speaking, these findings indicate that text comprehension in publicistic genres is heavily mediated by the reader's pre-existing cultural schemata. When texts introduce unfamiliar institutional contexts, cognitive friction increases exponentially. Pedagogically, instructors utilizing publicistic texts in advanced language classrooms must incorporate pre-reading contextual scaffolding and explicit conceptual framing to reduce cognitive bottlenecks and enhance critical literacy. Furthermore, journalists and publicistic writers aiming for cross-cultural accessibility should moderate dense metaphoric clustering or provide immediate contextual glosses to ensure efficient cognitive processing across diverse readership demographics.

Conclusion

This investigation into the psycholinguistic dimensions of English publicistic texts demonstrates that individual perception is inextricably linked to socio-cultural context and text-level framing strategies. Quantitative eye-tracking metrics and qualitative protocols confirm that evaluative lexis, metaphoric density, and ideological cues directly dictate reading effort, fixation patterns, and inferential depth. While advanced non-native readers exhibit higher cognitive load when navigating culturally embedded metaphors, their ultimate thematic retention parallels that of native speakers when adequate contextual scaffolding is present. By bridging text-level linguistic

features with reader-level cognitive mechanisms, this study highlights that text comprehension in socio-political domains is an active, socially mediated cognitive construction. Future research should expand demographic parameters, incorporate longitudinal tracking of ideological shifts, and utilize neuroimaging methodologies (such as fMRI or EEG) to map real-time neural activation during socio-political text processing.

ACOMPARATIVE ANALYSIS OF TEXT AND DISCOURSE

Sevinj Sultan İSMAYILOVA

Senior Researcher, Department of Sociolinguistics and Psycholinguistics,
Institute of Linguistics, Azerbaijan National Academy of Sciences.

English Language Lecturer, PhD Candidate, Sumgait State University

E-mail: sevincismayilova77@gmail.com

ORCID ID: 0009-0008-0016-7448

Abstract: The article provides a comprehensive comparison of the concepts of “text” and “discourse”, examining their common features, fundamental differences, and the theoretical contradictions surrounding their definitions. In Azerbaijani linguistics, the concepts of text and discourse are often treated as the same phenomenon; however, this study, based on their ontological nature, argues that they must be sharply distinguished. In the research, text is regarded as a static and structured linguistic product, while discourse is opposed to it as a dynamic and psycholinguistic process. In other words, text has a static structure and form; it is a stable linguistic unit that exists in written or oral forms and is preserved in a fixed manner. Discourse, on the other hand, is a dynamic process. It is a linguo-psychological phenomenon that expresses the thoughts and attitudes of the speaker or writer, that is, the active communicator, during communication. The article generally considers that text is created in a pre-conceived and planned manner. In reality, however, what is planned and realized is the discursive situation itself, and discourse emerges as a result of this process. Text, in turn, is formed as a reflection and representation of this process in language. In conclusion, it is emphasized that a deep understanding of the specific features of both concepts is of fundamental importance for the adequacy of linguistic analysis.

Keywords: text, discourse, text-discourse distinction, communicative process, linguo-psychological approach, discourse analysis.

MƏTN VƏ DİSKURSUN MÜQAYİSƏLİ TƏHLİLİ

Xülasə: Məqalədə “mətn” və “diskurs” anlayışları hərtərəfli şəkildə müqayisə olunur, onların ortaq cəhətləri, və prinsipial fərqləri və tərifləri ətrafındakı nəzəri ziddiyyətlər araşdırılır. Azərbaycan dilçiliyində mətn və diskurs anlayışlarına çox vaxt eyni məsələ kimi yanaşılır, bu tədqiqat onların ontoloji mahiyyətinə söykənərək kəskin şəkildə fərqləndirilməli olduğunu müdafiə edir. Araşdırmada mətn - statik və strukturlaşmış bir dil məhsulu kimi götürülür, diskurs isə dinamik və psixolinqvistik bir proses kimi ona qarşı qoyulur. Başqa sözlə, mətn statik bir quruluşa, formaya malikdir, yazılı və ya şifahi növləri mövcud olan, sabit şəkildə saxlanılan bir dil struktur vahididir. Diskurs isə dinamik bir prosesdir. O, ünsiyyət zamanı danışanın və ya yazanın, yəni aktiv kommunikanın fikir və münasibətlərini ifadə edən linqvo-psixoloji fenomendir. Məqalədə bir qayda olaraq belə hesab edilir ki, mətn əvvəlcədən düşünülmüş və planlaşdırılmış şəkildə yaranır. Əslində isə planlaşdırılan və reallaşan diskursiv situasiyanın özü və bu proses nəticəsində yaranan diskursdur. Mətn isə bu prosesin dildə əks və təsvir olunması nəticəsində yaranır. Nəticə olaraq vurğulanır ki, hər iki anlayışın özünəməxsus xüsusiyyətlərini dərinlən anlamaq linqvistik təhlilin adekvatlığı üçün fundamental əhəmiyyət kəsb edir.

Açar sözlər: mətn, diskurs, mətn-diskurs fərqləndirilməsi, kommunikativ proses, linqvo-psixoloji yanaşma, diskurs təhlili.

Introduction

Numerous research works have been dedicated to the common and differing aspects of the concepts of “text” and “discourse,” including the question of whether they express the same or similar notions. Nevertheless, we found it necessary to dedicate this article specifically to this issue. This is because, in Azerbaijani linguistics, the concepts of text and discourse are often treated as the same phenomenon. In reality, discourse is a linguo-psychological phenomenon that comprehensively reflects the overall communicative materials and participants arising in a discursive situation. As for text, it can generally be defined as the written expression of a sequence of speech utterances produced by participants in communication. At present, in modern research, given the growing interest in complex linguistic units, determining the boundaries of such relevant yet controversial concepts as text and discourse is of particular importance. There are numerous interpretations of these concepts and terms.

Materials and Methods

The present study is based on the analysis of numerous theoretical sources devoted to the concepts of text and discourse. Comparative and descriptive methods have been applied in order to identify the similarities and differences between these concepts. The research relies on the examination of linguistic, psycholinguistic, and interdisciplinary approaches, as well as on the analysis of viewpoints proposed by various scholars.

According to E.S.Kubryakova, numerous scientific studies are encountered where various forms of speech manifestations are studied under the name of “text” and this is not surprising at all (Kubryakova, 2001). The researcher believes that the text should be considered a natural category,

including peripheral elements alongside ideal examples. These peripheral elements also have the right to be called a text. The researcher suggests that prototypical texts usually include narratives, letters, encyclopedias, newspaper articles, etc. (Kubryakova, 2004). Regarding the same issue, T.Litvinenko is of the opinion that peripheral texts are structures expressed through any signaling means other than natural language (Litvinenko, 2008).

The existence of numerous definitions related to the concepts of text and discourse indicates that these concepts are multifaceted and that scholars' perspectives on this topic vary, while also showing that these concepts are in a constant process of development, that is, they evolve over time. Currently, there is a tendency for these concepts to converge, which is observed in the definitions given for text and discourse. However, actual reality shows the opposite.

Results and Discussion

Theoretical Approaches and Definitions. The broad definition proposed by S.N. Plotnikova regarding discourse allows for the elimination of many contradictions encountered in understanding this concept. In the definition provided by S.N. Plotnikova, the semantic difference and boundary between the concepts of text and discourse disappear (Plotnikova, 2008). V.E. Chernyavskaya, who deals with the study of scientific texts, emphasizes that the text is a multidimensional form and notes that the structure of the text is inseparably linked with a complex of extralinguistic factors built upon its linguistic features (Chernyavskaya, 2010).

As seen from these interpretations, the different approach to text and discourse stems from the postmodernist positions of linguists. Along with this, the idea that intertextuality covers all spheres and the general position of presenting the world as a text (Derrida, 2000) leads to the disappearance of the boundary between text and discourse. The idea of accepting the world as a text and the text as a sign is supported in philosophy and literary studies. Y.M. Lotman presents culture as a complex union within a text and divided into a hierarchy of texts, while presenting the complex structures that create texts as the basis or foundation of the text (Lotman, 2005). The researcher deals with the problem of intertext (text within a text) based on the works of Argentine authors, primarily proceeding from the conceptual metaphors of "the world as a text" and "the text as a world".

Common and Differing Features. In some studies directly related to linguistics, text and discourse are accepted as close but different concepts. The similarities between these concepts play a significant role in terms of studying the communicative functions of language. Thus, both text and discourse serve the purpose and intent of transmitting information between people, expressing thoughts, or exerting influence. Both discourse and text occur in a specific communication environment (Veysalli, 2010).

The text, as a rule, combines the lexical and grammatical units of language. Sentences, word combinations, and expressions hold an important place in the structure of the text. In fact, both text and discourse are directly related to the context or the process of communication. The content layer of both depends on the conditions of their creation and on social and cultural factors. These factors act as units that ensure the semantic integrity and logical connection of both the text and the discourse. Both text and discourse are perceived by the reader or listener as a semantically completed whole and both are constructed according to certain structural rules.

In addition to the similarities listed between text and discourse, there are a number of differences. Thus, text has a static structure and form; it is a stable linguistic unit that can exist in written or oral forms and is preserved in a fixed manner. Discourse, however, is a dynamic process.

It is a linguo-psychological phenomenon that expresses the thoughts and attitudes of the speaker or writer, that is, the active communicator, during communication.

Text mainly encompasses content that exists within language and is stabilized in written form. Texts can be understood independently of context. Discourse, on the other hand, plays a fundamental role in the formation of context itself. The meaning of discourse can only be fully reconstructed by taking into account the conditions of its production and its participants, that is, the discursive situation as a whole.

Text is a finished product, it represents the final result of the communication process. For example, if a letter has already been written, it is considered a completed text. Discourse, however, is the overall description of the process of writing that letter, that is, the activity itself. Discourse emerges at the moment when people are engaged in communication. Text, however, is formed later as a result of recording that communication process.

As a rule, it is considered that text is created in a pre-planned and structured manner. In fact, what is planned and realized is the discursive situation itself and the discourse that emerges as a result of this process. Text, in turn, is formed as a result of the reflection and representation of this process in language.

In some cases, discourse can arise spontaneously, and in such situations, it takes on an informal character. It should also be noted that the formation of text sometimes occurs simply as a result of recording speech, while in other cases, along with speech, the description of the situation in which it was produced is also included in the overall text. So, text is a linguo-psychological phenomenon resulting from the recording of speech and the situation in which it was produced.

Text is mainly studied in linguistics from syntactic, grammatical, and semantic perspectives. Discourse, however, serves as an object of research in studies related to cognitive linguistics when investigating psychological problems of language, and it can also be studied within sociolinguistics and pragmatics. Text can be fixed in written, oral, or sometimes digital form. Discourse is usually produced orally, and its recording as written text is carried out later.

Interaction and Mathematical Modeling. In specific linguistic directions and individual research, their relationship and difference are determined in various ways: from general formulas to the application of specific equations:

$$\text{Discourse} = \text{Text} + \text{Speech Situation}$$

$$\text{Text} = \text{Discourse} - \text{Speech Situation} \text{ (Asgarov, Ismayilova, 2025) .}$$

This dichotomy is characteristic not only for the movement of scientific thought but also for human cognition - mastering oneself, others, and reality through the formation of binary contradictions. Text is exclusively an intra-linguistic phenomenon, while discourse is both an intra-linguistic phenomenon like a text and an extralinguistic phenomenon.

Conclusion

In our opinion, although there are common features between text and discourse in terms of essence, they are different concepts. The text acts as a static and stable linguistic unit, while discourse expresses the dynamic processes of communication. The text is a more structured and independently existing linguistic or linguistic-psychological structure. Despite these differences, just as a text is created on the basis of discourse, discourse can be restored on the basis of a text.

Understanding the text is presented and interpreted differently in various fields of linguistics. In psycholinguistics, the main focus is on the suggestive potential and psychological essence of the text. In sociolinguistics, the text is viewed as a communicative phenomenon created by a specific

social group. We believe that discourse and text cannot be separated from each other, but it is also a great mistake to consider them the same thing. The text is the only possibility in terms of observing and recording the forms of manifestation of discourse. Discourse is realized in the text and, at the same time, through the text. The differences between text and discourse make it possible to conduct research on these concepts in different directions. Nevertheless, just as text emerges on the basis of discourse, discourse can also be reconstructed on the basis of text.

VIOLATION OF LANGUAGE NORMS IN THE MEDIA

Associate Professor Aynur NASIROVA

Doctor of Philosophy in Philology

Baku State University, Faculty of Journalism,

Head of the Department of International Journalism and Information Policy

E-mail: aynur.bsu@gmail.com

ORCID ID: [0000-0002-2463-8813](https://orcid.org/0000-0002-2463-8813)

Abstract: The preservation of the Azerbaijani language in the media is one of the pressing issues of our time. This is not only a philological matter but also a question of national security, cultural identity, and social responsibility.

The call by the President of the Republic of Azerbaijan, Ilham Aliyev, addressed particularly to journalists regarding the protection of the purity of the Azerbaijani language—voiced at the meeting dedicated to the 80th anniversary of the Azerbaijan National Academy of Sciences on November 3, 2025, and in his interview with local television channels on January 5, 2026—has further increased the relevance

of this issue. Noting that journalists constitute the majority in the broadcasting space, the head of state brought the importance of paying attention to this problem to the agenda.

Language is not merely a means of communication; it is national identity, history, and culture. The media plays a crucial role in presenting the language to society, preserving its purity, and ensuring its proper use. In the modern media environment, frequent violations of the norms and principles of the Azerbaijani language are observed, especially in audiovisual media, where adherence to language and stylistic norms is essential. Otherwise, formal and informal styles become mixed, academic speech weakens, the level of professional communication declines, and future generations lose correct linguistic models. Incorrect expressions and the excessive use of foreign words entering the media—often regarded as a mirror of society—alter the semiotics of the language. The pursuit of speed and the principle of “being the first to break the news” push quality into the background. Unfortunately, there are cases when the person reading the text does not understand its content and merely voices it mechanically, which leads to serious problems.

Orthographic, orthoepic, lexical, and syntactic errors, the unjustified use of foreign words, the unadapted presentation of expressions borrowed from Russian and English, flaws in sentence structure, and the inclusion of jargon in official information are among the main issues. Stress errors in presenters’ speech, mispronounced words, and non-literary expressions are factors that directly influence the audience. A society that takes the media as a model begins to adopt these expressions in everyday speech. As a result, the younger generation develops a different attitude toward the language.

The causes of these problems include the shortage of professional editors, insufficient language training of journalists, the prioritization of rapid news dissemination over editing, and the prevalence of rpybe stylistic errors in pursuit of ratings.

The problem can be addressed by strengthening language control within media institutions. For this purpose, it is essential to restore the institution of professional editors and to conduct regular training sessions on language and speech culture.

MEDİADA DİL NORMALARININ POZULMASI

Dosent Aynur NƏSİROVA

Filologiya elmləri üzrə fəlsəfə doktoru

Bakı Dövlət Universiteti, Jurnalistika Fakültəsi

Beynəlxalq jurnalistika və informasiya siyasəti kafedrasının müdiri

E-mail: aynur.bsu@gmail.com

ORCID ID: [0000-0002-2463-8813](https://orcid.org/0000-0002-2463-8813)

Xülasə: Mediada Azərbaycan dilinin qorunması günümüzün problemlərindəndir. Bu, yalnız filoloji məsələ yox, həm də milli təhlükəsizlik, mədəni identiklik və ictimai məsuliyyətdir.

Azərbaycan Respublikası Prezidenti İlham Əliyevin 2025-ci il noyabrın 3-də Azərbaycan Milli Elmlər Akademiyasının 80 illik yubileyi münasibətilə keçirilən iclasda və 2026-cı il yanvarın 5-də yerli televiziya kanallarına müsahibəsində Azərbaycan dilinin saflığının qorunması ilə bağlı xüsusilə jurnalistlərə çağırışı bu məsələni daha da aktuallaşdırıb. Efir məkanında daha çox jurnalistlərin olduğunu deyən dövlət başçısı problemə diqqətin vacibliyini gündəmə gətirib.

Dil sadəcə ünsiyyət vasitəsi yox, milli kimlik, tarix, mədəniyyətdir. Media dilin cəmiyyətə təqdimatında, saflığının qorunmasında və düzgün istifadəsində mühüm rol oynayır. Müasir media məkanında Azərbaycan dilinin norma və prinsiplərinin tez-tez pozulması müşahidə olunur, xüsusən də audiovizual mediada dil-üslub normalarının qorunması şərtidir. Əks təqdirdə rəsmi və qeyri-rəsmi üslub qarışır, akademik

nitq zəifləyir, peşəkar ünsiyyət səviyyəsi aşağı düşür, gələcək nəsil düzgün modeli itirir. Cəmiyyətin güzgüsü olan mediaya ayaq açan yanlış ifadələr, xarici sözlərdən istifadə dilin semiotikasını dəyişir. Operativlik, "xəbər ilk bizdə çıxsın" prinsipi keyfiyyəti arxa plana keçirir. Təəssüf ki, bəzən mətni oxuyan şəxs məzmunu anlamır, oxuduğunu mexaniki şəkildə səsləndirir. Bu isə ciddi problemlərə gətirib çıxarır. Orfoqrafik, orfoepik, leksik və sintaktik səhvlər, xarici sözlərin əsassız istifadəsi, rus və ingilis dillərindən alınmış ifadələrin təhrif olunmadan təqdimatı, cümlə quruluşundakı qüsurlar və jarqonların rəsmi məlumatlara daxil edilməsi əsas problemlərdəndir. Aparıcıların nitqindəki vurğu səhvləri, düzgün tələffüz olunmayan sözlər və qeyri-ədəbi ifadələr auditoriyaya birbaşa təsir göstərən amillərdəndir. Medianı nümunə hesab edən cəmiyyət bu sözləri gündəlik nitqə keçir. Nəticədə gənc nəsillə fərqli yanaşır.

Bu problemlərin yaranmasının səbəbi isə peşəkar redaktorların azlığı, jurnalistlərin dil hazırlığının zəifliyi, sürətli xəbər yayımının redaktəni arxa plana keçirməsi, reytingə naminə kobud üslub səhvlərinin olmasıdır.

Problem media qurumlarında dilə nəzarətinin gücləndirilməsi ilə aradan qaldırıla bilər. Bunun üçüncü peşəkar redaktor institutunun bərpası, mütəmadi dil və nitq mədəniyyəti təlimlərinin keçirilməsi mütləqdir.

Açar sözlər: Azərbaycan dili, dil normaları, audiovizual media, dil pozuntuları, xarici sözlər

Introduction

Language is the fundamental factor that preserves a nation's national identity, historical memory, and cultural heritage. One of the most essential indicators of any people's existence is its language. The Azerbaijani language stands as one of the core pillars of our state independence, national-spiritual values, and cultural heritage.

In the contemporary era of the information society, the impact of the media on language has grown significantly. Television, radio, internet portals, and social media platforms influence the daily speech of millions of people. From this perspective, the media is not merely a tool for transmitting information, but also a vital institution that shapes and disseminates linguistic norms.

The protection of the state language in the Republic of Azerbaijan is a priority direction of state policy. The Decree of the President of the Republic of Azerbaijan dated November 1, 2018, "On measures regarding the protection of the purity of the Azerbaijani language and the further improvement of the use of the state language," is considered a crucial step implemented in this field. That document established the protection, development, and ensuring the correct application of the Azerbaijani language across all spheres of public life as core directions of state policy. (E-Qanun)

Language violations observed in the media space in recent years have further heightened the urgency of this issue. Particularly in audiovisual media, the use of non-literary words, excessive use of foreign words, stress and pronunciation errors, syntactic flaws, and stylistic confusion attract serious attention.

Norms of the Azerbaijani Literary Language

Literary language norms constitute a system of language rules accepted by society and considered mandatory for use. In the Azerbaijani language, these norms are classified into orthographic, orthoepic, lexical, grammatical, and stylistic norms.

Orthographic Norms Orthographic norms determine the correct spelling of words. The modern spelling rules of the Azerbaijani language were approved by the Decision of the Cabinet of Ministers No. 174 dated April 16, 2019. These norms ensure uniformity in written speech and are considered the primary reference source in preparing media texts. (E-Qanun)

Orthoepic Norms Orthoepic norms regulate the correct pronunciation of words. The orthoepy norms of the Azerbaijani language were approved in 2021, establishing the core principles of modern literary pronunciation. The application of these norms carries significant importance, particularly for television and radio journalists. (E-Qanun)

Lexical Norms Lexical norms entail the use of words in accordance with their meanings. The protection and development of the language's vocabulary structure constitute the primary objective of these norms.

Stylistic Norms Stylistic norms ensure that speech is structured in alignment with its purpose and content. Adhering to the requirements of the journalistic style is considered an essential condition for professional activity in journalism.

Main Forms of Language Violations in Modern Azerbaijani Media

Orthoepic Violations One of the most frequently encountered problems in audiovisual media is the violation of correct pronunciation rules. The fact that presenters and reporters frequently misplace stress and pronounce certain words differently from their normative forms directly impacts the audience. For instance, frequent errors are made in the pronunciation of place names, foreign proper nouns, and terms. Because the speech of television presenters is accepted by society as a model, these errors spread more rapidly.

Lexical Violations The excessive use of foreign words in the media is one of the most widespread issues. Using words of English and Russian origin while equivalents exist in the Azerbaijani language negatively affects the purity of the language. For example:

- It is more appropriate to use "**tədbir**" instead of "event";
- "**rəy**" instead of "feedback";
- "**son tarix**" instead of "deadline";
- "**fəaliyyət nəticəsi**" instead of "performance";
- "**görüş**" instead of "meeting".

The mass usage of such words causes a weakening of the language's national characteristics.

Syntactic Violations Sentence constructions translated directly from foreign languages are frequently encountered in internet media and news portals. These sentences do not comply with the syntactic rules of the Azerbaijani language and reduce text comprehension. For instance, expressions such as "*Nazir vurğuladı ki, layihə tərəfindən həyata keçiriləcək tədbirlər...*" are considered linguistically flawed.

Stylistic Violations The use of colloquial elements, jargon, and emotional expressions in official news is another widespread problem. For example, expressions such as "**şok qərar**" (shock decision), "**sensasion hadisə**" (sensational event), and "**partlayış effekti yaratdı**" (created an explosion effect) weaken the principle of objectivity in informative texts.

The Impact of Social Media on Language Norms

The development of digital media and social networks has created a new communication environment. The fast-sharing culture on social media has led to a weakening of language oversight. The widespread adoption of abbreviated words, emojis, and symbols as part of the text, non-compliance with Latin graphic rules, and avoidance of using unique Azerbaijani letters have become prevalent. This process particularly affects the written speech of youth, resulting in a noticeable divergence from literary language norms.

National Security Aspects of Language Violations

Language is an essential component of national security. The weakening of a language can result in the weakening of national identity and cultural heritage. While the influence of foreign languages is inevitable under conditions of globalization, the preservation of the national language remains a strategic task. From this perspective, the responsibility of media organizations is even greater.

The aforementioned 2018 Decree of the President of the Republic of Azerbaijan specifically emphasized that protecting the purity of the language is a core direction of state policy. Based on that Decree, the Monitoring Center under the State Language Commission was established, and mechanisms for overseeing the application of the state language were strengthened. (President.az)

Causes of the Problem

Research demonstrates that the main causes of language violations in the media include:

- A decrease in the number of professional editors;
- Inadequate linguistic preparation among journalists;
- The weakening of the editing process in the name of operational speed;
- The influence of social networks;
- Competition for ratings and audiences;
- The absence of continuous training courses on speech culture.

Because news is broadcast rapidly in many media organizations, sufficient time is not allocated to language editing. As a result, various linguistic flaws are presented to the public.

Recommendations

To resolve the problem, implementing the following measures is advisable:

- Strengthening the institution of professional editors within media organizations;
- Organizing regular language and speech culture training sessions for journalists;
- Conducting orthoepy courses for television presenters;
- Expanding the monitoring conducted by the Monitoring Center under the State Language Commission;
- Strengthening media language curricula in university journalism programs;
- Implementing artificial intelligence-based language checking systems in media editorial offices;
- Developing specialized language standards for social media journalism.

Conclusion

The protection of language norms in the media is not merely a philological issue, but also a matter of national security, cultural identity, and information policy. The modern media environment must serve the development of the Azerbaijani language and consider the protection of literary language norms as one of its primary duties.

Analyses indicate that the number of orthoepic, lexical, syntactic, and stylistic violations in audiovisual and digital media is increasing. Overcoming these problems requires joint efforts from state institutions, media organizations, and journalists alike. Protecting the purity of the Azerbaijani language is an inseparable part of preserving national and spiritual values.

COGNITIVE-LINGUISTIC ANALYSIS OF PARTICIPLES IN ARABIC AND AZERBAIJANI: INTEGRATION OF ACTION AND ATTRIBUTE CATEGORIES

Lala Hasameddin ALIGULIYEVA

PhD in Philology, Associate Professor, Baku Aurasia University, Azerbaijan University,
Azerbaijan University of Languages

ORCID ID: 0000-0002-4312-8982

Abstract: This study examines the cognitive-linguistic properties of participles in Azerbaijani and offers a comparative analysis of their realization in Arabic and English. While participles are traditionally treated as non-finite verb forms, this research conceptualizes them as hybrid units that integrate the categories of action and attribute within human cognition. The analysis shows that participles convert dynamic processes into static properties, forming a "frozen action" model that enables more efficient and structured conceptualization of reality.

In Azerbaijani, participles are formed through agglutinative suffixes; in Arabic, through a root-and-pattern morphological system; and in English, through analytic forms such as *-ing* and *-ed*. Despite these typological differences, participles across all three languages exhibit similar semantic and cognitive functions. The comparative findings indicate that participles consistently encode the transformation of action into result and attribute, a process that can be explained through conceptual integration.

The study concludes that participles are not merely grammatical forms but also manifestations of universal cognitive mechanisms. This underscores their importance in exploring the relationship between language and thought and highlights their relevance in cognitive-linguistic research.

Keywords: participles, cognitive linguistics, conceptual integration, linguistic typology, Azerbaijani language, Arabic language.

ƏRƏB VƏ AZƏRBAYCAN DİLLƏRİNDƏ FEİLİ SİFƏTLƏRİN KOQNİTİV-LİNGVİSTİK TƏHLİLİ: HƏRƏKƏT VƏ ƏLAMƏT KATEQORİYALARININ İNTEQRASIYASI

Xülasə: Bu tədqiqatda Azərbaycan dilində feili sifətlərin koqnitiv-lingvistik xüsusiyyətləri araşdırılır və onların müxtəlif dil sistemlərində, xüsusilə ərəb və ingilis dillərində təzahürü müqayisəli şəkildə təhlil olunur. Feili sifətlər ənənəvi olaraq felin qeyri-şəxsi forması kimi izah edilsə də, bu işdə onlar insan təfəkkürünün məhsulu kimi, hərəkət və əlamət kateqoriyalarını birləşdirən hibrid vahidlər kimi qiymətləndirilir. Tədqiqat göstərir ki, feili sifətlər dinamik prosesləri statik xüsusiyyətlərə çevirərək “dondurulmuş hərəkət” modeli yaradır və bu, insanın dünyanı daha yığcam və sistemli qavramasına xidmət edir. Azərbaycan dilində şəkilçilər vasitəsilə, ərəb dilində kök-şablon sistemi ilə, ingilis dilində isə analitik formalarla ifadə olunan feili sifətlər semantik baxımdan eyni funksiyanı yerinə yetirir. Müqayisəli təhlil nəticəsində müəyyən olunur ki, bu formalar hər üç dildə hərəkətin nəticəyə və xüsusiyyətə transformasiyasını təmin edir və konseptual integrasiya mexanizmi ilə izah olunur. Tədqiqatın nəticələri feili sifətlərin yalnız qrammatik kateqoriya deyil, həm də universal koqnitiv mexanizm kimi çıxış etdiyini göstərir. Bu isə dil və düşüncə münasibətlərinin öyrənilməsində feili sifətlərin mühüm yer tutduğunu təsdiq edir.

Açar sözlər: feili sifət, koqnitiv dilçilik, konseptual integrasiya, dil tipologiyası, semantik transformasiya, dil və düşüncə əlaqəsi, Azərbaycan dili, ərəb dili.

Introduction

One of the central paradigmatic shifts in contemporary linguistics is the reconceptualization of language not merely as a formal structural system, but as an integral component of human cognition. In this regard, the emergence of cognitive linguistics in the late twentieth century has foregrounded the intrinsic relationship between linguistic structures and the processes of perception, categorization, and conceptualization through which individuals interpret reality (Lakoff, 1987; Langacker, 2008). Within this framework, language is understood not simply as a communicative tool, but as a structured manifestation of conceptual organization.

In Azerbaijani linguistics, participles have traditionally been examined within morphological and syntactic paradigms, with considerable attention devoted to their formal structure, derivational markers, and syntactic functions (Hüseynzadə, 1983; Kazımov, 2010). However, their role as cognitive constructs—specifically, as mechanisms that integrate the conceptual domains of action and attribute—remains insufficiently theorized. This gap highlights the need for a cognitively grounded re-evaluation of participial forms.

Participles occupy an intermediary and hybrid position within the grammatical system. On the one hand, they preserve core verbal features such as temporality, aspectuality, and event structure; on the other hand, they assume adjectival functions by encoding attributes and modifying nominal

referents. Constructions such as *the arriving guest*, *the burning light*, and *the collapsing building* illustrate how an originally dynamic event is reinterpreted as a stable, attributive property. This transformation exemplifies the fluidity between dynamic (processual) and static (qualitative) conceptual domains within linguistic representation.

From a cognitive-linguistic perspective, this phenomenon can be conceptualized as a form of conceptual reification, whereby temporally unfolding events are cognitively recast as enduring properties. In other words, the human mind abstracts and stabilizes dynamic processes, encoding them as relatively fixed attributes within the mental lexicon. This process aligns with broader principles of cognitive economy and processing efficiency (Croft & Cruse, 2004). In this sense, participles can be interpreted as linguistic instantiations of “frozen” or “compressed” events.

In modern linguistic inquiry, the analysis of language extends beyond the descriptive modeling of structural forms to encompass its function as a direct reflection of cognitive activity. Within this paradigm, participles acquire particular significance as they embody the intersection of grammatical form and conceptual structure. They represent not merely a morphological category, but a complex cognitive configuration that integrates action and attribute within a unified representational schema. Furthermore, recent advances in neurolinguistics and psycholinguistics underscore the importance of understanding how such hybrid forms are encoded, processed, and retrieved within the mental lexicon.

The aim of the study is to investigate the cognitive-linguistic properties of participles in the Azerbaijani language and, comparatively, across typologically distinct languages, with a focus on identifying the mechanisms through which they mediate between the conceptual domains of action (dynamicity) and attribute (stativity).

The objectives of the study are as follows:

- To examine the core concepts of cognitive linguistics—such as *scanning*, *profiling*, and *mental spaces*—within the framework of participial constructions;
- To delineate the grammatical and semantic boundaries of participles across typologically different languages (agglutinative and inflectional systems);
- To analyze the cognitive functions of participles and their role in the categorization of reality, drawing on comparative data from Azerbaijani and Arabic.

Methodology and Materials

This research is based on the principles of cognitive linguistics and comparative-typological analysis. The primary objective of the study is to investigate participles as cognitive and grammatical structures in Azerbaijani and Arabic, with particular attention to their semantic, functional, and conceptual properties. The methodology combines theoretical, descriptive, comparative, and cognitive-linguistic approaches in order to provide a comprehensive explanation of how participles function as transitional forms between verbs and adjectives.

The theoretical framework of the research is grounded in the works of major representatives of cognitive linguistics, including Ronald Langacker, George Lakoff, Leonard Talmy, Gilles Fauconnier, Mark Turner, and Vyvyan Evans (Langacker, 2008; Lakoff, 1987; Talmy, 2000; Fauconnier & Turner, 2002; Evans & Green, 2006). Their approaches to categorization, profiling, conceptual blending, and prototype theory form the conceptual basis of the study.

The research applies the comparative-typological method in order to identify similarities and differences between Azerbaijani and Arabic participial systems. Azerbaijani, as an agglutinative language, and Arabic, as a root-and-pattern inflectional language, provide two distinct typological

models for the formation and conceptualization of participles. The comparison of these languages allows the study to reveal both language-specific and universal cognitive mechanisms.

The study also employs descriptive and semantic analysis. Participial constructions are examined according to their grammatical structure, syntactic functions, semantic meanings, and contextual usage. Particular attention is paid to the transformation of dynamic actions into static attributes, which is considered one of the major cognitive functions of participles.

In addition, the cognitive-linguistic method is used to analyze how participles reflect conceptualization processes in human cognition. Within this framework, participles are interpreted not merely as grammatical forms, but as cognitive tools that enable the compression, categorization, and economical representation of information.

The cognitive approach adopted in this research is based on the assumption that language is closely connected with human thought and perception. Cognitive linguistics views linguistic structures as reflections of conceptual organization rather than as isolated grammatical systems. From this perspective, participles are regarded as hybrid structures that combine the semantic features of action and attribute.

One of the central theoretical concepts used in this study is prototype theory proposed by George Lakoff (1987). According to this theory, linguistic categories are organized around central and peripheral members. Participles occupy a peripheral position because they simultaneously display verbal and adjectival properties. For example: the writing student → ongoing action; the written letter → completed result.

These examples demonstrate that participles are cognitively flexible forms capable of shifting between process-oriented and attribute-oriented meanings (Lakoff, 1987).

Another important concept applied in the study is Ronald Langacker's theory of profiling. According to Langacker, language highlights only specific aspects of a broader conceptual structure (Langacker, 2008). In participial constructions, the entire event is not profiled; instead, a selected phase or result of the action is foregrounded. For instance, in the phrase "the laughing child," the action of laughing is conceptualized not as an independent event but as a characteristic of the child.

The study also relies on conceptual blending theory developed by Gilles Fauconnier and Mark Turner (2002). Participles emerge through the integration of two conceptual domains:

1. action/process;
2. attribute/property.

The combination of these domains creates a hybrid conceptual structure (Fauconnier & Turner, 2002). Thus, participles represent the cognitive synthesis of dynamic and static meanings.

Furthermore, the research considers Leonard Talmy's notion of reification, according to which dynamic processes can be transformed into stable conceptual entities (Talmy, 2000). Participles reflect this process by converting actions into descriptive properties.

The materials used in this research consist of participial constructions collected from Azerbaijani and Arabic linguistic sources, grammar books, academic studies, and illustrative examples from both languages. The selected examples represent active and passive participial forms, attributive constructions, lexicalized participles, and substantivized forms.

The Azerbaijani data include examples formed with participial suffixes such as: -an / -ən; -mıſ / -mıſ; -acaq / -əcək; -ası / -əsi.

These forms demonstrate the agglutinative structure of Azerbaijani and its ability to express temporal and aspectual meanings through suffixation (Comrie, 1976).

The Arabic data focus primarily on: *ism al-fā'il* (active participle); *ism al-maf'ūl* (passive participle).

Examples derived from Arabic root-and-pattern morphology are analyzed to demonstrate how actions are conceptualized as permanent or temporary qualities. For instance, forms such as *kātib* ("writer/writing") and *maktūb* ("written") illustrate the semantic transition from action to attribute (Ibn Jinni, 1952, Vol. 1, p. 92).

The corpus of examples was selected according to the following criteria:

- relevance to participial structures;
- representation of cognitive and semantic functions;
- typological significance;
- frequency and clarity of usage.

The examples were analyzed comparatively in order to identify common cognitive mechanisms underlying participial constructions in both languages.

The comparative analysis forms one of the core methodological components of the research. Azerbaijani and Arabic belong to different language families and typological systems, which makes their comparison particularly valuable for understanding universal and language-specific properties of participles.

In Azerbaijani, participles are generally formed through suffixation, reflecting the agglutinative character of the language. These forms preserve verbal properties such as the ability to govern objects while simultaneously functioning as adjectives.

In Arabic, participles are formed through morphological patterns based on consonantal roots. This root-and-pattern system demonstrates a different cognitive mechanism of conceptual organization. While Azerbaijani relies on linear affixation, Arabic encodes grammatical and semantic meanings through internal morphological structure.

Despite these structural differences, the comparative analysis demonstrates several functional similarities:

- transformation of actions into attributes;
- compression of information;
- representation of temporality;
- enhancement of descriptive expression.

For example:

Azerbaijani: "yanan şam" (burning candle);

Arabic: "mušta'il" (burning).

Similarly:

Azerbaijani: "yanmış şam" (burned candle);

Arabic: "muhtaraq" (burned).

In both languages, participles distinguish between process and result, indicating their dual semantic nature.

The analysis also examines substantivization. In Azerbaijani, participles may function as nouns, as in "gələnlər" ("those who arrive"). Similarly, Arabic forms such as "al-qādimūn" carry nominal functions while retaining verbal semantics.

The semantic analysis in this study focuses on the cognitive transformation of action into attribute. Participles are interpreted as linguistic manifestations of conceptual compression and cognitive economy.

One of the main cognitive properties of participles is the “frozen action” model. A dynamic process is represented as a stable characteristic. For example: the burning candle → ongoing process; the burned candle → completed result.

This transformation reflects how human cognition organizes temporal information. Participles allow speakers to compress extended actions into compact descriptive forms.

The study also examines the role of participles in linguistic economy. Compare the following constructions: the guest who arrives; the arriving guest.

The second structure conveys the same meaning more economically (Croft & Cruse, 2004). This supports the cognitive principle that language tends to maximize information while minimizing structural complexity.

Another aspect of the analysis concerns the center–periphery model proposed by prototype theory. Prototypical verbs express dynamic actions, whereas prototypical adjectives express stable qualities (Lakoff, 1987). Participles occupy an intermediate position between these categories, inheriting features from both.

This peripheral status provides participles with cognitive flexibility. Depending on context, a participle may be interpreted as closer either to verbal dynamism or adjectival stability. For example: the crying child → emphasis on ongoing action; the educated man → emphasis on stable quality.

The study also investigates lexicalization and semantic stabilization. In both Azerbaijani and Arabic, certain participles gradually lose their verbal meaning and acquire stable lexical meanings. Examples include:

Azerbaijani: “tanınmış şəxs” (well-known person);

Arabic: “ma‘rūf” (well-known).

Such forms demonstrate the process of grammaticalization and semantic change (Traugott & Dasher, 2002).

The analysis of the collected materials was conducted in several stages:

1. Identification of participial constructions in Azerbaijani and Arabic;
2. Classification according to grammatical and semantic properties;
3. Comparative analysis of morphological and syntactic features;
4. Cognitive interpretation of conceptual functions;
5. Evaluation of similarities and differences between the two languages.

Each example was analyzed in relation to:

- temporal meaning;
- aspectual interpretation;
- syntactic role;
- degree of verbal or adjectival behavior;
- cognitive function.

The findings were interpreted within the framework of cognitive linguistics in order to demonstrate how participles contribute to conceptual organization and information processing (Evans & Green, 2006).

The methodology applied in this research combines cognitive linguistics with comparative-typological analysis in order to provide a multidimensional understanding of participles. By examining Azerbaijani and Arabic participial systems comparatively, the study demonstrates that

participles are not merely grammatical forms but also cognitive instruments that mediate between action and attribute.

The selected materials and analytical methods allow the research to identify both structural differences and universal cognitive similarities between the two languages. Ultimately, the methodology highlights the role of participles in conceptual compression, categorization, semantic flexibility, and the economical organization of information within human cognition.

Discussion

The findings of the present study demonstrate that participles function as cognitively complex linguistic units mediating between the conceptual domains of action and attribute. The comparative analysis of Azerbaijani and Arabic shows that, despite typological differences, participles in both languages display significant similarities in their semantic, cognitive, and functional properties.

The analysis confirms that participles serve as mechanisms of conceptual compression, transforming dynamic processes into stable attributes. This function enhances cognitive efficiency by reducing syntactic complexity and enabling the compact representation of information. At the same time, participles play an important role in the cognitive representation of temporality by recasting events as stable conceptual entities. In both Azerbaijani and Arabic, participles express both dynamic and resultative meanings, reflecting different stages of event conceptualization.

The study also demonstrates that participles arise through conceptual integration, combining the domains of process and property into hybrid structures. Their intermediate status between verbs and adjectives supports prototype theory and explains their cognitive flexibility. Depending on context, participles may emphasize either action-oriented or attribute-oriented meanings.

Furthermore, the comparative analysis reveals that typological differences between Azerbaijani and Arabic mainly affect morphological structure, while the underlying cognitive functions of participles remain largely universal. This finding suggests that participles reflect general principles of human cognition rather than language-specific phenomena.

Overall, the study confirms that participles are not merely grammatical forms, but important cognitive tools that contribute to conceptual organization, linguistic economy, and the interpretation of experience.

Conclusion

The peripheral status of participles does not represent a weakness of language; on the contrary, it reflects its functional strength. If linguistic categories had rigid boundaries, human cognition would encounter a discontinuity when transitioning from “action” to “attribute.” George Lakoff’s prototype theory demonstrates that participles create a cognitive “buffer zone” between these two domains, thereby significantly expanding the capacity of language to represent reality.

Participles function as a kind of cognitive “processor”: they transform dynamic, potentially chaotic actions into organized, stable, and easily processable attributes. This transformation arises from the human need to perceive and structure the surrounding world in terms of categories.

Participles may be likened to the “neural nodes” of language. Without them, human perception of reality would remain fragmented into discrete temporal segments (present, past, future). However, forms such as the Azerbaijani suffix *-miş* or the Arabic *ism al-fā'il* enable us to grasp time as if it were an object. Leonard Talmy’s theory of reification plays a key role here: we “freeze” time in order to transmit it as an attribute. This represents one of the most advanced forms of abstraction in human cognition.

The concept of *thubūt* (stability), articulated by Ibn Jinni in the 10th century, closely corresponds to Ronald Langacker's notion of summary scanning in the 20th century. This parallel suggests that although languages and typological systems (agglutinative vs. inflectional) may differ, the "operating system" of the human mind has functioned according to the same principles for centuries: in order to manage action, it must be nominalized and stabilized.

The most powerful component of language is not its center (pure verbs or pure adjectives), but its periphery (participles). The center is stable but limited, whereas the periphery is flexible and generative. Through participles, language "breathes": they enable it to function simultaneously as action (verb) and as description (adjective).

In Azerbaijani, the suffix *-acaq* (e.g., *görüləcək iş*—"the work to be done") is prototypically closer to the conceptual domain of intention or potentiality. Since the future has not yet occurred, it exists in cognition as a kind of "blueprint." In this sense, the participial form with *-acaq* is perceived not merely as an action, but as a form of responsibility or projected destiny attributed to the object.

Abstract: This study examines how meaning is constructed in educational discourse through cognitive and interactional processes. The research focuses on visioning conversations among educators and explores how participants collaboratively develop shared understandings of educational transformation. In contemporary educational contexts, transformation is not limited to policy reforms or institutional changes; it is also shaped through language, dialogue, professional reflection, and collective interpretation.

A mixed-method approach was adopted, combining qualitative discourse analysis with quantitative coding of interaction patterns. Data were collected from five structured visioning conversations involving 20 educators. The discussions focused on educational access, quality, equity, future learning environments, digital transformation, teacher agency, and collaboration in educational change. A total of 150 discourse segments were analyzed according to four categories: present-oriented statements, future-oriented statements, negotiation moves, and new meaning emergence.

The findings show that meaning construction is dynamic, collaborative, and progressive. Statistical results indicate that 70% of ideas were either modified or newly generated during interaction. Cohen's kappa coefficient was calculated as $\kappa = 0.84$, confirming strong inter-rater reliability. The study concludes that educational discourse functions not only as a communicative tool but also as a cognitive and social space where new ideas, shared visions, and professional meanings are constructed.

Keywords: educational discourse, meaning construction, cognitive-discursive approach, visioning conversations, educational transformation, discourse analysis

TƏHSİL DİSKURSUNDA MƏNA YARADILMASI: VİZYON YÖNÜMLÜ DANIŞIQLARA KOQNİTİV-DİSKURSİV YANAŞMA

Leyla Arif CUMAYEVA

Xülasə: Bu tədqiqat təhsil diskursunda mənanın koqnitiv və interaktiv proseslər vasitəsilə necə formalaşdığını araşdırır. Məqalədə müəllimlər arasında aparılan "visioning conversations" tipli müzakirələr əsas götürülür və iştirakçıların təhsilin transformasiyası ilə bağlı ortaq anlayışları necə yaratdıqları təhlil edilir. Müasir təhsil mühitində transformasiya yalnız siyasət və struktur islahatları ilə məhdudlaşmır; o, həm də dil, dialoq və peşəkar ünsiyyət vasitəsilə formalaşır.

Tədqiqatda keyfiyyət və kəmiyyət metodları birgə tətbiq edilmişdir. Məlumatlar 20 müəllimin iştirak etdiyi beş strukturlaşdırılmış müzakirədən toplanmışdır. Ümumilikdə 150 diskurs vahidi təhlil edilmişdir. Diskurs vahidləri indiki vəziyyətə yönəlmiş fikirlər, gələcəyə yönəlmiş fikirlər, müzakirə və razılaşma/razılaşmama halları, həmçinin yeni mənanın yaranması kateqoriyaları üzrə kodlaşdırılmışdır.

Nəticələr göstərir ki, təhsil diskursunda məna dinamik, əməkdaşlığa əsaslanan və mərhələli şəkildə formalaşır. Statistik nəticələrə əsasən, fikirlərin 70%-i müzakirə zamanı dəyişdirilmiş və ya yeni formada yaranmışdır. Cohen's kappa göstəricisi $\kappa = 0.84$ olmuşdur ki, bu da kodlaşdırmanın etibarlılığını təsdiq edir. Tədqiqat göstərir ki, təhsil diskursu yalnız kommunikasiya vasitəsi deyil, həm də yeni ideyaların və ortaq peşəkar baxışların formalaşdığı koqnitiv-sosial məkandır.

Açar sözlər: təhsil diskursu, məna quruculuğu, koqnitiv-diskursiv yanaşma, visioning conversation, təhsil transformasiyası, diskurs analizi

Introduction

In today's rapidly changing world, educational transformation has become one of the central priorities at global, national, and local levels. Discussions about education increasingly focus on access, quality, equity, digital learning, lifelong learning, teacher development, and inclusive educational environments. However, educational transformation is not only a matter of policy documents, institutional reforms, or technological innovation. It is also a discourse-based process through which educators, learners, policymakers, and communities construct shared meanings about what education is, what it should become, and how change can be achieved.

Language plays a central role in this process. Through discourse, people define problems, express values, imagine future possibilities, negotiate priorities, and construct collective visions. Gee (2014) explains discourse as socially situated language use that shapes how individuals understand the world. Fairclough (2013) also emphasizes that discourse is connected with social practice and institutional change. From this perspective, educational discourse is not simply a neutral reflection of reality; it actively participates in shaping educational reality.

This study focuses on visioning conversations, which are structured professional discussions in which educators imagine future educational possibilities. Such conversations are important because they help participants move beyond immediate problems and begin to articulate shared aspirations for transformation. They provide a space where present realities, professional experiences, future expectations, and institutional values are brought together.

The relevance of this topic is also connected with global educational agendas, particularly Sustainable Development Goal 4, which emphasizes inclusive and equitable quality education and lifelong learning opportunities for all. In this sense, educational transformation requires not only structural reform but also meaningful professional dialogue.

The aim of this study is to examine how meaning is constructed in educational discourse through cognitive and interactional processes.

The study addresses the following research questions:

1. How is meaning constructed in educational visioning conversations?
2. What interaction patterns support meaning development?
3. To what extent do professional discussions lead to modified or new ideas?
4. How can meaning construction in educational discourse be related to SDG 4?

Literature Review

Educational discourse has become an important area of research in applied linguistics, discourse studies, and educational research. In educational settings, discourse is not limited to classroom interaction. It also includes policy documents, teacher meetings, professional development sessions, curriculum discussions, institutional communication, and reform-oriented dialogue. These forms of discourse shape how educational actors understand learning, teaching, assessment, equity, and change.

Fairclough (2013) argues that discourse is closely related to power, ideology, and social transformation. In education, this means that the way people talk about reform can influence what types of reform become possible. For example, when education is discussed mainly through the language of performance and testing, quality may be understood narrowly as measurable

achievement. However, when discourse includes concepts such as inclusion, well-being, creativity, collaboration, and lifelong learning, educational quality receives a broader meaning.

Gee (2014) similarly views discourse as a form of social action. People use language not only to communicate information but also to build identities, relationships, and social meanings. In professional educational conversations, teachers construct themselves as practitioners, learners, leaders, collaborators, and change agents. Therefore, analyzing educational discourse allows researchers to understand not only what educators say but also how they position themselves within educational transformation.

Halliday's (1994) systemic functional linguistics also provides an important foundation for understanding language as a meaning-making resource. From this perspective, language performs ideational, interpersonal, and textual functions. In educational discourse, these functions are visible when participants describe educational realities, negotiate relationships, and organize ideas into coherent visions of change.

A cognitive-discursive approach adds another important dimension. It emphasizes that meaning is constructed through the interaction between language, thought, experience, and context. Participants in discourse do not simply repeat fixed meanings. They combine prior knowledge, professional experience, institutional expectations, and future-oriented imagination. This is particularly visible in visioning conversations, where participants are invited to imagine what a better educational future may look like.

The social dimension of meaning-making is strongly connected with Vygotsky's (1978) theory of social learning. Vygotsky argues that cognitive development is mediated through social interaction. In educational discourse, this suggests that professional understanding develops through dialogue, negotiation, and shared reflection. When teachers discuss educational transformation together, they do not only express individual opinions; they also develop collective understanding.

Research on teacher collaboration also supports this view. Datnow et al. (2013) show that collaboration creates both opportunities and constraints for professional learning. Teachers may use collaborative spaces to interpret data, reflect on practice, and improve instruction. However, collaboration becomes meaningful only when participants have opportunities to speak, listen, question, and reformulate ideas. This is why structured conversations are important in professional development.

The concept of educational transformation is also closely related to system building and rebuilding. Peurach et al. (2019) discuss the movement from mass schooling to more developed education systems that organize and improve instruction. This perspective is relevant to the present study because visioning conversations can be understood as local discursive practices that help educators imagine how school systems can become more effective education and learning systems.

Leadership studies also highlight the role of dialogue in educational change. Spillane (2006) argues that leadership is distributed across people, tools, routines, and interactions. This means that transformation does not depend only on formal leaders. Teachers, students, parents, and local communities can also participate in constructing change. Visioning conversations support this distributed view of leadership by creating spaces for multiple voices.

Global educational frameworks strengthen the relevance of this research. UNESCO (2015, 2021, 2022) emphasizes inclusive, equitable, and future-oriented education. The United Nations 2030 Agenda also places education at the center of sustainable development. These frameworks

show that educational transformation requires cooperation, shared responsibility, and new ways of thinking about quality education.

However, there is still a research gap. Many studies examine educational policy, classroom interaction, or teacher collaboration separately. Fewer studies examine how meaning is constructed in structured professional conversations about future educational transformation. This study addresses that gap by combining discourse analysis, cognitive interpretation, and statistical coding.

Research Design

This study uses a mixed-method research design. Qualitative discourse analysis was used to examine how participants constructed meaning in conversation. Quantitative coding was used to identify the frequency and percentage of key discourse patterns. This combination makes it possible to interpret the data both descriptively and analytically.

Participants and Data

The study involved 20 educators who participated in five structured visioning conversations. Each conversation lasted approximately 30–45 minutes. The participants discussed educational transformation, access, quality, equity, future learning environments, teacher development, and digital learning.

A total of 150 discourse segments were selected for analysis.

Table 1. Participants and Data Overview

Variable	Description
Participants	20 educators
Number of conversations	5 sessions
Duration	30–45 minutes each
Total discourse units	150 segments
Research method	Mixed-method discourse analysis

Data Collection

The data were collected through structured visioning conversations. Participants were invited to reflect on the current state of education and imagine possible future improvements. The conversations were recorded, transcribed, and divided into discourse segments.

Coding Categories

Four main categories were used in the coding process.

Table 2. Coding Categories

Code	Category	Description
PR	Present-oriented statements	References to current problems, limitations, and existing realities
FR	Future-oriented statements	References to goals, hopes, reforms, and imagined improvements
NG	Negotiation moves	Agreement, disagreement, clarification, and reformulation
NM	New meaning emergence	New or transformed interpretations created during discussion

Reliability Analysis

To ensure reliability, two independent coders analyzed the same discourse segments. Inter-rater reliability was calculated using Cohen's kappa.

The result was:

$\kappa = 0.84$

This value indicates strong agreement between coders and confirms that the coding process was reliable.

Results and Discussion

Discourse Orientation

The first stage of analysis examined whether the discourse segments were present-oriented or future-oriented.

Table 3. Distribution of Discourse Orientation

Category	Frequency	Percentage
Present-focused statements	60	40%
Future-focused statements	90	60%
Total	150	100%

The results show that future-focused statements were more frequent than present-focused statements. This indicates that visioning conversations encourage participants to move beyond describing existing problems and begin imagining possible improvements.

Present-focused statements usually referred to limited resources, traditional teaching methods, unequal access, digital challenges, and difficulties in teacher professional development. Future-focused statements referred to inclusive education, learner-centered classrooms, digital tools, stronger teacher collaboration, and better alignment with global educational standards.

This result confirms that visioning conversations have a constructive function. They help educators transform problem-oriented discourse into possibility-oriented discourse.

Interaction Patterns

The second stage of analysis focused on interaction patterns.

Table 4. Interaction Patterns in Visioning Conversations

Interaction Type	Frequency	Percentage
Agreement	52	35%
Disagreement	30	20%
Reformulation	68	45%
Total	150	100%

The most frequent category was reformulation. This means that participants often changed, expanded, or clarified each other's ideas. Reformulation is important because it shows that meaning is not simply transferred from one speaker to another. Instead, meaning is actively reconstructed during interaction.

Agreement helped participants build shared understanding. Disagreement also played a productive role because it created opportunities for clarification and deeper explanation. However, reformulation was the strongest indicator of meaning development because it showed visible transformation in participants' ideas.

Meaning Construction Outcomes

The third stage of analysis examined whether ideas remained stable, were modified, or became completely new.

Table 5. Meaning Construction Outcomes

Outcome Type	Frequency	Percentage
Stable ideas	45	30%
Modified ideas	75	50%
New ideas	30	20%
Total	150	100%

The results show that 70% of ideas were either modified or newly created during the discussions. This finding is significant because it demonstrates the transformative potential of educational discourse. Visioning conversations do not merely collect existing opinions. They create conditions for the emergence of new interpretations.

This supports Vygotsky's (1978) view that learning and meaning develop through social interaction. It also supports Halliday's (1994) view of language as a meaning-making resource.

Figure 1. Distribution of Meaning Construction Outcomes

Figure 1 may be presented as a pie chart showing the distribution of stable, modified, and new ideas. The largest part of the chart represents modified ideas, which confirms that participants actively reshaped their thinking during discussion.

Figure 2. Development of Discourse Patterns Across Conversation Stages

Figure 2 may be presented as a line graph showing the development of discourse patterns across three stages: beginning, middle, and end. At the beginning, present-focused statements were dominant. In the middle stage, negotiation and reformulation increased. At the final stage, future-oriented and new ideas became more visible.

This pattern suggests that meaning construction is progressive. Participants first identify current realities, then negotiate interpretations, and finally construct more developed future-oriented meanings.

Connection with Sustainable Development Goals

This study is directly related to Sustainable Development Goal 4, which aims to ensure inclusive and equitable quality education and promote lifelong learning opportunities for all. The findings show that quality education is not only achieved through curriculum reform or institutional policy. It also depends on how educators understand, discuss, and construct the meaning of educational change.

Visioning conversations support SDG 4 because they promote inclusion, participation, reflection, and collaboration. They create a space where educators can discuss barriers to access, define quality in context, and imagine more equitable learning environments.

The study is also connected with SDG 17, which emphasizes partnerships for sustainable development. Meaningful educational transformation requires cooperation among teachers, students, institutions, policymakers, and communities. Visioning conversations support this partnership logic by encouraging shared responsibility and collective meaning-making.

In addition, the study has partial relevance to SDG 9, which focuses on innovation and infrastructure. In educational contexts, innovation begins not only with digital tools or institutional reforms but also with new ways of thinking and communicating. When educators generate new meanings through discourse, they create the conceptual foundation for innovation.

Conclusion

This study examined meaning construction in educational discourse through a cognitive-discursive approach. The analysis of visioning conversations showed that educational transformation is not only a policy or structural process. It is also a discursive and cognitive process in which educators construct, negotiate, and reshape meanings.

The statistical findings confirmed that 70% of ideas were modified or newly generated during discussion. This demonstrates that structured professional conversations can serve as productive spaces for educational thinking and transformation. The reliability result, Cohen's kappa $\kappa = 0.84$, confirmed that the coding process was consistent and reliable.

The study also demonstrated that educational discourse is strongly connected with global goals such as SDG 4. It shows that quality education is not only about curriculum, assessment, or technology, but also about how educators collectively understand and discuss educational change.

The article contributes to applied linguistics, discourse studies, and educational research by showing that language plays an active role in shaping educational transformation. Practically, it suggests that visioning conversations can be used by teachers, institutions, and educational leaders to develop shared understanding and support meaningful change.

Future research may expand this study by comparing discourse patterns across different universities, schools, languages, and institutional contexts. A larger corpus of educational conversations would provide deeper insight into how professional educational meanings are constructed through discourse.

THE IMAGE OF MOTHER IN MAHIRA NAGHIGIZI'S WORK IS IN THE CONTEXT OF COMMON TURKIC NATIONAL-SPIRITUAL VALUES

Bahram Jafar MAMMADOV

PhD in Philology

Head teacher of the Department of Azerbaijani Language and its Teaching Technology, ASUU

E-mail: behrammammedov@yahoo.com

ORCID ID: 0000-0002-3631-1412

Abstract: Three factors are fundamental for the formation of values in the Pan-Turkic mindset. The first of these factors is importance. Whatever characteristics the Turks attach importance to in terms of morality, it has become the unified value of the people. The second is meaning. Moral factors that gain meaning in the Pan-Turkic worldview rise to the level of value. The third is experience. Experience is the skill acquired in the past by the Turkish community, the masses, the people, and finally the society that has risen to the level of a nation, which becomes a moral value. Based on these factors, we can note that the geographical position of the Azerbaijani Turks, their transformation into many political struggle arenas in ancient times and the Middle Ages, and their possession of rich nature and lands have played a role in the creation and development of the values of an ancient people living in Azerbaijan. Mother is one of the most important values among the national-moral values of the Azerbaijani Turks. The article examines the image of Mother in the context of pan-Turkic values.

Key words: mother image, pan-Turkic ideology, national-moral values

ОБРАЗ МАТЕРИ В РАБОТАХ МАХИРЫ НАГИГИЗИ ПРЕДСТАВЛЕН В КОНТЕКСТЕ ОБЩИХ ТЮРКСКИХ НАЦИОНАЛЬНО-ДУХОВНЫХ ЦЕННОСТЕЙ.

ORCID ID: 0000-0002-3631-1412

Аннотация: Три фактора имеют основополагающее значение для формирования ценностей в пантюркском мировоззрении. Первый из этих факторов-важность. Какие бы характеристики ни придавали значение тюркам с точки зрения морали, они стали единой ценностью народа. Второй-смысл. Моральные факторы, обретающие смысл в пантюркском мировоззрении, поднимаются до уровня ценности. Третий-опыт. Опыт-это навыки,

приобретенные в прошлом турецкой общиной, массами, народом и, наконец, обществом, которое поднялось до уровня нации и становится моральной ценностью. Исходя из этих факторов, можно отметить, что географическое положение азербайджанских тюрков, их превращение во множество арен политической борьбы в древности и Средневековье, а также обладание богатой природой и землями сыграли роль в формировании и развитии ценностей древнего народа, проживавшего в Азербайджане. Мать-одна из важнейших ценностей среди национально-моральных ценностей азербайджанских тюрков. В статье рассматривается образ Матери в контексте пантюркских ценностей.

Ключевые слова: Образ матери, пантюркская идеология, национально-нравственные ценности

Intoruction

The family is a small model of the state. Every family has its own internal laws, lifestyle, and unique values. These internal laws and values unite and integrate, turning into the supreme values of society. As the first stage of social life and the primary phase of society, the family is also the starting point for the stability and development of the state. The Turkic-Azerbaijani family is no exception; if the Azerbaijani family is the first step of society and the beginning of social life, the Azerbaijani family's story begins with the Azerbaijani mother. Looking back at our history, it becomes clear that the Azerbaijani mother and woman are symbols of power, wisdom, and strength. The role of the Azerbaijani mother and woman in Azerbaijani history is undeniable. The glorious pages of our history feature plenty of heroic mother figures and real historical personalities.

In the epic "Kitabi-Dada Gorgud", Boyu Uzun Burla Khatun-daughter of the Khan of Khans of the Oghuz people and spouse of Qazan Khan; Tomris; Momine Khatun, spouse of the Seljuk ruler Toghrul II; Sara Khatun, Azerbaijan's first female diplomat and mother of Aq Qoyunlu Uzun Hasan; Zarifa Aliyeva, spouse of Heydar Aliyev, the Founder of Modern Azerbaijan and National Leader, and mother of the Victorious Commander-in-Chief Ilham Aliyev; prominent scholar Aida Imanguliyeva; and Mehriban Aliyeva, the First Vice-President of the Republic of Azerbaijan, are vivid examples of the mother figure in the socio-political life and the formation of family values of the Azerbaijani people. These historical personalities represent the highest peak of the Azerbaijani-Turkic woman and the leading figures of family values. It is precisely against the backdrop of these historical figures that the image of the mother is considered the honor of humanity, the most sublime, and the highest peak for Azerbaijani Turks. For this reason, the mother figure is regarded as a supreme value of the Azerbaijani people. Throughout centuries of Azerbaijani literature, the image of the mother has been presented as the peak of perfection and at the level of the Azerbaijani people's ideals in the artistic works of various poets and writers. It would not be wrong to say that Nigar Khanim in the epic "Koroghlu", H. Javid's play "Mother", and C. Jabbarli's poem "Mother" are the greatest monuments erected to the Azerbaijani mother and woman. The mentioned works are familiar to Azerbaijani schoolchildren; whether the epic "Koroghlu", H. Javid's tragedy "Mother", or C. Jabbarli's poem "Mother", all are included in Azerbaijani language and literature textbooks, and young people have closely engaged with the ideas, content, and linguistic features of these works.

Main part

As in all fields, progress is also evident in poetry and the art of Azerbaijani verse. From this perspective, in the work "My Mother's Book"-published in 2025 by Mahira Naghigizi, Doctor of

Philological Sciences, Professor, Vice-Rector for International Relations at ADPU, member of the Toponymy Commission under the National Assembly of the Republic of Azerbaijan, member of the Board of the Western Azerbaijan Community, Chair of the Council of Turkic World Women Scientists of the BZT Turan Academy, Honorary Professor of the Khwarazm Institute of In-Service Training and Pedagogy and the Skill Center, Honorary Professor of Ma'mun University, Honorary Professor of Tashkent University of Economics and Pedagogy of the Republic of Uzbekistan, Honorary Professor of Jizzakh State Pedagogical University of Uzbekistan, Honorary Academician of the Presidium of the World Word Academy, Honorary Academician of the Turan Academy of Sciences named after Makhpirat, and Honorary Academician of the International Academy of Sciences-poems dedicated to Mother Nazli, mother of Azerbaijani combat generals who have rendered major services to the socio-political life of Azerbaijan, draw significant attention. The poems included in "My Mother's Book" can be regarded as a verbal monument erected to the Turkic-Azerbaijani mother and woman in the persona of Mother Nazli. Every poetic sample in this book demonstrates the lofty status of the Turkic-Azerbaijani woman in Azerbaijani society. The poem "My Mother" in the book draws special attention in this regard. The poet writes in a narrative tone:

Nələr eləməyib yaşamaq üçün,
Bir ocaq yükünü daşımaq üçün.
Ey mənim oxucum, məni yandıran,
Tüstüsüz, ocaqsız alovlandıran,
Bir şirin, bir həzin ana səsidir,
Mehriban sözüdür, xoş nəfəsidir. (1.s.71)

In the first lines, it is noted that the Azerbaijani mother carries the heaviest burden of the family. Indeed, throughout the thousand-year historical past and family values of the Azerbaijani people, the place of mothers has been irreplaceable, and the main weight of the family has rested upon their shoulders. It is the warm breath of the mother that has been considered the warmth, fire, and flame of the family hearth. The mother's sudden departure from the family and her passing away deeply moved the poet and touched her heart. In the subsequent stanzas of this work dedicated to Mother Nazli-which we can call the "Mother Poem"-we read that Mother Nazli sacrificed her youth and vitality for her family and children, giving up her own comfort for the well-being of her home:

Evində həm qadın, həm də kişiydi.
Ot biçər, bağ yığar, taya vurardı,
Eh nələr yaradıb nələr qurardı.
Göydən od yağsa da, alov çıxsada,
Qəriblik həsrəti onu yaxsa da,
Təndir qalayardı, lavaş salardı
Qəlbində dünyaynan savaş salardı. (1.s.72)

It is well known that throughout history, Azerbaijani women rode horses, wielded swords alongside Oghuz braves, and helped their life partners with heavy labor when needed. Mother Nazli's greatest advice to her children was reminding them to protect and stand up for their Motherland and the Turkic homeland:

Öyüd nəsihətin anam verərdi.
Mərd olun, siz sevin ana vətəni. (1.s.74)

In these lines, student-readers see not only the trust and homeland legacy inherited from our historical past. In the poet's subsequent lines, we witness Mother Nazli preparing movuj (dried grapes) and gakh (dried fruits), and hanging milakh (suspended grape bunches for winter storage) on the roof. Naturally, our compatriots living in various countries around the world and speaking different Turkic languages may find it difficult to understand the meaning of these national-ethnographic words and expressions. To address this, it is necessary to look back at the historical past and everyday life of Azerbaijani Turks and conduct an ethnolinguistic study. Attention must also be given to the cuisine and culinary traditions of Azerbaijani Turks.

Mother Nazli is a devoted mother. Her selflessness is measured not only by her diligence, devotion to her family, family values, and children; Mother Nazli also spares no effort to ensure her children receive an education, so they can serve the Azerbaijani people with their literacy, knowledge, and skills:

Gəlib yetişəndə qəmli payızın
Qədəmi, səslərdi oğlun qızın:
Bax yaxşı fikirləş, dərs başlanır ha,
Gözümü dikmişəm ancaq sabaha.
O sabah sizinlə nurlanacaqdır.
Ailə, el sizə arxalanacaqdır. (1.s.72)

When Mother Nazli's thoughts, ideas, cares, and dreams combine with her hard labor and sound judgment, they turn into reality. The children she raised-weaving one strand of her hair white and the other black in the process-become educated and serve the Homeland as children worthy of the Azerbaijani State, the President of Azerbaijan, and the Azerbaijani people.

In the poem "My Mother", we see the Azerbaijani mother, Mother Nazli, working tirelessly day and night through all four seasons of the year. While in the opening stanzas Mother Nazli works without taking a breath in the summer heat, a little further on we witness her preparing provisions for the winter. For an Azerbaijani woman, family and its cares are paramount throughout every season. Rich in national ornaments and traditional customs, these lines depict Mother Nazli's winter preparations for her family so vividly that a classic Azerbaijani family feels as though these preparations were taking place right in their own home.

The mother fries meat for qara qovurma-the most delicious dish of our rich Western Azerbaijani cuisine-grinds grain for yarma, cuts arishta (homemade noodles), and packs cheese and butter into earthenware jars (kup) for the winter. When snow-covered winter arrives at the doorstep and she finds a moment of spare time, she weaves carpets and sings bayatis and recites goshmas (traditional poetry forms) to her children:

Elə ki, çatardı soyuq qış günü,
Qayğılar kəsərdi başın üstünü.
Əriş, arğacını hazır eyləyib,
Bayatı oxuyub, qoşma söyləyib... (1.s. 72)

In the poem "My Mother", along with creating the family values and the mother figure of the Azerbaijani people, the poet masterfully depicts the national customs and traditions of the Azerbaijani nation as if with a painter's brush. The cold, frosty, and snowy winter passes, and the warm breath of spring is felt. This time, the reader sees the mother during the spring season, at the Novruz holiday. Now, the mother is immersed in the preparations for spring, the arrival of new life, and the festivities of Novruz:

Gəlib yetişincə gözəl, güllü yaz,
Ötüşüb gedərdi, qar, şaxta, ayaz.
Yumurta boyayıb halva çalardı,
Xalçanın yaxşısını yerə salardı.
Aş dəmə qoyular süfrə açılar.
Otağa qəribə ətir saçılar.
Ay bala, Novruzum gəlib çatıbdı,
Günlərə başqa bir ovqat qatıbdı. (1.s.72)

For thousands of years, Turks living around the world, including the Azerbaijani people, have celebrated the Novruz holiday; for thousands of years, the noble Turkic nation has kept this tradition alive and passed it down from generation to generation. This thousand-year-old custom passed on by Mother Nazli to her children rises to the level of an artistic image in the creative works of Mahira Naghigizi, transforming into immortal lines that preserve the historical past and supreme values of the nation.

In the subsequent lines of the poem, the reader encounters interesting facts and hears the supreme values of the Azerbaijani people directly through the words of Mother Nazli. Mother Nazli tells her children that whichever way Turks welcome the new year on Novruz Eve, that is how the entire year will pass.

Indeed, there is a saying among the Azerbaijani people that on Novruz night one should speak kind words and remain in good spirits so that the coming year will be prosperous. This saying of the mother, filtered down through thousands of years of collective memory, expresses not only a holiday custom but also the profound value placed on the family as a whole. Mother Nazli raises her children in the spirit of respect for their father, telling them:

Atamın hər vaxtı bilib yerini,
Danışıb hər vaxt onun xoş əməllərini:
Çoxdur atanızda qeyrət, dəyanət,
Onda cəm olubdur mərdlik, mətanət.
Getsəniz atanız çəkdiyi yolnan,
Ancaq qazanarsız bu yolda ad-san. (1.s.73)

Indeed, the devotion, love, affection, and warmth of Mother Nazli—a symbol of the Azerbaijani woman-toward the head of the family are clearly felt in these lines.

In other stanzas of the poem, Mother Nazli's advice to her children to remain bound to their Homeland and nation is a clear reflection of her love for Azerbaijan and its people. It was a result of her counsel to "be brave" and "love your Homeland" that every child she raised grew up to become the most worthy individuals, scholars, and generals of the Azerbaijani people.

In the final stanzas of the poem, the monument of Mother Nazli moves the reader with the following lines, sometimes bringing them to tears, and at times transporting them into another world beyond their imagination:

Qazancı cənnətdir verilər ehsan.
İçsin səlsəbil, abi-köysəri,
Yaxşı əməllərin budu səməri.
Həmin o cənnət də, buna inanın.
Ayağı altında durub ananın. (1.s.72)

The condensed semantic manifestation of the expression “Paradise lies beneath the feet of mothers” serves as the foundation for the saying “A mother’s right is God’s right,” which trickles down from the ancient Turkic book “Kitabi-Dada Gorgud” in the subsequent lines. At the end of the poem, the poet reaches the conclusion that in the world we inhabit, humankind possesses no greater supreme value than the mother. The poet is right; mothers are the most innocent and supreme beings in this world. It is precisely for this reason that the Azerbaijani people place the modifier “Mother” before the word “Homeland,” calling the Homeland the “Motherland.”

Conclusion

In the work “My Mother’s Book”, which includes dozens of poems such as “Conversation with My Mother,” “Nazli-Nazli,” “Letter to My Mother,” “My Mother’s,” “My Qibla, My Sanctuary Nazli,” “Mother,” “Say a Word,” “My Mother’s,” and many others, the strength and power of the Turkic woman are depicted while her loyalty and devotion are immortalized.

This book contains hundreds of sayings and proverbial expressions collected directly from the lips of Mother Nazli. Let us look at some of the sayings and expressions gathered from Mother Nazli in the book:

The content of such proverbial expressions and adages as “O mercy, help comes from You, I will not let go of Your hem,” “They eat a hundred bitter things for the sake of one sweet thing,” and “The people have moved, but the custom has not” provides a solid basis to state that the authors of the proverbs and sayings created in the Azerbaijani language are indeed wise grandfathers and matriarchal grandmothers.

By the way, “My Mother’s Book” also draws attention with its engaging prose examples and short stories.

Each of the stories with distinct storylines-such as “Sandal,” “Angel,” “Silk Shirt,” “My Floral Headscarf,” “Bitter-Sweet Memories,” “My World with a Mother,” “Ashiq Tune,” “Whatever Your Hand Touched,” “Grandmother’s Novruz,” “Neighbor’s Right,” and “Dream”-serves as an expression of common Turkic national and moral values. In every one of these stories, one encounters the artistic embodiment of the national-spiritual values of the Azerbaijani people, loyalty to these values, and the concepts of love for the Homeland and the nation.

ORCID ID: [0009-0000-4046-6452](https://orcid.org/0009-0000-4046-6452)

Abstract: The history and role of african americans in modern society is of great importance for understanding the social development of the United States. The fate of these people, who were forcibly brought and used as slaves in the 17th–19th centuries, was closely linked to the struggles for freedom and equality in subsequent periods. Despite the abolition of slavery in 1865, discrimination and racial inequality that continued for many years had a serious impact on their lives. In particular, the civil rights movement that took place in the middle of the 20th century was a turning point in this area and created conditions for the expansion of the rights of african americans. In modern times, African Americans occupy an important place in the political, economic and cultural life of the United States. Their active participation in politics, including the election of Barack Obama as president, reflects the changing dynamics of society. At the same time, this community still faces certain difficulties in social and economic areas. This topic requires a deeper examination of the path that african americans have taken from the past to the present, the achievements they have made, and the problems they face. In this regard, the position of african americans in society can be seen as both a result of historical injustices and as part of an ongoing process of development. Their successes and challenges provide a deeper understanding of the principles of social justice and equality in modern society.

Xülasə: Afrikalı amerikalıların tarixi və müasir cəmiyyətdəki rolu ABŞ-ın sosial inkişafını anlamaq üçün mühüm əhəmiyyət daşıyır. XVII–XIX əsrlərdə zorla gətirilərək qul kimi işlədilən bu insanların taleyi, sonrakı dövrlərdə azadlıq və bərabərlik uğrunda aparılan mübarizələrlə sıx bağlı olmuşdur. 1865-ci ildə quldarlığın ləğv olunmasına baxmayaraq, uzun illər davam edən ayrı-seçkilik və irqi bərabərsizlik onların həyatına ciddi təsir göstərmişdir. Xüsusilə XX əsrin ortalarında baş verən vətəndaş hüquqları hərəkatı bu sahədə dönüş nöqtəsi olmuş və afrikalı amerikalıların hüquqlarının genişlənməsinə şərait yaratmışdır.

Müasir dövrdə afrikalı amerikalılar ABŞ-ın siyasi, iqtisadi və mədəni həyatında mühüm yer tuturlar. Onların siyasətdə fəallaşması, o cümlədən Barak Obamanın prezident seçilməsi, cəmiyyətin dəyişən dinamikasını əks etdirir. Bununla yanaşı, bu icma hələ də sosial və iqtisadi sahələrdə müəyyən çətinliklərlə qarşılaşır. Bu mövzu afrikalı amerikalıların keçmişdən bu günə qədər keçdiyi yolu, əldə etdikləri nailiyyətləri və üzləşdikləri problemləri daha dərinlən araşdırmağı tələb edir. Bu baxımdan, afrikalı amerikalıların cəmiyyətdəki mövqeyi həm tarixi ədalətsizliklərin nəticəsi, həm də davam edən inkişaf prosesinin bir hissəsi kimi qiymətləndirilə bilər. Onların əldə etdiyi uğurlar və qarşılaşdıqları çətinliklər müasir cəmiyyətin sosial ədalət və bərabərlik prinsiplərini daha dərinlən anlamağa imkan yaradır.

Açar sözlər: afrikalı amerikalı, ictimai müqavimət, ayrı seçkilik, inkişaf, vətəndaş hərəkatı

Introduction

African Americans play an important social, cultural, political, and economic role in modern society. Their impact on society and the challenges they face are notable in many ways. African Americans were brought to the United States, mainly as slaves, in the 17th–19th centuries. Although slavery was abolished in 1865, systemic discrimination and racial discrimination continued for a long time. As a result of the civil rights movement in the 1960s, significant progress was made towards equality.

African Americans are now more actively participating in the political arena of the United States. The election of Barack Obama as president in 2008 and 2012 is of historical importance in this regard. At the same time, the role of African American politicians in Congress and local governments is significant. Nevertheless, African Americans still face a number of challenges in terms of income inequality, unemployment, and access to quality education.

Problems such as police brutality, injustice in the healthcare system, and racial discrimination are still relevant for African Americans. The Black Lives Matter movement has become a symbol of widespread public resistance to police brutality and racial injustice, and has had a significant impact both in the United States and globally. (Harrot, 2023, p. 245)

African Americans have played an integral role in the formation and development of modern American society. Their history is a rich and complex one that has left deep traces both in the formation of the United States and in the struggle for human rights.

Methodology and Materials. In 1619, the first African slaves were brought to the state of Virginia. This date is considered the beginning of African Americans in the history of the United States. During the 17th–19th centuries, millions of Africans were forcibly brought to America and exploited as slaves. They were worked in harsh conditions, especially on cotton, sugarcane, and tobacco plantations in the Southern states of the United States. During this period, slaves had no rights, were separated from their families, and were subjected to violence and exploitation. Growing injustice, racial discrimination, and inequality against slaves led to a number of rebellions and, ultimately, the Civil War.

Discussion

As a result of the struggle, President Abraham Lincoln adopted the Emancipation Proclamation in 1863, which declared freedom for slaves in the Southern states. Later, with amendments to the US Constitution, slavery was completely abolished. (Zinn, 2015, p. 300)

New laws were passed for freed slaves, and some gained the right to vote. However, from the 1870s onwards, Jim Crow laws in the South continued to segregate African Americans from whites (e.g., segregated schools, public transportation, and other areas). Educational and employment opportunities were extremely limited for African Americans; social and economic opportunities were marked by severe inequality. Leaders such as Martin Luther King Jr., Malcolm X, and Rosa Parks actively campaigned against racism and discrimination. In 1954, the U.S. Supreme Court declared segregated schools unconstitutional in the Board of Education case. The Civil Rights Act of 1964 prohibited discrimination in public places, and the Voting Rights Act of 1965 granted African Americans the right to vote. (Kidd, 2019, p. 400)

As a result of all these historical struggles, African Americans have gained their rights and freedoms and have gained a more respected and influential position in the United States over time. Among the symbolic and real successes achieved in this process, the election of Barack Obama as President of the United States should be especially noted. Africans, who were once exploited as

slaves, have today become an influential community that plays an important role in many areas in the United States, including politics, art, science, and sports.

The history of african americans, from slavery to freedom, from discrimination to civil rights, to the struggle for freedom and justice that continues to this day, is an integral part of both their history and the history of the United States as a whole.

This development process shows that the achievements of african americans are not only individual successes, but also the result of collective struggle and solidarity. At the same time, the struggle for racial equality and social justice remains relevant today and is continued by new generations. In modern times, steps taken in the fields of education, economic opportunities, and legal equality are of great importance for the future development of this community.

Conclusion

The history of african americans is characterized not only by social and political struggles, but also by a unique heritage that has been formed in the field of language and culture. One of the important parts of this heritage is the african american variant of the English language, that is, the african American spoken variant. This language form has developed in the social conditions of african american communities for centuries and has become one of the important elements of their identity. The historical development of the african american variant of the English language is the result of the social struggle and cultural self-expression of african americans, starting from the time of slavery and continuing to the present day. This language form has served both as a means of resistance during times of discrimination and as a means of preserving cultural identity over time. In modern times, the african american variant is perceived not only as a dialect, but also as a bearer of cultural value and social history.

As a result, the historical struggle and evolution of the african american variant of the English language reflects the place and cultural influence of african americans in US society. This language form is not only the result of past difficulties, but also has important significance as a symbol of cultural richness and identity.

Abstract: Lexicology is one of the fundamental branches of linguistics that studies the vocabulary of a language, including the structure, meaning, origin, and usage of words. This paper provides a comprehensive examination of the theoretical foundations and practical aspects of lexicology, focusing on word formation, semantic change, lexical relations, and vocabulary development. It analyzes the role of internal linguistic mechanisms alongside social, cultural, historical, and technological factors in shaping the evolution of the lexicon. The study emphasizes the close relationship between lexicology and related disciplines such as morphology, semantics, sociolinguistics, cognitive linguistics, and lexicography, demonstrating the interdisciplinary nature of lexical research. Particular attention is given to borrowing, neologisms, globalization, and digital communication as major forces contributing to the continuous expansion of modern English vocabulary. By integrating classical linguistic theories with contemporary approaches, the paper argues that the lexicon is not a static entity but a dynamic system that constantly adapts to changing communicative and cultural needs. The findings indicate that the study of lexical systems enhances our understanding of language development, semantic evolution, communication, and cognitive processes. Consequently, lexicology plays a vital role in theoretical and applied linguistics, language teaching, dictionary compilation, translation studies, and research on language use in contemporary society.

Xülasə: Leksikologiya dilçiliyin əsas sahələrindən biri olub, dilin lüğət tərkibini, sözlərin quruluşunu, mənasını, mənşəyini və işlənmə xüsusiyyətlərini öyrənir. Bu məqalədə leksikologiyanın nəzəri əsasları və praktik istiqamətləri geniş şəkildə araşdırılmış, söz yaradıcılığı, semantik dəyişmə, leksik münasibətlər və lüğət tərkibinin inkişafı təhlil edilmişdir. Tədqiqatda sözlərin yaranması və inkişafında daxili dil mexanizmləri ilə yanaşı, sosial, mədəni, tarixi və texnoloji amillərin rolu qiymətləndirilmişdir. Morfologiya, semantika, sosiolinqvistika, koqnitiv dilçilik və leksikoqrafiya ilə qarşılıqlı əlaqələr leksikologiyanın çoxşaxəli və integrativ xarakterini göstərir. Alınma sözlər, neologizmlər, qloballaşma və rəqəmsal kommunikasiya vasitələrinin müasir ingilis dili lüğət tərkibinin zənginləşməsinə və yenilənməsinə təsiri xüsusi diqqət mərkəzində saxlanılmışdır. Məqalədə klassik və müasir dilçilik nəzəriyyələri müqayisəli şəkildə ümumiləşdirilmiş, leksik sistemin statik deyil, daim dəyişən və cəmiyyətin kommunikativ ehtiyaclarına uyğun inkişaf edən bir struktur olduğu əsaslandırılmışdır. Aparılan təhlillər göstərir ki, leksikologiyanın öyrənilməsi dilin inkişaf qanunauyğunluqlarını, sözlərin mənaca və struktur baxımından dəyişməsinə, eləcə də dil ilə mədəniyyət arasındakı qarşılıqlı əlaqələri daha dərinlən anlamağa imkan verir. Nəticə etibarilə, leksikologiya həm nəzəri, həm də tətbiqi dilçilik tədqiqatlarında, dil tədrisində, lüğətçilik fəaliyyətində və ünsiyyət proseslərinin araşdırılmasında mühüm elmi və praktik əhəmiyyətə malikdir.

Açar sözlər: leksikologiya, lüğət tərkibi (söz ehtiyatı), semantika, söz yaradıcılığı, leksik dəyişmə, dilçilik

Introduction

Lexicology is a fundamental branch of linguistics that studies the structure, meaning, and usage of words within a language system. This paper examines the theoretical foundations and practical aspects of lexicology, with a focus on word formation, semantic change, lexical relations, and vocabulary development. It also explores how internal linguistic mechanisms and external social, cultural, and technological factors influence the evolution of the lexicon over time. Special attention is given to the interaction between lexicology and related linguistic fields such as morphology, semantics, and sociolinguistics. The study highlights the importance of borrowing, neologisms, and globalization in shaping modern vocabulary, particularly in English. By integrating classical theories with contemporary linguistic perspectives, the paper demonstrates that lexicology is a dynamic and continuously developing discipline. Understanding lexical systems provides valuable insights into language structure, communication, and cognitive processes. Therefore, lexicology plays a crucial role in both theoretical linguistics and applied language studies.

Introduction

Lexicology is a central branch of linguistics that focuses on the study of words, their meanings, structures, and usage within a language system. It plays a crucial role in understanding how vocabulary is formed, how it changes over time, and how it functions in communication. As

language is a dynamic and constantly evolving system, lexicology helps to explain the processes that shape the development of the lexicon.

The study of lexicology involves several key areas, including word formation, semantic change, lexical relations, and vocabulary expansion. It also examines the influence of internal linguistic mechanisms as well as external social, cultural, and technological factors on language development. In modern linguistics, lexicology is closely connected with other fields such as morphology, semantics, and sociolinguistics, which together provide a more comprehensive understanding of language structure and use.

In today's globalized world, the lexicon of many languages, especially English, is rapidly expanding due to borrowing, neologisms, and technological innovations. Therefore, studying lexicology is essential for understanding not only linguistic systems but also cultural and cognitive aspects of human communication. This paper aims to explore the scope, structure, and evolution of lexicology in modern linguistics.

Materials and Methods

This study is based on qualitative and descriptive research methods used in modern linguistic analysis. The materials include scientific books, journal articles, dictionaries, and academic publications related to lexicology, semantics, morphology, and sociolinguistics. Both classical and contemporary linguistic sources were reviewed in order to provide a comprehensive understanding of lexical structure and development.

The descriptive method was applied to explain the main theoretical concepts of lexicology, including word formation, semantic change, lexical relations, and vocabulary expansion. In addition, analytical methods were used to examine how internal linguistic mechanisms and external social and technological factors influence lexical development.

A comparative approach was also employed to identify differences and similarities in lexical processes across languages, with special attention to English vocabulary development. Examples from real language usage were analyzed to illustrate key theoretical points.

The collected data were systematically reviewed, classified, and interpreted to ensure a clear understanding of lexical evolution. This methodological framework allows for a structured analysis of lexicology as a dynamic and evolving field within modern linguistics.

Results and Discussion

The analysis shows that lexicology is a dynamic and continuously developing branch of linguistics that reflects both internal linguistic mechanisms and external socio-cultural influences. The study confirms that word formation processes such as derivation, compounding, and conversion play a major role in expanding vocabulary. Semantic change, including broadening, narrowing, and metaphorical extension, also significantly contributes to lexical evolution.

The findings indicate that lexical relations such as synonymy, antonymy, hyponymy, and polysemy help organize the vocabulary system and ensure coherence in language use. In addition, borrowing from other languages and the creation of neologisms are key factors in the enrichment of modern vocabulary, especially in English, where technological and scientific advancements rapidly introduce new terms.

The discussion highlights that lexicology is closely connected with morphology, semantics, and sociolinguistics, forming an interdisciplinary field of study. External factors such as globalization, cultural exchange, and technological progress accelerate lexical changes and influence language development patterns.

Overall, the results demonstrate that the lexicon is not a static system but a constantly evolving structure shaped by cognitive, social, and communicative needs. This confirms the importance of lexicological research for understanding language development and usage in contemporary contexts.

Lexicology is a fundamental area of linguistic study concerned with the analysis of words as units of language. Unlike grammar, which focuses on structural rules, lexicology emphasizes the composition, meaning, origin, and usage of lexical items. Words serve as the primary carriers of meaning, and their study offers insight into how speakers conceptualize and communicate reality.

The term lexicology derives from the Greek words “lexis” meaning word and “logos” meaning study. It encompasses various subfields, including morphological analysis, semantic interpretation, and etymological investigation. By examining how words are formed, how they evolve, and how they relate to one another, lexicology contributes to a comprehensive understanding of language systems.

One of the central concerns of lexicology is word structure. Words may be simple, derived, or compound. Simple words consist of a single morpheme, while derived words are formed through affixation. Compounds combine two or more roots to create new meanings. These processes demonstrate the productivity of language and its ability to generate new lexical items.

Word formation processes are essential to lexicology. These include derivation, compounding, conversion, blending, clipping, and acronym formation. Each process reflects different mechanisms through which language expands its vocabulary. For example, technological advancements have led to the creation of numerous neologisms through blending and acronym formation, illustrating the adaptability of language.

Semantics, another key component of lexicology, deals with meaning. Words may have denotative and connotative meanings, and their interpretation often depends on context. Polysemy, homonymy, synonymy, and antonymy are important lexical relations that reveal how meaning is structured within a language. These relationships contribute to both clarity and ambiguity in communication.

Semantic change is a dynamic process influenced by cultural, social, and historical factors. Words may undergo broadening, narrowing, amelioration, or pejoration. For instance, a word that originally had a neutral meaning may acquire a positive or negative connotation over time. These shifts reflect changes in societal attitudes and values.

Borrowing is another significant aspect of lexical development. Languages frequently adopt words from other languages due to contact through trade, migration, or cultural exchange. English, for example, has incorporated vocabulary from Latin, French, Germanic languages, and many others. Borrowed words often undergo phonological and semantic adaptation to fit the receiving language.

The study of lexical fields provides insight into how words are organized conceptually. Words related by meaning form semantic fields, such as terms related to color, emotion, or technology. This organization reflects cognitive categorization and helps speakers navigate complex systems of meaning.

Lexicology is closely related to lexicography, the practice of compiling dictionaries. While lexicology is theoretical, lexicography is applied. Lexicologists analyze word behavior and meaning, providing the foundation for dictionary entries. Modern lexicography relies on corpus linguistics, using large databases of real language use to ensure accuracy and relevance.

The role of context in determining meaning cannot be overstated. Words do not exist in isolation; their meanings are shaped by syntactic, situational, and cultural contexts. Pragmatics, therefore, intersects with lexicology by examining how meaning is constructed in actual communication.

Sociolinguistic factors also influence vocabulary. Social class, region, age, and profession can affect lexical choice. Slang, jargon, and dialectal variations demonstrate how vocabulary reflects identity and group membership. These variations enrich language but also pose challenges for standardization.

Technological advancement has significantly impacted lexicology. The rise of the internet and digital communication has accelerated the creation and dissemination of new words. Social media platforms contribute to rapid lexical innovation, often leading to widespread adoption of informal expressions.

Corpus linguistics has revolutionized the study of lexicology by providing empirical data on word frequency, collocation, and usage patterns. Researchers can analyze large corpora to identify trends and test hypotheses about lexical behavior. This approach enhances the objectivity and precision of lexical analysis.

Cognitive linguistics offers another perspective by examining how mental processes shape lexical structure. Concepts such as prototype theory and metaphor highlight the relationship between language and thought. Words are not merely labels but reflect cognitive categorization and conceptualization.

Phraseology, the study of fixed expressions and idioms, is also relevant to lexicology. Idiomatic expressions often have meanings that cannot be deduced from their individual components. Understanding these expressions requires knowledge of cultural context and usage conventions.

The evolution of vocabulary is an ongoing process. Language adapts to new realities, incorporating terms related to science, technology, politics, and culture. Neologisms emerge to describe new phenomena, while obsolete words fall out of use. This constant change reflects the dynamic nature of human communication.

Lexical competence is essential for language proficiency. It involves not only knowing word meanings but also understanding their usage, collocations, and stylistic nuances. Language learners must develop a rich vocabulary to communicate effectively and comprehend complex texts.

Conclusion

Lexicology is a multifaceted discipline that examines the structure, meaning, and development of words. It intersects with various branches of linguistics and provides valuable insights into language as a system and as a social phenomenon. By studying vocabulary, researchers gain a deeper understanding of communication, cognition, and cultural identity. The continuous evolution of language ensures that lexicology remains a vibrant and relevant field of study.

Abstract: American student slang is a dynamic and changing subset of language reflecting the social, cultural, and linguistic traits of student populations. Within the larger framework of American English, this paper investigates the beginnings, evolution, and relevance of student slang. The development of student slang is intimately related to the framework of the American educational system, in which colleges and universities create special language settings. Often including metaphorical implications, borrowings from many social groups, and acronyms, student slang is distinguished from conventional English by spontaneity, informality, and great degree of originality.

One of the primary findings of this study include the important impact of outside social elements on student slang. Young subcultures' spread, the rising frequency of digital communication, and Standard American English's declining regulatory impact help to define student language constantly. The study also emphasizes how student slang often acquires vocabulary from specialized disciplines including the military, drug culture, and technology, therefore augmenting the lexicon with fresh idioms.

Moreover, student slang is a strategy for developing identity since it strengthens in-group bonds and keeps most incomprehensible to outsiders. Though it is informal, it is absolutely important for the American vocabulary to flourish since it introduces often accepted new terms and expressions.

In conclusion, American student slang is an important linguistic phenomena that not only enhances the national language but also reflects more general socio-cultural tendencies. In modern linguistics, it is a necessary field of research since its constant development shows the adaptability and the dynamic interaction of language.

Xülasə: Amerika tələbə slənqi tələbə icmalarının sosial, mədəni və dil xüsusiyyətlərini əks etdirən dinamik və daim dəyişən dil qatıdır. Bu məqalə Amerika ingiliscəsinin ümumi çərçivəsində tələbə slənqinin yaranmasını, inkişafını və aktuallığını araşdırır. Tələbə slənqinin formalaşması ABŞ təhsil sisteminin strukturu ilə sıx bağlıdır; belə ki, kollec və universitetlər xüsusi dil mühitləri yaradır. Metaforik mənalar, müxtəlif sosial qruplardan alınmalar və akronimlərin geniş istifadəsi ilə səciyyələnən tələbə slənqi spontanlığı, qeyri-rəsmi xarakteri və yüksək yaradıcılıq dərəcəsi ilə standart ingilis dilindən fərqlənir.

Tədqiqatın əsas nəticələrindən biri tələbə slənqinə xarici sosial amillərin güclü təsirini göstərir. Gənclər submədəniyyətlərinin yayılması, rəqəmsal ünsiyyətin artması və standart Amerika ingiliscəsinin normativ təsirinin zəifləməsi tələbə dilinin davamlı şəkildə formalaşmasına təsir edir. Araşdırma həmçinin vurğulayır ki, tələbə slənqi tez-tez hərbi sahə, narkotik mədəniyyəti və texnologiya kimi spesifik sahələrdən sözlər götürərək leksikonu yeni ifadə və deyimlərlə zənginləşdirir.

Bundan əlavə, tələbə slənqi identikliyin formalaşdırılması üçün bir vasitə kimi çıxış edir: o, qrup daxilində əlaqələri gücləndirir və çox vaxt kənar şəxslər üçün anlaşılmaz qalır. Qeyri-rəsmi olmasına baxmayaraq, o, milli leksikonun inkişafı üçün mühüm əhəmiyyət daşıyır, çünki tez-tez yeni söz və ifadələrin dilə daxil olmasına şərait yaradır.

Nəticə etibarilə, Amerika tələbə slənqi yalnız milli dili zənginləşdirən deyil, həm də daha geniş sosial-mədəni meyilləri əks etdirən mühüm linqvistik hadisədir. Onun davamlı inkişafı dilin çevikliyini və dinamik qarşılıqlı təsirini nümayiş etdirdiyindən, müasir dilçilikdə araşdırılması zəruri sahələrdən biridir.

Açar sözlər: tələbə slənqi, Amerika ingiliscəsi, sosial identiklik, qeyri-rəsmi dil, mədəni təsir, leksik innovasiya

Introduction

The English language has undergone significant transformation over the decades under the influence of sociocultural change, technological development, globalization, and informal speech communities. Among these linguistic layers, American student slang occupies a special place as a dynamic, creative, and socially meaningful subsystem of American English. Student slang may be understood as a form of group slang that originates within student communities and reflects their social identity, emotional experience, cultural values, and communicative needs. It is characterized by informality, spontaneity, metaphorical meaning, expressiveness, abbreviations, borrowings from different social and professional groups, and rapid semantic change.

The formation of student slang is closely related to the structure of the American educational system. Colleges and universities in the United States often develop their own linguistic environments, traditions, and communicative norms. As a result, specific vocabulary emerges to describe students, teachers, academic routines, campus life, peer relations, and institutional culture.

Student slang is also difficult for outsiders to understand. This difficulty is caused by several factors: its orientation toward oral and spontaneous speech, its dependence on context, its rapid development, and its use as a marker of in-group identity. Moreover, the gap between formal academic English and the language used in everyday communication continues to increase, especially under the influence of digital media and youth subcultures.

The aim of this paper is to examine American student slang as a linguistic and sociocultural phenomenon and to show how it contributes to the enrichment of the American English lexicon.

Methodology and Materials

The material of the study consists of lexical units, slang expressions, abbreviations, metaphorical formations, and evaluative adjectives used in American student communication. These examples include both traditional campus slang and modern digital slang influenced by social media, meme culture, online learning, and youth subcultures. The study is based on descriptive, semantic, and sociolinguistic methods. The descriptive method is used to present and classify student slang units according to their meanings and functions. The semantic method helps to identify metaphorical transfer, evaluative meaning, emotional coloring, and lexical innovation. The sociolinguistic approach makes it possible to examine slang as a marker of group identity, social belonging, resistance, and generational communication.

Student slang is analyzed according to several semantic and functional categories. These include friendship and group identity, money, academic life, emotional states, digital communication, rebellion, humor, and taboo topics. For example, slang words such as *posse*, *crew*, and *dogpack* refer to a student's circle of friends, while *benjamins*, *loot*, and *duckets* refer to money. Emotional and evaluative slang is represented by words such as *jammed*, *buzz crusher*, *janky*, *awesome*, *dope*, and *shady*.

A significant feature of American student slang is metaphorical meaning transfer. For instance, *ghost* no longer refers only to a supernatural being but also means suddenly ending communication with someone. Similarly, *flex* has shifted from the meaning of physical muscle movement to the act of showing off. Expressions such as *walk of shame*, *false messiah*, *God squad*, and *academic weapon* also demonstrate how students creatively reinterpret existing words and phrases.

The research also considers the influence of digital platforms such as TikTok, Reddit, Discord, YouTube, and social media comment threads. These platforms accelerate the spread of slang and create new forms of expression through memes, emojis, hashtags, acronyms, and visual language. Expressions such as *no cap*, *slay*, *it's giving*, and *that's fire* show how digital culture shapes student communication.

Special attention is given to pandemic-related educational slang. The shift to online learning during COVID-19 produced expressions such as *Zoom fatigue*, *fake freeze*, *Zoom jail*, *Canvas crash*, *Moodle meltdown*, and *camera-off academia*. These units reflect not only technological changes but also students' emotional responses to isolation, burnout, and academic pressure.

The study also examines slang connected with academic fields. STEM students often use expressions such as *code spaghetti*, *lab rat*, *curve killer*, and *debugging life*, while humanities students may use phrases such as *paper purgatory*, *crisis major*, and *post-structural breakdown*. These examples show that slang varies according to disciplinary culture and academic identity.

Discussion

In English lexicography, student slang language subsystem is referred to as special slang. Set against common slang, student slang unites its bearers with in-group ties. A significant number of student slang units are actually secondary to neutral or colloquial units. Student slang is a linguistic reflection of youth culture and is one of the most flexible and dynamic aspects of American English. It represents the cultural values, emotional concerns, and intellectual curiosity of students navigating a world that is changing quickly; it is by no means just a collection of informal or

"improper" expressions. Slang changes along with society with each new generation, whether it is due to media, social justice movements, technology, or worldwide trends. This ongoing development demonstrates the linguistic ingenuity and adaptability of young speakers who develop new forms of expression to fit their environments, identities, and experiences. Student slang should be seen as evidence of language's adaptability, responsiveness, and inclusivity rather than as a sign of its decline. Slang's playful, symbolic, and occasionally rebellious qualities highlight the close relationship between language and social belonging, experimentation, and resistance. Interacting with student slang provides educators, linguists, and legislators with important insights into the attitudes of the next generation. In addition to improving comprehension of communication styles, studying these expressions provides insight into more general cultural and psychological dynamics in modern American society.

American student slang is quite difficult to understand. There are several reasons for this:

1. Communicants strive for free understanding, orientation to oral speech, spontaneity of speech, lack of preparation in advance, lack of detailed thinking of the content of the conversation;
2. Inadequate approach to learning foreign languages, the main reason for which is that textbooks and tasks in them are not based on natural language, but on artificial language. Students are taught an idealized academic language and cannot inculcate in themselves the habits of understanding the English they hear around them;
3. The tendency of decreasing the regulatory influence of American Standard English and increasing the status of other types of language based mainly on Uzu;
4. Expansion of youth slang. This leads to an increase in the difference between the academic language and the language used in everyday life.

One of the most interesting things about student slang is how it helps people build and show who they are. Language is a powerful tool for expressing individuality, affinities, and opposition to norms during adolescence and early adulthood, which are important times for self-discovery. Students use slang to fit in with certain groups of friends and to set themselves apart from adults, authoritative figures, and even other youth subcultures. Words and phrases used in dorms, cafeterias, and social media threads act as linguistic badges, showing if someone is part of a group, rebellious, creative, or funny. People who say "slay," "no cap," or "that's fire" are making a conscious choice about how they want to sound. This shows that they want to fit in, stand out, or go against what people expect. So, student slang isn't just a coincidence; it's a planned social activity that is a part of the daily process of forming an identity.

Being able to switch between informal slang and formal academic language is an important part of how students talk to each other these days. Many students show a high level of register awareness, changing the way they speak and write based on the situation, which goes against the stereotype that using a lot of slang makes you less good at language. Students can use slang words like "sus," "W," "rizz," or "it's giving" freely in casual digital settings like group chats, Discord servers, or TikTok comments. This is because these words are common in how peers talk to each other. But these same students often use more standard grammar and vocabulary in class, essays, or presentations, which shows that they understand what the school wants from them. This ability to switch between languages shows not a lack of language skills but a strategic and sociolinguistic skill that scholars call "bidialectalism" or "situational code-switching." Students' ability to switch between registers shows that they have an implicit understanding of audience and purpose. It also shows the bigger problem in education of finding ways to validate students' language skills while

also helping them learn how to use academic language. In reality, a lot of young people know when and how to use different kinds of English to get their point across. So, code-switching isn't a sign of being confused or careless; it's a sign of being able to switch between languages quickly, which is a useful skill in school and at work.

Humor and irony are two of the most important things that go into making and using student slang. They not only make people laugh, but they also change the way people interact with each other and subtly challenge social norms. A lot of slang phrases have layers of sarcasm, exaggeration, or absurdity. This is because young people like to be funny, make inside jokes, and have a shared understanding. For example, students might say "I'm dead" to show that they are laughing very hard, or they might call a small problem a "whole tragedy" to make it seem worse than it really is for comedic effect. Students use this fun way of playing with language to connect with each other, tease each other, and deal with academic or social stress. Irony is especially useful for showing that you don't agree with or want to distance yourself from mainstream ideas. For example, calling someone a "simp" or saying "that's a choice" instead of "that's bad" lets you criticize someone in a funny way. This is how student slang becomes more than just a way to talk; it also becomes a way to look at culture. It shows how humor and irony help people get along, deal with stress, and feel like they belong in a group.

Memes and visual language are very important for creating, changing, and spreading student slang in today's world, which is full of digital media. Meme culture is very different from traditional language because it uses a lot of different types of communication, like text, images, emojis, and even videos, to quickly create new meanings. Memes are often a quick way to express complicated feelings, opinions, or social commentary, and their language—often funny, ironic, or silly—often makes its way into the slang that students use. For instance, phrases like "it's giving," "we do a little trolling," started out as captions or comments on memes and quickly became part of everyday student speech. In this case, language isn't just about words anymore; it's also about how meaning is made through shared cultural references, pictures, and timing. Platforms like TikTok, Reddit, and Discord are important parts of this process because they are places where slang words and meme-based phrases are created, tested, and spread. TikTok, especially with its algorithmically curated For You Page (FYP), encourages trends that mix sound clips, catchphrases, and facial expressions into short performances that change how students talk in real life. A single viral video can make a new phrase popular with millions of people in just a few days. These online groups encourage creativity, inside jokes, and language experimentation, which makes them great places for slang to grow. In this world, student slang is more than just a set of words; it's a living form of digital literacy that requires understanding irony, humor, and different types of cues.

Globalization has a big and complicated effect on student slang in the United States. American students are more and more exposed to global trends, phrases, and cultural references that go beyond national borders because of the many digital platforms that are connected to each other. Because of this, modern student slang often includes words from other languages, international pop culture, and subcultures that cross borders.

American student groups adopt new words from the lexicon of certain groups that are behavioral guidelines for them. For example, a large number of slang words have been adopted from the lexicon of drug addicts: hooch, tree, buddak, crippls, doobie, chronic, smokey treat - "marijuana"; «to get one's johnny, blaze(on), burn, pull tubes, play monopoly – «to smoke marijuana»; el, reefer (from Black English lexicon), spliff – marijuana cigarette; fiend – "marijuana

addiction"; hypertweaked – addicted to cocaine; blew out – "high or under the influence of marijuana"; geeka – "marijuana addict". As can be seen from the given examples, a negative value orientation is typical for American student slang. Apparently, this is because slangs dominated by drugs, alcohol, and sex are the majority in general student slang, but there are very few slangs related to "education".

In schools, student slang often serves as a commentary on life at school, giving informal but insightful views on the structures, pressures, and social rituals of education. These words help people get around and make it through the academic world. They often express criticism, worry, or funny takes on academic routines. Words like "GPA killer," which means a hard class that hurts your GPA, or "bird course," which means a class that is easy or doesn't require much work, show how students think about their school experiences. Other phrases that show how students mix seriousness and sarcasm in their studies are "syllabus week" (the first week of classes when the workload is light), "prof crush" (a cute name for a professor they admire), and "academic weapon" (a term for someone who is doing well in school). This slang does more than just name things that happen in the classroom; it also creates a peer-to-peer knowledge economy. Upperclassmen pass on insider terms to new students, helping them choose classes, learn about the reputation of their teachers, and follow campus rules. The language helps create a culture among students that is flexible and strong against the strict rules of formal academia. In more emotional situations, slang words like "zombied," "fried," or "running on caffeine and hope" show how academic stress, midterms, and finals affect people's mental health. They also provide both comfort and humor as a way to deal with it. The rise of slang terms like "Zoom fatigue," "fake freeze," and "Canvas crash" during the COVID-19 pandemic shows how educational slang changes in real time to keep up with changes in technology and the way classrooms work. In this way, educational slang is more than just a way to talk casually; it's also a powerful storytelling tool. It lets students criticize, reframe, and emotionally process their school lives using language that feels real and is understood by everyone.

The switch to online learning during the COVID-19 pandemic was a turning point in education. It changed how classes were taught and led to the creation of a new set of slang terms that described the strange and unique experiences of learning from home. Students quickly changed how they talked to show how frustrating, silly, and funny virtual classrooms could be. People started using terms like "Zoom fatigue" to talk about how mentally tired they were after spending a lot of time on video calls. Terms like "fake freeze" (pretending to lose connection by freezing on camera), "Zoom jail" (being stuck in back-to-back online meetings), and "mute trauma" (accidentally talking while muted or forgetting to unmute during a presentation) turned shared digital mistakes into things that made everyone laugh and feel better. Teachers weren't safe either. Phrases like "Canvas crash" or "Moodle meltdown" meant technical problems with popular learning management systems, and "screen-sharing shame" meant the fear of accidentally showing personal files or tabs during a presentation. Online slang also showed how the lines between school and personal life were getting less clear. Students came up with terms like "Zoom-university," "bed-to-desk pipeline," and "camera-off academia" to describe how their routines had changed, how they weren't as physically active, and how their motivation had dropped. Some people used exaggerated slang terms like "chronically unmuted," "emotionally buffering," or "digitally ghosted" to talk about how disconnected they felt from their classmates, professors, and institutional support. These phrases were funny, but they also hinted at deeper emotional and psychological problems that come

with online learning, such as feeling alone, not being interested, and burning out. In the end, this slang from the pandemic era served both practical and expressive purposes. It helped students talk about how quickly things were changing in school, build community online, and deal with the huge changes in how they learned and lived during a time of global uncertainty.

There are also big differences in the slang used by students in different academic fields, which shows that there are different subcultures at the university. In STEM fields (Science, Technology, Engineering, and Mathematics), student slang often reflects how hard these majors are, how much technical jargon there is, and how competitive they are. Engineering and computer science students often use phrases like "math brain rot," "lab rat," "code spaghetti," and "exam graveyard" to make fun of how tired and confused they are by their work. "Curve killer" is a term for a student whose high exam scores raise the grading standards for the whole class. "Debugging life" is a phrase that programming students use to talk about fixing not only code but also personal problems, treating emotional issues as if they were software bugs. In these situations, slang often uses metaphors about systems, machines, or data to talk about school experiences. On the other hand, students in the humanities tend to use more abstract or self-referential slang, often making fun of how impractical or deep their slang seems to be. Words like "crisis major" (used jokingly by literature or philosophy students thinking about their career options), "paper purgatory" (describing the stress of writing essays), or "post-structural breakdown" (a pun that combines academic theory with emotional exhaustion) show a different kind of academic humor—one that is self-reflective and full of irony. Humanities students also tend to romanticize struggle by using phrases like "the tortured academic" or "poetic burnout" to describe the stress of doing intellectual work with little job security. These slang words are not only ways to deal with stress, but they also help people build their identities by strengthening bonds within their groups and dealing with society's expectations about the value of different fields.

Slang is also a social marker. It helps people signal belonging to a particular group—whether it's a college cohort, subculture, or profession. For example, when a student uses a term common in campus slang, they're not just communicating meaning—they're also reinforcing their group identity.

Campus slang is a unique type of student slang that is shaped by the physical, social, and cultural environment of a certain college or university. Campus slang is different from more general slang that people use on a lot of different digital platforms. It often comes from local customs, shared student experiences, and the culture of the school. "Pulling an all-nighter," "blowing off steam at the quad," and "cramming" for last-minute studying are all phrases that show how stressful and busy university life can be. Students at a lot of colleges give funny names to buildings, professors, and famous places on campus. For example, they might call a class that is known for being hard a "weed-out course" or the main library "the dungeon" because it is so quiet and dark. These words aren't just funny shortcuts; they have shared meanings and inside information that make students feel like they belong and are part of a group. Also, campus slang changes with each new group of students, so some words may stop being used or get new meanings over time. The language helps keep group memory alive and change it at the same time. For example, students get some phrases from older students and come up with new ones that reflect their own experiences. Campus slang is very local, which shows how language reflects where you are: students at an Ivy League school might use different words than students at a state university or a community college, even when talking about the same things. This difference shows how creative students can be with

language and how important the physical and institutional context is in shaping how they talk to each other. So, campus slang is more than just casual talk; it's a way for culture to stay alive and an oral tradition that passes from one class to the next, subtly strengthening institutional identity and peer connection.

Universities in the United States have created their own unique linguistic ecosystems, where campus-specific slang shows the culture of the students, the traditions of the area, and the character of the school. Students at Harvard University, for instance, call their dorms "Houses" (like "I live in Adams"), which comes from the school's residential college system. They also use the word "comping" to talk about the competitive process of applying to join student groups. This word isn't used much outside of Harvard. Students at the University of California, Berkeley, which has a history of activism, may call political protests "Free Speech 2.0" to honor the school's role in the Free Speech Movement of the 1960s. "Dead Week" is the last week of classes before exams at many colleges, including Purdue University. These examples show how campus slang not only shares information but also keeps the memory of the school alive and makes people feel like they belong to a group. It captures the daily struggles, challenges, and pride of student life in ways that people who aren't students may not fully understand.

Student slang confirms once again that the structure of language reflects the social structure of society. Many social processes and socio-psychological trends in American society are reflected in the language. Student slang is one of the sources of enrichment of the lexicon of the American version of the literary language and one of the elements of American culture. The immediate changes in student slang make it a natural experimental laboratory for studying language changes in social contexts.

Conclusion

American student slang is a dynamic linguistic phenomenon that reflects the social, cultural, emotional, and intellectual life of students. It is not simply informal or improper speech; rather, it is a meaningful subsystem of American English that reveals how young people construct identity, express emotions, build group solidarity, resist authority, and respond to social change.

The study demonstrates that student slang is shaped by educational institutions, youth culture, digital communication, globalization, academic disciplines, and social experience. Its rapid development makes it a valuable field for observing language change in real time.

In conclusion, American student slang enriches the lexicon of American English by introducing new words, meanings, expressions, and communicative strategies. It serves as both a mirror of contemporary youth culture and a powerful mechanism of linguistic innovation. Therefore, the study of student slang is important not only for linguistics but also for education, cultural studies, and sociolinguistics.

ORCID ID: 0009-0005-9477-5329

Abstract: Like all areas of human life, the rapid development of the internet has had a substantial impact on language and verbal communication. Nowadays, millions of users create a unique form of virtual interaction by posting content, exchanging instant messages, and participating in web-based discussions on various social media platforms. This process significantly influences almost all languages, and its linguistic features reflect contemporary trends, cultural practices, and communication habits of the online community. As a dynamic and living phenomenon, language inevitably changes under the influence of social media and digital technologies.

The aim of this paper is to examine the ways in which social media is transforming language, identify the main directions of these changes, and analyze their linguocultural consequences. By investigating the different mechanisms through which social media affects verbal communication, the study seeks to provide a clearer understanding of the profound impact of digital interaction on language use, linguistic development, and communication patterns in modern society.

Keywords: virtual communication, social media, lexical variations, meme, stylistic amalgamation, internet slang, substandard language forms

THE IMPACT OF SOCIAL MEDIA ON MODERN LANGUAGE USE

Xülasə: İnsan həyatının bütün sahələrində olduğu kimi, internetin sürətli inkişafı da dilə və şifahi ünsiyyətə mühüm təsir göstərmişdir. Bu gün milyonlarla istifadəçi sosial media platformalarında paylaşımlar etməklə, ani mesajlar mübadiləsi aparmaqla və müxtəlif onlayn müzakirələrdə iştirak etməklə özünəməxsus virtual ünsiyyət forması yaradır. Bu proses demək olar ki, bütün dillərə təsir edir və onun linqvistik xüsusiyyətləri onlayn cəmiyyətin müasir tendensiyaclarını və ünsiyyət vərdişlərini əks etdirir. Dinamik və canlı bir fenomen olan dil sosial medianın təsiri altında qaçılmaz olaraq dəyişir və inkişaf edir.

Məqalənin məqsədi sosial medianın dili hansı yollarla dəyişdirdiyini araşdırmaq, bu dəyişikliklərin əsas istiqamətlərini müəyyənləşdirmək və onların linqvokulturoloji nəticələrini təhlil etməkdir. Sosial medianın şifahi ünsiyyətə təsir göstərdiyi müxtəlif mexanizmlərin öyrənilməsi rəqəmsal kommunikasiya proseslərinin dil istifadəsinə, dilin inkişafına və müasir cəmiyyətdə ünsiyyət formalarına təsirini daha dərinlən anlamağa imkan verir.

Açar sözlər: virtual ünsiyyət, sosial media, leksik variasiyalar, mem, üslubi birləşmə, internet slenqi, qeyri-standart dil formaları

Introduction

Modern language is being transformed by social media which is simultaneously contributing to the globalization of speech (Даниленко, 2020). The unique linguistic identity of social media is a way of self-expression and establishing a sense of belonging to a certain culture. It manifests not only the dynamic nature of a language but also how it tailors to communication status and contexts. A particular linguistic landscape created by this phenomenon is the result of the interaction of various aspects – users' linguistic practices, cultural characteristics, virtual cultural trends and so on inclusive (Crystal, 2011).

Studies on the impact of social media on language are being conducted not only in linguistics but also in such different fields as communication sciences, cognitivism, pragmatics, sociology, etc. These researches facilitate to understand how social media and the internet environment command languages and how they alter users' verbal communication habits.

Social media language is made more visual, succinct, informal, and the emergence of slang words, coinages and memes are being accelerated by virtual communication. High dynamism, brevity, and informality ineluctably modify language structure (Danet & Herring, 2007), which characterizes this type of communication: they affect style, vocabulary, grammar, and spelling. Consequently, functional styles are becoming obfuscated (e.g. business substyle includes slang words), and such language fundamentals as grammar and punctuation are being conventionalized to overtake the acceleration.

Here arises a question whether this enriches language or degrades it, which requires a comprehensive analysis. The paper is an attempt to answer this question.

Materials and Methods

The material for the present paper consists of multilingual samples of online communication, including memes, lexical coinages, catchphrases, acronyms and abbreviations, hybrid formations, instances of deliberate orthographic variation and similar language units.

To identify patterns of linguistic variation and usage in digital contexts, the data were studied using qualitative methods, including descriptive, discourse, and comparative analysis.

Results and Discussion

The key aspects of the influence of social media on language can by and large be traced in the following levels:

- Lexical.

- Stylistic.
- Visualization

In social communication, the lexical variations occur by abundant use of borrowings (especially from English), memes, acronyms and abbreviations that are easily replicable, viral because they spread quickly and reflect cultural relevance by echoing current ideas or trends. In order to shorten comments or messages, social media users prefer acronyms and abbreviations. For example, "GG" (good game), "SUS" (suspicious), "NVM" (nevermind), "Moots" (mutuals, or followers), "SSDD" (same stuff, different day), etc. The meme, which is also the element of Internet culture, involve the emergence of new words and expressions. As a piece of media, like a captioned pictures, videos, or text snippets, repurposed to deliver a social, cultural, or political expression, mainly through humor, they can embrace either borrowings from other languages, or new terms coined by users.

Expansion of virtual vocabulary through neologisms, especially, coinages and blendings, is another lexical tool. Perpetual liability to diverse linguistic variations and styles on social media have generated a broader assimilation of such substandard language forms as dialects, slang words and jargonisms which blurred the boundaries between literary and vernacular languages (Allahverdiyeva, 2025, p.57).

Today, social media are emerging as a source of new words and expressions which swiftly enter language. For instance, the words *stori*, *həştəq*, *komment*, *layk etmək*, *şeyer etmək* and so on in Azerbaijani; *флексить*, *хе́йм*, *шуннепуть*, *байтуть*, *рофл* and so forth in Russian; *chillax* (from chill+relax), *hangry* (from hungry+angry), *finfluencer* (from financial+influencer) and many others in English are samples. Hybrid words with English roots and Azerbaijani suffixes are also actively used in Azerbaijani social communication, e.g., *bloklamaq*, *kommentlər*, *tvit etmək*, *folloverlər*, *trolluq*, etc.

Besides reflecting the topics and interests applicable to a given community, this linguistic phenomenon encompasses internet slang and unique terms created by the community, along with such stylistic elements as acronyms, abbreviations, emojis, etc.

On the stylistic level, the writing style differs greatly on social media. Unlike formal or official writing, users may ignore grammar and punctuation rules, or give way to a more colloquial language. This stylistic amalgamation demonstrataes a decline in speech culture, especially infusing colloquial expressions into written language. For instance, the word "Yeet" which can be used in different ways (to throw something suddenly forcefully and carelessly; act of caution; speed, or energy) is now used as the synonym of the exclamation "Yes!" to express excitement or happiness: "I have got high scores on all the exams. Yeet!" Actually, it is users' skill to coin their own words, whose structure involves emotional, or expressive evaluative language components, to express personal view-points towards the main issue.

Catchphrases are also characteristic of virtual communication. For example, in correspondence, users very often commence their answer to some question with the popular slang initialism *IMHO* (In my humble opinion).

Changing grammatical norms on social media, first of all, gives rise to simplified syntactical structures like shorter sentences, ignoring punctuation, and replacement of complete statements with memes, or templates, e.g., "The two-buttons choice" (replaces "I am in a dilemma"), or "Always has been"(instead of "The situation has fundamentally been wrong, so it is senseless to

try to settle it"). Thus, the so-called "deliberate typos" (conscious grammar and spelling illiteracy) like writing lowercase, omission of punctuation have become inherent of social communication.

With respect to visualization, although the replacement of lexical units with GIFs, emojis, or stickers allows for a faster expression to be conveyed, it is usually superficial. All in all, emoticons and emojis have become an integral part of verbal social media communication since they foster to express emotional nuances. Capitalization, repetition of letters, and punctuation marks are also vigorously used to achieve these in the visualization level.

Here arises a question whether all these social media elements enrich language or degrade it. To answer this question, a comprehensive analysis is required as social media communication accelerates the emergence of neologisms, loanwords, abbreviations, emojis, as well as the spread of various linguistic trends. The smearing of the spoken and written speech boundaries in social communication is evidently observed which provokes concern on the part of linguists who conclude that this impact fosters written utterance to trace the colloquial speech schemes (Smith, 2021). It is even not impossible that, over time, under this impact numerous words will be spelled differently in standard dictionaries. Consequently, there will occur a decline in literacy rates. The reason is that a significant proportion of users demonstrate only a limited understanding of language rules, not to mention their ability to implement these rules effectively.

Conclusion

By reflecting on modern communication trends in social media, one can conclude that the diversity of online communication will change linguistic priorities in the future. In due course, mankind will adopt a common unique and universally perceived means of communication which directly appeals to the language of information. Since the leading platforms and programming environments (e.g., Microsoft, Google) operate primarily in English, the programming languages use the syntax based on English (e.g., Java, Python), a substantial share of online content is in English, or English is a neutral communication medium for universal exchange, the centrality of English in social communication is likely to persevere.

Thus, social media has a remarkable multifaceted and contradictory impact on language, forging its evolution, altering its use and structure since it is evolving its unique linguistic identity, reflecting modern trends and linguocultural characteristics. On the one hand, it contributes to the diversity of speech patterns, the vocabulary growth, on the other hand, there is decline in the level of speech culture as the linguistic structures are oversimplified and the punctuation and spelling norms are disregarded.

APPLICATION OF ARTIFICIAL INTELLIGENCE IN COGNITIVE LINGUISTICS AND NATURAL LANGUAGE PROCESSING

Elnara Kamandar ABDULLAYEVA

Ph.D. on philology, Associate Professor

Ganja State University

E-mail: elnara.abdullayeva@gdu.edu.az

ORCID ID: 0000-0002-5173-6953

Abstract: This article explores the application of artificial intelligence (AI) in computational linguistics and natural language processing (NLP). Key areas of application are covered, including automatic translation, virtual assistants, text analysis, and speech recognition. Key technologies and methods, such as neural networks, transformers, and big data learning, are described. The article highlights the benefits of AI in NLP, including improved quality and accuracy, automation of routine tasks, and personalization, and discusses challenges related to interpretation, resource requirements, and ethical considerations.

Artificial intelligence (AI) and natural language processing (NLP) play a vital role in the modern world, transforming many aspects of our lives and work. With AI and NLP, we can automate routine tasks, improve customer service, provide access to information, and much more. This article examines in detail the main applications of AI in computational linguistics and NLP, including technologies and methods, advantages and challenges, and development prospects.

Artificial intelligence (hereinafter also referred to as AI), a field encompassing a wide range of methods and techniques developed to mimic human cognitive functions, has become a powerful driver of innovation in linguistic research. By integrating AI techniques such as natural language processing (NLP), machine learning (ML), and deep learning (DL), researchers can now analyze and interpret language in unprecedented ways, achieving new levels of accuracy and efficiency.

Key word: artificial intelligence, natural language processing, cognitive linguistics, automatic translation, AI ethics

SÜNİ İNTELLİN KOQNİTİV DİLÇİLİKDƏ VƏ TƏBİİ DİL EMALINDA TƏTBİQİ

Introduction

Historical Context. The development of computational linguistics began in the mid-20th century, when scientists began developing algorithms for automatic text processing. One of the first significant achievements in this field was a program for automatic text translation, developed in the 1950s. However, it was only with the advancement of AI and computing power in recent decades that natural language processing became possible at a new level. The development of neural networks and deep learning methods opened up new possibilities for text analysis and generation, significantly improving the quality and accuracy of data processing.

Cognitive linguistics provides insights into the structure and mechanisms of human language processing, which have practical implications for the development of artificial intelligence systems. By analyzing the mechanisms through which people form and convey meaning through language, cognitive linguistics forms the foundation for the creation of AI models with enhanced human-like characteristics. Furthermore, some concepts from cognitive linguistics, including conceptual metaphor theory and frame semantics, have been successfully adapted to artificial intelligence systems to enhance their ability to understand and generate natural language.

Cognitive linguistics focuses on the analysis of language through the lens of human cognition, emphasizing the importance of mental processes, conceptual structures, and meaning-making mechanisms in linguistic interaction. Artificial intelligence, on the other hand, develops and applies a wide range of technologies and methodologies aimed at creating systems that can perform tasks traditionally considered to require human intelligence and intellectual abilities.

Materials and Methods

This study is based on a review and analysis of scientific literature related to cognitive linguistics and artificial intelligence. Books, academic articles, and previous research on cognitive linguistics, natural language processing, cognitive modeling, and artificial intelligence were examined. The study uses a qualitative approach to identify the main connections between cognitive linguistics and AI. Particular attention was paid to the use of cognitive-linguistic concepts, such as conceptual metaphor, frame semantics, and cognitive modeling, in the development of AI systems. The reviewed studies were compared and analyzed to identify current research trends, existing approaches, and possible directions for future research.

Discussion

Cognitive linguistics in artificial intelligence serves the following functions:

1. In the context of natural language processing, cognitive linguistics provides fundamental insights into the cognitive processes involved in understanding, generating, and assimilating language. This knowledge is essential for developing more advanced systems capable of effectively modeling human abilities to perceive and create linguistic content.

2. Within the framework of conceptual modeling, cognitive linguistics provides a comprehensive theoretical foundation for analyzing the processes by which people form and interpret thoughts. These approaches enable AI researchers to effectively use developed conceptual models to more accurately model and manipulate semantic data in AI systems, thereby improving and contextualizing language processing.

3. Artificial intelligence models, using cognitive linguistics, can recreate human cognitive processes, particularly those related to language comprehension. Incorporating principles of cognitive linguistics into AI systems allows researchers to develop artificial intelligence systems with enhanced cognitive functions, improving their ability to perceive and interpret language data.

AI plays a crucial role in cognitive linguistics, specifically:

1. Data analysis and pattern recognition: Artificial intelligence, particularly through the use of machine learning algorithms, has the ability to process and analyze vast amounts of linguistic data to identify subtle patterns, relationships, and structures. This aspect of technology is crucial for cognitive linguists who seek to unravel cognitive and linguistic patterns across a variety of languages and contexts.

2. Cognitive modeling: Artificial intelligence is capable of reconstructing cognitive processes, particularly those related to language comprehension, thereby providing tools for testing hypotheses about human language perception and interpretation. AI models can provide valuable insights into the cognitive aspects of linguistic processes, significantly expanding our understanding of linguistic and cognitive mechanisms.

3. Empirical testing of theories: Artificial intelligence is a powerful tool for empirically testing and refining theories of cognitive linguistics using computational modeling and simulation methods. The application of AI technologies allows cognitive linguists not only to test but also to refute existing hypotheses, thereby deepening our understanding of the mechanisms of language and cognitive processes.

The significant prospects offered by the application of artificial intelligence in cognitive linguistics are worth emphasizing. The potential of AI technologies to expand our understanding of human cognition and language is significant; in particular, machine learning algorithms can process and analyze vast arrays of linguistic data, revealing patterns and structures that may otherwise remain hidden from researchers. AI has great potential to deepen our understanding of language and cognitive processes, opening up new opportunities for the development of cognitive linguistics in several key areas: cognitive grammar, cognitive phonology, and cognitive semantics. In Russia, cognitive semantics (CS) has become the most widespread approach. According to E. V. Rakhilina, within linguistics, the cognitive approach naturally assumes the primacy of CS, which determines the behavior of lexemes, their parts and combinations, constructions, etc. (10).

Artificial intelligence has the ability to model cognitive processes such as language acquisition and comprehension, opening up new perspectives for studying the mechanisms by which humans process and generate language structures. Contemporary research focuses on integrating theories of cognitive linguistics into artificial intelligence systems, for example, by

creating computational models for interpreting metaphors and developing algorithms for frame-based semantic analysis. Furthermore, there is growing interest in applying AI technologies to research on cognitive-linguistic processes, particularly in analyzing how neural networks process linguistic representations and how language systems evolve.

Contemporary research in cognitive linguistics and artificial intelligence occupies a leading position in the interdisciplinary scientific field, leveraging the potential of AI to advance our understanding of language and cognitive processes. Key areas of research in this field include:

1. Computational modeling of language and cognitive functions. Today, increasing efforts are being directed toward applying artificial intelligence methods, such as machine learning and deep learning, to create models that emulate the cognitive processes involved in language analysis, production, and acquisition. Such models allow us to test hypotheses about the mechanisms of language processing and perception, facilitating a deeper understanding of the cognitive foundations underlying linguistic phenomena.

2. Synthesis of cognitive neuroscience and artificial intelligence: There is growing interest in merging cognitive neuroscience with AI techniques to study the neurobiological foundations of language and cognition. Researchers are actively using artificial intelligence tools to analyze neuroimaging data and create computational models that help bridge the gap between the theoretical assumptions of cognitive linguistics and empirical findings in neuroscience.

Future directions in cognitive linguistics and artificial intelligence promise to significantly advance our understanding of language, cognitive processes, and the development of intelligent systems. Promising areas of research and development include:

1. Embodied and situated cognition: Future research may seek to synthesize knowledge from the field of embodied cognition with artificial intelligence methods, enabling the creation of more contextual and real-world language understanding systems. Considering the influence of the physical body and environment on linguistic and cognitive development, AI models will be able to more accurately reflect the characteristics and nuances of human communication.

2. Multimodal language processing: There is growing interest in creating artificially intelligent systems capable of interpreting and analyzing language in its diverse manifestations, including verbal, nonverbal, and visual elements.

3. Cognitive semantics and knowledge representation: In the future, the application of artificial intelligence technologies involves the development of advanced models for processing and managing semantic data, drawing on the foundations of cognitive linguistics. This could enable the creation of intelligent systems that are capable of reasoning about the meaning and relationships between concepts at a level close to human thinking.

4. Language acquisition and learning: Collaboration between cognitive linguistics and artificial intelligence can shed light on the mechanisms through which humans acquire and learn language, leading to the creation of artificially intelligent models capable of replicating the cognitive processes underlying language learning.

5. Cross-cultural and cross-linguistic research: Future developments in artificial intelligence may include the analysis of diverse linguistic and cultural data to identify universal cognitive patterns and culturally related differences in linguistic behavior.

Conclusion

In conclusion, it can be argued that the interaction between cognitive linguistics and artificial intelligence opens new, highly promising horizons for both disciplines. This collaboration not only

deepens our understanding of language and cognitive processes but also facilitates the development of more advanced artificial intelligence systems that can adequately model human cognition. The importance of this synthesis is particularly evident in the possibility of creating multifaceted research programs that integrate theoretical approaches and empirical methods from both sciences to address complex problems of language perception and processing.

AGENCY, LEGITIMACY AND RISK IN ENGLISH-LANGUAGE MEDIA DISCOURSE ON THE KARABAKH CONFLICT

Nigar Chingiz MAHARRAMOVA

PhD in Philology, Associate Professor, Department of Azerbaijani Literature,
Azerbaijan University of Languages

E-mail: meherremova.nigar@adu.edu.az

ORCID ID: [0000-0002-0270-4453](https://orcid.org/0000-0002-0270-4453)

Abstract: This article examines how the Karabakh conflict is presented in selected English-language media texts, drawing on reports from Reuters, Al Jazeera English and The Guardian. The analysis focuses on three interrelated aspects of media representation: the way the conflict parties are named, the verbs describing military actions, and the linguistic construction of legality, danger and regional risk.

For this purpose, the study draws on Critical Discourse Analysis, framing theory and lexical-semantic analysis. Critical Discourse Analysis helps to connect language choice with ideology and social context, while framing theory explains how the same conflict can be presented from different media perspectives.

The study shows that the three media outlets frame the conflict in different ways. Reuters tends to emphasise sovereignty and territorial restoration, such as “recaptured”, “took back” and “full sovereignty over its territory”. Al Jazeera English emphasises escalation, as seen in the headline “fighting erupts”. The Guardian takes a broader view of the conflict. By referring to “fears of instability” and “gas and oil routes”, it goes beyond events on the ground and points to possible regional consequences. In this way, the language does more than report what is happening; it also shapes how the reader understands the situation. The article

therefore argues that media language does not simply describe war events; it also influences the reader's understanding of agency, legitimacy and the nature of risk associated with the conflict.

Keywords: media discourse, framing, Karabakh, war representation, lexical semantics, ideology

QARABAĞ MÜNAQİŞƏSİ İLƏ BAĞLI İNGİLİS DİLLİ MEDIADA AGENTLİK, LEGİTİMİLİK VƏ RİSK

Nigar Çingiz MƏHƏRRƏMOVA

Filologiya üzrə fəlsəfə doktoru, dosent, Azərbaycan ədəbiyyatı kafedrası,

Azərbaycan Dillər Universiteti

ORCID ID: 0000-0002-0270-4453

Xülasə: Məqalədə Qarabağ münaqişəsinin seçilmiş ingilisdilli media mətnlərində necə təqdim olunduğu tədqiq edilir. Tədqiqat materialını Reuters, Al Jazeera English və The Guardian nəşrlərində dərc olunmuş xəbərlər təşkil edir. Təhlil media representasiyasının bir-biri ilə sıx əlaqədə olan üç əsas aspektinə yönəlmişdir: münaqişə tərəflərinin necə adlandırılması, hərbi əməliyyatları təsvir edən fellər, legitimlik, təhlükə və regional risk kimi anlayışların dil vasitəsilə qurulması.

Bu məqsədlə tədqiqat işində Tənqidi Diskurs Analizi, freyminq nəzəriyyəsi və leksik-semantik təhlildən istifadə olunmuşdur. Tənqidi Diskurs Analizi dil seçimi ilə ideologiya və sosial kontekst arasındakı əlaqəni müəyyənləşdirməyə imkan verir. Freyminq nəzəriyyəsi isə eyni münaqişənin müxtəlif media baxışları çərçivəsində necə təqdim oluna biləcəyini izah edir.

Tədqiqat göstərir ki, hər üç media qurumu münaqişəni fərqli şəkildə çərçivələndirir. Reuters "recaptured", "took back" və "full sovereignty over its territory" kimi ifadələr vasitəsilə əsasən suverenlik və ərazi bütövlüyünün bərpası ideyalarını ön plana çıxarır. Al Jazeera English isə münaqişəni eskalasiya kontekstində təqdim edir və bu, "fighting erupts" başlığında daha aydın nəzərə çarpır. The Guardian "fears of instability" və "gas and oil routes" kimi ifadələrlə münaqişəni daha geniş regional nəticələrlə əlaqələndirir. Beləliklə, media dili müharibə hadisələrini sadəcə təsvir etmir, eyni zamanda oxucunun agentlik, legitimlik və risk anlayışının formalaşmasına təsir göstərir.

Açar sözlər: media diskursu, freyminq, Qarabağ, müharibə representasiyası, leksik semantika, ideologiya

Introduction

International conflicts are rarely understood by global audiences through military facts and official statements alone. This is especially true of conflicts that are geographically and culturally distant from most international readers. In such cases, media language becomes one of the main frameworks through which the reader first interprets the event. A verb may present an action as attack, return, defence or escalation, while the naming of the sides may influence perceptions of responsibility and legitimacy. This makes media discourse a space where information, interpretation and evaluation are combined. This understanding corresponds to the view that discourse is a complex phenomenon shaped by linguistic, psychological, social and cultural dimensions (Mammadov & Lewandowska-Tomaszczyk, 2022, p. 1). Media texts do not only report events; they also select, organize and evaluate them for a broad and heterogeneous audience. For this reason, the linguistic analysis of media discourse makes it possible to reveal how public knowledge about political events is formed through lexical, syntactic and stylistic choices. This approach is especially relevant because media discourse belongs to institutional discourse and functions through specific

genres and subgenres, including news reports, headlines, interviews and analytical articles. Thus, the study of media discourse requires attention not only to the reported event, but also to the genre form, communicative purpose and audience-oriented organization of the text.

The same event may be represented through different frames, such as restoration, escalation, humanitarian crisis or geopolitical risk. For this reason, war reporting should not be understood only as the direct transmission of facts. Even when a report appears factual, its language may influence which side is presented as active, which action is shown as legitimate and which consequence is brought to the reader's attention. In this regard, media language becomes one of the main means through which agency, responsibility, risk and emotional value are distributed. This article examines how selected English-language media reports represent the Karabakh conflict through verbs, actor labels, metaphorical patterns, metonymic references, contrastive structures and evaluative lexical choices.

The relationship between language and political meaning is central to Critical Discourse Analysis. In this approach, discourse is not viewed as a simple container of information. It is seen as a form of social practice through which political meanings, ideological positions and relations of power may be produced and reproduced. In this sense, CDA is not limited to the description of separate linguistic forms. It also explains how these forms function within a broader social and political context. This is important for the analysis of war reporting, because conflict-related media texts usually combine factual information with implicit evaluation. Therefore, verbs, actor labels, grammatical subjects and contrastive constructions may become linguistic indicators of ideological positioning. In other words, this approach is particularly useful for analysing conflict reporting, because war news may appear factual while still influencing the reader's perception through selected linguistic forms. This is especially relevant in media texts where political events are often presented as factual information, although the choice of words may already contain a certain interpretation.

Within this approach, media texts are understood as structures that select certain aspects of reality and make them more visible than others. As Entman (1993) points out, not all elements of reality are given equal attention; rather, some aspects are foregrounded in order to shape a particular understanding of events.

In a similar way, Gamson et al. (1992) show that facts do not carry a fixed meaning on their own; they become meaningful when they are placed within a broader interpretive context. This means that the same fact may guide the reader toward different conclusions depending on whether the media text foregrounds legality, violence, civilian suffering or regional consequences. In conflict reporting, journalists may choose to focus on different aspects of the same situation—for example, legality, violence, the suffering of civilians, or possible regional consequences.

As a result, the same military event can be interpreted in different ways. In one case, it may be presented as the restoration of control, while in another it may appear as sudden fighting, a humanitarian issue, or a source of wider regional risk.

This point is particularly relevant to the Karabakh case, since the same conflict may be associated with different meanings depending on whether the report foregrounds sovereignty, escalation, humanitarian concern or regional risk.

The linguistic expression of these frames can be examined through lexical semantics and stylistic analysis. Even a single verb may change the direction of interpretation. For this reason, lexical choices should not be treated as secondary details of the report. A verb may present an action

as restoration, expansion, movement, rupture or threat. At the same time, the way participants are named also matters. They may be presented as state actors, military forces, civilians, or ethnic groups, and this already shapes how the reader understands the situation. Metaphors also play an important role: violence can be described as fire, an explosion, movement, or even a natural disaster. In addition, metonymy allows the use of a capital city or a country's name to refer not just to a place, but to the whole political system behind it (Lakoff & Johnson, 1980; Charteris-Black, 2004).

These devices are not decorative elements of media language. They are part of the mechanism through which political reality becomes intelligible to the reader.

The Second Karabakh War extended beyond the South Caucasus and entered international media discourse. However, English-language outlets approached and presented the conflict differently. In Reuters, the conflict is mainly connected with territorial control and sovereignty. In Al Jazeera English, the emphasis moves toward fighting and escalation. In The Guardian, the focus is placed more on regional instability and possible wider consequences. For this reason, these reports provide useful material for analysing how the meaning of war is shaped through language. It should be noted that although media discourse and conflict representation have been widely examined in modern discourse studies, the Karabakh conflict has not been sufficiently analysed from the perspective of the interrelation between agency, legitimacy and risk in English-language media texts. Existing studies usually focus either on political and historical aspects of the conflict or on general media representation. However, the concrete lexical, syntactic and stylistic mechanisms through which English-language media construct the meaning of the conflict remain less systematically examined. In this regard, the present study does not approach the Karabakh conflict only as a political or historical event. It approaches it as a discursively constructed media event in which lexical choice, syntactic organisation and evaluative language participate in the formation of meaning. This makes it possible to reveal not only what is reported, but also how the reported event is linguistically organised for an international audience. For this reason, the present article attempts to fill this gap by analysing how selected linguistic units participate in the formation of different interpretive frames.

This study does not aim to generalise across all English-language media, but to illustrate how different linguistic patterns may shape interpretation in selected cases.

Methodology and Materials

The material of the study consists of selected English-language media texts published by Reuters, Al Jazeera English and The Guardian. These outlets were selected because they are globally recognized news platforms with broad international readerships and different editorial styles. Another reason for selecting these outlets is that they represent different journalistic modes of international news production. Reuters functions mainly as a global news agency with an explanatory and fact-oriented style. Al Jazeera English often gives strong visibility to conflict, crisis and escalation. The Guardian, in turn, tends to situate political events within wider regional, humanitarian and geopolitical contexts. Thus, the selected materials make it possible to compare not only different reports, but also different modes of framing the same conflict. The corpus includes one Reuters explanatory report, one Al Jazeera English news report and one The Guardian report related to the Second Karabakh War and Armenia–Azerbaijan tensions.

Since the analysis is based on selected media examples, the study is carried out as a qualitative, case-based discourse analysis. The limited corpus makes it possible to examine selected

linguistic units more closely and to show how framing is formed in concrete media texts. Therefore, the aim of the article is not to claim that the selected texts represent the entire English-language media field, but to demonstrate how different framing mechanisms operate in concrete media examples.

The research applies Critical Discourse Analysis as the main methodological approach and combines it with framing analysis and lexical-semantic analysis. CDA is used to examine the relation between language, ideology, and social context. Framing analysis is used to identify dominant interpretive structures. Lexical-semantic analysis is used to explain how specific verbs, nouns, metaphors, metonymies, contrastive constructions, and evaluative expressions construct meaning.

The units of analysis are headlines, lead structures, conflict-related verbs, actor labels, evaluative expressions, metaphorical patterns, metonymic references, contrastive syntax, and semantic prosody. Semantic prosody is understood as the evaluative meaning created by the repeated lexical environment of a word or phrase (Partington, 2004).

In accordance with the aim of the study, the following tasks are identified:

1. to examine the linguistic framing of the Karabakh conflict in selected English-language media texts;
2. to analyse how verbs, actor labels, metaphors, metonymies and evaluative lexical fields shape different interpretations of the conflict;
3. to clarify the role of media discourse in the construction of political meaning through these linguistic patterns.

Discussion

The analysis shows that the selected English-language media reports construct the Karabakh conflict through different but overlapping linguistic frames. These frames are not produced only through explicit political statements. They are also created through verbs, actor labels, metaphorical structures, metonymic references, contrastive syntax, and evaluative lexical fields. The main frames identified in the corpus are the restoration frame, sovereignty frame, escalation frame, mutual-blame frame, regional-risk frame, geopolitical frame, and legal-ambiguity frame.

The Reuters explanatory report is cited as a web source in the reference list and is used here as one of the primary media texts (Reuters, 2023). In the selected Reuters text, the conflict is constructed the conflict through a legal-political and restoration-oriented lexical field. This is especially visible in expressions such as “recaptured” and “took back”. In the sentence “Azerbaijan recaptured seven surrounding districts and took back about a third of Nagorno-Karabakh itself”, the verbs do not merely describe military movement. They also create a specific interpretation of that movement. The verb “recaptured” differs from the more neutral verb “captured” because the prefix “re-” activates the meaning of return, repetition, and previous possession. In a similar way, the phrasal verb “took back” carries an additional meaning through the particle “back”, suggesting a sense of return rather than expansion.

In this context, the verb “recaptured” can be read as signalling not just military movement, but a return to a previously recognised political status. As a result, such lexical choices lead Reuters to present Azerbaijan’s military actions not as an act of expansion, but as the restoration of control over previously lost territory.

The event is therefore not mainly represented as territorial acquisition, but as the recovery of a prior political and territorial order. This corresponds to a restoration frame, in which military action is linguistically connected with return, control, and legal-political legitimacy.

A similar pattern appears in the expression “full sovereignty over its territory”. The noun “sovereignty” belongs to the legal-political semantic field and evokes state authority, territorial integrity, and international law. The possessive phrase “its territory” also carries an important presupposition: the territory is presented as belonging to Azerbaijan. Thus, the conflict is not framed simply as a dispute between two equal territorial claims, but as a state’s attempt to establish complete authority over a legally recognized space.

This lexical pattern shows that Reuters’ language tends to reduce emotional dramatization and instead relies on formal political vocabulary. Words such as “sovereignty”, “territory”, “control”, “recaptured”, and “took back” produce a semantic environment associated with legality, restoration, and institutional order.

The Al Jazeera English report presents the conflict in a different way. Unlike Reuters, it does not mainly focus on restoration or sovereignty. Its headline, “Fighting erupts between Armenia, Azerbaijan over disputed region”, brings the idea of escalation to the foreground. The verb “erupts” is important here because it gives the impression of sudden and uncontrolled violence. It transfers the conflict into the semantic field of explosion, fire or sudden release of energy.

The grammatical structure of the headline also weakens direct agency. The subject of the sentence is not “Azerbaijan” or “Armenia”, but “fighting”. As a result, the violence appears to happen almost by itself. The headline does not clearly show which side started the action. Instead, it makes the reader focus on the sudden outbreak of violence. This produces an escalation frame.

Another Al Jazeera expression, “Heavy fighting between the two arch-foes broke out on Sunday, as they blamed each other for the escalation”, strengthens this pattern. The phrase “arch-foes” presents Armenia and Azerbaijan as long-standing enemies. It historicizes the conflict and places the current event within a broader narrative of repeated hostility. At the same time, the phrase “blamed each other” creates symmetrical attribution of responsibility. Instead of assigning direct blame to one actor, the sentence distributes responsibility between both sides.

This wording does not place responsibility clearly on one side. Rather, the conflict is presented as a continuing tension in which both sides accuse each other. In this case, the legal background becomes less visible, while repeated escalation is brought to the centre of the interpretation.

The Guardian: regional risk and geopolitical framing

The Guardian report analysed in this study was written by Michael Safi and is cited in the reference list as a web article (Safi, 2020). In the report, the Karabakh conflict is not described only within the limits of a military confrontation. This can be seen in the sentence “At least 16 troops and civilians have been killed, raising fears of instability in a region that provides crucial transit routes for gas and oil to the international market”. The first part of the sentence gives information about casualties, while the following part moves the reader’s attention to the possible consequences of the conflict.

The expression “raising fears of instability” is important in this respect. It shows that the conflict is presented not only as an event that has already happened, but also as a situation that may lead to further uncertainty. The word “fears” adds an emotional shade to the report, while “instability” gives the event a wider regional meaning.

This regional-risk frame is further strengthened by the phrase “crucial transit routes for gas and oil”. Here, the region is shown as important not only for Armenia and Azerbaijan, but also for international markets. In this way, the conflict is connected with energy routes and broader political interests, and the focus of the report moves beyond the battlefield.

The report also draws attention to another important aspect of the conflict in the sentence “Nagorno-Karabakh is internationally recognised as Azerbaijani territory but is run by ethnic Armenians”. Here, the first part of the sentence refers to international recognition and legal sovereignty, while the second part points to the actual situation on the ground. The conjunction “but” is important because it places these two meanings in contrast. As a result, the conflict is presented not only as a territorial issue, but also as a problem connected with control, identity and political reality.

Media outlet	Example expression	Linguistic device	Frame type	Interpretive effect
Reuters	“recaptured” / “took back”	Verb semantics; prefix “re-”; particle “back”	Restoration frame	Presents military action as recovery, not expansion
Reuters	“full sovereignty over its territory”	Legal-political lexicon; possessive structure	Sovereignty frame	Constructs the event as restoration of state authority
Al Jazeera English	“fighting erupts”	Metaphorical verb; event as grammatical subject	Escalation frame	Presents violence as sudden and uncontrolled
Al Jazeera English	“arch-foes” / “blamed each other”	Evaluative naming; symmetrical attribution	Mutual-blame frame	Distributes responsibility between both sides
The Guardian	“fears of instability”	Evaluative lexis	Regional-risk frame	Emphasises uncertainty, danger, and wider consequences
The Guardian	“gas and oil routes”	Strategic geopolitical reference	Geopolitical frame	Links the conflict to energy security and international markets
The Guardian	“internationally recognised... but...”	Contrastive syntax	Legal-ambiguity frame	Creates tension between legal sovereignty and de facto control

The examples discussed above show that the same conflict is not presented in the same way by all media outlets. Reuters mainly connects the event with restoration, sovereignty and legal-political control. In its language, Azerbaijan’s actions are shown more as a return of control than as a new territorial gain. Al Jazeera English gives more space to escalation, sudden violence and mutual accusation. The Guardian, however, approaches the conflict from a wider regional perspective and emphasises instability, energy routes and the contrast between legal recognition and practical governance. This indicates that the difference between these reports lies not only in what they state about the conflict, but also in how they shape its interpretation.

The findings confirm that media language does not simply transmit information. It also organizes interpretation. A verb such as “recaptured” can construct legitimacy. A metaphor such as “erupts” can make violence appear sudden and self-generating. A phrase such as “fears of instability” can shift attention from legal-political context to regional danger. A contrastive construction such as “internationally recognised... but...” can create ambiguity between law and political reality.

This supports the central assumption of Critical Discourse Analysis that discourse is closely connected with power, ideology, and social interpretation. As noted above, language in media texts does not function as a neutral container of facts. On the contrary, it acts as a form of social practice through which meanings are produced, legitimized, and contested. In this respect, the results of the analysis also correspond to framing theory, since the same factual event may be interpreted differently depending on the lexical and syntactic choices through which it is presented.

Headline structure is especially important in this process. The examples discussed above show that headlines occupy an important place in the linguistic construction of media texts. A headline is not limited to giving brief information about the event. It may also determine the direction in which the reader begins to understand it. For example, the headline “fighting erupts” presents the event as a sudden and uncontrolled escalation before the reader turns to the body of the article. The explanatory headline “tensions explained”, on the other hand, directs the reader not to an immediate emotional reaction, but to a more contextualized understanding of the conflict. Thus, headlines become one of the first linguistic means through which the event is framed. This is why headline analysis is important in the study of media framing. The headline usually appears before the main text and may predetermine the first direction of interpretation. In this respect, a headline is not only a short summary of the report, but also a condensed discourse unit in which agency, evaluation and ideological perspective may be concentrated.

The examples analysed in the article also make it clear that the Karabakh conflict is represented differently in the selected English-language media texts. Reuters mainly presents the conflict through the ideas of legal-political restoration and sovereignty. Al Jazeera English gives more space to escalation and mutual blame. The Guardian, in turn, connects the conflict with regional risk and geopolitical consequences. These differences show that war reporting is shaped not only by the facts selected for reporting, but also by the linguistic means through which agency, legitimacy, risk and emotional meaning are presented to the reader.

Conclusion

The analysis carried out in this article shows that English-language media frame international conflicts through concrete linguistic mechanisms. In the Karabakh case, verbs, actor labels, metaphorical patterns, metonymic references, semantic prosody, contrastive syntax, and headline structures all participate in the construction of meaning. Reuters’ use of “recaptured” and “took back” produces a restoration-oriented interpretation. Al Jazeera English’s use of “fighting erupts” creates a metaphor of sudden escalation and weakens direct agency. The Guardian’s risk-oriented vocabulary foregrounds instability and regional consequences.

The findings show that war reporting is not only a matter of factual selection but also a matter of linguistic organization. A single verb may influence the reader’s perception of legitimacy. A headline may turn a political event into an image of sudden violence. A metonymic reference may compress complex institutions into a single actor. An evaluative phrase may shift attention from legal-political context to emotional and geopolitical risk. From the points mentioned above, it

becomes clear that media discourse cannot be regarded as a passive channel through which information is simply transmitted to the reader. On the contrary, it participates in the construction of social and political reality by selecting, naming and evaluating events through language. In this sense, every lexical choice, syntactic structure or metaphorical expression may contribute to the way the reader understands war, responsibility and legitimacy.

The main contribution of this article is connected with the combination of Critical Discourse Analysis and lexical-semantic analysis. This approach makes it possible to examine not only the general frames used by the media, but also the concrete linguistic means through which these frames are formed. Metaphor, metonymy, semantic prosody, contrastive syntax and actor naming are treated here as important devices that help to reveal how English-language media construct the meaning of war. The Karabakh case shows that international journalism should be analysed not only from the point of view of the information it reports, but also from the point of view of how this information is linguistically organised. This combination is useful because it allows the analysis to move from general media frames to the concrete linguistic forms through which these frames are created.

It should also be noted that the present study has certain limitations. Since the analysis is based on a small number of selected media texts, the results should not be understood as broad statistical generalisations. They should rather be considered as qualitative observations based on close textual analysis. Future research may include a larger corpus, more media outlets, a wider time period and quantitative analysis of lexical patterns related to conflict reporting.

ORCID ID: 0009-0004-2630-5176

Xülasə: 2020-ci ilin payızında baş verən 44 günlük Vətən müharibəsi Azərbaycanın müasir tarixinin ən mühüm səhifələrindən birini təşkil edir. Bu müharibə təkcə hərbi və siyasi baxımdan deyil, həm də dil və ictimai diskurs baxımından cəmiyyətin dərinliklərini silkələmiş, insanların düşüncə və ifadə tərzini kökündən dəyişdirən bir hadisə kimi yadda qalmışdır. Həmin günlərdə mediada, sosial şəbəkələrdə, küçə söhbətlərində və rəsmi çıxışlarda eyni ifadələrin, eyni şüarların, eyni duyğuların dolaşdığını görmək mümkün idi. Bu tədqiqat müharibə dövründə ictimai diskursda meydana çıxan dil vahidlərini – siyasi şüarları, ritorik formulaları, azadlıq elanlarını və qələbə narrativlərini – araşdıraraq onların cəmiyyətin dil yaddaşına necə hopduğunu izah etməyə çalışır. "Qarabağ Azərbaycandır!", "Dəmir yumruq", "Noldu Paşinyan?", "İti qovan" və "Əziz Şuşa, sən azadsan!" kimi ifadələr qısa müddət ərzində bütün ünsiyyət platformlarında geniş yayılaraq sadə sözlər olmaqdan çıxmış, milli kimliyin, həmrəyliyin və tarixi haqqın simvollarına çevrilmişdir. Tədqiqat göstərir ki, dil bu prosesdə yalnız passiv bir vasitə deyil, aktiv bir qurucu qüvvə kimi çıxış etmiş; həm kollektiv yaddaşın formalaşmasında, həm də milli şüurun yenidən gücləndirilməsində mühüm rol oynamışdır. Müharibə dili nəinki hadisələri əks etdirmişdir, o, eyni zamanda insanların hiss etdiklərini ifadə edəcək ortaqlar bir dil yaratmışdır.

Açar sözlər: Azərbaycan dili, Vətən müharibəsi, müharibə diskursu, siyasi şüarlar, milli kimlik, media dili

44 GÜNLÜK VƏTƏN MÜHARİBƏSİNİN AZƏRBAYCAN DİLİNƏ VƏ İCTİMAİ DİSKURSA TƏSİRİ

ORCID ID 0009-0004-2630-5176

Abstract: The 44-Day Patriotic War of autumn 2020 represents one of the most consequential events in Azerbaijan's modern history – a conflict that reshaped not only the country's territorial boundaries but also the language through which its people understood and expressed what they were experiencing. Across television broadcasts, social media platforms, public rallies, and everyday conversations, certain phrases emerged with remarkable speed and spread to virtually every corner of public life. This study examines how the wartime language produced during that period – encompassing political slogans, rhetorical formulas, liberation announcements, and victory narratives – entered Azerbaijani public discourse and what role it played in shaping national identity and collective memory. Expressions such as "Qarabağ Azərbaycanıdır!", "Dəmir yumruq", "Noldu Paşinyan?", "İti qovan", and "Əziz Şuşa, sən azadsan!" transcended their immediate communicative functions to become symbols of something far larger: national solidarity, historical justice, and the lived experience of liberation. The research argues that wartime language did not simply reflect or describe the events of the conflict – it actively participated in constructing the meaning of those events for those who lived through them. By shaping how people felt, what they remembered, and how they spoke to one another, this language contributed directly to the formation of a shared national consciousness. Understanding this dimension of the war is therefore not merely a linguistic exercise; it is an essential part of understanding how Azerbaijani society processed and commemorated a moment of profound historical significance.

Keywords: Azerbaijani language, Patriotic War, war discourse, political slogans, national identity, media language

Introduction

Wars leave traces not only on maps and in history books, but in the very words people reach for when trying to explain what they have lived through. The 44-Day Patriotic War between Azerbaijan and Armenia in the autumn of 2020 is a striking example of this. By the time the fighting ended, the country had regained territories that had been out of reach for nearly three decades – and the language Azerbaijanis used to speak about themselves and their country had shifted in ways that are still unfolding today.

The events of the war unfolded in real time across television screens, social media feeds, and kitchen table conversations. In this environment, certain phrases took hold almost immediately. They were short, memorable, and emotionally charged – qualities that allowed them to travel across different registers of communication, from the formal language of political speeches to the informal banter of online comment sections. In this sense, the war produced a new layer of public language that is worth examining closely.

This paper focuses on how wartime language shaped Azerbaijani public discourse during and after the conflict. Rather than treating language as a passive mirror of events, the study explores how specific expressions actively contributed to the construction of national identity and collective memory. Drawing on the analysis of wartime slogans, liberation announcements, and victory

narratives, the research argues that the linguistic dimension of the war deserves as much attention as its military and political dimensions (1, p. 45-47).

Wartime Language and Political Communication

When a country goes to war, language does not stay neutral. Political leaders, journalists, soldiers, and ordinary citizens all reach for words in ways that are shaped by the urgency and emotion of the moment. In Azerbaijan's case, the Patriotic War produced a remarkably distinctive set of expressions that cut across different levels of communication – from presidential addresses to memes shared on Telegram channels.

The political leadership played a central role in setting the tone of wartime rhetoric. Speeches were carefully crafted to underscore national unity and to frame the military campaign in terms of historical justice and territorial sovereignty. The repeated use of symbolic language helped channel public sentiment and sustain collective resolve during a prolonged and uncertain conflict (2, p. 133–135).

At the same time, the media operated as both a transmitter and an amplifier of wartime discourse. Daily briefings, live coverage of liberated territories, and victory announcements were broadcast widely and discussed extensively. Through constant repetition, certain phrases became touchstones — words that people associated not just with specific events but with the war as a whole.

Social media introduced another dynamic into this process. Platforms like Facebook, Instagram, and Telegram allowed citizens to engage with wartime language in informal and creative ways. Slogans appeared on profile pictures; memes circulated expressions that had started in political speeches; short videos spread phrases that might otherwise have remained confined to official discourse. The result was a kind of open-ended conversation between top-down rhetoric and bottom-up participation. As Antal (2022) observed in his study of the conflict, Azerbaijan's information warfare teams leveraged high-definition drone footage across social media to shape not only battlefield perceptions but also the emotional experience of the war on the home front – a dynamic that had a direct bearing on how wartime language was received and amplified (7, p. 76).

The slogan "Qarabağ Azərbaycanıdır!" exemplifies this interaction well. Although it had roots in earlier expressions of territorial aspiration, the war gave it a new intensity and urgency. It became a rallying cry that appeared across every platform and every context, from official government communications to handwritten signs held up at public gatherings (3, p. 3-4).

Analysis of Wartime Slogans

Slogans are interesting linguistic objects. They compress large and often complicated ideas into a small number of words, and they rely on repetition to build meaning over time. The slogans of the 44-Day War are worth examining individually because each one worked somewhat differently.

"Qarabağ Azərbaycanıdır!" was perhaps the most ubiquitous expression of the conflict. Its grammatical simplicity was part of its power: it made a claim that was absolute and left no room for ambiguity. The phrase did not argue for anything – it stated a fact that its speakers regarded as self-evident. This declarative quality made it easy to repeat and easy to remember, which is precisely why it spread so effectively.

"Dəmir yumruq" worked differently. As a metaphor, it evoked an image of concentrated force and coordination. It was the kind of phrase that politicians and military commanders reached for when they wanted to convey that the country's response to the conflict was organized, deliberate,

and powerful. The phrase carried an implicit message: this was not improvised resistance but a carefully prepared effort.

"Noldu Paşinyan?" had a very different character. It spread primarily through online platforms and carried a tone of mocking triumphalism – a way of marking each military success by turning attention to the difficulties faced by the opposing side's leader. Its humor distinguished it from official rhetoric, but that informal quality was also part of what made it so widely shared. It captured something that official language could not quite articulate: the relief and satisfaction of seeing things go well after a long period of uncertainty.

"İti qovan" followed a similar pattern. Emerging from informal speech, it made its way into broader circulation through repetition and social sharing. Its presence in the discourse illustrates something important about how wartime language actually works: it is not produced by official sources alone but emerges from the interaction between formal and informal communication.

Liberation Announcements and Linguistic Symbolism

Some of the most emotionally significant moments of the war came not during battles but in the announcements that followed them. As Azerbaijani forces liberated territories that had been under occupation for close to thirty years, the announcements of those liberations became events in their own right.

The phrase that has stayed most firmly in public memory is the declaration made upon the liberation of Shusha:

"Əziz Şuşa, sən azadsan!"

The rhetorical choice here is striking. Rather than simply announcing that Shusha had been liberated, the statement addresses the city directly, as though it were a person who had been waiting for this moment. This personification transformed a military communiqué into something that felt more like a reunion. For many people, the emotional resonance of those words went far beyond what a straightforward factual announcement could have achieved. This is not coincidental: Antal (2022) notes that Shusha was identified by Azerbaijani planners from the very beginning as the decisive terrain and the symbolic center of gravity of the entire campaign – a fact that lent the liberation announcement an almost ceremonial weight (8, p. 96).

The liberation announcements for other districts followed a similar pattern:

*Füzuli azaddır
Cəbrayıl azaddır
Zəngilan azaddır
Qubadlı azaddır
Kəlbəcər azaddır*

Each of these phrases was received not merely as news but as a kind of historical marker. They were widely repeated and shared because they gave tangible form to what had previously seemed almost unimaginable. Together, they built a cumulative narrative of return and restoration (6, p. 52-54).

5. Victory Discourse

As the war moved toward its end, a particular vocabulary of victory emerged in public discourse. Words like "Zəfər" and "Qələbə" took on a heightened significance, appearing across media coverage, political speeches, and public celebrations. Their frequent repetition was not accidental – it reflected a deliberate effort to frame the outcome of the conflict in terms that would endure.

The phrase "Zəfər yolu" became especially resonant. On one level it referred to a specific road leading to Shusha, but on another it functioned as a broader metaphor for the journey the country had undertaken. The combination of geographical concreteness and symbolic depth gave the phrase a staying power that more abstract formulations often lack.

Victory discourse also served an interpretive function. By providing a narrative framework – a story of determination, sacrifice, and ultimate success – it helped people make sense of what had happened and locate the war within a longer history. This interpretive dimension is one of the reasons wartime language tends to outlast the conflicts that produce it.

6. Language and National Identity after the Patriotic War

The end of the fighting did not mark the end of the language the war had produced. In the years that followed, wartime expressions continued to circulate in political speeches, educational materials, cultural events, and commemorative gatherings. This persistence is itself significant. It suggests that wartime language was not simply a response to an immediate situation but something that had become woven into the fabric of how Azerbaijanis think and talk about themselves.

Academic research on other conflicts has shown that wartime discourse can play a lasting role in processes of identity formation and national solidarity (4, p. 143-145). The Azerbaijani case appears to follow a similar pattern. The slogans and expressions of the 44-Day War have become reference points – shared linguistic markers that signal membership in a community with a common historical experience.

Educational institutions have played a role in this process. References to wartime expressions appear in classroom discussions, textbooks, and documentaries produced in the aftermath of the conflict. By incorporating this language into formal education, institutions help ensure that the next generation will understand not just the events of the war but the emotional and symbolic vocabulary associated with it.

Discussion

The analysis carried out in this paper points to several conclusions worth stating clearly. First, wartime language in the Azerbaijani context was not produced by a single source. Political leaders, media institutions, and ordinary citizens all contributed, and the interaction between these different contributors gave the discourse its particular character. Official slogans gained meaning partly through informal adoption; informal expressions gained legitimacy partly through media circulation.

Second, the speed at which wartime expressions spread was qualitatively different from earlier conflicts. The combination of 24-hour media coverage and social media platforms meant that a phrase could move from a presidential speech to a viral meme in a matter of hours. This compression of the diffusion process intensified the saturation of public discourse with wartime language.

Third, the persistence of wartime language beyond the end of the conflict suggests that it was fulfilling functions that go beyond simple communication. It was helping people process an experience that was, by any measure, extraordinary – and it was doing so in a way that connected individual responses to a collective narrative.

Conclusion

The 44-Day Patriotic War changed the way Azerbaijanis talk about their country, their history, and themselves. Expressions that were born in the urgency of conflict – "Qarabağ Azərbaycandır!", "Dəmir yumruq", "Əziz Şuşa, sən azadsan!", and others – became part of a shared

linguistic inheritance. They are phrases that people reach for when they want to invoke the war and everything it represented.

This paper has tried to show that studying these expressions is not a peripheral concern. Language is one of the primary ways in which communities make meaning out of their experiences, and the language of war is particularly revealing because it is produced under conditions of heightened emotion and collective purpose. Understanding how wartime language works – how it spreads, what it does, and how it persists – is part of understanding the war itself.

Further research might examine how wartime expressions are being used in educational contexts, how they appear in cultural productions such as literature and film, and how they are understood by different generations. There is also scope for comparative work that situates the Azerbaijani case within broader patterns of wartime discourse in other societies.

DİGİTAL COMMUNİCATION MODELS İN APPLIED LİNGUISTİCS:EMERGİNG FORMS OF LANGUAGE BEHAVİOR

Zeynab İsa MAMİYEVA

Lecturer, Department of Azerbaijani Language, Baku Slavic University

E-mail: zeynab.safarova.i@bsu-uni.edu.az

ORCID ID: 0000-0003-1594-6175

Abstract: The study explores the transformation of language behavior within the framework of applied linguistics, focusing on digital communication models. With the rapid expansion of online platforms, traditional patterns of language use are being reshaped by multimodal, hybrid, and dynamic forms of interaction. The paper examines how technological environments influence linguistic choices, communicative strategies, and stylistic variation. Drawing on both theoretical perspectives, and practical examples, the research highlights the emergence of new language behaviors characterized by brevity, hybridity, and visual supplementation.

In recent decades, the rapid development of digital technologies has significantly transformed the ways in which individuals communicate. Online platforms such as social media, messaging applications, and virtual learning environments have created new communicative spaces where language is used differently from traditional contexts. These changes have become a central concern of applied linguistics, which seeks to understand language in real-life use.

The aim of this study is to analyze digital communication models and to identify emerging forms of language behavior within these environments. The research focuses on how linguistic practices adapt to technological conditions and how new communicative strategies are formed.

Key words: communication strategies, discourse analysis, hybrid language, language behavior, multimodality

TƏTBİQİ DİLÇİLİKDƏ RƏQƏMSAL KOMMUNİKASIYA MODELƏRİ: DİL BACARIQLARININ YENİ FORMALARI

Zeynəb İsa MƏMIYEVA

Müəllim, Azərbaycan dili kafedrası, Bakı Slavyan Universiteti

Xülasə: Tədqiqatımız təbqi dilçilik çərçivəsində dil davranışının transformasiyasını araşdırır və əsas diqqəti rəqəmsal kommunikasiya modellərinə yönəldir. Müasir dövrdə onlayn platformaların sürətli inkişafı nəticəsində ənənəvi dil istifadəsi formaları əhəmiyyətli şəkildə dəyişərək multimodal, hibrid və dinamik ünsiyyət modelləri ilə əvəz olunmaqdadır.

Məqalədə texnoloji mühitin dil seçiminə, kommunikativ strategiyalara və üslubi variasiyaya təsiri təhlil olunur. Həm nəzəri yanaşmalara, həm də praktik nümunələrə əsaslanan bu araşdırma göstərir ki, müasir kommunikasiya şəraitində dil davranışı qısalıq, hibridlik və vizual elementlərlə zənginləşmə kimi xüsusiyyətlərlə səciyyələnir. Bu isə dilin statik sistem deyil, dəyişkən və adaptiv bir struktur olduğunu bir daha təsdiqləyir.

Son onilliklərdə rəqəmsal texnologiyaların sürətli inkişafı insanların ünsiyyət qurma üsullarında köklü dəyişikliklərə səbəb olmuşdur. Sosial media platformaları, mesajlaşma tətbiqləri və virtual təhsil mühitləri yeni kommunikativ məkanlar formalaşdırmış və bu məkanlarda dil istifadəsi ənənəvi modellərdən əhəmiyyətli dərəcədə fərqlənməyə başlamışdır.

Bu dəyişikliklər təbqi dilçiliyin diqqət mərkəzinə çevrilmişdir. Belə ki, təbqi dilçilik dili yalnız struktur baxımından deyil, həm də real kommunikativ mühitdə funksional istifadəsi baxımından öyrənir. Rəqəmsal mühitdə dilin yeni formalarının yaranması bu sahədə yeni tədqiqat istiqamətlərinin meydana çıxmasına səbəb olmuşdur.

Tədqiqatın əsas məqsədi rəqəmsal kommunikasiya modellərini sistemli şəkildə təhlil etmək və bu mühitdə formalaşan yeni dil davranışı modellərini müəyyənləşdirməkdir. Bu çərçivədə dilin texnoloji şəraitə necə uyğunlaşdığı, kommunikativ strategiyaların necə dəyişdiyi və yeni ünsiyyət formalarının hansı xüsusiyyətlərə malik olduğu araşdırılır.

Eyni zamanda, bu tədqiqat dilin sosial və texnoloji faktorlarla qarşılıqlı əlaqəsini ön plana çıxarır. Müasir kommunikasiya mühitində dil yalnız informasiya ötürmə vasitəsi deyil, həm də identiklik qurma, sosial münasibətləri tənzimləmə və emosional ifadə vasitəsi kimi çıxış edir. Bu baxımdan rəqəmsal kommunikasiya dilin funksional imkanlarını genişləndirərək onun yeni inkişaf mərhələsinə keçidini təmin edir.

Açar sözlər: diskurs analizi, dil davranışı, hibrid dil, kommunikasiya strategiyaları, multimodalıq

Introduction

Applied linguistics is a dynamic and interdisciplinary field that investigates the practical applications of linguistic theory in real-world contexts. Traditionally, it has focused on areas such as language teaching and learning, translation studies, language policy, and communication analysis. However, in the context of rapid technological advancement, the scope of applied linguistics has significantly broadened to encompass digitally mediated forms of language use.

In contemporary research, applied linguistics does not merely describe language structures but seeks to understand how language functions within specific social, cultural, and technological environments. This functional orientation enables scholars to examine how individuals employ language as a tool for interaction, identity construction, and meaning negotiation. Consequently, the field increasingly integrates insights from sociolinguistics, psycholinguistics, and discourse analysis.

Moreover, the emergence of digital communication has introduced new domains of inquiry, including computer-mediated discourse, online identity performance, and algorithm-influenced communication patterns. Applied linguistics, therefore, plays a crucial role in analyzing how linguistic practices adapt to evolving communicative demands and technological affordances.

Materials and Methods

Digital communication constitutes a complex and rapidly evolving linguistic environment in which interaction is mediated through electronic technologies. Unlike traditional face-to-face communication, digital interaction is characterized by spatial and temporal flexibility, allowing users to communicate across distances and, in many cases, asynchronously.

One of the defining features of this environment is its multimodal nature. Communication is no longer restricted to verbal or written text; instead, it incorporates a wide range of semiotic resources, including images, videos, emojis, hyperlinks, and audio elements. This multimodality expands the expressive potential of language while simultaneously transforming conventional norms of meaning-making.

In addition, digital communication tends to favor informality, brevity, and immediacy. Users often prioritize speed and efficiency over grammatical accuracy, leading to the widespread use of abbreviations, ellipsis, and non-standard orthographic forms. These tendencies reflect not a decline in linguistic competence, but rather an adaptation to the communicative constraints and opportunities of digital platforms.

Results and Discussion

Importantly, digital environments also reshape interactional dynamics. Features such as comment threads, likes, shares, and tagging mechanisms introduce new forms of audience engagement and participation. As a result, communication becomes more interactive, collaborative, and publicly visible, influencing both linguistic choices and discourse strategies.

The relationship between language and technology is not merely instrumental but fundamentally transformative. Technology does not simply serve as a neutral channel for communication; rather, it actively shapes the ways in which language is produced, distributed, and interpreted.

Digital platforms impose specific structural and functional constraints that influence linguistic behavior. For example, character limitations encourage conciseness, while instant messaging systems promote rapid and fragmented exchanges. Similarly, predictive text and autocorrect features subtly guide lexical and syntactic choices, thereby participating in the construction of

meaning. Furthermore, technological affordances enable the integration of multiple communicative modes, giving rise to hybrid forms of expression. Users frequently combine textual, visual, and auditory elements to create layered meanings that would be difficult to achieve through language alone. This phenomenon challenges traditional linguistic models that prioritize verbal communication as the primary mode of expression.

Another significant aspect of this interaction is the emergence of new linguistic norms and conventions. Online communities often develop their own discourse practices, including specific vocabulary, stylistic patterns, and interactional rules. These norms are shaped by factors such as platform design, user demographics, and cultural context.

Ultimately, the interplay between language and technology reflects a broader process of linguistic evolution. As communication technologies continue to develop, they will undoubtedly give rise to new forms of language use, requiring ongoing analysis within the framework of applied linguistics.

Digital communication is fundamentally structured around two primary temporal modes: synchronous and asynchronous interaction. These modes differ not only in terms of timing but also in their impact on linguistic form, discourse organization, and communicative intent.

Synchronous communication occurs in real time and includes interactions such as live chats, video conferencing, and instant messaging. This mode is characterized by immediacy, rapid turn-taking, and a high degree of interactivity. Linguistically, synchronous communication often mirrors features of spoken discourse, including incomplete sentences, discourse markers, hesitation phenomena, and informal lexical choices. The pressure to respond quickly encourages efficiency, resulting in reduced syntactic complexity and increased reliance on context for meaning interpretation.

In contrast, asynchronous communication allows for temporal delay between message production and response. Examples include emails, discussion forums, and comment sections. This mode provides users with greater time for reflection, planning, and revision, which often leads to more structured and coherent discourse. As a result, asynchronous communication tends to exhibit features associated with written language, such as greater grammatical accuracy, elaborated sentence structures, and clearer thematic organization.

Importantly, these two modes should not be viewed as strictly dichotomous but rather as points along a continuum. Many digital platforms integrate both synchronous and asynchronous features, creating hybrid interactional environments. Consequently, users must navigate varying communicative expectations, adjusting their linguistic behavior according to the temporal dynamics of each context.

A defining feature of digital communication is its inherently multimodal nature. Unlike traditional forms of communication that rely predominantly on verbal or written language, digital discourse incorporates multiple semiotic modes, including visual, auditory, and symbolic resources. These may include images, videos, emojis, GIFs, hyperlinks, and audio messages.

Multimodality fundamentally transforms the process of meaning-making. Communication is no longer confined to linear textual expression; instead, meaning emerges through the interaction of various modes that complement, reinforce, or even replace linguistic elements. For example, an emoji may function as an emotional cue, clarifying the tone of a message that might otherwise be ambiguous in text form.

From an applied linguistic perspective, multimodal communication challenges traditional analytical frameworks that prioritize language as the primary carrier of meaning. It necessitates a broader understanding of discourse as a composite of semiotic resources, each contributing to the overall communicative effect. This shift has led to the development of new analytical approaches that account for the interplay between different modes.

Furthermore, multimodality enhances communicative efficiency and expressiveness. Users can convey complex ideas, emotions, and attitudes through the strategic combination of modes, often reducing the need for lengthy textual explanations. At the same time, it introduces new interpretive challenges, as meaning becomes more context-dependent and culturally variable.

Social media platforms represent a distinct and highly influential model of digital communication.

These platforms are characterized by their interactive, participatory, and networked nature, which fundamentally shapes linguistic practices and discourse structures.

One of the most notable features of social media communication is its emphasis on brevity and immediacy. Platform-specific constraints, such as character limits and fast-paced content flows, encourage users to produce concise and impactful messages. This has led to the widespread use of abbreviated forms, hashtags, and other strategies designed to maximize visibility and engagement.

In addition, social media discourse is inherently audience-oriented. Users are often aware of multiple, overlapping audiences, including friends, acquaintances, and the broader public. This awareness influences linguistic choices, as individuals strategically construct their messages to achieve specific communicative goals, such as self-presentation, persuasion, or social alignment.

Another key aspect is interactivity. Features such as commenting, sharing, liking, and tagging enable continuous feedback and participation, transforming communication into a collaborative process. Discourse in this context is not static but evolves through ongoing interaction among users.

Moreover, social media fosters the emergence of new discourse conventions and community-specific norms. These may include particular stylistic patterns, lexical innovations, and culturally embedded references that are shared within user groups. Such practices reflect the dynamic and adaptive nature of language in digital environments.

One of the most salient characteristics of language use in digital environments is the principle of linguistic economy, which prioritizes brevity, efficiency, and speed of communication. This phenomenon is largely shaped by the technological affordances and constraints of digital platforms, such as limited screen space, rapid message exchange, and users' preference for immediacy.

Linguistic economy manifests itself through various strategies, including abbreviation, acronym formation, ellipsis, and the simplification of syntactic structures. Users frequently omit function words, reduce sentence complexity, and employ shortened lexical forms (e.g., "pls," "msg," "u") to minimize effort while maintaining communicative effectiveness. These practices reflect not a degradation of language competence, but rather an adaptive response to the demands of fast-paced communication.

Moreover, linguistic economy is closely linked to cognitive processing. Shortened forms reduce the time required for both production and comprehension, thereby facilitating more efficient interaction. At the same time, this efficiency relies heavily on shared contextual knowledge, as meaning is often inferred rather than explicitly stated.

Importantly, linguistic economy also has stylistic and pragmatic implications. Concise expressions can signal informality, group membership, and digital literacy, while also contributing to the creation of a distinct communicative norm within online communities.

The phenomenon of code-switching, defined as the alternation between two or more languages within a single communicative event, has become increasingly prominent in digital discourse. In online environments, this practice often extends beyond traditional code-switching to include broader forms of linguistic hybridization, where elements from different languages are blended into a unified expression.

This hybrid language use serves multiple communicative and social functions. On a functional level, users may switch codes to compensate for lexical gaps, enhance clarity, or achieve greater expressive precision. Certain concepts or expressions may be more readily available or culturally salient in one language than another, prompting users to draw on multiple linguistic resources.

From a sociolinguistic perspective, code-switching is closely associated with identity construction and group affiliation. By mixing languages, individuals can signal membership in specific communities, such as bilingual or multilingual groups, and negotiate their social identities in dynamic ways. In digital contexts, this practice is further amplified by the global nature of communication, where users are frequently exposed to multiple languages and cultural influences.

Linguistic hybridization also reflects the fluidity of language boundaries in the digital age. Traditional notions of discrete, stable language systems are increasingly challenged by the emergence of mixed and evolving forms of expression. As such, hybrid language use can be understood as both a linguistic and a cultural phenomenon, shaped by globalization and technological connectivity.

Another defining feature of contemporary digital communication is the integration of visual elements, particularly emojis, into linguistic interaction. Emojis, along with images, GIFs, and other visual symbols, function as semiotic resources that complement or even substitute for verbal language.

These visual elements play a crucial role in conveying emotional nuance, interpersonal stance, and pragmatic meaning. In text-based communication, where prosodic and paralinguistic cues are absent, emojis help to mitigate ambiguity by providing additional contextual information. For example, a simple statement may be interpreted differently depending on the accompanying emoji, which can signal humor, irony, or sincerity.

From a theoretical standpoint, emoji-based communication represents an extension of language rather than a replacement. Emojis interact with textual elements to create a multimodal discourse in which meaning is co-constructed through multiple channels. This challenges traditional linguistic models that prioritize verbal signs and highlights the need for a broader semiotic framework.

Furthermore, the use of emojis is governed by emerging conventions and cultural norms. While some symbols have relatively stable meanings, others are highly context-dependent and subject to reinterpretation. This variability underscores the dynamic and negotiated nature of meaning in digital communication.

Digital communication is characterized by a high degree of stylistic fluidity, whereby traditional distinctions between formal and informal language are increasingly blurred. In contrast to conventional written discourse, which often adheres to standardized norms of grammar and style, digital discourse allows for greater flexibility and experimentation.

Conclusion

Users frequently combine elements from different registers within a single interaction, producing hybrid stylistic forms that reflect both personal and contextual factors. For instance, a message may include formal lexical items alongside colloquial expressions, abbreviations, and emotive markers. This blending of styles is not random but strategically employed to achieve specific communicative goals.

Stylistic fluidity is closely linked to audience design and situational context. In digital environments, users must navigate diverse and often overlapping audiences, adjusting their language use accordingly. This results in a dynamic process of style-shifting, where linguistic choices are continuously adapted to suit the communicative context.

Additionally, the erosion of rigid stylistic boundaries reflects broader sociocultural changes. As digital communication becomes more pervasive, norms of language use evolve to accommodate new forms of interaction. Informality, once restricted to private communication, is increasingly accepted in professional and public contexts, leading to a reconfiguration of traditional linguistic hierarchies.

CONCEPTUAL METAPHOR USE AND ITS IDEOLOGICAL EFFECTS IN AZERBAIJANI AND ENGLISH POLITICAL DISCOURSE: A COMPARATIVE CDA APPROACH

Gular Fizuli SADIGOVA

PhD student, Department of Philology, Baku State University

Senior lecturer, Department of Grammar and English Teaching, Ganja State University

E-mail: gularnabiyeva@gmail.com

ORCID ID: [0000-0002-2054-5900](https://orcid.org/0000-0002-2054-5900)

Abstract: This study examines the role of conceptual metaphors in political discourse, focusing on their cognitive, persuasive, and ideological functions. Drawing on Conceptual Metaphor Theory and Critical Discourse Analysis (CDA), the paper explores how metaphors shape public understanding of complex political phenomena. The analysis identifies three primary functions of metaphor in political communication: simplification of abstract concepts, implicit guidance of audience interpretation, and persuasive influence. Empirical examples from international media discourse—including BBC, CNN, and The Guardian—demonstrate how metaphorical framing structures political reality through domains such as war, game, health, and navigation. The findings indicate that metaphors activate culturally embedded cognitive frames, enabling audiences to process information efficiently while simultaneously constraining interpretation. Although metaphors enhance accessibility and emotional engagement, they may also obscure complexity, reinforce ideological bias, and reduce critical reflection. The study concludes that conceptual metaphors function not merely as linguistic devices but as powerful tools of political cognition and influence, making their analysis essential for understanding contemporary political communication.

Introduction

Political discourse employs conceptual metaphors not merely as stylistic features of language, but also as cognitive and ideological instruments. In this regard, metaphors do not simply describe reality; they simultaneously structure it and present it within particular interpretive frameworks. This approach is especially explained within the framework of Conceptual Metaphor Theory, according to which metaphor is regarded not as a linguistic phenomenon, but as one of the fundamental mechanisms of thought. There are three primary ways in which metaphors are used in the development of political discourse: (1) to simplify abstract political concepts that are less accessible to the general public by bringing them closer to the “physical world” through metaphor; (2) to influence the subconscious structure of political cognition in the audience and thereby suggest a particular “course of action” regarding a political issue or point of dispute; and (3) to persuade the public of a particular argument (Cox, 2012).

The first direction-the function of simplification-is not limited merely to explaining complex concepts. In fact, this process involves a systematic mapping between a “source domain” and a “target domain.” For example, presenting politics as war is not only a lexical choice, but also the transfer of concepts such as competition, strategy, victory, and defeat into political thinking. This causes audiences to perceive political reality through the prism of conflict. Thus, simplification is simultaneously accompanied by the foregrounding of certain aspects and the backgrounding of others.

The second direction-the mechanism of subconscious influence-is related to the way metaphors operate through cognitive frames. As Chilton notes, metaphors function within networks of “structured cultural knowledge,” which are closely connected to the audience’s pre-existing worldview. When a metaphor is activated, it does not merely invoke an isolated expression, but rather an entire conceptual schema. This generates a system of “entailments,” meaning implicit conclusions embedded within the metaphor but not overtly expressed. For example, if the metaphor “captain of the ship of state” is used, notions such as leadership, responsibility, navigation, and potential danger are automatically activated. Such subconscious mechanisms exert an indirect yet powerful influence on the audience’s decision-making processes.

The third direction-the function of persuasion and manipulation-is one of the most critical aspects of political discourse. Metaphors are not only used to strengthen argumentation, but can also weaken the legitimacy of alternative perspectives. For instance, if an economic crisis is framed as an “illness,” then concepts such as “treatment,” “prescription,” and “expert intervention” become central, creating conditions in which certain political decisions appear necessary and inevitable.

This establishes a normative orientation within discourse and directs audiences toward accepting a specific “course of action.”

In other words, simplification works by “mapping well-understood source domains of experience onto more schematic target domains” (Chilton, 2004). In this process, orientation (up/down), sensory experience (seeing, hearing), and other fundamental human experiences are used to explain complex political concepts. Conceptual metaphors operate within “frame representations,” which are grounded in systems of “structured cultural knowledge” (Chilton, 2004, pp. 51–52). Conceptual metaphors do not exist in a vacuum; rather, they exist within networks of meaning composed of “frame representations” and “structured cultural knowledge.” When a metaphorical expression is used, it activates an unconscious system of meaning, and once the metaphor is accepted, the rest of the frame representation aligns accordingly. These so-called “entailments” enable speakers to make use of “conclusions that would otherwise not conceptually exist.” To summarize, metaphors not only simplify complex and inaccessible theoretical concepts by aligning them with innate human knowledge, but also allow access to unconscious systems of meaning, which may produce certain “conclusions” and direct the listener’s thinking toward a specific orientation.

This leads to the second major use of conceptual metaphors in political communication: “metaphors symbolically suggest a course of action to the audience,” and “if audience members accept that the metaphor applies, then the course of action suggested by the metaphor appears to be a reasonable option” (Cox, 2012, p. 5). Once a particular metaphor and its accompanying frame representation become rooted in the listener’s mind, that same metaphor can be used to present a certain goal or course of action as favorable, particularly in situations where non-metaphorical arguments may be too abstract or technical for the average audience.

Finally, metaphors are essential tools of persuasion because “politicians use metaphors as persuasive communication devices, to bridge gaps and create identification among strangers,” and therefore “to gather votes and win elections” (Beer, 2004, p. 24).

One way persuasion is achieved is by “stirring emotions” and bridging the gap between the rational and the emotional, thereby creating the impression that the conflict being discussed personally concerns the audience. For example, the metaphor YOUR NATION IS YOUR HOME conceptualizes the nation as a personal space that can be invaded, stolen, repaired, and so on. Similarly, Charteris-Black (2004) argues that “metaphor has a highly important persuasive role in generating strong emotional reactions and privileging one interpretation of a text over another, and this persuasive role forms the ideological and rhetorical basis of metaphors” (p. 41).

Nevertheless, evidence demonstrating a direct relationship between the persuasiveness of a message and its metaphorical component remains inconclusive.

Mio (2018) reviews a number of studies concerning the effectiveness of metaphor as a persuasive mechanism. Bowers (1964) and Osborn (1966) conducted experiments based on a series of root metaphors. The findings indicated that one speech was more persuasive than the “DEATH” speech (Mio, 2018, p. 134). Mio also cites Reinsch (1971) and Johnson and Taylor (1981) as researchers who obtained positive findings regarding the persuasive effectiveness of metaphors. However, Johnson and Taylor found that metaphors increased persuasiveness only for “politically sophisticated” subjects. In contrast, a study conducted by Bosman and Hagendoorn (1991) directly contradicted these findings by demonstrating that metaphor more easily persuaded “politically less sophisticated” subjects. Another study by Bosman (1987) found no difference in persuasiveness

between metaphorical and literal language. However, Read et al. (1990) identified a correlation between metaphor use, memorability, and persuasiveness (Mio, 2018, pp. 134–135). Therefore, although the idea of metaphor as a powerful persuasive tool has some empirical basis, the evidence remains inconclusive.

Methodology and Materials

This study employs a qualitative research design grounded in Conceptual Metaphor Theory and Critical Discourse Analysis (CDA). The research focuses on identifying and interpreting metaphorical structures in political discourse and examining their cognitive and ideological implications.

The methodological framework is primarily based on the works of Lakoff and Johnson (1980), Chilton (2004), and Fairclough (1995). Conceptual Metaphor Theory is used to analyze the mapping between source and target domains, while CDA is applied to investigate how metaphorical framing contributes to ideology, persuasion, and power relations within political communication.

The materials analyzed in this study consist of political discourse examples drawn from international English-language media sources such as BBC, CNN, and The Guardian, as well as examples from Azerbaijani media discourse. The selected corpus includes political speeches, media commentaries, election-related articles, and reports discussing political conflicts, economic crises, and leadership.

The analysis focuses on recurring metaphorical models such as:

- POLITICS IS WAR
- POLITICS IS A GAME
- ECONOMY IS A BODY/ILLNESS
- STATE IS A SHIP

These metaphors are examined in terms of their cognitive framing, persuasive effects, and ideological implications.

Discussion

Undoubtedly, conceptual metaphors are undeniably useful tools in political discourse, serving to simplify, suggest courses of action, and persuade audiences. Furthermore, metaphor use may have both positive and negative effects. Thompson (2018, p. 187) points to the importance of metaphor in strengthening group consciousness among individuals and in communicating abstract political concepts to the wider public by connecting them to more tangible experiences.

In order to demonstrate more clearly how conceptual metaphors function in political discourse, the analysis of specific media examples is particularly important. One of the most widespread metaphorical models in contemporary English-language media discourse is the POLITICS IS A GAME/STRATEGY model. For example, political analyses broadcast on CNN frequently include expressions such as “political players are positioning themselves” and “this move could change the game.” Such expressions frame politics as rational strategy, tactical maneuvering, and competitive interaction. Consequently, voter behavior and political decisions are evaluated more from the perspective of “winning” than from ethical or social considerations. This shifts the normative dimensions of politics into the background and presents politics primarily as instrumental activity.

A similar tendency can be observed in influential media outlets such as The Guardian. In articles about election campaigns, expressions such as “campaign strategy,” “key players,” and “winning ground” demonstrate how politics is constructed through a synthesis of spatial and game

metaphors. Here, the notion of “ground” conceptualizes voter support as a geographical or social territory, thereby activating a POLITICS IS A BATTLEFIELD metaphor.

Another widely used model is the POLITICS IS WAR metaphor. In U.S. political discourse, expressions such as “attack ads,” “defend a position,” and “fight for votes” are typical examples of this model. Such metaphors reinforce confrontation, enemy imagery, and zero-sum logic not only at the lexical level, but also at the level of thought structure. As a result, political opponents are perceived not merely as rivals but as enemies, which intensifies polarization within discourse. During discussions of Brexit, The Guardian used the expression: “The prime minister is under attack from both sides of the political spectrum.” In this context, criticism is conceptualized as attack and politics as a battlefield. Such metaphors intensify confrontation and portray compromise as weakness.

In the field of economic policy, the ECONOMY IS A BODY/ILLNESS metaphor is widely used. For example, BBC reports on economic crises frequently include expressions such as “the economy is recovering,” “the financial system is weak,” and “economic health.” This metaphorical framework presents economic problems within the context of medical diagnosis and treatment. Consequently, economic decisions are legitimized as “technical interventions,” while political responsibility becomes partially depersonalized.

Another noteworthy example is the STATE IS A SHIP metaphor, which is widely employed in representations of leadership. Political leaders frequently use expressions such as “steering the country” and “navigating through crisis.” In these expressions, the leader is conceptualized as the “captain” and the people as the “crew.” This simultaneously emphasizes the leader’s responsibility and legitimizes the collective consequences of leadership decisions. In one of his speeches, former U.S. President Barack Obama stated: “We must navigate this crisis together.” In this metaphor, the state is conceptualized as a ship and the leader as the person directing it, thereby reinforcing ideas of collective responsibility and leadership.

Similar metaphorical structures can also be observed in local and regional media discourse. In Azerbaijani media, expressions such as “entering the political arena,” “struggle for positions,” and “political course” are commonly used to describe political processes. These expressions indicate the activation of the metaphors POLITICS IS THEATER/STAGE, POLITICS IS STRUGGLE, and POLITICS IS MOVEMENT/PATH within local discourse. This demonstrates that conceptual metaphors are not limited to global media, but also manifest within national discourses in ways shaped by cultural context.

The analysis of empirical examples clearly demonstrates that metaphors do not merely serve explanatory and simplifying functions; they also shape the ideological structure of discourse. Different metaphorical models generate different systems of entailments, which directly determine how audiences interpret events. For instance, audiences who conceptualize politics as a “game” may perceive compromise as a tactical move, whereas within the framework of the “war” metaphor, compromise may be interpreted as weakness.

Thus, analysis based on concrete media examples once again confirms that conceptual metaphors function in political discourse both as mechanisms of cognitive guidance and as instruments of ideological influence. Their systematic use plays a significant role in shaping public opinion, which is why their empirical analysis is of particular importance in political communication research.

At the same time, the negative effects of conceptual metaphors must also be considered. First, they may reduce the complexity of reality and contribute to the formation of stereotypes. Second, the dominance of certain metaphorical frames may marginalize alternative discourses. Third, the emotional intensity of metaphors may weaken the audience's capacity for critical thinking, since emotional resonance often overrides rational analysis.

On the other hand, Thompson notes that excessive use of metaphor "may induce passivity, as listeners may not feel the need to make the necessary effort to understand the technical aspects of political issues and may therefore arrive at lazy and poorly considered conclusions" (as cited in Cox, 2012, p. 185). Furthermore, Lakoff (1991, p. 32) emphasizes that "metaphors can kill" because they may be used to "hide reality in harmful ways," thereby trivializing concepts such as "pain, disintegration, death, and starvation."

George Lakoff (1991) argues that metaphors not only describe reality, but may also selectively conceal it. Through this "highlighting vs. hiding" mechanism, metaphors foreground certain aspects while backgrounding others, thereby altering the audience's perception of events. For example:

- "collateral damage" → the semantic neutralization of civilian casualties
- "surgical strike" → the presentation of violence as a precise and technical operation

In such expressions, attention is diverted away from the humanitarian dimension of the outcome and redirected toward notions of "technical efficiency" and "precision." As a result, ethical responsibility is weakened through language, and the moral consequences of decisions are pushed into the background.

When this phenomenon is examined more broadly, several important mechanisms emerge:

1. **Euphemization and semantic softening.** Metaphors frequently function as euphemisms, presenting harsh and negative realities in more acceptable forms. For example, the expression "ethnic cleansing" replaces violence and forced displacement with less emotionally charged terminology. This weakens the audience's emotional reaction and reduces ethical concern.
2. **Erasure of agency.** Metaphorical language often obscures the subject responsible for an action. Structures such as "mistakes were made" conceal the agents responsible for particular actions. This leads to the diffusion of political responsibility and reduces accountability.
3. **Technocratic framing.** Metaphors such as "surgical strike" present political and military decisions as technical procedures. In such cases, decisions cease to be perceived as ethical or political issues and are instead accepted as forms of "expert intervention." This weakens the audience's critical stance.
4. **Desensitization.** Repeated use of metaphors weakens emotional reactions to certain concepts. Audiences continually exposed to softened terminology gradually become less sensitive to violence and suffering.
5. **Ideological manipulation and legitimization.** Metaphors may be used to legitimize particular political decisions. For example, presenting war as "defense," "cleansing," or "stabilization" encourages audiences to perceive such actions as necessary and justified. This contributes to the marginalization of alternative perspectives.
6. **Cognitive constraint.** Once a metaphorical frame is accepted, audiences experience greater difficulty in accepting alternative interpretations. For example, when conflict is framed as "war," compromise and dialogue automatically appear weak and ineffective.

Consequently, the use of metaphors in this manner produces serious consequences not only at the linguistic level, but also at ethical and political levels. While simplifying the complexity of reality, metaphors simultaneously direct public perception by systematically concealing certain aspects. This contributes to the invisibility of ethical problems, the diffusion of responsibility, and the weakening of critical evaluation.

It is evident that conceptual metaphors in political discourse function not merely as communicative devices, but also as mechanisms of cognitive guidance and ideological influence. They both simplify the perception of reality and direct that perception toward specific orientations, thereby influencing political behavior and decision-making processes. This makes the study of metaphors one of the central issues in political communication and discourse analysis.

Conclusion

In conclusion, metaphors are important tools of political communication and serve three primary purposes: (1) simplifying complex and abstract political concepts so that the public can understand them and participate in political discussion; (2) influencing cognitive processing in such a way that metaphors can implicitly suggest courses of action to the public; and (3) functioning as instruments for persuading the public to support particular plans or ideas.

Overall, the theoretical and empirical analysis conducted in this study demonstrates that conceptual metaphors play a central role in structuring political discourse. They function not only as decorative linguistic elements, but also as mechanisms of cognition and interpretation. Within this framework, three primary functions of metaphors can clearly be identified:

- simplification — making complex and abstract political concepts comprehensible through familiar experiential domains;
- guidance — influencing how audiences perceive events within particular frames and limiting possible interpretations;
- persuasion — making certain positions appear more acceptable through emotional and cognitive influence.
- At the same time, the study demonstrates that metaphors create not only communicative efficiency, but also serious discursive risks. These include:
 - manipulative potential — weakening alternative perspectives and privileging certain ideas;
 - ideological influence — selectively constructing social reality and legitimizing specific power relations;
 - effects on critical thinking — weakening analytical reasoning through the excessive simplification of complex issues.

In this respect, as George Lakoff emphasizes, metaphors not only reflect reality, but also shape and sometimes conceal it.

Therefore, the study of conceptual metaphors is important in political discourse analysis not only from a linguistic perspective, but also in terms of investigating cognition, ideology, and power relations. In particular, research conducted within the framework of Critical Discourse Analysis demonstrates that the systematic analysis of metaphors serves as an effective methodological tool for understanding how public opinion is formed.

Finally, two directions appear especially relevant for future research: (1) comparative analysis of metaphorical frames across different cultural and political contexts; and (2) empirical measurement of the influence of metaphors on real audience decision-making behavior through methods such as corpus analysis and experimental design. These approaches will contribute to a

deeper understanding of the role of conceptual metaphors within systems of political communication.

Abstract: The lexicon is one of the fundamental components of language, reflecting the historical, cultural, and social development of a speech community. This study examines the lexical system as a dynamic structure that continuously evolves under the influence of linguistic and extralinguistic factors. The research focuses on the main aspects of lexicology, including the origin, meaning, usage, and development of lexical units. Particular attention is paid to semantic relations such as synonymy, antonymy, and homonymy, which organize vocabulary and contribute to effective communication. The study also discusses the role of loanwords, terminology, neologisms, archaisms, and phraseological units in enriching and shaping the lexical system. A theoretical and descriptive research methodology was employed, based on the analysis of linguistic literature, dictionaries, and scholarly publications. The findings indicate that scientific and technological progress, globalization, and intercultural communication significantly accelerate lexical change and the emergence of new vocabulary. At the same time, preserving the national lexical heritage remains essential for maintaining linguistic identity and cultural continuity. The study concludes that lexicology plays a vital role in understanding language structure, vocabulary development, language teaching, translation, and communication. Investigating lexical systems contributes to a deeper understanding of language functioning and supports further research in theoretical and applied linguistics.

Key words: lexicon, lexicology, vocabulary, semantics, language development

Xülasə: Leksika dilin əsas tərkib hissələrindən biri olmaqla xalqın tarixi, mədəni və sosial inkişafını əks etdirən söz ehtiyatı sistemidir. Bu tədqiqatda leksik sistemin dil və cəmiyyətin inkişafı ilə sıx bağlı olan dinamik bir quruluş olduğu araşdırılmışdır. Məqalədə leksikologiyanın əsas tədqiqat istiqamətləri, o cümlədən sözlərin mənşəyi, mənası, işlənmə xüsusiyyətləri və inkişaf mərhələləri təhlil edilmişdir. Sinonimlik, antonimlik və omonimlik kimi semantik münasibətlərin leksik sistemin təşkilində və ünsiyyətin səmərəliliyində mühüm rolu göstərilmişdir. Eyni zamanda alınma sözlər, terminlər, neologizmlər, arxaizmlər və frazeoloji vahidlərin dilin lüğət tərkibinin zənginləşməsindəki əhəmiyyəti qiymətləndirilmişdir. Tədqiqat nəzəri və təsviri metodlar əsasında aparılmış, elmi ədəbiyyat, lüğətlər və dilçilik üzrə mənbələr təhlil edilmişdir. Araşdırmanın nəticələri göstərir ki, qloballaşma, elmi-texniki tərəqqi və mədəniyyətlərarası əlaqələr leksik dəyişiklikləri sürətləndirir və yeni sözlərin yaranmasına şərait yaradır. Bununla yanaşı, milli söz ehtiyatının qorunması dilin özünəməxsusluğunun və mədəni irsinin saxlanılması baxımından mühüm əhəmiyyət daşıyır. Nəticə etibarilə, leksikologiya dilin quruluşunun, inkişaf qanunauyğunluqlarının və ünsiyyət prosesinin daha dərinlən öyrənilməsində mühüm nəzəri və praktik əhəmiyyətə malikdir.

Açar sözlər: leksikon, leksikologiya, lüğət tərkibi (söz ehtiyatı), semantika, dilin inkişafı

Introduction

The lexicon is one of the most important components of any language, consisting of all the words and expressions used by its speakers. It reflects the history, culture, and social development of a community. The lexical system is a structured network of words connected through various semantic and grammatical relationships. As society changes, the lexicon continuously develops through the creation of new words, borrowing from other languages, and changes in meaning. The study of the lexicon and lexical system helps linguists understand how language functions, evolves, and adapts to the communicative needs of its users over time.

Lexicon is one of the most important layers of language and reflects the worldview, culture, and way of thinking of every nation. The lexical system of a language consists of the total set of words and constantly changes and develops along with the development of society. Lexicology is the branch of linguistics that studies the origin, meaning, usage features, and development of words.

In the modern era, the study of lexicon is important not only for linguistics but also for translation, education, and communication fields.

Lexicon is not a static system. It develops in accordance with historical, social, and cultural changes. The emergence of new words, the archaization of old ones, and changes in meanings show that the lexical system is dynamic.

Lexical units are divided into different groups: commonly used words, terms, dialect words, loanwords, etc. Each group expands the functional capacity of the language.

The lexical system of a language is formed as a result of historical processes. Economic, scientific, and technological development leads to the creation of new concepts. These concepts are expressed through new words.

Loanwords constitute an important part of the lexicon. As a result of contact with different languages, the lexical stock becomes richer. At the same time, preserving the national vocabulary is also an important issue.

Lexicology studies the origin, semantic development, and usage of words. It also examines semantic relations such as synonymy, antonymy, and homonymy.

This field plays an important role in the correct use of language, enrichment of speech, and formation of style.

Materials and Methods

This study is based on theoretical and descriptive research methods. The main materials include books, scientific articles, dictionaries, and linguistic publications related to lexicology and the lexical system of language. Comparative analysis was used to examine different approaches to the study of vocabulary and word meaning. Descriptive methods were applied to explain the structure and functions of the lexicon, as well as semantic relations such as synonymy, antonymy, and homonymy. Relevant examples from the English language were analyzed to illustrate lexical phenomena. The collected data were systematically reviewed and interpreted to provide a comprehensive understanding of the lexical system and its development.

Synonyms (words with similar meaning)

Synonyms are words that have the same or similar meanings.

- beautiful – attractive – charming
- big – large – huge
- to speak – to talk – to tell
- fast – rapid – quick

Antonyms (words with opposite meaning)

Antonyms are words with opposite meanings.

- big – small
- white – black
- late – early
- good – bad
- hot – cold

Homonyms (same spelling, different meaning)

Homonyms are words that are spelled or pronounced the same but have different meanings.

- yay (season) – yay (weapon)
- arm/branch (body part) – arm (sports term)
- stone (hard material) – stone (game pieces)
- face – to swim (depending on context usage)

Loanwords

Words borrowed from other languages.

- school (Arabic-Persian origin)
- university (Latin origin)
- technology (Greek origin)
- internet (English origin)
- telephone (Greek origin)

Terms (scientific and professional words)

Specialized words belonging to a specific field.

- lexicon (linguistic term)
- grammar
- phonetics
- morphology
- semantics

Phraseological units (idioms)

Fixed expressions used in figurative meaning.

- to understand – “to comprehend”
- to attract attention – “to have a bad influence”
- to express – “to state”
- to give up – “to abandon”

Archaisms (obsolete words)

- Words that are rarely used or no longer used in modern language.
- charig (old type of footwear)
- katil (old type of seat)
- yazikhana (old writing room concept)

Neologisms (new words)

Recently created words.

- smartphone
- online
- e-mail
- blog
- application (app)

The role of lexicon in the modern era

In the era of globalization, interlingual relations have strengthened. This leads to faster changes in the lexicon. New terms emerging in information technology are integrated into different languages.

However, preserving the national vocabulary is essential for maintaining linguistic identity.

Lexicon is the living and dynamic part of language. Its study provides deep knowledge about the general structure and development of language. Lexicology ensures the scientific study of this system and plays an important role in language enrichment.

Discussion and Conclusion

The study demonstrates that the lexicon is a dynamic and essential component of language, reflecting cultural, social, and historical changes within society. The analysis shows that the lexical system develops continuously through word formation, semantic change, and borrowing from other languages. Semantic relations such as synonymy, antonymy, and homonymy contribute to the organization and richness of vocabulary. Modern technological and social developments accelerate lexical innovation and the emergence of new terms. Understanding the lexical system is important for effective communication, language teaching, and linguistic research. Therefore, the study of lexicology remains a significant field for understanding language structure, development, and usage in contemporary society.

Conclusion

The lexicon represents one of the most important components of language and serves as a reflection of a society's cultural, historical, and social development. This study has shown that the lexical system is not static but constantly evolves in response to changes in human life, science, technology, and communication. New words enter the vocabulary through word formation processes, borrowing, and semantic shifts, enriching the language and expanding its expressive possibilities. The analysis also highlights the significance of semantic relations such as synonymy, antonymy, and homonymy in organizing the vocabulary system. In the modern world, globalization and technological advancement contribute to rapid lexical changes, making the study of vocabulary increasingly important. At the same time, preserving the national lexical heritage remains a key

objective for maintaining linguistic identity. Overall, lexicology provides valuable insights into the structure and functioning of language and supports effective communication, language learning, and further linguistic research.

CROSS-LINGUISTIC UNIVERSAL TENDENCIES IN THE SEMANTIC REPRESENTATION OF THE CATEGORY OF NUMBER IN ENGLISH AND UZBEK PROVERBS

Sunnatillo Buribayevich USMANOV

Senior teacher, Department of Foreign Languages
Samarkand State University named after Sharof Rashidov

E-mail: vvaa19639@gmail.com

ORCID ID: [0009-0002-3946-5019](https://orcid.org/0009-0002-3946-5019)

Abstract: This article explores the role of the category of number in the formation of meaning in English and Uzbek proverbs. Proverbs, as a reflection of the cultural and cognitive worldview of societies, utilize numerical expressions to convey complex ideas. The research identifies common tendencies in the use of numbers to express intensification, quantification, and generalization in both English and Uzbek proverbs. While these tendencies are shared across languages, cultural differences influence the interpretation and application of numbers, leading to unique semantic structures. The paper contributes to a deeper understanding of how the category of number shapes meaning in different linguistic and cultural contexts. This comparative analysis sheds light on the cognitive role of numbers in language and how they reflect universal and culture-specific cognitive processes.

Keywords: category of number, English proverbs, Uzbek proverbs, semantic structuring, intensification, quantification, generalization, cognitive linguistics, cross-cultural analysis.

İNGİLİZ VE ÖZBEK ATASÖZLERİNDE SAYI KATEGORİSİNİN ANLAMSAL TEMSİLİNDEKİ DİLLER ARASI EVRENSEL EĞİLİMLER

Özet: Bu makale, İngiliz ve Özbek atasözlerinde sayı kategorisinin anlam oluşumundaki rolünü incelemektedir. Toplumların kültürel ve bilişsel dünya görüşlerinin bir yansıması olan atasözleri, karmaşık fikirleri ifade etmek için sayısal ifadelerden yararlanır. Çalışma; İngiliz ve Özbek atasözlerinde sayıların pekiştirme, miktar belirtme ve genelleme anlamlarını kazandırmadaki kullanımına dair genel eğilimleri belirlemektedir. Bu eğilimler diller arasında benzerlik gösterse de kültürel farklılıklar, sayıların yorumlanmasını ve kullanımını etkileyerek kendine özgü semantik yapılar ortaya çıkarmaktadır. Makale, farklı dilsel ve kültürel bağlamlarda sayı kategorisinin anlam inşasını nasıl etkilediğine dair daha derin bir anlayışa katkı sunmaktadır. Karşılaştırmalı analiz, sayıların dildeki bilişsel rolünü ve evrensel ile kültüre özgü düşünce süreçlerini nasıl yansıttığını aydınlatmaktadır.

Anahtar Kelimeler: sayı kategorisi, İngiliz atasözleri, Özbek atasözleri, semantik yapı, pekiştirme, miktar belirleme, genelleme, bilişsel dilbilim, karşılaştırmalı-kültürel analiz.

Introduction

The category of number plays a significant role in the formation of meaning, especially in proverbs, which encapsulate societal wisdom and reflect the values of a particular culture. In both English and Uzbek, numbers serve as tools for conveying ideas related to intensity, quantity, and generalization. Despite the similarities in the use of numbers across these two languages, there are noticeable differences in how they are applied and interpreted due to cultural and psychological factors. This study investigates the common patterns in the use of numbers in proverbs and how these patterns contribute to the overall meaning-making process in both English and Uzbek languages.

The relationship between numbers and meaning has been a subject of interest in linguistics, especially in cognitive linguistics, where scholars like Lakoff (1987) and Whorf (1956) have explored how numbers influence conceptualization and perception. Research on proverbs, such as Popov (1998) on Russian proverbs and Ashurova (2015) on Uzbek proverbs, reveals that numbers not only quantify but also intensify, generalize, and affect the psychological interpretation of the world. However, comparative studies of the use of numbers in proverbs from different linguistic traditions, particularly between English and Uzbek, remain limited.

The methodology of this study involves a **comparative linguistic analysis** of a selection of well-known English and Uzbek proverbs containing numerical expressions. A qualitative approach is used to examine the role of numbers in intensifying meaning, quantifying concepts, and generalizing ideas. Each proverb is analyzed to determine how the number influences the overall message, both syntactically and semantically. Additionally, the cultural and cognitive aspects of

these proverbs are considered to understand the deeper implications of numerical usage in different cultural contexts.

The analysis identifies several common tendencies in the use of numbers in both English and Uzbek proverbs:

Intensification: Numbers are often used to intensify or emphasize a concept. For example, in English, the proverb "The more the merrier" emphasizes the idea that greater quantity leads to greater enjoyment. In Uzbek, a similar pattern is seen in "Ko'p og'izga ko'p gap" (Many mouths, many words), where the presence of more people increases the scope of action.

Quantification: Numbers also function to quantify ideas and actions. In English, proverbs like "Two wrongs don't make a right" express the idea that a number (two) is significant in the context of moral judgment. Similarly, the Uzbek proverb "Bir ko'rgan don, ming so'zdan foydali" (One grain seen is more useful than a thousand words) uses the number one to emphasize the value of direct experience over theoretical knowledge.

Generalization: Numbers serve as a means to generalize concepts. For instance, "Three's a crowd" in English is used to generalize social dynamics. In Uzbek, "To'rt tayyor bo'lsa, bironta qo'shiq aytib ko'r" (When four are ready, try singing a song) uses numbers to generalize a situation in which preparation leads to success. Despite these common tendencies, there are differences in how numbers are interpreted. In English, numbers often have a direct quantitative implication, while in Uzbek proverbs, numbers frequently carry symbolic or qualitative meanings that reflect cultural values and psychological perceptions.

Results and Discussion

The analysis revealed distinct patterns in the use of numbers in English and Uzbek proverbs.

English Proverbs:

- Numbers often convey symbolic meaning (e.g., "Two wrongs don't make a right").
- Singular and plural forms highlight the collective versus individual dimensions.
- Even numbers (2, 4) frequently indicate balance or partnership, while odd numbers (3, 7) carry connotations of wisdom or luck.

Uzbek Proverbs:

- Numbers underscore moral and social lessons (e.g., "Bir qo'l bilan olomchi tutib bo'lmaydi" – literally, "One hand cannot grasp a bundle").
- Plural forms emphasize community, family, or group solidarity.
- Certain numbers have culturally specific symbolic value (e.g., 3, 7, 40) reflecting historical and religious influences.

Comparative Insights:

- Both languages use numbers as mnemonic and rhetorical devices.
- English tends to employ numbers abstractly, emphasizing cognitive patterns and general wisdom.
- Uzbek proverbs integrate numbers concretely, reflecting local customs and social ethics.
- The category of number interacts with grammar, semantics, and pragmatics, enhancing expressive power and cultural specificity.

Conclusion

This study demonstrates that the category of number in proverbs plays a critical role in shaping meaning, both universally and culturally. While there are shared tendencies in how numbers are used to intensify, quantify, and generalize meaning, cultural contexts shape the specific

interpretation and significance of numbers. The findings highlight the importance of numbers as cognitive tools in language that not only reflect the structure of thought but also embody the worldview of different societies. This comparative analysis contributes to a broader understanding of how numerical expressions function within proverbs across linguistic and cultural boundaries.

RHEUMATIC INARGUMENT IN THE FUNCTIONAL STRUCTURE OF DISCOURSE IN ENGLISH AND AZERBAIJANI

Ayshan Ibad SHIRINOVA

Teacher, Azerbaijan University of Languages

E-mail: as.shirinova@adu.edu.az

ORCID ID: 0000 0002 1178 9524

Abstract: In discourse analysis, rheme negation serves as a fundamental mechanism for structuring communication and encoding novel or contradictory information. This study presents a comparative analysis of how the rheme negation system operates in English and Azerbaijani, focusing directly on the negative dimension of information structure.

While both languages utilize negation to establish contrast and highlight rhematic emphasis, the findings reveal significant divergence in their underlying syntactic and pragmatic realizations. In English, negation relies heavily on auxiliary structures and word order, whereas Azerbaijani primarily employs morphosyntactic affixes alongside flexible word-order shifts.

Ultimately, this research demonstrates that negation is not merely a syntactic modifier or narrative device. Instead, it functions as a strategic communicative pivot located within the discourse flow. By identifying these cross-linguistic variations, the study sheds light on how cognitive focus and communicative intent are dynamically negotiated across distinct language systems.

Key words: Rheme negation (or Negation of rheme), functional discourse structure, Functional Sentence Perspective (FSP), Contrastive linguistics, discourse, analysis

İNGİLİS VƏ AZƏRBAYCAN DİLLƏRİNDƏ DİSKURSUN FUNKSIONAL STRUKTURUNDA REMATİK İNKAR

Ayşən İbad ŞİRİNOVA

Müəllim, Azərbaycan Dillər Universiteti

ORCID ID: 00000002 1178 9524

Xülasə: Diskurs analizində remanın inkarı informasiya strukturunun təşkili və kommunikativ məqsədin reallaşması baxımından mühüm əhəmiyyət kəsb edir. Remanın inkar edilməsi dinləyicinin diqqətini mətnə daxil edilən yeni, ziddiyyətli və ya əks məlumatın kodlaşdırılması mexanizminə yönəldir.

Bu tədqiqatda ingilis və Azərbaycan dillərində remanın inkarı sisteminin işləmə prinsipləri funksional-semantik müqayisə əsasında təqdim olunur. Analiz hər iki dilin struktur xüsusiyyətlərini qarşılaşdıraraq məlumatın məhz inkar olunan hissəsinə diqqət yetirir. Müqayisəli təhlilin nəticələri göstərir ki, hər iki dildə inkar vasitələrindən ziddiyyət yaratmaq və rhematik vurğunu gücləndirmək üçün geniş istifadə edilsə də, bu prosesin sintaktik və praqmatik təzahürləri ciddi fərqlər nümayiş etdirir. İngilis dilində inkar sintaktik köməkçi sözlər və fel ardıcılığı ilə tənzimlənəndiyi halda, Azərbaycan dilində morpho-sintaktik şəkilçilər və söz sırası dinamikası daha ön plana çıxır.

Yekun olaraq, çalışma inkarın sadəcə nəqliyyat və ya sintaktik bir inkaretmə mexanizmi olmadığını göstərir. İnkər, diskursun müvafiq mərhələsində əsas kommunikasiya nöqtəsini və diqqət mərkəzini müəyyənləşdirən strateji bir praqmatik vasitə kimi çıxış edir.

Açar sözlər: Rematik inkarlıq (və ya Remanın inkarı), diskursun funksional strukturu, aktual üzvlənmə, müqayisəli dilçilik, diskurs, analiz

Introduction

As a quality of language that expresses, negation fulfills an important role in constructing discourse that transcends grammatical functions. Negation is a crucial part of the rheme (negation of rheme) element of the function of discourse for what was new, important, or different. This is grounded in the paradigm of subject-rheme as well as an information representation model that allows for a deep dive into the functions ascribed to negation. A functional structure of discourse is formed through purpose and function in the use of language. The components of discourse can differ due to subject and purpose differentiation. In this paper, the concept of rhematic negation will be studied in relation to the functional structure of discourse (Firbas, 1992).

English and Azerbaijani are two languages distinguished at the typological and functional levels (Veysalli, 2020). Since English has more analytic structures in saying negation, but Azerbaijani has an agglutinative language system, which causes some differences to some extent in the expression of negation. So a comparative examination of these discursive functions of negation provides a more comprehensive assessment.

Materials and Methods

This article is an attempt to demonstrate how the negation of the rheme is congealed into a structure, and how it varies between the two languages (Thompson, 2014). It offers qualitative data and actual language samples used in discourse. Constructive examples for both text and speech corpora, as well as scientific institutions covering the issue, formed the basis for their study. Functional linguistics and pragmatic theory were applied to conduct its analysis. On linguistic construction, they defined thematic and rheme elements of the sentence, and described how to apply negation to that part of a discourse structure the rheme. A lexicon, "do", can be found in the English "do" system. Negation is a morphologically and syntactically-oriented characteristic in Azerbaijani

(with the negation as word suffixes in verb (“-ma/-mə”) and also indicated by intonation and word stacking.

Results

Both languages employ rheme negation for new, conflicting, or emphatic information, but the languages utilize a different lexical infrastructure. English shows a strong dependence on analytic and syntactic patterns and often relies on “do-support” and concrete constructions such as cleft sentences (It is not John who...”... to isolate the rheme. Azerbaijani, on the other hand, as an agglutinative language, embeds most negation in its structure by the use of verbal suffixes (-ma/-mə) and employs very flexible word order and intonation to denote the focus on the rheme.

Rheme’s Negation in English. In general, the alternative auxiliary verb in English is like: "It is not John who snatched the book." Here the phrase "It is not John" is the negation of rheme, it also highlights the change of the position of rheme. In English, special constructions, such as cleft sentences, direct the listener to the negation. This enables a more utilitarian separation of negation from rheme.

Denial of Rheme in Azerbaijani. Morphemes in Azerbaijani give negation to the rheme segment. This is illustrated primarily through the negation suffixes of verbs. Its negation of the "etmədi" part adds to the mixed or contrasting information. In Azerbaijani, the negation function in the rheme is stressed with the help of intonation and word order.

Discussion

Comparative Analysis. Although Rheme's negation is functionally identical across languages, its use differs both syntactically and pragmatically. Negation in English has a more formal and structured register. In contrast, in Azerbaijani, denial is structural, regarding word order and intonation. These differences of discourse and meaning are due to the difference in history, words used, syntax, culture. According to the functional description of what discourse contains the main elements of discourse are the presentation, explanation, argument, and conclusion. (Levinson, 2020) Each element determines the fundamental content and goal of the discourse. The use of a functional structure is good for communicating meaning in sentences clearly and meaningfully.

Conclusion

We indicate that the negation of rheme is closely related to the functional feature of English and Azerbaijani discourse, which constitutes a powerful mechanism of communication in both languages. Because of its morphological and syntactic features, the negation has linguistic categories. They can be utilized to expand comparative discourse studies of Azerbaijani and English languages. (Gasimov, 2023) Rhematic negation takes an important role in the functional structure of discourse as part of the patient psychological defence, the way of communication and the establishment of social relations. Rheme negation acts as a bridge between grammar and social interaction. Further research on this phenomenon – particularly within larger corpora of media and medical discourse – would continue to expand upon our understanding of how English and Azerbaijani speakers engage in and create complex communicative interactions.

THE ROLE AND STRATEGIC APPLICATION OF ENGLISH PHRASEOLOGISMS IN POLITICAL DISCOURSE

Lala Matlab RUSTAMOVA

Lecturer, Mingachevir State University

E-mail: lala.rustamova@mdu.edu.az

ORCID ID: 0000-0001-7542-6215

Abstract: Phraseology as a scientific discipline examines the internal and external drivers that dictate the genesis and evolution of phraseological units, alongside the structure and operational utility of these phrasemes. It further investigates the criteria governing the combination of lexical units within these expressions, as well as the grammatical and semantic characteristics of various phraseological types. The English lexicon is highly enriched by phraseologisms that have developed throughout diverse socio-historical contexts. Political discourse is widely regarded as a sphere where such expressions are utilized extensively. Phrasemes in this context are primarily the product

of political activity, where their inherent traits—such as imagery, originality, and emotional weight—serve as strategic tools for manipulative communication. Phraseologisms allow for the condensation of complex situations and events into concise, impactful forms. Frequently, these units acquire specific, politicized semantic shades depending on the context. Within both political and business communications, the adoption of these expressions is standard practice, driven by the requirement to frame events from fresh perspectives and capture the allegiance of followers. This article provides an in-depth analysis of theoretical frameworks concerning the use of English phraseologisms in political settings and synthesizes current research and developments in this domain through illustrative examples.

Keywords: political discourse, phraseologisms, linguistic and stylistic factors, context, persuasion.

İNGİLİS DİLİNDƏ FRAZEOLGİZMLƏRİN SİYASİ DİSKURSDA ROLU VƏ STRATEJİ TƏTBİQİ

Lalə Mətləb RÜSTƏMOVA

Müəllim, Mingəçevir Dövlət Universiteti

ORCID ID: 0000-0001-7542-6215-9

Xülasə: Frazeologiya elmi bir sahə kimi frazeoloji vahidlərin yaranmasını və inkişafını şərtləndirən daxili və xarici amilləri, onların quruluşunu və funksional xüsusiyyətlərini öyrənir. Bu sahə həmçinin frazeoloji birləşmələri təşkil edən sözlərin birləşmə prinsiplərini, müxtəlif frazeoloji növlərin qrammatik və semantik xüsusiyyətlərini araşdırır. İngilis dili lüğət tərkibi müxtəlif ictimai-tarixi şəraitlərdə formalaşmış zəngin frazeoloji vahidlərlə səciyyələnir. Siyasi diskurs bu ifadələrin geniş istifadə olunduğu əsas sahələrdən biri hesab edilir. Bu kontekstdə frazeoloji vahidlər əsasən siyasi fəaliyyətin məhsulu kimi meydana çıxır və onların obrazlılıq, orijinallıq və emosional təsir gücü kimi xüsusiyyətləri manipulyativ ünsiyyət üçün strateji vasitə rolunu oynayır. Frazeologizmlər mürəkkəb hadisə və vəziyyətlərin qısa, lakin təsirli şəkildə ifadə olunmasına imkan yaradır. Çox vaxt bu vahidlər istifadə olunduqları kontekstdən asılı olaraq xüsusi siyasi məna çalarları qazanırlar. Həm siyasi, həm də işgüzar ünsiyyətdə bu ifadələrin işlədilməsi geniş yayılmış praktikadır, çünki onlar hadisələri yeni baxış bucağından təqdim etməyə və auditoriyanın dəstəyini qazanmağa xidmət edir. Məqalədə ingilis dilindəki frazeologizmlərin siyasi diskursda istifadəsinə dair nəzəri yanaşmalar ətraflı təhlil edilir, həmçinin bu sahədə mövcud tədqiqatlar və müasir inkişaf istiqamətləri nümunələr əsasında ümumiləşdirilir.

Açar sözlər: siyasi diskurs, frazeologizmlər, linqvistik və üslubi amillər, kontekst, inandırma.

Introduction

Phraseological units are frequently integrated into various text types to heighten their appeal, largely due to their capacity to represent complex concepts through vivid imagery. Because these units encapsulate the collective knowledge and experiential background of a linguistic community, they are recognized as highly informative elements within linguistics. In contemporary English, phraseologisms are frequently utilized in propaganda-heavy political, cultural, and business contexts, serving as an indispensable mechanism for the implicit expression of ideas aimed at

swaying the attention of opposing parties. The stylistic qualities inherent in phraseologisms—such as their ability to veil or distract—enhance emotional expressiveness, thereby imparting novel nuances and distinctive modes of expression to political, business, advertising, and propaganda texts. In the analysis of political texts, one can distinguish between various lexico-phraseological units based on the fusion of underlying political theories. If the political lexicon were to be visualized as a conical pyramid, the foundation would be comprised of standard, commonly used vocabulary, the central portion would contain general political lexicon, and the apex would consist of specialized terminology. Through common vocabulary, the language of politics maintains its tether to the broader literary language. General political lexicon articulates the primary concepts of scientific categorization, whereas terminological lexicon denotes specific political notions, representing the zenith of linguistic evolution [4, pp. 11-12].

Anita Naciscione is a prominent figure known for her contribution to the discourse-based study of phraseological units. In her seminal work, *Stylistic Use of Phraseological Units in Discourse* (2001), she pioneered the examination of the intersection between phraseology, discourse, and stylistics. She posits that phraseological units function as potent tools for the reflection of metaphorical meaning. Within her research, she established the definitions for "idiom" and "phraseological unit," describing idioms as stable, interconnected lexical combinations characterized by complete or partial metaphorical transference [10, p. 13].

Political discourse can be conceptualized as: 1) a sophisticated communicative phenomenon; 2) an intentional social activity; 3) an environment that mirrors the subjective psychological states of participants; and 4) a cognitive process tied to the transformation and generation of knowledge. As an institutional discourse type, political discourse serves as a robust platform for explaining human cognitive mechanisms and bridging the gap between knowledge-based concepts and diverse linguistic representations [6, p. 43]. It acts as a specialized communication mode, bounded by specific political circumstances, temporal constraints, and defined objectives [9, p. 57]. The fundamental underpinning of political discourse is the concept of power, and the usage of phraseologisms here is largely linked to the politician's intent to clarify or justify specific problems. Political discourse spans various magnitudes, ranging from brief slogans to medium-length press articles or parliamentary speeches, and extends to large-scale political reports and treatises [8, p. 77].

As G. Kammer suggests, "language functions as a critical instrument in election campaigns, utilized both to achieve power and to exert it effectively." This brings to mind A. Zabba's observation: "Language is a weapon; it must be kept sharp" [2, pp. 73-74]. Speakers and writers employ phraseologisms to achieve precise stylistic objectives, adapting them to suit the requirements of various functional genres.

The phraseologisms characteristic of political activity are shaped by the exigencies of the political field. Their core attributes—imagery, originality, and emotive charge—possess strategic value for linguistic manipulation. These expressions enable the succinct and compact description of events and situations. In both political and business spheres, their usage is considered appropriate for generating new perspectives and engaging potential supporters. H. Poethen notes that "all means are justifiable to attain and retain power" [2, p. 77]. The prevalence of manipulative language in electioneering is echoed by S. Abdullayev, who observes that in the speech of demagogues or opportunists, language undergoes a degradation, losing its inherent naturalness and normativity,

effectively becoming a slave to individual will rather than maintaining its original biological vitality [1, p. 27].

Materials and Methods

"In professional correspondence and negotiations, phraseologisms are employed to mitigate potentially contentious information" [3, p. 164]. A case in point is found in U.S. political discourse, where phraseologisms are often utilized as political euphemisms. I.A. Dyachenko has studied how political etiquette in the U.S. influences the substitution of terms, such as using *special children* instead of *retarded children*. By analyzing the dictionary definitions of "special"—which can imply superiority, distinctiveness, or note-worthiness—Dyachenko highlights its function as a softening agent for the original, more abrasive term [15]. The pragmatic and positivist standards inherent in American societal values render such lexical choices in political rhetoric almost inevitable. For instance, when analyzing B. Clinton's re-election campaign rhetoric, Dyachenko observes that the President's reference to *welfare rolls* was a calculated decision to paint a more positive picture of the country's economic and social landscape over his four-year tenure:

"Four years ago I ran for president at a time of high unemployment and rising frustration. I wanted to turn this company around with a program of opportunity for all, responsibility from all, and an American community where everybody has a role to play. Four years ago you took me on faith. Now there is a record: ten and a half million more jobs, rising incomes, failing crime rates and welfare rolls, a strong America at peace" [5].

Political leaders often use these phraseologisms as instruments of influence and pressure, fulfilling two core purposes: first, the obfuscation or partial concealment of realities, and second, appealing to the audience's moral compass and emotions [11]. It is evident that in political discourse, these euphemistic units are frequently deployed to lend credibility to falsehoods or to justify tragic outcomes. Y.L. Smirnova has documented the intensive use of such expressions by political figures in pre-election rhetoric. For example, she highlights B. Obama's use of terms like *economically disadvantaged* or *low-income* as substitutes for "poor," and *member of the African diaspora* instead of "black," specifically to achieve the aforementioned strategic goals [7].

Results and Discussion

A significant portion of the phraseology integrated into political discourse is derived from literary tradition. A notable example from a U.S. Presidential address includes: *"No one would argue that this war has not come at a high cost in lives and treasure but those costs are necessary when we consider the cost of a strategic victory for our enemies in Iraq."* The expression *lives and treasure* (derived from "blood and treasure") became a staple of political rhetoric, having been popularized by 19th-century American writers such as Edgar Allan Poe and Washington Irving [12].

The emergence of new phraseologisms within the political arena is intrinsically tied to current geopolitical and social events. Terms such as *preventive war*, *collateral damage*, and *yellow journalism* illustrate this evolution. The latter term originated in the United States, denoting a style of reporting that prioritizes sensationalism and the exaggeration of reality, or employing unscrupulous practices to manipulate circulation figures [13]. *Yellow journalism* is defined as the utilization of lurid, sensationalized content in print media to draw in readers [14]. Within the English-speaking cultural context, numerous euphemistic phrasemes containing the "yellow" component have developed, such as *yellow dog contract*—an illegal stipulation preventing an employee from joining a union—or *yellow dog fund*, referring to a slush fund for bribery. In

American English, the zoomorphism "yellow dog" carries connotations of cowardice or vileness, while also functioning as a descriptor for anti-labor legal frameworks.

During the U.S. presidential debates, D. Trump's remark regarding B. Sanders' endorsement of H. Clinton—"I was so surprised to see him sign on with the devil"—serves as an example of adapting the idiom "to make a deal with the devil" by substituting the core phrase with *to sign on*, thereby tailoring the expression to the specific political situation.

Conclusion

In conclusion, analyses indicate that specific groups of phraseologisms function as explicit carriers of strategic intent. The trajectory of a nation's cultural and historical growth, its state mechanisms, political institutions, and the socio-political experiences of its citizenry are all mirrored in the thematic clustering of these phrasemes, particularly during election cycles and in the development of foreign policy traditions in the U.S. and the UK.

For instance, looking at *The Economist*: "Over the past fortnight the independent counsel has scored a series of legal victories, and put Bill Clinton and the White House back on defensive. But whatever happens next, Mr. Clinton's strategy of delay and co-operation with Mr. Starr's inquiry seems to be going wrong" (*The Economist*, Bill Clinton, p. 13). Here, *put somebody back on defensive* implies forcing an adversary into a reactive stance, while *seems to be going wrong* indicates an erroneous course of action. In another article regarding British politics, the phrase *make somebody look foolish* is used to describe how politicians inadvertently damage their own reputation. Furthermore, the description of Margaret Thatcher's interactions—"handbagged the organization into near-immobility"—uses vivid, aggressive imagery to illustrate critical verbal or written attacks [The Economist, John Major, p. 33]. Other frequently encountered phraseologisms include *devising the key elements*, *to flirt with terrorists*, *gaining combat experience*, *to sweep through the planet*, and *pass through turbulent events*.

In political and business discourse, the utility of these phrasemes lies in their ability to subtly signal intent to an interlocutor while simultaneously inducing confusion through the deployment of semantically ambiguous linguistic signs. The adoption of powerful, expressive structures is a requirement for maintaining the balance of compromise and discussion. Because of their polysemous nature, phraseologisms can effectively veil reality, causing the audience to drift from the original intent; thus, they often cloak negative semantics within superficially positive or neutral linguistic units.

GRAMMATICAL FEATURES OF RELATIVE CLAUSES IN THE GERMAN LANGUAGE

Gulshan Vagif AHMADOVA

Senior lecturer, Department of Lexicology and Stylistics of the German Language, Azerbaijan
University of Languages

E-mail: ahmadova_g@yahoo.de

ORCID ID: 0009-0009-9398-3897

Abstract: This paper examines relative subordinate clauses in the German language. The article examines their structural, syntactic, and semantic features, as well as their functions within a complex subordinate clause. Specifically, it analyzes the means of connecting relative subordinate clauses to the main clause, namely relative pronouns, and their morphological features. Word order within sentences and its influence on grammatical structure are also examined. The paper also examines the division of relative subordinate clauses into restrictive and nonrestrictive types, which plays an important role in ensuring the precision of meaning and correct interpretation of expressions. It is said that relative clauses function as modifiers in relation to a member of the main clause expressed by a noun, a substantivized part of speech, a pronominal noun, or a numeral. Relative clauses (or, as they are sometimes called, relative clauses) are subordinate clauses that depend entirely on a single word in the main clause. Attributive clauses (or Relativistic clauses) in German represent a vast area of syntactical research. Linguists identify a number of key features that distinguish them from clauses in other languages and determine their structure. The results of this study can be used in the study of German syntax and in teaching German as a foreign language.

Key words: complex sentence, relative clause, relative pronouns, syntactic features, morphological features.

**ALMAN DİLİNDƏ TƏYİN BUDAQ CÜMLƏLƏRİNİN QRAMMATİK
XÜSUSİYYƏTLƏRİ**

Gülşən Vaqif ƏHMƏDOVA

Baş müəllim, Alman dilinin leksikologiyası və stilistikası kafedrası, Azərbaycan Dillər Universiteti

ORCID ID: 0009-0009-9398-3897

Xülasə: Bu iş alman dilində təyin budaq cümlələrinin öyrənilməsinə həsr olunmuşdur. Məqalədə onların struktur-sintaktik və semantik xüsusiyyətləri, eləcə də mürəkkəb tabeli cümlə daxilində funksiyaları araşdırılır. Xüsusilə, təyin budaq cümlələrinin baş cümlə ilə əlaqələnmə vasitələri, yəni nisbi əvəzliliklər və onların morfoloji xüsusiyyətləri təhlil olunur. Eyni zamanda, budaq cümlələrdə söz sırası və onun qrammatik quruluşa təsiri nəzərdən keçirilir. İşdə təyin budaq cümlələrinin məhdudlaşdırıcı və qeyri-məhdudlaşdırıcı növlərə bölünməsi də araşdırılır ki, bu da nəna dəqiqliyinin və ifadənin düzgün şərhinin təmin edilməsində mühüm rol oynayır. Qeyd edilir ki, nisbi cümlələr əsas cümlənin isim, substantivləşdirilmiş nitq hissəsi, əvəzlilik isim və ya sayla ifadə olunan üzvünə münasibətdə dəyişdirici funksiya yerinə yetirir. Təyin budaq cümlələri (və ya bəzən nisbi cümlələr adlandırıldığı kimi) tamamilə əsas cümlədəki tək bir sözdən asılı olan tabeli cümlələrdir. Alman dilində atributiv cümlələr (və ya nisbi cümlələr) sintaktik tədqiqatların geniş bir sahəsini təmsil edir. Dilçilər onları digər dillərdəki cümlələrdən fərqləndirən və strukturlarını müəyyən edən bir sıra əsas xüsusiyyətləri müəyyən edirlər. Tədqiqatın nəticələri alman dilinin sintaksisinin öyrənilməsində və onun xarici dil kimi tədrisində istifadə oluna bilər.

Açar sözlər: tabeli mürəkkəb cümlə, təyin budaq cümləsi, nisbi əvəzliliklər, sintaktik xüsusiyyətlər, morfoloji xüsusiyyətlər

Introduction

A complex subordinate clause in the German language is one that consists of two or more independent clauses. A subordinate clause is usually an expanded part of the main clause and only appears within complex sentences. For example: *Heute gehe ich nicht in die Schule, weil ich krank bin-I'm not going to school today because I'm sick.*

Depending on the function the subordinate clause performs, it can be of several types: Explanatory, Attributive, Conditional, Concessive, Comparative, Causes, Time, Places, Goals, Consequences. This depends on the question asked of the subordinate clause. Subordinate clauses can be conjunctive or non-union.

Relative clauses (Relativsätze) are clauses that provide additional information about an object or person mentioned in the main clause. A relative pronoun in the nominative case is used when it is the subject of a relative clause, and a relative pronoun in the accusative case is used when it is the object of a relative clause.

Subordinate clauses are an important part of German syntax. They allow us to clarify or elaborate on information about the subject or object discussed in the main clause. In this article, we'll explore how to correctly use subordinate clauses in German, as well as the specifics of their construction and agreement.

Results and Discussion

Attributive clauses (or, as they are sometimes called, relative clauses) are subordinate clauses that depend entirely on a single word in the main clause (Stepanova, 1985, p. 121). This word is most often a noun or pronoun. Relative clauses provide a detailed explanation of this word, without which the entire sentence is often incomprehensible. These clauses most often answer the questions "what?" and "which?" Relative clauses are usually placed in a sentence immediately after the word

they modify; they can be placed at the beginning or end of the main clause, or they can break it in the middle. For example: *Jugendliche, die einen guten Schulabschluss haben, bekommen leichter eine Lehrstelle an der Uni* - Young people with good school grades find it easier to get an apprenticeship at university. As we've already noted, relative clauses are usually placed immediately after the word they refer to, meaning they're inserted into the original sentence without changing the word order within it. Relative clauses can be used freely within main clauses, as well as within other subordinate clauses or infinitive constructions. Why does the definite article come at the beginning of a subordinate clause and not modify anything? We'll explain everything now! In German, there are relative pronouns, and essentially everyone is already familiar with them. They are the same definite articles - der, die, das, and die (plural). However, as pronouns, these words are declined for case according to a different pattern (you can find it in the illustration for the post), and are also used in special cases. In which cases? Relative pronouns (Relativpronomen) are used to form relative clauses. In Russian, they are called attributive clauses. For example: *Der Mann, den ich gestern wieder im Büro getroffen habe, ist sehr net* - The man I met at the office yesterday is very nice. What do you need to know about relative clauses? The choice of pronoun depends on the gender of the word being modified, just like in Russian. For example: *The table that stands in the room* - *Der Tisch, der im Zimmer steht*. Relative clauses are subordinate clauses, meaning that the verb (the news) comes at the end of the sentence. "*Der Mann*", "*der das Buch liest*", "*ist my Vater*" - *The man reading the book is my father*. The main clause and the subordinate clause have their own word order. Here the main clause is "*Der Mann ist my Vater*". "*der Mann*" is the subject and comes first, while "*ist*" is the news and comes second. The subordinate clause "*Der das Buch liest*" refers to the word "*der Mann*" in the main clause (*Bezugswort*), meaning that it agrees with this word in gender and number - therefore the relative pronoun "der" is masculine and singular. However, determining the case of the relative pronoun (Nominative or Accusative) is often difficult for students.

The algorithm is as follows: we check whether the subordinate clause is a predicate. We can determine this by the predicate that agrees with the predicate and is located at the end of the sentence. In the subordinate clause "*Der das Buch liest*", the predicate *liest* indicates that the predicate should be in the third person singular. We have two grammatically compatible words (*der* "which" and *das Buch* "book"). However, "book" is an inanimate object and cannot move, so the word "*der*" "which" is semantically compatible. This is the predicate of the subordinate clause, that is, it is a relative pronoun in the nominative tense and is used in relative clauses instead of conjunctions. The subordinate clause "*das ich gestern gekauft habe*" refers to the defining clause of the main clause "*das Auto*." The predicate in the subordinate clause is *gekauft habe*, the subject is "*ich*," and the word "*das*" is a relative pronoun in the accusative, since we cannot have two subjects in the nominative in one sentence: *Ich (Nominativ) habe was (Akkusativ) gekauft – das Auto (Akkusativ)*. The relative pronoun (Relativpronomen) in the Nominative and Accusative cases is declined in the same way as the definite article.

Subordinate clauses function as modifiers in relation to a member of the main clause expressed by a noun, a substantivized part of speech, a pronominal noun, or a numeral. Subordinate clauses are introduced by the relative pronouns *der/die/das* and the conjunctions *als ob/als, dass, ob, wenn*.

Subordinate clauses use both the indicative and subjunctive moods. *Er will das Gefühl, als ob jemand den Stecker herausgezogen hätte, erlebt haben- He claims to have experienced the feeling as if someone had pulled the plug.* (Fdeischer & Bartz, 2012, p. 98)

The attributive clause "als ob jemandden Stecker herausgezogen hätte" is introduced by the conjunction *als ob*, within which the subjunctive is used. The author compares the state of a person who has lost consciousness to a sudden power outage, as if someone pulled the plug from the power grid. This comparison, within the framework of an attributive clause, succinctly and figuratively conveys the person's state. Thus, by functioning within the attributive clause of the comparative construction, the emotive potential of this sentence is revealed.

Das ist ein solches Kunstwerk der Natur, also ob eine besonders exzentrische Künstlerkolonie im Gestaltungsrausch their Visionen in Stein gehauen habe- This is such a work of art by nature, as if a particularly eccentric artists' colony, in a creative frenzy, had carved their visions in stone. (Fdeischer & Bartz, 2012, p. 101)

The author of the article describes his unforgettable impressions of seeing the Erciyes volcano in Turkey. According to the author, the astonishing features of this volcano cannot be a product of chance, but rather the work of particularly eccentric artists who created this stone wonder, struck by the volcano's unusualness. The author expressed his surprise at the painting with a subordinate clause, "als ob eine besonders exzentrische Künstlerkolonie im Gestaltungsrausch ihre Visionen in Stein gehauen habe," figuratively comparing a centuries-old natural process with human actions. By contaminating meanings, the author not only answers the question "what" and not simply communicates certain facts about this geographical feature, but also paints a vivid image of a miraculous volcano in the minds of readers through comparison. (6) *Tatsächlich erscheint Gorbatschow als ein moderner Drachentöter, der über übermenschliche Kräfte verfügt -The author of the article refers to Gorbachev as a modern dragon, the dragon that has been destroyed by the over-human army.* (Fdeischer & Bartz, 2012, p. 97)

The subordinate clause "the dragon that has been destroyed by the over-human army," introduced by the relative pronoun "der," paints a vivid image of Mikhail Sergeyevich Gorbachev, highly appreciating his political activity. In the author's opinion, Gorbachev possesses superhuman abilities, since he was able to free the country from the dragon. By the image of the dragon, the author refers to the communist ideology that reigned in the USSR for a long time. The subordinate clause, together with the comparative construction "as a modern dragon," possesses vivid emotional potential and performs an influencing function on the reader. Attributive clauses (or Relativistic clauses) in German represent a vast area of syntactical research. Linguists identify a number of key features that distinguish them from clauses in other languages and determine their structure. The main ideas and conclusions of scientists about the features of attributive clauses in German:

1. **Attributivity as an invariant (Essence)** Scientists emphasize that attributive clauses function as an expanded attribute of a noun or pronoun in the main clause. **Function:** They express a feature, quality, or property of an object, answering the questions *welcher?* (which one?) or *was für ein?* (what kind of ...?). **Relationship to the word being defined:** The attributive clause usually follows the noun it defines.

2. **Structural Features (Relative Pronouns)** They are usually introduced by relative pronouns (*der, die, das, die* or less commonly *welcher, welche, welches*). **Gender and Number:** The relative pronoun agrees in gender and number with the word it defines. **Case:** The case of a pronoun is

determined by its role within the subordinate clause (subject, object, etc.). Fusion with Prepositions: Relative pronouns can be used with prepositions that are modified by the verb in the subordinate clause.

3. Word Order (Frame Construction) Germanic scholars (Eisenberg, 2004) note a rigid structure: Frame Construction: The conjugated verb always comes at the very end of the subordinate clause. Initial Position: The relative pronoun is usually the first word in the subordinate clause. 4. Differentiation: Restrictive and Extensive Clauses In German (as noted, for example, in corpus studies by Schaffranietz 1999), two types of attributive clauses are clearly distinguished: Restrictive clauses (Restrictive): These indicate the specific object being referred to; without them, the meaning of the main clause changes. They are not separated from the word they define by a comma in spoken language (pauses). Extending clauses (Nicht-restrictive): These provide additional information without restricting the word they define. They are often set off by intonation and commas. Usage Features (Contrastive Studies) Comparison with English: German tends to have a tighter structure, where the relative clause is clearly separated and structurally formed. Position: The relative clause can break the main clause by being located within it immediately after the noun it defines (extraposition). Thus, scholars view relative clauses in German as an important syntactic tool for detailed description of an object, requiring precise agreement of relative pronouns and adherence to strict final position of the verb.

From the point of view of syntactic theory, attributive clauses are classified as attributive clauses since they perform the function of definition (Attribute) and are part of a noun group (Nominalgruppe). Their presence allows for the expansion of the semantic scope of the defined word (antecedent), providing its organization, identification, or classification. Attributive clauses in German are typically introduced by relative pronouns (Relativpronomen), which perform a dual function: 1. serve as a means of connection between the main and subordinate clauses; 2. are members of the subordinate clause. Syntactically, attributive clauses serve the function of clarifying the referent. Depending on the degree of necessity of the information they contain, they are subdivided into: restrictive (nicht-restrictive) - contain additional, optional information and are usually emphasized by intonation and punctuation. This contrast plays an important role in the interpretation of an utterance and is associated with the pragmatic aspect of speech.

Conclusion

Relative clauses in German are an important means of syntactic and semantic organization of speech. Their structural complexity and functional ambiguity make them a subject of active study in modern German studies.

ORCID ID: 0009-0002-4756-085X

Abstract: This article examines language as a complex system that connects communication, cognition, and society. It emphasizes that language is not only a means of exchanging information but also a repository of cultural values, traditions, and collective knowledge. Through both verbal and non-verbal elements, individuals use language to build relationships, express emotions, and shape social realities. From a psycholinguistic perspective, language is closely linked to mental processes, showing how thoughts are produced, structured, and understood. Cognitive linguistics further explores how people perceive and categorize the world, highlighting key units such as frame, concept, utterance, and discourse. Frames represent mental structures of experience, which develop into concepts and are expressed through utterances, ultimately forming discourse. The article also presents the Linguo-Psychological Unity Theory, which explains how individuals encode and expand knowledge through interaction, linking personal cognition with social communication.

Key words: language, frame, concept, utterance, discourse

Xülasə: Bu məqalə dili kommunikasiya, idrak və cəmiyyət arasında qarşılıqlı əlaqəni təmin edən mürəkkəb və çoxşaxəli bir sistem kimi təhlil edir. Məqalədə vurğulanır ki, dil təkcə informasiya mübadiləsi vasitəsi deyil, eyni zamanda mədəni dəyərlərin, ənənələrin və kollektiv biliklərin qorunub saxlanıldığı və ötürüldüyü fundamental bir mexanizmdir. Verbal və qeyri-verbal komponentlərin vəhdəti çərçivəsində fərdlər dili sosial münasibətlərin qurulması, emosiyaların ifadəsi və sosial reallığın formalaşdırılması üçün istifadə edirlər.

Psixolinqvistik yanaşma baxımından dil insanın zehni prosesləri ilə sıx əlaqədə olub, düşüncələrin formalaşması, strukturlaşdırılması və qavranılması mexanizmlərini əks etdirir. Koqnitiv dilçilik isə reallığın qavranılması və kateqoriyalaşdırılması proseslərini araşdıraraq freym, konsept, ifadə və diskurs kimi əsas vahidləri ön plana çıxarır. Freymilər təcrübənin idraki strukturları kimi çıxış edərək zamanla konseptlərə transformasiya olunur və ifadələr vasitəsilə reallaşaraq diskursun formalaşmasına zəmin yaradır.

Bundan əlavə, məqalədə təqdim olunan Linqvo-Psixoloji Vəhdət Nəzəriyyəsi fərdlərin qarşılıqlı fəaliyyət prosesində bilikləri necə kodlaşdırdığını, genişləndirdiyini və paylaşdığını izah edərək fərdi idrak ilə sosial kommunikasiya arasındakı dialektik əlaqəni əsaslandırır.

Açar sözlər: dil, freym, konsept, söyləmə, diskurs

Introduction

Language acts as an essential instrument for connecting community members, influencing how people engage with one another and develop mutual perspectives. Beyond its role in exchange, it functions as a storehouse for societal principles, traditions, and collective wisdom. Language is the mechanism that allows for the sharing of thoughts and emotions, helping individuals create social networks and communities. It adapts alongside cultural and technical progress while reflecting the social environment of its users. Effective communication relies on more than just words; it includes body language and shared context to foster better understanding. Ultimately, this makes language a vital component of social stability and growth. Communication, society, and language are linked fields that examine the ways people utilize verbal and non-verbal symbols to interact and define their world. Serving as the core of human expression, language spans everything from spoken words to physical cues. It is inherently social, mirroring cultural expectations and group hierarchies while remaining the primary method for transmitting information. In addition to this, language acts as the chief medium for dialogue and a reflection of our mental organization of reality. Understanding the way we communicate involves looking at how language allows humans to share their intentions, emotions, and thoughts. Language is a fluid system rather than a mere set of rules, and it shares a reciprocal relationship with identity, culture, and human contact. It is used to communicate values, feelings, and social bonds, acting as a tool for creativity, networking, and exerting influence. Because it represents the complexity of our experiences, language is always changing to fit new environments.

Because our language is so deeply woven into our minds and the way we think, every word we speak carries a bit of our inner psychology with it. It's why looking at our conversations through a psycholinguistic lens is so valuable—it helps us see the human side of how we communicate. In fact, the entire field of psycholinguistics is dedicated to using science to unravel the mystery of how we actually manage to turn our thoughts into speech and how we make sense of what others are saying to us. Psycholinguistics as an independent scientific field got its beginning from a seminar which is held in America. The term "Psycholinguistics" was created for the first time in this seminar and the book called "Psycholinguistics" was published (Clark et al., 1977). Research in psycholinguistics or cognitive linguistics is discussed, and efforts related to the study of psychological problems of language are mentioned; likewise, an interpretation of behaviorism, neobehaviorism, and theories of speech activity is provided. The Linguo-Psychological Unity Theory, which is one of the recent theories of cognitive linguistics and emerged at the intersection of linguistics and psychology, is explained.

Methodology and Materials

This research is based on qualitative and theoretical analysis within the fields of cognitive linguistics and psycholinguistics. The study investigates the structural relationship between speech, concept, frame, and discourse by applying the principles of the Linguo-Psychological Unity Theory. The methodological framework combines descriptive, comparative, and interpretative approaches in order to explain how cognitive and linguistic units interact during communication and meaning construction.

The primary materials of the research consist of scientific literature related to cognitive linguistics, discourse analysis, psycholinguistics, and frame theory. Particular attention is given to the works of Marvin Minsky, Ronald Langacker, and Herbert Clark, as well as the theoretical model proposed by Mayil B. Asgarov. These sources provide the conceptual basis for examining the formation of discourse through the interaction of mental and linguistic structures.

The study analyzes the processes through which units of reality are transformed into initial frames, lexical frames, concepts, and finally discourse. Special emphasis is placed on the role of utterance as an intermediary unit connecting conceptual and discursive structures. The research also considers both linguistic and extralinguistic elements involved in communication, including context, social interaction, and cognitive perception.

Through theoretical synthesis and conceptual interpretation, the article aims to clarify the functional connections between frame, concept, speech, and discourse in modern cognitive linguistics.

Discussion

Cognitive psycholinguistics -one of the two main branches of neobehaviorism, or as it is more popularly known these days, cognitive linguistics-is a modern field of science that simultaneously investigates how humans utilize language to perceive the world and how units of perceived reality are reflected within the language system. The primary goal of cognitive psychology in this context is to understand the mechanisms of perception, categorization, and the accumulation of knowledge. In recent times, research related to cognitive linguistics is rapidly increasing; including studies dedicated to the analysis of discourse itself and its most vital elements, such as concepts and frames.

Cognitive linguistics investigates mental processes that occur during perception, thinking, and the conscious understanding of reality, as well as the types and forms of their mental representations. In other words, cognitive linguistics primarily studies the mechanism of cognition, and here, language is considered the main tool of thought processes-a system of signs that codes and transmits information. In recent times, research related to cognitive linguistics is rapidly increasing, including studies dedicated to the analysis of its most vital elements, such as frames, concepts, and discourse. The most well known notions and terms actively used in cognitive linguistics are generally as follows: reality, unit of reality, initial frame, word-frame, concept, utterance, discourse, discursive situation, etc. The most active and significant of these notions and terms is, undoubtedly, utterance. For the formation of utterance, the initial frame reflecting the unit of reality about which information is provided becomes verbalized and transforms into a word-frame. Each word-frame possesses the potential to expand semantically and turn into a concept. Utterance is formed as a result of the integration of word-frame and concept, both in terms of form and meaning. Let us try to interpret these concepts and terms on the basis of the "Linguo-Psychological Unity Theory".

Cognitive linguistics or psycholinguistics investigates the mental processes that occur during perception, thought, and the understanding of reality, as well as the types and forms of their mental representations. As is known, the goal of cognitive psychology is to understand and research how the processes of world perception, categorization, classification, and understanding are carried out, and how the accumulation of knowledge takes place. Cognitive linguistics emerged from the union of cognitive psychology with linguistics or linguistic science. It is for this reason that today, the majority of specialists conducting research on language theory rely specifically on this branch of neobehaviorism-that is, on cognitive psycholinguistics or cognitive linguistics.

Although cognitive linguistics has existed for more than 50-60 years, disagreements regarding its units and the relationships between them still persist. Even today, there is a diversity of opinions concerning the interpretations of the core units of cognitive linguistics-such as frame, discourse, and concept—as well as the connections between them, and the extent to which one plays a role in the

formation of another. To date, there have been three different propositions regarding the sequence of their emergence and realization:

Discourse-Concept-Frame

Concept-Discourse-Frame

Frame-Discourse-Concept

While it is impossible to determine with absolute precision when or by whom these propositions were first put forward, it is useful to examine what these sequences signify. Notably, these different sequential orders have led to shifts in the content and essence of the units that constitute them—namely, the notions of frame, discourse, and concept.

M. Minsky explained the frame as follows: "A person strives to perceive new situations, approaches ordinary things from a new perspective, takes images from their memory that we call 'frames,' and adjusts several of its details into the required state. By taking it from a narrow field, they apply it to a broader class and processes. A frame is a structure for the representation of a stereotypical situation" (Minsky, 1975).

A frame is a cognitive structure and a person's phenomenological field. This cognitive structure creates the concept and organizes the importance of information into typical and potential forms, through which concepts are associated.

A concept is a fundamental building block of human thought and the way we mentally organize our understanding of the world. It isn't just personal; it is a shared piece of our collective consciousness that carries the unique flavor of a specific culture. As an abstract unit, it forms the core of what we know and how we perceive reality. A concept is a global unit of thought and a component of human consciousness that helps organize our understanding of the world.

Through these concepts, the meanings that people express in words are preserved within the memory of a nation. This means that a concept holds more than just individual life lessons; it protects the collective wisdom and experiences of everyone who speaks the language. Essentially, a concept is a result of human activity and experience that stores vital information.

In modern science, a concept is seen as a mental essence that reflects the spiritual character of a person rooted in their culture. It is often described as an original, unique "cultural focus". Ultimately, these concepts find their fullest expression through the way we use them in actual discourse.

Discourse, speech, and text are fundamentally different from one another. Discourse is the result of actual speech activity. It is the manifestation of a system of abstract thought or psychological images created in the human brain and are always linked to specific objects and conditions. There are specific spaces, times, and participants where discourse takes place. In the creation of discourse, the individual opinion and attitude of the subject creating it are the most important factors. Discourse combines the verbal and non-verbal information that participants address to each other during the communication process.

Dialogues, conversations, debates, etc., where visual and other contact factors fade into the background and do not occur in natural conditions, take on the nature of speech. From the perspective of speech production, natural conditions and situations do not hold as much significance. In such cases, no contact opportunity exists between the active and passive communicants other than vocal contact.

Cognitive linguistics identifies frame, concept, utterance, and discourse as its most basic appellative units, each forming the foundation for the next. A frame, once verbalized and expanded,

develops into a lexical frame and eventually into a concept. The combination of these elements leads to the formation of utterances, while discourse emerges through the interaction between speaker and listener.

From the perspective of the Linguo-Psychological Unity Theory, an individual is both a conscious and social being. As a conscious entity, a person perceives elements of reality—objects, events, and phenomena—and encodes them in memory as initial frames. These frames represent abstract mental constructs shaped by personal needs and experiences.

As a social being, an individual seeks to exchange information. This requires verbalizing the initial frame by assigning it a linguistic form, thereby transforming it into a lexical frame. With continued interaction and experience, these lexical frames expand. Formal expansion enriches their structure, whereas semantic expansion transforms them into concepts. Over time, concepts develop a semantic structure consisting of a core, periphery, and intermediate zones. Importantly, every lexical frame has the potential to evolve into a concept.

Discourse is constructed through the exchange of information, primarily via speech utterances composed of linguistic units. However, it also incorporates extralinguistic elements that carry meaning. As a linguo-psychological process, discourse occurs in real time and is later stored in memory, where linguistic elements may transform into internal dialogue, and extralinguistic elements into descriptive or narrative forms. Elements that cannot be linguistically encoded tend to disappear once the communicative situation ends.

Cognitive linguistics identifies frame, concept, utterance, and discourse as its most basic representative units, each forming the foundation for the next. A frame, once verbalized and expanded, develops into a lexical frame and eventually into a concept. The combination of these elements leads to the formation of utterances, while discourse emerges through the interaction between speaker and listener.

From the perspective of the Linguo-Psychological Unity Theory, an individual is both a conscious and social being (Asgarov, 2015). As a conscious creature, a person perceives elements of reality—objects, events, and phenomena—and encodes them in main memory as initial frames. These frames represent abstract mental constructs shaped by personal needs and experiences. As a social being, an individual seeks to exchange information. This requires verbalizing the initial frame by assigning it a linguistic form, thereby transforming it into a lexical frame. With continued interaction and experience, these lexical frames expand. Formal expansion enriches their structure, whereas semantic expansion transforms them into concepts. Over time, concepts develop a semantic structure consisting of a core, periphery, and intermediate zones. Importantly, every lexical frame has the potential to evolve into a concept. As a result of information exchange, discourse is created, primarily via speech utterances composed of linguistic units. Discourse is a linguo-psychological process that necessarily takes place in the present tense or in the focus frame window of R.V. Langacker. This process moves to the plus frame window and is archived in memory with bright elements and the background model around them (Langacker, 1987). At this time, linguistic elements turn into intratextual dialogic speech, and extralinguistic elements turn into descriptions and narration, even punctuation marks. Discourse elements that cannot be transformed into language structural units disappear with the end of the discursive situation.

Conclusion

Language is a dynamic and evolving system that plays a central role in both individual cognition and social interaction. It reflects cultural identity, shapes thought processes, and enables

the transmission of knowledge across generations. The relationship between frame, concept, utterance, and discourse demonstrates how language operates as both a mental and communicative tool. The Linguo-Psychological Unity Theory highlights the dual nature of humans as conscious and social beings who continuously create and share meaning. Overall, understanding language through cognitive and psycholinguistic approaches provides deeper insight into how people interpret reality, interact with others, and adapt to changing environments.

EXPRESSIVE LANGUAGE IN ADVERTISING DISCOURSE: ANALYSIS OF ENGLISH CAR SLOGANS

Gulnara Gorkhmaz GURBANOVA

Associate Professor, Mingachevir State University

E-mail: gulnara.qurbanova@mdu.edu.az

ORCID ID: 0000-0003-1206-3909

Abstract: This study examines the use of expressive linguistic means in English-language automobile advertising slogans. The research is based on the analysis of more than 200 slogans from various countries, including the USA, the UK, Germany, Japan, and France. The findings reveal that advertising slogans widely employ lexical, syntactic, phonetic, and graphic stylistic devices similar to those found in literary texts. Among lexical means, metaphor, epithet, and hyperbole are the most frequently used, helping to create vivid imagery and emphasize the qualities of the advertised product. Allusion is also significant, as it evokes cultural associations and enhances memorability. Syntactic devices such as parceling, rhetorical questions, antithesis, and repetition contribute to emotional impact and structural clarity. Phonetic features, particularly alliteration and rhyme, increase the attractiveness and memorability of slogans, while graphic elements (punctuation, symbols) strengthen visual perception. The study concludes that expressive means play a crucial role in increasing the effectiveness of advertising slogans. They help attract consumer attention, create positive associations, and influence purchasing decisions, making them an essential tool in modern advertising discourse

Keywords: advertising slogan, expressive means, stylistic devices, automobile advertising, advertising discourse

Xülasə: Bu tədqiqat ingilis dilli avtomobil reklam şüarlarında ifadəlilik vasitələrinin istifadəsini araşdırır. Tədqiqat ABŞ, Böyük Britaniya, Almaniya, Yaponiya və Fransa kimi müxtəlif ölkələrə aid 200-dən çox şüarın təhlilinə əsaslanır. Nəticələr göstərir ki, reklam şüarlarında bədii mətnlərə xas olan leksik, sintaktik, fonetik və qrafik üslubi vasitələr geniş şəkildə istifadə olunur. Leksik vasitələr arasında metafora, epitet və hiperbola daha çox üstünlük təşkil edir və reklam olunan məhsulun xüsusiyyətlərini vurğulayaraq obrazlılıq yaradır. Alluziya isə mədəni assosiasiyalar yaradaraq yadda qalmanı gücləndirir. Sintaktik vasitələr – parsellyasiya, ritorik suallar, antiteza və təkrar – emosional təsiri və struktur aydınlığını artırır. Fonetik vasitələr, xüsusilə alliterasiya və qafiyə, şüarların cəlbediciliyini və yadda qalmasını təmin edir, qrafik vasitələr isə vizual təsiri gücləndirir. Tədqiqatın nəticəsi göstərir ki, ifadəlilik vasitələri reklam şüarlarının effektivliyinin artırılmasında mühüm rol oynayır. Onlar istehlakçı diqqətini cəlb edir, müsbət assosiasiyalar yaradır və qərarvermə prosesinə təsir göstərir.

Açar sözlər: reklam şüarı, ifadəlilik vasitələri, üslubi vasitələr, avtomobil reklamı, reklam diskursu

Introduction

Advertising occupies a special place in the life of a modern person. In addition to informing about brands, goods, and services and shaping a positive attitude toward the advertised product, advertising often influences a person's worldview, their goals, and the making of important consumer decisions.

In advertising texts, the slogan (tagline, motto) occupies a special place, since this concise and easily memorable phrase expresses the essence of the advertising message. According to the definition given in the *Big Explanatory Dictionary* (Kuznetsov, 2006), a slogan contains a clear, precise, and concise formulation of the advertising idea, intended to briefly and effectively reflect what distinguishes a given product or company from others of a similar kind.

Since almost all market segments are saturated with similar products, manufacturers need to make their advertising—and especially the advertising slogan—as attractive and persuasive as possible. Our study aims to demonstrate that this goal is achieved through the same expressive means that are used by authors of literary texts.

Materials and Methods

In this study, we analyzed more than 200 English-language automobile advertising slogans produced in different countries (the USA, Great Britain, Germany, Japan, France, etc.). As a result of the stylistic analysis of slogans, we found that many of them employ lexical, syntactic, and phonetic expressive means that are characteristic of literary works. A quantitative analysis made it possible to determine the most frequently used stylistic devices that attract the attention of potential consumers.

Results and Discussion

Having analyzed advertising slogans from the point of view of the expressive means used in them, we concluded that the most popular among the authors of automobile slogans are lexical

means—hyperbole (8 slogans), epithet (12 slogans), and metaphor (11 slogans). The most frequent syntactic expressive means are parceling (8 slogans) and the rhetorical question (6 slogans). The most commonly used phonetic expressive means is alliteration (7 slogans).

One of the primary functions of a slogan is to encourage the buyer to take action, which requires describing the superior qualities of the product. Epithets serve this purpose by characterizing the advertised cars as “clever,” “honest,” and simply “superb” (*Skoda. Simply Clever; It’s a Skoda. Honest; Skoda Superb. Simply superb*).

Epithets such as *executive*, *exclusive*, and *distinguished* emphasize the exclusivity of the car:

- *Hyundai Accent. Executive* (an executive-class car);
- *Audi A8. Sporty & exclusive* (sporty and exclusive);
- *Hyundai Sonata. Undoubtedly Distinguished* (undoubtedly distinguished).

A poetic word such as *sunshine* can function as an epithet (*Hyundai Santro. The sunshine car*), as well as a colloquial phrase like *no nonsense* (*Ford Fusion. The no nonsense car* — a serious car, not something trivial).

A car can be described as “full of life” (*Chevrolet Spark. Full of life*), “wild” (*Dodge. Domestic. Not domesticated*), or “different from others” (*Dodge. Different*).

A car can answer your questions (*BMW 5-Series. The answer to your questions*) and bring joy to its owner (*Maruti Ritz. Joy Inside*). A car may be driven by passion (*FIAT. Driven by passion*) or by what is inside (*Subaru. Driven by what’s inside*). In the latter slogan, a double interpretation is possible: it may refer either to the engine or to the driver.

In the slogan *Peugeot. The lion goes from strength to strength*, metonymy is used, where instead of the word “car,” the brand’s symbol (logo)-a lion-is employed. A similar technique is used in the slogan *Jaguar. Unleash a Jaguar*, where the name of the automobile brand *Jaguar Land Rover* is played upon.

The slogan of Nissan is based on an extended metaphor in which life is compared to a journey, and the consumer is invited to enjoy the ride in a Nissan car: *Life is a Journey. Enjoy the Ride*. The metaphorical nature of slogans helps attract attention and remain in the memory of a potential buyer.

The same goal is served by the stylistic device of hyperbole. The advertised car is presented as the best and even unique:

- *Toyota. The best built cars in the world*
- *Hummer. Like nothing else on earth*
- *Mercedes-Benz. Unlike Any Other*
- *Jeep. There is only one*
- *Porsche. There is No Substitute*

The speed characteristics of Toyota cars are clearly exaggerated in the slogan *Toyota. The car in front is a Toyota*, while Nissan suggests that its car is designed not for individuals but for the entire human race: *Nissan. Built for the Human Race*. The wordplay in Nissan’s slogan (*race* meaning both “human race” and “car racing”) makes it even more persuasive.

Among lexical expressive means that evoke a positive response from the audience, allusion should be noted. It contains a reference to well-known cultural or historical phenomena. More often, it is not a literal reproduction of such linguistic phenomena as proverbs, sayings, well-known expressions, lines from famous songs, or phrases from films, but rather their creative reinterpretation. The effectiveness of allusions lies in their appeal to the background knowledge of

the audience, creating a "recognition effect," which generates positive associations (Savelieva et al., 2021).

For example, the advertising slogan of Hyundai *Driving is believing* (literally: driving is believing, meaning that driving the car will make you believe it is excellent) evokes associations with the proverb *Seeing is believing* (to see is to believe).

A slogan may also be based on a phraseological unit. For example, *Dodge. Grab life by the horns* is associated with the idiom *take the bull by the horns*, which implies decisiveness in action.

Mercedes-Benz characterizes its car as *The best or nothing*, which resembles the phrase *Everything or nothing*.

The slogan of the Honda car *It must be love* evokes an association with the song *It Must Have Been Love* by the group Roxette. The advertising slogan of the Oldsmobile car directly refers the consumer to memories of the old model of this brand owned by their father, but at the same time emphasizes that it is no longer the same car: *This is not your father's Oldsmobile*, which simultaneously indicates both continuity and the development of the brand.

The slogan *Volkswagen. Think Small*, which is associated with the phrase *Think big*, may seem paradoxical; however, it fully corresponds to the small size of the advertised car. Among other lexical expressive means used in slogans to a much lesser extent, irony should be noted:

- *Saab: To crash with a Volvo is extremely safe. If you're sitting in a Saab.*

This slogan plays on the long-standing competition between these two Swedish brands.

An oxymoron is used in the advertisement of the Fiat Strada:

- *Fiat Strada. Hand-built by robots.*

Such a description emphasizes that, on the one hand, the Fiat Strada resembles hand-built cars, that is, it appears exclusive and unlike other cars, while on the other hand, it is not so expensive, since it is assembled on a production line.

Enumeration in a series of homogeneous elements can also be used as a stylistic device, whereby individual objects, things, phenomena, or actions are named one after another so that they form a chain, the elements of which have equal syntactic status in the sentence and a certain semantic unity, although not obvious at first glance.

Thus, in the enumeration of characteristics of the Aston Martin car *power, beauty, soul*—along with an objective technical characteristic of any car (power) and a subjective evaluation of its appearance (beauty), a quality not inherent in any technical device (soul) is included, thereby likening the car to a human being.

In the slogan of Chevrolet *baseball, hot dogs, apple pie and Chevrolet-baseball*, hot dogs, apple pie, and Chevrolet are listed, and what unites all these semantically diverse items is that they are loved by ordinary Americans.

Among syntactic expressive means, authors of automobile slogans often use parceling, which serves to create a pause that enhances the effect of the following part of the slogan:

- *Plymouth. The Pride is Back. Born in America* (the pride has returned; born in America);
- *Chevrolet. Building a better way. To see the USA* (building a better car; to see the USA);
- *Subaru. Inexpensive. And built to stay that way* (inexpensive; and built to remain so).

The first part of such a construction may take the form of a question and the second part an answer, which creates a conversational tone: *Saturn. What kind of car is that? It's a Saturn.* (What kind of car is it? It's a Saturn.) This is a question-and-answer form of a slogan, which helps to create an atmosphere of ease and informality.

A rhetorical question is used in slogans to give them an emotional tone. The interrogative form of the slogan serves only to increase the persuasiveness of the statement, for example:

- *Toyota. Who could ask for anything more?*

It is no coincidence that most such slogans are general questions that require a “yes” or “no” answer:

- *BMW Mini. Is it love?*

The negative form of general questions requires only confirmation of already known positive information:

- *Plymouth. Isn't that the kind of car America wants?*
- *Buick. Isn't it time for a real car?*

Antithesis appears in several slogans. In the automobile slogan

- *Saturn. Like Always. Like Never Before*

this stylistic device of contrast emphasizes that the company continues to follow traditions of high quality while at the same time not standing still.

The slogan

- *Audi S Line. More horses. Fewer seconds*

is built on the antonyms *more* and *fewer*, helping to create a positive effect in describing the technical characteristics of the car: increased power leads to faster acceleration.

In the slogan

- *Nissan. Everything you want. Nothing you don't* the antonymous pronouns *everything* and *nothing* are brought to the forefront, thereby emphasizing characteristics that are important for the consumer: high functionality and the absence of unnecessary options that increase the cost of the car.

Anaphora gives the slogan a special rhythm and expressiveness:

- *Tata Indigo Marina. Big on space. Big on life*
- *BMW X3. Any road. Any time*
- *Saturn. A different kind of company. A different kind of car*

The same purpose is served by epiphora-the repetition of final language units-in the advertising slogan:

- *Chevrolet. Eye it. Try it. Buy it*

One of the most important features of an effective slogan is its brevity, which can be achieved through the use of ellipsis. This device is used in the following slogans:

- *Nissan. You can with a Nissan* (with a Nissan, you can do anything);
- *Jeep. Only in a Jeep* (only in a Jeep);
- *Volvo. For life* (for life);
- *Maruti Alto. Let's go* (let's go).

Despite their apparent fragmentation, such short slogans allow the reader to infer what is left unsaid: with a Nissan, you can achieve anything; only in a Jeep will you get what you need; Volvo Among phonetic expressive means, alliteration is the most frequently encountered. The purpose of this device is to enhance the expressiveness and memorability of the slogan. Here are several examples:

- *Toyota. Drive your dreams* (control your dream);
- *Lexus. The Passionate Pursuit of Potential* (an unstoppable drive toward success);
- *Jaguar. Don't Dream It. Drive It* (stop dreaming, get behind the wheel);

- *Honda. Start something special* (start something special);
- *Toyota. Today tomorrow Toyota* (today, tomorrow, Toyota);
- *Mitsubishi. Better built. Better backed* (better engineered, better supported).

Rhyming slogans are also more memorable:

- *Jaguar. Grace... Space... Pace...* (grace, space, speed);
- *Ford Trucks. The Best Never Rest* (Ford trucks—the best never rest);
- *Ford. Everything We Do is Driven By You* (you drive everything we produce).

We encountered only one example of onomatopoeia in the slogan:

- *Mazda. Zoom, Zoom, Zoom,*

where the repeated word *zoom* (a humming, buzzing sound) imitates the sound of the engine.

Consumers often see slogans as inscriptions against the background of an image of the advertised product; therefore, advertisers frequently resort to graphic expressive means, which also include punctuation marks. Thus, we observed slogans where an exclamation mark is used to attract attention and intensify the impact:

- *Chevrolet. Eye it. Try it. Buy it!*

Ellipsis is used in:

- *Jaguar. Grace... Space... Pace...*

Sometimes a period acquires special meaning, as in the slogan:

- *Subaru. Think. Feel. Drive* (Think. Feel. Drive).

In other cases, the absence of punctuation in enumeration serves the same purpose:

- *Today tomorrow Toyota.*

The symbol “&” (ampersand), which replaces the conjunction “and,” is widely used in typography because of its stylish and concise appearance and its ability to fit easily between words and expressions. This can be seen in the slogan:

- *Audi A8. Sporty & exclusive* (sporty and exclusive).

The mathematical equals sign in the slogan:

- *Chrysler. Drive = Love*

is used to show that driving a Chrysler car is equivalent to the feeling of love.

is designed for all aspects of life, and with a Maruti car, you can set off on a journey immediately.

Conclusion

The study shows that expressive means play a crucial role in the effectiveness of automobile advertising slogans. Although not all slogans use stylistic devices, many rely on lexical, syntactic, phonetic, and graphic means to enhance expressiveness and memorability. Metaphor, epithet, and hyperbole help create imagery and emphasize product qualities, while allusion generates associations. Repetition and syntactic structures improve rhythm and clarity. Overall, expressive means contribute to distinguishing products in a competitive market and influencing consumer decision-making.

ORCID ID: 0000-0002-7814-2522

Abstract: The article offers a comprehensive analysis of the linguistic and artistic features of the satirical style in the literary works of Mir Jalal Pashayev, a prominent twentieth-century Azerbaijani prose writer and scholar. The primary focus of the study is the examination of the linguistic devices employed in the author's satirical stories and novels to expose negative social phenomena, bureaucratic impediments, and moral degradation.

The research demonstrates that the power of Mir Jalal's satire lies in its grounding in the vivid vernacular, as well as in his masterful use of dialectal and colloquial elements to reveal the inner world of his

characters. Through figures such as "Anket Anketov" the author constructs a parody of the official-bureaucratic style, thereby subjecting the bureaucratization of language to sharp criticism.

The article further elucidates the role of satirical onomastics and provides a detailed account of the artistic functions of irony, sarcasm, and figurative language. Mir Jalal's language is characterized by its avoidance of artificial rhetoric; it is at once simple, semantically rich, and purpose-oriented. The analysis reveals that the writer's distinctive satirical style holds exceptional significance for enriching the Azerbaijani literary language and the development of satirical prose.

The findings of the study constitute an important scholarly foundation for the examination of Mir Jalal's oeuvre from the perspective of modern linguistic poetics.

Keywords: Mir Jalal, satire, irony, language features, targets of criticism.

MİR CƏLALIN ƏSƏRLƏRİNDƏ SATİRİK ÜSLUBUN LİŖVİSTİK XÜSUSİYYƏTLƏRİ

Ayna BABAZADƏ

Filologiya üzrə fəlsəfə doktoru (PhD)

Xülasə: Məqalədə XX əsr Azərbaycan nəsrinin görkəmli nümayəndəsi, ustad yazıçı və alim Mir Cəlal Paşayevin bədii yaradıcılığında satirik üslubun dil və sənətkarlıq xüsusiyyətləri kompleks şəkildə tədqiq olunur. Yazıcının satirik hekayə və romanlarında cəmiyyətdəki mənfi təzahürləri, bürokratik əngəlləri və mənəvi aşınmanı ifşa etmək üçün istifadə etdiyi lingvistik vasitələr təhlilin əsas obyektini təşkil edir.

Tədqiqat zamanı məlum olur ki, Mir Cəlalın satirasının gücü onun canlı xalq dilinə söykənməsində, dialekt və şivə elementlərindən personajın daxili dünyasını açmaq üçün məharətlə istifadə etməsindədir. Müəllif, "Anket Anketov" kimi tipajlar vasitəsilə rəsmi-işgüzar üslubun parodiyasını yaradaraq, dilin bürokratlaşmasını kəskin tənqid atəşinə tutur. Məqalədə həmçinin satirik onomastikanın rolu, ironiya, sarkazm və məcazlar sisteminin bədii funksiyası ətraflı işıqlandırılır. Mir Cəlalın dili süni ritorikadan uzaq, sadə olduğu qədər də dərin mənalı və hədəfəyönlüdür. Aparılan təhlillər göstərir ki, yazıcının yaratdığı fərdi satirik üslub Azərbaycan ədəbi dilinin zənginləşməsində və satirik nəsrin təkamülündə müstəsna əhəmiyyət kəsb edir.

Tədqiqatın nəticələri Mir Cəlal yaradıcılığının müasir lingvistik poetika baxımından öyrənilməsi üçün mühüm elmi baza rolunu oynayır.

Açar sözlər: Mir Cəlal, satira, ironiya, dil xüsusiyyətləri, tənqid hədəfləri

Introduction

Mir Jalal Pashayev, a prominent representative of twentieth-century Azerbaijani literature, brought a new dimension to national prose through both his academic activity and literary creativity. The writer's satirical stories and novels became a powerful instrument directed against social injustice, bureaucracy, and moral degradation within society. The strength of Mir Jalal's satire lies in the closeness of his language to colloquial speech and in the originality of his expressive means (Habibbeyli, 2017).

The satirical style of Mir Jalal Pashayev is primarily grounded in his masterful incorporation of the internal expressive capacities of the Azerbaijani language, the subtle humor embedded in everyday speech, and elements of colloquial vocabulary into literary discourse. To expose the

spiritual poverty of negative characters, the writer employs vernacular expressions, regional dialects, and elements of local speech, transforming the characters' manner of speaking into a reflection of their inner world. Bureaucratic terminology and dry official language are used ironically in the author's prose, creating a form of linguistic parody that highlights the absurdity and ridiculousness of career-oriented and status-driven characters.

Materials and Methods

Use of Colloquial Language and Dialects. Mir Jalal Pashayev is recognized in Azerbaijani literature as a master of both serious realist prose and sharp, genuinely sincere satire. His satirical style is based on exposing the negative aspects of society without overburdening the language; instead, he relies on the natural flow of everyday speech. Rather than making his characters speak in an artificially literary manner, the writer skillfully incorporates regional expressions, colloquialisms, and dialectal elements that correspond to each character's social status and background. This approach not only reveals the personalities of his characters but also turns their cultural limitations into objects of satirical ridicule. One of the defining features of his works is the naturalness of expression, as if the dialogues heard in the streets or marketplaces were directly transcribed onto the page.

In the internal monologues of his characters, Mir Jalal Pashayev masterfully uses the emotional and expressive layers of language so that every exclamation or interrogative sentence becomes a detail that exposes a character's hypocrisy. In his satire, comparisons and similes—such as likening human qualities to objects or animals create a vivid, almost caricature-like, visual language that enhances the overall impact of the narrative. By avoiding overly complex syntactic structures, he prefers concise and incisive sentences that directly target the object of satire, giving his style the dynamism and playfulness characteristic of folk humor. As a result, in Mir Jalal's literary work, language serves not only as a means of communication but also as an aesthetic and linguistic filter that purifies society of obsolescence and moral deformity.

Irony and Allusion (Sarcasm). In Mir Jalal's satire, direct insult is absent; instead, subtle mockery and irony prevail. Sometimes the author praises a negative character so excessively that the reader immediately senses the sharp criticism behind the praise. Mir Jalal depicts the inner world and hidden intentions of his characters so skillfully through their own speech that they unwittingly confess their flaws. This technique evokes a bittersweet sense of humor in the reader.

For example, in the character of "Anket Anketov" bureaucratic language is exaggerated to such an extent that every sentence spoken by the character becomes comically self-incriminating. This story is one of Mir Jalal's most renowned works for exposing bureaucratic thinking. Here, the type of boss who sees everything only through documents, forms, and "personal affairs" forgetting the human element, is subjected to sharp satire. The content of the story makes it clear that the new head of the Bathhouse Administration, Anket Anketov, views his subordinates not as individuals, but merely as a collection of dry documents, through the prism of "personal affairs". For him, a person's professionalism, morality, or character is of no importance; he perceives people as the animated shadows of archive folders. Through this satirical image, the author vividly demonstrates how the human factor is disregarded in bureaucratic systems.

This approach becomes particularly apparent during Anketov's first meeting with the bathhouse managers: he immediately demands their "personal affairs". When the managers try to sit down, he does not allow it. This prohibition symbolizes both his unwavering authority and his cold, inhuman attitude toward his subordinates. His dictatorial nature is immediately confirmed by

his own words: "Instead of just saying 'yes sir', take action quickly. My personal affairs should be your focus right now", "Mr. Anketov, if we go? What about the meeting?", "What's a meeting without personal affairs, my dear? I need to know who I'm holding a meeting with, don't I?" (Mir Jalal, 2013, v.1, p. 273).

In the story "The Meeting Enthusiast" a ridiculous character is portrayed who devotes his entire life solely to meetings, decisions, and protocols, even behaving according to meeting rules at home. Although the author does not give this character a specific name, he refers to him as "the Enthusiast." The story shows how the obsession with meetings can cut a person off from real life. The Enthusiast, who neglects his family, spends all his time in meetings. He even makes naming his daughter a subject of a meeting, and, dissatisfied with the suggestions, ultimately names her "Report." At the end of the story, when his daughter elopes with the man she loves, she leaves a note: "If you don't have a meeting tomorrow, come to the wedding" (Mir Jalal, 2013, v.2, p. 410).

In the story "Doctor Criminalov" a doctor who is irresponsible in his job and indifferent to patients is portrayed with satirical colors. The contrast between the character's name and his actions enhances the power of the writer's critical humor (Mir Jalal, 2005, p. 17).

In "New Wedding Etiquette" the internal ugliness of those who try to profit from national traditions and wedding ceremonies by turning everything into a commodity is exposed (Mir Jalal, 2005, p. 28).

In the story "The City Man" the arrogant character Antarzade, who considers himself a "bearer of culture" but is actually out of touch with rural life and reality, is ridiculed. The author mocks this character through his actions, language, and conversations (Mir Jalal, 2013, v.1, p. 83).

The story "The Brick Issue" is devoted to everyday life. In this work, hypocrisy, greed, and deceitful behavior are criticized in a satirical manner (Mir Jalal, 2013, v.1, p. 232).

Additionally, stories such as "The Melon Thief", "The Mischief-Maker", "The Kemtarov Family", and "Foreign Illness" are significant examples of Mir Jalal's satirical legacy. In these works, the writer uses humor as a weapon to reveal shortcomings and guide the reader toward moral purity and truth.

Phraseological Units and Proverbs. The writer skillfully uses ready-made expressions from folk creativity for satirical purposes. The use of phraseological units and proverbs occupies a special place in his works. Sometimes, by using a proverb in the right context, the author reveals the disgrace of an entire situation. Because he is deeply familiar with oral folk literature, he brings vitality to his stories through folklore elements. He enriches Azerbaijani storytelling with the issues of his time and the wisdom of the people. Proverbs in Mir Jalal's works serve both as a means of education and as artistic-aesthetic elements. In many of his works, the author uses proverbs as epigraphs to foreshadow the essence of the subject. In the novel "Manifest of a Young Man" the saying "I'd throw it to a dog, but never sell it to a stranger," spoken by Sona, becomes a symbol of national pride and patriotism. Through this proverb, the writer promotes the idea that the material and spiritual wealth of the people should not be sold to outsiders. Sometimes, Mir Jalal preserves proverbs exactly as they are, and other times he intentionally alters them to create new meanings. For example, the proverb "Hear of the hero's name, but don't see his face" is satirically transformed to "see his face" in the novel "The New City". Such changes serve to reveal a character's nature and expose the flaws in society.

In Mir Jalal's stories, proverbs contribute to the naturalness and fluency of dialogue. In the story "Let's See What Fate Brings" the phrase "I assure you" replaces an oath with the vitality of

colloquial speech. The writer is adept at selecting these folk expressions to fit the situation. Phraseological units are among the main tools in Mir Jalal's prose for increasing imagery and emotional expressiveness. He uses idioms such as "the heart is burning" and "the tongue is tied" to describe the inner turmoil of his characters. Through phraseological units, Mir Jalal conveys the psychological state of his characters to the reader in a laconic way. Phrases like "to be struck by misfortune" or "to go to hell" create sharpness in satirical dialogues. The writer enriches the meaning of these phrases with irony and sarcasm, turning them into tools of satire. With the expression "When the music surged, the woman tangled the yarn," the author vividly illustrates the complexity of a situation.

Mir Jalal's use of phraseology also demonstrates his connection to the literary school of "Molla Nasreddin". By employing phraseological contamination, he increases the impact of humor. The phrase "to fall at someone's feet" is used to expose the subservience and flattery of ordinary people. Vulgar words and coarse expressions play an important role in characterizing figures in satirical prose. Words and phrases such as "lighthouse", "rogue", and "scoundrel" highlight the inner ugliness of negative types. By using such expressions, Mir Jalal criticizes bureaucracy and ignorance in society.

Sometimes, phraseological units in the author's narration serve a metaphorical purpose, creating vivid imagery. He skillfully uses the phrase "to revitalize" (or "to be dying") in both the sense of dying and reviving. The comparison "a rope with a knot" in his prose symbolizes the complexity and trickery in the bey's signature. Mir Jalal's aphorisms are also an important part of his rich spiritual heritage. The saying, "To break chains, one needs both mental and physical strength," reflects the writer's life philosophy. Aphorisms in his works not only determine the ideological direction but also enhance the artistic quality of the language. By stating, "Freedom is not given, it is taken," he seeks to elevate the spirit of struggle among the people.

Folklore motifs and proverbs are united in Mir Jalal's works, helping to preserve national color. In the story "The Matchmakers Returned" the matchmaking ceremony is depicted against a background of proverbs and national customs. The phrase "to tie one's head", meaning to get married, is used in his language to show closeness to common speech. The author strives to preserve not only the form but also the spirit of folk expressions. In his satirical stories, phraseological units are the sharpest tools for accurately targeting the subject. Colloquial expressions such as "to tighten one's stomach" and "to scrape one's soul" strengthen the comicality of dialogues (Mir Jalal, 2005, p. 138). Mir Jalal creates an artistic atmosphere not from single words but from entire layers of phraseology. His work is a bridge between the traditions of classical prose and modern language norms. The synonymy of phraseological units in the writer's language serves the diversity and precision of ideas. Synonyms such as "to lose color" and "to lose oneself" vividly reflect the bey's fear and anxiety. The writer chooses every word and expression with great care, creating a masterpiece of art.

Mir Jalal's language is a brilliant example of the struggle for the purity of the Azerbaijani language. Proverbs and phraseological expressions in his works have become the aesthetic expression of national thought. The heritage created by the artist, drawing from the folk language, will never lose its relevance. In conclusion, it can be said that Mir Jalal conquered the summit of the art of words precisely with these rich linguistic tools.

Naming (Onomastics). The titles that Mir Jalal gives to his works often indicate their satirical content. Examples include "Underarm Radio", "Peach Conversation", and "The Meeting

Enthusiast". Such titles already suggest that these stories aim to expose the flaws of society through criticism and irony. The author's use of satirical onomastics, giving characters distinctive names (for instance, "the Enthusiast" in "The Meeting Enthusiast" or "Anket Anketov" in "Anket Anketov"), serves not only the function of naming but also acts as a direct socio-psychological diagnosis at the linguistic level. The phraseological units and folk sayings to which the writer refers are ingeniously modified in the original context, creating new semantic nuances that evoke both bitter laughter and serious social reflection in the reader.

In Mir Jalal's works, irony and sarcasm are not introduced through direct authorial intervention but rather are embedded in the structure of the language through the character's own inconsistencies and self-exposure tactics. The names given to characters serve the satirical function of language; for example, names like "the Enthusiast" or "Anket Anketov" symbolize the character's inner essence directly at the linguistic level. As Mir Jalal himself noted, "Mir Jalal's laughter is not laughter through tears, but rather a laughter that cleanses the ugliness of life with sound logic and folk humor".

During the research, Mir Jalal Pashayev's short stories were examined using analytical and thematic methods, providing an in-depth analysis of the characters' traits and the socio-moral issues present within society.

Results and discussion

Research shows that Mir Jalal Pashayev, a prominent representative of twentieth-century Azerbaijani literature, established a linguistic and aesthetic school in national prose through both his scholarly and literary activities. In his artistic legacy, satire is not merely a genre characteristic but serves as a sharp instrument aimed at exposing moral decay, bureaucracy, and social deformities within society. The fundamental strength of Mir Jalal's satire lies in his avoidance of artificial "book language," instead drawing directly from the vibrant patterns of everyday spoken language and colloquial vocabulary. By skillfully employing vernacular expressions, local dialects, and regional elements in his prose, the writer masterfully reveals the social and intellectual levels of negative characters through their own speech.

His ironic use of official terminology and dry bureaucratic expressions forms a systematic example of linguistic parody. The use of emotional and expressive nuances in the internal monologues of his characters becomes an invaluable device for exposing their hypocrisy from within. By forgoing complex syntactic constructions in favor of short, incisive sentences, Mir Jalal brings a unique dynamism and playfulness to his style. In his creative work, direct insult gives way to subtle mockery, allusion, and the concealed sarcasm that often manifests as exaggerated praise for negative characters. In foundational stories such as "Anket Anketov" and "The Meeting Enthusiast," the Soviet bureaucratic mindset that replaces the human element with paperwork and protocol is subjected to sharp criticism. In works like "Doctor Criminalov" and "The Man from the Center" the writer skillfully draws on the contrast between name and deed, as well as the internal poverty of arrogant characters. Stories such as "New Wedding Etiquette" and "The Brick Issue" reflect the author's uncompromising stance against greed and hypocrisy in everyday life.

Deeply familiar with oral folk literature, Mir Jalal incorporates proverbs as both artistic-aesthetic elements and didactic tools within the structure of his texts. In many works, he uses proverbs as epigraphs, as in the novel "Manifest of a Young Man" transforming folkloric expressions into symbols of national patriotism. Sometimes he preserves proverbs in their original form; at other times, he adapts them to the context, reinterpreting them for satirical purposes.

Extensively employing phraseological units and idioms, the writer conveys the internal turmoil and psychological state of his characters in a laconic manner.

Continuing the traditions of the "Molla Nasreddin" literary school, Mir Jalal intensifies the inner ugliness of negative types through phraseological contaminations and vulgarisms. In his linguistic system, onomastics giving characteristic names to characters serves not only to identify but also to provide a direct socio-psychological diagnosis. The examined materials confirm that, in his works, irony emerges not through subjective authorial intervention but as an artistic reality via the self-exposure tactics of his characters. The humor in Mir Jalal's realism acts as an aesthetic filter that cleanses life's flaws with sound logic, guiding the reader toward moral purity and truth.

In conclusion, Mir Jalal Pashayev, who unites the traditions of classical prose with modern language norms, stands as a pinnacle of the struggle for the purity of the Azerbaijani language and the art of national storytelling.

ORCID ID: 0000-0003-1890-6524

Abstract: This article examines the role and stylistic significance of syntactic parallelism in Azerbaijani linguistics and literary language. Compared with phonetic, lexical, and morphological parallelism, syntactic parallelism occupies a distinctive position due to its rich expressive possibilities and its ability to intensify information within texts. The study emphasizes that syntactic parallelism contributes to rhythm, harmony, rhetoric, emotionality, and artistic expressiveness by repeating similar syntactic structures. Such repetitions strengthen the semantic and emotional impact of sentences, making literary texts more memorable and aesthetically attractive. Special attention is given to the historical development of syntactic parallelism in ancient Turkic texts, where it functioned as an important stylistic device for enlivening discourse and increasing informational intensity. The article also highlights the widespread use of syntactic parallelism in oral folk literature and classical Azerbaijani texts. Furthermore, it analyzes the

prose language of Ramiz Rovshan, demonstrating how poetic traditions of syntactic parallelism are actively employed as a means of imagery and artistic expression. The study concludes that syntactic parallelism remains one of the most powerful stylistic-textual devices in Azerbaijani literary language and discourse analysis.

Key words: rhythm, harmony, syntax, parallelism, poetics, style, intonation

RAMİZ RÖVŞƏNİN NƏSR DİLİNDƏ SİNTAKTİK PARALELİZM ƏNƏNƏLƏRİNİN POETİK ASPEKTLƏRİ

Xülasə: Məqalədə Azərbaycan dilçiliyində sintaktik paralelizmin rolu və üslubi xüsusiyyətləri araşdırılır. Fonetik, leksik və morfoloji paralelizmlə müqayisədə sintaktik paralelizm daha geniş ifadə imkanlarına malik olmaqla mətnin ritm, ahəng, emosional təsir və bədii ifadəliliyinin formalaşmasında mühüm rol oynayır. Tədqiqatda göstərilir ki, eyni sintaktik quruluşların təkrarı informasiya intensivliyini artırır, mətnə poetiklik qazandırır və onun daha təsirli və yadda qalan olmasını təmin edir. Sintaktik paralelizmin qədim türk mətnlərində xüsusi yer tutduğu vurğulanır və bunun türk xalqlarının zəngin bədii-üslubi ənənələrinin göstəricisi olduğu qeyd edilir. Məqalədə həmçinin sintaktik paralelizmin şifahi xalq ədəbiyyatında, klassik mətnlərdə və müasir nəsr dilində geniş istifadə olunduğu təhlil edilir. Xüsusilə Ramiz Rövşən nəsrində sintaktik paralelizmin poetik ifadə vasitəsi kimi işlənməsi nümunələr əsasında araşdırılır. Müəllif belə nəticəyə gəlir ki, sintaktik paralelizm Azərbaycan ədəbi dilində obrazlılıq, emosional təsir və bədii-estetik ifadəliliyin yaradılmasında mühüm üslubi vasitələrdən biridir.

Introduction

Without explaining the structural characteristics of syntactic parallelism, some studies emphasize its ability to create harmony, melodiousness, rhythmic diversity, and poetic depth of meaning (12). In one article devoted to syntactic parallelism, it is stated that: "Syntactic parallelism possesses both grammatical and stylistic-rhetorical functions and includes several connective and text-forming factors. In complete syntactic parallelism, sentence members or sentences follow one another in the same structure, turning into parallel components, while the repeated component reproduces the previous component in all its parameters" (6, p. 581). As can be seen, syntactic parallelism is characterized here in general terms, and its functional aspect is highlighted. However, if the specific question is raised as to what constitutes the general structural organization of syntactic parallelism, its functional aspect alone cannot provide a sufficient answer.

In an article dedicated to the linguistic peculiarities of the Kitabi Dede Gorgud, regarding the functional interpretation of syntactic parallelism in the epic, it is noted that "The poetic categories here - rhythm, intonation, alliteration, assonance, rhyme, and others - are organically connected with syntactic parallelism" (9, p. 312). The same article, citing Musa Adilov's research "Syntactic Parallelism in the Azerbaijani Language" (Scientific Works of ASU, 1974, No. 4) and Kamil

Veliyev's "Poetic Syntax of the Azerbaijani Language" (Baku, ASU Publishing House, 1981), points out that Musa Adilov explains the essence of syntactic parallelism as follows: "The essence of syntactic parallelism lies in the fact that the structural pattern belonging to one syntactic unit is repeated in the same or partially modified form. What is repeated here is neither a word, nor a phrase, nor a sentence, but only the pattern of expression itself" (9, p. 312). In the quotation cited from Kamil Veliyev, it is stated that "The center of gravity of the poetic syntax of the epic "Kitabi Dede Gorgud" rests on syntactic parallelism" (9, p. 312).

As can be observed, discussions concerning syntactic parallelism generally focus more on explaining its semantic and functional aspects, while specific syntactic parameters remain somewhat outside the scope of attention. Nevertheless, the undeniable role of repetition in the formation of parallel components is especially emphasized. In Russian linguistics, syntactic parallelism is interpreted as follows: "Syntactic parallelism consists of adjacent sentences or speech segments. The concept of lexical parallelism originates from Greek and means 'going side by side.' The characteristic features of syntactic parallelism lie in the arrangement of identical sentence types or text segments in analogous syntactic structures" (11).

It is also noted here that syntactic parallelism is widely used as a stylistic expressive device in literary texts written in English, as well as in Russian literature. The characteristic features of syntactic parallelism are interpreted in a similar manner in other sources, where its role in creating a poetic landscape is confirmed through relevant linguistic materials (4; 5; 13, p. 853).

When all interpretations related to syntactic parallelism are generalized, the following conclusions can be drawn:

1. Syntactic parallelism is a stylistic figure.
2. Syntactic parallelism possesses an emotional and expressive character; it creates rhetoric, rhythm, and harmony within the sentence.
3. Syntactic parallelism forms the poetic landscape of artistic information.
4. Syntactic parallelism represents the repetition of similar syntactic constructions within sentences and within complex syntactic wholes.
5. Syntactic parallelism has anaphoric, epiphoric, consecutive, and antithetical types; these may possess complete, partial, or incomplete structural forms.

All these characteristic features belong to the description of syntactic parallelism; however, they do not directly reveal its structural outlines. Therefore, it seems appropriate to summarize the principal characteristics of syntactic parallelism as follows:

1. Structurally, syntactic parallelism consists of identical or similar elements within the sentence and demonstrates parallelism both in form and in meaning.
2. In syntactic parallelism, a particular element is either common or identical. The identical elements in syntactic parallelism are not homogeneous sentence members but internal components of each parallel syntactic construction.
3. In syntactic parallel constructions, both similar and identical elements function as common or shared components.
4. In syntactic parallelism, one or both shared components may be omitted. In such cases, the missing element is restored or implied through the semantic content of the parallelism.
5. In syntactic parallelism, the shared component functions as one of the grammatical-syntactic elements of the sentence structure.

6. Syntactic parallelism is constructed around a corresponding shared element within a syntactic construction. Even when the shared element is not explicitly present, it is revived and implied within the internal semantic structure of the construction. The shared component simultaneously functions as a syntactic member of the sentence.

Syntactic parallelism is one of the leading syntactic-stylistic figures contributing to the poeticization of the language of ancient Turkic sources, written monuments, folklore samples, and literary works.

Materials and Methods

In the language of ancient written monuments, the following examples of syntactic parallelism can be observed:

1. In parallel components, the first person functions as a common element, while the predicates are repeated:

“İlgəri Şantun yazıka tæki sülədim, Talukaya kiçik tæqmədim. Birgərü Tokuz Ərsəngə tæki sülədim. Tüpütkə kiçik tæqmədim”

(“I marched eastward as far as the Shantung plain, but did not quite reach the sea. I marched southward as far as Tokuz Erseng, but did not quite reach Tibet.”) (Kül Tigin Inscription, South, 3).

2. The common element is implied through the possessive meaning of “my,” while the predicates consist of the same lexical form:

“İnim yiti, urım üç, kızım üç erti”

(“My younger brothers were seven, my sons were three, and my daughters were three.”) (Süci Inscription, 6).

3. The shared component is not explicitly expressed but is implied through temporal adverbials such as “then” or “at that time”:

“Taŋ taŋladı, udu yir yaradı, udu kün toğdı, kamiğ üzə yaruk boltı-tir.”

(“Dawn broke, the earth brightened, the sun rose, and the faces of all became illuminated.”) (Irk Bitig, II, 39).

4. The common element appears as the pronoun “he” in the first component and as the object “him” in the second, while the predicates function as stylistic synonyms:

“Yılka tægmişik, yıdıtmayın, ayka tægmişik ortatmayın.”

(“He had reached his year - do not touch him; he had reached his month - do not destroy him.”) (Irk Bitig, II, 91).

5. The common element is represented by the word “bodun” (“people”), while the predicates are expressed through the shared phrase “maŋa körür”:

“İlgərü kün toğsıka, birikərü kün ortasıŋaru, kurığaru kün batsıkiŋa, yırığaru tün ortasıŋaru anta içərki bodun kop maŋa körür.”

(“To the east where the sun rises, to the south at noon, to the west where the sun sets, and to the north at midnight - all the peoples within those lands are subject to me.”) [Kül Tigin Inscription, South, 2].

6. In the first parallel component, the word “Azkiya” (“the Turkic people”) appears explicitly, while in the following components the meaning “of Azkiya” functions as the shared element, and the predicates are repeated with the same word:

“Azkiya yorı yur ermis. Kağanı alp ermis, ayğuçısı bilgə ermis.”

(“The Turkic people of Azkıya were advancing. Their khagan was brave, and their advisor was wise.”) (Tonyukuk Inscription, South Side, 9-10, Stone I).

Various forms and models of syntactic parallelism are also widely employed in the Kitabi Dede Gorgud and in folklore materials:

1. The shared component consists of the predicate, while the subject appears in synonymous forms:

“At ayağı külük, ozan dili çevik olur.”

(“A horse’s legs are swift, and a minstrel’s tongue is eloquent.”)

2. The common element is omitted but implied through meanings such as “at that moment” or “at that time,” while the predicates are repeated:

“Şahbaz atlar yürüdü, nalı düşdü, qara polad üz qılıclar çalındı, yalmanı düşdü...”

(“The noble horses advanced, their horseshoes fell; black steel swords clashed, their sharp edges fell...”)

3. The shared component is repeated as the subject in parallel constructions, while the predicate functions as a common lexical element:

“Ağıllı arvad kamala, ağılsız arvad camala güvənər.”

(“A wise woman trusts wisdom; a foolish woman trusts beauty.”)

4. The common component is implied through the generalized meaning of “you,” while the predicates are expressed independently:

“Ağlayanda elə ağla əzizi ölmüş kimi, güləndə elə gül əzizi gəlmiş kimi.”

(“When you cry, cry as if you have lost a loved one; when you laugh, laugh as if your beloved has returned.”)

5. The common element is implied through the meaning “from me,” while the predicates are repeated in identical constructions:

“Tacir deyiləm, bac alasınız, paşa deyiləm...”

(“I am not a merchant for you to collect taxes from, nor am I a pasha...”)

The poetic landscape of syntactic parallelism in the prose works of Ramiz Rovshan is also constructed on the basis of tradition, though enriched with the writer’s own imaginative and stylistic nuances. Some of the most vivid examples include the following:

1. In the parallel constructions, common notions such as “never” and “always” are implied successively; attributes are repeated, and predicates are expressed both affirmatively and negatively, thus creating a complete picture of the event:

“Əliş yekə-yekə kişilərnən durub-oturmurdu, çünki yekə-yekə kişilərə inanmırdı. Əliş xırda-xırda uşaqlardan durub-otururdu, çünki xırda-xırda uşaqlara inanırdı.”

(“Alish did not associate with important men because he did not trust them. He associated with little children because he trusted them.”)

2. Parallel components appear in separate independent sentences, but the predicates are repeated as identical elements. Throughout all the components, the notions “Alish” and “his” become shared components:

“Əliş anadan olanda bir ağzı vardı... Əliş davadan qayıdanda iki əli vardı...”

(“When Alish was born, he had one mouth, one nose, two hands, two legs, and two eyes. When he returned from the war, he still had two hands, two legs, one mouth, one nose, and one eye.”)

3. In the parallel constructions, the name “Sharif” is repeated at the beginning, functioning as a common component throughout the text, while subjects and predicates are built upon repetition:

“Şərif sədr seçəndə dedilər ki, Şərif hamıya bir göznən baxan adamdır...”

(“When Sharif was elected chairman, they said that Sharif treated everyone equally...”)

4. Parallel components are used within a single sentence. In such constructions, the subject of the first component functions as the common element, while the predicates of the parallel components are repeated as identical elements:

“İskəndər qupquru quruyub qalmışdı. Gah dəyirmançının marçıldayan ağzına baxırdı, gah yerdəki kağız qırıntılarına baxırdı”

(“Iskandar had become completely exhausted and dried up. Sometimes he looked at the miller’s chattering mouth, sometimes at the scraps of paper lying on the ground.”) (10, p. 484).

5. Parallel components function almost as intersecting repetitions. In each repeated component, the words “Hamid” and “his mother” (“the woman”) repeatedly occupy the position of the shared element. The predicates are arranged alternately in affirmative and negative forms, creating a zigzag-like impression:

“Anası bütün günü qapının ağzından çəkilmədi... Yazıq arvad ha dindirdi, Həmid dinmədi, çay gətirdi, içmədi, çörək gətirdi, yemədi.”

(“His mother did not leave the doorway all day long... The poor woman tried again and again to make Hamid speak, but he remained silent; she brought tea, he did not drink it; she brought bread, he did not eat it.”) (10, p. 525).

6. Parallel components are expressed in separate sentences and are connected not grammatically, but semantically. In each sentence, the word “mother” functions as a common element, though with different attributes, while the predicates are repeated:

“Əsgər gedən cavanları yola salırdılar. Əfrayılın anası Əfrayılın boynunu qucaqlayıb ağlayırdı. İsmayılın anası İsmayılın boynunu qucaqlayıb ağlayırdı.”

(“They were bidding farewell to the young men leaving for the army. Afrail’s mother embraced his neck and cried. Ismayil’s mother embraced his neck and cried.”) (10, p. 462).

7. In the parallel components, one common element (“Hasan aga”) functions as the subject, while the predicates are repeated as identical elements:

“Həsən kişi... dönüb baxdı Əfrayıla, dönüb baxdı İsmayıla, dönüb baxdı İsrəfilə.”

(“Hasan aga turned and looked at Afrail, turned and looked at Ismayil, turned and looked at Israfil.”) (10, p. 461).

8. In the parallel components, the word “quarrel” (“dava”), which forms part of the predicate, becomes the common element for all components, while the same word also functions as the object within the sentence:

“Əgər kəhər atı vaxtında bizə satsaydın nə dava olardı, nə biz gedərdik, nə də kəhər at.”

(“If you had sold us the chestnut horse in time, there would have been no quarrel, neither would we have gone, nor the chestnut horse.”) (10, p. 464).

9. In the parallel components, the word “Gulu” functions as the common element, while the predicates are repeated through the phrase “did not die.” The motivation of the parallelism is based on contrastive meanings:

“Tay-tuşları oğul-uşaq sahibi oldular, Qulu ölmədi... on beş yaşını adladı, Qulu ölmədi.”

(“His peers became fathers, Gulu did not die; the children grew up, reached five, passed ten, crossed fifteen years of age, and Gulu still did not die.”) (10, p. 492).

10. In the parallel components, the words “the cracking whip” function as the common element, while the place of the event is expressed through contrasting notions and the predicates are repeated:

“Şaraqq-qamçısı şaqqıldayırdı burda bu camaatın başına dəyirdi, orda o uşağın başına dəyirdi.”

(“The cracking whip was snapping - here it struck the heads of the crowd, there it struck the head of the child.”) (10, p. 598).

11. In the parallel components, the phrase “Nisa sister” becomes the shared element. According to the grammatical requirements of the constructions, this phrase is implied in forms such as “Nisa sister’s” or “to Nisa sister.” The predicates function as stylistic synonyms:

“Nisə bacı tövşüyüdü, üz-gözündən tər axırdı, bir yandan yoxuş nəfəsini kəsirdi, bir yandan da gün yandırır.”

(“Nisa sister was panting, sweat was pouring from her face; on the one hand the uphill road took her breath away, on the other hand the sun was burning her.”) (10, p. 487).

Discussion

As these examples demonstrate, parallel syntactic constructions in the prose works of Ramiz Rovshan continue the existing literary tradition, yet the methods of depiction, narrative techniques, and presentation of events and details are revived through the writer’s unique artistic imagination and individual stylistic manner. A vivid stereoscopic picture is created in the reader’s perception, making the reader feel like a direct participant in the events. It is as though these events and impressions occur within the reader’s own surroundings.

Conclusion

All of this shows that while modern methods of depiction are important for representing contemporary realities, the modernization of ancient expressive techniques is equally significant in creating an attractive and powerful poetic landscape in artistic prose.

IMPLICIT MEANING IN ENGLISH DISCOURSE: INTERPRETATION AND VERBALIZATION PROBLEMS

Khanim Salim AHMADOVA

Phd in Philology, Lecturer, Khazar University

E-mail: ahmadova88.khanim@gmail.com

ORCID ID: [0009-0007-7394-0502](https://orcid.org/0009-0007-7394-0502)

Abstract: The present article investigates the phenomenon of implicit meaning in English discourse and analyzes the mechanisms of its interpretation and verbalization within the framework of pragmatics and discourse analysis. In modern communication, speakers frequently avoid direct expression and instead employ indirect linguistic strategies that require contextual and cognitive interpretation. As a result, implicit meaning has become one of the central research areas in applied linguistics, discourse studies, and pragmatics.

The study examines the theoretical foundations of implicit meaning, including conversational implicature, presupposition, inference, contextual interpretation, and indirect speech acts. The article also explores the relationship between language structure and communicative intention in English discourse. Particular attention is devoted to the verbalization process through which hidden meanings are transformed into explicit semantic constructions during interpretation.

The research applies qualitative discourse analysis and pragmatic interpretation methods to examples selected from conversational English, literary texts, media discourse, and digital communication environments. The findings reveal that implicit meaning is strongly influenced by sociocultural background, contextual knowledge, communicative strategies, and speaker-listener interaction. Furthermore, the study demonstrates that the interpretation of implicit meaning requires not only linguistic competence but also pragmatic and cognitive awareness.

The article contributes to contemporary discourse studies by emphasizing the functional role of implicit meaning in modern English communication and by identifying the linguistic and cognitive factors affecting its verbalization.

Keywords: implicit meaning, discourse analysis, pragmatics, verbalization, implicature, English discourse, communication

İNGİLİS DİLİ DİSKURSUNDA İMPLİSİT MƏNA: ŞƏRHİ VƏ VERBALLAŞMASI PROBLEMLƏRİ

Xanım Səlim ƏHMƏDOVA

Filologiya üzrə fəlsəfə doktoru, müəllim, Xəzər Universiteti

E-mail: ahmadova88.khanim@gmail.com

ORCID ID: [0009-0007-7394-0502](https://orcid.org/0009-0007-7394-0502)

Xülasə: Bu məqalədə ingilis dili diskursunda implisit məna fenomeni və onun interpretasiya və verballaşma mexanizmləri praqmatika və diskurs təhlili çərçivəsində araşdırılır. Müasir kommunikasiya prosesində danışanlar çox zaman fikirlərini birbaşa deyil, dolayı və kontekstual vasitələrlə ifadə edirlər. Nəticədə implisit məna tətbiqi dilçilik, diskurs təhlili və praqmatikanın əsas tədqiqat istiqamətlərindən birinə çevrilmişdir.

Tədqiqatda implikatura, presuppozisiya, inferensiya, kontekstual interpretasiya və dolayı nitq aktları kimi nəzəri məsələlər təhlil edilir. Məqalədə həmçinin dil strukturu ilə kommunikativ niyyət arasındakı münasibətlər araşdırılır. Xüsusi diqqət gizli mənalara interpretasiya zamanı açıq semantik strukturlara çevrilməsi prosesinə yönəldilir.

Araşdırmada danışq dili, bədii mətnlər, media diskursu və rəqəmsal kommunikasiya nümunələri üzərində keyfiyyət diskurs təhlili və praqmatik interpretasiya metodlarından istifadə olunmuşdur. Nəticələr göstərir ki, implisit məna sosial-mədəni fon, kontekstual biliklər, kommunikativ strategiyalar və danışan-dinləyən münasibətlərindən ciddi şəkildə asılıdır. Eyni zamanda müəyyən edilmişdir ki, implisit mənanın düzgün interpretasiyası yalnız dil biliyi deyil, həm də praqmatik və koqnitiv kompetensiya tələb edir.

Introduction

In contemporary linguistics, discourse is regarded not only as a grammatical or structural phenomenon but also as a dynamic communicative process shaped by context, cognition, and social interaction. Modern discourse studies emphasize that communication frequently depends on meanings that are implied rather than directly verbalized. Such meanings are commonly described as implicit meanings and constitute one of the central objects of pragmatic and discourse-oriented linguistic research.

The concept of implicit meaning is closely connected with pragmatics because communication often extends beyond literal semantic structures. Interlocutors cooperate during communication and interpret meanings based on contextual assumptions, conversational maxims, and background knowledge (Grice, 1975). According to the theory of conversational implicature, speakers may intentionally imply additional meanings through indirect linguistic forms rather than direct verbal expression (Grice, 1975).

Indirect speech acts also represent one of the most important mechanisms of natural communication because speakers frequently avoid direct expression in order to maintain politeness, reduce communicative tension, or achieve pragmatic efficiency (Searle, 1969).

In higher educational institutions, especially in English language teaching environments, the interpretation of implicit meaning has become increasingly important. Students studying English as a foreign language often understand grammatical structures correctly but experience difficulties interpreting hidden communicative intentions, irony, indirect requests, emotional implications, or sociocultural references.

As a lecturer teaching English communication and discourse-oriented subjects in higher education, it can be observed that students frequently rely on literal translation and semantic decoding instead of pragmatic interpretation. This issue becomes particularly visible during classroom discussions, academic presentations, debates, and discourse analysis activities.

For example, expressions such as:

“You may want to revise this section.”

may pragmatically imply criticism or recommendation for substantial correction rather than a simple suggestion. Pragmatic interpretation requires contextual competence in addition to grammatical knowledge (Levinson, 1983).

The relevance of the present study is associated with globalization, digital communication, and the increasing importance of communicative competence in higher education. Modern universities focus not only on grammar instruction but also on discourse interpretation, intercultural communication, and pragmatic awareness.

Methodology and Methods

The present research employs qualitative discourse analysis, pragmatic interpretation, and contextual analysis methods. These approaches were selected because implicit meaning cannot be fully investigated through quantitative linguistic measurement alone.

The research material consists of examples selected from conversational discourse, academic communication, literary texts, media discourse, and digital communication platforms. Particular attention is devoted to educational discourse because university-level language learning environments provide rich examples of pragmatic misunderstanding and implicit communication.

The methodological framework of the study is based on pragmatic theory, discourse analysis, and cognitive linguistics. The theoretical concepts proposed in pragmatics and discourse studies constitute the primary theoretical basis of the investigation (Grice, 1975; Levinson, 1983; Van Dijk, 2008).

Discourse comprehension requires cognitive models connecting language structures with contextual knowledge (Van Dijk, 2008). Similarly, successful communication depends not only on semantic meaning but also on pragmatic interpretation and contextual awareness (Yule, 2020).

Pragmatic analysis was used to identify conversational implicatures, indirect speech acts, and contextual meanings. Contextual analysis enabled the investigation of sociocultural and communicative factors influencing interpretation. Discourse analysis was applied to determine how implicit meanings function within broader communicative structures.

Discussion

The analysis demonstrates that implicit meaning in English discourse is realized through conversational implicatures, indirect speech acts, irony, metaphorical implication, contextual references, and presuppositions.

One of the major findings of the study is that implicit meaning frequently functions as a communicative strategy for maintaining politeness and interpersonal balance. In educational

environments, lecturers and students often avoid direct criticism in order to preserve communicative harmony.

For example, a lecturer may state:

“Your presentation contains several interesting ideas.”

Although the sentence appears positive on the surface level, contextual interpretation may suggest that the presentation lacks organization or analytical depth. Such communicative indirectness reflects pragmatic politeness strategies.

Speakers frequently imply intentions rather than express them directly because indirect speech acts represent one of the most flexible structures of natural communication (Searle, 1969).

The study also reveals that EFL students in higher educational institutions often encounter difficulties interpreting implicit academic discourse. Students generally focus on vocabulary and grammar while overlooking contextual and pragmatic signals. This problem becomes especially visible during listening comprehension and seminar participation.

Pragmatic competence develops through exposure to authentic communicative situations rather than isolated grammatical exercises (Yule, 2020). Therefore, discourse-oriented teaching approaches are essential for developing interpretative competence in foreign language education.

Another important finding concerns the influence of sociocultural background on implicit meaning interpretation. Discourse meaning depends heavily on shared cultural assumptions and communicative expectations (Brown & Yule, 1983).

Digital communication also plays a significant role in the transformation of implicit meaning. Internet communication has created hybrid discourse forms where meaning is frequently conveyed through implicit multimodal interaction (Crystal, 2011).

The findings additionally demonstrate that verbalization represents a complex cognitive process through which hidden meanings become explicitly understood. During interpretation, interlocutors reconstruct communicative intention using contextual clues, background knowledge, and inferential reasoning.

This process is especially important in higher education because academic success increasingly depends on discourse interpretation skills, critical reading abilities, and communicative competence. Consequently, university-level English teaching should focus not only on grammar instruction but also on pragmatic and discourse-oriented language development.

Conclusion

The findings confirm that implicit meaning represents one of the most significant components of modern communication because speakers frequently convey ideas indirectly through implication, contextual inference, and pragmatic strategies.

The study demonstrated that successful interpretation depends not only on linguistic competence but also on cognitive, sociocultural, and pragmatic awareness. Furthermore, the research revealed that students in higher educational institutions often experience difficulties interpreting implicit academic discourse due to insufficient pragmatic competence and limited exposure to authentic communicative interaction.

Therefore, modern English language teaching in universities should integrate discourse analysis, pragmatic interpretation, and communicative methodologies into language instruction. Communicative competence requires both grammatical and pragmatic understanding (Yule, 2020).

The study also established that verbalization is a multidimensional cognitive process involving inferential reasoning, conceptual reconstruction, and contextual decoding. Future research

may focus on intercultural comparison of implicit discourse strategies and pragmatic competence development in EFL classrooms.

Abstract: This article investigates the development of Charles Dickens's idio-style through a linguastylistic analysis of his novels. The study focuses on lexical, syntactic, and stylistic features that contribute to Dickens's distinctive authorial voice. Particular attention is paid to expressive devices such as metaphor, irony, repetition, hyperbole, dialect, and symbolic imagery. Six novels representing different stages of Dickens's literary career are examined using qualitative and quantitative approaches. Corpus stylistic tools, including AntConc and CLiC Dickens, are used to identify recurring linguistic patterns and thematic features. The findings demonstrate a clear stylistic development from the humorous, theatrical, and exaggerated language of Dickens's early

works toward the psychologically complex, symbolic, and socially critical style of his later novels. Character idiolects, repetition, sentence structure, and expressive vocabulary play an important role in creating realistic characters and reflecting Victorian social problems. The study concludes that Dickens's idio-style is characterized by linguistic creativity, emotional intensity, satire, and social criticism. His distinctive use of language not only strengthens characterization and narrative expression but also serves as an effective means of representing social inequality, class conflict, and moral problems. Thus, Dickens's linguistic individuality remains significant for modern linguastylistic and corpus-based literary studies.

Keywords: idio-style, linguastylistics, Charles Dickens, Victorian literature, narrative style, stylistic analysis, expressive means.

CHARLES DICKENS'IN ROMANLARINDA İDİYLEKT VE ÜSLUBUN DİLBİLİMSEL İNCELEMESİ

Özet: Bu makale, Charles Dickens'ın romanlarında görülen idio-üslubun gelişimini dilbilimsel ve stilistik açıdan incelemektedir. Araştırmada Dickens'ın özgün yazar üslubunu oluşturan sözcüksel, sözdizimsel ve stilistik özellikler ele alınmaktadır. Özellikle metafor, ironi, tekrar, abartı, diyalekt kullanımı ve sembolik imgeler gibi ifade araçlarının yazarın anlatımındaki rolü incelenmektedir. Dickens'ın edebî kariyerinin farklı dönemlerini temsil eden altı roman, nitel ve nicel yöntemler kullanılarak analiz edilmiştir. AntConc ve CLiC Dickens gibi derlem temelli araçlardan yararlanılarak metinlerdeki tekrar eden dilsel kalıplar ve tematik özellikler belirlenmiştir. Araştırmanın sonuçları, Dickens'ın erken dönem eserlerinde görülen mizahi, teatral ve abartılı anlatımın zamanla daha karmaşık, psikolojik, sembolik ve toplumsal eleştiriye dayalı bir üsluba dönüştüğünü göstermektedir. Karakterlerin bireysel dil özellikleri, tekrarlar, cümle yapıları ve etkileyici sözcük seçimi karakterlerin oluşturulmasında önemli rol oynamaktadır. Sonuç olarak Dickens'ın idio-üslubu dilsel yaratıcılık, duygusal yoğunluk, hiciv ve toplumsal eleştiri ile karakterize edilmektedir. Bu özellikler onun İngiliz edebiyatındaki kalıcı etkisini ve özgün anlatım gücünü açıklamaktadır.

Anahtar Kelimeler: idio-stil, dilbilimsel stilistik, Charles Dickens, Viktorya dönemi edebiyatı, anlatım tarzı, stilistik analiz, ifade araçları.

Introduction

Charles Dickens is one of the most influential writers of Victorian literature whose works are distinguished by a recognizable idio-style. His language reflects both artistic individuality and social criticism. Dickens employs expressive vocabulary, repetition, irony, dialectal speech, and detailed characterization to create memorable fictional worlds.

The concept of idio-style refers to the individual linguistic system of an author, including lexical, syntactic, and stylistic choices. Dickens's idio-style evolved throughout his career. Early novels such as *The Pickwick Papers* demonstrate humor, theatricality, and exaggerated characterization, while later works like *Great Expectations* and *Bleak House* reveal psychological complexity and symbolic language.

Researchers such as Geoffrey Brook, Robert Golding, and Michaela Mahlberg have emphasized Dickens's innovative use of language, repetition, and character speech patterns. Their studies show that Dickens's stylistic development reflects broader literary and social changes of the Victorian era.

Methods

The study applies a mixed linguastylistic approach combining qualitative and quantitative analysis. Six novels from Dickens's early, middle, and late creative periods were selected for analysis.

The research focuses on:

- lexical features (slang, repetition, expressive vocabulary);
- syntactic structures (sentence length, parallelism, inversion);
- stylistic devices (metaphor, irony, hyperbole);
- narrative techniques and character idiolects.

Corpus stylistic tools such as AntConc and CLiC Dickens were used to identify recurring linguistic patterns and thematic keywords. Comparative analysis helped trace stylistic changes across different stages of Dickens's творчество.

Results and Discussion

Early Period

In early works, Dickens's style is energetic and theatrical. Characters are presented through exaggerated speech patterns and humorous expressions. For example, Sam Weller's Cockney dialect in *The Pickwick Papers* creates comic effect and social realism. Long sentences, repetitions, and playful vocabulary dominate this stage.

Middle Period

In novels such as *Bleak House* and *David Copperfield*, Dickens's language becomes more complex and socially engaged. Repetition acquires symbolic meaning, as seen in the recurring "fog" motif in *Bleak House*, representing confusion and institutional corruption. Narrative polyphony and psychological depth increase significantly.

Late Period

Later novels, including *Great Expectations* and *Our Mutual Friend*, demonstrate greater stylistic control and irony. Dickens uses concise syntax, symbolic imagery, and psychologically nuanced speech patterns. Character idiolects become less caricatured and more realistic, reflecting themes of alienation, class conflict, and social decay.

Corpus analysis confirms that Dickens's early novels contain more overt dialect markers and variable sentence structures, while later works emphasize symbolic repetition and thematic cohesion.

Conclusion

The study demonstrates that Charles Dickens's idio-style developed from humorous and performative narration toward psychologically complex and socially critical prose. His linguistic creativity allowed him to portray Victorian society with realism, satire, and emotional power. Dickens's innovative use of character speech, repetition, and symbolic imagery contributed significantly to the evolution of the English novel.

The findings confirm that Dickens's language is not merely decorative but functions as a tool of social commentary and character construction. His idio-style remains an important subject in linguistics, corpus stylistics, and literary studies.

RECONCEPTUALISING ACADEMIC DISCOURSE: REGULATED DEVIATION IN GRAMMATICAL, STYLISTIC, AND PRAGMATIC PRACTICE

Zuleykha BAGHIRZADE

PhD in Philology, Senior Lecturer, Azerbaijan University

E-mail: zuleykha.baghirzada@au.edu.az

ORCID ID: 0000-0002-4743-2893

Abstract: Academic discourse is traditionally conceptualised as a norm-governed system characterised by grammatical precision, stylistic uniformity, and pragmatic objectivity. However, this perspective does not adequately explain the persistent and systematic variation observable in expert academic writing. This study introduces the concept of regulated deviation, defined as the contextually constrained and functionally motivated use of structurally non-traditional linguistic forms within disciplinary norms. Drawing on genre theory, interactional approaches to discourse, and corpus-based studies of academic language, the paper develops a qualitative analytical framework for examining variation across grammatical, stylistic, and pragmatic dimensions. The analysis demonstrates how active-passive alternation, nominal-verbal variation, and interactional metadiscourse function strategically to improve clarity, manage informational density, and negotiate authorial stance. The findings suggest that academic discourse operates not as a rigidly standardised system but as a norm-referenced structure governed by regulated linguistic choice.

Keywords: academic discourse, linguistic variation, regulated deviation, discourse analysis, academic writing

AKADEMİK DİSKURSun YENİDÖN KONSEPTUALLAŞDIRILMASI: GRAMMATİK, ÜSLUBİ VƏ PRAQMATİK PRAKTİKADA TƏNZİMLƏNƏN YAYINMALAR

Introduction

Academic discourse has traditionally been conceptualised as a highly regulated linguistic domain characterised by grammatical precision, stylistic consistency, and epistemic objectivity. Within conventional academic writing pedagogy, deviation from established forms is frequently associated with insufficient linguistic competence, lack of disciplinary awareness, or failure to conform to institutional expectations. Such a perspective reflects a fundamentally prescriptive understanding of scholarly communication in which legitimacy is closely tied to adherence to standardised linguistic norms.

However, contemporary academic writing increasingly challenges this assumption. Across disciplines, genres, and publishing contexts, expert writers regularly employ forms that diverge from traditionally canonical conventions while remaining rhetorically effective and institutionally accepted. These include the growing use of active constructions in methodological description, strategic self-mention in argumentative positioning, compressed syntactic structures for informational efficiency, and stylistic shifts aimed at improving readability and accessibility.

The coexistence of normativity and variation presents an important theoretical problem for discourse studies. On the one hand, academic discourse continues to operate within recognisable institutional conventions. On the other hand, actual scholarly practice demonstrates substantial flexibility in grammatical, stylistic, and pragmatic choice. Existing scholarship has documented

many aspects of this variation. Genre theory has shown that disciplinary communities shape rhetorical expectations dynamically rather than uniformly (Swales, 1990). Interactional approaches to academic writing have demonstrated that scholarly discourse is inherently dialogic and audience-oriented (Hyland, 2005). Corpus-based investigations similarly reveal increasing syntactic compression and structural flexibility in contemporary academic prose (Biber & Gray, 2016).

Despite these contributions, variation is still frequently treated as secondary to the normative structure of academic discourse. Much of the literature describes variation empirically without fully theorising its systemic role within scholarly communication itself. Consequently, a conceptual tension remains unresolved: if academic discourse is fundamentally norm-governed, how can persistent and institutionally accepted variation be explained without reducing it either to error or exceptional deviation?

The present study addresses this problem through the concept of regulated deviation. The term refers to the contextually constrained and functionally motivated use of structurally non-traditional linguistic forms within accepted disciplinary conventions. The concept does not reject the existence of norms; rather, it proposes that academic discourse operates through a dynamic interaction between normative expectations and regulated flexibility.

Unlike approaches that interpret variation merely as disciplinary diversity or rhetorical adaptation, regulated deviation conceptualises variation itself as an operational mechanism of academic discourse. In this framework, deviation is not external to the system but constitutive of its communicative functioning.

The study is guided by the following research questions:

Academic discourse is commonly described as a highly standardised system governed by established grammatical and stylistic conventions (Halliday & Matthiessen, 2014). Within this framework, deviation from normative patterns is frequently interpreted as error, insufficient linguistic competence, or lack of disciplinary conformity. Such a perspective, however, fails to account for a significant empirical reality: expert academic writing consistently employs linguistic forms that diverge from traditional conventions while remaining institutionally legitimate and rhetorically effective.

Previous research has demonstrated that academic discourse varies across disciplines, genres, and communicative contexts (Swales, 1990; Hyland, 2005; Biber & Gray, 2016). Studies in genre analysis and metadiscourse have shown that academic writing is shaped not only by formal grammatical rules but also by rhetorical expectations, disciplinary identities, and interactional practices. Similarly, corpus-based approaches reveal increasing flexibility in syntactic and stylistic choices within contemporary academic communication.

Despite these insights, much of the existing literature remains primarily descriptive. While variation has been documented extensively, less attention has been devoted to explaining how such variation functions systematically within institutional norms. This creates a theoretical contradiction: academic discourse is simultaneously treated as norm-governed and inherently variable.

The present study addresses this contradiction by introducing the concept of regulated deviation. The term refers to the contextually constrained and functionally motivated use of structurally non-traditional linguistic forms within accepted disciplinary conventions. Unlike approaches that treat variation merely as stylistic diversity or disciplinary difference, regulated deviation emphasises the coexistence of normativity and flexibility within academic discourse itself.

The study is guided by the following research questions:

1. How does linguistic variation operate across grammatical, stylistic, and pragmatic dimensions of academic discourse?
2. In what ways can these variations be understood as regulated rather than erroneous?
3. How does regulated deviation contribute to meaning construction and disciplinary communication?

The article argues that academic discourse should be understood not as a rigidly standardised linguistic system but as a norm-referenced structure governed by strategic and regulated linguistic choice.

Materials and methods

The study adopts a qualitative discourse-analytical approach informed by genre theory, interactional linguistics, and corpus-based perspectives on academic writing. In order to strengthen the analytical reliability of the study, examples were selected from a small purposive corpus consisting of thirty peer-reviewed research articles published between 2018 and 2024 in the fields of applied linguistics, education, and related social sciences. The corpus included articles from internationally recognised journals indexed in Scopus and Web of Science.

The selection criteria focused on articles representing contemporary academic prose in disciplines where rhetorical negotiation and methodological explanation are highly visible. Particular attention was paid to recurring linguistic patterns that diverged from traditionally prescriptive academic conventions while remaining institutionally acceptable within scholarly communication.

The analytical procedure consisted of three stages.

First, canonical grammatical and stylistic expectations associated with formal academic discourse were identified through existing literature on academic writing conventions, particularly studies in genre analysis and systemic functional linguistics.

Second, instances of linguistic variation from these expectations were identified within the corpus. These included:

- active-passive alternation,
- reduced clause structures,
- nominalisation and verbalisation patterns,
- hedging strategies,
- and self-mention.

Third, the communicative and rhetorical functions of these variations were interpreted within their disciplinary contexts. The analysis examined not only whether variation occurred, but also how it functioned rhetorically and why it remained acceptable within academic norms.

The study does not seek broad quantitative generalisation. Nevertheless, preliminary frequency observations from the corpus revealed that active constructions, reduced clauses, and interactional metadiscourse occurred consistently across disciplines and publication contexts, suggesting that these forms represent recurrent rhetorical tendencies rather than isolated stylistic preferences. The emphasis of the study therefore remains on interpretive depth and functional explanation rather than statistical modelling. The analytical objective is not to measure linguistic frequency exhaustively but to explain how variation operates systematically within the communicative logic of academic discourse.

Results and discussion

The analysis demonstrates that variation in academic discourse operates systematically across grammatical, stylistic, and pragmatic dimensions. These variations are neither accidental nor disorderly; rather, they function as regulated mechanisms that support clarity, rhetorical effectiveness, and disciplinary positioning.

Table 1. Illustrative Patterns of Regulated Deviation in Academic Discourse

Linguistic Level	Conventional Academic Preference	Contemporary Variation	Communicative Function
Grammar	“The data were analysed”	“We analysed the data”	Procedural clarity and explicit agency
Syntax	Fully expanded subordinate clauses	Reduced clause structures	Informational compression
Style	Heavy nominalisation	Increased verbalisation	Improved readability
Pragmatics	Authorial invisibility	Self-mention and hedging	Interactional positioning

The patterns presented above demonstrate that variation in academic discourse is neither random nor unrestricted. Instead, contemporary academic writing selectively departs from traditional conventions in ways that remain rhetorically functional and institutionally acceptable.

Grammatical Variation and Functional Efficiency

The grammatical dimension of academic discourse reveals one of the clearest examples of regulated deviation. Traditional academic writing conventions strongly privileged impersonal and syntactically elaborate structures, particularly passive constructions and fully expanded subordinate clauses. These forms were historically associated with objectivity, formality, and institutional authority. Contemporary academic writing, however, demonstrates a more flexible relationship with these conventions. The analysis indicates that active and passive constructions now frequently coexist within the same disciplinary contexts, often serving distinct rhetorical purposes. At the grammatical level, one of the most visible developments in contemporary academic writing is the increasing coexistence of active and passive constructions. Traditional academic conventions strongly favoured passive structures such as “The data were analysed” in order to maintain impersonality and objectivity. However, many contemporary research articles now employ active alternatives such as “We analysed the data,” particularly in methodology sections where explicit procedural agency improves transparency and clarity.

This shift does not represent the abandonment of academic norms but rather their adaptation to changing communicative priorities. Active constructions are typically used in contexts where procedural precision and readability are emphasised, while passive forms continue to dominate in contexts where the process itself is foregrounded over the researcher. Another significant example of grammatical variation involves syntactic compression through reduced clause structures. Expressions such as “participants completing the survey” increasingly replace fully expanded subordinate clauses like “participants who completed the survey.” These compressed structures contribute to informational density and facilitate more efficient processing of complex academic content. Corpus-based studies similarly indicate that contemporary academic prose increasingly relies on compressed noun phrases and reduced clausal structures as strategies for managing dense information (Biber & Gray, 2016). Such patterns demonstrate that grammatical variation in

academic discourse is regulated by communicative efficiency rather than governed exclusively by traditional prescriptive expectations.

Stylistic Variation and Informational Balance

Stylistic variation in academic discourse similarly demonstrates the interaction between institutional convention and communicative adaptation. Historically, academic prose has favoured dense nominalised structures because they facilitate abstraction, conceptual compression, and disciplinary precision. Nevertheless, excessive nominalisation may reduce readability and increase processing difficulty, particularly in interdisciplinary or pedagogical contexts. The corpus examined in this study indicates that contemporary academic writing increasingly balances informational density with reader accessibility through strategic alternation between nominalised and verbal structures.

At the stylistic level, variation frequently occurs through the alternation between nominalised and verbal structures. Academic writing has historically favoured nominalisation because it enables abstraction, conceptual condensation, and formal tone. For example, expressions such as “the implementation of the framework facilitated evaluation” reflect a highly condensed informational style. However, contemporary academic discourse increasingly incorporates more dynamic verbal alternatives such as “the framework helped researchers evaluate outcomes.” While nominalisation contributes to conceptual density and disciplinary precision, verbalisation often improves readability, accessibility, and processing fluency. The coexistence of these structures reflects a strategic balance between abstraction and communicative clarity. Writers selectively employ nominalised or verbal forms depending on rhetorical context, disciplinary expectation, and audience accessibility. This demonstrates that stylistic variation is not evidence of inconsistency but a regulated response to competing communicative demands.

The findings also support Halliday and Martin’s (1993) argument that academic discourse operates through the management of informational density. Rather than maintaining absolute stylistic uniformity, contemporary scholarly communication relies on flexible linguistic selection to negotiate complexity and readability simultaneously.

Pragmatic Variation and Interactional Positioning

The pragmatic dimension of academic discourse provides particularly strong evidence for the interactional nature of regulated deviation. Earlier models of scholarly writing frequently idealised impersonality and authorial detachment as indicators of academic legitimacy. However, contemporary research in metadiscourse and interactional linguistics has demonstrated that academic communication is inherently dialogic and relational.

The findings of the present analysis support this position by showing that writers strategically employ hedging, self-mention, and evaluative framing in order to negotiate authority, credibility, and disciplinary alignment. At the pragmatic level, variation becomes particularly visible through the use of hedging, self-mention, and interactional metadiscourse. Traditional models of academic discourse frequently emphasised impersonality and authorial invisibility. Nevertheless, contemporary academic writing increasingly acknowledges the interactional nature of scholarly communication. Hedging expressions such as “the findings suggest,” “it appears that,” or “the results may indicate” enable writers to moderate epistemic certainty and position claims cautiously within disciplinary debate. Such structures function not as signs of uncertainty or weakness but as markers of disciplinary responsibility and academic credibility. Similarly, first-person constructions such as “we argue,” “I propose,” or “we interpret the findings as” increasingly appear in scholarly

publications. These forms allow authors to establish argumentative ownership, guide readers through analytical reasoning, and negotiate disciplinary identity. Importantly, these pragmatic choices remain highly regulated. Excessive authorial presence may still be perceived as inappropriate in many disciplines, while complete impersonality can reduce clarity and rhetorical engagement. Academic writers therefore operate within an implicit system of acceptable variation in which pragmatic deviation is constrained by disciplinary expectations.

The findings support Hyland's (2005) view that academic writing is fundamentally interactional rather than purely informational. Regulated deviation thus emerges as a mechanism through which scholars manage authority, credibility, and reader engagement within institutional norms.

Regulated Deviation as a Model of Academic Discourse

The analysis demonstrates that linguistic variation in academic discourse should not be interpreted simply as erosion of standards or stylistic inconsistency. Instead, variation functions systematically within disciplinary frameworks and serves identifiable communicative purposes.

At this point, it is important to distinguish the concept of regulated deviation from related approaches in discourse studies. Genre theory, particularly in the work of Swales (1990), explains how academic communities develop shared rhetorical conventions. Similarly, Hyland's interactional model demonstrates how writers negotiate stance and reader engagement through metadiscursive resources. Corpus-based studies by Biber and Gray (2016) further reveal the increasing grammatical compression characteristic of contemporary academic prose.

The concept of regulated deviation does not reject these approaches. Rather, it synthesises them within a broader explanatory framework. Existing theories successfully document variation, rhetorical adaptation, and disciplinary difference, but they do not fully conceptualise variation itself as an internally regulated mechanism of academic discourse. In this framework, deviation is not treated as marginal to the system but as part of the system's operational structure. Academic norms therefore function less as fixed rules and more as boundaries of acceptable linguistic flexibility. Writers may diverge from traditional conventions provided that such divergence remains rhetorically functional, contextually appropriate, and institutionally recognisable. This perspective also helps explain why contemporary academic writing increasingly combines formal precision with rhetorical adaptability. Rather than adhering to static linguistic templates, scholars continuously negotiate between clarity, authority, accessibility, informational density, and disciplinary convention. The proposed model therefore reconceptualises academic discourse as a system of constrained flexibility. Normativity and variation are not opposing forces but interdependent mechanisms through which scholarly communication achieves effectiveness and legitimacy.

Importantly, this framework may also help explain broader transformations in global academic communication. Increasing interdisciplinarity, internationalisation, and digital publication environments have intensified demands for clarity, accessibility, and rhetorical adaptability. Regulated deviation can therefore be understood not only as a linguistic phenomenon but also as a response to changing institutional and communicative conditions within contemporary knowledge production.

Conclusion

The present study has argued that academic discourse should be understood not as a rigidly standardised linguistic system but as a norm-referenced structure governed by regulated variation.

Through the concept of regulated deviation, the article demonstrates that many forms traditionally interpreted as departures from academic convention are in fact systematic, functional, and institutionally legitimate components of scholarly communication.

The analysis has shown that grammatical flexibility, stylistic adaptation, and pragmatic negotiation operate not outside academic norms but within them. Active-passive alternation, syntactic compression, nominal-verbal variation, hedging, and self-mention all illustrate how academic writers strategically manage communicative efficiency, rhetorical clarity, informational density, and disciplinary positioning.

Importantly, the study does not propose the abandonment of academic norms. Rather, it reconceptualises norms as flexible boundaries that regulate acceptable variation rather than prohibit it entirely. This perspective enables a more accurate understanding of contemporary scholarly communication, particularly in increasingly interdisciplinary and globalised academic environments.

The theoretical contribution of the article lies primarily in its integration of genre theory, interactional discourse analysis, and corpus-informed approaches into a unified explanatory framework. By conceptualising deviation as regulated rather than exceptional, the study offers a more dynamic model of academic discourse capable of accounting simultaneously for institutional stability and linguistic adaptability.

The findings also carry pedagogical implications. Academic writing instruction frequently relies on rigid prescriptive models that present scholarly discourse as uniformly impersonal and structurally fixed. Such approaches may oversimplify the actual practices of expert writers and inadequately prepare students for authentic disciplinary communication. Recognising regulated variation may therefore contribute to more realistic and rhetorically informed approaches to academic writing pedagogy.

The study is nevertheless limited by its qualitative scope and relatively small corpus size. The findings should therefore be interpreted as theoretically exploratory rather than statistically generalisable. Future large-scale corpus investigations may further refine the explanatory potential of the concept across disciplinary and multilingual contexts.

Future research may expand this framework through larger corpus-based investigations across disciplinary traditions, multilingual academic environments, and digitally mediated scholarly genres. Comparative studies examining how regulated deviation operates across cultural and institutional contexts would further strengthen understanding of the evolving dynamics of contemporary academic discourse.

References

This study reconceptualises academic discourse as a norm-referenced and variation-governed system in which deviation functions as a central mechanism of meaning construction rather than a violation of linguistic correctness. Through the concept of regulated deviation, the article demonstrates that grammatical, stylistic, and pragmatic variation in academic writing operates systematically and strategically within disciplinary norms.

The findings indicate that effective academic communication depends not on rigid adherence to fixed linguistic templates but on the strategic management of linguistic flexibility in response to rhetorical and communicative demands. Active-passive alternation, nominal-verbal variation, and interactional metadiscourse illustrate how contemporary academic discourse balances institutional convention with communicative efficiency.

The study contributes to discourse analysis and academic writing research by providing a theoretical framework that integrates normativity and variation within a single explanatory model. It also has implications for academic writing pedagogy, particularly in challenging overly prescriptive approaches to scholarly communication.

Future research may expand this framework through corpus-based investigation across disciplines, multilingual academic environments, and digital scholarly genres. Such research would further clarify how regulated deviation operates within evolving forms of global academic communication.

SYNTACTIC AND COMMUNICATIVE ANALYSIS OF THE SENTENCE CONCEPT

Parvana Zahid ABBASOVA

Doctor of Philosophy in Philology, Department of Foreign Languages,
Azerbaijan State University of Economics

E-mail: Pervane485@mail.ru

ORCID ID: [0000-0002-6593-2701](https://orcid.org/0000-0002-6593-2701)

Abstract: Language is a complex system that plays a central role not only in human communication but also in the formation and expression of thought. Linguistics, as an independent scientific discipline, aims to study the structure, development, and functional features of language in a systematic and objective manner. It examines the organization of linguistic units, their interrelations, and the rules governing sentence formation, providing insights into both the structural and functional aspects of language. By analyzing phonology, morphology, and syntax, linguistics enables a deeper understanding of how language operates in communication. This scientific approach distinguishes linguistics from other humanities and highlights its importance in both theoretical research and practical applications.

Keywords: Linguistics, grammar, syntax, morphology, sentence, speech, language system, communication, interaction, lexicon

Introduction

Language, as the most important means of communication in human society, is also a complex and multifaceted system that plays a fundamental role in the formation, structuring, and expression of thought. Through language, people not only exchange information but also perceive reality, conceptualize it, and transmit socio-cultural experience from generation to generation. From this perspective, the study of language is not limited to communicative aspects alone; it is also of great importance for investigating human cognition and mental processes.

Modern linguistics studies language not only as a means of communication but also as a system governed by internal regularities. This system consists of various levels-phonological, morphological, lexical, and syntactic structures-whose interaction forms the overall mechanism of language. The principles of organization of linguistic units and their functional use provide insight into how language operates. Therefore, the main objective of linguistics is to examine the structure of language, its developmental patterns, and its functional characteristics in a systematic and objective manner.

The scientific approach of linguistics is not limited to describing linguistic phenomena; it also seeks to explain their cause-and-effect relationships, internal mechanisms, and roles in the communication process. This approach necessitates a deeper study of different levels of language-particularly grammar and its key component, syntax-since the structural foundations of language are most clearly manifested in these areas.

At the same time, modern linguistics is widely applied not only in theoretical but also in practical domains. The systematic study of language plays an important role in education, text and discourse analysis, as well as in the comparative study of different languages. In this regard,

linguistics is a dynamically developing field of science with both fundamental and practical significance.

Methodology and Materials

This study is based on a qualitative research design aimed at analyzing the syntactic and communicative aspects of the sentence concept within the framework of modern linguistics. The research adopts a descriptive-analytical approach, allowing for a systematic examination of linguistic structures and their functional roles in communication.

The primary material of the study consists of theoretical sources and scholarly works in the field of linguistics, particularly those related to grammar, syntax, and sentence theory. The selection of sources was carried out on the basis of relevance to the research topic and their contribution to the understanding of the sentence as a central unit of language. Works by prominent linguists such as John Lyons, Leonard Bloomfield, Noam Chomsky, Otto Jespersen, Charles Fries, and Mikhail Blokh were analyzed in order to provide a comprehensive theoretical foundation.

The research employs descriptive and comparative methods to examine different approaches to the definition and classification of the sentence. Special attention is given to the analysis of syntactic structure, semantic content, and communicative function. In addition, elements of discourse and pragmatic analysis are incorporated to explore how sentences operate within real communication and how context influences their interpretation.

Furthermore, a functional approach is applied to investigate the relationship between structural features and communicative purposes of sentences. This makes it possible to identify how changes in syntactic organization affect meaning and information structure.

Overall, the chosen methodology ensures a comprehensive and systematic analysis of the sentence as a complex linguistic unit, integrating theoretical perspectives with functional interpretation to achieve a deeper understanding of its role in language and communication.

Main part

Linguistics is an independent field of science that scientifically studies complex processes such as the origin, development, and functional use of language. The main objective of this field is to objectively explain the internal structure of language, its regularities, and the role it plays in the process of communication. The English linguist John Lyons characterizes linguistics as a science engaged in the precise and systematic linguistic study of language, thereby emphasizing its scientific nature. (Lyons, 1968, p.87) In his view, linguistics should not be limited to observation alone but must substantiate its findings with empirical facts. This approach allows for the comprehensive study of the structural levels of language—phonology, morphology, and syntax. On the other hand, the prominent representative of American structuralism, Leonard Bloomfield, defined linguistics as the formal description of language units and the study of their interrelations. (Blumfield, 1933, p.36) According to Bloomfield, language is a systematic structure, and each of its elements functions within a set of rules. Thus, the approaches of both Lyons and Bloomfield show that linguistics is not only theoretical but also a practical and evidence-based science, which distinguishes it from other humanities.

A review of the history of linguistics shows that this field initially developed as part of philosophy but gradually became an independent scientific discipline. In ancient times, language issues were mainly the focus of philosophers, and language was studied primarily in relation to logic and thinking. For example, Aristotle laid the foundation of grammatical thought by putting forward initial theoretical ideas about parts of speech and sentence structure. (Aristotle, p.67) His

ideas had a significant influence on the development of linguistic science in later periods. On the other hand, Plato considered language not only as a means of communication but also as a form of expression of thought and examined the relationship between word and meaning. (Plato, p.78) These approaches created the basis for a deeper understanding of the nature of language. Thus, the views of ancient scholars played an important role in the formation of the theoretical foundations of linguistics, and in later stages, these ideas were developed further, leading to the emergence of modern linguistic theories.

One of the important branches of linguistics is grammar, which studies the structural organization of language and how it is formed. Through grammar, the formation of words, their combination into sentences, and the regularities involved in this process are determined. From this perspective, grammar is not only a set of rules but also a systematic theory explaining the mechanism of language functioning. The American linguist Leonard Bloomfield characterized grammar as the field that studies the structural organization of all linguistic units, from morphemes to sentences. (Blumfield, 1933 p.92) In his opinion, the correct sequence and connection of language units are ensured precisely through grammatical rules. On the other hand, Henry Sweet distinguished between grammar and lexicon, noting that grammar studies general linguistic regularities, while lexicon studies the specific vocabulary. (Sweet, 1891, p.42) These approaches show that grammar encompasses both the structural and functional aspects of language and plays an important role in the correct and clear expression of thought in the communication process.

Syntax, one of the main branches of grammar, studies the organization of linguistic units at a higher level—namely within phrases and sentences. Through syntax, it is determined how words are arranged within a sentence, according to which rules they are combined, and how meaning relations are formed. In this respect, syntax examines not only the formal structure but also the functional role of the sentence in communication. The English linguist Randolph Quirk evaluated syntax as the main field that studies the interrelations of elements within a sentence and their systematic organization. (Quirk, 1982, p.66) On the other hand, Noam Chomsky approached syntax differently by proposing the theory of generative grammar and noted that an infinite number of sentences can be generated through a limited number of rules. (Chomsky, 1957, p.90) According to Chomsky, the essence of language lies in its creative potential, and syntax plays a key role in the realization of this potential. Thus, syntax serves as one of the main tools for understanding the structural and functional characteristics of language in both traditional and modern approaches.

One of the main research directions of syntax is the study of the structure of the sentence and its functional characteristics. The sentence, as the main communicative unit of language, is not merely a mechanical combination of words but a complex and multi-level structure formed on the basis of intonation, grammatical organization, semantic integrity, and communicative purpose. In this respect, the sentence functions both as a structural unit of the language system and as a key element of the communication process. Through the sentence, reality is reflected, information is transmitted, and the speaker's attitude is expressed, which demonstrates its multifunctional nature.

From this perspective, the definition of the sentence and the determination of its main features have always been among the actual and controversial issues in linguistics. Various linguists have attempted to explain the sentence from different aspects-structural, semantic, functional, and pragmatic. The English linguist Otto Jespersen evaluated the sentence as the main unit realized in living speech and emphasized its communicative function. (Jespersen, 1924 p.82) According to his

approach, the sentence is not only a grammatical structure but also a dynamic unit realized in a speech act and serving a specific communicative purpose.

On the other hand, Charles Fries classified sentences according to their function in communication, dividing them into communicative and non-communicative expressions. (Fries, 1992, p.60) This classification shows that the sentence differs not only structurally but also in terms of its functional load. While communicative sentences serve purposes such as transmitting information, asking questions, and giving commands, non-communicative expressions tend to have a more structural character and may not directly serve a communicative purpose. This proves that the role of the sentence in speech activity is broader and more multifaceted.

In addition, the Russian linguist Mikhail Blokh, taking into account both structural and semantic features, noted that the sentence is a complex linguistic unit. (Blokh, 1983, p.92) He evaluates the sentence not only as a result of grammatical form but also as a unity of meaning, intonation, and communicative purpose. This approach integrates the multi-level structure of the sentence—syntactic structure, semantic content, and communicative function—within a single system and more clearly defines its place in the language system.

In modern linguistics, the concept of the sentence has been further expanded, and not only its syntactic but also its discourse and pragmatic aspects have been brought to the forefront. The sentence is now studied not only in terms of its internal structure but also within the framework of its position in the text, its relation to context, and its interaction with the communicative situation. From this perspective, the meaning of the sentence is determined not only by its components but also by the context in which it is used. This further actualizes the pragmatic function of the sentence and its role in real communication.

At the same time, there is a close interaction between the structural features of the sentence and its functional load. Changes in syntactic structure often lead to changes in the expressed meaning and communicative emphasis. For example, changes in word order, shifts in stress elements, or differences in intonation can produce different communicative outcomes based on the same lexical units. This shows that the sentence is not a static structure but a dynamic and variable system.

Moreover, the sentence operates in close connection with other levels of language. Morphological forms, lexical choices, and phonetic features directly influence the overall content and functional load of the sentence. In this respect, the sentence acts as a central unit where different levels of the language system are integrated.

Thus, the approaches of various linguists show that the sentence is not merely a grammatical structure but a complex and multi-dimensional linguistic unit that incorporates semantic, pragmatic, and communicative features. Its study is of particular importance for understanding both the structural and functional nature of language and remains actual as one of the main objects of research in syntax.

Discussion

The findings of this study confirm that the sentence, as the central unit of language, should be analyzed not only from a syntactic perspective but also within communicative and functional frameworks. The analysis demonstrates that purely structural approaches, while essential, are insufficient to fully explain the nature of the sentence. Instead, a comprehensive understanding requires the integration of semantic and pragmatic dimensions.

The views of linguists such as John Lyons and Leonard Bloomfield highlight the importance of systematic and empirical analysis in describing linguistic structures. Their approaches emphasize the formal organization of language, which provides a necessary foundation for syntactic analysis. However, the generative perspective introduced by Noam Chomsky expands this understanding by demonstrating that language is a creative system capable of producing an infinite number of sentences through a finite set of rules. This shift from descriptive to explanatory models represents a significant development in linguistic theory.

At the same time, functional and communicative approaches bring additional depth to the study of the sentence. The ideas of Otto Jespersen, Charles Fries, and Mikhail Blokh show that the sentence cannot be reduced to a static grammatical structure; rather, it is a dynamic unit shaped by communicative intention, context, and discourse conditions. This perspective underscores the role of the speaker and the communicative situation in determining sentence meaning and function.

The interaction between syntactic structure and communicative purpose is particularly noteworthy. Changes in word order, intonation, or emphasis can significantly alter the meaning and communicative effect of a sentence. This demonstrates that syntactic forms are closely linked to pragmatic functions, reinforcing the idea that language operates as an integrated system.

Furthermore, the analysis reveals that the sentence functions as a point of intersection for different levels of language, including morphology, lexicon, and phonology. This interconnectedness supports the view that linguistic units cannot be studied in isolation but must be examined within a broader systemic context.

Overall, the discussion highlights that modern linguistics increasingly favors integrative approaches that combine structural, functional, and pragmatic perspectives. Such approaches provide a more complete understanding of the sentence and its role in communication, confirming its status as a complex and multifaceted linguistic unit.

Conclusion

Thus, the conducted research shows that linguistics is an important scientific field that systematically studies the structure of language, its developmental regularities, and its functions in the process of communication. The theoretical ideas put forward by scholars who worked in different periods—such as John Lyons and Leonard Bloomfield—have played a significant role in the formation of the scientific foundations of linguistics. At the same time, the generative approach proposed by Noam Chomsky has once again proven that language is a system with creative and infinite possibilities.

As a result of the research, it has been determined that grammar and one of its main branches, syntax, play a key role in the correct and purposeful use of language. The sentence, as the central unit of this system, is distinguished by both its structural and communicative characteristics. The approaches of various scholars show that the issue of defining and classifying the sentence still remains actual, and different viewpoints exist in this field. In conclusion, it can be said that linguistics, as a dynamically developing field of science, is constantly renewed and enriched with new theories, thereby contributing to a deeper understanding of language.

MORAL PRESERVATION OF NATIONAL LANGUAGE UNDER GLOBALIZATION: ETHNO-CULTURAL IDENTITY STRATEGIES IN THE HERITAGE OF MIR JALAL PASHAYEV

Parvin HUSEYNOVA

PhD in Philology, Mingachevir State University

E-mail: parvin.huseynova@mdu.edu.az

ORCID ID: 0009-0008-2382-6485

Abstract: The article examines the mechanisms of national-spiritual self-defense in the works of Mir Jalal Pashayev against the background of universal standardization brought by the modern wave of globalization. The author's creativity is analyzed not just as a literary heritage, but as a conceptual strategy serving the preservation of the national language and ethical memory within the totalitarian system. In the research, the term "word laborer" is evaluated as the ontological responsibility of the creative personality towards the national existence. Through linguo-semiotic and ontological analysis, the study explores how Mir Jalal treats the mother tongue as a strategic space safeguarding the spiritual boundaries of identity against alien influences. Furthermore, it highlights his pedagogical-methodological mission, demonstrating that protecting language honor and moral dignity constitutes an indispensable foundation for sustaining cultural continuity and national self-awareness in contemporary times

Keywords: Mir Jalal Pashayev, globalization, national identity, mother tongue, "word laborer", Azerbaijanism, ethno-cultural strategy.

Xülasə: Məqalədə müasir qloballaşma dalğasının gətirdiyi universal standartlaşma fonunda Mir Cəlal Paşayev yaradıcılığının milli-mənəvi özünümədafiə mexanizmləri tədqiq olunur. Müəllifin yaradıcılığı sadəcə bədii irs kimi deyil, totalitar sistem daxilində milli dilin və etik yaddaşın qorunmasına xidmət edən konseptual bir strategiya kimi təhlil edilir. Tədqiqatda “söz fəhləsi” termini yaradıcı şəxsiyyətin milli varlıq qarşısında ontoloji məsuliyyəti kimi dəyərləndirilir. Dil-semiotik və ontoloji təhlil metodlarına əsaslanan araşdırma yazıçının ana dilini milli identikliyin mənəvi sərhədlərini yad təsirlərdən qoruyan strateji məkan kimi necə dəyərləndirdiyini üzə çıxarır. Eyni zamanda, əsərlərdəki milli varlıq kodları, yadlaşma fenomeni və pedaqoji-metodoloji strategiyalar təhlil olunaraq göstərilir ki, dilin şərəfini və mənəvi ləyaqəti qorumaq müasir dövrdə mədəni davamlılığın və milli özünüdərkini təmin edilməsində əvəzolunmaz təməl rolunu oynayır.

Açar sözlər: Mir Cəlal Paşayev, qloballaşma, milli kimlik, ana dili, “söz fəhləsi”, Azərbaycançılıq, etno-mədəni strategiya.

Introduction

Modern global integration processes actualize the danger of assimilation of local cultures and functional erosion of national languages. In this context, the heritage of Mir Jalal Pashayev is not just a literary fact of the past, but the basis of “moral immunity” for national identity. His work, spanning half a century, organizes a rare synthesis of artistic inspiration and scientific logic (Pashayev, 2005). This unity has played the role of an ideological shield protecting the spiritual integrity of the people.

Materials and Methods

The research material includes the “Selected Works” of Mir Jalal Pashayev (2005) and the collection of memoirs “Mir Jalal in the memories of his contemporaries” (Ahmedov, 1998). The study employs linguo-semiotic and ontological analysis methods to examine literary texts. Specifically, the concept of the “word laborer” is analyzed as a methodological tool for understanding the author's ethical and national stance.

The ontological boundaries of creativity: “word laborer” and the philosophy of national succession.

Mir Jalal's self-definition as a “word laborer” is not a simple act of modesty, but a view of national heritage from the highest peak of spirituality. Considering great masters like Nizami, Nasimi, and Fuzuli as scientific-historical heights, he saw his mission as the “laborer” of this height—one who carries, protects, and purifies that heritage. As emphasized in the memoirs of his contemporaries, literature was the art of “being able to distinguish the pearl from the sand” for him (Ahmedov, 1998). This approach is the scientific-ethical victory of the principle of “national succession” against individual ambitions and “author ego” brought by globalization. The writer purifies the language from all kinds of alien elements with laborer precision and diligence, turning it into the existential refuge of the nation.

Linguo-semiotic resistance: preservation of national identity codes in the literary text.

In Mir Jalal's creativity, the mother tongue is not just a means of communication, but a strategic area that defines the spiritual boundaries of national existence. The famous exclamation of Sona khanum in the novel “A Young Man's Manifesto,” “I would throw it to a dog, but not sell it to a stranger!”, is a spiritual oath of national values against alien influences. Here, “carpet” and “mother tongue” act on the same semiotic plane; both are inviolable “identity codes” of the nation

(Pashayev, 2005). This resistance line is completed by the exposure of the “alienation” phenomenon in the novel “The Open Book.” The Geldiyev type is an “anti-identity” model devoid of inner meaning, serving only bureaucratic formality (“lični delo”). Mir Jalal shows that detachment from national roots is a spiritual death.

Pedagogical-methodological strategy: transferring the ideology of Azerbaijanism to successors.

Mir Jalal's teaching activity is the scientific-pedagogical continuation of his artistic creativity. He demanded from the younger generation, first of all, “to protect the honor of the language” (Ahmedov, 1998). For the writer, national self-awareness begins not from macro-political declarations, but from micro-spirituality-from the sincerity within the family and the genetic sweetness of the mother tongue as in “The Taste of Almond.” With the thesis “We emerged from Mirza Jalal's 'Mailbox',” he defined the preservation of the national realism tradition and the natural language layers of the people as a strategic goal.

Conclusion

The heritage of Mir Jalal Pashayev is an ontological answer to the question “Who are we?” in the era of globalization. He proved that even in periods of heavy totalitarian or global pressure, loyalty to the mother tongue and moral dignity are the only ways to preserve national existence. Mir Jalal's creativity, forming the spiritual-aesthetic core of the modern ideology of Azerbaijanism, is a reliable bridge carrying our national identity into the future.

THE ROLE OF COMMUNICATION IN THE FORMATION OF DISCOURSE

Elnaz ALIYEVA

Ph.D., Department of English Language and Translation

Nakhchivan State University

E-mail: elnazela@gmail.com

ORCID ID: [0000-0002-4172-474](https://orcid.org/0000-0002-4172-474)

Abstract: In modern linguistics the study of discourse, various approaches to it and its various types is widespread. Although this phenomenon has been studied from semiotic, semantic, pragmatic, cognitive, and other aspects in the works of both Western and Russian researchers, there are still unresolved issues of discourse in linguistics.

The article discusses the role of communication in the formation of discourse. Discourse is a form of social behavior that participates in the formation of the social environment. This means that discourse itself is a communication process. Discourse cannot be formed without communication. That is, communication is necessary for discourse.

Keywords: discourse, researchers, linguistic category, discourse theory, communication, lexical units, characteristics of discourse, scientific debates

Introduction

"Discourse", which is much written about in modern linguistics and is constantly a central topic of scientific debates has not yet found its precise definition as a linguistic concept. For this reason, the definitions given to discourse as a specific field of science are not limited to linguistics but go beyond its boundaries. Even among linguists, discourse is given various definitions. However, what brought them together was the study of the structure of language, its functionality in speech activity and the role of the human factor in this process. Because language has an important sociological function in relation to society; members of society communicate and understand each other through language. In this process, the delivery of information, communicative influence on people, and the linguistic foundations of speech construction are among the important problems of modern linguistics.

Discourse is a linguistic phenomenon in action. As a social practice, discourse has a chain of multiple relationships. There are reciprocal relationships that develop between certain discursive events, and such events, as well as discursive events, constitute the structure of discourse (A.T.Dijk. 2008– 267 p.).

Methodology and Materials. All the investigations are held with the help of investigation methods, and all the methods should be determined and chosen in connection with the topic investigated. In the investigation process of the given topic we have used the descriptive method and linguistic analysis method.

Results and Discussion

The findings of this study confirm that discourse is a form of social behavior that participates in the formation of the social environment. Communication is a form of social behavior as a whole,

with all its terms, conditions and speech acts used. This means that discourse itself is a communication process. Discourse cannot be formed without communication.

The results also suggest that discursive analysis of a speech situation requires elucidating speech situations within a discourse. In this case, the communicative view of the discourse is also revealed sequentially. Communication, in all cases, is the transmission of information to the addressee and the sequence of the addressee's responses. Communication is a complex phenomenon (Harris, 1952– 474 p.).

The role of communication in the formation of discourse

The main purpose of speaking is always to convey information. The first type of speech is also to give information. This information performs educational communication. The second type is to influence the addressee, motivating him to speak or do other activities. This type is called regulatory communication. The third type defines expressive communication. The speaker expresses his mood and emotional state in the speech act. The fourth type is used to establish a connection, to continue or end the communication. This is a type of phatic communication. Naturally, during communication, other communications are projected into the four types mentioned.

There is a type of communication and a discourse that presents it. When the issue is approached from this perspective, different types of discourses emerge. When approached from the position of the topic in the discourse, another classification is obtained. Discourses devoted to political issues are divided into political, religious and military discourses. When we break down a broad discourse into parts, we easily observe the presence of various types of communicative acts in its composition (Fairclough, N. 2003– 288 p.).

The main means of communication is language. Language is a tool that enables communication. Each communication has its own purpose and objectives, depending on the participants.

The main reason for identifying discourse with text is that both objects refer to the same material - text - in the process of studying and researching them. The perception of discourse as language in action leads to the emergence of speech material and as a result, there is a shift towards dialogue and spoken language (Karasik, V.I. 2000). The main aspect that emerges in these studies and creates confusion stems from the inclusion of the text in the analysis in both cases. When oral speech is put into text form, it becomes written speech. Studying dialogues selected from works of fiction as oral speech or colloquial language material creates a transition from discourse to text. That is, the object of research is not discourse, but text. In the process of transforming oral speech into text, the speech acts of communication participants retain their structural, grammatical and lexical characteristics, if intonation and emotionality are not taken into account. The study of the language of the speaker, as well as dialogical speech, proceeds in a similar way to text analysis. There is a similar parallel in the study of oral and written discourses. When dialogues and polylogues are removed from the composition of written speech, monological written speech is obtained. In monologue speech, the communicative view is completely different. Here, communication is one-sided. The author or narrator tells about certain events, talks about what he saw, describes something, and expresses his attitude towards certain issues. Just as text is one type of discourse, monologic discourse is another. In monologic speech, the general speech situation does not change (Mammadov, A. Mammadov, M 2016 - 111 p.). The communicative view is also homogeneous in the monologue part of the discourse. It is observed in rare cases that works of

fiction consist only of monologue speech. Stories, narratives and novels also involve other characters. During the process of narration, these characters are incorporated into the work and the interactions between them are presented to the readers. In such places of artistic discourse, the renewal of the communication view becomes apparent. Monologue speech in a work of fiction is always addressed to the reader, regardless of whether it is uttered by the author or a character (Mammadov, A.Y.2018). Even when a monologue is addressed to the speaker, the reader acts as the addressee. However, since the reader does not enter into a dialogue with the author, the monological character of the speech does not change.

The communicativeness of discourse depends on the functions of communication. Communication functions can change within a given speech situation. In possible speech situations, especially in dialogical speech, the addressee is almost always known. The speaker's, that is, the addressee's, speech is directed at the second participant in the dialogue. In the analysis of the communicative view of discourse, there are cases where a third person speaker expresses an opinion about a person who is not participating in dialogical speech, or evaluates his or her actions. (Veysalli, F.Y.2010 - 141 p.). At first sight, it seems that the addressee is the third person. In fact, the speech is addressed to the person directly participating in the communication process. Or the addressee's speech may be addressed to him/herself. In such cases, the addressee is the second participant. One of the issues of interest in the study of speech situations is to reveal the specifics and distinguishing features of such cases and to give their linguistic interpretation.

Clarifying the communicative view of discourses involves determining the place of such speech situations in the general discourse and determining their relationships with other discourses.

Conclusion

Discourse is a form of social behavior that participates in the formation of the social environment. Communication is a form of social behavior as a whole, with all its conditions, circumstances and speech acts used. It follows from this that discourse itself is a communication process and cannot be formed without communication. That is, communication is necessary for discourse.

1. The main purpose of speaking is always to convey information. The first type of speech is also to give information. This information performs teaching and heuristic communication. The second type is to influence the addressee to speak or to take other action. This type is called regulatory communication. The third type is expressive communication. The speaker expresses his mood and emotional state in the speech act. The fourth type is used to establish a connection, continue or end communication. This is a phatic type of communication. Naturally, during communication, other communications are projected onto the four types mentioned.

2. There is a type of communication and a discourse that presents it. When the issue is approached from this perspective, different types of discourses become apparent. When approached from the position of the topic in the discourse, another classification is obtained. Discourses devoted to political issues are divided into political, religious, and military discourses.

ORCID ID: [0009-0001-2498-8880](https://orcid.org/0009-0001-2498-8880)

Abstract: This article comparatively examines the deep linguistic relationships between the two main branches of the Turkic language family, the Oghuz and Kipchak groups. The research findings demonstrate that, despite having developed in different geographical environments and historical conditions, these languages have preserved a strong structural and semantic unity, particularly at the level of basic parts of speech. Comparisons made in the categories of nouns, adjectives, numerals, pronouns, and verbs reveal that the differences are mainly related to phonetic changes, while meaning and content largely remain unchanged. The study highlights that vocabulary related to the human body, elements of nature, and family concepts, as well as numeral systems and personal pronouns, constitute the most conservative layer of Turkic languages. The analysis of verbs reveals the action-oriented nature of Turkic thinking and shared patterns of expression. In conclusion, it is emphasized that Oghuz and Kipchak languages are based on a common genetic linguistic foundation and represent different developmental branches of a single language system.

Key words: Parts of Speech, Turkic Language family, Pronouns, Oghuz and Kipchak, Dialect Words.

OĞUZ VƏ QIPÇAQ QRUPLARINA MƏXSUS TÜRK DİLLƏRİNDƏ ORTAQ NİTQ VAHİDLƏRİ PROBLEMİ

Xülasə: Bu məqalədə türk dilləri ailəsinin iki əsas qolu olan Oğuz və Qıpçaq qrupu türk dilləri arasındakı dərin dil əlaqələri müqayisəli şəkildə araşdırılır. Tədqiqat nəticələri sübut edir ki, müxtəlif coğrafi mühitlərdə və tarixi şəraitlərdə formalaşmalarına baxmayaraq, bu dillər xüsusilə əsas nitq hissələri

səviyyəsində möhkəm struktur və məna birliyini qoruyub saxlamışdır. İsim, sifət, say, əvəzlik və feil kateqoriyaları üzrə aparılan müqayisələr fərqlərin daha çox səs dəyişiklikləri ilə bağlı olduğunu, məna və məzmunun isə əsasən olduğu kimi dəyişməz qaldığını ortaya qoyur. Məqalədə qeyd olunur ki, insan bədəni, təbiət elementləri və ailə anlayışları ilə bağlı söz ehtiyatı, həmçinin say sistemi və şəxs əvəzlilikləri türk dillərinin ən sabit qatını təşkil edir. Feillərin təhlili isə türk düşüncə tərzinin hərəkət yönümlü xarakterini və ortaq ifadə modellərini üzə çıxarır. Nəticə olaraq vurğulanır ki, Oğuz və Qıpçaq dilləri ortaq genetik dil bazasına söykənir və vahid bir dil sisteminin müxtəlif inkişaf istiqamətləri kimi formalaşmışdır.

Açar sözlər: Nitq hissələri, Türk dilləri ailəsi, əvəzliliklər, Oğuz və Qıpçaq, dialekt sözlər

Introduction

The Turkic language family represents one of the most widespread and historically deep-rooted linguistic groups, extending across vast geographical territories from Eastern Europe to Central Asia. Despite this wide dispersion and the influence of diverse historical, cultural, and sociopolitical factors, Turkic languages demonstrate a remarkable degree of structural and semantic unity. This unity is particularly evident in the two major branches of the family—the Oghuz and Kipchak groups—which, although shaped in different environments, retain strong traces of a shared linguistic origin. The study of relationships between these two branches is of significant importance for understanding both the historical development and the internal organization of Turkic languages. Oghuz languages, including Azerbaijani, Turkish, and Turkmen, and Kipchak languages, such as Kazakh, Kyrgyz, and Tatar, have evolved along distinct paths; however, their similarities at the level of core linguistic categories suggest the persistence of a common genetic foundation. These similarities are especially observable in fundamental parts of speech, where phonetic variation often masks deeper semantic continuity. In contemporary linguistics, comparative analysis serves as a key method for revealing such underlying connections. By examining lexical, morphological, and semantic features across related languages, researchers can identify both shared elements and points of divergence. In the case of Oghuz and Kipchak languages, comparisons within categories such as nouns, adjectives, numerals, pronouns, and verbs provide valuable insights into the stability and transformation of linguistic structures over time. This article aims to conduct a comprehensive comparative analysis of the Oghuz and Kipchak branches of the Turkic language family, focusing on their structural and semantic relationships. The research seeks to demonstrate that, despite phonetic differences and regional diversification, these languages preserve a high degree of unity in their core lexical and grammatical systems. By highlighting both common features and distinctive developments, the study contributes to a deeper understanding of the historical continuity and cognitive-linguistic foundations of Turkic languages.

Methodology and Materials

This study adopts a comparative-linguistic framework to investigate the structural and semantic relationships between the Oghuz and Kipchak branches of the Turkic language family. The research design is qualitative in nature, supported by systematic comparison of linguistic data across selected languages representing both branches. The primary aim of the methodology is to identify recurring patterns, correspondences, and divergences in core parts of speech, including nouns, adjectives, numerals, pronouns, and verbs. The methodological approach is multi-layered and integrates several complementary methods. First, the comparative method is employed as the principal analytical tool to examine similarities and differences between linguistic units. This method enables the identification of regular phonetic correspondences and stable semantic parallels across the two language groups. Second, a historical-comparative approach is utilized to trace the

origins of shared linguistic features and relate them to Proto-Turkic roots. This allows for the reconstruction of earlier stages of linguistic development and provides a diachronic perspective on the observed similarities. In addition, descriptive and structural analysis is applied to classify and interpret linguistic data within each language. This includes the examination of phonological, morphological, and lexical features, as well as their functional roles within the language system. Semantic analysis is also incorporated to explore meaning structures and to determine the extent to which conceptual categories are preserved across languages despite phonetic variation. Furthermore, elements of typological analysis are used to situate the Oghuz and Kipchak languages within the broader Turkic linguistic system and to identify shared structural principles. The materials of the study consist of lexical and grammatical data drawn from representative languages of both branches. For the Oghuz group, languages such as Azerbaijani, Turkish, and Turkmen are included, while the Kipchak group is represented by languages such as Kazakh, Kyrgyz, and Tatar. The data set focuses primarily on basic vocabulary and core grammatical categories, as these are considered the most stable and resistant to external influence. Examples include words related to the human body, natural elements, kinship terms, numerals, personal pronouns, and frequently used verbs. The selection of materials is based on their relevance to the research objectives and their significance within the linguistic system. Priority is given to units that demonstrate high frequency, historical depth, and cross-linguistic comparability. Linguistic data are collected from academic sources, including dictionaries, grammar descriptions, and previous comparative studies, ensuring both reliability and scholarly validity. Overall, the combined use of comparative, historical, descriptive, semantic, and typological methods provides a comprehensive analytical framework. This integrated methodology enables a thorough examination of both surface-level variation and deep structural unity between the Oghuz and Kipchak branches, thereby supporting the broader aims of the study. Basic vocabulary related to the human body, natural elements, and kinship terms represents the most stable layer of Turkic lexicon (Shcherbak, 1981; Ercilasun, 2004). These elements preserve ancient linguistic structures and demonstrate strong resistance to external influence.

Discussion

Although the Turkic language family has expanded over vast geographical territories throughout millennia, a notable degree of linguistic unity still persists between its two principal branches: the Oghuz languages (including Azerbaijani, Turkish, Turkmen, and others) and the Kipchak languages (such as Kazakh, Kyrgyz, Tatar, and related varieties). This structural closeness is particularly visible in the most stable layers of language, especially within core parts of speech that are less susceptible to external influence and rapid change. Despite the fact that these language communities have developed in different regions and have been shaped by diverse climatic, historical, political, and cultural conditions, the similarities in how Oghuz and Kipchak Turkic speakers perceive, categorize, and name the surrounding world point to the existence of a deep-rooted linguistic continuity. This continuity is often described in linguistic research as a form of shared “genetic memory” of the Turkic languages, reflecting their common Proto-Turkic origin and long-term historical unity. Such unity is not confined solely to lexical correspondences; rather, it extends to broader patterns of semantic organization and conceptualization. In other words, it reflects a shared cognitive framework and a set of cultural codes that are expressed in different phonetic and morphological forms across various Turkic dialects. This suggests that, beyond surface-level differences, Turkic languages preserve a common way of structuring human

experience and interpreting reality. When the Oghuz and Kipchak branches are compared in detail, it becomes evident that nouns-serving as the primary linguistic means of naming entities—function not merely as communicative units but also as components of a deeper system that reflects how speakers conceptualize the world. Basic vocabulary, particularly words related to the human body (such as “head,” “hand,” “eye”), fundamental natural elements (such as “water,” “stone,” “earth”), and kinship relations (such as “mother,” “father,” “child”), represent the most stable and resistant layer of the lexicon. These terms tend to undergo minimal change over time, thereby preserving ancient linguistic structures and offering valuable evidence of the historical unity of the Turkic language family.

The process of naming and conceptualizing the world in Turkic languages encompasses not only the designation of objects but also a rich system of adjectives that express qualities, colors, and other perceptual characteristics. These elements form a fundamental layer of vocabulary that plays a crucial role in revealing the structural unity among Turkic languages. Within the Turkic cognitive and linguistic worldview, colors and descriptive attributes are not limited to their literal visual function; rather, they often carry additional symbolic, cultural, and sometimes even emotional meanings that have developed over long historical periods. For example, basic color terms such as “ağ” (white) and “qara” (black) in Azerbaijani correspond to “ak” and “kara” in many Kipchak languages. The remarkable stability of these lexical items across different Turkic branches indicates that such words belong to the most ancient stratum of the shared Turkic lexicon. These terms have preserved their phonetic and semantic identity for millennia, demonstrating a high degree of resistance to external linguistic influence and internal change. Similarly, a significant portion of vocabulary related to fundamental human perception—such as height, size, color intensity, taste, and spatial orientation—can be traced back to common Proto-Turkic roots. Words expressing notions like “big/small,” “high/low,” or “sweet/bitter” often show systematic correspondences across Oghuz and Kipchak languages, even when surface forms differ due to phonological evolution or dialectal divergence. At the same time, it is important to acknowledge that lexical variation does exist. These differences are often the result of long-term geographic separation, interaction with neighboring language families, and internal developments within each Turkic branch. For instance, the Azerbaijani “uca” may correspond to “biyik” in some Kipchak varieties such as Tatar, while “kiçik” may appear as “keçe” or other regional variants. Despite these divergences, the underlying semantic core remains largely consistent, which allows speakers to recognize conceptual similarities even when exact forms differ. This structural and semantic continuity is particularly significant because it suggests a latent capacity for mutual intelligibility among Turkic languages at the level of basic vocabulary. In many cases, speakers of different Turkic languages can grasp the general meaning of expressions without formal translation, especially when communication involves core descriptive and everyday lexical items. Therefore, the observed similarities are not only of linguistic interest but also serve as evidence of a shared cognitive and cultural framework that continues to connect Turkic-speaking peoples across different regions.

When an Azerbaijani Turk interacts with a Tatar or any other representative of the Kipchak branch, they often rely on remarkably similar linguistic means when describing their surroundings, especially in expressing notions of color, quality, and general perception. This similarity is not accidental; it reflects deep historical connections and a shared cultural-linguistic heritage that has been preserved across centuries of divergence within the Turkic language family. Such correspondences demonstrate that collective historical and cultural memory is embedded in the

most stable layers of language, particularly in its core lexical and grammatical structures, including fundamental parts of speech. Words denoting basic sensory perceptions, qualities, and descriptive categories tend to remain more resistant to change, thereby preserving traces of ancient linguistic unity. From this perspective, the lexical and semantic parallels between Oghuz and Kipchak Turkic languages reveal more than just superficial resemblance; they indicate a common conceptual system through which speakers categorize and interpret reality. This shared cognitive framework suggests that, despite geographical separation and historical differentiation, these communities continue to encode their experiences of the world in closely aligned linguistic patterns. Ultimately, this lexical and semantic cohesion provides a strong linguistic and cultural basis for the idea of broader Turkic integration. It highlights not only mutual intelligibility at certain levels of communication but also a deeper alignment in worldview formation. The persistence of such common structures supports the view that Turkic-speaking peoples, including Azerbaijani Turks and Tatars, maintain a historically rooted unity in how they perceive, conceptualize, and linguistically represent reality.

In Turkic languages, the numeral system is particularly conservative in nature. Although other parts of speech have historically been influenced by Arabic, Persian, Russian, and European languages during various stages of development, numerals have largely preserved their original structure with minimal change. A comparison between the Oghuz and Kipchak groups shows that the basic numbers from one to ten differ only slightly in phonetic form. For example, the word “bir” (one) is identical in both groups. In Azerbaijani, “iki” corresponds to “eki” in Kazakh, while “yeddi” (seven) appears as “jeti” in Kyrgyz. The “y-j” and “i-e” shifts represent only phonetic variations and do not affect the concept of quantity itself. This similarity indicates that Turkic peoples have historically operated with a unified numerical system since ancient times.

Verbs constitute the most dynamic and central component of Turkic languages. Since Turkic thought perceives the world primarily through action, verbs hold special importance and demonstrate a high degree of stability. Differences in verb forms between the Oghuz and Kipchak groups are mostly phonetic. For instance, the verb “to go” appears as “getmæk/gitmæk” in Oghuz languages and as “ketü/kitü” in Kipchak languages. The verb “to come” corresponds to “gəl” and “kel,” while “to drink” appears as “içmæk” in Oghuz and in some Kipchak varieties as “işü.” The verb “to die” has remained almost unchanged across Turkic languages. Similarly, verbs such as “to look” and “to lie/sleep” show only minimal phonetic variation (yat/jat, bax/baq). This demonstrates that the concept of action is encoded within a shared structural system in Turkic languages. These lexical and grammatical parallels reveal the deep historical and genetic unity of Turkic languages. This unity functions not only at the linguistic level but also as a continuation of a shared cognitive and cultural system, providing a strong scholarly foundation for the future integration of the Turkic world. A systematic comparison of lexical categories-including nouns, adjectives, numerals, pronouns, and verbs-demonstrates that the differences between the two groups are predominantly phonetic rather than semantic. In other words, variations are mostly observed in pronunciation, sound shifts, and minor morphological adaptations, while the underlying meanings, conceptual structures, and cognitive representations remain largely consistent. This suggests that the divergence between Oghuz and Kipchak languages is superficial in form but deeply unified in function and meaning. The study particularly emphasizes that vocabulary related to fundamental human experiences-such as the human body, natural elements (earth, water, fire, sky), and kinship or family relations-constitutes the most stable and least changeable lexical layer across both branches. These semantic domains appear to be resistant to external linguistic influence, preserving

ancient Turkic conceptualizations of the world. Similarly, numeral systems and personal pronouns exhibit exceptional stability, reflecting an early-established cognitive and communicative framework that has been transmitted with minimal structural alteration across centuries. Similarly, numeral systems across Turkic languages show remarkable consistency, differing mainly in pronunciation (Cavadov, 2010). The analysis of verbs further reveals a shared action-oriented cognitive model characteristic of Turkic languages. Verbal systems in both Oghuz and Kipchak groups demonstrate a strong emphasis on movement, process, and dynamic action, suggesting that Turkic linguistic thought conceptualizes reality primarily through change and activity rather than static description. Despite phonetic divergences in specific verb forms, the core verbal roots and grammatical functions remain highly recognizable across both branches.

Conclusion

This article provides a comparative linguistic analysis of the deep structural relationships between the Oghuz and Kipchak branches, which constitute the two major subdivisions of the Turkic language family. By examining these two groups within a historical-comparative framework, the study aims to identify both shared linguistic foundations and divergent developments that have emerged over time due to geographical dispersion, sociopolitical influences, and contact with neighboring language families. The findings of the study indicate that, despite their development across vast and diverse geographical regions and under varying historical and cultural conditions, the Oghuz and Kipchak languages have retained a remarkably strong degree of structural and semantic unity. This unity is particularly evident in the core components of grammar, especially at the level of fundamental parts of speech. Even though external influences from languages such as Arabic, Persian, Russian, and various European languages have affected certain lexical layers in different periods, the essential grammatical architecture of these Turkic branches has remained comparatively stable. In conclusion, the study reinforces the view that the Oghuz and Kipchak languages are historically grounded in a common genetic linguistic foundation. Their current differences represent divergent evolutionary pathways rather than separate origins. These branches can therefore be understood as distinct yet closely related developments within a single, originally unified Turkic language system. This shared foundation not only highlights their linguistic kinship but also provides important insights into the historical continuity, cognitive unity, and cultural coherence of Turkic-speaking peoples.

THE ARTISTIC AND STYLISTIC FEATURES OF MAMMAD ARAZ'S POETIC LANGUAGE

Elnura JAVADOVA

Azerbaijan University

E-mail: elnura.javadova@au.edu.az

ORCID ID: 0009-0001-5179-2963

Abstract: This article examines the stylistic and artistic features of the poetic language of Mammad Araz (1933-2004), one of the outstanding representatives of twentieth-century Azerbaijani literature. The study employs stylistic and linguistic analysis as its primary methodology, drawing on a representative corpus of the poet's collected works. The research focuses on the poet's skillful use of lexical richness, rhyme systems, repetition (anaphora, epiphora), antithesis, metaphor, metonymy, hyperbole, litotes, and personification. It is demonstrated that repetition occupies a central place in Araz's individual creative style, forming the stylistic foundation of his poetry: statistical analysis reveals, for instance, that the word "Azerbaijan" is used as an artistic refrain nine times in a single poem, while the expression "this evening" recurs fifteen times in another. The article also analyses the poet's philosophical approach to language and imagery, including the Human–Stone and Human–Tree oppositions rooted in national mythological thinking, as well as the rich deployment of symbolism through images of the Araz River, mountains, and birds. Special attention is paid to the use of the first-person pronoun as a means of expressing self-awareness and national identity. The originality of the poet's syntactic structures and the emotional intensity of his verse are likewise discussed. The study concludes that Mammad Araz's creative language serves as an exemplary model of Azerbaijani literary language and remains a unique phenomenon in the national poetic tradition.

Keywords: Məmməd Araz, poetic language, artistic figures, repetition, antithesis, metaphor, Azerbaijani poetry

MƏMMƏD ARAZIN POETİK DİLİNİN BƏDİİ VƏ ÜSLUBİ XÜSUSİYYƏTLƏRİ

Elnurə CAVADOVA

Azərbaycan Universiteti

E-mail: elnura.javadova@au.edu.az

ORCID ID: 0009-0001-5179-2963

Xülasə: Bu məqalədə XX əsr Azərbaycan ədəbiyyatının görkəmli nümayəndələrindən biri olan Məmməd Arazın (1933-2004) poetik dilinin bədii-üslubi xüsusiyyətləri araşdırılır. Tədqiqatda üslubi və linqvistik təhlil metodlarından istifadə edilmiş, şairin seçilmiş əsərləri korpusu əsasında araşdırma aparılmışdır. Şairin leksik zənginlikdən, qafiye sistemindən, bədii təkrirdən (anafora, epifora), antitezadan, metafora, metonimiya, mübaligə, litota və şəxsləndirmədən istifadə məharəti əsas diqqət mərkəzinə alınır. Sübut olunur ki, təkrir M. Arazın fərdi yaradıcılıq üslubunda mərkəzi yer tutur və onun şeirinin üslubi əsasını təşkil edir: statistik təhlil göstərir ki, bir şeirdə "Azərbaycan" sözü doqquz dəfə, digər şeirdə isə "bu axşam" ifadəsi on beş dəfə bədii təkrir kimi işlədilir. Məqalədə həmçinin şairin milli mifoloji düşüncəyə söykənən İnsan-Daş, İnsan-Ağac

opponentlikləri daxil olmaqla obrazlılığa fəlsəfi yanaşması, həmçinin Araz çayı, dağ, quş kimi təbiət obrazları əsasında zəngin simvolizm sistemi təhlil edilir. "Mən" şəxs əvəzliyinin özünüdərk və milli kimlik ifadəsi kimi işlənməsinə xüsusi diqqət ayrılır. Şairin sintaktik quruluşunun orijinallığı və misralarının emosional intensivliyi də araşdırılmışdır. Tədqiqat nəticəsində belə qənaətə gəlinir ki, Məmməd Arazın yaradıcılıq dili Azərbaycan ədəbi dilinin nümunəvi modeli kimi xidmət edir və milli poetik ənənədə yeganə bir hadisə olaraq qalır.

Açar sözlər: Məmməd Araz, poetik dil, bədii fiqurlar, təkrir, antiteza, metafora, Azərbaycan poeziyası

Introductionn

To characterize Mammad Araz merely as “a poet who writes poetry” would be to underestimate the magnitude of his poetic universe. As the poet himself asserted, a true poet is one who embarks on a quest for words, pursues them persistently, and engages in continuous creative effort. However, in the case of M. Araz, it appears not that he searches for words, but rather that words find him. It is difficult to conceive of him as someone who labors to discover or shape language; instead, his entire cognitive, emotional, and expressive being is intrinsically poetic in nature. “Mammad Araz, descended to Earth as if a particle of the divine, became a classic during his lifetime not only due to his poetic talent, but also owing to his profound capacity for love toward his homeland, his nation, his land, and humanity as a whole” (Abbas, 2004, p. 6).

Materials and methods

In our view, in the creative work of Mammad Araz, words are selected with such mastery that they appear to be woven like delicate and refined threads carrying a profound meaning. In his poetry, lexical units are employed with such subtlety and precision that they seem to form one of the most accomplished artistic models of the Azerbaijani language. The precise selection of words in accordance with their semantic load, as well as the use of concise and expressive linguistic means to convey meaning, constitute one of the principal artistic features of M. Araz's oeuvre. At times, even the skillful employment of rare lexical items clearly demonstrates the richness of his vocabulary.

In lines such as:

*“Haray durnam, qatarımı itirdim,
Havar çəkdim, havarımı itirdim,
Dalğasında avarımı itirdim.” (Mammad Araz, 1986, p. 480)*

*“Keçməzliyə keçid olan
Çəhlimlərin açarını.” (Mammad Araz, 1997, p. 74)*

“Girəvə-mariqda yatar birisi.” (Mammad Araz, 1997, p. 74)

expressions are used that fully demonstrate the lexical and semantic richness of the native language, as well as its formal aesthetic beauty. One of the distinctive features of M. Araz's poetry is that words are carefully selected and positioned in accordance with the idea and content he intends to express, resulting in each lexical unit fully conveying its deep semantic load. In his poetry, there is never any arbitrary placement of words; each word is chosen with a precise artistic function and occupies a well-defined semantic position.

Results and discussion

In the poetry of Mammad Araz, full rhyme in terms of phonetic correspondence between words is almost absent. In his creative work, rhymes are predominantly formed through the semantic and conceptual proximity of words rather than through strict phonetic similarity. The poet himself addresses this issue in his poem “Old Rhymes – Pebbles of the Riverbed”:

Canını qurtaraq "Azərbaycanın."
Daş əzdi, qum sıxdı – yağ alınmadı,
Heybəli, xurcunlu, çarılıq şeim.
Nə qədər çalışdım "ağ" alınmadı
Köhnə qafiyəsiz darıxdı şeim. (Mammad Araz, 1986, pp. 168–169)

However, this does not imply that the poet completely avoids full rhyme. In his oeuvre, it is possible to identify some of the most refined and substantial examples of rhyme. Rhyme is also an aesthetic phenomenon, associated with auditory perception, aesthetic impact, a sense of beauty, and artistic value.

In the poetry of Mammad Araz, a wide range of artistic and expressive means is employed, including unusual metaphors, symbolization, stylistic diversity, striking contrasts, metrical devices, and similes. A notable example of antithesis can be found in the poem “My Village, You Are Small, Very Small”:

Elə qorxular var, qorxulu deyil,
Elə qorxular var, qorxuya sığmaz.
Böyük dünyamızın kiçik dərdləri
Böyük dərdlərindən daha böyükdür. (Mammad Araz, 2004b, p. 224)

“Antithesis, while distinguishing opposing concepts from one another, is also used to create stylistic effect. In works on literary studies and stylistics, antithesis is defined as a figure formed through antonymic words, images, and situations...” (Efendiyeva, 1980, p. 71). The author not only appropriately employs lexical oppositions such as “big” and “small” within a single stanza, but also succeeds in creating more nuanced and compelling antithetical relations even within individual lines.

Another stylistic device that attracts particular attention in the poet’s work is repetition. As is well known, “repetition arises from the demands of content, logical idea, and descriptive detail, as well as from the requirements of the depicted scene and imagery” (Hajiyev, 1999, p. 226). In the creative work of Mammad Araz, repetition is used with remarkable artistic mastery:

Mən neçə yol danışmışam Arazla...
Hansı dillə danışmışam? –
Bilmirəm!
Quş dilində danışmışam
Bilmirəm!
Daş dilində danışmışam –
Bilmirəm!
Mən neçə yol danışmışam Arazla (Mammad Araz, 2003, p. 136)

This example may be regarded as one of the most illustrative instances demonstrating how skillfully Mammad Araz employs the lexical and stylistic richness of the native language. The repetition of the word “danışmışam” (“I have spoken”) is particularly noteworthy, and the first and last lines are also used as refrains. In addition, through the use of words such as “quş” (bird) and

“daş” (stone), which generate alliteration, the poet creates internal rhyme, while metaphorical expressions such as “quş dili” (“bird language”) and “daş dili” (“stone language”) are skillfully employed as symbolic constructs.

In the poem “Ballad of One Evening,” the poet uses the expression “this evening” fifteen times in order to convey his ideas more effectively and emphatically. Similarly, in the poem “Azerbaijan – My World,” a statistical analysis reveals that the word “Azerbaijan” is repeated nine times. Based on such analyses, it can be firmly concluded that repetition functions as one of the most refined and dynamically employed stylistic devices in M. Araz’s poetic language.

In the creative work of Mammad Araz, the personal pronoun “I” performs a specific and significant function. In linguistic philosophy, the pronoun “I” is considered an expression of self-awareness; in literary discourse, however, it signifies awakening and intellectual revival. In the poem “It Affected Me, It Struck My Brother,” the pronoun “I” is used 19 times as a form of artistic repetition. In this poem, the words “you” and “I” not only function as repetition but also serve as an artistic antithesis.

In his works, examples of hyperbole and litotes can also be observed. The poem “Stone Eagle,” entirely constructed on hyperbolic imagery and striking metaphors, serves as a prominent example:

*O, daşdan yonulub dağ zirvəsində,
Baxış qəzəbli, duruşu məğrur.
Elə dartınıb ki, yan-yörəsindən
Qoca qartallar da uçmağa qorxur. (Mammad Araz, 2004a, p. 55)*

From the perspective of litotes, an example can be found in the poem “These Lands, Those Lands”:

*O zaman yarpaqlar biri bir palaz,
İndiki yarpaqlar qulaq boydadı (Mammad Araz, 2004a, p. 61).*

As an example of an interesting metaphor, the following lines may be cited:

*Bir alim dilindən qopdu qığılıcı,
Oyandı hövlanak daş qərinələr (Mammad Araz, 2004a, p. 103).*

From the perspective of metonymy, the following lines are notable:

*Heyrətindən donmuş idi Dəlidağ
Nəfəs çəkib işqırırdı od-ocaq
Təbriz ağlayırdı dağlar başında (Mammad Araz, 2004a, p. 61).*

In the creative work of Mammad Araz, it is clearly observable that literary devices such as metaphor, metonymy, and personification – understood as processes of transfer, substitution, or semantic reconfiguration of features are employed extensively. In his poetry, one encounters striking examples of highly sophisticated imagery and its most complex forms, created with remarkable artistic mastery.

The emergence of such unique poetic structures is, on the one hand, associated with the poet’s individual cognitive style and philosophical outlook, and on the other hand, with his boundless imagination, poetic competence, and, most importantly, his ability to deeply observe and express associative relations, similarities, and conceptual links within the surrounding world. For this reason, nature, the world, and existence are presented in his work as a unified whole: human beings, nature, and the universe appear as an integrated entity, while humans are depicted in associative connection with springs, stones, rocks, trees, shrubs, and other natural elements.

In our view, the primary and most fundamental source of this poetic worldview lies in the poet's philosophical thinking and system of perception. Metaphysics, metaphysical orientation, and belief occupy a central place in his intellectual framework, and correspondingly, such literary devices play a significant role in his poetic system, generating a distinctive artistic dynamism. Consequently, oppositional constructs such as "Human–Stone" and "Human–Tree" hold particular importance in his philosophical-aesthetic conception, carrying profound semantic significance.

The poet's frequent engagement with folklore traditions, especially legends, can also be explained within this framework. In folk cultural consciousness, particularly in Azerbaijani oral tradition, there exists a belief in the transformation of humans into stones, rocks, birds, or trees, which reflects the symbolic embodiment of values. Similar notions of the transformation of the human soul into natural or animal forms are also present in ancient Indian philosophy. These ancient philosophical beliefs are ultimately rooted in the idea of the immortality of the soul, which explains the frequent appearance of transformation motifs in myths and legends.

It appears that such beliefs also influenced M. Araz's poetic imagination. Undoubtedly, the strong emotional attachment to values and beloved individuals may have played a significant role in the formation of such worldview tendencies within folk belief systems. Human life, as a limited temporal experience, cannot be regarded as absolute existence; therefore, in the poetic and philosophical system of Mammad Araz, values such as morality, ethics, and humanism are consistently represented as enduring and immutable principles.

In his poetic worldview, possibly under the influence of such philosophical and metaphysical orientations, comparisons such as "Human–Mountain," along with metaphorical constructions and symbolic representations, occupy a central position. In many of his poems dedicated to mountains, the projection of human character traits onto natural entities or their comparative representation is particularly evident.

Overall, from the perspective of the highly sophisticated artistic realization of the Azerbaijani language as a mother tongue, the creative work of Mammad Araz holds a distinctive and exceptional value. It should even be emphasized that, in his poetry, the Azerbaijani language appears as a medium through which a higher spiritual expression is realized. It is not accidental that, due to the uniqueness of his syntactic structure and the elevated philosophical meanings expressed in his language, his works occupy a prominent position in Azerbaijani literature, following such masters as Nizami Ganjavi and the great romantic poet Huseyn Javid.

Numerous examples demonstrate that the poetic lines of M. Araz are often indistinguishable from proverbs and aphorisms, as they immediately acquire the status of wise sayings upon their creation. In general, his poetry represents one of the most refined examples of linguistic conciseness, achieved through masterful utilization of all stylistic possibilities of the Azerbaijani language. His pursuit of linguistic purity, particularly his sensitivity toward the use of loanwords, makes his individual style and pure language a model for contemporary Azerbaijani literary expression. By effectively employing the internal expressive potential of the native language, his creative output stands as an exemplary model of perfect linguistic and artistic articulation.

Conclusionn

Based on the conducted research, it is possible to draw the following conclusion: the lexical richness of the poetic language of Mammad Araz represents one of the highest manifestations of the stylistic potential of the Azerbaijani language. Stylistic repetition constitutes a fundamental

component of the poet's individual creative style, while antithesis, metaphor, metonymy, hyperbole, and personification form an essential part of his figurative arsenal.

The poet's philosophical worldview has left a profound imprint on his poetic imagery, and the Human–Nature unity has become a dominant concept in his creative output. Syntactic originality, symbolic depth, emotional intensity, and the fusion of patriotic lyricism with humanistic pathos collectively define M. Araz's poetic language as a unique and irreplaceable phenomenon in Azerbaijani literature.

Abstract. The article examines the language game as an important element of advertising. Advertising texts containing various types of language games-lexical and graphic means - are examined. The development of the concept of "language game" in linguistics is analyzed.

Nowadays, it is impossible to live without advertising. Not so long ago, advertising was a novelty for Russian consumers, but since then it has become an integral part of our lives.

Modern advertising is a multidimensional phenomenon and attracts the attention of specialists from various fields - linguists, psychologists, cultural scientists and sociologists. The language of advertising directly responds to the emergence of new ideas and events, and changes in all spheres of life are inevitably reflected in the advertising text. Advertising creates beautiful legends and fairy tales about products, services and companies. It often exaggerates the benefits of the product and hides its negative qualities.

People need imagination, and advertising tries to make users feel almost happy by creating images of an ideal, friendly family, a beautiful woman or a strong man. When consumers understand

the advertising message, they must transfer positive emotions from the advertisement to the product itself, which subsequently influences their choice and is often subconscious.

Keywords: multidisciplinary, research, lexical-semantic, cognitive, functional

MÜASİR DİLÇİLİK ƏDƏBİYYATINDA REKLAMLARDA SÖZ OYUNLARI

Elzanə Məmməd MUSAYEVA

Xülasə. Məqalədə reklamın vacib elementi kimi dil oyunu araşdırılır. Müxtəlif dil oyun növləri - leksik və qrafik vasitələr-olan reklam mətnləri araşdırılır. Dilçilikdə "dil oyunu" anlayışının inkişafı təhlil edilir.

İndiki vaxtda reklamsız yaşamaq mümkün deyil. Çox keçməmiş reklam rus istehlakçıları üçün yenilik idi, lakin o vaxtdan bəri həyatımızın ayrılmaz hissəsinə çevrilib.

Müasir reklam çoxölçülü bir fenomendir və müxtəlif sahələrdən olan mütəxəssislərin - dilçilərin, psixoloqların, mədəniyyətşünasların və sosioloqların diqqətini cəlb edir. Reklam dili yeni ideyaların və hadisələrin yaranmasına birbaşa reaksiya verir və həyatın bütün sahələrindəki dəyişikliklər qaçılmaz olaraq reklam mətnində əks olunur. Reklam məhsullar, xidmətlər və şirkətlər haqqında gözəl əfsanələr və nağıllar yaradır. O, tez-tez məhsulun faydalarını şişirdir və mənfə keyfiyyətlərini gizlədir.

İnsanların təxəyyülə ehtiyacı var və reklam ideal, mehriban bir ailə, gözəl bir qadın və ya güclü bir kişi obrazları yaratmaqla istifadəçiləri demək olar ki, xoşbəxt hiss etməyə çalışır. İstehlakçılar reklam mesajını başa düşərkən reklamdan müsbət emosiyaları məhsulun özünə ötürməlidirlər ki, bu da sonradan onların seçiminə təsir göstərir və çox vaxt şüuraltı olur.

Introduction

In modern linguistic literature, there are various interpretations of the term "language game". Most linguists agree that language game is a form of linguistic-creative activity or psycholinguistics, associated with the deliberate violation of linguistic and speech norms and aimed at achieving a certain effect.

However, a language game should not be perceived as a speech error, and any impact and perceptual effect will be achieved only if the listener/reader/viewer is ready to perceive it adequately, which in turn depends on both the level of language proficiency of both parties, as well as on the cultural features familiar to native speakers of a particular language. A fairly clear example is the American version of English, where there is a wide variety of advertising tools and numerous speech and written accents that allow their use in accordance with the linguistic requirements of dialectal, that is, social, gender and individual characteristics (Abramov, V. E., 2004).

The main goal of advertising text is to attract the attention of the target audience and motivate them to take specific actions. As for language play, its main goal is expressiveness.

Methodology and Materials

This common purpose of the two components - advertising text and language game - gives reason to conclude that advertising text is a fruitful field for its application.

Language game in advertising texts maximizes information content and emotional appeal, which allows you to attract as many users as possible, which, in turn, is the main goal of advertising.

It follows that in order to create a unique and inimitable advertisement, its creators will, among other things, resort to the most appropriate linguistic means - language game - and deliberate violation of language norms and rules, since language game techniques in advertising allow you to have the maximum impact on the audience (Shvechov, I. V., 2010).

Modern linguists distinguish a large number of types of language games; this article will examine the orthographic, morphological, syntactic, stylistic and verbal types of language games.

Language games are found in modern advertising texts at almost all language levels. Advertising texts of both languages are characterized by the presence of language games at almost all language levels: phonetic (alliteration, assonance), lexical and phraseological (neologisms, idioms), semantic (paradox), stylistic (word play, slang, borrowings), which gives grounds to assess the penetration of language games into all layers of the language system of the Russian and English languages. Some linguistic devices are reflected in Russian and English advertising texts: repetition of sounds, homonymy, paronymic attribute, lexical repetition, borrowings, punctuation marks and font changes, intentional spelling errors, replacement of letters with graphic elements, word games (Lazovskaya, N. V., 2007).

Discussion

Leech identifies four key attributes of successful advertising, each of which influences the linguistic means that should be used (Leech, G., 1966).

Attention-grabbing: The advertisement should arouse interest and attract attention. In the context of language, this is usually achieved by breaking traditional language rules - for example, by deliberately making spelling mistakes, using puns and ambiguous words, rhyming text, and using neologisms and informal vocabulary.

Ease of perception: Once the advertisement has captured the reader's interest, it must be maintained, given that consumers always seek the shortest and simplest summary of information. Therefore, advertising is usually stylistically "colloquial", using mainly common vocabulary and often addressing the reader directly. This simplicity also serves another purpose: by using simple, informal vocabulary in the formal context of a consumer-oriented business, the advertisement creates a sense of informality and ease of perception, thereby artificially "bringing" the consumer and the advertiser closer together.

Memorability: It is clear that in order to be effective, an advertisement must be easily remembered and retained in the reader's memory. The most commonly used mechanism in advertising to improve perception and, consequently, memorability is speech repetition. In psycholinguistics, some linguistic mechanisms themselves involve repetition to varying degrees, and it is natural that advertising widely uses such techniques as alliteration (repetition of the first sound), rhythm (several words or phrases with the same rhythm), rhyme (repetition of the same sound ending), grammatical parallelism (repetition of the same grammatical structure), as well as semantic, syntactic and lexical repetition. These types of repetition are often combined.

The importance of repetition as an indicator of advertising effectiveness is also confirmed by the fact that the very concept of advertising implies that slogans and brand names are constantly being delivered to consumers from all possible sources, that is, they are "repeated" in a way.

Persuasiveness: The main purpose of advertising is to sell a product. Consumers can be encouraged to make a purchase by giving direct instructions on what to do. Slogans in the imperative mood are also known as imperatives and clearly convey the actions expected of them. The effective use of imperatives increases the "familiarity" effect inherent in the use of informal language, thereby increasing the chances of selling the product.

Another important component of persuasive advertising is to focus on the positive aspects of the product. Negations and negative aspects are avoided, except when they are deliberately done to surprise. At the lexical level, in the context of advertising language, this means avoiding negatives and using only words with positive meanings whenever possible. Positive adjectives play a key role in this process [Leech, G., 1966]. Leech identifies the following words as the most common words in advertising: new, good, better, best, sure, delicious, free, fresh, nice [Leech, G., 1966].

Advertising language has been proven to be a natural language with all the various figurative and expressive means used to convey targeted information about various objects that act as products in a market economy.

Conclusion

Advertising texts successfully use many natural language tools, which allows us to classify language game techniques and determine their functional characteristics in the advertising context - that is, how a particular linguistic mechanism contributes to the ultimate advertising goal. It should be noted that this article does not present a complete range of techniques, but rather a classification of the most common mechanisms used by advertisers today.

It is important to note that several techniques can be used simultaneously in one advertising message. The simultaneous use of several techniques increases its impact on the consumer, and for researchers this confirms the multifunctionality of the language game phenomenon and the multifaceted nature of psycholinguistic factors affecting the effectiveness of perception.

SUBSTANTIVE PHRASEOLOGICAL UNITS EXPRESSING HUMAN CHARACTER: A COMPARATIVE ANALYSIS IN ENGLISH AND AZERBAIJANI

Aynura KHANLAROVA

PhD student at Azerbaijan University of Languages

Lecturer at Sumgait State University

E-mail: aynure.kh@gmail.com

ORCID ID: 0000-0002-3696-697X

Abstract: Substantive phraseological units are generally defined as phraseological expressions functionally related to nouns, in which the main component is a noun. In both English and Azerbaijani, these units constitute one of the relatively smaller groups among structural-grammatical types. They are represented by both two-component and multi-component constructions and exhibit a variety of structural patterns. Substantive phraseological units can express characteristics related to humans, animals, as well as inanimate entities. Those reflecting aspects of a person's character, social behavior, and psychological qualities are often formed on a metaphorical basis and, in this regard, may convey both positive and negative evaluative features. Thus, like other phraseological units, substantive phraseological units enhance expressiveness, imagery, and the emotional impact of speech, while also playing an important role in enriching language as stable lexico-semantic units in communication. They perform not only a nominative function but also an evaluative function and, most importantly, possess a specific pragmatic effect. In general, comparative analysis across languages of different systems demonstrates that, alongside the presence of metaphorical models, substantive phraseological units also reflect national and cultural specificity. It should be emphasized that while some of these units exhibit full semantic equivalence, others demonstrate partial equivalence or clear national-cultural specificity. This, in turn, confirms that interlingual differences are shaped not only at the lexical level but also at cultural and cognitive levels.

Key words: substantive phraseological units, semantic parallelism, metaphor, zoonym, national and cultural characteristics, contrastive linguistics

İNSAN XARAKTERİNİ İFADƏ EDƏN SUBSTANTİV FRAZEOLÖJİ VAHİDLƏR: İNGİLİS VƏ AZƏRBAYCAN DİLLƏRİNDƏ MÜQAYİSƏLİ TƏHLİL

Aynura XANLAROVA

Azərbaycan Dillər Universitetinin doktorantı

Sumqayıt Dövlət Universitetinin müəllimi, Azərbaycan

ORCID ID: 0000-0002-3696-697X

Xülasə: Substantiv frazeoloji vahidlər adətən isimlərlə funksional olaraq əlaqəli olan və əsas komponenti isim olan frazeoloji ifadələr kimi müəyyən edilir. Bu frazeoloji vahidlər həm ingilis, həm də Azərbaycan dillərində struktur-qrammatik tiplər arasında ən kiçik qrupu təşkil edir. Onlar iki komponentli və çoxkomponentli konstruksiyalarla təmsil olunur və müxtəlif struktur nümunələri nümayiş etdirir. Substantiv frazeoloji vahidlər insanlarla, heryvanlarla və eləcə də cansız varlıqlarla bağlı xüsusiyyətləri ifadə edə bilər. İnsanın xarakteri, sosial davranışı, eləcə də psixoloji keyfiyyətləri ilə bağlı aspektləri ifadə edən substantiv frazeoloji vahidlər çox vaxt metaforik əsasda formalaşır və bu baxımdan həm müsbət, həm də mənfi qiymətləndirici xüsusiyyətləri əks etdirə bilər. Beləliklə, digər frazeoloji vahidlər kimi substantiv frazeoloji vahidlər də nitq prosesində ifadəliliyi, obrazlılığı və emosional təsirin gücünü artırmağa xidmət edir və kommunikasiya baxımından sabit leksik-semantik vahidlər kimi nitqin zənginləşməsində mühüm rol oynayır. Substantiv frazeoloji vahidlər yalnız nominativ funksiya yerinə yetirmir, həm də qiymətləndirici funksiya daşıyır və ən əsası, spesifik pragmatik təsirə malikdir. Ümumilikdə, müxtəlif sistemli dillər üzrə müqayisə aparıldıqda bir daha aydın olur ki, substantiv frazeoloji vahidlərdə metaforik modellərin mövcudluğu ilə yanaşı, milli-mədəni spesifikliyin təzahürü də özünü göstərir. Vurğulamaq lazımdır ki, bəzi substantiv frazeoloji vahidlər semantik baxımdan tam uyğunluq təşkil etsə də, digərlərində qismən ekvivalentlik və ya milli-mədəni spesifiklik müşahidə olunur. Bu isə dillərarası fərqlərin yalnız leksik səviyyədə deyil, həm də mədəni və idrak səviyyəsində formalaşdığını sübut edir.

Açar sözlər: substantiv frazeoloji vahidlər, semantik paralelizm, metafora, zoonim, milli-mədəni xüsusiyyətlər, müqayisəli dilçilik

Introduction

Phraseological units are linguistic units that exist in a ready-made form in a language, but in certain situations, they may still undergo certain changes, specific modifications. Phraseological units being closely related to the history, life, spirituality, ethics of people, play the role of an ornament of the language, enrich the language, make it even more original. However, it should be noted that although phraseological units enhance the expressiveness, imagery, and richness of language, they may create certain difficulties in comprehension during intercultural communication, particularly in direct interaction. This is because phraseological units inevitably reflect the national and cultural values of the society. As V.N.Teliya points out, the phraseological composition of a language serves as a mirror in which the unity of language and culture, as well as national self-identification, is reflected (Телия, 1996, с.9). It is precisely through phraseological units that speakers develop and convey a particular way of perceiving the world and interpreting situations.

As is well known, the number of comparative studies conducted on languages of different systems is steadily increasing, and approaches to phraseological units from various perspectives are becoming more extensive in the works of different scholars and researchers. Among the comparative studies devoted to substantive phraseological units, the works of L.R.Sakaeva and E.F.Arsentieva should be particularly noted. E.F.Arsentieva has carried out comparative phraseological research primarily on English and Russian languages. In contrast, L.R.Sakaeva conducted a trilingual comparative study, analyzing and comparing substantive phraseological units in English, Russian, and German.

E.F.Arsentieva carried out a structural and grammatical analysis of substantive phraseological units in English language. Based on her classification, it can be noted that substantive phraseological units with an **adjective + noun** structure constitute 43% of the English substantive

phraseological corpus; those with a **noun + preposition + noun** structure account for 27%; **noun + noun** structures make up 20%; and structures consisting of a **noun in the possessive case + noun** represent approximately 10%. As is evident, the most widespread grammatical structural pattern among substantive phraseological units is the **adjective + noun** model, which constitutes 43% in English. A similar tendency can also be observed in Azerbaijani, where substantive phraseological units with an **adjective + noun** structure likewise represent the most common structural type (Юсупова, 2019, c.174).

Materials and methods

Substantive phraseological units mainly characterize a person in terms of various intellectual, psychological, and moral qualities. The purpose of the article is to study substantive phraseological units in both English and Azerbaijani languages. This main purpose is primarily related to the identification of substantive phraseological units and their selection. The object of the study is substantive phraseological units. However, the subject is the selection of substantive phraseological units that express the positive and negative characteristics of human. The method of continuous sampling and comparative analysis methods were used in the research process. "*Azərbaycan dilinin frazeologiya lüğəti*" and "*Azərbaycanca-İngiliscə-Rusca frazeoloji lüğət*" were used as research materials. The study is based on samples selected from the aforementioned dictionaries by the continuous sampling method.

Results and Discussion

The vast majority of phraseological units are the product of metaphorical semantic transfer, and the meaning of a phraseological unit is determined by the metaphor that forms its basis. In this sense the metaphor functions as a driving force in the creation of a phraseological unit. In particular the comparative-bilingual study of metaphorical substantive phraseological units requires a special methodological approach. Substantive phraseological units include both phraseological units with a word-combination structure that are fully reinterpreted and partially changed in meaning, and phraseological units with a partially predicative structure that have completely changed in meaning. Within substantive phraseological units two main types of meaning transfer are observed: metaphorical transfer and metonymic transfer. We will conduct our research on substantive phraseological units that are more related to humans and are subject to metaphorical transfer. In cases where the literal meaning is still partially preserved, partial semantic transfer and a two-component structure can be identified. In such constructions, one component is used in its literal sense, while the other acquires a figurative meaning. For example, substantive phraseological units such as *a man of iron* or *gilded youth* can be cited as examples. As is known, substantive phraseological units with metaphorical meaning, denoting a person and expressing human qualities, are usually divided into two groups: those with positive connotations and those with negative connotations.

<i>Human-related substantive phraseological units with positive connotations</i>	
high-minded man (completely honest, without any fault and sin)	aydan arı, sudan duru (düz adam)
the bird flying high / a big number / a big shot / of the best description / of the first water / a big card / a big bug / a big gun / a big dog / a big pot / a big fish / a big wig / a big noise / a big number / prize rabbit	böyük adam – (vəzifəli şəxs)
a bigwig / a big bug / a big card / a big cheese / a big fish / a	tanınmış, sözü keçən insan

big gamble / a big gun / a big noise / a big number	
a callow / a callow fledge	təcrübəsiz gənc adam
a walking encyclopaedia / a walking dictionary / a living dictionary	hər şeydən məlumat verə bilən adam
an old bird / a downy bird / an old stager / a slick customer / a knowing old bird / an old hand / a tough customer (an experienced, wordly-wise man)	dünyagörmüş adam, təcrübəli adam
regular Jack-of-all-trades	əlindən hər iş gələn adam
plain dealer	düzgünlük tərəfdarı olan adam
an eager beaver / brisk as a bee	zəhmətkeş insan
a butter and egg man/ rich / moneyed / Cf. plastered with dough / swimming in gravy	zəngin adam (Vəliyeva, 2006, s.845)

Based on the meanings of the substantive phraseological units with positive connotations listed in the table, it can be said that the meanings of the substantive phraseological units with positive connotations in both English and Azerbaijani almost coincide in semantic terms. In the following section, examples illustrating the use of the substantive phraseological units “*big man*” and “*big fish*” in media contexts will be examined:

Wes Moyer was the big man on campus when he was a senior on the Alameda High football team in 2007...Then he got to college. After a late recruiting process brought him to Yale, Moyer was no longer a big fish in a small pond. – (Ves Moyer 2007-ci ildə Alameda Həy futbol komandasında yüksək kursda oxuyarkən kampusun böyük adamı idi... Sonra kollecə daxil oldu. Gec bir işə qəbul prosesi onu Yale'yə gətirdikdən sonra Moyer artıq kiçik bir gölməçədə böyük balıq deyildi.) (Contra Costa Times, 03.11.2011)

The Washington-based Institute for Science and International Security, which tracks Iran's nuclear programs, describes Sairafi as a core member of the smuggling networks and the kind of big fish rarely caught in the U.S. net. – (Vaşinqtonda yerləşən Elm və Beynəlxalq Təhlükəsizlik İnstitutu, İranın nüvə proqramlarını izləyən və Sairafini qaçaqmalçılıq şəbəkələrinin əsas üzvü olaraq təsvir edən bir qurumdur, həmçinin ABŞ-ın torunda nadir hallarda tutulan növdən böyük balıq kimi tanıyır.) (Associated Press, 10.11.2011)

Human-related substantive phraseological units with negative connotations	
a bad actor / a shameless / indecent / barefaced / impudent / bold man	abırsız adam (alçaq adam)
a small fry / Amer. small potatoes / a cog in a machine / a small beer / a sparrow fart / not a very big bug	sözü keçməyən, aciz, miskin
a light-minded / frivolous / thoughtless / superficial / shallow man / happy-go-lucky fellow (a carefree man)	arsız adam
bad man / a failure	ayağı ağır – (uğursuz adam)
sluggish / glue-footed / hard to get moving / slow-starter / slowcoach	astagəl, ləng adam
a man of moods (a person of changeable disposition)	dəmdəməki adam
snake-in-the-grass / viper	əfi ilan (məkrli, hiyləgər, fitnəkar adam)
a numb hand / butter-fingers / Cf. his (her) fingers are all	əlibişmiş adam

thumbs	
a meek creature / a lamblike creature / pure as a lamb	dilsiz-ağızsız insan
an old fox / a cheat / swindler / rouse	həlləm-qələm adam
a bad character / a bad egg	ləyaqətsiz adam
a mean soul / a base creature	rəzil (alçaq adam)
bone-head / clod / blockhead / numskull / dumbbell / dumbdumb / nitwit / dimwit / booby	sarsaq (ağlı başında olmayan adam haqqında)
a mere cipher / nothing but a cipher / a complete nullity / Amer. an abbreviated piece of nothing / Lit. absolute zero / a nobody / a nonentity / a good-for-nothing	dəyərsiz, diqqətləyiq olmayan adam
a dark horse	şübhəli adam
a stubborn beggar	tərs adam (inadkar adam)
a bird of passage / a stranger to these parts	təsadüfi gəlmiş adam
a sly dog / a sly one / artful fellow / a bad egg / a fast fellow / someone is very cunning / someone is a very crafty fellow / as artful as a cart-load (very sly, cunning)	tülkü (bic adam)
a round peg in a square hole / / goose egg / bugger all / good-for-nothing / nonentity (of a person)	yaramayan adam (münasib olmayan bir insan) (Vəliyeva, 2006, s.812)

So, based on the data presented in the table, it can be concluded that in fact, the negative characteristics inherent in a person are more related to his morals, intellectual level or social characteristics. For instance, features such as worthlessness or lack of authority (social), instability or cunning (psychological), as well as thoughtlessness (intellectual) and moral degradation are reflected in substantive phraseological units in both languages. We can observe these characteristics in substantive phraseological units in both languages. It should also be noted that, just as in positively connoted units, negatively connoted substantive phraseological units in English frequently contain zoonymic components. For example, elements such as *fox*, *dog*, *lamb*, and *snake* can be observed among the examples. In Azerbaijani, however, this imagery, metaphorical approach is more related to national cultural thinking, and is expressed more through emotional and expressive means. As illustrated by examples such as *həlləm qəlləm adam* (a deceitful, unreliable person) or *aydan arı, sudan duru* (a person of pure and impeccable character), it becomes evident that figurative expression plays a significant role. At the same time, zoonymic components are also present among negatively connoted substantive phraseological units in Azerbaijani. In fiction, such examples are used very widely, especially in works of fiction and to increase the expressiveness of the language, to express the idea more laconic, sharper, more figuratively.

The next section presents the human-related substantive phraseological units with positive and negative connotations selected from the “*Azərbaycan dilinin frazeologiya lüğəti*”:

Güllərin altında yatan gürzələr / A snake in the grass

Xeyirxahlıq pərdəsi altında şər işlər görən ziyanlıq insanlar haqqında deyilən ifadə (A phraseological unit denoting individuals who, while outwardly presenting themselves as benevolent, engage in detrimental or malicious activities).

Fəqət göz yumdunuz, görmədiniz ki, *Güllərin altında gürzələr yatır* (Həmidov, 2020, s.698).

Qırmızı adam / a blunt, shameless person

Sözü üzə deyən; sözü qıpqırmızı, utanıb-çəkinmədən üzə deyən; həyasız, sırtıq, utanmaz adam (a blunt and shameless person who says things to one's face without restraint).

Sən nə (necə (də) *qırmızı adamsan!*; *Vallah yaman qırmızı adamsan!*

Zootexnik hər şeyi sədrin üzünə oxudu. Sədr, çox *qırmızı adamsan*, deyib, obyektiv və subyektiv faktları sadalayaraq özünümüdafiyyə keçdi (Həmidov, 2020, s.971).

Can yoldaşı / bosom friend/ soulmate

İnsanın ruhən və hissən çox yaxın olduğu, dərin emosional bağ paylaştığı şəxs (a person with whom one has a deep natural connection. It suggests strong emotional, mental, and sometimes spiritual compatibility).

Bu dəfə babanı qollarına qandal vurub apardılar. Mina nənə qara yaşmasının ucunu gözlərinə basıb sakitcə çiyinləri ahəstə-ahəstə titrəyə-titrəyə ağlayırdı. Baba qapının ağzına çatanda birdən geri döndü. Uzun illərin *can yoldaşı* olmuş bu qadının çənəsindən tutub qaldırdı (Həmidov, 2020, s.343).

Canavar dərisi geymiş insan / a wolf in human skin

Qəddar, zalım, amansız insan haqqında deyilən ifadə (a ruthless, merciless person (like a wolf in human skin)).

Hitler dedi ki, sərgiyə baxandan sonra bu qərara gəldim ki, dahi sənətkarımız canavar deyil – *canavar dərisi geymiş insandı...* Hamıdan çox Hitleri alqışlayırdılar (Həmidov, 2020, s.344).

Qoca qurd / an old fox

Çox şeyi bilən, təcrübəli, çox hiyləgər adam haqqında deyilən ifadə; el arasında öz işlərinə və həyat tərzinə görə ad qazanmış adam haqqında (A figurative expression referring to a highly experienced, very clever, and often cunning person who has gained knowledge and reputation through long life experience).

Səfərəli meşəyə girəndə Zəkəriyyəni tufəng çiyində, əlin də ov görəndə: - *Qoca qurd*, gör necə tezdən gəlib, hələ ov da vurub, deyə düşündü (Həmidov, 2020, s.985).

Həlləm-qəlləm adam / a shady person

Fırıldaqqı, haramzada, sözünün yiyəsi olmayan adam haqqında deyilən ifadə (A figurative expression referring to a dishonest, unreliable, and deceitful person who cannot be trusted and often behaves in a fraudulent or trickster-like manner).

Xanın kefi təzədən açıldı, gülə-gülə dedi: - Ay gədə, sən çox *həlləm-qəlləm adama* oxşayırsan. Məndən nə istəyirsən de verim, tək çıx get (Həmidov, 2020, s.738).

Quru qurbağası / a solitary person

Tək yaşamağa üstünlük verən adam; sir-sifətindən eybəcər olan adamlar haqqında işlədilən ifadə

(A figurative expression used to describe a person who prefers to live alone and avoids social interaction, and in some contexts also refers to someone with a visually unattractive or unpleasant appearance).

Ay Məleykə, mənəm, mən. Bə bazara niyə gəlmirsən? Yaxşı xərək kartofum olur, a *quru yerin qurbağası*, tək nağayırırsan evdə, niyə gəlib kartof aparmırsan? (Həmidov, 2020, s.1016)

The examples presented clearly demonstrate that many substantive phraseological units are built on a metaphorical basis, that is, the characteristics typical of animals is transferred onto humans. Zoonymic components such as *gürzə* (viper), *canavar* (wolf), *qurd* (worm/wolf, depending on context), and *qurbağa* (frog) are used in Azerbaijani to make speech more emotional, effective and figurative. It can be emphasized that certain substantive phraseological units with negative connotation such as “a snake in the grass”, “a wolf in human skin” exhibit full semantic equivalence across languages.

Conclusion

As a result of comparative analysis, it becomes clear that English and Azerbaijani, which are languages with different systems, have a sufficiently rich phraseological fund to assess the characteristics of a person's character, behavior and psychology. Phraseological units can also reflect the worldview of the people, ethical norms, and cultural values. From a semantic point of view, if we look at phraseological units with both positive and negative meanings, we can observe that there are semantic parallels. Thus, these positive and negative qualities observed in people's behavior, reflecting their psychological states, are actually universal in nature in both languages, it is possible to group them in similar areas.

In English, as well as in Azerbaijani, positive qualities of a person include such qualities as knowledge, hard work, support for the right, experience, generosity and honesty. Negative qualities include ignorance, cunning, laziness. Thus, as is known, phraseological units with both positive and negative shades give speech such features as imagery, liveliness, greater brightness, metaphorical imagery. It should also be noted that in both languages, there are zoonym components among the components of substantive phraseological units. However, this feature is used more frequently in English. In many cases, national-cultural color prevails in substantive phraseological units in Azerbaijani compared to English.

ORCID ID: 0009-0008-1868-4371

Abstract: Syntactic units, word combinations and speech fragments used to enhance the effect of speech during communication are considered rhetorical figures. Metaphor, anaphora, antithesis, asyndeton (lack of connection), inversion, metonymy, repetition, ellipsis, epiphora, etc. are considered rhetorical figures. Each of these figures has its own characteristics of use, place and advantages in speech.

The presence of a rhetorical figure, which is widely observed in both writing and speech, especially in writing, in the artistic style, gives a certain imagery, liveliness, and clear understanding to writing and speech. There are many types of metaphors. Conceptual metaphors occupy a special place among them. Conceptual metaphors form the basis of all thoughts. Knowing what they are, what they do and how to use them sharpens our critical thinking, expands our empathy and ultimately improves our lives.

The basis of the study is the cognitive analysis of orientational metaphors, which are considered a type of conceptual metaphors. Orientational metaphor includes expressions that reflect spatial and directional relationships. For example, up-down, in-out, on-off, front-back, etc. Since the word up expresses the meaning of up, its use in metaphors mainly reflects a positive meaning, while words such as down, off, back, etc. express the meanings of down, outside, and back, so they are mainly used in metaphors that reflect a negative meaning.

Key words: Source, target, concept, conceptual metaphor, abstract

KONSEPTUAL SİSTEMLƏRİN METAFORİK TƏHLİLİ: MƏKAN-İSTİQAMƏT PERSPEKTİVİ

ORCID ID 0009-0008-1868-4371

Xülasə: Ünsiyyət zamanı nitqin təsir gücünü artırmaq məqsədilə istifadə olunan sintaktik vahidlər, söz birləşmələri və nitq parçaları ritorik fiqurlar hesab olunur. Metafora, anafora, antiteza, asindeton (bağlayıcısızlıq), inversiya, metonimiya, təkrar, ellipsis, epifora və s. ritorik fiqurlar sırasına daxildir. Bu fiqurların hər birinin nitqdə özünəməxsus istifadə xüsusiyyətləri, yeri və üstünlükləri vardır.

Həm yazılı, həm də şifahi nitqdə, xüsusilə də bədii üslubda geniş şəkildə müşahidə olunan ritorik fiqurların mövcudluğu mətnə və nitqə müəyyən obrazlılıq, canlılıq və aydınlıq qazandırır. Metaforanın çoxsaylı növləri mövcuddur. Onların arasında konseptual metaforalar xüsusi yer tutur. Konseptual metaforalar bütün düşüncə proseslərinin əsasını təşkil edir. Onların nə olduğunu, hansı funksiyanı yerinə yetirdiyini və necə istifadə olunduğunu bilmək tənqidi düşüncəni inkişaf etdirir, empatiya qabiliyyətini genişləndirir və nəticə etibarilə həyat keyfiyyətini yaxşılaşdırır.

Tədqiqatın əsasını konseptual metaforaların bir növü hesab edilən orientasiya metaforalarının koqnitiv təhlili təşkil edir. Orientasiya metaforaları məkan və istiqamət münasibətlərini əks etdirən ifadələri əhatə edir. Məsələn, yuxarı–aşağı, içəri–çölə, üstündə–kənarda, ön–arxa və s. “Yuxarı” sözü yüksəliş mənasını ifadə etdiyindən metaforalarda əsasən müsbət mənə daşıyır. Bunun əksinə olaraq, “aşağı”, “kənarda”, “arxada” və bu kimi sözlər aşağı, xaricdə və geridə qalmaq mənalarını ifadə etdiyinə görə, əsasən mənfi məzmunlu metaforalarda istifadə olunur.

Açar sözlər: mənbə, hədəf, konsept, konseptual metafora, abstract

Introduction

The concepts that control our thinking are not simply products of the mind. They also influence our daily activities, even down to the most mundane details. Concepts structure our feelings, our behavior, and our relationships with others. Thus, our conceptual system plays a central role in determining the realities of everyday life. If we are right in assuming that our conceptual system is largely metaphorical, then how we think, what we learn from experience, and everything we do daily are directly related to metaphor. But the conceptual system is usually not understood. We do not simply think about most of the little things we do every day; we perform them more or less automatically according to certain schemes. What these schemes are is not clear. One way to learn this is to look at the materials of language.

Materials and Methods

The research uses common thesis writing methodologies, including experimental/empirical methods, case studies, and comparative/descriptive methods. In the context of the topic "THE METAPHORICAL ANALYSIS OF CONCEPTUAL SYSTEMS: A SPACE-ORIENTATION PERSPECTIVE", experimental/empirical methods will test the causal effects of orientational metaphors on thought and behavior through controlled manipulations (e.g., priming HAPPINESS-AS-UP vs. SADNESS-AS-DOWN and measuring resulting inference changes, reaction times, and embodied responses).

Case studies will provide an in-depth and contextual analysis of specific discourse samples (e.g., political speeches, psychotherapeutic dialogues, or intercultural stories), demonstrating how spatially oriented metaphors are formed and stabilized in concrete communicative practices.

Comparative/descriptive methods, on the other hand, will map cross-linguistic, diachronic, and genre-specific variations of spatially oriented metaphors and quantitatively analyze them to identify systematic similarities and cultural differences through corpus frequencies, collocation patterns, and typological descriptions.

The method of discourse analysis has enabled us to examine language use beyond the sentence level, namely, context, culture, social interaction, and communicative meaning. Applied to this topic, discourse analysis will trace how orientational metaphors operate across a wide range of texts and interactions—how mappings such as UP/DOWN, IN/OUT, FORWARD/BACK are invoked, rejected, or mixed in storytelling, institutional rhetoric, and everyday speech; how they are reconciled with gesture and prosody; and how they replicate or complicate social ideologies. These methodologies—in a precisely operationalized and triangulated manner—will allow us to examine, at multiple levels, how spatially oriented metaphors structure conceptual systems, influence inference and behavior, and vary across contexts and cultures.

Since communication is based on the same conceptual system used in thought and action, language is an important source of information about this system. Metaphor is not limited to the field of language, that is, to words: human thought processes are also largely metaphorical. This is what we mean when we say that the human conceptual system is metaphorically organized and defined (Lakoff & Johnson, 1980, p. 38).

Metaphors are possible as linguistic expressions precisely because metaphors exist in the human system of understanding. The systematicity that allows us to understand some aspects of a concept in terms of another concept (for example, an argument in terms of war) inevitably "overshadows" other aspects of that concept. By allowing us to focus on one aspect of a concept (for example, the "military" aspect of an argument), metaphorical understanding can prevent us

from paying attention to other aspects that do not correspond to the metaphor (Lakoff, 1993, p. 210). For example, in the heat of an argument, when we try to attack our opponent's position and defend our own, we can forget that there is also an aspect of cooperation in argumentation. In a certain sense, we may think that our opponent is wasting our time-something valuable-in trying to achieve mutual understanding.

So far, we have considered cases that can be called structural metaphors, that is, cases in which one concept is structurally organized in terms of another concept.

There is another type of metaphorical concept, where there is no structural organization of one concept in terms of another, but rather an organization of a whole system of concepts on the model of another system. We will call such cases "orientational metaphors," since most of these concepts give spatial orientation and are associated with polar opposites such as up–down, in–out, front–back, on–off, deep–shallow, central–peripheral (Kövecses, 2002). Orientational metaphors provide a paradigmatic example: they impose a spatial orientation on non-spatial domains (HAPPINESS IS UP; SADNESS IS DOWN), grounding abstract evaluative states in recurring bodily experiences (posture, balance, energy) and culturally patterned practices (Kövecses, 2002). These orientational mappings are predictive: they generate a constellation of linguistic expressions ("my spirits rose," "I'm feeling down") and embodied behaviors (upright posture in positive affect, head lowering in sadness) that cohere across modalities (verbal, gestural, postural) and thus form mutually reinforcing cues for social perception (Niedenthal et al., 2005). Such spatial relations arise because a person has a body of a certain shape and interacts with the material world. Orientational metaphors give concepts a spatial orientation: for example, HAPPINESS corresponds to UP.

The UP orientation of the concept HAPPINESS is reflected in English expressions like "I am feeling up today." Such metaphorical orientations are not accidental. They are based on our physical and cultural experience. Although polar opposites like "up–down" or "inside–out" have a physical basis, orientation metaphors based on them can vary from culture to culture (Kövecses, 2005, p. 90). For example, in some cultures the future seems to be ahead of us; in others it is behind us. HAPPYNESS IS UP; SADNESS IS DOWN. That boosted my spirits. My spirits rose. You're in high spirits. Thinking about her always gives me a lift. I'm feeling down. My mood is spoiled. I'm depressed. He's really low these days. I fell into a depression. My spirits sank. As the examples show, sadness and depression bend a person's body and lower the head, while positive emotions straighten a bent body and raise the head. "CONSCIOUS IS UP; UNCONSCIOUS IS DOWN .Wake up. I'm up already. He wakes up early in the morning. He didn't fall asleep. He did not come down with the flu. His health is declining. He dropped dead. A serious illness forces a person to lie down; the deceased falls to the ground and lies in the grave "(Lakoff & Johnson, 1980, p. 149).

Results and Discussion

In sum, conceptual metaphor theory provides an empirically grounded, theoretically rich framework for understanding how embodied experience, linguistic practice, and cultural convention jointly structure human thought and action. Structural and orientational metaphors together form systematic cognitive architectures that shape attention, inference, emotion, and social behavior; attending to these architectures illuminates both everyday cognition and the levers by which discourse can be transformed (Lakoff & Johnson, 1980; Kövecses, 2002, 2005; Gibbs, 1994; Lakoff, 1993; Niedenthal et al., 2005; Williams & Bargh, 2008).

Conclusion

These examples allow us to draw some conclusions about the empirical basis, coherence, and systematicity of metaphorical concepts. Thus, most of our fundamental concepts are organized through one or more orientational metaphors. Each orientational metaphor has its own internal systematicity. For example, the metaphor HAPPY IS UP creates a unified system of meaning, not a collection of random and unrelated metaphors. If the system were violated, we would see it in expressions like "I'm feeling up" meaning "My mood is bad," or "My spirits rose" meaning "My mood is broken." There is also an external systematicity among various metaphors related to spatial orientation, which determines their mutual relationships. Thus, the metaphor KINDNESS IS UP contributes to the UP direction for general positive states.

LINGUISTIC AND STYLISTIC FEATURES OF SAMAD VURGUN'S POETRY: A LINGUISTIC AND POETIC ANALYSIS

Günel Kamil YUNUSOVA

Associate Professor, PhD, Department of Humanities, Mingachevir State University

E-mail: gunel.yunusova@mdu.edu.az

ORCID ID: 0000-0002-2375-2829

Abstract: The present article examines the rich creative heritage of Azerbaijan's national poet Samad Vurgun within the context of modern linguistics and literary studies. The primary aim of the research is to identify the linguistic factors shaping the poet's individual style, with particular emphasis on the mechanisms through which the aesthetic potential of folk language is applied to poetry. Samad Vurgun purified the Azerbaijani literary language from artificial and overly complex constructions, enriching it with the natural harmony of living folk speech. The article extensively investigates the poet's lexical foundation, the artistic transformation of phraseological units, the epic functionality of archaisms, and the anthropomorphic

elements in depictions of nature. At the same time, the syntactic structure of Vurgun's verse, the artistic-philosophical weight of inversion, and the emotional impact of rhetorical questions are interpreted on the basis of concrete examples. An important aspect of the study is also the issue of speech individualization in the poet's dramaturgy, as well as the selection of language in accordance with the social and psychological status of characters. As a result, it is emphasized that Samad Vurgun's linguistic-stylistic system constitutes a fundamental school born from the synthesis of national spirit and academic thought. The conducted analyses demonstrate that the poet's linguistic innovations continue to preserve their relevance to this day.

Keywords: Samad Vurgun, linguistic style, artistic means of expression, inversion, lexical semantics, poetics, folk language, linguistic analysis.

SƏMƏD VURĞUN ŞEİRİNİN DİL VƏ ÜSLUB XÜSUSİYYƏTLƏRİ: LİŖQVİSTİK VƏ POETİK TƏHLİL

Günel Kamil YUNUSOVA

Dosent, Humanitar fənlər Departamenti, Mingəçevir Dövlət Universiteti

E-mail: gunel.yunusova@mdu.edu.az

ORCID ID: 0000-0002-2375-2829

Xülasə: Təqdim olunan məqalədə Azərbaycanın xalq şairi Səməd Vurğunun zəngin yaradıcılıq irsi müasir dilçilik və ədəbiyyatşünaslıq kontekstində araşdırılır. Tədqiqatın əsas məqsədi şairin fərdi üslubunu formalaşdıran linqvistik amillərin müəyyənəşdirilməsi, xüsusilə xalq dilinin estetik potensialının poeziyaya təbii mexanizmlərinin təhlilidir. Səməd Vurğun Azərbaycan ədəbi dilini süni və həddindən ziyadə mürəkkəb konstruksiyalardan təmizləmiş, onu canlı xalq nitqinin təbii harmoniyası ilə zənginləşdirmişdir. Məqalədə şairin leksik bazası, frazeoloji vahidlərin bədii transformasiyası, arxaizmlərin epik funksionallığı və təbiət təsvirlərindəki antropomorfik elementlər geniş şəkildə tədqiq olunur. Eyni zamanda, Vurğun misrasının sintaktik quruluşu, inversiyanın bədii-fəlsəfi çəkisi və ritorik sualların emosional təsiri konkret nümunələr əsasında şərh edilir. Tədqiqatın mühüm aspektlərindən biri də şairin dramaturgiyasında nitqin fərdiləşdirilməsi, eləcə də obrazların sosial və psixoloji statusuna uyğun dil seçimi məsələsidir. Nəticə olaraq vurğulanır ki, Səməd Vurğunun linqvo-stilistik sistemi milli ruhla akademik təfəkkürün sintezindən doğan fundamental bir məktəb təşkil edir. Aparılan təhlillər göstərir ki, şairin dil yenilikləri bu gün də öz aktuallığını qoruyub saxlamaqdadır.

Açar sözlər: Səməd Vurğun, linqvistik üslub, bədii ifadə vasitələri, inversiya, leksik semantika, poetika, xalq dili, linqvistik təhlil.

Introduction

The Vurgun Stage of the Azerbaijani Literary Language Samad Vurgun's poetry represents a stage of return to origins in the Azerbaijani language. At the intersection of the dense terminology of classical Eastern poetry and the artistic thought of modern Europe, Vurgun created a language that appeals equally to the spirit of both the shepherd and the academic. As the distinguished linguist Aghamusa Akhundov noted, "Vurgun's language is as natural and fluent as the folk language itself" [1, p. 45]. By dismantling the artificial barriers of language, the poet enabled the music of Azerbaijani Turkish to be heard throughout the world.

Research Objective: The main purpose of the article is to systematically investigate the linguistic characteristics of Samad Vurgun's poetry and dramaturgy, and to determine the role of the author's individual style in the development of the Azerbaijani literary language. The study provides a scholarly substantiation of the lexical-semantic richness of the poet's language, its

syntactic peculiarities, and his mastery in the use of artistic means of expression. Furthermore, one of the principal aims of the research is to reveal how a balance is maintained in Vurgun's style between the principles of national authenticity and the norms of academic language.

Research Methods: In preparing the article, the following scientific research methods were employed:

Descriptive Method: Linguistic facts found in the poet's works were identified and described in terms of existing literary language norms.

Linguistic-Poetic Analysis Method: The linguistic structure of literary texts was examined in unity with their aesthetic function.

Comparative-Typological Method: S. Vurgun's linguistic-stylistic system was analyzed comparatively, both in relation to classical tradition and modern literary criteria.

Contextual Analysis: The new shades of meaning acquired by words and expressions within the text were studied in their contextual framework.

1. Lexical-Semantic Layer and the Artistic Energy of the Word

Vurgun's choice of words is never accidental. He takes into account not only the dictionary meaning of a word, but also the emotional burden it carries in the collective memory of the people. In the poet's language, phraseological units are not static but dynamic. He adopts ready-made expressions from folk speech and infuses them with a new poetic breath. This approach becomes particularly evident in his poem "My Eyes Have Remained on the Roads":

My eyes have remained on the roads, no news comes from the banks of the Kura,
My heart never tires of seeking the green-headed ones. (10, p. 234)

Here, the phraseological expression "to keep one's eyes on the road" signifies not merely anticipation, but also serves as a lexical marker of spiritual attachment directed toward the geography of the homeland (the banks of the Kura). By pairing this expression with "a heart that never tires" and "the search for the green-headed ones" (an image rooted in folklore), the poet expands the semantic boundaries of a traditional folk saying.

In the later stanzas of the poem, expressions such as "to be hung by one's feet" (as a symbol of condemnation and suffering) or "to kneel" (as a symbol of reverence and sorrow) likewise contribute to the intra-textual transformation of the artistic energy of words:

In the Qarayazi forest, there is a bird called Anadil,
Like my enamored heart, it hangs by its feet. (10, p. 234)

Such a mode of expression demonstrates that, for Vurgun, language is not merely a means of communication, but also a figurative mode of national spirit and thought.

In Vurgun's oeuvre, regional words (dialectisms) are employed in order to preserve the "aroma and flavor" of language. Words such as "el-oba" (community and homeland), "yurd" (native land), and "qovğa" (strife) function in his language not as archaeological remnants of the past, but as signs of a living national spirit. This serves as a stylistic device proving the language's enduring connection to its historical roots.

2. Lexical Resources of Samad Vurgun's Language: In the Context of the Explanatory Dictionary of the Artistic Language (4, B. Khalilov...)

The linguistic richness of Samad Vurgun's poetry is not merely an artistic impression, but also a linguistic phenomenon substantiated by concrete statistical indicators. Published in 2011, the Explanatory Dictionary of Samad Vurgun's Artistic Language constitutes the first and most fundamental step taken in this field within Azerbaijani lexicography. Compiled under the editorship

of Professor Ismayil Mammadli, this reference work contains 6,215 words and 1,753 expressions related to the poet's legacy (a total of 7,968 units), demonstrating the vast scale of Vurgun's lexical reservoir.

The dictionary data reveal that one of the principal pillars of originality in the poet's language lies in the successful transfer of elements from colloquial folk speech into the literary language. Units such as *bozarmaq*, *bozüzlü*, *cahal*, *çuğul*, *yalmanmaq*, *lələş*, *oqlaq*, and *gücənmək*, encountered throughout the texts, confirm the extent of S. Vurgun's mastery of the subtleties of folk language. By incorporating these words into artistic circulation, the poet significantly expanded the functional possibilities of the Azerbaijani literary language.

At the same time, Vurgun's literary works are distinguished by their rich ethnographic lexicon. The use of words such as *cehiz* (dowry), *cəhrə* (spinning wheel), *kəlağayı* (traditional silk headscarf), *kərmə* (livestock enclosure), *körük* (bellows), and *qımız* (fermented mare's milk) serves as a linguistic indicator of the poet's attachment to national customs and everyday life. Vurgun's well-known statement, "Language is the honor, history, and conscience of a people," is vividly reflected not only in his own creative works, but also in his search for adequate national expressions, such as "my eyes do not trust you", during the translation of works like Eugene Onegin.

The historicisms and archaisms included in the dictionary (*bac*, *kəndxuda*, *qare*, *yaraqlanmaq*) further demonstrate that Vurgun's language functions as a mechanism for preserving historical memory. This lexical foundation also constitutes the principal scholarly basis of the ideology of "linguistic purity and inviolability," defended in the journalistic writings of Bakhtiyar Vahabzadeh as a successor in the literary tradition.

3. Tropology: The Philosophical Essence of the System of Tropes

Samad Vurgun's poetry is distinguished by the richness of its artistic means of expression. His metaphors carry not merely the function of simple comparison, but rather the character of philosophical generalization.

For Vurgun, nature is not an inanimate geography, but a living entity. In his poem "Azerbaijan," mountains are presented as "a white-haired old man," while lakes are depicted as "the dwelling place of swans." Natural phenomena are identified with human emotions:

Myheart longs for Karabakh,

At times from this mountain, at times from that mountain... [10, p. 176]

In these lines, a parallel is established between the movement of the heart and the grandeur of the mountains. Academic scholar Bekir Nabiyeu characterizes this as "the unity of nature and spirit" [2, p. 112].

The poet's use of epithets such as "emerald spring," "tulip-covered plains," and "silver-winged airplanes" creates vivid effects of color and light. This forms a visual tableau in the imagination of the reader. Vurgun's epithets serve less to reveal the external features of an object than to uncover its inner essence.

4. Syntactic Structure and Poetic Intonation

According to the syntactic rules of the Azerbaijani language, the predicate is expected to appear at the end of the sentence. However, Vurgun deliberately breaks this convention by placing the predicate at the beginning:

Beats against my window the winter wind,
Is it untimely death that approaches me?

Let the darkness of the night withdraw... [10, p. 186]

Here, the foregrounding of the verb “beats” emphasizes the dynamism of the action and the poet’s inner agitation. This stands as one of the finest examples of syntactic inversion.

Vurgun does not merely ask the reader a question; he compels them to acknowledge a truth. When he says, “Is there anyone who does not know?” he is, in fact, expressing a collective national pride already shared by all. Professor Shamil Valiyev notes that “Vurgun’s rhetoric is a call that serves national self-awareness” [3, p. 88].

5. Individualization of Language in Dramaturgy

In this regard, the drama Vagif represents a pinnacle of achievement. The poet characterizes each figure through their distinctive speech. The language of the central character, Molla Panah Vagif, is lyrical, philosophical, and enriched with folk wisdom; that of Qajar is sharp, ruthless, and imperative in tone. In contrast, the speech of Ali Bey and Eldar is simpler, more courageous, and sincere.

This differentiation demonstrates the poet’s mastery over the various layers of language. The aphorisms found in the drama, such as “There is a death as valuable as life itself”, have already entered popular usage as proverbial expressions.

The musicality of Samad Vurgun’s verse is by no means accidental. Through the repetition of sounds such as s, l, and r (alliteration), he creates auditory effects within the text, reminiscent of the murmur of water or the howl of wind. This represents a synthesis of the phonetic possibilities of language with artistic thought. The enduring singability of his poems is rooted precisely in this internal harmony.

6. The Legacy of Samad Vurgun’s Style: Language Issues in the Journalism of Bakhtiyar Vahabzadeh (7, Aliya Guliyeva)

When analyzing Bakhtiyar Vahabzadeh’s journalistic reflections on language, one aspect draws particular attention: he presents the mother tongue not merely as a means of communication, but as the passport of national existence. As Yusif Seyidov also emphasized, Bakhtiyar Vahabzadeh elevated the simplicity and national authenticity of Samad Vurgun’s language to a new stage, the stage of philosophical journalism. If S. Vurgun brought language closer to the spirit of the people in poetry, B. Vahabzadeh defended that same language in official and academic environments, waging a moral struggle for its recognition as the “state language.” [7]

In the poet’s journalism, the issue of the mother tongue also emerges as a civic duty. The idea of “linguistic purity,” advanced in his works *Let Us Speak Openly* and *The Warmth of the Homeland Hearth*, in fact coincides with the idea of the purity of the nation itself. As noted in Y. Seyidov’s studies, B. Vahabzadeh’s demand to “load language with thought” appears even more prominently in his journalism; here, the word is transformed from a vehicle of artistry into a weapon serving national awakening.

Conclusion

The study of the linguistic-stylistic features of Samad Vurgun’s works, as well as their development within the framework of literary succession, allows us to arrive at several scholarly conclusions. Samad Vurgun purified the Azerbaijani literary language from the lexical heaviness and artificial molds of classical Eastern poetry, enriching it with the energy of living folk speech. The style he created is a rare synthesis of simplicity and grandeur.

The poet’s mastery in the use of inversion, rhetorical questions, and anthropomorphic tropes may be regarded as a syntactic and semantic revolution in Azerbaijani poetry. He foregrounded not

only the meaning of words, but also their musicality and visual weight. Vurgun's dramaturgy represents a perfect example of the individualization of speech in accordance with the character and social status of literary figures, thereby expanding the transitional possibilities between the functional styles of language.

Our research demonstrates that the "folk language" foundation established by S. Vurgun was carried onto a new plane in the works of Bakhtiyar Vahabzadeh, a philosophical-journalistic and civic dimension. By defending the aesthetic aspect of Vurgun's style, Vahabzadeh also transformed the mother tongue into a cornerstone of political and moral independence.

Thus, Samad Vurgun's linguistic-stylistic system is not merely the individual creative achievement of a single artist, but a fundamental scholarly-artistic school that has shaped the developmental pathways of the Azerbaijani literary language. The study of this school remains one of the most important tasks facing modern linguistics and literary scholarship.

INTERGENRE ANALYSIS OF RHETORICAL STRUCTURE THEORY IN LITERARY TEXTS

Aysel İlgar MAMMADBAYLI

Doctor of Philological Sciences, Associate Professor

Azerbaijan University of Languages

E-mail: aysel.mammadbayli@adu.edu.az

ORCID ID: 0000-0002-9942-764X

Abstract: The article uses Rhetorical Structure Theory (RST) to analyze literary texts' structural arrangement from an intergenre viewpoint. William C. Mann and Sandra A. Thompson created RST, which is acknowledged as a discourse theory that clarifies the semantic and functional relationships between various textual elements. Comparative analysis of the structural characteristics of rhetorical relations in the dramatic, poetry, and narrative genres is the study's goal. A comparative discourse analysis approach forms the foundation of the study.

The results demonstrate that cause-and-effect, elaboration, contrast, background, and appraisal are the primary rhetorical relations guaranteeing textual coherence in all three genres. The functional distribution of

these linkages, however, differs depending on the genre: dialogic interaction and conflict-based structures dominate theatrical discourse, metaphorical and evaluative structures dominate poetry discourse, and chronological sequencing and causal relations dominate narrative discourse. Additionally, RST makes it possible to integrate the text's macro and microstructural levels.

Finally, RST provides a useful theoretical framework for describing the semantic and functional structure of literary works. The study's scholarly uniqueness is based on a systematic comparative examination of literary genres within the framework of RST.

Keywords: Rhetorical Structure Theory, discourse analysis, literary text, genre analysis, narrative genre, poetic genre, dramatic genre

BƏDİİ MƏTNLƏRDƏ RİTORİK STRUKTUR NƏZƏRİYYƏSİNİN JANRLARARASI TƏHLİLİ

Aysel İlqar MƏMMƏDBƏYLİ

Filologiya elmləri doktoru, dosent

Azərbaycan Dillər Universiteti

E-mail: aysel.mammadbayli@adu.edu.az

ORCID ID: 0000-0002-9942-764X

Xülasə: Məqalədə bədii mətnlərin struktur təşkilinin janrlararası aspektdən təhlili Ritorik Struktur Nəzəriyyəsi (Rhetorical Structure Theory – RST) əsasında aparılmışdır. Uilyam C. Mann və Sandra A. Thompson tərəfindən irəli sürülmüş RST mətnin müxtəlif hissələri arasındakı semantik və funksional əlaqələri izah edən mühüm diskurs nəzəriyyəsi kimi qəbul edilir. Tədqiqatın məqsədi dramatik, poetik və nəqli janrlarda ritorik münasibətlərin struktur xüsusiyyətlərini müqayisəli şəkildə araşdırmaqdır. Tədqiqatın metodoloji əsasını müqayisəli diskurs təhlili təşkil edir.

Tədqiqatın nəticələri göstərir ki, səbəb-nəticə, genişləndirmə, qarşılaşdırma, fon məlumatı və qiymətləndirmə bütün üç janrdə mətnin koherentliyini təmin edən əsas ritorik münasibətlərdir. Bununla belə, bu münasibətlərin funksional bölgüsü janrdən asılı olaraq dəyişir: dramatik diskursda dialoji qarşılıqlı əlaqələr və konfliktə əsaslanan strukturlar, poetik diskursda metaforik və qiymətləndirici strukturlar, nəqli diskursda isə xronoloji ardıcılıq və səbəb-nəticə əlaqələri üstünlük təşkil edir. Bundan əlavə, RST mətnin makro və mikrostruktur səviyyələrinin vahid sistem çərçivəsində təhlilinə imkan yaradır.

Nəticə etibarilə, Ritorik Struktur Nəzəriyyəsi bədii əsərlərin semantik və funksional quruluşunun izahı üçün səmərəli nəzəri çərçivə təqdim edir. Tədqiqatın elmi yeniliyi RST çərçivəsində bədii janrların sistemli və müqayisəli şəkildə araşdırılmasına əsaslanır.

Açar sözlər: Ritorik Struktur Nəzəriyyəsi, diskurs təhlili, bədii mətn, janr təhlili, nəqli janr, poetik janr, dramatik janr

Introduction

One of the most important aspects of discourse analysis in modern linguistics is the structural and semantic arrangement of text. This structure is especially complicated in literary works since informative, aesthetic, and emotional purposes all occur at the same time.

Rhetorical Structure Theory (RST) explains that text is more than just a collection of phrases; it is a hierarchical structure connected by functional relationships. W. Mann and S. Thompson observe that textual coherence is generated by rhetorical relationships established between its elements [1, p. 245].

According to this viewpoint, a greater comprehension of the structural features of literary discourse is made possible by the comparative study of narrative, lyrical, and dramatic genres within the framework of RST.

According to Rhetorical Structure Theory (RST), text is arranged according to nucleus-satellite relations, making it a hierarchical functional system. While satellite elements explain, extend, justify, or place this core information within a larger contextual framework, nucleus elements bear the fundamental informational burden and make up the semantic core of speech. This structure guarantees the text's functional reliance and semantic coherence in addition to the information's sequential arrangement [4, p. 450].

A number of basic rhetorical connections are essential to the internal structure of speech under the framework of RST. Cause-and-effect, elaboration, contrast, backdrop, assessment, condition, and evidence connections are some of these. These relationships provide the coherence and interpretive integrity of speech as a whole in addition to tying textual units together. It should be mentioned that while assessment and comparison interactions are particularly prevalent in lyrical and argumentative discourse, cause-effect and elaboration relations are particularly dominating in the creation of narrative structures.

Rhetorical Structure Theory is extensively used in psycholinguistics, computational linguistics, and linguistic analysis, according to M. Taboada and W. C. Mann. These application domains show that RST is a useful theoretical foundation for developing autonomous text processing systems as well as for simulating human cognitive processes [2, p. 575].

Rhetorical Structure in the Narrative Genre

Narrative texts are based on temporal sequencing and cause-effect relationships between occurrences. The key rhetorical relations of the story genre, according to Rhetorical Structure Theory, are cause-effect, sequence, background, and elaboration. These relationships arrange events in a rationally ordered succession, aiding the reader's understanding of the story. In this genre, rhetorical structure largely serves informational and temporal purposes.

In narrative speech, Rhetorical Structure Theory is more than just event sequencing; it is a complicated system based on episodic hierarchy, temporal development, and causal chains. Background relations provide spatial and chronological context for this sort of discourse, whereas evaluation relations strengthen the narrative's ideological and emotional framework. At the same time, causal chaining and goal-oriented structures help the story develop coherently, maintaining logical and interpretive continuity.

Poetic Genre Rhetorical Structure

The framework of poetic language is figurative and emotionally charged. The primary rhetorical relations of Rhetorical Structure Theory within the poetic form are metaphorical extension, contrast, assessment, and interpretation.

Lexical units in poetic writings can be interpreted in a variety of ways and have complex semantic implications. The function of RST in adding semantic depth to the conversation is strengthened by this interpretive openness.

Rhetorical Structure Theory is mostly structured on associative linkages, metaphorical extension, and multilayered semantic composition in the poetry form. Symbolic coherence guarantees the text's internal integrity, whereas evaluation and metaphorical extension relations heighten emotional loading in poetic speech.

Semantic compression and figurative styles of communication take the role of elaboration, which is rather weak as compared to narrative speech.

Dramatic Genre Rhetorical Structure

Dramatic discourse has a more dynamic framework and is based on discussion. Contrast, concession, justification, and antithesis are the primary rhetorical relations of Rhetorical Structure Theory in the dramatic form.

A conflict-based structure is produced by constructing each utterance as a reaction to the speech act that came before it. Dramatic conversation is made more participatory by this feature.

A comparative study of genres reveals that theatrical discourse is structured around dialogic interaction and conflict-based structures, poetry discourse is typified by metaphorical and evaluative structures, and narrative discourse is controlled by temporal and cause-and-effect patterns.

In the dramatic genre, Rhetorical Structure Theory is founded on dialogic interaction and conflict-oriented organization. In this form, it should be highlighted that all three genres have similar coherence processes within the context of Rhetorical Structure Theory. Speech, rhetorical relations, notably comparison, concession, and antithesis, portray conflicting viewpoints and ideological confrontations between characters. The textual structure is determined by turn-taking systems, which emphasize the dynamic aspect of theatrical speech. At the same time, justification and concession interactions expose the actors' pragmatic goals and provide a communication effect on the performative level.

Furthermore, it should be highlighted that all three genres have similar coherence processes within the context of Rhetorical Structure Theory.

Conclusion

The study shows that Rhetorical Structure Theory is a useful methodological framework for literary text intergenre analysis. Despite having different structural traits, narrative, lyrical, and dramatic genres all use rhetorical connections to produce textual coherence. Additionally, this method increases RST's potential for use in the field of discourse analysis.

The study's methodological relevance stems from its comparative discourse analysis base. For the first time, three main literary genres are examined under a single RST model in a comparative context, which is the research's scientific innovation. This method offers a new analytical framework for literary text interpretation and permits a methodical explanation of the structural and semantic elements of literary discourse.

INTERCULTURAL COMMUNICATION IN SOCIAL NETWORKS

Turkan Sayavush AGHAYEVA

Teacher, Phd student, Ganja State University

E-mail: turkan.agayeva.92@mail.ru

ORCID ID: 0003 0002 6784 3367

Abstract: This article examines the main characteristics, challenges, and conditions of effective intercultural communication on social media. In the context of contemporary globalization, the Internet provides extensive opportunities for direct interaction among people from different national, ethnic, linguistic, and socio-cultural backgrounds. The study considers the major functions of intercultural communication, including cultural cognition and mutual understanding, the development of intercultural competence, goal-oriented communication, socialization, and the strengthening of cultural relations. Particular attention is given to the difficulties that may emerge in online communication, such as language barriers, differences in behavioral and politeness norms, humor, taboos, cultural stereotypes, and religious and social differences. The study also identifies the widespread use of pseudonyms, emojis, abbreviations, memes, slang, and dialectal forms in Azerbaijani online communication as factors that may influence intercultural understanding. An analysis of Telegram as an example demonstrates that translation tools and digital technologies can significantly reduce language barriers and facilitate communication between representatives of different cultures. Social media also creates opportunities for users to exchange information, experiences, opinions, multimedia content, and cultural knowledge in real time. The findings indicate that tolerance, mutual respect, cultural awareness, and sensitivity to cultural differences are essential conditions for successful intercultural communication in digital environments. Thus, social networks can be considered an important platform for overcoming cultural stereotypes and promoting mutual understanding in an increasingly interconnected global society.

Keywords: intercultural communication, social media, digital communication, language barrier, cultural diversity, Telegram, tolerance.

SOSIAL ŞƏBƏKƏLƏRDƏ MƏDƏNİYYƏTLƏRARASI KOMMUNİKASIYA

Türkan Sayavuş AĞAYEVA

Müəllim, doktorant, Gəncə Dövlət Universiteti

E-mail: turkan.agayeva.92@mail.ru

ORCID ID: 0003 0002 6784 3367

Xülasə: Bu məqalədə sosial şəbəkələrdə mədəniyyətlərarası kommunikasiyanın xüsusiyyətləri, problemləri və effektiv ünsiyyətin əsas şərtləri araşdırılır. Müasir qloballaşma şəraitində internet müxtəlif milli, etnik, dil və sosial-mədəni qruplara mənsub insanların birbaşa ünsiyyət qurmasına geniş imkanlar yaradır. Tədqiqatda mədəniyyətlərarası kommunikasiyanın mədəni idrak və qarşılıqlı anlaşıma, mədəniyyətlərarası kompetensiyanın inkişafı, məqsədyönlü kommunikasiya, sosiallaşma və mədəni əlaqələrin möhkəmləndirilməsi kimi əsas funksiyaları nəzərdən keçirilir. Sosial şəbəkələrdə ünsiyyət zamanı dil maneələri, fərqli davranış və nəzakət normaları, yumor, tabu mövzular, stereotiplər və dini-mədəni fərqlər əsas problemlər kimi müəyyən edilir. Azərbaycan onlayn kommunikasiya mühitində təxəllüslərin, emoji-lərin, qısaltmaların, memlərin, slenq və dialekt formalarının geniş istifadəsi də mədəniyyətlərarası

anlaşmaya təsir edən amillər kimi qiymətləndirilir. Telegram nümunəsində aparılan təhlil göstərir ki, tərcümə imkanları və rəqəmsal texnologiyalar dil maneələrinin aradan qaldırılmasına və müxtəlif mədəniyyətlər arasında qarşılıqlı anlaşmanın inkişafına mühüm töhfə verir. Nəticədə, tolerantlıq, qarşılıqlı hörmət və mədəni fərqlərə həssas yanaşma sosial şəbəkələrdə uğurlu mədəniyyətlərarası kommunikasiyanın əsas şərtləri kimi müəyyənləşdirilir.

Açar sözlər: mədəniyyətlərarası kommunikasiya, sosial şəbəkələr, rəqəmsal kommunikasiya, dil maneəsi, mədəni müxtəliflik, Telegram, tolerantlıq.

Introduction

Social media has become an important part of 21st-century life. This paper examines the challenges that arise when representatives of different cultures communicate on social media and identifies specific characteristics of intercultural communication on Russian social media.

In the 21st century, globalization is rapidly gaining momentum. This phenomenon leads to greater interconnections between different cultures and peoples. Humans live in society, which means they constantly interact with other members of society. In modern research, the term "communication" is most often understood as a socially conditioned process of transmitting and perceiving information in interpersonal, group, and mass communication settings using various channels and means.

Materials and Methods

The materials of this study include scholarly literature on intercultural communication, social media communication, digital linguistics, and cultural interaction, as well as examples of online communication in Azerbaijani and international social networks. Particular attention is given to communication practices observed on Telegram and other social media platforms.

The study employs descriptive, comparative, and analytical methods. The descriptive method is used to identify the main characteristics of intercultural communication in digital environments. The comparative method is applied to examine differences in communication norms, language use, cultural expectations, and behavioral patterns among representatives of different cultures. The analytical method is used to identify the main linguistic and cultural factors that may cause misunderstanding in online communication.

The study also considers the role of multilingualism, translation tools, emojis, abbreviations, memes, slang, and pseudonyms in intercultural online interaction. Particular emphasis is placed on language barriers, cultural stereotypes, politeness norms, religious and cultural differences, and strategies for achieving effective communication. The analysis aims to determine how social networks contribute to intercultural understanding and how digital technologies can facilitate communication between people from different cultural and linguistic backgrounds.

Discussion

Intercultural communication (IC) involves the exchange of information between people of different cultures about rules and norms of behavior, shared values, and beliefs. IC can occur in various spheres of life, including business, social, and personal contacts, and represents the interaction of people who differ in national, ethnic, linguistic, religious, cultural, and social backgrounds. Studying IC helps people communicate more successfully with representatives of other cultures (4, p. 87).

The following functions of intercultural communication are distinguished:

1. The function of cultural cognition and mutual understanding – intercultural communication can be aimed at broadening horizons, exploring different cultures, norms, and values, and establishing trusting relationships between people of different cultures.

2. The function of fostering intercultural competence and the ability to accept cultural differences – intercultural communication helps people develop intercultural competencies, such as the ability to adapt to another culture, respect cultural diversity, and be aware of their own biases and stereotypes.

3. Goal-oriented communication – intercultural communication can be aimed at achieving a specific task, such as reaching an agreement, resolving a conflict, conducting a business deal, or exchanging experiences.

4. Socialization function – International cultural exchanges can serve as a means of adaptation for individuals in a new socio-cultural environment, which is relevant, for example, for immigrants or students studying abroad.

5. Cultural relations development function – International cultural exchanges facilitate the development of cultural ties between countries, the establishment of diplomatic relations, and the expansion of cultural exchange and tourism.

One of the most significant characteristics of international communication is the development of cultural awareness. After all, each person has their own cultural background and is characterized by persistent behavioral stereotypes, which manifest themselves, including in the online environment. There are varying levels of politeness and formality in communication, which can also vary depending on culture.

On the Internet, as in real life, IC is an attribute of the socio-cultural life of society, in the social space of which interaction between different cultures occurs in spatial and temporal dimensions.

The internet offers virtually unlimited opportunities for interpersonal communication: people from all corners of the planet can communicate directly with each other. One of the internet's fundamental and key features is its interactivity, which gives the World Wide Web unique capabilities compared to other communication environments, encompassing many areas of human activity. Communication can take the form of online chats, social media, blog comments, forums, and groups.

According to W. F. Zhang and D. W. Chen, the compression of time and space due to the convergence of new media and globalization has reduced the world to a small interactive field, where IC occurs (5, p. 95).

One of the important characteristics of IC on social media is the ability to adapt to the cultural characteristics of the interlocutor. This means that a person must demonstrate flexibility and adaptability in their communication, preparing for possible differences in cultural expectations and standards.

The main ways to achieve successful IC in social networks are respect and tolerance for cultural differences, reducing uncertainty and including other users in communication in their language and taking into account the characteristics of their culture (1, p. 32).

Social media communication is crucial in today's multicultural society. Understanding and adapting to cultural differences is the foundation of effective online communication. It's important to remember that each social media user represents a cultural system with its own persistent

behavioral stereotypes, and this must be taken into account in online communication. Social media communication can be challenging, especially when participants represent different cultures.

First, it's important to consider that every culture has its own established norms of behavior and communication. For example, some cultures value more formal forms of address, while others prefer more informal communication. It's also important to consider cultural differences in humor, taboos, and so on.

Secondly, language barriers can arise on social media if participants speak different languages. In this case, it is important to use translators or communicate in a common language, if one exists (2, p. 246).

Thirdly, it is important to consider cultural differences in attitudes toward topics of communication and expressing one's opinion. Some topics may be unacceptable in one culture but quite common in another. It is also important to consider that in some cultures, expressing one's opinion more directly and emotionally is acceptable, while in others, this may be perceived as rude.

Finally, it's important to be critical of the information you receive and try to avoid spreading negative stereotypes.

Effective online communication on social media can be challenging, but with the right approach and respect for cultural differences, it's possible to achieve effective communication and improve mutual understanding between people from different cultures.

Online communication in Azerbaijani is multifaceted. Let's highlight some of its characteristics:

1. Many social media users in Azerbaijan use pseudonyms or "nicknames," making it difficult to identify the national and cultural background of their interlocutors.

2. The use of emojis, abbreviations, and memes is widespread.

3. Certain events and topics spark debate, controversy, and protests between people from different cultural groups.

4. Slang and dialects specific to certain social groups, such as students, teenagers, and workers in certain industries, are used.

5. Intercultural communication on social networks can lead to misunderstandings and conflicting expectations related to the traditions, customs, and religious beliefs of different cultural groups.

Certain topics, such as politics and religion, are particularly challenging for intercultural communication in the online environment, as they evoke strong emotional reactions (3, p. 148).

Overall, intercultural communication on social media represents a complex "microcosm" in which people from all over the world engage in communication to exchange information and share experiences. Communication in this environment can be successful if participants demonstrate tolerance, understanding, and respect for cultural differences.

An analysis of IC using the social network Telegram as an example shows that communication on social media primarily involves the mutual exchange of information, ideas, impressions, and opinions. A common problem that frequently arises during MC on social networks, including Telegram, is the language barrier. Many people experience difficulty understanding text written in a foreign language, leading to misunderstandings and communication failures.

The social network Telegram helps solve this problem: users of the messenger can use a number of tools to translate messages into other languages. Intercultural communication on

Telegram allows people from different countries to learn about each other and expand their horizons, which helps overcome stereotypes and prejudices, leading to better understanding and respect between representatives of different cultures.

Conclusion

Thus, the following conclusions can be drawn. Undoubtedly, international communication contributes to globalization, as the internet creates a unified communication environment and establishes new rules for lifestyle and human communication. One of the distinctive features of online communication is multilingualism, which sometimes makes the language barrier a serious obstacle to intercultural communication. However, the internet, as a medium for applying new technologies, significantly solves the language barrier. Interaction within community groups allows people to learn more about the cultures of different peoples, communicate in foreign languages with native speakers, and broaden their horizons. Information technology creates unlimited opportunities for community groups: people from all corners of the planet can communicate directly with each other, not only by texting but also by talking in real time and exchanging various files (photos, videos, audio).

THE PHENOMENON OF POLITENESS IN THE SOCIOLINGUISTIC AND LINGUOCULTURAL LEVEL

Kamale Aliaga GULIYEVA

PhD Candidate, Institute of Linguistics named after Nasimi,
Azerbaijan National Academy of Sciences (ANAS)

E-mail: kamalaguli@gmail.com

ORCID ID: [0009-0008-1732-2475](https://orcid.org/0009-0008-1732-2475)

Abstract. The presented research focuses on a complex analysis of the linguocultural and sociolinguistic aspects of the phenomenon of politeness, which is one of the most relevant areas of modern linguistics. The main goal of the study is to identify the forms of manifestation of politeness strategies in various cultural areas and to demonstrate the role of the linguocultural personality type in this process.

During the research, it was determined that politeness is not just a set of ethical rules, but a system of complex strategic mechanisms regulating relations between individuals. The study is based on the theory of "face" by P. Brown and S. Levinson, as well as the concept of "linguocultural type" by O.A. Dmitriyeva, and both universal and specific features of politeness are contrasted. The analyses show that while "negative politeness" based on individualism dominates in Western cultures, "positive politeness" models based on collective harmony and hierarchical respect prevail in the Eastern and Caucasian-Turkic areas.

The identification function of politeness is especially emphasized in the article. The author argues that forms of address and speech etiquette are the main indicators demonstrating the sociocultural affiliation of an individual. It has been proven by examples that differences in politeness codes in the field of intercultural communication lead to "pragmatic failures" and "linguistic shocks".

As a final conclusion, it is noted that an in-depth study of politeness strategies serves to understand the dialectical relationship between language, culture and thinking. The results of the study are of practical importance in terms of increasing the effectiveness of intercultural dialogue and improving diplomatic and business communication models.

Keywords: politeness phenomenon, linguocultural type, sociopragmatics, intercultural communication, politeness strategies

SOSİOLİNGVİSTİK VƏ LİNGVOKULTUROLOJİ SƏVİYYƏDƏ NƏZAKƏT FENOMENİ

Xülasə: Təqdim olunan tədqiqat işi müasir dilçiliyin ən aktual sahələrindən biri olan nəzakət fenomeninin lingvokulturoloji və sosiolingvistik aspektlərinin kompleks təhlilinə həsr edilmişdir. İşin əsas məqsədi nəzakət strategiyalarının müxtəlif mədəniyyət areallarında təzahür formalarını müəyyənəlməkdir və bu prosesdə lingvomədəni şəxsiyyət tipinin rolunu əsaslandırmaqdır.

Tədqiqat zamanı müəyyən edilmişdir ki, nəzakət sadəcə etik qaydalar toplusu deyil, şəxslərarası münasibətləri tənzimləyən mürəkkəb strateji mexanizmlər sistemidir. İşdə P.Braun və S.Levinsonun "sima" nəzəriyyəsi, eləcə də O.A.Dmitriyevanın "lingvomədəni tip" konsepsiyası əsas götürülərək, nəzakətin həm universal, həm də spesifik xüsusiyyətləri qarşılaşdırılmışdır. Analizlər göstərir ki, Qərb mədəniyyətlərində fərdiyyətçiliyə əsaslanan "mənfi nəzakət" dominantlıq təşkil etdiyi halda, Şərq və Qafqaz-Türk areallarında kollektiv harmoniyaya və iyerarxik ehtirama söykənən "müsbət nəzakət" modelləri üstünlük təşkil edir.

Məqalədə nəzakətin identifikasiya funksiyası xüsusi vurğulanır. Müəllif əsaslandırır ki, müraciət formaları və nitq etiketləri fərdin sosisiomədəni mənsubiyyətini nümayiş etdirən əsas indikatorlardır. Mədəniyyətlərarası kommunikasiya müstəvisində nəzakət kodlarındakı fərqlərin "pragmatik uğursuzluqlara" və "lingvistik şoklara" səbəb olduğu nümunələrlə sübut edilmişdir.

Yekun qənaət olaraq qeyd edilir ki, nəzakət strategiyalarının dərinədən öyrənilməsi dil, mədəniyyət və təfəkkür arasındakı dialektik əlaqəni anlamağa xidmət edir. Tədqiqatın nəticələri mədəniyyətlərarası

dialogun səmərəliliyinin artırılması, diplomatik və işgüzar kommunikasiya modellərinin təkmilləşdirilməsi baxımından praktiki əhəmiyyət kəsb edir.

Açar sözlər: nəzakət fenomeni, linqvomədəni tip, sosiopraqmatika, mədəniyyətlərarası kommunikasiya, nəzakət strategiyaları

Introduction

The development of modern linguistics within the framework of the anthropocentric paradigm necessitates the study of language units not only in terms of structure, but also in sociocultural and pragmatic contexts. In this context, the phenomenon of politeness acts as one of the most dynamic and topical topics at the intersection of sociolinguistics and pragmatics. Politeness is not just a set of ethical rules, but a system of complex strategic mechanisms that regulate interpersonal relationships, ensure communicative harmony and protect the sociocultural “face” of the interlocutor.

The relevance of the study is conditioned by the fact that the politeness category has both universal and specific features in various linguistic areas. Although the methodological foundations of politeness theories were established in the works of fundamental researchers such as R. Lakoff, P. Brown, S. Levinson and J. Leach, the application of these models to different cultures - especially to the Eastern and Western areas - is still at the center of scientific discussions. The question of the extent to which existing models, especially those based on the priorities of Anglo-Saxon culture, include the specific politeness norms of Asian and Caucasian-Turkic cultures requires an interdisciplinary approach.

Etymologically, politeness, which means “polished behavior”, is closely related to the concepts of linguocultural type and cultural code in modern linguistics. Each society transfers its ideological values, hierarchical structure and historical traditions into language precisely through politeness strategies. In this regard, politeness also performs an identification function and becomes an important indicator demonstrating the sociocultural affiliation of the individual.

The presented research comprehensively examines the comparative analysis of the politeness category across various linguocultural types, the scientific explanation of “pragmatic failures” arising in intercultural communication, and the role of this phenomenon as a mechanism of social regulation.

Materials and methods. The methodological basis of the study is formed by the principles of a systematic and interdisciplinary approach in accordance with the anthropocentric paradigm of linguistics. The following methods and materials were used to achieve the goals set in the course of the work:

1. Research Material: The empirical material of the study consists of communicative etiquette formulas from modern political discourse (speeches, statements, official diplomatic texts) and various linguocultural areas (Anglo-Saxon, East Asian, Turkic-Caucasian, Arabic). The samples selected for analysis consist of discursive units containing both verbal and paralinguistic (non-verbal) elements.

2. Research Methods: In order to ensure the scientific objectivity of the research, the following methods were applied in a complex manner:

Critical discourse analysis: Based on the methodology of N. Fairclough and T.A. van Dijk, it was used to reveal the hidden ideological meanings in political texts and the relationship between politeness strategies and power relations.

Comparative-typological method: It was applied to reveal the codes of politeness in different cultures, the divergence between “negative” and “positive” politeness strategies.

Linguo-culturological analysis: It was taken as a basis to determine the manifestation of concepts such as “face”, “respect”, “harmony” in various linguo-cultural types and the place of cultural codes in the language structure.

Descriptive method: It was used to systematically describe the current state of speech norms, etiquette formulas and ritual expressions included in the object of research.

Conclusion and discussion

In modern linguocultural research, the concept of “linguocultural type” has a special methodological significance. This phenomenon is an important scientific tool that allows systematizing typical speech and behavior models that manifest themselves in a specific cultural area. According to the approach put forward by O.A. Dmitrieva, the linguocultural type is, in essence, a manifestation of linguistic personality in a cultural-anthropological context (Dmitrieva, 2007, p. 56). It is possible to characterize the linguocultural type not only as a socio-communicative role, but also as a complex image that includes the national character of the bearer, historical communication traditions and discursive strategies based on socio-cultural foundations.

The carried out research shows that the category of politeness is a phenomenon that is directly correlated with the linguocultural personality type. Each linguocultural type carries the politeness standards of the society to which it belongs as an internal mechanism:

Thus, the English linguocultural type is characterized by maintaining communicative distance, “softening” of expressions, and avoiding direct judgments – negative politeness strategies.

The Japanese linguocultural type, which belongs to the Eastern linguocultural type, is built on absolute subordination to the social hierarchy, intra-group harmony, and adherence to strict rules of etiquette.

The Turkish linguocultural type is distinguished by special respect for age and social status, a high degree of emotional kindness, and a discourse of hospitality – positive politeness strategies.

Thereby, the criteria of politeness or impoliteness are not random principles, but a system of social expectations encoded in linguocultural personality types. This system ensures the inextricable unity of language, culture and the individual's behavioral model. The discussions prove that a deep study of politeness strategies also plays a decisive role in eliminating pragmatic failures in intercultural communication.

Another important concept that is directly associated with the phenomenon of politeness is the cultural code. This code combines a system of symbols, rituals, linguistic units and non-verbal signals that transmit the internal standards of social behavior of a particular culture. The cultural code consists of a unity of both verbal and paralinguistic elements. For example, while in Japanese culture, bowing (ojigi) is the central element of the politeness code, in Western-European cultures this burden is carried more by a smile, eye contact and specific intonation shades.

Thus, the linguocultural type and cultural code, acting in unity, determine the forms of manifestation of politeness in a specific sociocultural environment, which speech models are considered normative, and which strategies are preferred in various communicative situations.

Politeness strategies form the basis of harmonious communication and are an important tool for maintaining the stability of social relations between different cultures. Although the need for mutual respect and esteem is a universal human value, the mechanisms for realizing this need vary significantly depending on the linguistic and cultural environment. The discussions show that these variations are directly influenced by the conceptual type of culture (high / low context), the degree of formality of discourse, the hierarchical structure of society, the dominant communication style, as well as the historical-religious way of thinking.

In the English-speaking communicative environment, negative politeness strategies that minimize intrusion into the personal space of the discussion partner are dominant. The individualistic nature of English culture determines the widespread use of indirect appeals, modal constructions ("Can you...", "Would you like...") and internal editing tools (hedging) that serve to soften speech. Here, directness is evaluated as rudeness, and high emotionality is evaluated as a violation of professional subdistance. Politeness is more often manifested by a restrained tone, neutral facial expressions and ritualistic apology formulas.

In societies such as Japan, Korea, and China, ritualized strategies based on the principles of harmony and status respect are at the forefront. Politeness is regulated by a complex system of honorific titles and degrees of respect. In this area, direct disagreement or refusal is perceived as a serious threat to the interlocutor's "face", so these forms of communication are preferred. During communication, paralinguistic means - pauses, bows, and non-verbal signals - sometimes carry a greater semantic load than verbal expressions. The myth that "politeness is not important in English" among Japanese speakers is actually a stereotype arising from the clash of two different politeness systems (hierarchical versus distant) (Kasper, 1997).

In Azerbaijani and other Caucasian-Turkic cultures, a synthesis of positive politeness and respect strategies is observed. Age, social status, and family hierarchy play a fundamental role in forms of address: the use of titles, honorifics ("sir," ("bəy"), "madam" ("xanım"), numerous blessings, and applause are mandatory. Emotional warmth, hospitality, and communicative openness are the main criteria of politeness. Even in the business sphere, there is a strong tendency to establish "pseudo-familial" relationships, based more on trust than on formality.

Expressive positive politeness strategies based on blessings, wishes, and metaphorical expressions are widespread in Arab cultures. Compliments and generous speech formulas form the backbone of communication. However, this outward warmth is strictly regulated by norms of honor, religious frameworks, and gender roles. The regulation of eye contact (looking down) and physical posture act as one of the most important components of respect.

The category of politeness is one of the central pillars of cultural identity. It is not only a communicative tool, but also a mirror that visualizes the value system, behavioral paradigms and ideological foundations of a particular society. A person demonstrates his sociocultural affiliation through forms of address, ritualistic greeting and farewell models, as well as specific non-verbal signals. In this regard, politeness not only regulates communication, but also performs an identification function; it allows the native speaker to determine his place in the social environment, understand status relations and correctly maneuver in complex interactive situations.

In the context of intercultural communication, the category of politeness is of even greater importance. Fundamental differences in cultural codes often lead to "pragmatic failures" and misinterpretations. Discursive tactics that are perceived as neutral or sincere in one culture may be perceived as impolite or a violation of ethical norms in another. For example, communicative

directness and open criticism strategies characteristic of the Anglo-Saxon and Germanic traditions are interpreted as obvious rudeness and disrespect in Eastern cultures, where indirectness dominates. On the contrary, intensive apology rituals, "avoidance of conversation" and excessive indirectness, characteristic of Japanese or Korean discourse, are often incorrectly assessed by Western interlocutors as uncertainty, insincerity or professional incompetence. Thereby, a deep study of politeness strategies is a necessary condition for preventing "linguistic shocks" in intercultural dialogue.

Conclusion

The study of the phenomenon of politeness in the linguoculturological and sociolinguistic levels enables us to draw the following scientific conclusions:

Although politeness, on the one hand, is a universal human category aimed at maintaining social harmony, on the other hand, it has specific forms of manifestation determined by the internal value system of each culture. This characterizes politeness as both a sociocultural constant (stability) and a contextual variable.

Research proves that politeness strategies are directly linked with "linguo cultural personality type." Each society (English, Japanese, Turkish, etc.) encodes its own code of politeness through these types and passes it down from generation to generation.

In Western cultures, "negative politeness" based on respect for the personal space and sovereignty of the individual dominates, while in Eastern cultures, "positive politeness" and ritualized models based on collective harmony and hierarchical respect dominate. Understanding these differences from a sociopragmatic perspective is fundamental to preventing "pragmatic failures" in intercultural dialogue.

Politeness is not just a set of etiquette rules, but also an important identification tool that confirms the cultural identity of an individual. Through speech etiquette and non-verbal signals, the bearer demonstrates his sociocultural affiliation, regulates social roles and status relations.

In conclusion, it can be noted that studying the category of politeness allows us to understand the dialectical relationship between language, culture, and thought, as well as to build more effective and conflict-free communication models in the modern globalized world.

ORCID ID: 0009-0005-4875-1545

Abstract: This study examines the humorous and comic potential of phraseological units and idioms in English and Azerbaijani discourse. The research focuses on the role of idiomatic expressions in creating humor, irony, satire, and comic characterization within literary and communicative contexts. Particular attention is given to the semantic transformation and structural modification of idioms by writers, as well as to the relationship between traditional folk expressions and their use in artistic discourse. Through comparative and contextual analysis, examples from English and Azerbaijani linguistic and literary materials

are examined. The findings demonstrate that idioms function not only as stable linguistic units but also as productive stylistic resources capable of generating new contextual meanings and humorous effects. The study also reveals that culturally specific idiomatic patterns contribute to the national and aesthetic character of discourse. The comparison of English and Azerbaijani examples shows that structurally different idiomatic equivalents may perform similar humorous functions. Thus, idioms significantly increase the expressive, communicative, semantic, and comic potential of discourse.

Keywords: discourse, idiom, folklore, man of letters, humorous quality

DİSKURSDA İDİOMLARIN KOMİK TƏBİƏTİ

Mehriban Ehtiram MƏMMƏDLİ

Azərbaycan Dillər Universiteti

Xülasə: Bu məqalədə ingilis və Azərbaycan diskursunda frazeoloji vahidlərin və idiomların yumoristik və komik potensialı araşdırılır. Tədqiqatın əsas məqsədi idiomların bədii və kommunikativ kontekstdə yumor, ironiya, satira və komik xarakter yaratmasında rolunu müəyyənləşdirməkdir. Məqalədə yazıçılar tərəfindən idiomların semantik transformasiyası və struktur dəyişiklikləri, həmçinin xalq ifadələrinin bədii diskursda istifadəsi nəzərdən keçirilir. Tədqiqat zamanı ingilis və Azərbaycan dillərinə aid linqvistik və ədəbi materiallar müqayisəli və kontekstual təhlil əsasında araşdırılmışdır. Nəticələr göstərir ki, idiomlar yalnız sabit dil vahidləri deyil, həm də yeni kontekstual mənalar və yumoristik effekt yaratmağa imkan verən məhsuldar üslubi vasitələrdir. İngilis və Azərbaycan idiomlarının müqayisəsi struktur baxımından fərqli ifadələrin oxşar yumoristik funksiyalar daşıya bildiyini göstərir. Beləliklə, idiomlar diskursun ifadəliliyini, kommunikativ və semantik yükünü artırmaqla yanaşı, onun komik və satirik təsirini də gücləndirir.

Açar sözlər: diskurs, idiom, frazeoloji vahid, folklor, yumor, ironiya, satira

Introduction

1. Discourse is “speech loaded with life”; it is a process of language activity. Discourse is the movement and flow of information in communication between interlocutors. The activity of discourse participants accelerates this process.

2. The relevance of the topic is determined by the need to identify the comic force of phraseological units and idioms in the process of language and speech activity. The main aim is to clarify the role and position of idioms in humorous behavior and comic situations.

3. Phraseological units also underlie comic creativity. Their comic potential is broad within the discourse environment as well. In such conditions, the potential of set expressions colored with comic shades becomes even wider. In this sense, “it is almost impossible to create the necessary artistic effect and aesthetic qualities in a work of art without phraseological means.” (1, 156-188 s.)

4. A writer is able to regulate the relationship between artistic truth and life through the manner of using words and through the ability to alter the arrangement of meanings within the semantic chain of a word. “The creative mastery of an artist reveals itself in bringing to the foreground one of the possible meanings existing within a word in accordance with an artistic intention and an individual style. It is also possible for an author to construct an entirely new meaning on the basis of the semantic potential of a word, although such cases are very rare. The essential point is that the writer selects the most appropriate meaning from among the various

semantic shades of the word according to the purpose of expression and activates it within the text. This process is evaluated as stylistic choice.” (2, s. 5 (177 s.)

5. Among the phraseological means that ensure comic effect in the environment of artistic information, idioms occupy one of the most important places. Idioms are among the most enduring expressive means of a national language. Idioms are first created by the people, and then by men of letters. Every language possesses a rich stock of idiomatic patterns. Through idioms, irony can also be expressed where appropriate. The aesthetic views of the creator of humor become manifest.

Materials and Methods

The present study is based on the analysis of phraseological units and idioms used in English and Azerbaijani discourse, with particular attention to their humorous, comic, ironic, and satirical functions. The research material includes idiomatic expressions found in literary discourse, folklore, poetic works, dramatic texts, and examples of everyday language usage.

A comparative approach is applied to identify similarities and differences between English and Azerbaijani idiomatic expressions. The analysis focuses on the semantic meanings of idioms, their structural patterns, contextual transformations, and their ability to produce comic effects.

Particular attention is paid to cases in which writers preserve the semantic association of a traditional idiom while modifying its structural elements. Examples from the works of Jalil Mammadguluzadeh, Nüsret Kəsəmənli, S. Rustamkhanli, and S. Rahman are examined to demonstrate how idiomatic expressions function in humorous and satirical discourse.

The study also considers the role of contextual meaning, metaphorical transfer, semantic deviation, irony, and exaggeration in the creation of humorous quality. English idiomatic expressions are compared with their Azerbaijani equivalents where appropriate in order to reveal their structural and semantic characteristics.

The main analytical method is contextual and comparative analysis, which makes it possible to determine how idioms contribute to comic characterization, humorous narration, dialogue, and the overall communicative and semantic load of discourse.

Discussion

Sometimes idioms presented in quotation marks express a comic attitude toward the events described in discourse. For example: *“It is impossible to understand you.”* This impersonal sentence in English is translated into Azerbaijani as *“Səni başa düşmək qeyri-mümkündür.”* The ironic attitude here is conveyed through quotation marks. Therefore, in the idiom *“to understand,”* there is a deviation from the primary meaning. In such cases, description becomes natural, vivid, and figurative. Idioms in both English and Azerbaijani function as important means of creating laughter. The idiomatic pattern of the native language is used in two ways:

1. A metaphorical image already existing in folk usage is successfully transferred into discourse or an artistic text. The comic aspect predominates in such metaphorical images. For example: *“saqqallı uşaq”* (“a bearded child”). As is well known, this idiom was coined by Jalil Mammadguluzadeh, and it was created for a humorous-satirical purpose. In the discourse, the subject is a child who writes on a wall:

“Father, who wrote this?” I said: “My children, the one who wrote this was also a child like you; the only difference is that he has a beard, while you do not yet have one.” The children laughed a lot, and it is clear that there was a strong reason for their joy and laughter, obvious to every reader.

(Jalil Mammadguluzadeh, Saqqallı uşaq. Uşaq Bilik Portalı; <https://portal.azertag.az/node/31769>)

2. In some cases, however, the man of letters grasps only the pattern-scheme of an idiom used in the common language, changes the elements of that structure, but still preserves the semantic association of the original idiomatic pattern.

For example, in English there are such expressions as: *to get into the groove*, *to resume one's natural course*, *to get back into one's routine*, *to become completely settled*, *to settle down*, *to come to oneself*. In Azerbaijani, this is expressed as "*yolun ağzına düşmək*." This folk expression is modified by the poet as: "*Düşmüşəm küçələrin ağzına*" ("I have fallen into the mouths of the streets") (Nüsrət Kəsəmənli. Seçilmiş əsərləri. "Şərq-Qərb", Bakı-2004, s.56 (256 s.). The fixed expression conveys the meaning of the folk phrase "*küçələrdə qalmışam*" ("I have been left in the streets").

Another example: *someone lacks the energy (strength)*, *someone hasn't got it in him*, *someone has not the courage*, *someone has not the nerve*. In Azerbaijani, this idiom is expressed as "*bir atımlıq barıtı var*" ("he has only one shot of gunpowder"). "*Bircə kabinetlik istedadı da təkrarladı*" (S. Rustamkhanli).

There is also an idiom in English: *to be imposed (against one's will)*. In Azerbaijani, this corresponds to "*boyuna biçilmək*" (to be forced upon someone against his or her will). "*İndi sevgilərin, əqidələrin / Stollar boyuna biçilməsi var*" ("Now loves and convictions are tailored to the size of tables") (S. Rustamkhanli).

As can be seen, phraseological units and idioms are widely used in the process of comic depiction of images. The idiom "*gülməyə baxmaq*" ("to look at laughing") is in fact not correct. "*Hamı Sabirin gülməyinə baxdı*" (*Everybody looked at Sabir's laughing*). It would be more accurate to say that people looked at the person who was laughing.

One of the features that produces laughter is the reflection of flattery in discourse through various idioms. For example, the idiom "*ayağına düşmək / əl-ayağına düşmək*." In English this may correspond to various expressions such as: *to be ready to drop*, *to be dropping with fatigue*, *to be falling off one's feet*, *to fall ill*, *to be laid low*. In the sentence "*Müdür içəri girəndə əl-ayağa düşdülər*" ("When the boss entered, they became overly flustered"), one can also observe the exposure of flattery.

Comic semantics is also present in the idiom "*cəhənnəmdən bezbilet qaçan*" ("one who escaped from hell without a ticket"). This semantics conveys the meaning of *perfect hell / a regular inferno / to live badly*. The English use such expressions as *a bad-looker* or *a terror*. In other words, he has escaped from hell without a ticket. The words *bezbilet* and *biletsiz* ("ticketless") in themselves acquire comic qualities and create a humorous attitude in discourse.

The English use the expression "*the man in the street*" about a person who is completely ordinary and unremarkable. In Azerbaijani, the metaphor "*siçan*" ("mouse") is used in this sense and gives rise to laughter. In the discourse of S. Rahman's comedies, we find such an utterance: "*...məni əməlli-başlı siçana döndərdilər*" ("...they really turned me into a mouse.") (4, s.43/302 s.)

Conclusion

Thus, the following conclusions can be drawn:

- Comic idioms used in discourse are the product of the interlocutors' thinking.
- On the basis of language facts, the national-cultural potential of idioms that create laughter in discourse is revealed.
- Comic idioms are used in the speech of characters and play a major role in producing comic tone.
- The idiomatic layer of discourse also increases its communicative and semantic load.
- Irony and sarcasm found in idioms observed in discourse often have an episodic character.

- Comic narration, dialogues, and replicas are created in discourse.
- Idiomatic expressions of typologically different languages appear more interesting in humorous quality and are sometimes observed in structurally different equivalents.
- Idiomatic units are also distinguished by the sweet and salty humor they manifest, as well as by their satirical sharpness.

APPLICATION OF CORPUS LINGUISTICS AND LINGUOSTATISTICS IN FOREIGN LANGUAGE TEACHING AND TRANSLATION STUDIES (BASED ON A DEVELOPING AZERBAIJANI LANGUAGE CORPUS)

Hamida Azizagha KHALILOVA

PhD, teacher, Baku branch of Moscow State University

E-mail: hamida.khalilova@mail.ru

ORCID ID: 0000-0002-7423-8850

Abstract: This article explores the possibilities of integrating corpus technologies and linguostatistical methods into contemporary foreign language teaching and translation practices. The study is based on literary texts and the developing Azerbaijani language corpus, examining their methodological potential for enhancing language and translation competence. Particular attention is paid to the application of frequency analysis, contextual lexical analysis, and the comparative study of source texts and their translations. The findings indicate that a corpus-oriented approach enables learners to analyze authentic language data more effectively, identify lexical and stylistic patterns, and make informed translation decisions. Furthermore, it promotes the development of analytical thinking, critical evaluation, and research skills by encouraging learners to investigate linguistic phenomena independently. Such an approach supports a transition from a traditional reproductive model of learning to an inquiry-based, learner-centered model, fostering greater autonomy and improving the overall quality and effectiveness of foreign language learning and translator training.

Xülasə: Məqalədə korpus texnologiyalarının və lingvostatistik metodların müasir xarici dil tədrisi və tərcümə praktikasına integrasiyası imkanları araşdırılır. Tədqiqat ədəbi mətnlər və formalaşdırılmaqda olan Azərbaycan dili korpusu əsasında aparılmış, bu vasitələrin dil və tərcümə kompetensiyalarının inkişafındakı metodoloji potensialı təhlil edilmişdir. Xüsusi diqqət tezlik analizinin, leksik vahidlərin kontekst daxilində öyrənilməsinin, eləcə də orijinal mətnlə onun tərcüməsinin müqayisəli təhlilinin tədris prosesində tətbiqinə yönəldilmişdir. Müəyyən edilmişdir ki, korpusyönümlü yanaşma tələbələrin dil faktlarını obyektiv şəkildə qiymətləndirməsinə, leksik və üslubi xüsusiyyətləri daha dərinlən mənimsəməsinə, analitik təfəkkürünün və tədqiqat bacarıqlarının inkişafına mühüm töhfə verir. Bununla yanaşı, bu yanaşma öyrənənlərin müstəqil araşdırma aparmaq, dil materialını sistemli şəkildə təhlil etmək və tərcümə qərarlarını əsaslandırmaq qabiliyyətini gücləndirir. Nəticədə, ənənəvi reproduktiv öyrənmə modelindən tədqiqatyönümlü, tələbəmərkəzli təlim modelinə keçid təmin edilir və xarici dil tədrisinin səmərəliliyi artır.

Introduction

The contemporary development of foreign language teaching methodology and translation studies is taking place within the context of a profound digital transformation of the humanities (Xəlilova, 2025). The expanding capabilities of natural language processing technologies and the growing volume of available textual data necessitate a reconsideration of traditional approaches to teaching and learning. The focus is shifting beyond the mere acquisition of linguistic norms toward the development of learners' ability to independently analyze linguistic material, interpret texts, and make informed translation decisions.

One of the most persistent challenges in contemporary language pedagogy remains the gap between the language presented in educational settings and its actual functioning in real communication. Examples used in textbooks are often artificially constructed and fail to reflect the complexity, variability, and stylistic richness of authentic speech. As a result, learners encounter difficulties when working with authentic texts, particularly literary ones, where the meaning of linguistic units is determined not only by their dictionary definitions but also by context, authorial style, and cultural connotations.

In this regard, the corpus-oriented approach, based on the use of authentic texts compiled into electronic corpora and supplied with various types of annotation, has acquired particular significance. Methods of corpus linguistics and linguostatistics, originally developed for scholarly language analysis, are gradually becoming instruments of educational practice. Their application transforms the nature of learners' interaction with linguistic material, shifting it from passive perception to active investigation.

The use of corpus resources, particularly the data of the Russian National Corpus, demonstrates high effectiveness in language teaching, as it provides access to representative collections of authentic texts. Such data make it possible to identify lexical frequency patterns, analyze typical contexts of use, and examine the functioning of linguistic units across different styles and genres. This enables the development of teaching materials grounded not in intuitive assumptions, but in objective linguistic evidence.

Particular significance in this context is attached to the study of literary texts. A literary work constitutes a complex system in which linguistic means perform not only nominative functions, but also aesthetic, expressive, and pragmatic ones. Working with literary texts in a corpus-based format enables learners not only to analyze lexical and grammatical features, but also to identify stylistic patterns and the distinctive characteristics of an author's individual style.

Materials and Methods

The research material consisted of literary texts from Azerbaijani literature, as well as parallel texts of original works and their translations included in both developing and already established electronic corpora. The study employs texts representing various genres and historical periods, which makes it possible to take into account both synchronic and diachronic features of language functioning.

The empirical basis of the research comprises the developing corpus of Azerbaijani literary texts, as well as previously created author-specific corpora: the poetic corpus of Fuzuli's texts (Халилова, 2024), the corpus of M.A.Sabir's texts (Халилова, 2023), the corpus of Nizami Ganjavi's texts (Халилова, 2023), and the corpus of Imadeddin Nasimi's texts. These resources include literary and poetic texts provided with elements of structural and partially morphological annotation.

The research employed methods of corpus linguistics, linguostatistics, and comparative analysis. The methods used included frequency analysis of vocabulary, contextual analysis of word usage, identification of collocations, and comparison of original texts with their translations. Particular attention was paid to the analysis of the functioning of linguistic units in literary discourse and to the study of translation transformations.

The research methodology also incorporated elements of pedagogical modelling. On the basis of corpus data, research-oriented tasks were developed aimed at fostering students' skills in the independent analysis of linguistic material. The study also employed digital text-processing tools that made it possible to conduct searches by lemmas, contexts, and frequency characteristics of linguistic units (Хәлилова, 2025, s. 10).

Results and discussion

The results of the study demonstrate that the use of corpus technologies in the teaching of foreign languages, translation, and philological analysis significantly increases the effectiveness of working with authentic linguistic material. The application of the corpus-based approach in combination with methods of cognitive linguistics and digital humanities contributes to the development of analytical text perception, fosters students' skills in independent linguistic research, and makes it possible to conduct both quantitative and qualitative analyses of literary texts at the lexical, morphological, and partially syntactic levels.

The study is based on the development of Azerbaijani literary text corpora, including including author-specific corpora: Nizami Ganjavi's corpus, M. A. Sabir's corpus, Imadaddin Nasimi's corpus, and Fuzuli's corpus. The use of these corpora made it possible not only to identify the quantitative characteristics of literary texts, but also to trace the features of the linguistic representation of artistic thought, the author's worldview, and the ways in which reality is conceptualised in Azerbaijani literature.

During the analysis of Nizami Ganjavi's corpus of texts ("Khamsa"), 290,476 tokens and 45,453 word forms were identified (Хәлилова, 2025, s. 23). Frequency analysis revealed the most frequently used linguistic units, among which function words, pronouns, and particles

predominated, including “bir”, “bu”, “o”, “hər”, “ki”, and others (Xəlilova, 2025, s. 23). The obtained data made it possible to trace the functioning of deictic elements, the organisation of textual cohesion, and certain regularities in the syntactic structure of literary discourse. From the perspective of the cognitive approach, such units play an important role in structuring the artistic space of the text and in shaping the mechanisms of perception of poetic discourse.

A comparative analysis of Azerbaijani and Russian translations of the poem “Leyli and Majnun” was also carried out. The study included an analysis of the frequency of personal pronouns, predicative units, religious vocabulary, and ethnoculturally specific lexical items. The analysis revealed specific features in the functioning of Arabic borrowings, as well as differences in the frequency of the lexical items “Allah”, “yaradan”, “tanrı”, and other units in the original texts and their translations (Xəlilova, 2025, s. 24). Work with parallel corpora demonstrated the high effectiveness of corpus methods in translation teaching, since it enables students to analyse translation transformations at the lexical, grammatical, and stylistic levels, compare different ways of representing meaning, and examine the mechanisms of intercultural transmission of literary texts.

During the creation of M.A.Sabir’s corpus of texts, satirical works, letters, stories, translations, children’s poems, ghazals, articles, takhmises, and other texts by the author were systematised. At the present stage, the corpus contains 67,138 tokens and 21,361 word forms (Xəlilova, 2025, s. 10). Frequency analysis revealed the high frequency of colloquial, socio-political, and evaluative vocabulary, reflecting the specific features of Sabir’s satirical discourse. The analysis of contexts of use and the variability of word forms made it possible to identify the features of the linguistic representation of colloquial speech and socially marked elements within the text. For example, the word “school” appears in various forms, including “uşqol”, “uşqola”, “uşqoladan”, and others, which indicates the author’s intention to reproduce living colloquial speech and the socio-speech characteristics of his characters (Xəlilova, 2025, s. 24).

A special place in the study is occupied by the creation of the Fuzuli’s corpus of poetic texts, which includes 305 ghazals and a number of the author’s poems. The corpus contains 31,372 tokens and 9,289 word forms (Xəlilova, 2025, s. 25). Frequency analysis revealed the active functioning of the auxiliary verbs “olmaq”, “etmək”, and “eyləmək”, as well as complex constructions formed through combinations of Arabic borrowings and Azerbaijani verbal forms (Xəlilova, 2025, s. 25). The study demonstrated that these linguistic units perform not only grammatical but also important cognitive-poetic functions, participating in the formation of the figurative system of the text and the organisation of the author’s poetic thinking. The analysis of contexts and concordances made it possible to identify the features of recurring imagery, semantic connections, and lexical-syntactic patterns in Fuzuli’s poetic discourse.

The practical application of corpus resources in the methodology of teaching foreign languages and translation demonstrated that work with authentic authorial texts significantly increases students’ engagement in the process of analysing and interpreting literary material. Unlike artificially adapted teaching examples, corpus-based literary texts allow students to work with authentic linguistic material reflecting the author’s individual style, cultural context, nationally specific vocabulary, and artistic thinking. This contributes to a deeper perception of the text, the development of contextual analysis skills, an understanding of semantic and stylistic nuances, and the formation of more accurate translation solutions.

Work with corpora also enables students to independently analyse the frequency of lexical usage, the features of syntactic constructions, the functioning of culturally marked vocabulary, and

the specifics of authorial textual organisation. The use of concordances, parallel texts, and frequency dictionaries makes the learning process more research-oriented and interactive, fostering students' skills in critical text analysis and the interpretation of linguistic data.

The discussion of the research results demonstrates that author-specific corpora of Azerbaijani literary texts possess considerable scholarly, educational, and methodological potential. Their use opens up new opportunities for the development of corpus linguistics, digital humanities, cognitive text studies, translation studies, and contemporary methods of teaching foreign languages. At the same time, the study confirms the necessity of further expanding the corpus base of the Azerbaijani language, improving tools for automatic annotation, morphological and syntactic analysis, and creating fully developed parallel corpora of literary translations.

The prospects for further research are associated with the development of multi-level annotated corpora of Azerbaijani literary texts, the integration of artificial intelligence technologies and natural language processing methods, as well as the creation of educational platforms based on corpus data. An important direction for future research is also the development of cognitive-discursive analysis of literary texts, which makes it possible to investigate the mechanisms of linguistic representation of thought, emotions, and cultural memory in Azerbaijani literature.

Conclusion

Thus, the present study confirms that the corpus-based approach and methods of linguostatistics represent one of the most promising directions in contemporary digital linguodidactics and corpus linguistics. Their integration into the teaching of foreign languages and translation practice enables a shift from a traditional model of language acquisition toward a research-oriented model of learning grounded in the analysis of authentic linguistic data.

The results of the analysis of the developed and implemented corpora of Azerbaijani literary language, including author-specific and poetic corpora of Nizami Ganjavi, M.A.Sabir, Imadaddin Nasimi, and M.Fuzuli, as well as other specialized textual databases, demonstrate their considerable scholarly and educational potential.

Corpus resources equipped with tools for concordance analysis, frequency analysis, tokenization, and contextual search significantly expand the possibilities for studying language and literary texts.

Of particular importance is the use of concordance analysis, which allows linguistic units to be examined not in isolation but within broad contextual environments, thereby contributing to a deeper understanding of their semantics, stylistic functions, and pragmatic load. Frequency and token analysis make it possible to identify key lexical units, thematic dominants, and features of individual authorial style. In the field of translation studies, corpus technologies provide opportunities for comparing original texts and their translations at the level of specific contexts, identifying translation transformations, and analysing strategies for rendering literary expressiveness.

The practical application of corpus data in education contributes to the development of students' critical thinking, research skills, and ability to independently analyse linguistic material. Working with authentic texts in a corpus-based format brings the learning process closer to real language use and fosters a deeper understanding of its systemic and functional organization.

Despite existing limitations related to the underdevelopment of corpus infrastructure for the Azerbaijani language and the need to further improve tools for automatic annotation and analysis, the continued development of corpus technologies opens broad perspectives for integrating digital

methods into humanities education. In the future, such resources may serve as the foundation for intelligent educational platforms, automated text analysis systems, electronic dictionaries, and new methodological models for teaching language and translation.

CONCEPTUAL METAPHORS IN POLITICAL DISCOURSE: FRAMING REALITY

Nigar Vagif SEYIDOVA

PhD in Philology, Baku State University

E-mail: nigarseyidova@bsu.edu.az

ORCID ID: 0009-0001-4413-2270

Abstract: Political discourse is characterized as a communicative system that plays an important role in the construction and interpretation of social reality in modern society. Within this discourse, formed through language, conceptual metaphors perform the function of concretizing abstract political concepts, presenting ideological positions, and directing public opinion. Metaphors are not only a means of artistic expression, but also act as fundamental components of thinking and perception mechanisms. In this regard metaphorical models in political discourse serve to present reality within certain frameworks, to ensure the selective interpretation of events, and to shape the emotional-logical reactions of the audience. According to the provisions of discourse theory, the meaning of social objects and events is determined by the discursive system to which they belong, and metaphors play a special structuring role in this process. In the context of political communication, the manipulative potential of metaphors, their ideological impact, and framing mechanisms constitute one of the main directions of modern linguistic and political research.

Keywords: political discourse, conceptual metaphor, framing, discourse theory, speech manipulation, political communication

SİYASİ DİSKURSDA KONSEPTUAL METAFORLAR: REALLIĞIN ÇƏRÇİVƏLƏNDİRİLMƏSİ

Аннотация: Политический дискурс характеризуется как коммуникативная система, играющая важную роль в конструировании и интерпретации социальной реальности в современном обществе. В рамках данного дискурса, формируемого посредством языка, концептуальные метафоры выполняют функцию конкретизации абстрактных политических понятий, представления идеологических позиций и направления общественного мнения. Метафоры выступают не только средством художественного выражения, но и являются основными компонентами механизмов мышления и восприятия. В этом контексте метафорические модели в политическом дискурсе служат представлению реальности в определённых рамках, обеспечивают селективную интерпретацию событий и формируют эмоционально-логические реакции аудитории. Согласно положениям теории дискурса, значение социальных объектов и явлений определяется дискурсивной системой, к которой они принадлежат, и в этом процессе метафоры играют особую структурирующую роль. В контексте политической коммуникации манипулятивный потенциал метафор, их идеологическое воздействие и механизмы фрейминга составляют одно из основных направлений современных лингвистических и политологических исследований.

Ключевые слова: политический дискурс, концептуальная метафора, фрейминг, теория дискурса, речевая манипуляция, политическая коммуникация

Introduction

In modern linguistics, the concept of discourse is interpreted not only as a text, but also as the unity of social, ideological and communicative context. In this regard discourse acts as a means of perceiving and presenting reality. According to discourse theory, the meaning of objects and events is determined through the discursive system to which they belong, and this system plays a fundamental role in the formation of social reality (Mammadova, 2017).

Political discourse, in turn, acts as a special form of this general discursive system and aims to influence public consciousness, legitimize ideological positions and regulate social relations. In this discourse, language functions not only as a means of transmitting information, but also as a tool of influence and manipulation. Modern studies show that various speech strategies, including metaphorical models, are widely used in the process of political communication and these models significantly influence the formation of public opinion.

In this context, conceptual metaphors are of particular importance. They simplify complex political reality by presenting it through concrete images, and thus determine the direction of thinking of the audience. These frames created through metaphors direct the perception of political events and bring certain aspects of reality to the fore.

The above-mentioned theoretical provisions show that the effectiveness of political discourse largely depends on the linguistic means used, especially conceptual metaphors. In this regard, the systematic analysis of the functional features of metaphors in political discourse, their framing and manipulation mechanisms arouses special scientific interest.

Materials and Methods

The material of the study consists of examples of modern political discourse, speeches of political leaders, texts published in mass media, as well as scientific sources related to discourse

theory and political communication. In the research process, descriptive, comparative and discourse analysis methods were used in order to determine the functional role of conceptual metaphors in political discourse. Content analysis was applied to identify and systematize metaphorical models and at the same time the semantic and pragmatic features of language units were interpreted within the context. During the research, the basic principles of discourse theory and cognitive linguistics approaches were taken as a basis and the mechanisms of framing reality in political texts were comprehensively analyzed.

Conceptual metaphors are of particular importance in language. They simplify complex political reality by presenting it through concrete images and thus determine the direction of thinking of the audience. These frames created through metaphors direct the perception of political events and highlight certain aspects of reality.

The above-mentioned theoretical provisions show that the effectiveness of political discourse largely depends on the linguistic means used, especially conceptual metaphors. In this regard, the systematic analysis of the functional features of metaphors in political discourse, their framing and manipulation mechanisms arouses special scientific interest. Therefore, in the following sections, the theoretical foundations of discourse and political discourse, the principles of conceptual metaphor theory and the role of metaphors in the process of political communication will be widely studied.

The concept of discourse in modern linguistics is interpreted not only as a text, but also as a complex system in which social reality is formed and interpreted. According to this approach, discourse is not a simple sequence of language units, but a system of meaningful practices conditioned by a certain social context, ideological framework and communicative purpose. It is especially emphasized in discourse theory that all objects and events are meaningful only within discourse and their perception depends on the discursive structure (Samadov, 2020).

In this regard discourse is not a passive reflection of social reality, but acts as its active constructor. That is, through language not only the existing situation is described, but also new meanings are created and social relations are structured. This feature of discourse also determines its political nature, because each discourse is connected with certain power relations and ideological priorities.

Political discourse acts as a special form of this general discursive system and its main purpose is to influence public opinion, direct social behavior and create political legitimacy. Studies show that political discourse is not only informative, but also manipulative in nature. The linguistic means used in this discourse are aimed at shaping the emotional and cognitive reactions of the audience. For example, modern studies note that political discourse is a communicative environment in which various speech strategies are applied to influence mass consciousness, and manipulation acts as one of the main mechanisms (Habibova, 2024). This manipulation is often hidden and it is difficult for the audience to directly perceive it.

The manipulative nature of discourse is clearly reflected in G. Schiller's idea. He notes that the success of manipulation depends on it being unnoticed and on reality being presented as "natural" (Vaqifgizi, 2026). This shows that the "reality" created in political discourse is actually a construct formed through language.

A person conceptualizes abstract notions through concrete domains of experience, and this process is carried out on the basis of metaphorical mapping. This approach coincides with the provisions of discourse theory. Thus, it is also noted in discourse theory that the meaning of objects

and events is determined through the systems of meaning to which they belong and these systems have a socially constructed character. Conceptual metaphors, in turn, play a crucial role precisely in structuring these systems of meaning. Through metaphorical models, a person connects complex and abstract domains with simpler and more familiar ones.

In political discourse, conceptual metaphors perform several main functions:

Simplification of reality. Political processes are highly complex and multi-layered. Metaphors simplify this complexity and present it in a more understandable form. This enables the audience to perceive information more easily.

Framing function. Metaphors present events within a certain framework. Through this framework, the audience perceives reality only from a particular perspective. According to discourse theory, the same object can be interpreted differently in different discourses and metaphors are one of the main tools of this differentiation.

Ideological influence and manipulation. Metaphors allow ideological positions to be presented in a hidden form. In this case the audience tends to perceive the presented ideas as “natural” and “objective.” This constitutes one of the main mechanisms of manipulation. For example, one of the main characteristics of manipulation in political discourse is its hidden nature. Studies note that manipulation is more effective when the audience does not realize it and reality is presented as “natural” (Habibova, 2024). Metaphors play an important role in creating this illusion of “natural reality.” Certain stable metaphorical models are widely used in political discourse. These models show similar characteristics across different languages and cultures.

Politics is war. This model presents political struggle through the prism of confrontation, hostility, and victory. Within this metaphor, opponents are presented as “enemies,” and political processes are described using expressions such as “battle,” “attack” and “defense.”

Politics is a journey. In this model, political processes are presented as development and movement: “moving forward,” “roadmap,” “right direction.” Such metaphors present political decisions as rational and goal-oriented processes.

The state is a family. In this metaphorical model, the state is presented as a family: the leader appears as a “father” or “protector” and citizens are described as “family members.” This model creates emotional attachment and serves to legitimize power.

In political discourse, metaphors are not only a means of explanation but also a mechanism of influence. They directly affect the emotions and values of the audience. Studies show that political leaders influence the decision-making process of the audience by using emotional and evaluative expressions in their speeches (Qurbanov, 2024). In this process, metaphors play a special role because they carry emotional load and transform abstract concepts into concrete images. For example, metaphors such as “threat,” “crisis” and “struggle” create fear, while metaphors such as “development,” “progress” and “path” generate hope and motivation.

The practical application of conceptual metaphors in political discourse shows that they are not merely theoretical models but function as key components of real communicative strategies. The analysis of the presented materials makes it possible to confirm this idea with concrete examples. For instance, the creation of the image of “threat” and “enemy” in political speeches is a widely used discursive strategy. Within this strategy, certain political forces or events are deliberately presented in a negative framework. Such presentation creates feelings of fear, anxiety and mobilization among the audience. This represents a concrete realization of the metaphorical model “politics is war” (Qurbanov, 2024).

At the same time, the evaluation strategy in political discourse is closely connected with metaphors. Through evaluative vocabulary and metaphorical expressions, events are presented from a particular ideological position. In this case, the audience tends to accept this presentation as objective reality. Thus, ideological influence is carried out indirectly through metaphors. On the other hand, according to discourse theory, each object and event can acquire different meanings within different discursive frameworks. This indicates the existence of alternative interpretations in political discourse. For example, the same event may be presented as “development” in one discourse and as “threat” in another. This difference is realized precisely through metaphorical framing.

Studies conducted in Azerbaijani linguistics also show that political discourse is based on stable structural-semantic models and that these models play an important role in shaping public consciousness (Habibova, 2024). This stability is related to the continuous use of metaphorical models. That is, certain metaphors are repeatedly used, becoming firmly embedded in collective thinking and acquiring a stereotypical character.

Another important function of metaphors in political discourse is the strengthening of emotional impact. Studies on speech manipulation indicate that emotional arguments directly influence the decision-making process of the audience. Metaphors further intensify this emotional impact, as they activate feelings through concrete imagery.

Conclusion

The conducted research shows that political discourse is an important communicative system in modern society in terms of shaping social reality and directing public consciousness. Within this discourse, conceptual metaphors act not only as linguistic units but also as structuring elements of thought and ideology.

Based on the provisions of discourse theory, it has been determined that the meaning of objects and events is defined within the discursive system to which they belong and metaphors play a central role in this system. Through metaphorical models, political reality is presented within certain frameworks, and these frameworks determine how the audience perceives events.

STYLISTIC FEATURES OF PHONETIC CHANGES IN MAHIRA NAGIGIZI'S POEMS

Chinara YOLCHUBAYLI

Teacher, Mingachevir State University

E-mail: chinara.yolchubayli@mdu.edu.az

ORCID ID: [0000-0002-6971-8710](https://orcid.org/0000-0002-6971-8710)

Abstract: This article examines the poetic and stylistic features of phonetic changes in the works of Mahirə Nağıqızı. During the research, alliteration, assonance, sound repetitions, colloquial phonetic elements, sound reduction, and the poetic possibilities of vowel harmony used in the poet's various poems were extensively analyzed. The study reveals that phonetic devices in Mahira Naghigizi's poetry function not only as linguistic phenomena but also as important artistic components that create emotional and aesthetic impact. The harmony of sounds in the poet's works strengthens poetic rhythm, musicality, and imagery while creating a deep emotional effect on the reader. The research demonstrates that the deliberate repetition of consonant and vowel sounds contributes significantly to the formation of poetic harmony, whereas colloquial language elements increase the sincerity and naturalness of the poems. Based on concrete poetic examples, the semantic load, rhythmic function, and artistic-aesthetic role of phonetic changes are explored in detail. The article concludes that the phonetic system occupies an important place in Mahira Naghigizi's individual poetic style and serves as one of the major factors shaping the emotional expressiveness of her poetry.

Keywords: phonetic changes, alliteration, assonance, poetic language, Mahira Naghigizi, style, Azerbaijani poetry

MAHİRƏ NAĞIQIZININ ŞEİRLƏRİNDƏ FONETİK DƏYİŞİKLİKLƏRİN ÜSLUBİ XÜSUSİYYƏTLƏRİ

Çinarə YOLÇUBƏYLİ

Mingəçevir Dövlət Universitetinin müəllimi

E-mail: chinara.yolchubayli@mdu.edu.az

ORCID ID: [0000-0002-6971-8710](https://orcid.org/0000-0002-6971-8710)

Xülasə: Bu məqalədə Mahirə Nağıqızının yaradıcılığında fonetik dəyişmələrin poetik və üslubi xüsusiyyətləri araşdırılır. Tədqiqat zamanı şairin müxtəlif şeirlərində istifadə olunan alliterasiya, assonans, səs təkrarları, danışq dilinə məxsus fonetik elementlər, səs düşümü və sait ahənginin poetik imkanları geniş şəkildə təhlil edilmişdir. Araşdırma göstərir ki, Mahirə Nağıqızının poeziyasında fonetik vasitələr yalnız dil hadisəsi kimi deyil, həm də emosional və estetik təsir yaradan mühüm bədii komponentlər kimi çıxış edir. Şairin əsərlərində səslərin ahəngi poetik ritmi, musiqililiyi və obrazlılığı gücləndirməklə yanaşı, oxucuda dərin emosional təsir yaradır. Tədqiqat nəticələri göstərir ki, samit və sait səslərin məqsədyönlü təkrarı poetik harmoniyanın formalaşmasında mühüm rol oynayır, danışq dili elementləri isə şeirlərin səmimiyyətini və təbiiliyini artırır. Konkret poetik nümunələr əsasında fonetik dəyişmələrin semantik yükü, ritmik funksiyası və bədii-estetik rolu ətraflı şəkildə araşdırılmışdır. Məqalədə belə nəticəyə gəlinir ki, fonetik sistem Mahirə Nağıqızının fərdi poetik üslubunda mühüm yer tutur və onun poeziyasının emosional ifadəliliyini formalaşdıran əsas amillərdən biri kimi çıxış edir.

Açar sözlər: fonetik dəyişmələr, alliterasiya, assonans, poetik dil, Mahirə Nağıqızı, üslub, Azərbaycan poeziyası

Introduction

The use of phonetic possibilities of language in Azerbaijani poetry is one of the major factors determining the poet's artistic style (Kazimov, 2019). The harmony of sounds, rhythmic structure, alliteration, and assonance strengthen the emotional impact of poetic texts (Aliyev, 2021). One of the contemporary Azerbaijani poets who successfully applies these stylistic features in her creativity is Mahirə Nəghigizi.

Phonetic changes in the poet's works serve not only to create poetic beauty but also to express the author's inner emotional world (Mammadov, 2022). Her poetic language is characterized by closeness to colloquial speech, sound harmony, and rhythmic fluency. Therefore, the study of phonetic changes in Mahira Nəghigizi's poetry is of great importance for understanding the rich possibilities of Azerbaijani poetic language.

Materials and Methods

During the research, various poems by Mahirə Nəghigizi were analyzed comparatively (Nəghigizi, 2020). Comparative-descriptive, phonetic, and stylistic analysis methods were employed in the study. The phonetic devices used in the poems were identified and their poetic functions were examined.

The poet's lyrical, patriotic, philosophical, and love-themed poems were comparatively analyzed. The emotional-expressive load of phonetic changes, their role in shaping rhythmic structure, and their influence on the musicality of poetic language were investigated (Hasanov, 2018). Particular attention was paid to the function of sound repetitions in creating poetic meaning.

Results and Discussion

Features of the Phonetic System in Mahira Nəghigizi's Poetic Language. One of the principal characteristics of Mahirə Nəghigizi's poetic language is the systematic and purposeful use of phonetic devices. The selection of sounds in her poetic texts is not accidental; each sound contributes to the formation of poetic rhythm, emotional intensity, and artistic-aesthetic effect. Although the stylistic possibilities of phonetic devices are broad in Azerbaijani poetry, these features appear as a distinctive poetic system in Mahira Nəghigizi's works (Kazimov, 2019).

Phonetic changes in the poet's works function not merely as linguistic phenomena but also as stylistic tools creating poetic meaning. In poems based on lyricism, alliteration and assonance intensify the expression of inner feelings and emotions. Since the poet's language is rich in emotional and expressive shades, the harmony of sounds complements the overall artistic structure of the text.

The main phonetic features observed in Mahira Nəghigizi's poetic style include:

- alliteration;
- assonance;
- sound reduction;
- colloquial phonetic forms;
- rhythmic sound repetitions;
- phonetic parallels creating intonation;
- sound harmony based on vowel harmony principles.

These phonetic devices increase the musicality of poetic speech, ensure rhythmic fluency, and create emotional impact on the reader.

The Poetic and Emotional Function of Alliteration. The repetition of consonant sounds occupies an important stylistic place in Mahirə Nəghigizi's poetry. The poet intentionally uses

certain sounds to express emotional states, inner tension, and lyricism more effectively. This feature is particularly evident in examples of alliteration (Aliyev, 2021).

For example:

"Silent memories on silent shores,
The sound of broken dreams was heard."

In these lines, the repetition of the "s" sound strengthens the feeling of silence, loneliness, and melancholy. The soft acoustic quality of the consonant creates an atmosphere of inner sadness and silence. Here, alliteration functions not only as a rhythmic device but also as an emotionally and aesthetically meaningful poetic element.

Another example demonstrates the repetition of the "q/k" sound:

"Dark doors turned into sorrow,
My heart shivered again in grief."

The intensive repetition of harsh consonants increases emotional tension and psychological heaviness. This stylistic feature reveals the poet's ability to express psychological states through sounds.

In patriotic poems, the prevalence of "t" and "k" sounds creates a stronger and more determined intonation:

"There is a feeling sacred as the homeland,
The breath of the Turk lives in history."

The rhythmic repetition of the "t" sound symbolizes strength, determination, and national spirit.

Thus, alliteration in Mahira Naghigizi's poetry is not merely a decorative poetic device but also an important stylistic component intensifying emotional effect. It creates rhythmic unity and forms the internal harmony of poetic speech.

Assonance and Poetic Musicality. The harmony of vowel sounds is one of the central elements of poetic musicality in Mahira Naghigizi's poetry. Assonance serves as an important phonetic means ensuring emotional fluency and musicality in her lyrical works (Mammadov, 2022).

For example:

"The roads were tired of long separation,
My heart waited for you with hope."

The repetition of rounded vowels such as "u" and "o" creates harmony and softness in poetic speech. The internal melody of the lines emerges through sound harmony.

Another example states:

"Dreams disappeared within the years,
My eyes searched for you at nights."

The rhythmic repetition of vowels intensifies emotional fluency and contributes to the musical quality of the poem.

One of the main functions of assonance is to provide rhythmic flow and melodic coherence. Through vowel harmony, the poet creates internal connections between lines and strengthens poetic musicality. This feature forms one of the major components of Mahira Naghigizi's individual poetic style.

Sound Reduction and Poetic Economy. Sound reduction is one of the phonetic phenomena serving to preserve rhythm and meter in the poet's language. Mahirə Naghigizi often uses colloquial

variants of words rather than their complete phonetic forms, which makes poetic speech more natural and vivid (Hasanov, 2018).

For example:

"I do not know where these roads lead,
My heart still searches for you."

The colloquial intonation creates sincerity and emotional closeness.

Several phonetic reductions are observed in the poet's works:

- "deyildir" → "deyil";
- "olacaqdır" → "olacaq";
- "gəlmişdir" → "gəlib";
- "edəcəkdir" → "edəcək".

These phonetic reductions create poetic economy, accelerate rhythmic movement, and ensure emotional fluency. At the same time, they bring poetic language closer to folk speech.

The Poetic Function of Colloquial Language Elements. Colloquial language elements play an important stylistic role in Mahira Naghigizi's poetry. By using phonetic and syntactic features of everyday speech, the poet increases the naturalness and sincerity of poetic expression.

For example:

"I asked you to come, but you did not tonight,
Even the roads missed you, believe me."

The colloquial intonation strengthens emotional impact and allows the reader to perceive the poetic text as living speech rather than artificial expression.

These colloquial language elements:

- simplify poetic speech;
- create emotional intimacy;
- ensure natural presentation of emotions;
- bring the poems closer to folklore style.

Therefore, colloquial speech becomes one of the important stylistic components of Mahira Naghigizi's poetry.

Vowel Harmony and Rhythmic Integrity. Vowel harmony, one of the major phonetic principles of the Azerbaijani language, occupies an important place in the poet's artistic system (Hasanov, 2018). By preserving vowel harmony, the poet ensures rhythmic integrity and melodic structure.

For example:

"A spark remained deep in my heart,
Memories left traces in my eyes."

The harmony between front and back vowels strengthens poetic unity and internal melody.

In Mahira Naghigizi's poetic language, vowel harmony:

- ensures rhythmic fluency;
- increases poetic musicality;
- creates intonational integrity;
- strengthens emotional impact.

This feature causes her poems to sound more expressive and melodic when read aloud.

Semantic Function of Phonetic Changes. In Mahira Nagigizi's poetry, sounds function not only as acoustic units but also as semantic poetic elements. Specific sounds create emotional meanings and poetic atmosphere.

For instance:

- "s" and "sh" sounds symbolize silence, melancholy, and loneliness;
- "q" and "k" sounds express harshness, pain, and determination;
- "m" and "n" sounds create softness and lyricism;
- open vowels evoke emotional breadth and hope.

The semantic function of sounds enriches the emotional and artistic structure of the poetic text.

Phonetic Parallels and Rhythmic Structure. Phonetic parallels are among the essential elements shaping rhythmic structure in the poet's works. Words beginning or ending with the same sounds strengthen poetic harmony and the connection between lines.

For example:

"Again the rain falls quietly on the roads,
Again my dreams search for you."

The repetition of the "y" sound creates rhythmic parallelism and emotional harmony.

Phonetic parallels:

- strengthen poetic rhythm;
- create connections between lines;
- intensify emotional harmony;
- provide musicality to the poem.

Thus, phonetic parallels function as significant components of the artistic-aesthetic structure in Mahira Nagigizi's poetry.

Conclusion

Phonetic changes constitute one of the principal elements of poetic style in Mahira Nagigizi's works. Alliteration, assonance, sound repetitions, colloquial phonetic elements, and vowel harmony significantly strengthen the emotional and aesthetic effect of poetic texts.

The research demonstrates that Mahira Nagigizi's poetic language is phonetically rich and forms a distinctive stylistic system in contemporary Azerbaijani poetry. Phonetic changes in her poetry function not only as linguistic phenomena but also as important means of poetic expression. Consequently, phonetic changes in Mahira Nagigizi's poems represent a major component of artistic-aesthetic thought and one of the principal features defining her individual poetic style.

FUNCTIONAL FEATURES OF PHRASEOLOGICAL UNITS IN THE SOCIO-POLITICAL DISCOURSE OF CONTEMPORARY FRENCH (BASED ON THE NEWSPAPER LE MONDE)

Nazrin Suleyman RAHMANOVA

Master of Linguistics and Translation

Lecturer, the Department of Theory and Practice of Translation of Romance Languages

Azerbaijan University of Languages

E-mail: nezrin.rahmanova@gmail.com

ORCID ID: 0009-0000-3935-3549

Abstract: The article examines the functional characteristics of phraseological units in the socio-political discourse of contemporary French based on materials from the French newspaper *Le Monde*. The study focuses on adverbial phraseological expressions, mythological and biblical phraseologisms, aphorisms, proverbs, and precedent expressions functioning in political journalism between 2018 and 2023. The research is situated within the interdisciplinary framework of phraseology, discourse analysis, pragmatics, and cultural linguistics.

The study demonstrates that phraseological units represent an important mechanism of ideological interpretation and persuasive influence in political media discourse. Adverbial phraseological constructions such as *en effet*, *de fait*, and *il va sans dire que* perform argumentative and connective functions by organizing textual coherence and reinforcing logical persuasion. Mythological phraseologisms including *épée de Damoclès*, *fil d'Ariane*, and *errer dans le dédale* contribute to metaphorical representation, cultural identification, and aesthetic expressiveness. Biblical allusions intensify evaluative and emotional meanings while creating ethical frameworks for the interpretation of political events.

The analysis confirms the multifunctional character of phraseological units. They simultaneously realize semantic, pragmatic, stylistic, ideological, and cultural functions, enabling journalists to communicate complex socio-political meanings in a concise and expressive form. Phraseological units also participate in shaping public opinion and constructing political reality through implicit evaluative strategies.

The article concludes that phraseological units constitute an essential component of contemporary French socio-political discourse and should be considered a significant object of interdisciplinary linguistic research combining discourse studies, pragmatics, stylistics, and cultural analysis.

Keywords: phraseological units; adverbial phraseologisms; socio-political discourse; mythological phraseologisms; biblical phraseologisms; French media discourse.

MÜASİR FRANSIZ DİLİNİN SOSİAL-SİYASİ DİSKURSUNDA FRAZEOLOJİ VAHİDLƏRİN FUNKSIONAL XÜSUSİYYƏTLƏRİ (LE MONDE QƏZETİ ƏSASINDA)

Nəzrin Süleyman RAHMANOVA

Dilçilik və tərcümə üzrə magistr

Roman dillərinin tərcümə nəzəriyyəsi və praktikasi kafedrasının müəllimi,

Azərbaycan Dillər Universiteti,

E-mail: nezrin.rahmanova@gmail.com

ORCID ID: 0009-0000-3935-3549

Xülasə: Məqalədə müasir fransız ictimai-siyasi diskursunda frazeoloji vahidlərin funksional xüsusiyyətləri *Le Monde* qəzetinin materialları əsasında tədqiq edilir. Araşdırma 2018 - 2023-cü illər arasında siyasi jurnalistikada işlənən adverbial frazeoloji vahidlərə, mifoloji və bibliya mənşəli frazeologizmlərə, aforizmlərə, atalar sözlərinə və presedent ifadələrə həsr olunmuşdur. Tədqiqat frazeologiya, diskurs təhlili, pragmatika və linqvokulturologiyanın kəsişməsində aparılmışdır.

Araşdırma göstərir ki, frazeoloji vahidlər siyasi-media diskursunda ideoloji interpretasiya və təsiredici kommunikasiya vasitəsi kimi mühüm rol oynayır. *En effet, de fait, il va sans dire que* kimi adverbial frazeologizmlər mətnin məntiqi bütövlüyünü təmin edir, arqumentasiyanı gücləndirir və oxucuda inandırıcılıq effekti yaradır. *Épée de Damoclès, fil d'Ariane, errer dans le dédale* kimi mifoloji frazeologizmlər metaforik təsvir, mədəni identifikasiya və estetik ekspressivlik funksiyasını yerinə yetirir. Bibliya mənşəli ifadələr isə emosional və qiymətləndirici məna çalarlarını gücləndirərək siyasi hadisələrin etik interpretasiyasına xidmət edir.

Təhlil nəticəsində müəyyən edilmişdir ki, frazeoloji vahidlər çoxfunksiyalı xarakter daşıyır. Onlar semantik, pragmatik, üslubi, ideoloji və mədəni funksiyaları eyni zamanda reallaşdırır, mürəkkəb ictimai-siyasi məzmunun yığcam və təsirli şəkildə ifadəsinə imkan yaradır. Frazeoloji vahidlər həmçinin ictimai rəyin formalaşmasında və siyasi reallığın diskursiv qurulmasında mühüm rol oynayır.

Beləliklə, frazeoloji vahidlər müasir fransız ictimai-siyasi diskursunun əsas komponentlərindən biri hesab edilməli və kompleks dilçilik tədqiqatlarının mühüm obyektinə çevrilməlidir.

Açar sözlər: frazeoloji vahidlər; adverbial frazeologizmlər; ictimai-siyasi diskurs; mifoloji frazeologizmlər; bibliya mənşəli frazeologizmlər; fransız media diskursu.

Introduction

In contemporary linguistics, phraseology is considered not only a field devoted to the study of fixed expressions but also an important mechanism through which language reflects cultural, social, and ideological values. Phraseological units (PUs) preserve collective memory, reproduce national cultural codes, and participate in the transmission of historically shaped representations. Within socio-political discourse, phraseological units perform several essential communicative functions: they structure argumentation, express evaluation, intensify pragmatic influence, and contribute to the ideological framing of events and political actors.

According to the French researcher Isabelle Gonzales Rey, there are two approaches to the understanding of phraseology: a broad and a narrow one. (Rey I., 2022, p. 38). Following I. Rey and I. Mel'çuk, we also include in the analyzed corpus any phrasemes or complex fixed expressions functioning as syntagms and characterized by a non-free, frozen structure (Mel'çuk I., 2012, p. 31).

Modern French media discourse is characterized by a high density of phraseological constructions, including adverbial expressions, idiomatic collocations, proverbs, aphorisms, mythological references, and biblical allusions. Journalistic discourse frequently relies on these units to simplify complex political realities, increase emotional impact, and establish communicative proximity with readers. The newspaper *Le Monde*, one of the leading French daily newspapers, provides extensive material for studying the functioning of phraseological units in contemporary political communication.

The importance of phraseological units in media discourse is explained by their ability to condense meaning and convey implicit evaluations. In political journalism, phraseological constructions often serve as markers of ideological positioning. Through metaphorical and culturally recognizable expressions, journalists may legitimize political actors, criticize institutions, dramatize social crises, or shape public perception of political processes. Consequently,

phraseological units function not only as linguistic devices but also as instruments of persuasion and ideological interpretation.

Theoretical approaches to phraseology emphasize its interdisciplinary character. Phraseological analysis intersects with discourse studies, pragmatics, cognitive linguistics, stylistics, and cultural studies. From a discourse-oriented perspective, phraseological units are viewed as culturally loaded communicative signs that contribute to intertextuality and shared social understanding. Their interpretation depends not only on lexical meaning but also on historical, cultural, and ideological associations embedded within collective consciousness.

The objective of this study is to identify the functional characteristics of phraseological units in contemporary French socio-political discourse and to determine their role in constructing meaning, evaluation, persuasion, and cultural representation. Special attention is devoted to adverbial phraseological expressions, mythological phraseologisms, biblical allusions, and precedent expressions functioning in political journalism.

Materials and Methods

The present research is based on articles, reports, interviews, and analytical publications from the French newspaper *Le Monde* published between 2018 and 2023. Additional contextual references from publications dated between 2015 and 2026 were also considered to observe broader tendencies in the evolution of French socio-political discourse.

The corpus of analysis includes phraseological units functioning within political, economic, and social contexts. The following categories of phraseological constructions were selected for examination:

1. Adverbial phraseological expressions reinforcing argumentative and connective functions;
2. Mythological and biblical phraseologisms contributing to cultural representation and metaphorical interpretation;
3. Aphorisms, proverbs, and precedent expressions ensuring didactic and intertextual functions;
4. Evaluative and ideological phraseological constructions used in political representation.

The methodological framework combines several complementary approaches:

- content analysis of journalistic texts;
- functional-semantic analysis of phraseological units;
- pragmatic analysis aimed at identifying persuasive and evaluative functions;
- discourse analysis focusing on ideological representation;
- comparative-cultural analysis revealing the reflection of national and cultural codes in political communication.

Particular attention was paid to the contextual functioning of phraseological units, their semantic transformations, and their pragmatic effects within media discourse. The study also considered the frequency of phraseological constructions and their stylistic distribution across different genres of political journalism, including editorials, analytical articles, interviews, and headlines.

Results and Discussion

Within the framework of the present study, a phraseological unit is understood as a stable combination of words characterized by semantic integrity and functioning as a unified communicative sign. This definition includes not only classical idioms but also adverbial locutions, fixed collocations, aphorisms, proverbs, mythological expressions, and biblical allusions.

From the perspective of discourse analysis, phraseological units are not merely linguistic ornaments but carriers of cultural memory that preserve collective experience and ensure intertextual recognizability. In socio-political discourse, they contribute to the representation of ideological values and influence readers' interpretation of political events.

One of the most important functions of phraseological units in French socio-political discourse is the persuasive function. Adverbial expressions such as *en effet*, *de fait*, *à vrai dire*, and *il va sans dire que* create an effect of logical inevitability and argumentative coherence. These expressions guide the reader's interpretation by presenting information as self-evident or universally accepted. In this sense, phraseological units strengthen the persuasive power of political discourse and contribute to the construction of credibility.

Closely related to persuasion is the argumentative function. Expressions such as *à juste titre*, *avec raison*, and *à l'évidence* serve as logical connectors organizing the structure of political reasoning. They facilitate textual cohesion while simultaneously introducing evaluative perspectives. Through these phraseological markers, journalists subtly orient the reader toward a preferred interpretation of political events.

Another significant function concerns ideological representation. Phraseological constructions such as *la voix du peuple* or *le peuple souverain* are not ideologically neutral. They implicitly invoke democratic values and concepts of popular sovereignty while simultaneously legitimizing particular political positions. In this context, phraseological units act as ideological markers capable of transmitting political evaluations without explicit argumentation.

The metaphorical and culturally representative function of phraseological units is particularly prominent in French media discourse. One of the most illustrative examples is the expression *épée de Damoclès*. In *Le Monde*, this phraseologism frequently describes situations of permanent uncertainty or threat. For example, in articles devoted to political instability or economic risks, journalists employ the expression to emphasize the fragility of institutions, governments, or corporations.

Similarly, the expressions *fil d'Ariane* and *errer dans le dédale* refer to mythological narratives deeply rooted in European cultural tradition. These units perform several simultaneous functions: they aestheticize discourse, create cultural identification, intensify metaphorical imagery, and occasionally introduce irony. Headlines such as *Emmanuel Macron dans le dédale de la reconnaissance de l'État de Palestine (Le Monde, 2025)* demonstrate how phraseological density contributes to the expressiveness and interpretative complexity of journalistic discourse.

Biblical phraseologisms also occupy an important place in political media language. Expressions associated with sacrifice, betrayal, apocalypse, or redemption frequently appear in discussions of international crises, migration, economic instability, and geopolitical conflicts. Biblical references create moral and emotional frameworks that intensify readers' emotional engagement and facilitate ethical interpretation of political events.

The analysis demonstrates that phraseological units in contemporary French socio-political discourse are fundamentally multifunctional. Their principal functions may be summarized as follows:

1. They combine semantics, pragmatics, and culture, enabling the compact transmission of complex meanings;
2. Adverbial expressions ensure argumentative coherence and persuasive effectiveness;

3. Mythological and biblical phraseologisms function as cultural markers and instruments of symbolic representation;
4. Aphorisms and precedent expressions reinforce intertextuality and didactic orientation;
5. Evaluative phraseological constructions shape ideological framing and emotional perception.

Moreover, phraseological units contribute to the dramatization of political discourse. Through metaphorical imagery, journalists transform abstract political processes into emotionally accessible narratives. Economic crises become “storms,” political uncertainty appears as a “labyrinth,” and social tensions are represented as “explosive situations.” Such metaphorization simplifies complex realities while simultaneously intensifying emotional impact.

Another important aspect concerns the role of phraseological units in media manipulation and agenda-setting. Since phraseological expressions often carry implicit evaluation, they may influence public opinion indirectly. Readers tend to perceive culturally familiar phraseological constructions as natural and trustworthy, which increases the persuasive effectiveness of political discourse.

Thus, phraseological units constitute a central mechanism in the construction of socio-political reality. Their communicative efficiency lies in their ability to condense ideological, emotional, cultural, and pragmatic meanings into concise linguistic forms.

Conclusion

The analysis of material from *Le Monde* demonstrates that phraseological units in contemporary French socio-political discourse possess a broad and multifunctional communicative potential. They perform argumentative, persuasive, evaluative, aesthetic, ideological, and cultural functions simultaneously.

Adverbial phraseological expressions contribute to logical coherence and persuasive organization of discourse, while mythological and biblical phraseologisms ensure cultural continuity and symbolic representation. Aphorisms, precedent expressions, and metaphorical constructions intensify intertextuality and increase the expressive power of journalistic language.

The study confirms that phraseological units are not secondary stylistic elements but essential instruments of political communication. They actively participate in shaping public opinion, constructing ideological meanings, and representing socio-political reality. Through phraseological constructions, journalists can transmit complex political evaluations in a concise, emotionally expressive, and culturally recognizable form.

Consequently, phraseological units should be regarded as an important object of interdisciplinary linguistic research situated at the intersection of discourse analysis, pragmatics, stylistics, and cultural linguistics. Further research may focus on comparative studies of phraseological usage in different French media outlets or on the evolution of phraseological representation in digital political discourse.

COMMUNICATIVE-PRAGMATIC FUNCTIONS OF SYNTACTIC TOOLS IN MODERN DISCOURSE FORMATION

Fakhriyya Elchin MABUDOVA

Lecturer, Department of Foreign Languages, Mingachevir State University

E-mail: faxriyya.mabudova@mdu.edu.az

ORCID ID: 0000-0001-9300-7890

Abstract: The article provides a comprehensive examination of the functional and pragmatic dimensions of syntactic tools in the multifaceted formation of modern discourse. In contemporary linguistic paradigms, syntax is no longer perceived merely as a formal set of rules for sentence construction; instead, it is recognized as a vital strategic mechanism that ensures textual cohesion and communicative coherence. This research delves into how specific syntactic structures—namely inversion, parallelism, and ellipsis—serve as instruments for managing the recipient's attention and enhancing the rhetorical impact of a message. By analyzing a diverse corpus of 100 discourse units across academic, literary, and conversational genres, the study demonstrates that syntactic choices are strategically deployed to foreground specific information. The theoretical framework integrates the foundational theories of Halliday and Hasan with the socio-cognitive models of Teun van Dijk. The findings emphasize that the syntactic architecture of discourse is intrinsically linked to pragmatic intent, socio-cultural context, and the cognitive constraints of information processing.

Keywords: discourse analysis, syntactic tools, communicative pragmatics, cohesion, linguistic structure, cognitive processing.

MÜASİR DİSKURS FORMALAŞMASINA SİNTAKTİK VASİTƏLƏRİN KOMMUNİKATİV-PRAGMATİK FUNKSİYALARI

Fəxriyyə Elçin MƏBUDOVA

Xülasə: Məqalədə müasir diskursun çoxşaxəli formalaşmasında sintaktik vasitələrin funksional və pragmatik ölçüləri hərtərəfli şəkildə tədqiq olunur. Müasir linqvistik paradigmalarda sintaksis artıq yalnız cümlə qurulması üçün formal qaydalar toplusu kimi qəbul edilmir; əksinə, o, mətnin daxili bütövlüyünü və kommunikativ ardıcılığını təmin edən mühüm strateji mexanizm kimi tanınır. Bu tədqiqat inversiya, paralellizm və elipsis kimi spesifik sintaktik strukturların resipientin diqqətini idarə etmək və mesajın ritorik təsirini gücləndirmək üçün necə bir alət rolunu oynadığını dərinlən araşdırır. Elmi, bədii və danışq janrları

üzrə 100 diskurs vahidindən ibarət müxtəlif korpusu təhlil edərək, tədqiqat sübut edir ki, sintaktik seçimlər spesifik informasiyanı ön plana çıxarmaq üçün strateji şəkildə tətbiq edilir. Nəzəri baza Halliday və Hasanın fundamental nəzəriyyələrini Teun van Dijk-in sosio-koqnitiv modelləri ilə birləşdirir. Nəticələr vurğulayır ki, diskursun sintaktik arxitekturası praqmatik niyyət, sosio-mədəni kontekst və informasiya emalının koqnitiv məhdudiyyətləri ilə qırılmaz şəkildə bağlıdır.

Açar sözlər: diskurs analizi, sintaktik vasitələr, kommunikativ praqmatika, koheziya, linqvistik struktur, koqnitiv emal.

Introduction

The evolution of modern linguistics has witnessed a significant shift from descriptive structuralism toward a more dynamic, usage-based understanding of language. Central to this shift is the concept of discourse-language functioning in social contexts to produce meaning. Discourse formation is a complex process where the speaker must balance grammatical accuracy with pragmatic efficacy. Within this framework, syntactic tools act as the engine of communicative intent, allowing the speaker to organize thoughts into a coherent and persuasive structure. According to Brown and Yule (1983), discourse analysis is fundamentally the study of language in action. Syntax, therefore, is not a static background but an active participant in meaning-making. In the contemporary information age, where discourse is increasingly fragmented across digital and traditional platforms, the role of syntactic organization has become even more critical. Effective discourse requires more than just the transmission of data; it necessitates the strategic arrangement of syntactic units to influence the recipient's cognitive processing. This article argues that syntactic tools such as inversion, parallelism, and ellipsis are not merely stylistic choices but are functional requirements for successful communication. By exploring the interplay between syntactic form and pragmatic function, this research seeks to uncover the underlying mechanisms that govern how human beings structure their verbal interactions to achieve social and psychological goals.

In the process of discourse formation, the choice of a specific syntactic structure is rarely a neutral act. Every deviation from the standard word order or every omission of a grammatical element carries a pragmatic weight. This weight is determined by the communicative environment, the social status of the participants, and the ultimate objective of the interaction. For instance, in formal academic writing, the goal is often the precise transmission of logical relationships, whereas in conversational discourse, the focus shifts toward efficiency and interpersonal rapport. The syntactic tools employed in these distinct environments must therefore adapt to these varying demands. By examining these adaptations, we can gain a deeper insight into the cognitive flexibility of the human language faculty. The study of syntactic tools within discourse is not merely a linguistic exercise but a window into the human mind's ability to map social intentions onto formal structures. Furthermore, the modern era's linguistic diversity requires a closer look at how these tools transcend cultural boundaries, creating a universal grammar of pragmatics that operates beneath the surface of specific languages.

As we delve deeper into the pragmatic layers of syntax, it becomes evident that discourse is not a mere sequence of sentences but a structured whole where each part serves a specific communicative function. The transition from sentence-level syntax to discourse-level pragmatics involves understanding how structural choices facilitate the flow of information. Syntactic tools are the primary instruments for managing this flow, ensuring that the most important information receives the necessary emphasis while maintaining the overall logical integrity of the message. This article provides a detailed analysis of these instruments, showing how they contribute to the multi-

layered process of modern discourse formation. By integrating classical theories with modern empirical data, the research highlights the indispensable role of syntax in the successful execution of human communication strategies.

Materials and Methods

This research adopts a multi-methodological approach, combining qualitative functional-syntactic analysis with a quantitative empirical assessment. The primary objective is to observe how syntactic variation correlates with pragmatic goals across different communicative environments. The theoretical foundation is built upon the Cohesion Theory of Halliday and Hasan (1976), which emphasizes the role of syntax in creating texture within a text, and the Socio-Cognitive Approach of Van Dijk (2008), which links linguistic structure to mental models and social ideologies. For the empirical component of the study, a specialized corpus of 100 discourse units was curated. These units were selected from three distinct domains to ensure broad representativeness. Academic Discourse (30 samples) comprised abstracts and introductions from peer-reviewed journals published between 2020 and 2025. Literary Discourse (40 samples) focused on contemporary prose that utilizes diverse narrative perspectives and stylistic innovations. Conversational Discourse (30 samples) was derived from transcribed natural dialogues and digital exchanges reflecting real-time linguistic choices.

The methodology involved identifying dominant patterns, calculating frequency, and performing a communicative-pragmatic interpretation to understand why a particular structure was chosen over a standard alternative. To ensure high accuracy, each sample was analyzed for its macro-syntactic connectivity and its alignment with the speaker's overarching pragmatic intent. The research also utilized comparative analysis to highlight how identical syntactic structures function differently across various genres. By triangulating qualitative insights with quantitative data, the study aims to provide a robust explanation for the pragmatic necessity of syntactic tools in modern communication. The focus remains on the "why" of syntactic choice, moving beyond the "how" of grammatical description to reveal the strategic nature of human speech production. This rigorous methodological framework allows for a nuanced understanding of how syntactic tools operate as functional components within the broader architecture of human discourse.

In addition to genre-based classification, the methodology also accounted for the socio-linguistic variables that influence syntactic choices. This involved examining how the speaker's background, the relationship between interlocutors, and the medium of communication (written vs. oral) dictate the deployment of specific syntactic tools. The qualitative analysis was further enriched by a focus on "marked" vs. "unmarked" structures, where deviations from the linguistic norm were treated as primary indicators of pragmatic intent. By documenting these deviations, the study provides a comprehensive map of how syntactic creativity serves the practical needs of discourse formation in the 21st century.

Discussion

The analysis reveals that the choice of syntactic tools is heavily influenced by the genre and the intended pragmatic impact. Syntax serves as a bridge between the speaker's internal mental state and the external social reality. Cohesion is the linguistic glue that transforms a collection of isolated sentences into a unified discourse. Halliday and Hasan (1976) argue that syntax provides the primary threads for this connectivity. In academic discourse, we observed a high reliance on complex subordination (65%). This is not a sign of unnecessary complexity but a functional necessity. Academic writing aims to establish causal, temporal, and conditional relationships

between abstract ideas. Subordination allows the researcher to embed secondary thoughts within a primary logical frame, thereby guiding the reader through a sophisticated argument without losing the central thread. This structural layering ensures that the evidence and the conclusion remain syntactically linked, facilitating a smoother transition for the reader's cognitive processing.

Based on the analyzed corpus of 100 discourse units, the frequency distribution demonstrates how communicative environments dictate structural choices. While academic discourse prioritizes logical cohesion, conversational discourse relies heavily on contextual shortcuts. In our findings, ellipsis appeared in 75% of spoken dialogue units, whereas complex subordination dropped to a mere 5%. This dramatic contrast highlights the adaptability of human syntax. In spontaneous communication, the brain prioritizes speed and efficiency, assuming a high level of shared knowledge between participants. Conversely, literary discourse occupies a middle ground, utilizing a balanced mix of parallelism (40%) and inversion (25%) to achieve aesthetic and emotional resonance. The intentional deviation from the standard Subject-Verb-Object (SVO) order in literature serves to "defamiliarize" the language, forcing the reader to pay closer attention to the nuanced meanings embedded within the structure. This suggests that syntax in literature functions not just as a vessel for content, but as a deliberate artistic choice designed to slow down the reading process and deepen engagement.

Syntactic inversion, in particular, emerges as a powerful pragmatic tool for foregrounding specific information. By placing an adverbial or a complement in the initial position, the author forces the recipient to process the context before the actor. For example, in the phrase "Through the dark forest walked the weary traveler," the focus is shifted from the traveler to the atmosphere of the forest. This creates a "zooming in" effect, where the environment dictates the mood of the narrative. Our data suggests that such inversions are not random but are strategically placed at pivotal moments in a text to signal a change in perspective or to emphasize a thematic element. In academic discourse, though rare (2%), inversion is typically used to introduce a significant finding or to link two complex propositions. This demonstrates that even in the most rigid genres, syntax remains a flexible tool for managing the reader's focus. The cognitive load required to process an inverted sentence ensures that the information contained within it is registered with a higher degree of importance by the recipient.

Furthermore, the study of syntactic parallelism-the repetition of structural patterns-reveals its role as a rhythmic anchor in persuasive discourse. Fairclough (2010) notes that parallelism helps in naturalizing complex ideologies. By presenting multiple arguments in the same syntactic container, the speaker suggests they are of equal importance or truth. In political speeches and poetic prose, this structural symmetry builds emotional momentum, making the message more memorable and authoritative for the audience. The analysis showed that parallelism often occurs in clusters, especially in the concluding remarks of a discourse, where the speaker aims to leave a lasting impression. This structural repetition serves as a mnemonic device, reinforcing the central theme of the discourse through rhythmic regularity. In our corpus, 40% of literary samples utilized parallelism as a primary narrative technique, highlighting its effectiveness in creating a cohesive aesthetic experience.

Further examination of the principle of pragmatic economy reveals that ellipsis is not a sign of "broken" language but an indicator of highly efficient communication. In real-time communication, speakers adhere to the Gricean Maxim of Quantity, providing no more information than is necessary. Ellipsis relies on mutual manifestness-the shared knowledge between participants. When

a speaker says "Coffee?" instead of "Would you like a cup of coffee?", the syntactic brevity serves as a pragmatic bridge, reducing social distance while maximizing communicative speed. This research also identified that in modern digital discourse, such as instant messaging, ellipsis has become the dominant syntactic mode, reflecting a broader cultural shift toward rapid information exchange. These syntactic choices, whether they involve the expansion of structure in academic writing or the contraction of structure in digital chat, are all fundamentally driven by the need to align linguistic form with the specific pragmatic constraints of the communicative event.

The socio-cognitive dimension of discourse formation, as theorized by Van Dijk (2008), is clearly visible in the way syntactic structures are used to express power and ideology. In the analyzed political texts, the use of passive voice and the omission of agents through ellipsis were frequent strategies used to avoid direct responsibility or to focus on the results rather than the actors. This confirms that syntactic tools are not neutral grammatical options but are deeply embedded in the sociopolitical fabric of communication. By selecting a specific syntactic model, the speaker implicitly frames the reality being discussed, influencing the recipient's mental model of the event. Thus, the communicative-pragmatic function of syntax extends beyond the sentence to the construction of social identity and the management of interpersonal relationships. The strategic use of "we-parallelism" in institutional discourse, for instance, serves to build a collective identity, while the syntactic distancing in legal texts reinforces objective authority.

Expanding upon these findings, it is important to note that the interaction between syntactic tools is often as significant as their individual functions. In complex narrative structures, authors frequently combine inversion with parallelism to create a heightened sense of drama or emphasis. This interplay allows for a multi-dimensional approach to discourse formation, where different layers of meaning are communicated simultaneously. For instance, an inverted sentence that is part of a parallel structure can both foreground new information and reinforce the structural rhythm of the passage. Such sophisticated syntactic maneuvering is a hallmark of professional communication and highlights the advanced level of pragmatic awareness required in modern linguistics. The research indicates that the most effective discourses are those that balance these tools in a way that aligns perfectly with the intended communicative goal.

Conclusion

This research has demonstrated that syntactic tools are the fundamental building blocks of discourse pragmatics. The formation of discourse is not a random linguistic event but a strategically organized process where syntactic choices are made to satisfy communicative goals. The frequency distribution analyzed in this study proves that each genre-academic, literary, and conversational-possesses a unique syntactic signature tailored to its specific social function. While academic discourse prioritizes logical cohesion through subordination, conversational discourse favors efficiency through ellipsis, and literary discourse utilizes inversion and parallelism for aesthetic and emotional impact. These findings confirm that syntax is a dynamic and functional component of human interaction that continuously adapts to the context.

The study concludes that the communicative effectiveness of a message is directly proportional to the strategic alignment of its syntactic structure with its pragmatic intent. Syntactic tools provide the necessary flexibility for speakers to navigate different social spheres, from the precision of scientific inquiry to the emotional depth of artistic expression. Ultimately, understanding the role of syntactic tools in discourse formation allows us to appreciate the intricate relationship between the structure of our language and the structure of our social interactions.

Future research should further investigate how emerging digital platforms and artificial intelligence are reshaping these traditional syntactic strategies in the evolving landscape of global communication, as the boundaries between formal and informal discourse continue to blur. The transition toward multimodal communication further suggests that syntactic tools will increasingly operate in tandem with visual and auditory cues, creating even more complex frameworks for discourse formation in the future.

LEXICAL-SEMANTIC REPRESENTATION OF THE CONCEPT “GOOD” IN AZERBAIJANI LINGUOCULTURE

Lamia Ali HEYDAROVA

PhD candidate, Lecturer

Sumgayit State University

E-mail: lamia.heydarova@sdu.edu.az

ORCID ID:0009-0008-0793-921X

Abstract: This article presents a systematic and comprehensive analysis of the lexical-semantic representation of the concept “good” (The term *xeyir* will be used throughout this study to refer to the culturally specific notion of “good” in Azerbaijani linguoculture) in Azerbaijani linguoculture within the framework of semantic field theory. The main aim of the study is to identify the functioning mechanism of this concept as a structured semantic field in the language system, as well as to determine its internal organizational principles and the interactions between its semantic components. The findings demonstrate that the concept “*xeyir*” is not merely a collection of individual lexical units, but rather a multi-layered semantic structure formed through the interaction of interconnected components.

The analysis reveals that this concept is structured around three main dimensions: ethical, pragmatic-functional, and connotative components. The ethical component constitutes the semantic core of the concept,

expressing positive values, social norms, and principles of behavior, and is closely associated with moral values in Azerbaijani culture. The pragmatic-functional component highlights aspects such as benefit, outcome, and purposefulness, thereby reflecting the practical and functional nature of the concept. The connotative component encompasses emotional, evaluative, and context-dependent nuances that emerge in different communicative situations, ensuring the semantic flexibility of the concept.

Furthermore, the study establishes that the concept “*xeyir*” is organized within the semantic field through synonymic, antonymic, and functional relations, which ensure the systematicity and integrity of its internal structure. As a result, this concept functions not only as an essential element of the lexical system of the language, but also as a means of expressing the system of values formed within Azerbaijani society, thereby holding significant importance from a linguocultural perspective.

Key words: concept of good, semantic field, lexical-semantic structure, connotation, Azerbaijani language, linguoculture

"YAXŞI" KONSEPTİNİN AZƏRBAYCAN LİŦQVOKULTURASINDA LEKSİK-SEMANTİK TƏMSİLİ

Lamiyə Əli HEYDƏROVA

Filologiya üzrə fəlsəfə doktoru, müəllim

Sumqayıt Dövlət Universiteti

E-mail: lamia.heydarova@sdu.edu.az

ORCID ID:0009-0008-0793-921X

Xülasə: Bu məqalədə Azərbaycan linqvomədəniyyətində “*xeyir*” konseptinin leksik-semantik səviyyədə ifadə xüsusiyyətləri semantik sahə nəzəriyyəsi çərçivəsində sistemli və kompleks şəkildə təhlil olunur. Tədqiqatın əsas məqsədi bu anlayışın dil sistemində strukturlaşmış semantik sahə kimi fəaliyyət mexanizmini, onun daxili təşkil prinsiplərini və müxtəlif semantik komponentlər arasında qarşılıqlı əlaqəni müəyyənləşdirməkdir. Araşdırma nəticəsində müəyyən edilir ki, “*xeyir*” konsepti yalnız ayrı-ayrı leksik vahidlərin məcmusu deyil, həm də qarşılıqlı əlaqədə fəaliyyət göstərən çoxqatlı semantik strukturdur.

Təhlil göstərir ki, bu konsept üç əsas istiqamətdə formalaşır: əxlaqi-etik, pragmatik-funksional və konnotativ komponentlər. Əxlaqi-etik komponent konseptin semantik nüvəsini təşkil edərək müsbət dəyər, sosial norma və davranış prinsiplərini ifadə edir və Azərbaycan mədəniyyətində mənəvi dəyərlərlə sıx bağlıdır. Pragmatik-funksional komponent anlayışın fayda, nəticə və məqsədyönlülük aspektlərini ön plana çıxararaq onun praktik və funksional xarakterini müəyyənləşdirir. Konnotativ komponent isə müxtəlif kommunikativ situasiyalarda yaranan emosional, qiymətləndirici və kontekstual çalarları əhatə edərək konseptin semantik çevikliyi təmin edir.

Bundan əlavə, müəyyən edilir ki, “*xeyir*” konsepti semantik sahə daxilində sinonimik, antonimik və funksional münasibətlər əsasında təşkil olunur və bu əlaqələr onun daxili strukturunun sistemliliyini və bütövlüyünü təmin edir. Nəticə etibarilə, bu konsept həm dilin leksik sisteminin mühüm elementi kimi çıxış edir, həm də Azərbaycan cəmiyyətində formalaşmış dəyərlər sisteminin dil vasitəsilə ifadəsinə xidmət edərək linqvomədəni baxımdan xüsusi əhəmiyyət kəsb edir.

Açar sözlər: xeyir konsepti, semantik sahə, leksik-semantik struktur, konnotasiya, Azərbaycan dili, linqvomədəniyyət

Introduction

The lexical description of the concept of “*xeyir*” should first be analyzed from the perspective of semantic field theory. The study of semantic changes in languages is carried out through the semantic field as a system. The development of semantic systems dates back to the last quarter of the nineteenth century. Despite the fact that semantic field theory has existed for more than a century, interest in it has not decreased. This interest is explained by the relevance of semasiological issues, since the semantic field was created precisely for the purpose of studying changes in word meanings and identifying semasiological regularities.

Materials and Methods

This study is grounded in semantic field theory, which serves as the principal analytical framework for examining the concept “*xeyir*” in Azerbaijani linguoculture. Within this approach, “*xeyir*” is not treated as an isolated lexical item, but rather as a concept embedded in a network of semantically related units that together form a structured lexical-semantic field.

To achieve the objectives of the research, a combination of complementary analytical methods is employed. First, semantic analysis is used to identify the core and peripheral meanings of lexical units associated with “*xeyir*”, with particular attention to their denotative and connotative properties. Second, lexical-semantic classification is applied in order to group these units according to shared semantic features and functional roles, thereby revealing the internal organization of the field. Third, structural analysis is utilized to examine the relationships among lexical units, including synonymic, antonymic, and functional connections, which collectively contribute to the coherence of the semantic system.

The empirical material of the study consists of lexical units in the Azerbaijani language that express the concept “*xeyir*”, including nouns, adjectives, and verbal constructions. These units are analyzed in relation to their distribution across different parts of speech and their contextual usage. Particular attention is given to how meaning is shaped through interaction with context, allowing for a more comprehensive understanding of both the internal structure of the concept and its role within the broader linguistic and cultural system.

Results and Discussion

Semantic Field Theory and Its Application. The concept of the “semantic field” did not immediately emerge as a fully formed system; therefore, at certain stages of its development, semasiological problems could not be resolved. The semantic field has developed from Jost Trier’s conceptual field to various modern types of fields. In Trier’s theory, particular attention is paid to historical and diachronic changes. The diachronic approach was not considered systematic in the study of fields, as structure was revealed only synchronically. All of this limited the potential of the field as a system (Kezina, 2004, p. 79).

L. Weisgerber, while developing field theory, treated it as a system and argued that this system develops organically from a whole. In other words, the system initially exists as a whole and then naturally differentiates into parts and continues its development. He focused mainly on lexical fields and directly studied the meanings of words. In constructing the field (for example, in the study of color naming), the linguist proceeds from a basic word, analyzes the distinguishing semantic features of words within the field, and thus lays the foundations of componential analysis. G. Ipsen and V. Porzig continued the study of linguistic fields. Porzig paid particular attention to linguistic relations as an essential feature of the system. He analyzed lexical-syntactic, lexical-grammatical, and lexical-semantic relations within language.

F. P. Filin considered the lexical-semantic group as a type of semantic field and attempted to define criteria that distinguish it from other word groups. The linguist saw the difference between thematic and lexical-semantic groups in the fact that thematic groups are based on the classification of “objects and phenomena themselves,” whereas lexical-semantic groups represent the grouping of words according to their meanings (Filin, 1982, p. 230).

The lexical-semantic group, with its varieties (synonymic series, antonyms, hyperonym-hyponym groups), is a type of paradigmatic field. It should be noted that paradigmatic fields are among the most studied areas in linguistics. As Vasiliev (1971, p. 109) notes, paradigmatic fields include various classes of lexical units that share similar semantic features or components.

The characteristics of the semantic field include dynamism, openness, and flexibility. The field constantly changes as a result of the development of abstract thinking and the continuity of knowledge: new artifacts are created, and new features are discovered in existing objects. The dynamic nature of the field requires its openness: new semantic components enter the field, interact with previous ones, and form new knowledge groups, thereby expanding the semantic space.

Thus, a semantic field as a system can be characterized by the following features:

1. A semantic field is a set of words that share at least one common semantic component and are interconnected through various relations. “Connection, integrity, and the structure determined by them are the distinguishing features of any system” (Kodukhov, 1955).
2. A semantic field is part of the internal structure of language and naturally enters the semantic space of the language. At the same time, the field is a system of systems: micro-systems (synonyms, antonyms, hyperonym-hyponym groups, and even an individual word as the smallest system) can be identified within it.
3. The source of changes in the system is usually internal. The semantic field is a self-organizing system, and the causes of its evolution are primarily inherent within the field itself.
4. The system performs a classificatory function: it classifies a fragment of the world.
5. The field is characterized by dynamism, openness, and flexibility. Its lexical-semantic space is open to the inclusion of new elements. The variability of the semantic field is explained by its ability for self-organization, the development of abstract thinking, the emergence of new artifacts, and the discovery of new features in objects of the surrounding environment (Kezina, 2004, p. 85).

Thus, the main principles of semantic field theory show that each concept functions as a complex semantic structure formed through the interaction of lexical units within the language system. From this perspective, the concept of “*xeyir*” can also be considered an independent lexical-semantic field. Within this field, the concept of “*xeyir*” is realized through various semantic components, and its content expands at both denotative and connotative levels. For this reason, in order to more deeply understand the semantic structure and conceptual content of “*xeyir*”, it is considered necessary to refer to its philosophical and ethical interpretations.

The problem of conceptualizing “good” was also examined by Aristotle. As noted by N. D. Arutyunova, Aristotle used three concepts to define “good”: benefit (*agaphon*), happiness or well-being (*eudaimonia*), and pleasure (*hedys*) (Arutyunova, 1999, p. 133). These were contrasted respectively with harm, failure, and suffering. Even in ancient times, the concept of “good” was quite ambiguous: although its lexical meaning had been established, it was enriched with abstract semantic content, and additional semantic nuances were highly diverse. At the beginning of the

twenty-first century, a shift occurred in the hierarchy of denotative and connotative components. These theoretical approaches demonstrate that the concept of “good” is not only philosophical but also a multi-layered structure at the lexical-semantic level.

As a general definition, the lexical-semantic field may be described as a higher-level lexical category representing the hierarchical structure of lexical units united by a common invariant meaning (Balalykina, 2002, p. 23). Karaulov (1987) explained the vagueness and indeterminacy of the boundaries of lexical-semantic fields by their relative nature and the instability of both their core and their elements.

The concept of “good” has several distinctive features:

1. It is studied at the intersection of various fields such as philosophy, psychology, ethics, aesthetics, religion, and linguistics, and is interpreted differently in each.
2. As the highest ethical value, it is a comprehensive concept that includes all positive, beneficial, and desirable meanings.
3. It is interpreted through its antonymic opposition: “that which is not evil.”

Based on these theoretical considerations, it can be stated that the concept of “*xeyir*” functions as an independent lexical-semantic field in the Azerbaijani language and forms a multi-layered semantic structure. Within this structure, the main directions of the concept can be systematized as follows:

The first direction is the ethical component. This component is expressed through lexical units such as *yaxşılıq* (“kindness”), *savab* (“merit” or “good deed”), *mərhəmət* (“compassion”), and *xeyirxahlıq* “benevolence”, and constitutes the semantic core of the concept. In this sense, “*xeyir*” functions as a category of positive evaluation and moral value. According to Arutyunova (1999), language has an evaluative nature, and concepts such as “good” function as semantic units associated with positive evaluation.

The second direction is the pragmatic-functional component. In this domain, the concept of *xeyir* is realized through lexical items such as *fayda* (“benefit”), *qazanc* (“gain”), and *mənfiət* (“profit”), as well as expressions such as *xeyir vermək* (“to be beneficial”), *xeyir gətirmək* (“to bring benefit”), and *xeyirli iş görmək* (“to do a good deed”). This component reflects the practical and result-oriented nature of the concept.

The third direction is the connotative component. This component includes the additional emotional and evaluative nuances that the word “*xeyir*” acquires in different communicative situations. According to Maksimov (2000), such lexical units have modal and evaluative characteristics depending on context.

Within the lexical-semantic field, the concept of “*xeyir*” is organized into micro-systems, including synonymic series (*yaxşılıq* – *savab* – *xeyirxahlıq*), antonymic oppositions (*xeyir* – *şər*), and functional lexical groups (*xeyir vermək*, *xeyirli iş görmək*, *xeyir gətirmək*). This demonstrates that the concept has a systematic and hierarchical structure.

The lexical-semantic field of “*xeyir*” is expressed through units belonging to different parts of speech. In this regard, nouns and adjectives express evaluative meanings more stably, while verb constructions reflect the dynamic and functional aspects of the concept.

Conclusion

Thus, the analysis shows that the concept “*xeyir*” functions as a structured element within a lexical-semantic field rather than as an isolated unit. Its meaning is shaped through the interaction of multiple semantic dimensions that operate within the language system.

The concept is realized through three main components: ethical, pragmatic-functional, and connotative. Each of these contributes a distinct layer of meaning, allowing the concept to express moral evaluation, practical usefulness, and context-dependent nuances.

This structure demonstrates that “*xeyir*” is both stable in its core meaning and flexible in its usage. Such characteristics enable it to function effectively across different communicative contexts.

Overall, the concept reflects key aspects of Azerbaijani linguoculture, including value systems and evaluative patterns. Its analysis within the framework of semantic field theory highlights the connection between language structure and cultural meaning.

FUNCTIONAL GRAMMAR AND FUNCTIONAL DISCOURSE GRAMMAR: A COMPARATIVE ANALYSIS OF THEORETICAL MODELS

Roya Gazanfar ABDURAHMANOVA

PhD., Associate professor, Azerbaijan University of Languages

E-mail: abdurr.roya@adu.edu.az

ORCID ID: 0009-0002-1577-4482

Abstract: The article examines the theoretical foundations and methodological differences between functional grammar and functional discourse. Although functional grammar focuses on communicative functions, it mainly analyzes sentence-level structures. Although functional discourse focuses on communicative functions, this theory mainly analyzes sentence-level structures. The article discusses the extension of this analysis to discourse-level analysis in functional discourse grammar. At the same time, the current theory emphasizes context, speaker intention, and multi-level linguistic representation. The aim of the article is to provide a comparative analysis of the theoretical principles of these frameworks and their

application in linguistic research. Based on works of M.A.K. Halliday, Simon C. Dick Simon, Kees Hengeveld, and other authors, the study emphasizes the functional discourse grammar has developed and improved further by taking its basis from functional grammar. The article notes that functional grammar systematically explains the grammatical foundations of language, while functional discourse grammar raises these foundations to the level of discourse. Furthermore, In addition, it has been noted that functional discourse grammar explains more complex communicative processes. It is concluded that although both approaches share a functional perspective, functional discourse grammar provides a better model for analyzing language use in real life, but this does not diminish the importance of functional grammar, because functional grammar is the most appropriate method to apply when analyzing at the sentence level. Besides, it is proved in the article that functional grammar and functional discourse grammar are not alternatives to each other, but rather complementary theoretical models.

Xülasə: Məqalədə funksional qrammatika və funksional diskurs qrammatikası arasındakı nəzəri əsaslar və metodoloji fərqlər araşdırılır. Funksional qrammatikada kommunikativ funksiyalara diqqət yetirilməsinə baxmayaraq bu nəzəriyyə çərçivəsində əsasən cümlə səviyyəli strukturlar təhlil olunur. Məqalədə funksional diskurs qrammatikasında bu təhlilin diskurs səviyyəli təhlillərə qədər genişləndirilməsindən bəhs açılır. Mövcud nəzəriyyə çərçivəsində eyni zamanda kontekst, danışanın niyyəti, çox səviyyəli linqvistik təqdimat vurğulanır. Məqalənin məqsədi bu çərçivələrin nəzəri prinsiplərini, və linqvistik tədqiqatlarda tətbiqini araşdıraraq onların müqayisəli təhlilini təmin etməkdir. M.A.K Həlidey, C.Dik Simon, Kees Hengeveld və digər müəlliflərin əsərlərinə əsaslanaraq tədqiqat funksional diskurs qrammatikasının əsasını funksional qrammatikadan götürərək daha da inkişaf etdiyini və təkmiləşdiyini vurğulayır. Məqalədə funksional qrammatikanın dilin qrammatik əsaslarını sistemli şəkildə izah etdiyi qeyd edilmiş, və funksional diskurs qrammatikasının isə bu əsaslarını diskurs səviyyəsinə qaldırdığı bildirilmişdir. Bundan əlavə, nəzərə çatdırılmışdır ki, funksional diskurs qrammatikasının daha mürəkkəb kommunikativ prosesləri izah edir. Belə bir qənaətə gəlinir ki, hər iki yanaşma funksional perspektivi bölüşsə də, funksional diskurs qrammatikası real həyatda dildən istifadənin təhlili üçün daha yaxşı bir model təqdim edir, lakin bu funksional qrammatikanın əhəmiyyətini azaltmır. Çünki cümlə səviyyəsində təhlillər zamanı müraciət olunan ən uyğun metod funksional qrammatikadır. Bundan əlavə, məqalədə funksional qrammatika və funksional diskurs qrammatikası arasında bir-birinə qarşı alternativ nəzəriyyə kimi bəhs edilməmiş, əksinə bir-birini tamamlayan nəzəri modellər olduğu sübut edilmişdir.

Açar sözlər: funksional qrammatika, funksional diskurs qrammatikası, kontekst, kommunikasiya, cümlə

Introduction

Functional approaches to syntax are aimed at studying the communicative and social functions of language, as well as its structural features. In this regard, two theoretical directions in the study of language - functional grammar and functional discourse grammar - attract more attention.

The field of linguistics that studies how linguistic expressions are formed based on the knowledge and goals of language speakers is functional grammar and its successor, functional discourse grammar. The supporters of this theory have made statements contrary to the theoretical knowledge of transformational grammar introduced to linguistics by N. Chomsky. Functional discourse grammar, which is a more advanced form in psychological and pragmatic terms, is considered the predecessor of functional grammar. Therefore, these two theories differ significantly in their focus and area of analysis.

Materials and Methods

Theoretical resources related to the field of functional linguistics makes up the materials of the presented article. The main scientific works on the "Systemic Functional Grammar" by M. A. K. Halliday, "Functional Grammar" by S. Dick, and the "Functional Discourse Grammar" models developed by K. Hengeveld and J. L. Mackenzie were especially included in the study. In addition, the studies of scientists such as C. S. Butler, T. A. van Dijk, J. Firbas, T. Givón, V. Mathezius, N. S. Trubetzkoy and A. V. Bondarko on the functional approach, discourse analysis and grammatical categorization were also used as a theoretical basis. In the Azerbaijani language, the studies of M. Musayev and G. Jafarov on functional grammar, as well as the works of A. Isgandarova on the lexical and grammatical characteristics of discourse, were taken into account.

The methodological basis of the study is a comparative-descriptive and analytical approach. Through the comparative method, the basic principles, structural features and functional explanatory mechanisms of the Functional Grammar and Functional Discourse Grammar models were compared. The descriptive method served to systematically present the main concepts of both theoretical models. The analytical method was used to identify their similarities and differences and assess their applicability in the explanation of discourse. In addition, the functional characteristics of theoretical propositions at the text level were also considered as an element of discursive analysis.

The main purpose of the presented article is to comparatively analyze the theoretical and methodological differences between functional grammar and functional discourse grammar and to determine their place in modern linguistics.

As the name suggests, the object of study of functional discourse grammar is discourse, which includes text, speech, and conversation. Therefore, language units are analyzed within the context and in the entire communication process. For this reason, not only sentences but also inter-sentential relationships and meaning flows are studied. For example, information flow, theme-rhema, speaker's intention, context, etc.

Encyclopedia Britannica states that (2003, p.529) the history of functional grammar is closely connected with the Prague Linguistic Association. This association is also called the Prague School of Linguistics. This association emerged at the beginning of the 20th century and gathered around itself the most influential linguistic scholars of that time. Founded in 1926, this association gathered around itself such prominent scholars as Wilhelm Matesius, Roman Jakobson, and Nikolai Trubetzkoy. Their works would later lay the foundation for the theory of linguistics that would later be called functionalism. In contrast to the structural approach that treated language as an independent system of signs, the representatives of the Prague School of Linguistics mentioned above emphasized the functional role of language in communication. They argued that language elements cannot be understood in isolation; on the contrary, meaning and structure are determined by their communicative purpose. This created a shift towards the analysis of language in terms of its

use in real communicative contexts. One of the main contributions of the Prague School to linguistics was the theory of the Functional Sentence Perspective, which is mainly associated with Wilhelm Mathezius and later expanded by Jan Fibras (Mathezius, 1978 & Fibras, 1992). FSP is a theory that explains how information is distributed within a sentence by emphasizing the distinction between the concepts of theme and rheme. This concept later became the cornerstone of functional grammar (Adam, 2007). Another contribution to linguistics was in the field of phonology. Nikolai S. Trubetskoy and Roman Jakobson, unlike their predecessors, developed functional phonology by emphasizing the role of sounds in distinguishing meaning rather than describing the physical properties of sound units. This strengthened the idea in linguistics that language units should be analyzed according to their communicative function (Trubetzky, 2001). The ideas of the Prague School had a significant influence on later functionalist theories, including the systematic functional linguistics developed by M.A.K. Halliday. M.A.K. Halliday consolidated the position of the functional approach in linguistics by integrating grammar with social context, showing how language serves ideational, interpersonal, and textual functions (Halliday, 1994).

Functional grammar studies the functions of grammatical structures of the language at the sentence level. It was noted about this: Functional grammar has illuminated the topics related to grammar as a whole and syntax on the topic of the actual articulation of the sentence (Musayev, 2014, p.11). Currently, the answer to the question of why the existing structure is being processed is being investigated. For example, questions such as tense form, news, word order function, etc. have always been in the focus of attention of linguists engaged in functional grammar. Since the main object of their research is the sentence, language is analyzed at the sentence level. Therefore, the analysis of language at the sentence level is brought to the fore and the relationship of grammatical structures with communicative purposes is explained. Language is considered a social semiotic system ([Halliday, 1994, p.15). Linguists who consider language as a system with a social function in functional grammar have stated that it has three main functions: ideational, interpersonal, textual. The mentioned features are based on the Systematic Functional Linguistics approach of M.A.K. Halliday (Halliday, 1994, p.36-38).

According to C.S. Butler, structure and function are inseparable, and this relationship is taken as the basis in functional grammar (Butler, 2003, p. 20).

A.V. Bondarko analyzed the grammar of the Russian language from a systemic-functional point of view. The author discussed the existing categories in grammar and divided them into three parts: grammatical, lexical-grammatical and functional-semantic. (Bondarko, 2011, p.8).

Functional discourse grammar, based on the idea of C. Dick Simon and developed by Kees Hengeveld, deals with the analysis of language not only within a sentence, but also in a broader discourse and communication process (Hengeveld, 2008, p.2).

Linguist A.R. Iskandarova (2023, p.20) noted this: Since grammatical categories are formed over a long period of time within certain language boundaries, each of them, in addition to its grammatical meaning, also has a functional meaning in that language, which is clearly visible during its realization in this discourse, and often its meaning is more understandable for the speaker of this language. As can be seen, the author has explained the importance of functional discourse grammar in his own way.

Functional discourse grammar was first developed by C. Dick Simon and later by Kees Hengeveld. In this theory, language is presented as a multi-level model covering various layers such as the conceptual level, semantic level, morphosyntactic level and phonetic level. Kees Hengeveld

(2008, pp.1-4) presented this approach as a multi-level model in linguistics and emphasized the role of discourse. S. Dick (1997, pp.3-5) linked the semantic and syntactic levels of language. This idea is consistent with the existing theoretical framework, and in this regard, I consider the author's position logical. Teun A. Van Dijk proposed studying discourse as a structure and process (Van Dijk, 1997, pp.5). T. Givon (2001, pp. 25) noted that syntax is formed not only as a system of formal rules, but also because of communicative need, however, he also emphasized the influence of the syntactic structure on the information structure (Givon, 2001, pp.30-32). I consider this approach to be reasonable and agree with the author's opinion.

Results and Discussion

The comparative analysis shows that although Functional Grammar (FG) and Functional Discourse Grammar (FDG) belong to the same functional approach framework, their approaches to explaining language cover different levels. Therefore, sometimes the objects of research can also differ from each other. FG mainly focuses on the sentence and its internal structure and highlights the relationship between grammatical forms and communicative functions. In this model, language is evaluated as a system of choices and meaning is expressed mainly through grammatical means. FDG, on the other hand, further expands this approach and explains language at the discourse level and takes pragmatic, semantic and contextual factors into account in a more systematic way.

The discussion shows that FG is more effective in explaining morphosyntactic and semantic relations and is especially suitable for clarifying functional relationships within a sentence. FDG, on the other hand, is distinguished by its multilevel model and explains the functioning of language at a broader – discourse level – level by establishing connections between interpersonal, representational and structural levels. In this respect, FDG offers wider opportunities for investigating issues such as communicative intention, information flow and text integrity. At the same time, the main principle in both models is the prioritization of function over form. However, in FDG, the speaker's intention and communicative context are modeled more explicitly, which shows its superiority in discourse analysis. FG, on the other hand, is more widely used in practical applications, especially in language teaching and grammatical description.

Based on the analysis, it can be noted that functional grammar, despite its limitation at the discourse level, can be considered an effective method for explaining the structure of language. In contrast, functional discourse grammar studies language in the context of real communication. Therefore, it can be considered a more effective method in discourse analysis and language teaching. The fact that it contains so much complexity causes it to have wider application possibilities but also makes its application difficult.

Conclusion

Functional discourse grammar, the predecessor of functional grammar, is a theory that analyzes language not only as a structure, but also as a complete communicative system and discourse process. Functional grammar studies how language is used, while functional discourse grammar studies how language is used in real communication. Taking the above into account, functional discourse grammar can be considered a more promising model, yet on the other hand, functional grammar is strongly required in micro level analysis.

As a result, the analysis shows that FG and FDG are not alternatives to each other, but rather complementary theoretical models. While FG systematically explains the grammatical foundations of language, FDG takes these foundations to the discourse level and explains more complex

communicative processes. This allows for the formation of a unified and more comprehensive approach to the study of language at both the micro (sentence) and macro (discourse) levels.

SUBJECTIVITY IN ECONOMIC DISCOURSE: A COGNITIVE-SOCIOLINGUISTIC ANALYSIS

Shafa Rafiq NAGHIYEVA

Lecturer, Department of Foreign Languages, Azerbaijan University

E-mail: shafa.naghiyeva@au.edu.az

ORCID ID: [0009-0006-2496-4770](https://orcid.org/0009-0006-2496-4770)

Abstract: This study investigates the discursive construction of subjectivity within economic discourse through a dual cognitive-sociolinguistic lens. It explores how specific linguistic strategies in financial journalism curate representations of economic reality and pre-determine audience interpretation. Drawing upon the theories of cognitive framing, conceptual metaphor, and sociolinguistic stance, the research examines a qualitative corpus of international economic news published between 2023 and 2026. The findings reveal that subjectivity is a structural phenomenon rather than an individual bias, emerging through three primary mechanisms: evaluative language, metaphorical entailments, and narrative framing. The analysis demonstrates that economic processes are frequently conceptualized through metaphors-such as

growth, recovery, or medical crises—which implicitly encode ideological perspectives and guide public perception. Furthermore, the strategic attribution of agency to abstract entities like “markets,” “inflation,” or “algorithmic systems” serves to naturalize economic events and obscure human or institutional responsibility. By synthesizing cognitive and sociolinguistic frameworks, this research provides a robust methodology for deconstructing how subjectivity is embedded in financial communication. The study concludes that economic discourse acts as a critical mediator between complex financial data and public epistemology, shaping the boundaries of what is perceived as objective truth in a post-pandemic, AI-integrated global economy.

İQTİSADI DİSKURSDA SUBYEKTİVLİK: KOQNİTİV-SOSIOLİNGVİSTİK TƏHLİL

Şəfa Rafiq NAĞİYEVA

Müəllim, Xarici Dillər Kafedrası, Azərbaycan Universiteti

E-mail: shafa.naghiyeva@au.edu.az

ORCID ID: [0009-0006-2496-4770](https://orcid.org/0009-0006-2496-4770)

Xülasə: Bu tədqiqat iqtisadi diskursda subyektivliyin qurulmasını koqnitiv-sosiolinqvistik müstəvidə araşdırır. Məqalədə maliyyə jurnalistikasında tətbiq olunan xüsusi dil strategiyalarının iqtisadi reallığın təqdimatını necə formalaşdırdığı və auditoriya tərəfindən qavranılan mənanı necə əvvəlcədən müəyyənləşdirdiyi təhlil olunur. Koqnitiv freyminq, konseptual metafora və sosiolinqvistik "mövqe tutma" (stance) nəzəriyyələrinə əsaslanan tədqiqat, 2023–2026-cı illəri əhatə edən beynəlxalq iqtisadi xəbər mətnlərinin keyfiyyət korpusu üzərində aparılmışdır. Nəticələr göstərir ki, subyektivlik fərdi qərəzlilik deyil, üç əsas mexanizm vasitəsilə ortaya çıxan struktur fenomendir: qiymətləndirici dil, metaforik nəticələr (entailments) və narrativ çərçivələmə. Təhlillər sübut edir ki, iqtisadi proseslər çox vaxt artım, bərpa və ya tibbi böhran kimi metaforalar vasitəsilə konseptuallaşdırılır ki, bu da ideoloji perspektivləri gizli şəkildə kodlaşdırır və ictimai rəyi istiqamətləndirir. Bundan əlavə, “bazarlar”, “inflyasiya” və ya “alqoritmik sistemlər” kimi abstrakt anlayışlara agentlik (təsir gücü) verilməsi iqtisadi hadisələrin təbii proseslər kimi qəbul edilməsinə xidmət edir və insan və ya təsisat məsuliyyətini kölgədə qoyur. Koqnitiv və sosiolinqvistik çərçivələri sintez edərək, bu tədqiqat maliyyə kommunikasiyasında subyektivliyin necə yer aldığını dekonstruksiya etmək üçün möhkəm metodologiya təqdim edir. Tədqiqatın yekununda qeyd olunur ki, iqtisadi diskurs mürəkkəb maliyyə məlumatları ilə ictimai epistemologiya arasında həlledici vasitəçi rolunu oynayır və post-pandemiya, süni intellektin integrasiya olunduğu qlobal iqtisadiyyatda "obyektiv həqiqət" kimi qəbul edilən anlayışların sərhədlərini müəyyən edir.

Introduction

Economic discourse functions not merely as a descriptive vehicle for financial data but as a sophisticated mechanism of social construction. While classical economic theory often posits the market as a rational, objective entity, the linguistic realization of "the economy" in public media suggests a deeply subjective architecture. This study proceeds from the premise that economic language is inextricably linked to cognitive and sociolinguistic processes that dictate how reality is curated and consumed (van Dijk, 2020). Subjectivity, in this context, is defined not as a collection of personal biases, but as a systemic discursive phenomenon where linguistic choices—ranging

from evaluative adverbs to complex metaphorical mappings—shape the epistemological boundaries of what the public understands as "economic truth."

In the contemporary landscape (2023–2026), characterized by post-pandemic volatility and shifting geopolitical alliances, the role of framing has become increasingly vital. As Hart (2018) notes, cognitive linguistics provides the tools to deconstruct how mental models are activated through language. However, to understand the social impact of these models, one must also employ sociolinguistic lenses to examine how stance and agency are distributed within the text (Bednarek & Caple, 2017). This article addresses the existing scholarly gap by integrating these two paradigms, moving beyond simple metaphor identification toward a critical analysis of how subjectivity is naturalized in the global financial press.

The central argument posits that the strategic use of metaphor and evaluative language does more than simplify complex data; it actively removes human accountability from economic outcomes. By framing market movements through biological, meteorological, or technological metaphors, the discourse suggests that economic shifts are inevitable natural laws rather than the results of specific policy decisions.

Literature Review: The Cognitive-Sociolinguistic Connection

The study of economic discourse has evolved from early lexicographical interests to a multifaceted analysis of power and perception. Foundational work by Lakoff and Johnson (1980) established that metaphors are not merely "ornamental" but "conceptual" in nature, providing the cognitive scaffolding through which individuals experience abstract domains such as finance. In economic journalism, the "Economy as a Living Organism" metaphor is particularly pervasive, as it imbues market fluctuations with biological inevitability (Koller, 2019).

Recent scholarship has shifted toward the sociocognitive approach championed by van Dijk (2020), which bridges the relationship between individual cognition and social power. This perspective argues that discourse is mediated by "mental models"—subjective representations of events stored in episodic memory. When a financial journalist describes a market dip as a "correction," they are not merely selecting a word; they are activating a specific mental model that frames a loss as a necessary, even healthy, adjustment.

Furthermore, the concept of stance—the linguistic expression of an author's relationship to content—is central to sociolinguistic inquiry. Bednarek and Caple (2017) demonstrate that news values such as "Impact" and "Negativity" are often constructed through evaluative language. In economics, this is frequently achieved through modal verbs and hedging, which allow writers to project authority while maintaining strategic distance from the inherent unpredictability of the future.

This integration of cognitive and sociolinguistic theories allows for a deeper understanding of "Naturalization." This is the process by which value-laden interpretations are presented as empirical facts. When the media describes a market as "nervous," it grants agency to a collection of data points, effectively masking the human actors—traders, policymakers, and corporate leaders—whose specific decisions actually drive the volatility.

Methodology

This research adopts a qualitative, corpus-informed discourse analysis. The primary data consists of a curated corpus of 25 economic news articles published between January 2023 and May 2026, sourced from high-register outlets including *The Financial Times*, *The Economist*, and *The Wall Street Journal*.

The methodology is bifurcated into two analytical stages:

1. Micro-Linguistic Analysis: Identification of evaluative markers (adjectives, adverbs, and modals) and the mapping of Conceptual Metaphors (CMT) using the Metaphor Identification Procedure (MIP).

2. Critical Discourse Analysis (CDA): Examining the attribution of agency and the construction of narrative frames to determine how responsibility for economic outcomes is either highlighted or obscured.

The study prioritizes coherence and cohesion by tracing specific lexical chains (e.g., “resilience,” “headwinds,” “intervention”) across the corpus to observe how subjective evaluation becomes a recurring discursive trope. By analyzing texts from the 2024–2026 period, the study captures the shift from human-centric reporting to a narrative dominated by algorithmic agency and geopolitical “battlefields.”

Case Study: Corpus Data Analysis

To demonstrate the intersection of subjectivity and agency, we examine representative corpus fragments from global inflation and market trends.

“Central banks find themselves in a precarious dance with a stubborn inflation that refuses to be tamed by traditional interest rate hikes. While the labor market remains defiant, the ghost of a looming recession continues to haunt investor sentiment, forcing a pivot toward more aggressive intervention.” — (*The Guardian*, 2024)

1. The Personification of Abstract Entities

In the fragment above, subjectivity is constructed through the personification of inflation. Inflation is not merely a statistical rise in prices; it is “stubborn” and “refuses to be tamed.” By attributing human traits to an abstract economic phenomenon, the discourse shifts from mathematical description toward moralized struggle. This is a classic example of agency obfuscation (van Dijk, 2020): if inflation “refuses” to move, policy failure is framed less as human miscalculation and more as the consequence of an unruly antagonist.

2. Evaluative Adjectives and Affective Framing

The use of “defiant” to describe the labor market and “haunt” for recession introduces a high level of affective subjectivity. “Defiant” carries a dual connotation: strength in one context, resistance in another. This illustrates the cognitive framing of the economy as a battlefield (Koller, 2019), where sectors are positioned in implicit opposition.

3. Narrative Cohesion and the “Ghost” Metaphor

The metaphor of the “ghost of a looming recession” functions as an ontological metaphor (Lakoff & Johnson, 1980), granting tangible presence to an intangible future possibility. This creates a sense of inevitability that legitimizes “aggressive intervention.” From a sociolinguistic perspective, this lexical choice signals a stance of alarmism, contributing to perceived newsworthiness (Bednarek & Caple, 2017).

Emerging Discursive Patterns In Financial Reporting

Beyond the dominant metaphors of medicine and warfare, the corpus reveals recurring use of environmental and climatic imagery. Such lexical choices reinforce the perception of economic events as external, uncontrollable forces rather than consequences of institutional decision-making.

The Maritime and Climatic Frame

In reports from June 2025, the economy is conceptualized through the metaphor of maritime crisis: “*Global investors continue to navigate turbulent waters as currency markets brace for the*

storm of rising debt obligations." Expressions such as "turbulent waters" and "brace for the storm" activate a schema of survival against natural disaster. From a cognitive-linguistic perspective, this framing reduces economic complexity into an experiential narrative of endurance. Sociolinguistically, it displaces accountability: storms are endured, not negotiated. Thus, structural debt issues become naturalized as environmental inevitabilities.

The Militarization of Innovation

A second emergent pattern concerns the increasing militarization of innovation discourse, particularly in relation to digital infrastructure. In late 2025, reports noted: *"Nations are racing to secure dominance in the semiconductor battlefield, where every delay risks surrendering strategic ground."* Here, technological development is framed as territorial conflict. The phrase "semiconductor battlefield" imports military logic into economic planning, while "surrendering strategic ground" implies irreversible loss. Such discourse encourages urgency and legitimizes aggressive state intervention under the guise of national defense.

The Rise of Algorithmic Subjectivity (2025–2026)

The corpus indicates an intensification of anthropomorphic framing in discussions of algorithmic systems. *"The predictive engines grew cautious overnight, recalibrating their appetite for risk as uncertainty spread through global exchanges."* This fragment attributes emotional and cognitive capacities to algorithmic systems: they "grew cautious" and possess an "appetite." The effect is to construct computational tools as autonomous agents capable of judgment. This framing obscures the human-designed parameters embedded within these systems and distances responsibility for market consequences. By framing the AI as the actor that "decided" to pull money, the human developers and the companies using the AI are cleared of responsibility.

Results And Discussion

The findings demonstrate that subjectivity in economic discourse is not confined to isolated metaphors but extends across broader semantic fields. Whether framed as weather, war, or sentient machinery, economic narratives consistently reposition agency away from identifiable institutions and toward abstract, impersonal forces.

1. Personification and Agency

One of the most common ways to create subjectivity is to treat abstract economic concepts as if they were living people. When *The Financial Times* (2024) reports that *"global markets reacted nervously,"* it employs a subjective evaluation. A market is a collection of numbers; it cannot feel emotions. By saying inflation "refused to cooperate," the writer makes inflation look like a stubborn person, hiding the fact that inflation is the result of complex human decisions and policies.

2. The "Economy as a Patient" Metaphor

When the economy is in trouble, journalists often use medical language. This makes the economist look like a doctor and the economy look like a sick patient. *"The nation's manufacturing sector remains in intensive care... the government must administer a strong dose of fiscal stimulus."* This medical metaphor is highly persuasive. If a sector is in "intensive care," it implies an emergency that precludes political debate. It suggests there is only one "cure," turning a political choice into a medical necessity.

3. Evaluation through Adverbs and Adjectives

Subjectivity is often hidden in simple descriptions that seem like facts but are actually judgments. The phrase *"painfully slow growth"* or *"bold new policy"* demonstrates stance-taking. "Painfully" tells the reader how to feel about the growth rate, while "bold" frames a policy as

courageous. The journalist is not just reporting; they are telling a story where the government is a hero "rescuing" the economy.

4. Ideological Consequences of Dramatization

Journalistic language in economic reporting often relies on familiar cultural narratives because they make uncertainty easier to process. Financial systems are abstract and data-heavy; metaphor becomes a mechanism of translation. Yet this translation is never neutral. The choice to describe markets as "nervous" or algorithms as "cautious" introduces interpretive assumptions that shape public understanding before numerical evidence is even considered.

When an economy is framed as a body in pain or a vessel in danger, intervention appears as urgent care rather than political choice. This narrows the range of imaginable responses by privileging immediacy over deliberation. Readers are positioned to accept solutions that seem necessary within the metaphorical world constructed by the article.

Discussion: The Naturalization Of Subjectivity

The findings suggest that the strategic integration of cognitive metaphors and sociolinguistic stance markers creates a persuasive veneer of objectivity. This linguistic framework masks an ideological core, presenting value-laden interpretations as empirical facts. When abstract concepts such as "the market" are granted independent agency, actual human actors—institutional fund managers, algorithmic traders, and policymakers—become less visible within the discourse.

This process of naturalization recontextualizes economic processes as immutable laws of nature rather than outcomes of specific social, ethical, and political decisions. By minimizing human intent, discourse can render the current economic order as inevitable. In contemporary narratives surrounding artificial intelligence in markets, "the algorithm" is increasingly framed as an autonomous entity that experts must "interpret" or "respond to." This digital deity serves to further distance human accountability, suggesting that as technology advances, the linguistic strategies used to obscure power and agency simply adapt to incorporate new technical idols.

The repetition of emotionally resonant verbs like "collapse," "recover," and "survive" creates a narrative arc resembling human struggle. In effect, the economy is not simply reported—it is dramatized. This dramatization makes abstract systems legible, but it also personalizes them in ways that obscure structural realities. Because these symbolic resources feel natural, they often escape scrutiny. Only by tracing these patterns can scholars uncover how language maintains economic "common sense" in contemporary society.

Conclusion

This study concludes that subjectivity in economic discourse is not an accidental byproduct of communication but an integral component of how financial reality is constructed and transmitted. By employing a dual cognitive-sociolinguistic framework, the analysis demonstrates three principal mechanisms of persuasion:

1.Embedded Evaluation: Subjective meaning is often concealed within seemingly neutral or technical descriptors (e.g., "healthy" growth vs. "sluggish" recovery), shaping reader judgment without overt ideological signaling.

2.Cognitive Shorthand: Metaphors provide accessible interpretive frameworks for complex economic processes, though they may oversimplify structural realities into digestible, yet misleading, domestic narratives.

3.Strategic Agency Attribution: Assigning agency to non-human entities (inflation, markets, algorithms) contributes to the depoliticization of economic crises and the normalization of systemic volatility.

Ultimately, deconstructing these linguistic strategies is essential for fostering a more critical, transparent, and democratic understanding of economic narratives. Such awareness enables readers to move from passive recipients of “economic facts” to active interrogators of the power relations embedded within discourse. Understanding the architecture of economic truth allows for a renewed discourse—one that acknowledges human responsibility and the potential for systemic change in the face of perceived market inevitability.

ORCID ID: 0009-0003-2063-8124

Abstract: The culture of English speech plays a vital role in effective global communication. It goes beyond grammar and includes pronunciation, vocabulary richness, stylistic appropriateness, and ethical communication norms. Proper pronunciation, including stress and intonation, ensures clarity and prevents misunderstandings. A rich vocabulary allows speakers to express ideas more precisely and creatively. Grammar remains a fundamental pillar, as incorrect structures may distort meaning. The distinction between formal and informal styles is essential, especially in professional and academic contexts. Politeness and respectful expressions are key elements of communication in English. Listening skills are equally important, enabling meaningful interaction and understanding. Cultural awareness is necessary when communicating internationally, as meanings and interpretations can vary. Continuous practice through reading, writing, listening, and speaking helps develop speech culture. Education and modern technology also influence how English is used. Overall, English speech culture is a complex system combining linguistic, social, and cultural competencies.

Keywords: English language, speech culture, pronunciation, vocabulary, grammar, style, ethical norms, communication, listening skills, cultural differences

Xülasə: İngilis nitq mədəniyyəti səmərəli qlobal ünsiyyətdə mühüm rol oynayır. O, qrammatikadan daha geniş anlayış olub, tələffüzü, zəngin söz ehtiyatını, üslubi uyğunluğu və etik ünsiyyət normalarını əhatə edir. Düzgün tələffüz, o cümlədən vurğu və intonasiya, fikrin aydın ifadə olunmasını təmin edir və anlaşılmazlıqların qarşısını alır. Zəngin söz ehtiyatı danışanlara fikirlərini daha dəqiq və yaradıcı şəkildə ifadə etməyə imkan verir. Qrammatika əsas dayaqlardan biri olaraq qalır, çünki səhv quruluşlar mənanın təhrif olunmasına səbəb ola bilər. Rəsmi və qeyri-rəsmi üslublar arasındakı fərq xüsusilə peşəkar və akademik mühitdə vacibdir. Nəzakət və hörmət ifadələri ingilis dilində ünsiyyətin əsas elementləridir. Dinləmə bacarıqları da eyni dərəcədə əhəmiyyətlidir, çünki onlar səmərəli qarşılıqlı əlaqə və anlaşmanı təmin edir. Beynəlxalq ünsiyyətdə mədəni məlumatlılıq zəruridir, çünki məna və şərhlər fərqli ola bilər. Oxuma, yazma, dinləmə və danışma vasitəsilə davamlı təcrübə nitq mədəniyyətinin inkişafına kömək edir. Təhsil və müasir texnologiyalar da ingilis dilinin istifadəsinə təsir göstərir. Ümumilikdə, ingilis nitq mədəniyyəti dil, sosial və mədəni səriştələri birləşdirən mürəkkəb bir sistemdir.

Açar sözlər: ingilis dili, nitq mədəniyyəti, tələffüz, lüğət tərkibi (söz ehtiyatı), qrammatika, üslub, etik normalar, ünsiyyət, dinləmə bacarıqları, mədəni fərqlər

Introduction

English has become one of the most widely used languages in the world and serves as a primary means of international communication. As a global language, it is used in education, science, business, technology, diplomacy, and everyday interactions among people from different cultural backgrounds. In this context, the culture of English speech has gained increasing importance. Speech culture refers not only to the correct use of grammar and vocabulary but also to pronunciation, stylistic appropriateness, politeness, and effective communication skills.

The ability to communicate clearly and respectfully in English is essential for successful interaction in both personal and professional settings. Proper pronunciation, including stress and intonation, helps convey meaning accurately and avoids misunderstandings. A rich vocabulary and a good command of grammar enable speakers to express their thoughts more precisely and confidently. Furthermore, understanding the differences between formal and informal language is necessary for adapting speech to various communicative situations.

English speech culture is also closely connected with cultural awareness. Since English is used by people from diverse linguistic and cultural backgrounds, effective communication requires sensitivity to different customs, values, and communication styles. Therefore, developing English speech culture involves linguistic competence as well as social and cultural skills. Studying this topic contributes to improving communication abilities and promotes more successful interaction in a globalized world.

Materials and Methods

This study is based on qualitative and descriptive research methods. The materials used include books, academic articles, linguistic studies, and educational resources related to English speech culture and communication. Relevant literature on pronunciation, vocabulary development, grammar, stylistic features, communication skills, and cultural aspects of language use was reviewed and analyzed.

The descriptive method was employed to explain the main components of English speech culture and their role in effective communication. Comparative analysis was used to examine the relationship between linguistic competence and cultural awareness in English-language communication. Examples from educational and communicative contexts were considered to illustrate the practical application of speech culture principles.

Data were collected through the review of scholarly sources and systematically analyzed to identify the key factors influencing the development of English speech culture. The findings were interpreted to provide a comprehensive understanding of how linguistic, social, and cultural elements contribute to successful communication in English.

The English language, as one of the most widely used means of communication in the modern world, plays the role of a bridge between different nations and cultures. Knowing only the grammatical rules of this language is not enough; understanding its speech culture is also essential. Speech culture refers to the correct, fluent, appropriate, and ethically grounded use of language. In English, speech culture is important both in everyday communication and in formal and academic contexts.

One of the key elements of English speech culture is correct pronunciation. Stress, intonation, and rhythm play an important role in the pronunciation of words. These features help to convey ideas more clearly and effectively. At the same time, correct pronunciation ensures better understanding between speakers and prevents misunderstandings in communication.

Lexical richness is also an essential part of speech culture. Having a wide vocabulary in English allows speakers to express their ideas more precisely and vividly. Proper use of synonyms prevents repetition and makes speech more engaging. In addition, choosing words appropriate to the context is of great importance.

Grammatical accuracy is one of the main pillars of English speech culture. Correct sentence structure, proper use of tenses, and adherence to syntactic rules ensure clarity of meaning.

Grammatical mistakes can sometimes completely change the meaning of a sentence; therefore, special attention must be paid to this area.

Style selection also plays an important role in speech culture. In English, the distinction between formal and informal styles is significant. Formal style is used in academic writing, business correspondence, and official speeches. It is characterized by more serious and structured expressions. Informal style, on the other hand, is used in everyday conversations and social interactions and is characterized by more relaxed expressions.

Observing ethical rules is also an important part of speech culture. Politeness forms are widely used in English. Expressions such as “please,” “thank you,” and “excuse me” reflect respect and attentiveness in communication. Proper use of these expressions creates a positive impression and makes communication more effective.

Listening skills are also an integral part of speech culture. Effective communication is possible not only through speaking but also through careful listening. Active listening helps to better understand the speaker’s ideas and respond appropriately.

English speech culture also requires awareness of cultural differences. The same expressions may have different meanings in different countries. Therefore, understanding cultural context and behaving appropriately is essential in international communication.

Continuous practice plays a key role in developing speech culture. It is recommended to use various resources such as books, articles, podcasts, and films to improve reading, writing, listening, and speaking skills.

The education system also plays an important role in shaping English speech culture. In schools and universities, not only grammar but also the practical use of language should be taught. Teachers should encourage active student participation and use methods aimed at developing communication skills.

The development of technology has also influenced English speech culture. Social media and digital platforms have changed communication patterns. In this environment, short and fast messaging is common; however, this may sometimes negatively affect proper language use. Therefore, maintaining balance is important.

Discussion and Conclusion

The findings of this study emphasize the importance of English speech culture in modern communication. Effective communication depends not only on grammatical accuracy but also on pronunciation, vocabulary richness, stylistic appropriateness, and cultural awareness. The analysis shows that successful communication requires a balance between linguistic competence and social communication skills. Speakers who possess a strong command of these elements are better able to express their ideas clearly and interact effectively in various contexts.

The study also highlights the growing role of English as a global language. As communication increasingly occurs across cultures, awareness of cultural differences and communication norms becomes essential. Misunderstandings can often arise from differences in language use, politeness strategies, and cultural expectations. Therefore, developing intercultural competence is an important aspect of English speech culture.

In conclusion, English speech culture is a comprehensive concept that combines language knowledge with social and cultural understanding. It plays a crucial role in education, professional communication, and international interaction. Continuous practice in speaking, listening, reading, and writing contributes significantly to its development. By improving speech culture, individuals

can enhance their communication effectiveness, build stronger relationships, and participate more successfully in a globalized world.

Conclusion

In conclusion, English speech culture is not limited to language knowledge alone. It is a complex and multifaceted concept that includes linguistic, social, cultural, and ethical dimensions. Effective communication in English requires not only a good command of grammar and vocabulary but also the ability to use language appropriately in different situations and cultural contexts. Pronunciation, intonation, listening skills, and stylistic awareness all contribute to successful interaction and mutual understanding.

In today's globalized world, English serves as a bridge between people from diverse backgrounds. Therefore, understanding the norms and values associated with English communication is essential for building positive relationships in academic, professional, and social environments. Respect, politeness, and cultural sensitivity help speakers avoid misunderstandings and communicate more effectively.

The development of English speech culture is a continuous process that requires regular practice in speaking, listening, reading, and writing. Modern technologies, educational resources, and international communication opportunities provide valuable support for language improvement. At the same time, learners should remain aware of cultural differences and adapt their communication styles accordingly.

Ultimately, a high level of English speech culture enhances communication competence, promotes intercultural understanding, and contributes to personal and professional success. Continuous learning and practical application remain the key factors in achieving excellence in this important field.

Abstract: Since the second half of the 20th century, linguists' interest in the study of text has significantly increased, establishing text research as a central direction in linguistics. Initially, texts were analyzed primarily at the sentence level, but later attention shifted to larger units such as discourse and communicative structures. In structuralist approaches, texts were examined in terms of internal organization and cohesion, whereas functional and communicative approaches emphasized texts as complex semiotic systems shaped by the author's intent and the reader's perception. Key categories such as coherence and cohesion reveal the multi-level organization of texts, with phonetic, lexical, morphological, and syntactic elements integrating to generate new aesthetic qualities.

Modern text linguistics favors communicative and cognitive methods, integrating syntax, discourse, and lexical analysis. Cognitive approaches explore how texts are modeled and processed in human consciousness, while pragmatic perspectives highlight the text as a goal-directed social activity within communication. Linguocultural research examines national and cultural codes, stereotypes, and collective experiences, and references to precedent texts and phenomena activate the reader's cultural competence. The semantics of literary texts encompass both denotative and connotative layers, with semes ensuring coherence, and evaluative and emotional components enriching meaning.

Key words: semantics, pragmatics, cognitive approach, discourse analysis, linguistic cultural modern methodology

Xülasə: XX əsrin ikinci yarısından başlayaraq dilçilərin mətnə marağı artmış və mətn araşdırmaları dilçiliyin mərkəzi istiqamətlərindən birinə çevrilmişdir. Əvvəlcə mətn yalnız cümlə səviyyəsində öyrənilsə

də, sonrakı mərhələdə diqqət daha iri vahidlərə – diskursa və kommunikativ strukturlara yönəlmişdir. Strukturalist yanaşmada mətn daxili quruluş və əlaqəlilik baxımından təhlil edilirdisə, funksional və kommunikativ yanaşmalar onun müəllif niyyəti və oxucu qavrayışı ilə şərtlənən mürəkkəb semiotik sistem kimi dərk olunmasına səbəb olmuşdur. Mətnin bütövlük (koherentlik) və bağlılıq (koheziya) kateqoriyaları onun çoxsəviyyəli təşkilini göstərir, fonetik, leksik, morfoloji və sintaktik elementlərin inteqrasiyası nəticəsində yeni estetik keyfiyyətlər əldə olunur.

Müasir mətn linqvistikası kommunikativ və koqnitiv metodlara üstünlük verərək sintaksis, diskurs və leksik təhlili birləşdirir. Koqnitiv yanaşma mətnin insan şüurunda modelləşdirilməsini və qavranılmasını araşdırır, pragmatik yanaşma isə mətnin ünsiyyət situasiyasında məqsədyönlü sosial fəaliyyət kimi funksiyasını vurğulayır. Linqvokulturoloji tədqiqat milli-mədəni kodları, stereotipləri və kollektiv təcrübəni öyrənir, presedent mətnlər və fenomenlər oxucunun mədəni kompetensiyasını aktivləşdirir. Bədii mətnin semantikasi denotativ və konnotativ məna qatlarını əhatə edir, semalar əlaqəliliyi təmin edir, qiymətləndirici və emosional komponentlər isə mətni zənginləşdirir.

Açar sözlər: semantika, pragmatika, koqnitiv yanaşma, diskurs təhlili, linqvokulturoloji tədqiqat, müasir metodologiya

Introduction

In the second half of the twentieth century, linguistic scholarship underwent a profound transformation marked by a growing and sustained interest in the study of text as a fundamental unit of analysis. This shift was not accidental; rather, it was conditioned by the increasing awareness that language cannot be fully understood when examined solely at the level of isolated words or sentences. Instead, meaning emerges more comprehensively within extended semiotic structures, where linguistic units interact dynamically. In this context, particular attention was directed toward identifying and explaining the mechanisms through which meaning is constructed, transformed, and interpreted within complex semiotic macrostructures.

As a result of these developments, the concept of “text” gradually acquired the status of a central and unifying notion within leading scientific paradigms (Abdullayev, 2011; Vəliyev, 2005). It became a focal point not only within linguistics but also across a wide range of disciplines, including philosophy, literary studies, semiotics, psychology, and communication studies. Some of these disciplines—such as semiotics and discourse analysis—emerged in response to new academic and societal demands, reflecting the need to understand communication in increasingly complex informational environments. Others, including hermeneutics and poetics, have a long-standing tradition of textual interpretation and contributed foundational insights into the nature of meaning, interpretation, and aesthetic expression. Within each of these fields, however, the concept of text is approached differently, shaped by distinct methodological principles and theoretical assumptions, which together contribute to its multidimensional character.

The etymology of the term “text,” derived from the Latin *textus* meaning “woven fabric” or “interlacing,” metaphorically illustrates the intricate and interconnected nature of textual structures. This metaphor underscores the idea that a text is not a random aggregation of linguistic elements but a carefully organized system in which each component contributes to the overall coherence and meaning (Abdullayev, 1998). Historically, text was primarily understood as a product of written language, often associated with literary or formal communication. However, over time, this narrow interpretation proved insufficient. Contemporary linguistic thought increasingly recognizes text as a complete communicative unit that encompasses not only written but also spoken and multimodal forms of expression (Abdullayev, 2011).

In earlier stages of linguistic development, research was largely confined to sentence-level analysis, with primary emphasis placed on grammatical correctness and syntactic structure. While such studies provided valuable insights into the formal properties of language, they were limited in their ability to explain how meaning operates in real communicative contexts. Beginning in the latter half of the twentieth century, scholars shifted their attention toward larger units of analysis—namely, text and discourse. This transition was closely linked to a growing interest in the functional aspects of language, particularly how it is used in authentic communicative situations to achieve specific purposes. Language began to be viewed not merely as a system of rules but as a tool for interaction, shaped by context, intention, and social dynamics.

During the structuralist period, texts were primarily examined in terms of their internal organization, focusing on elements such as cohesion, structural patterns, and formal relationships between linguistic units. Structuralist approaches sought to identify universal principles governing textual construction, often emphasizing the systematic and rule-based nature of language. However, these approaches tended to overlook the role of context, interpretation, and user interaction in the creation of meaning.

Subsequent developments in functional linguistics, pragmatics, and discourse analysis led to a significant reorientation of textual studies. Text came to be understood not simply as a linear sequence of sentences but as a complex semiotic system that operates within a broader communicative framework. In this perspective, the production and interpretation of text are seen as interactive processes involving both the author and the reader. The author encodes meaning based on specific intentions, goals, and contextual factors, while the reader actively decodes and interprets this meaning through cognitive and cultural frameworks.

This expanded understanding of text necessitated its investigation across multiple dimensions—linguistic, cognitive, social, and cultural. From a linguistic perspective, attention is given to structural and semantic organization (Abdullayev, 1998; Əfəndiyeva, 2007); from a cognitive perspective, to mental processes involved in comprehension and interpretation (Апытюнова, 1999); from a social perspective, to the role of context, norms, and interaction (Сәфəров, 2014); and from a cultural perspective, to the ways in which texts reflect and transmit collective knowledge, values, and identities (Seyidov, 2004). Thus, the evolution of text studies in the second half of the twentieth century represents a paradigmatic shift from a narrowly formal analysis of language toward a holistic and interdisciplinary understanding of text as a dynamic, multifaceted phenomenon (Vəliyev, 2005).

Methodology and Materials

The present study is grounded in an interdisciplinary approach to text analysis, integrating theoretical and methodological perspectives from text linguistics, semiotics, hermeneutics, pragmatics, stylistics, rhetoric, and linguoculturology. Such a comprehensive framework reflects the complex and multifaceted nature of text as a phenomenon that cannot be fully understood within the boundaries of a single discipline. The methodological foundation of the research is based on communicative, cognitive, and functional approaches, which together enable a holistic examination of text as a multi-layered and dynamic system of meaning production.

The communicative approach emphasizes the role of text as a means of interaction between participants in a specific context, focusing on intention, interpretation, and the exchange of information. The cognitive approach, in turn, explores the mental processes involved in text production and comprehension, including the formation of conceptual structures, mental models,

and interpretative strategies. The functional approach highlights the purpose-oriented nature of language use, analyzing how linguistic forms are selected and organized to fulfill particular communicative goals.

Within this interdisciplinary framework, textology occupies an important position by focusing on the study of manuscripts and printed texts, particularly those intended for publication and scholarly interpretation. It addresses issues such as the reconstruction of original texts, authorship attribution, historical dating, and textual authenticity (Лотман, 1970). Through these processes, textology provides a reliable foundation for further interpretative and analytical work.

Hermeneutics contributes to the study by offering tools for interpreting texts beyond their surface-level meanings. It seeks to uncover deeper semantic layers and to understand the intentions, worldview, and aesthetic orientation of the author. Hermeneutic analysis views the text as an open system of meanings, where interpretation is influenced not only by the author's intent but also by the reader's cultural and cognitive background. Poetics focuses on the internal organization and aesthetic properties of text, examining elements such as structure, composition, imagery, and expressive devices. It evaluates how these elements contribute to the artistic value of the text and its impact on the reader. Semiotics, on the other hand, provides a broader analytical perspective by investigating text as a system of signs. It examines how meaning is constructed, encoded, and transmitted through various sign systems across domains such as language, culture, and cognition. Rhetoric and pragmatics further enrich the analytical framework. Rhetoric studies the principles of effective and persuasive communication, particularly in relation to speech construction, argumentation, and audience engagement. Pragmatics, meanwhile, considers text as a form of purposeful social action, shaped by communicative intentions, contextual factors, and interactional dynamics. It examines how meaning is negotiated between participants and how implicit and context-dependent meanings are generated.

Stylistics and linguostylistics provide insights into the expressive dimension of language. Stylistics analyzes the selection and arrangement of linguistic means for conveying ideas and emotions in different communicative contexts, while linguostylistics places particular emphasis on the "human factor in language," exploring how individual and social identities are reflected in stylistic choices. These disciplines highlight the role of language not only as a tool of communication but also as a medium of artistic and personal expression.

Text linguistics occupies a central and integrative position within this methodological system. It examines text both as an independent unit of linguistic analysis and as part of broader communicative processes. Its primary objectives include the investigation of coherence and cohesion as fundamental textual categories, the identification of explicit and implicit meanings, the determination of communicative intentions, and the analysis of relationships between textual components as elements of a sign system. Text linguistics thus serves as a bridge connecting structural, semantic, and functional aspects of text.

Contemporary developments in text linguistics increasingly rely on communicative and cognitive methodologies. Research in text syntax demonstrates that syntactic organization extends beyond sentence boundaries and involves processes such as information distribution, thematic progression, and referential linkage, all of which contribute to textual coherence (Kazimov, 2010). Cognitive approaches further enhance analysis by examining how textual structures are processed in the human mind and how readers construct meaning through mental schemas and background knowledge (Кубрякова, 2004). Cognitive approaches further enhance the analysis by examining

how textual structures are represented and processed in the human mind. They explore how readers construct mental models, activate background knowledge, and employ interpretative strategies during text comprehension. This perspective underscores the interactive nature of meaning construction, where both linguistic input and cognitive mechanisms play essential roles.

Linguoculturological analysis significantly broadens the scope of text studies by examining texts as carriers of cultural knowledge and collective memory. Within this framework, concepts such as “conceptosphere,” “cultural concept,” and “precedent text” are employed to analyze how language reflects national identity, cultural values, and historical experience. Text is thus viewed not only as a linguistic phenomenon but also as a repository of cultural meanings and social practices.

This approach places particular emphasis on the role of symbols, metaphors, and culturally specific elements in shaping textual meaning. It demonstrates that understanding a text often requires familiarity with the cultural context in which it was produced. Consequently, linguoculturological analysis highlights the importance of cultural competence in the interpretation of texts and underscores the interdependence of language, culture, and cognition.

In sum, the methodological framework adopted in this study reflects the complexity of text as a multidimensional construct. By integrating insights from multiple disciplines and combining communicative, cognitive, and functional approaches, the research provides a comprehensive and nuanced understanding of text as both a linguistic and a socio-cultural phenomenon.

Discussion

The findings of the present study demonstrate that text constitutes a highly complex, hierarchically organized, and multi-level system in which coherence and cohesion function as fundamental categories. Cohesion refers to the formal, surface-level connections between linguistic elements—such as lexical repetition, grammatical agreement, and connective devices—while coherence represents the deeper semantic and logical unity perceived by the reader. Together, these properties ensure the integrity, continuity, and interpretability of the text, enabling effective interaction between its structural, semantic, and communicative components. In this regard, text is understood as a higher-order linguistic unit that emerges through the integration of phonetic, lexical, grammatical, and stylistic levels into a unified whole.

A key aspect of textual organization is the central role of the author in structuring meaning and guiding interpretation. In this context, the author can be seen as a coordinating force who shapes the communicative intent of the text. Through deliberate lexical, syntactic, and stylistic choices, the author not only conveys information but also constructs evaluative, expressive, and emotional dimensions of meaning. The interaction between denotative and connotative meanings is particularly significant in this process. While denotative meaning provides the direct, referential content, connotative meaning introduces additional layers of interpretation, reflecting attitudes, emotions, and culturally embedded associations. This dual structure enriches the semantic depth of the text and allows for multiple interpretative possibilities.

The analysis further reveals that textual coherence is maintained through the operation of semantic networks, key lexical units, and recurring motifs. These elements form interconnected patterns that contribute to the internal organization of the text and guide the reader’s cognitive processing. Key words and thematic repetitions function as anchors that stabilize meaning and highlight the central ideas of the text. At the same time, recurring motifs and symbolic structures

contribute to the formation of the conceptual core, reinforcing thematic unity and enhancing interpretative consistency.

Figurative language plays a crucial role in shaping the semantic and aesthetic structure of the text. Devices such as metaphor, symbolism, irony, and allegory extend beyond literal meaning and enable the representation of abstract concepts, emotional states, and cultural values. These expressive tools not only increase the aesthetic richness of the text but also activate the reader's interpretative engagement, requiring a deeper level of cognitive and cultural competence.

From a pragmatic perspective, text functions as an instrument of communicative influence. Authors employ a range of strategies—informative, persuasive, and expressive—to achieve specific communicative goals. These strategies are realized through various linguistic and discursive means, including argumentation, rhetorical questions, implicatures, and indirect speech acts. The presence of implicit meanings and context-dependent expressions necessitates active participation on the part of the reader, who must interpret, infer, and reconstruct meaning. In this sense, the reader becomes a co-creator of the text, engaging in a dynamic process of meaning-making.

The study also highlights the extent to which text is embedded within a broader socio-cultural context. Factors such as social environment, communicative situation, and the relationships between participants play a decisive role in shaping both the production and interpretation of text. Context influences not only the selection of linguistic forms but also the interpretation of meaning, emphasizing the situational and relational nature of communication. This contextual dependency underscores the dynamic and adaptive character of text as a communicative phenomenon.

In the context of globalization, the interaction between different cultures has become increasingly significant, further enhancing the relevance of linguoculturological approaches. Contemporary texts often reflect a complex interplay between national and universal elements, raising important questions regarding cultural identity, hybridity, and transformation. The presence of culturally specific references, precedent phenomena, and intertextual connections enriches the semantic structure of the text and requires a higher level of cultural awareness from the reader.

Moreover, the interdisciplinary nature of text research becomes particularly evident through its connections with fields such as psychology, sociology, philosophy, and literary studies. Concepts traditionally associated with literary theory—such as plot, motif, composition, chronotope, and narrative structure—are reinterpreted within a linguistic framework, allowing for a more integrated analysis of textual phenomena. This synthesis of approaches contributes to a deeper understanding of how texts function not only as linguistic constructs but also as cognitive, social, and cultural artifacts.

Overall, the results confirm that text is not a static or purely formal entity but a dynamic, multifaceted system shaped by the interaction of linguistic structures, cognitive processes, communicative intentions, and socio-cultural influences.

Conclusion

In conclusion, the second half of the 20th century marked a turning point in linguistic research, with text emerging as a central object of study. It is now recognized as a complex, multi-dimensional phenomenon that integrates linguistic, cognitive, and cultural aspects. Text is not merely a sequence of linguistic units but a dynamic communicative system shaped by authorial intention, reader perception, and contextual factors.

The integration of semantic and pragmatic approaches enables a deeper understanding of both the internal mechanisms of meaning construction and the functional role of text in communication.

Interdisciplinary methodologies further enhance the analysis by incorporating insights from various humanitarian disciplines.

Ultimately, text occupies a pivotal position in modern scientific thought as both the highest linguistic unit and a cultural-communicative entity. Its study requires a synthesis of theoretical perspectives, which allows for a more systematic, objective, and comprehensive understanding of its complex nature.

MEDIA INTERVIEW AS A GENRE OF DIALOGICAL DISCOURSE

Laman Fuad SHUKUROVA

Lecturer, PhD student, Department of Languages, Azerbaijan Tourism and Management University

E-mail: shukurova.leman@atmu.edu.az

ORCID ID: 0009-0002-6359-4590

Abstract: The article proposes to study dialogic discourse and media interviews as a genre of dialogic discourse. The article reflects the various definitions given to discourse by various scholars and the adoption of a general definition. At the same time, political, critical and dialogic types of discourse are touched upon. Dialogic discourse has a communicative meaning based on communication between people and serves to transmit information to people through body language. Discourse types are analyzed using cognitive, comparative, inductive and deductive methods. Media has become an integral part of everyday life and the importance of studying it within dialogic discourse is emphasized. The body language utilized by public figures and politicians during media interviews plays an important role, because the principle of persuasion

and completeness must be maintained during interviews. The words and sentences used during political speeches are based on the strategy of persuading the opponent or audience. The main issue here is the manipulation of the addressees in a positive sense. Body language also plays an important role in dialogic discourse. The use of various gestures and facial expressions serves to enhance the speaker's speech and increase the credibility of the speech. There are some universal signs that are perceived the same all over the world. These include "towering hands", "crossing arms" during dialogue, smiling, and certain head movements.

Keywords: discourse, media, dialogic discourse, body language, implicit, pragmatic

MEDIA MÜSAHİBƏSİ DİALOJİ DİSKURSun JANRI KİMİ

Ləman Fuad ŞÜKÜROVA

Müəllim, doktorant, Dillər Departamenti, Azərbaycan Turizm və Menecment Universiteti

E-mail: shukurova.leman@atmu.edu.az

ORCID ID: 0009-0002-6359-4590

Xülasə: Məqalə dioloji diskursun və media müsahibələrinin dioloji diskursun bir janrı kimi araşdırılmasını təklif edir. Məqalədə diskursa müxtəlif alimlər tərəfindən müxtəlif təriflərin verilməsi və ümumi tərifin qəbul edilməsi əks etdirilir. Eyni zamanda diskursun siyasi, tənqidi və dioloji növlərinə toxunulmuşdur. Dioloji diskurs insanlar arasındakı ünsiyyətə əsaslanaraq kommunikativ məna daşıyır və bədən dili vasitəsilə insanlara informasiya ötürməyə xidmət edir. Diskurs növləri koqnitiv, müqayisəli, induktiv və deduktiv metodlarla analiz edilmişdir. Media günlük həyatın ayrılmaz hissəsinə çevrilmişdir və onun dioloji diskurs daxilində öyrənilməsinin əhəmiyyəti vurğulanmışdır. Siyasətçilərin və ictimai xadimlərin media müsahibələri zamanı işlətdiyi bədən dili xüsusilə mühüm rol oynayır, çünki müsahibələr zamanı inandırma və tamliq prinsipi qorunmalıdır. Siyasi nitqlər zamanı istifadə olunan sözlər və cümlələr qarşıdakını və ya auditoriyanı inandırma strategiyası əsasında qurulur. Burada əsas məsələ adresatların müsbət mənada manipulyasiyasıdır. Bədən dilindən istifadə də dioloji diskursda vacib rol oynayır. Müxtəlif jest və mimikaların istifadəsi danışanın nitqini qüvvətləndirərək nitqin inandırıcılığını artırmağa xidmət edir. Bəzi universal işarələr var ki, onlar da bütün dünyada eyni qarşılanır. Bunlara “əllərin qüllə” şəklini alması, dialoqlar zamanı “qolların çarpaz şəkildə” saxlanması, təbəssüm və müəyyən baş hərəkətləri daxildir.

Açar sözlər: diskurs, media, dioloji diskurs, bədən dili, implisit, pragmatik

Introduction

Before analyzing media interviews as a genre of dialogic discourse, it would be more appropriate to examine what discourse is. Although there are many ideas about the definition of discourse, it is most often accepted as verbal communication between two people. Discourse is the way people use to share ideas and thoughts, shape culture, build relationships, and influence others. Discourse plays an important role for the recipients of the text and carries a variety of informational burdens. In other words, we can also call discourse the actual activity of language in real time. Discourse analysis examines the form and structure of language expression in cultural and social contexts. Discourse also studies how language shapes identity within context, how language promotes social change, etc. In other words, discourse is the study of language in a social context. For example, in political discourse, people use language as a means of persuasion. Discourse is a word of Latin origin and is derived from the words “discursus” or the French word “discurrere” (to speak, to converse).

Collins Concise English Dictionary defines discourse as a noun as “a unit of text (for the analysis of linguistic phenomena)” and “verbal communication”, but as a verb as “to speak, write and discuss”. In other dictionaries, discourse is also mentioned as a related conversation or a formal conversation. (Collins, 2008)

The most important factor in the study of dialogues in our daily life is that it is an integral part of our lives. Dialogue is also a part of discourse. That is, it is one of the types of speech, like monologue discourse. Dialogues are usually formed with the participation of two people. The formation of dialogues takes place in the conditions of everyday conversations, debates and interviews. The basis of dialogue discourse is the conceptual-semantic content of dialogues.

Methodology and Materials

The basis of the study is the study of the role of discourse, dialogical discourse and media interviews in dialogical discourse, and the use of inductive, comparative, hypothetical-deductive, descriptive, pragmatic and cognitive methods.

According to the study, it was determined that implicit information and subtext are more common when examining media interviews as an important part of dialogical discourse. It was also noted that the body language of the interviewers and interviewees during the interviews played a decisive role.

In the study, media interviews were identified as a genre of dialogical discourse, and the fact that they carry a communication load for modern society, and at the same time, the examination of information in dialogical speeches through pragmatic methods also explains the content of the work.

Discussion

G. Cook introduced discourse as a term as a means of communication of language. It is based on the grammatical perfection of sentence structures. The concepts of content and discourse are interconnected. More precisely, content can be considered as a certain part of discourse. (Dastpak, M., & Taghinezhad, A, 2015). N. Enquist distinguishes discourse from text and evaluates it as part of situational processes. For example, the phrase “No smoking” is normally a piece of text, but when it is hung on the wall, it is evaluated within the context of the situation and becomes a certain part of the discourse”. (Quliyeva K, 2018)

One of the main types of discourse is “dialogical discourse”. Dialogical discourse covers people’s daily conversations. Dialogical discourse is studied in the Conversation Analysis section of discourse. Here, the purpose of the speaker and listener, body language – gestures and facial expressions, and micro-level details of the conversation are examined. Also, the main interest here is to learn for what social purpose the conversation is structured – to build a relationship, resolve any conflict or exchange information.

Discourse covers both written and oral communication. Discourse includes the interaction between the speaker and the listener or the writer and the reader. Discourse covers more than the words spoken, but also the context in which these words are said and with what intention. It is a multifaceted and broad concept, and also includes various disciplines such as linguistics, philosophy, social sciences and psychology. It is also used in fields. Discourse can be simple and complex. For example, a simple conversation between two friends and an interview given by a state official or politician are examples of these.

As a type of discourse, we can mention media discourse. Examining media discourse on the basis of people's speeches reveals the essence of dialogical discourse. It is appropriate to analyze

the media as a part of discourse. People, especially politicians and statesmen, use the media as a mechanism for influencing people and as a means of persuasion. The main components here are language, participants, goals, and context. The language used in media discourse is very important because it ensures the effectiveness and clarity of communication. During dialogical discourse, the choice of language, the purpose of the speaker, and the message he wants to convey are very important. The speaker must correctly determine the language level of the listener.

During dialogical discourse, especially in media interviews, the speaker's body language - tone of voice, gestures and facial expressions also play an important role. Because the loudness or lowness of the speaker's tone of voice, sitting posture, facial and body movements convey certain information to the other person along with the speaker's speech.

According to D. Bieber, media discourse is a written and oral broadcasting platform that is provided to a non-existent or unknown audience, listener or reader. (Biber, D, 1988) Media discourse is a form of communication that is produced, recorded, public and based on interaction. Media discourse provides information flow using tools such as television, radio, newspapers and social media. Discourse cannot be formed without communication.

In dialogical discourse, that is, among the important factors during communication, how speech is perceived and understood takes an important place. That is, how speech is understood by the person in front of us also depends on some psychological factors. V. Abbasova emphasizes the influence of internal and external factors in the perception process and says that external factors are qualities that outwardly distinguish a person from others. These include people's levels of employment, daily life mobility, personal qualities, innovations, etc. Internal factors include people's personalities, goals, values, hopes, expectations, desires and wishes, experiences, habits, motivations, etc. (Abbasova, V, 2021).

According to F. Shiriyeu, dialogue is the main form of interpersonal communication and a type of communicative activity. That is, the goal here is how the other party understands the arguments of one party. (Shiriyeu, F. A., 2011). During the dialogue, the roles change between speaker-listener and listener-speaker, and in English we can call this term "turn-taking".

The study of media as a type of discourse, in other words, discursive and cognitive research, began systematically in the 1980s. According to A. Bell's research, it has been emphasized that news conveyed through the media can be "misrepresented" or "distorted." (Bell. A., 1991) In other words, it is important that pre-prepared speeches during interviews also reflect the truth.

The interview is characterized as the main act of modern journalism. Large-scale interviews take place in various contexts, ensuring knowledge production and becoming its integral part. Therefore, some researchers call our era an "interview society". Interviews are one of the main products of journalism and the media. They are mainly analyzed in dialogical and critical discourses. Interviews usually have the form of personal communication or question-and-answer, and their degree of truthfulness is higher than political speeches and printed articles.

News media interviews are a complex communicative process based on reciprocal interaction. Although they resemble everyday interpersonal communication, interviews also obey the rules of the genre, that is, here the audience has an influence on the interview process. The age range and goals of the audience, the content and topic of the interview play an important role in the perception of information.

One of the most important features in the study of dialogical discourse is the study of body language. Body language plays an important role in dialogical speech. Pragmatically examining

dialogic speeches facilitates a more accurate study of their content. The study of dialogic speeches during media interviews is also carried out based on how body language is used. The study of body language in media interviews within dialogic discourse is more often observed in political speeches. Let's look at some of the universal body language signs.

During media interviews, the main issue is eye contact between the interviewer and the interviewee. Eye contact increases the credibility of the spoken speech. Politicians use more manipulation strategies, which are more often word manipulation. When we say manipulation, we mean a speech that is constructed taking into account the goals and ideas of the person in front of us or the general audience, as well as their points of view. This corresponds to the strategy used by the interviewer during dialogic discourse and in media interviews. In this case, body language should be used correctly so that the spoken words and gestures and facial expressions coincide. (Shiriyev, F, 2014)

The “tower position of the hands” plays an important role in body language, especially in two-way dialogues and interviews. This sign shows that the speaker is confident in his speech and the topics he is talking about. This type of interview is more common in speeches by political and public figures. In addition, a gentle smile and a nod of the head at a certain stage during the interview can be recorded as one of the ethical rules. The “open position of the hands” is another example. This is especially the main part of dialogical speech. The use of hands in this way ensures that the interviewer completes his speech and the addressee is confident in the sincerity and truthfulness of this speech. (Pease, A., & Pease, B, 2016).

The book “The Definitive Book of Body Language” by Allan and Barbara Pease explains the importance of body language and it can be concluded that body language is considered a common language of people speaking different languages and from different cultures. Although not all signs, there are certain universal signs that are perceived the same by all people.

One of the body language signals that is not accepted during interviews is “Standing with arms crossed”. This movement is a sign of dissatisfaction and shyness all over the world and is in a certain sense defensive. (Pease, A., & Pease, B., 2016) These dialogues are usually studied in political and critical discourse.

Conclusion

In recent years, the term dialogic discourse has begun to be analyzed as the main method for studying language in the communication process, especially during media interviews. People use dialogic discourse to understand each other, build relationships, or solve any problems. At the same time, media interviews, which are part of dialogic discourse, have also become an important object of interest. The objects that serve to study the media as a genre of dialogic discourse are interviews given by heads of state, political and public figures, etc. It is known that when we say discourse, both written texts and oral dialogs come to mind. However, since the article examines dialogic discourse from the aspect of oral discourse, the factors that play an important role here include people's body language - gestures and facial expressions. It is necessary to emphasize body language as one of the most important factors of dialogic discourse. Because it is known that during media interviews, implicit information and subtext are used more often, and in this case, body language can play a decisive role. The signs used during interviews facilitate the study of dialogic discourse. Gestures and facial expressions used during dialogues convey information to people that is not said or vocalized. Therefore, body language plays an important role not only in dialogical and political discourse, but also in all stages of our lives.

IMPLICIT MEANING IN ENGLISH DISCOURSE: INTERPRETATION AND VERBALIZATION PROBLEMS

Khanim Salim AHMADOVA

Phd in Philology, Lecturer, Khazar University

E-mail: ahmadova88.khanim@gmail.com

ORCID ID: [0009-0007-7394-0502](https://orcid.org/0009-0007-7394-0502)

Abstract: The present article investigates the phenomenon of implicit meaning in English discourse and analyzes the mechanisms of its interpretation and verbalization within the framework of pragmatics and discourse analysis. In modern communication, speakers frequently avoid direct expression and instead employ indirect linguistic strategies that require contextual and cognitive interpretation. As a result, implicit meaning has become one of the central research areas in applied linguistics, discourse studies, and pragmatics.

The study examines the theoretical foundations of implicit meaning, including conversational implicature, presupposition, inference, contextual interpretation, and indirect speech acts. The article also explores the relationship between language structure and communicative intention in English discourse. Particular attention is devoted to the verbalization process through which hidden meanings are transformed into explicit semantic constructions during interpretation.

The research applies qualitative discourse analysis and pragmatic interpretation methods to examples selected from conversational English, literary texts, media discourse, and digital communication environments. The findings reveal that implicit meaning is strongly influenced by sociocultural background, contextual knowledge, communicative strategies, and speaker-listener interaction. Furthermore, the study demonstrates that the interpretation of implicit meaning requires not only linguistic competence but also pragmatic and cognitive awareness.

The article contributes to contemporary discourse studies by emphasizing the functional role of implicit meaning in modern English communication and by identifying the linguistic and cognitive factors affecting its verbalization.

Xülasə: Bu məqalədə ingilis dili diskursunda implisit məna fenomeni və onun interpretasiya və verballaşma mexanizmləri praqmatika və diskurs təhlili çərçivəsində araşdırılır. Müasir kommunikasiya prosesində danışanlar çox zaman fikirlərini birbaşa deyil, dolayı və kontekstual vasitələrlə ifadə edirlər. Nəticədə implisit məna tətbiqi dilçilik, diskurs təhlili və praqmatikanın əsas tədqiqat istiqamətlərindən birinə çevrilmişdir.

Tədqiqatda implikatura, presuppozisiya, inferensiya, kontekstual interpretasiya və dolayı nitq aktları kimi nəzəri məsələlər təhlil edilir. Məqalədə həmçinin dil strukturu ilə kommunikativ niyyət arasındakı münasibətlər araşdırılır. Xüsusi diqqət gizli mənaların interpretasiya zamanı açıq semantik strukturlara çevrilməsi prosesinə yönəldilir.

Araşdırmada danışq dili, bədii mətnlər, media diskursu və rəqəmsal kommunikasiya nümunələri üzərində keyfiyyət diskurs təhlili və praqmatik interpretasiya metodlarından istifadə olunmuşdur. Nəticələr göstərir ki, implisit məna sosial-mədəni fon, kontekstual biliklər, kommunikativ strategiyalar və danışan-dinləyən münasibətlərindən ciddi şəkildə asılıdır. Eyni zamanda müəyyən edilmişdir ki, implisit mənənin düzgün interpretasiyası yalnız dil biliyi deyil, həm də praqmatik və koqnitiv kompetensiya tələb edir.

Açar sözlər: implisit məna, diskurs təhlili, praqmatika, verballaşma, implikatura, ingilis diskursu, kommunikasiya

Introduction

In contemporary linguistics, discourse is regarded not only as a grammatical or structural phenomenon but also as a dynamic communicative process shaped by context, cognition, and social interaction. Modern discourse studies emphasize that communication frequently depends on meanings that are implied rather than directly verbalized. Such meanings are commonly described as implicit meanings and constitute one of the central objects of pragmatic and discourse-oriented linguistic research.

The concept of implicit meaning is closely connected with pragmatics because communication often extends beyond literal semantic structures. Interlocutors cooperate during

communication and interpret meanings based on contextual assumptions, conversational maxims, and background knowledge (Grice, 1975). According to the theory of conversational implicature, speakers may intentionally imply additional meanings through indirect linguistic forms rather than direct verbal expression (Grice, 1975).

Indirect speech acts also represent one of the most important mechanisms of natural communication because speakers frequently avoid direct expression in order to maintain politeness, reduce communicative tension, or achieve pragmatic efficiency (Searle, 1969).

In higher educational institutions, especially in English language teaching environments, the interpretation of implicit meaning has become increasingly important. Students studying English as a foreign language often understand grammatical structures correctly but experience difficulties interpreting hidden communicative intentions, irony, indirect requests, emotional implications, or sociocultural references.

As a lecturer teaching English communication and discourse-oriented subjects in higher education, it can be observed that students frequently rely on literal translation and semantic decoding instead of pragmatic interpretation. This issue becomes particularly visible during classroom discussions, academic presentations, debates, and discourse analysis activities.

For example, expressions such as:

“You may want to revise this section.”

may pragmatically imply criticism or recommendation for substantial correction rather than a simple suggestion. Pragmatic interpretation requires contextual competence in addition to grammatical knowledge (Levinson, 1983).

The relevance of the present study is associated with globalization, digital communication, and the increasing importance of communicative competence in higher education. Modern universities focus not only on grammar instruction but also on discourse interpretation, intercultural communication, and pragmatic awareness.

Methodology and Methods

The present research employs qualitative discourse analysis, pragmatic interpretation, and contextual analysis methods. These approaches were selected because implicit meaning cannot be fully investigated through quantitative linguistic measurement alone.

The research material consists of examples selected from conversational discourse, academic communication, literary texts, media discourse, and digital communication platforms. Particular attention is devoted to educational discourse because university-level language learning environments provide rich examples of pragmatic misunderstanding and implicit communication.

The methodological framework of the study is based on pragmatic theory, discourse analysis, and cognitive linguistics. The theoretical concepts proposed in pragmatics and discourse studies constitute the primary theoretical basis of the investigation (Grice, 1975; Levinson, 1983; Van Dijk, 2008).

Discourse comprehension requires cognitive models connecting language structures with contextual knowledge (Van Dijk, 2008). Similarly, successful communication depends not only on semantic meaning but also on pragmatic interpretation and contextual awareness (Yule, 2020).

Pragmatic analysis was used to identify conversational implicatures, indirect speech acts, and contextual meanings. Contextual analysis enabled the investigation of sociocultural and communicative factors influencing interpretation. Discourse analysis was applied to determine how implicit meanings function within broader communicative structures.

Discussion

The analysis demonstrates that implicit meaning in English discourse is realized through conversational implicatures, indirect speech acts, irony, metaphorical implication, contextual references, and presuppositions.

One of the major findings of the study is that implicit meaning frequently functions as a communicative strategy for maintaining politeness and interpersonal balance. In educational environments, lecturers and students often avoid direct criticism in order to preserve communicative harmony.

For example, a lecturer may state:

“Your presentation contains several interesting ideas.”

Although the sentence appears positive on the surface level, contextual interpretation may suggest that the presentation lacks organization or analytical depth. Such communicative indirectness reflects pragmatic politeness strategies.

Speakers frequently imply intentions rather than express them directly because indirect speech acts represent one of the most flexible structures of natural communication (Searle, 1969).

The study also reveals that EFL students in higher educational institutions often encounter difficulties interpreting implicit academic discourse. Students generally focus on vocabulary and grammar while overlooking contextual and pragmatic signals. This problem becomes especially visible during listening comprehension and seminar participation.

Pragmatic competence develops through exposure to authentic communicative situations rather than isolated grammatical exercises (Yule, 2020). Therefore, discourse-oriented teaching approaches are essential for developing interpretative competence in foreign language education.

Another important finding concerns the influence of sociocultural background on implicit meaning interpretation. Discourse meaning depends heavily on shared cultural assumptions and communicative expectations (Brown & Yule, 1983).

Digital communication also plays a significant role in the transformation of implicit meaning. Internet communication has created hybrid discourse forms where meaning is frequently conveyed through implicit multimodal interaction (Crystal, 2011).

The findings additionally demonstrate that verbalization represents a complex cognitive process through which hidden meanings become explicitly understood. During interpretation, interlocutors reconstruct communicative intention using contextual clues, background knowledge, and inferential reasoning.

This process is especially important in higher education because academic success increasingly depends on discourse interpretation skills, critical reading abilities, and communicative competence. Consequently, university-level English teaching should focus not only on grammar instruction but also on pragmatic and discourse-oriented language development.

Conclusion

The findings confirm that implicit meaning represents one of the most significant components of modern communication because speakers frequently convey ideas indirectly through implication, contextual inference, and pragmatic strategies.

The study demonstrated that successful interpretation depends not only on linguistic competence but also on cognitive, sociocultural, and pragmatic awareness. Furthermore, the research revealed that students in higher educational institutions often experience difficulties

interpreting implicit academic discourse due to insufficient pragmatic competence and limited exposure to authentic communicative interaction.

Therefore, modern English language teaching in universities should integrate discourse analysis, pragmatic interpretation, and communicative methodologies into language instruction. Communicative competence requires both grammatical and pragmatic understanding (Yule, 2020).

The study also established that verbalization is a multidimensional cognitive process involving inferential reasoning, conceptual reconstruction, and contextual decoding. Future research may focus on intercultural comparison of implicit discourse strategies and pragmatic competence development in EFL classrooms.

Abstract: In the modern era, the rapid development of information technologies has increased the role of the electronics industry in the global economy. Along with this, problems such as the increase in electronic waste, the growth of energy consumption, and environmental pollution have emerged. For this reason, the concept of “green electronics” is considered one of the important directions of sustainable development. The article investigates the integration of green electronics with the fields of information technology and English language studies. The research shows that green technologies are not only a technical innovation, but are also closely connected with international scientific communication and

professional English language skills. The publication of international standards, technical documents, and scientific articles in the field of electronics mainly in English makes professional language competence essential for IT specialists. The article comparatively analyzes ecological sustainability, green electronics, and English for Specific Purposes (ESP) approaches.

Xülasə: Müasir dövrdə informasiya texnologiyalarının sürətli inkişafı elektronika sənayesinin global iqtisadiyyatda əhəmiyyətini xeyli artırmışdır. Bununla yanaşı, elektron tullantıların artması, enerji istehlakının yüksəlməsi və ətraf mühitin çirklənməsi kimi ciddi ekoloji problemlər meydana çıxmışdır. Bu kontekstdə “yaşıl elektronika” anlayışı davamlı inkişafın vacib istiqamətlərindən biri kimi formalaşmışdır. Məqalədə yaşıl elektronikanın informasiya texnologiyaları və ingilis dili tədrisi sahələri ilə əlaqəsi araşdırılır. Tədqiqat göstərir ki, yaşıl texnologiyalar yalnız texniki yenilik kimi deyil, həm də beynəlxalq elmi kommunikasiya və peşəkar ingilis dili bacarıqları ilə sıx bağlı olan bir sahə kimi çıxış edir. Elektronika və İT sahəsində beynəlxalq standartların, texniki sənədlərin və elmi araşdırmaların əsasən ingilis dilində təqdim olunması bu dili peşəkar səviyyədə bilməyi zəruri edir. Məqalədə ekoloji davamlılıq, yaşıl elektronika və ESP (Xüsusi Məqsədlər üçün İngilis dili) yanaşmaları müqayisəli şəkildə təhlil olunur və onların müasir təhsil sistemində inteqrasiyasının əhəmiyyəti vurğulanır. Bu yanaşma həm texniki biliklərin, həm də dil bacarıqlarının inkişafına töhfə verir və tələbələrin beynəlxalq əmək bazarına hazırlığını gücləndirir.

Açar sözlər: yaşıl elektronika, davamlı inkişaf, informasiya texnologiyaları, ESP, ekoloji kommunikasiya, elektron tullantılar, enerji səmərəliliyi

Introduction

In the 21st century, the development of information technologies has affected all spheres of human life. Computers, mobile devices, cloud technologies, and smart systems have become the main elements of modern society. However, alongside the rapid development of technology, the increase in electronic waste, excessive use of energy resources, and environmental problems have also become global threats. In this regard, the concept of “green electronics” is considered one of the main directions of modern scientific and technological research.

Green electronics implies minimizing the negative impact on the environment during the production, use, and disposal of electronic devices. This concept is based on the principles of energy efficiency, recycling, reduction of carbon emissions, and the use of ecological materials.

On the other hand, as a result of globalization and international technological cooperation, English has become the main communication tool of information technologies. In the IT field, technical documents, software, international standards, and scientific research are mainly presented in English. Therefore, it is important for specialists working in the field of green electronics to possess both technical knowledge and professional English language skills.

Materials and methods

The rapid development of the electronics industry has led to the deepening of ecological problems. The mismanagement of electronic waste, the increase in energy consumption, and the use of toxic substances pose serious threats to the environment. At the same time, most international scientific sources and technical documents on green technologies are published in English. This causes professional communication problems for people working in the IT field.

The main essence of the problem is that the integration between technical innovations and professional language skills in the field of green electronics is weakly developed. In the modern era, both the creation of environmentally responsible technologies and the formation of international scientific communication skills are considered important.

The scientific novelty of the article lies in the study of the concept of green electronics not only from technical and ecological aspects, but also within the framework of the English for Specific Purposes (ESP) approach. The research analyzes the interrelation between information technologies and professional English language competence.

For the first time in the field of green electronics:

- the linguistic aspect of technical terminology,
- international scientific communication,
- teaching ecological topics through the ESP model,
- professional language skills of IT specialists have been evaluated within a unified concept.

Modern studies show that green electronics is one of the main components of the sustainable development strategy. According to UNEP reports, millions of tons of electronic waste are generated every year worldwide, and most of it is not properly recycled. This leads to the pollution of soil, water, and atmosphere.

Pecht and Tummala (2018) characterized green electronics as a production model based on ecological responsibility. The authors note that energy-efficient design and the use of ecological materials are important for the future of the industry.

Bandyopadhyay (2020) analyzed the problem of planned obsolescence and emphasized the importance of producing durable and repairable devices. According to the World Economic Forum (2022), information technology infrastructure constitutes a significant part of global carbon emissions.

ESP studies conducted in the field of English language show that technical communication is one of the main elements of modern IT education. The preparation of international standards and technical documents in English necessitates the professional language training of specialists.

Results and discussion

The research shows that green electronics is not only a technical issue, but also a social and communicative process. A modern IT specialist must possess both knowledge about ecological technologies and professional English language skills in order to participate in international projects.

Green technologies applied in the electronics industry require international cooperation. This cooperation is mainly carried out through the English language. Therefore, IT and English language studies should be taught in an integrated way at universities.

In addition, teaching terminology related to green electronics can improve both the technical knowledge and academic writing skills of students. This approach facilitates the integration of future specialists into the international scientific environment.

Conclusion

The research determined that green electronics is one of the main development directions of modern information technologies. The reduction of electronic waste, the creation of energy-efficient systems, and the use of ecological materials are of great importance for sustainable development.

At the same time, since international scientific communication in the field of green electronics is mainly carried out in English, the professional language competence of IT specialists is of particular importance. For this reason, the integration of IT and English language studies should be considered an important direction in the modern education system.

Future studies may focus on teaching green technologies through the ESP model and the application of artificial intelligence technologies in the field of ecological communication.

FEATURES OF PHYSICAL EDUCATION OF CHILDREN WITH SENSORY DISORDERS

Sulhana Siyahbar BASHIROVA

Teacher of the Special training, Azerbaijan State Pedagogical University

E-mail: Sulhanebesirova17@gmail.com

ORCID ID: 0009-0002-6150-6921

Abstract. Physical education of children with sensory impairments plays an important role in their physical, mental and social development. Sensory impairments include deficiencies in vision, hearing, touch, proprioceptive and vestibular systems. Such impairments negatively affect children's motor coordination, spatial perception and the development of general motor skills. Children with sensory impairments often have poor motor coordination, instability of muscle tone and delayed motor skills. These problems create difficulties in children's daily activities and make it difficult for them to adapt to the social environment. Physical education classes help to overcome these difficulties, develop children's motor skills and increase their sense of self-confidence.

During classes, balance exercises, coordination movements, tasks aimed at the development of large and small motor skills, rhythmic and game-like activities are used. In particular, ball games, obstacle courses, balance exercises, gymnastic movements and rhythmic movements have a positive effect on the development of sensory integration. Physical education for children with sensory disorders has a positive effect not only on physical development, but also on the development of attention, memory, perception, social communication and emotional stability. Such children become better acquainted with their bodies through physical activity, develop independence skills and accelerate the processes of integration into society.

As a result, physical education for children with sensory impairments has a positive impact on their comprehensive development. A properly organized physical education program makes a significant contribution to the healthy development of children, the formation of motor skills, and social adaptation.

Keywords: sensory impairments, hearing impairments, visual impairments, spatial orientation, motor coordination, physical education, social development.

SENSOR POZUNTULARI OLAN UŞAQLARIN FİZİKİ TƏRBİYƏSİNİN XÜSUSİYYƏTLƏRİ

Sülhanə Siyahbar BƏŞİROVA

Xüsusi təlim müəllimi, Azərbaycan Dövlət Pedaqoji Universiteti

E-mail: Sulhanebesirova17@gmail.com

ORCID ID: 0009-0002-6150-6921

Xülasə: Sensor pozuntusu olan uşaqların fiziki tərbiyəsi onların fiziki, psixi və sosial inkişafında mühüm rol oynayır. Sensor pozuntulara görmə, eşitmə, toxunma, proprioseptiv və vestibulyar sistemdə olan çatışmazlıqlar daxildir. Bu cür pozuntular uşaqların hərəkət koordinasiyasına, məkan qavrayışına və ümumi motor bacarıqlarının inkişafına mənfi təsir göstərir. Sensor pozuntusu olan uşaqlarda tez-tez hərəkət koordinasiyasının zəifliyi, əzələ tonusunun qeyri-sabitliyi və hərəkət bacarıqlarının gecikməsi müşahidə olunur. Bu problemlər uşaqların gündəlik fəaliyyətlərində çətinliklər yaradır və onların sosial mühitə uyğunlaşmasını çətinləşdirir. Fiziki tərbiyə məşğələləri bu çətinliklərin aradan qaldırılmasına kömək edir, uşaqların hərəkət bacarıqlarını inkişaf etdirir və özünə inam hissini artırır.

Məşğələlər zamanı balans məşqləri, koordinasiya hərəkətləri, böyük və kiçik motorikanın inkişafına yönəlmiş tapşırıqlar, ritmik və oyun xarakterli fəaliyyətlərdən istifadə edilir. Xüsusilə topla oyunlar, maneələrdən keçmə, tarazlıq məşqləri, gimnastik hərəkətlər və ritmik hərəkətlər sensor inteqrasiyanın inkişafına müsbət təsir göstərir. Sensor pozuntusu olan uşaqlar üçün fiziki tərbiyə yalnız fiziki inkişafı deyil, həm də diqqət, yaddaş, qavrama, sosial ünsiyyət və emosional sabitliyin inkişafına da müsbət təsir göstərir. Belə uşaqlar fiziki fəaliyyət vasitəsilə öz bədənlərini daha yaxşı tanıyır, müstəqillik bacarıqları formalaşır və cəmiyyətə inteqrasiya prosesləri sürətlənir.

Nəticədə sensor pozuntuları olan uşaqların fiziki tərbiyəsi onların hərtərəfli inkişafına müsbət təsir edir. Düzgün təşkil olunmuş fiziki tərbiyə proqramı uşaqların sağlam inkişafına, motor bacarıqlarının formalaşmasına və sosial adaptasiyasına mühüm töhfə verir.

Açar sözlər: sensor pozuntular, eşitmə pozuntuları, görmə pozuntuları, məkanda bələdləşmə, hərəkət koordinasiyası, fiziki tərbiyə, sosial inkişaf.

Introduction

Children with sensory disorders include children with hearing, vision and motor development disorders. Disorders occurring in these sense organs negatively affect their physical, mental and intellectual development.

Due to the total or incomplete loss of hearing in children with hearing disorders, the activity of the vestibular apparatus is disrupted, and as a result:

- auditory control over physical development is completely or incompletely lost;
- static and locomotor functions lag behind in development;
- impaired coordination of movements, spatial orientation and familiarization, fear of heights, slowness and stiffness of movements are observed;
- impaired motor skills, lack of precision and coordination of movements during walking and running, flexibility and accuracy of physical movements are impaired;
- a delay in the development of motor (motor) memory, a decrease in static and dynamic balance, a lack of balance in the activity of the vestibular analyzer, wide stance of the legs during walking and running, increased flatness of the soles of the feet, curvature of the spine, and a violation of posture are manifested.
- a decrease in motor reaction and speed of movement is observed;
- in the respiratory system, a decrease in the vital capacity of the lungs is caused by the inability to adapt breathing to the rhythm of oral speech. Hearing loss and weakening negatively affect the formation and development of speech.

Ağayeva T.(2015 notes that as a result of hearing impairment, children experience excessive noise, arrhythmic and slowed-down movements in performing many movements, including daily and household movements. The reason for this is the lack of control of movements by the auditory analyzer in children.

However, it should be noted that proper physical performance and pedagogical activity compensate for the deficiencies in the physical development of children with hearing impairment. The development of motor-cognitive activity in children engaged in physical education provides an opportunity to gain new experience and new impressions, forms independence and confidence in the ability to control their own body.

The main tasks of physical education of children with hearing impairments:

- ensuring harmonious physical development;
- creating conditions for maintaining health and strengthening the child's body;
- comprehensive development of motor activity;
- formation of basic motor qualities;
- formation of correct posture;
- development of breathing, coordination of movements and orientation in space.

Materials and methods

Physical education should be carried out in the entire process of correctional and educational work. Many children with hearing impairments have impaired balance. Visual and kinesthetic

sensitivity play a major role in the compensation process of the motor analyzer function. The following points must be taken into account during the exercises:

- Various tasks on the formation of the figure are included in all exercises in a certain order.
- Children with hearing impairments cannot hear the explanation, so the teacher who shows the movement must be well visible.
- Each new movement is first shown to children visually without verbal accompaniment (performance sequence), and then performed by the children.
- It should also be remembered that at all stages of development, children with hearing impairments need adult help in the form of demonstration in performing physical tasks.
- It is necessary to pay due attention to the development of a sense of rhythm in children, the ability to distinguish tactile-vibrational and convenient sound signals (tapping the table with a hand, half-foot, the noise of traffic passing by on the street, the signal of an electric train, volleys of holiday greetings, etc.).
- It is necessary to apply various forms of encouragement and emotional support to the child during various activities.
- Children with hearing impairments do not have serious restrictions in the types of sports and physical education activities that require a high level of coordination of movements; they can engage in various types of sports.

Physical education classes for children with visual impairments play a major role in eliminating their motor deficits, in the development of cognitive activity, emotional-volitional sphere, behavior and personality. The process of physical education should be approached with special attention by educators and researchers working with children with visual impairments in the context of correctional-pedagogical work. L.S. Sekovets defined the main conditions of correctional-pedagogical work on physical education with preschool children with visual impairments as follows:

1. Observance of all the basic rules of the orthopedic regimen:
 - Maintaining and forming the correct posture, regardless of visual impairments;
 - Organizing sleep on a flat and hard bed in case of posture and spine disorders;
 - Wearing orthopedic shoes and boots with laces during flat feet;
 - Teaching children the correct position of the hands and feet, keeping the head and torso level;
 - Maintaining the correct posture while walking - standing upright, relying on both legs;
 - Correct sitting and self-control at the table (for example, sitting on one knee is not allowed, relying on only one leg)

2. Teaching children to adhere to the ophthalmological regimen during the educational process.

The ophthalmological direction of the educational process means the interaction between the visual function and the field of movement.

3. Литвак А.Г.(1995) notes that when organizing physical education classes with children with visual impairments:

- first, information about the movement is given, the execution mechanism is clearly explained;
- the execution of the movement (for those with poor vision) is carried out during the concentration of gaze and attention and by following the movement of the eye.

4. In physical education and spatial orientation classes for preschool children with visual impairments, it is important to take into account the following:

- Establishing control over visual perception (learning new movements, activities in space, teaching the rules for using equipment and devices to perform motor activities.

- In physical education classes, the ability to observe must be formed.

Ağayeva T.(2018) notes that observation of movements is very important in terms of their perception. In the process of observation, children with visual impairments determine the main movements and the mechanism of their execution, learn to transition from one movement element to another, and form the mechanism of performing movements sequentially.

- Systematic observation of movements instills in a child with visual impairment the ability to follow the movement in dynamics, select its changes, and distinguish between primary and secondary movements. It is important not to subject children to physical exertion and not to provide a large amount of information during one lesson.

Солнцева Л.И.(2002) notes that the main goal of physical education classes is to organize the perception of objects and activities in physical education, taking into account the individual capabilities of each child, to form in children the ability to perform actions in accordance with verbal instructions and to develop the ability to provide information about the execution of the performed actions.

When organizing physical education, the educator-teacher must prepare a place for classes and select the necessary equipment in advance. The equipment to be used should be well lit and contrast with other objects. Adapted devices and sports equipment should be in a convenient place for children, accessible for perception. In accordance with ophthalgo-hygienic and pedagogical requirements, classes on the development of the visual-motor sphere in children should be organized in a special room (hall). Sports equipment should have special markings: The markings on balls, gymnastic sticks and rings should be brightly colored and in the form of dots that are felt when touched (convex). These markings allow you to correctly perform the movement, concentrate on the object, and analyze its visual properties.

- The markings on the rope, string, and rope are in the form of stripes or bands. These stripes and bands allow children to perform movements in the right direction, focus on the right place, find the right place to jump, find the distance between themselves and the object

In addition, these markings help children with visual impairments coordinate their hands and eyes. They allow them to determine the direction of movement, their own and their friends' position in space, and their movements.

Conclusion

To support the physical development of children with sensory disorders, we should pay attention to the implementation of the main forms of physical education:

- morning gymnastics
- active games (during walks and breaks between classes);
- free activity;
- sports minutes;
- music lessons;
- phonetic rhythmic;
- physical education classes.

Morning gymnastics - ensures the transition of the child's body from a state of sleep to a state of vivacity. Morning gymnastics provides the child with active activity throughout the day and maintains the necessary tone. Morning gymnastics is carried out in all groups under the guidance of a teacher (verbal and practical clarification). Gymnastics should correspond to the age, individual capabilities of children, refer to exercises for the development and coordination of movements, the development of balance, the formation of correct posture. Musical accompaniment can be used during gymnastics.

Games are held during walks and breaks between classes. They allow children to change the type of activity, relax after active work in the classroom. Games between classes should be familiar to children, simple and accessible for participation. In the process of conducting active games, special attention is paid to the formation of a response to a word or sound signal.

Free activity is provided to children in the afternoon and evening. Through free activity, opportunities are created for the child's motor activity (verbal and practical enlightenment).

Sports minutes help children change their activities as a short-term rest during classes or lessons. Sports minutes are provided to children between classes or classes, when the child shows signs of fatigue.

Music lessons are one of the main forms of physical education for children with hearing problems. The main goal of music lessons is to develop the perception of music, the development of the voice, and the development of the rhythm of movement.

Phonetic rhythmic is a system of special tasks that combine speech and movement, in which the pronunciation of speech material (sounds, syllables, words, texts) is accompanied by movement. Phonetic rhythmic exercises are used to develop speech breathing, voice power, tempo, freedom, and the technique of performing them simultaneously with movement. The main condition for the exercises is an emotional-positive background, active use of gestures, facial expressions, intonation language, that is, oral speech consists not only of sounds, but also includes facial expressions and movements.

Physical education classes are conducted with children with hearing problems in all age groups. Physical education classes are held 3-4 times a week (oral and practical clarification).

Physical education classes consist of three parts: introductory, main and final.

In the introductory part, it is necessary to prepare children for the main physical activity, so it is recommended to include an explanation of the tasks, walking, short-term running and simple exercises to perform the main load.

The main part includes general developmental exercises, the development of basic movements and active play. The complex of general developmental exercises should consist of exercises for various muscle groups: exercises for the neck muscles, shoulders, arms and legs.

The final part offers calming movements such as easy running, quiet walking, etc.

Physical education classes are accompanied by speech instructions, which include both words and expressions that are constantly used in various types of activity, and words denoting the names of specific subjects and movements. Speech material should be gradually complicated.

The content of physical education classes in all age groups is determined by the general tasks of physical education, the need to correct and prevent deficiencies in physical and motor development.

When working with children of early and younger preschool age, attention should be paid to the development of motor activity, the formation of independent attention, the ability to imitate the

movements of adults, the formation of behavioral habits in the hall, and the development of the emotional-volitional sphere.

THE DISCOURSE FUNCTIONS OF THE PRESENT PERFECT TENSE IN ENGLISH TEXT PRODUCTION

Birgül Alakbar ƏSƏDOVA

PhD Student, Department of English Language and Translation, Nakhchivan State University

E-mail: birgulesedova9@gmail.com

ORCID ID: [0009-0001-7405-0356](https://orcid.org/0009-0001-7405-0356)

Abstract: This article investigates the discourse functions of the Present Perfect tense in English text production. The main aim of the study is to demonstrate that this tense form functions not only as a grammatical category but also as an essential linguistic device that creates semantic cohesion and logical continuity within texts. The Present Perfect tense contributes to the overall structure of a text by establishing a connection between past events and their present relevance.

The article particularly analyzes the use of this tense in academic and expository texts from a functional perspective, identifying its main discourse roles in expressing experience, results, and change. The study is based on discourse analysis and a functional-grammatical approach. The findings indicate that the purposeful and accurate use of the Present Perfect strengthens textual coherence and enables readers to understand the content more clearly.

At the same time, it is observed that learners' difficulties in using this tense negatively affect the quality of written production. The study emphasizes the importance of discourse-level instruction in addressing these challenges.

Key words: Present Perfect, discourse analysis, text production, temporal cohesion, aspect, coherence

İNGİLİS DİLLİ MƏTNİN HAZIRLANMASINDA İNDİKİ BİTMİŞ ZAMANIN DİSKURS FUNKSİYALARI

Birgul Ələkbər ASADOVA

Doktorant, İngilis dili və tərcümə kafedrası, Naxçıvan Dövlət Universiteti

E-mail: birgulesedova9@gmail.com

Xülasə: Bu məqalə ingilis dilində Present Perfect zamanının mətnyaratma prosesində yerinə yetirdiyi diskurs funksiyalarını araşdırır. Tədqiqatın əsas məqsədi bu zaman formasının yalnız qrammatik kateqoriya kimi deyil, həm də mətn daxilində semantik əlaqəlilik və məntiqi davamlılıq yaradan mühüm vasitə kimi çıxış etdiyini göstərməkdir. Present Perfect zaman forması keçmişdə baş vermiş hadisələrlə onların indiki zamandakı nəticələri arasında əlaqə quraraq mətnin ümumi strukturunun formalaşmasına töhfə verir. Məqalədə bu zamanın xüsusilə akademik və izahlı mətnlərdə istifadəsi funksional baxımdan təhlil edilir və onun təcrübə, nəticə və dəyişiklik ifadə edən əsas diskurs funksiyaları müəyyənəldirilir. Tədqiqat diskurs analizi və funksional-qrammatik yanaşma əsasında aparılmışdır. Nəticələr göstərir ki, Present Perfect zamanının məqsədyönlü və düzgün istifadəsi mətnin koherensiyasını gücləndirir və oxucunun məzmunu daha aydın qavramasına imkan yaradır. Eyni zamanda, dil öyrənənlərin bu zaman formasından istifadə zamanı qarşılaşdıqları çətinliklərin mətnin keyfiyyətinə mənfi təsir etdiyi müəyyən edilmişdir. Məqalədə bu problemlərin aradan qaldırılması üçün diskurs səviyyəsində tədrisin əhəmiyyəti vurğulanır.

Açar sözlər: Present Perfect, diskurs analizi, mətnyaratma, zaman əlaqəsi, koherensiya, aspekt

Introduction

In contemporary linguistics, grammatical structures are increasingly examined beyond the sentence level, with growing attention to their role in discourse and meaning construction (Halliday, 1994). Rather than being viewed as isolated forms, grammatical elements are now understood as functional tools that contribute to the organisation and interpretation of texts (McCarthy, 1991). Among these elements, the Present Perfect tense occupies a distinctive position due to its ability to establish a meaningful connection between past events and present relevance. This temporal feature makes it particularly valuable in constructing coherent and logically structured discourse.

From a discourse-oriented perspective, tense selection is not merely a matter of grammatical accuracy; it represents a strategic choice that shapes how information is presented and interpreted (Carter & McCarthy, 2006). The use of specific tense forms allows writers to guide the reader through a sequence of ideas, highlight relationships between events, and maintain continuity within a text. In this regard, the Present Perfect serves as an important mechanism for linking different temporal layers, enabling the integration of prior actions into the current communicative context.

Furthermore, the functional significance of the Present Perfect becomes especially evident in academic and expository writing, where clarity, coherence, and precision are essential. Its ability to express experience, result, and ongoing relevance contributes to effective communication and supports the logical progression of arguments. The aim of this study is to investigate the discourse functions of the Present Perfect tense in English text production and to evaluate its contribution to coherence, continuity, and overall communicative effectiveness.

Materials and methods

The present study adopts a qualitative research design based on discourse analysis and functional grammar frameworks (Halliday, 1994). These approaches are suitable for examining how linguistic structures operate beyond the sentence level and function within authentic communicative contexts. They enable a detailed interpretation of how grammatical choices contribute to meaning construction and textual organisation.

The data for the study consists of selected examples from academic and expository English texts in which the Present Perfect tense is frequently used. These texts were analyzed to identify

recurring usage patterns and to explore the functional role of the tense in maintaining coherence, expressing relevance, and structuring information across discourse (Biber et al., 1999).

The analysis focuses on how the Present Perfect contributes to temporal linking and textual continuity. In addition, instances of learner-produced language were also considered to identify common errors in tense usage. These examples were examined to better understand how misuse of the Present Perfect affects clarity and coherence in writing. The findings are also interpreted in relation to their pedagogical implications for language teaching and learning.

Discussion.

1. The Present Perfect as a Temporal Linking Device

One of the most significant discourse functions of the Present Perfect tense is its role in establishing a temporal connection between past actions and present relevance. Unlike past tense forms that typically present events as completed and temporally detached, the Present Perfect encodes a relationship in which past occurrences are interpreted through their current significance. This function enables writers to construct meaning in a way that integrates temporal dimensions rather than separating them. As Halliday (1994) notes, such grammatical choices contribute to the continuity of discourse by maintaining semantic links across time frames. Consequently, the Present Perfect operates as a cohesive device that ensures textual flow and supports the reader's interpretation of events as relevant to the ongoing communicative context.

2. Functional Roles in Academic Writing

In academic discourse, the Present Perfect tense performs several interrelated functions that contribute to the development of scholarly argumentation. It is frequently used to refer to prior research, summarize established findings, and indicate the continuing relevance of earlier studies to present discussions (Quirk et al., 1985). For instance, the statement "Recent studies have demonstrated significant changes in language acquisition patterns" illustrates how the tense positions findings within an ongoing scholarly dialogue rather than treating them as temporally isolated facts. This usage allows writers to situate their arguments within an existing body of knowledge while simultaneously maintaining analytical immediacy and relevance. Thus, the Present Perfect serves as a linguistic mechanism for integrating past research into current academic discourse.

3. Contribution to Coherence and Cohesion

From a discourse-analytical perspective, the Present Perfect contributes significantly to both coherence and cohesion in written texts. It achieves this by linking propositions across sentences and paragraphs through shared temporal reference points. This interconnection facilitates logical progression and ensures that ideas are perceived as part of a unified argumentative structure rather than as disconnected statements. In complex academic writing, where clarity depends heavily on the organisation of information, the Present Perfect plays a crucial role in maintaining interpretative consistency and textual unity. Aligning past and present temporal references, it strengthens the internal logic of the text and enhances readability.

4. Learner Difficulties and Errors

Despite its functional importance, the Present Perfect tense is frequently identified as a problematic area for second language learners. One of the most common difficulties involves the confusion between the Present Perfect and the Past Simple, particularly in contexts where both forms may appear grammatically acceptable but differ in pragmatic meaning (Swan, 2005). Such confusion often results in inappropriate tense selection, leading to temporal inconsistency within

texts. This inconsistency can disrupt discourse coherence and negatively affect the clarity and communicative effectiveness of written production. Therefore, mastering the functional distinction between these tenses is essential for accurate academic writing.

5. Pedagogical Implications

The findings of this study suggest that teaching the Present Perfect tense solely through isolated grammatical rules is insufficient for developing communicative competence. Instead, it should be introduced within authentic discourse contexts that demonstrate its functional role in meaning construction. A discourse-based pedagogical approach enables learners to understand not only the structural form of the tense but also its pragmatic and textual functions (McCarthy, 1991). This method can facilitate deeper cognitive processing of tense usage and improve learners' ability to produce coherent and contextually appropriate texts.

Conclusion

The Present Perfect tense occupies a central position in English discourse due to its ability to link past events with present relevance and to support the logical organisation of information within texts. Its function extends beyond grammatical marking, contributing fundamentally to coherence, continuity, and effective meaning construction.

The study emphasizes the importance of adopting a discourse-oriented approach in language teaching, particularly in the development of academic writing skills. Future research may further investigate comparative interactions between the Present Perfect and other tense forms in order to deepen understanding of temporal structuring in discourse.

WORD ORDER PROBLEM IN GERMAN AND ITS PLACE IN DIFFERENT TYPES OF SENTENCES

Vusala Adalat KARIMOVA

Ganja State University

Senior lecturer of the German language department

E-mail: gsu.ffl_deutsch@yahoo.com

ORCID ID: 0003 0009 4588 5734

Abstract: This thesis is dedicated to the functional peculiarities of German word order because word order in German has a special significance and depends on several factors. As is known, the mechanism of communication involves both the speaker and the listener. The reason for the new information being said is that it is new to the listener, forming the core of the communication; that is, the given information is similar to the totality of rheme and theme. This thesis extensively discusses the reciprocal relationship between rheme and theme in word order. Many scientific works by various linguists were examined, revealing that theme and rheme can be in varying degrees of relative importance in word order. In general, if rheme is removed from the information, the remaining part is called theme. The thesis extensively analyzes the relativity between rheme and theme in two-, three-, four-, and five-part sentence structures. It also explores the differences and similarities in word order between Azerbaijani and German.

Key words: German language, word order, grammar, subject, news, topic

ALMAN DİLİNDƏ SÖZ SIRASI PROBLEMİ VƏ ONUN MÜXTƏLİF ÜZVLÜ CÜMLƏLƏRDƏ YERİ

Vüsalə Adil KƏRİMOVA

Alman dili kafedrasının baş müəllimi, Gəncə Dövlət Universiteti

E-mail: gsu.ffl_deutsch@yahoo.com

ORCID ID: 0003 0009 4588 5734

Xülasə: Məqalə alman dilində söz sırasının funksional xüsusiyyətlərinə həsr olunub, çünki alman dilində söz sırası xüsusi əhəmiyyət kəsb edir və bir neçə amildən asılıdır. Məlum olduğu kimi, ünsiyyət mexanizmi həm danışanı, həm də dinləyicini əhatə edir. Deyilən yeni məlumatın səbəbi onun dinləyici üçün yeni olması, ünsiyyətin əsasını təşkil etməsidir; yəni verilən məlumat rem və mövzunun ümumiliyinə bənzəyir. Məqalə söz sırasında rem və mövzu arasındakı qarşılıqlı əlaqəni geniş şəkildə müzakirə edir. Müxtəlif dilçilərin bir çox elmi əsərləri araşdırılmış və mövzu və remin söz sırasında müxtəlif dərəcələrdə nisbi əhəmiyyət kəsb edə biləcəyi aşkar edilmişdir. Ümumiyyətlə, rem məlumatdan çıxarılsa, qalan hissə mövzu adlanır. Məqalədə aparılan araşdırma iki, üç, dörd və beş hissəli cümlə strukturlarında rem və mövzu arasındakı nisbəti geniş şəkildə təhlil edir. Həmçinin, Azərbaycan və alman dilləri arasında söz sırasındakı fərqləri və oxşarlıqları araşdırır.

Introduction

Word order in German depends on many factors. However, not all factors are equally important in determining the structure of a particular clause. B. Admoni writes, "The fundamental characteristic of German speech—the structure of a sentence—depends on its large size." When determining word order in a German sentence, two basic factors are distinguished. B. Admoni, W. Winogradov, and other linguists noted in their works the importance of learning these factors. In general, much research has been devoted to the influence of communicative and structural factors on word order in German. The Russian linguist J. Raspanov developed the communicative-syntactic types of sentences. He classified the communicative-syntactic types of sentences, taking the reason for speaking as his starting point. He identified the following communicative-syntactic types of sentences:

The sentence with no reason.

- Situational – content-based sentence.

- Sentence indicating the person or object.
- Sentence indicating the person or object.
- Sentence indicating a factor or an event.
- Sentence indicating several factors or events.

Different communicative-syntactic sentence types point to different syntactic constructions and constitute the communicative-syntactic models of the sentence.

The other Russian linguist, V. Yurchenko, researched the functional-structural type of speech and identified the other types of this sentence:

- Subject-progressive type.
- Predicate-progressive type.
- Object (adverbial) type.

The mutual interaction of syntactic and communicative types distinguishes two levels of syntax: potential and actual. One must determine the functions of word order in German. Here, a distinction must be made between grammatical and communicative functions. The structural function is expressed in the specific placement of sentence elements. Means of condensing the communicative structure of the sentence are primarily isolated appositions, adjectival groups, predicative attributive elements, participles and participial phrases, and isolated appositives, which occupy a relatively independent position within the sentence and, according to their rheme value, are placed under their own sub-array.

The communicative function of word order determines the role of sentence elements. Therefore, syntactic structure is considered the potential syntactic unit, while communicative type is considered the actual syntactic unit. The syntactic function is determined by the formation of the conjugable part of the verb in word order. The entirety of the constant elements forms the model, the basic basis, or the core of the syntactic structure. The constant elements include the main constituents. Depending on the properties of the verb in German, there are two, three, four, or more detailed sentence structures. Syntactic structures usually appear as dominants in one or more variants. When a dominant structure emerges, one must consider some of E. Schendel's ideas that the dominant's characteristic is determined by the frequent use of this structure and by the reflection of its fundamental features within itself. Changing the position of one or more sentence elements does not create a new sentence model, but rather results in internal changes and variants.

The terms theme and rheme originate with K. Ammann. The term rheme signifies the novelty that is conveyed to the listener. Karl Boost also assumes the principle of the binary structure of the sentence as a communicative unit, characterizing the sentence as a field of tension with the theme-rheme structure. Thus, the following sentences are characterized by agreement between subject and predicate with theme and rheme:

Die Sonne scheint. - *The sun is shining.*

Karl ist faul. - *Karl is lazy.*

Es ist ein Glück. - *It is fortunate.*

This distribution of theme and rheme value is also confirmed by intonation and the use of the article. In cases of emphasis, the subject-theme and predicate-rheme exchange their positions when the predicate is bipartite. The novelty pressure and possibly also the indefinite article with the predicate noun also signal the rheme value: e.g.:

If the subject has the rheme *wer* (who/who), it can be emphasized without changing the word order through intonation and the indefinite article. The rheme-theme arrangement lends the

sentence a strong emphatic character: e.g., "A communicative monosyllabic sentence is also characterized by special intonation. Its rhythmic-melodic features are: the absence of a caesura between the sentence parts and strong emphasis on the last clause. L.R. Sinder and T. V. Szrojewa rightly emphasize that in sentences with the sentence-opening *es*, neither the subject nor the predicate is highlighted as the most important word. In the sentence, "Es war einmal eine alte Frau" (Once upon a time there was an old woman), neither the subject nor the predicate is the new element. Together with L. W. Scherbe, they consider such sentences monosyllabic according to their logical content. The sentence-opening *es* is a formal feature of the logical, i.e., communicative, monosyllabic nature of the sentence. The same two arrangement schemes of topic and rheme also apply to three- or multi-part sentences. However, as the number of parts increases, so do the expressive possibilities of word order. This begins with the fact that even in three-part sentences, the subject is offered greater freedom of movement. Straight and inverted word order become the usual parallel constructions and are regularly considered in calm, logically structured speech, as emphatic word order is used quite frequently not only for strong expressions of feeling or will, but also in the language of authors in literary works as a means of creating imagery: She had told me a café was the meeting place. I couldn't; I only knew that it was a small, elegant place. Oblivious, I went there. The fairly frequent coexistence of neutral and emphatic arrangements of topic and rheme makes word order an inadequate means of expressing the mediating perspective.

There are several extended variants of the S-P structure. These extended sentence structures, with the help of optional elements, guarantee the accuracy and completeness of the information. Optional sentence elements convey both current and non-current information. This is achieved through adverbs of place, time, and manner. The extended variants with adverbs of time and place are structured as follows.

S-P. Ob and Ob-P-S.

S-P. Zb and Zb-P-S

The models of two-part declarative sentences can be divided into three groups. The first group comprises sentences with a nominal predicate. They necessarily contain three structure-forming elements, which usually have the following order:

Subject + copulative verb + predicate noun.

Variants in the word order are only permissible under the following condition: the second position of the finite verb is retained. Depending on the expression of the predicate noun, several models can be distinguished:

1) The predicate noun is the idiomatic model, consisting of two identical nouns joined by a copula:

„Nichts zu machen, man muss sich dem fügen, es ist eine Notwendigkeit“.

“Nothing to be done about it, one has to accept it, it is a necessity.”

Less frequently, two identical adjectives, participles, or adverbials are joined in this way:

“Stupid remains stupid.” “Lazy is lazy.” “Gone is gone.” Another secondary meaning, namely intensification, can arise:

“Safe is safe.”

2) The predicate noun is an adjective or an adjectivized participle, rarely an adverb.

Er war tapfer. Alle waren entzückt-He was brave. Everyone was delighted.

3) The predicate noun is an infinitive.

Das Buch ist mein. Wir waren vier.-The book is mine. There were four of us.

4) The predicate noun is an infinitive.

Leben heißt kämpfen.-To live is to fight.

5) The predicative adjective requires a complement; then the number of elements in the structure increases to four:

Der Sohn ist seinem Vater ähnlich.-The son resembles his father.

6) The predicate noun is a noun in the genitive case or a noun with a preposition.

Sie ist schlechter Laune.-She is in a bad mood.

Ich bin einer anderen Meinung.- I have a different opinion.

The second group of models comprises sentences with a verbal predicate. The number of structure-forming elements varies from two to five, depending on the valency of the verb. All elements surrounding the verb are called its actants. The subject is a special type of actant; it is not subordinate to the verb. The other actants belong to the verbal domain; they appear as complements of the verb and thus form the predicate. Depending on the number of structure-forming elements, we distinguish two-, three-, four-, and five-place models. The attribute does not participate in the sentence structure: any sentence element expressed by a noun can use an attribute. The concept of the sentence paradigm only developed in linguistics at the beginning of the 1960s. This explains why there is still no consensus today on the nature and limits of the sentence paradigm, which is defined very broadly as a series of synonymous sentences or as a transformation series. However, a stricter understanding of the sentence paradigm seems more correct to us, which ties the sentence paradigm to a specific sentence model and treats it as a system of sentence forms within the framework of a sentence.

Abstract: This study investigates the fundamental theoretical aspects of linguistic structures, focusing on the systemic nature of language and the hierarchical organization of its internal components. The primary objective is to analyze the dialectical relationship between form and meaning within the framework of modern theoretical linguistics. Utilizing structural-functional and systemic analysis methodologies, the research explores how language operates as a dynamic semiotic system rather than a static collection of signs. The study examines the interplay between paradigmatic and syntagmatic relations, highlighting their role in maintaining linguistic stability while allowing for evolutionary changes. Furthermore, the abstract discusses the integration of cognitive approaches into classical structuralism, suggesting that linguistic units are deeply rooted in human conceptualization processes. The findings indicate that the structural integrity of a language is preserved through a complex network of interdependencies among phonological, morphological, and semantic levels. This research contributes to a deeper understanding of linguistic universalism and provides a theoretical basis for further explorations in computational linguistics and language modeling.

Keywords: Theoretical linguistics, language system, structuralism, semantics, paradigmatic relations, cognitive linguistics.

AZƏRBAYCAN DİLÇİLİYİNDƏ STRUKTUR VƏ SEMANTİK VƏHDƏT PROBLEMLƏRİ

Xülasə: Bu tədqiqat dil strukturlarının əsas nəzəri aspektlərini araşdırır, dilin sistemli təbiətinə və daxili komponentlərinin iyerarxik təşkilinə xüsusi diqqət yetirir. Tədqiqatın əsas məqsədi müasir nəzəri dilçilik çərçivəsində forma və məna arasındakı dialektik əlaqəni təhlil etməkdir. Struktur-funksional və sistemli analiz metodologiyalarından istifadə edilərək, araşdırma dilin statik işarələr toplusu deyil, dinamik bir semiotik sistem kimi necə fəaliyyət göstərdiyini aşkar edir. Tədqiqatda paradigmatik və sintaqmatik münasibətlərin qarşılıqlı təsiri nəzərdən keçirilir və onların dil sabitliyini qorumaqla yanaşı, təkamül xarakterli dəyişikliklərə imkan verməkdəki rolu vurğulanır. Bundan əlavə, xülasədə koqnitiv yanaşmaların klassik strukturalizmlə inteqrasiyası müzakirə olunur və dil vahidlərinin insanın konseptuallaşdırma prosesləri ilə dərinədən bağlı olduğu irəli sürülür. Nəticələr göstərir ki, dilin struktur tamlığı fonoloji, morfoloji və semantik səviyyələr arasındakı mürəkkəb asılılıq şəbəkəsi vasitəsilə qorunub saxlanılır. Bu tədqiqat linqvistik universalizmin daha dərinədən dərk edilməsinə töhfə verir və kompüter dilçiliyi ilə dil modelləşdirilməsi sahəsində gələcək araşdırmalar üçün nəzəri baza yaradır.

Açar sözlər: Nəzəri dilçilik, dil sistemi, strukturalizm, semantika, paradigmatik münasibətlər, koqnitiv dilçilik.

Introduction

Language is a complex and multifaceted system that is in a constant state of evolution. Modern linguistics views language not merely as a system of signs, but also as an integral part of cognition and communication. The study of theoretical aspects in Azerbaijani linguistics is crucial for uncovering the internal patterns and laws of the language. In particular, the interdependence between the semantic load of linguistic units and their grammatical structure is among the central problems of theoretical linguistics. This article explores the theoretical principles that ensure the functioning of language as a unified mechanism.

Methods

The research material consists of the lexical and grammatical units of the modern Azerbaijani language, as well as the theoretical concepts of prominent linguists such as A. Akhundov, A. Damirchizade, M. Adilov, and others. The following methods were employed as the methodological basis of the study:

Descriptive method: Used for the linguistic description of the current state of language phenomena.

Systemic-structural analysis: Applied to determine the position of linguistic units within the language system.

Comparative-typological method: Utilized to evaluate theoretical propositions within the broader context of general linguistics.

1. The Balance Between Structure and Semantics

The unity of the structural and semantic aspects of linguistic units is one of the most fundamental topics in modern linguistics. The existence of language as a system depends on its internal elements having both a specific form (structure) and a meaning (semantics) attached to that form. Although these two concepts were studied separately for a long time in the history of linguistics, modern linguistic paradigms prove that the balance between structure and semantics is a primary condition for the functionality of language. By structure, we mean the sound composition, morphological makeup, and syntagmatic arrangement of a linguistic unit. Semantics, on the other hand, is the concept evoked in our minds by this structure-the meaning load associated with an object or event in reality. As Ferdinand de Saussure noted in his concept of the "linguistic sign," the signifier (form) and the signified (meaning) are like two sides of a single sheet of paper; it is impossible to separate one from the other (Akhundov, 1992, p. 63).

A linguistic unit, whether it is a morpheme-the smallest unit of meaning-or a complex sentence construction, gains the status of a linguistic unit only when the balance between structure and semantics is preserved. For instance, if a collection of sounds does not convey a specific grammatical or lexical meaning, it remains merely an acoustic phenomenon for the language system. On the other hand, any minor change in the form (structure) of a language inevitably leads to a transformation of semantic nuances. This process can be seen more clearly within the context of the agglutinative structure of the Azerbaijani language. "Every suffix added to a word root not only creates a structural change but also narrows, broadens, or directs the scope of meaning toward a completely new conceptual path. This is the most striking example of the principle 'if the form changes, the meaning changes'" (Cəfərov, 1982, p. 73).

For a unit to gain functionality within the language system, it is essential that it expresses a specific concept. This concept can be either lexical or grammatical in nature. While at the lexical level, the structural composition of a word is linked to its etymological and semantic roots, at the grammatical level, structure serves a more relational function. For example, changing the word order within a sentence (a transformation of structure) leads to changes in emphasis, the semantic center, and sometimes the logical meaning of the entire sentence. In this regard, the stability of structure ensures the rules and regulations of language, while the flexibility of semantics enriches its expressive capabilities.

Modern cognitive linguistics relates this balance to the way humans perceive the world. The human brain encodes complex information into specific structures. Language is the most perfect tool of this encoding system. When we wish to express a concept (semantics), we utilize the

structural templates existing in our consciousness. Without these templates (grammatical and lexical rules), semantic chaos would ensue. If structure is the skeleton of language, semantics is its soul and spirit. Just as the spirit cannot manifest without a skeleton, a skeleton without a spirit remains lifeless and immobile.

The dependency between the change of form and the transformation of semantic nuances is particularly evident in the phenomena of synonymy and polysemy. Two different structures that are initially thought to express the same meaning (e.g., synonyms) actually possess subtle semantic differences. It is the distinctness of the structure that allows for the emergence of nuanced differences in their semantic capacity. This further proves that absolute identity does not exist in language; every new form signifies a new shade of meaning. Consequently, the balance between structure and semantics creates the internal harmony of the language. When this harmony is disrupted (for instance, during the retention of archaic forms or the creation of meaningless new words), the language system either pushes those units out or restores balance by assigning them a new function.

2. Paradigmatic and syntagmatic relations

In linguistic theory, the study of the relationships between language units plays a decisive role in understanding language as a system. "These relationships fundamentally develop along two main axes: paradigmatic and syntagmatic relations. These two concepts are internal mechanisms that ensure language functions both as a static treasury and a dynamic process. This dualism, systematized by Ferdinand de Saussure, explains both the potential possibilities in memory and the linear realization forms in the speech chain". The agglutinative structure of the Azerbaijani language creates a natural basis for establishing these relations in a more mathematical, transparent, and systematic manner.

Paradigmatic relations constitute the internal memory or the "potential axis" of the language system. These relations are based on the probability that language units belonging to the same functional class can substitute for one another in consciousness. They exist outside of speech, in an "associative" manner within the memory of the language. For example, the word "book" used within a sentence is related to other lexical units such as "notebook," "newspaper," "magazine," or "source" on the paradigmatic axis. When speaking, an individual selects a specific unit from this rich paradigm in their memory. "The rich word-formation and numerous synonymy possibilities of the Azerbaijani language expand this paradigmatic base and maximize the expressive potential of the language. This axis is essentially the axis of selection and reflects the vertical dimension of language".

Syntagmatic relations, however, represent the possibilities of linear realization within the speech chain. This is the process of language units combining, harmonizing, and forming a syntagmatic chain in succession. If paradigmatics is selection, syntagmatics is the combination of these selected units. "Because speech is linear in character, units are arranged one after another, and during this process, they are subject to certain grammatical, phonetic, and semantic rules. In the Azerbaijani language, syntagmatic relations are regulated with particular precision. The agglutinative nature of the language requires that suffixes added to the word root be arranged in a specific sequence—syntagmatically within a linear chain. This linear arrangement constitutes the horizontal axis of the language and is the space where thought is realized".

The agglutinative structure of the Azerbaijani language allows for the establishment of paradigmatic and syntagmatic relations as a mathematical system. In the principle of agglutination,

each suffix has a specific function, and these suffixes create new semantic and grammatical nuances by "attaching" to the root. In this process, each suffix is paradigmatically in competition with other suffixes belonging to its category (for example, case suffixes among themselves, or number suffixes among themselves). However, on the syntagmatic axis, they are arranged in a strictly defined sequence: root + lexical suffix + plural + possessive + case + person. This structure is so systematic that selecting the correct suffix from memory (paradigm) to express a specific case or quantity and including it in the linear chain (syntagma) gives the impression of a mathematical combination.

The development of language along these two axes is also significant from the perspective of cognitive linguistics. While paradigmatic relations are related to the human ability to classify the world and group concepts, syntagmatic relations reflect the ability to establish a logical sequence between events. The law of harmony in the Azerbaijani language ensures the stability of the syntagmatic chain at the phonetic level, while grammatical rules regulate the alignment of successive units at the morphological and syntactic levels. Thus, paradigmatic selection and syntagmatic combination act in unity, ensuring the functioning of language as a mechanism that is both rich and variable, as well as stable and orderly. The balance between these two axes forms the basis of communicative effectiveness and systemic integrity.

3. Cognitive approach

The cognitive approach, one of the most promising directions in modern linguistics, views language no longer merely as a system of signs or a collection of dry grammatical rules, but as a direct manifestation of the human brain, thought, and world perception mechanisms. According to this approach, the semantics of language units—that is, the meaning load they carry—is inseparably linked to the process of human cognition. While observing the environment, grouping events, and naming objects, individuals rely on their personal and collective experiences. For this reason, analyzing the lexical and semantic layers of any language essentially means understanding the mental-cultural model of the people speaking that language, how they see the world, and how they encode it. The rich phraseological units, metaphors, and idioms in the Azerbaijani language are linguistic mirrors of this internal spiritual structure.

One of the fundamental principles of cognitive linguistics is the process of "conceptualization." To perceive complex reality, the human brain divides it into small mental units called concepts. These concepts materialize in language through words and expressions. For example, the concept of "heart" (ürək) in the Azerbaijani language is not just a biological organ, but a vast cognitive space expressing the entire emotional spectrum, courage, sincerity, and state of mind of a person. Phraseological units such as "ürəyi yanmaq" (to feel pity), "ürəyi getmək" (to faint/long for), and "ürək qızdırmaq" (to trust/warm to) show how the people associate feelings of compassion, love, and faith with physical sensations. This proves that semantics is not accidental but is the result of the historically formed cognitive experience of the people. (Seyidov, Y. (2006))

In the cognitive approach, metaphors are not just tools of artistic description but the basic structure of thought. "As noted in Lakoff and Johnson's 'Metaphors We Live By' theory, we perceive abstract concepts through simpler, physical concepts. Metaphors used in the Azerbaijani language to describe time, love, or arguments reflect the mentality of the people". For instance, the "time is gold" metaphor expresses the value of time through a material measure, while the "argument is war" metaphor shows that we perceive intellectual exchange through the prism of competition and struggle. Such linguistic manifestations show that language units create certain "schemas" and "frames" in the human cognitive system.

Phraseological units are the most conservative and informative layer of the mental-cultural model. If we separate the words within these expressions from one another, the original meaning is lost, because a phraseologism is a complete cognitive unit. For example, the expression "gözü ayağının altını görməmək" (to be too arrogant to see the ground under one's feet) is a linguistic model of arrogance. Here, the combination of the ability to see (a cognitive process) with the concept of space arises from the confrontation of the person's inner world with the physical world. The nomadic and sedentary lifestyles, close connection with nature, and religious and spiritual values of the Azerbaijani people are encoded in their phraseology with fundamental concepts such as "horse," "water," "bread," and "earth." Unlocking these codes allows for the creation of a linguistic map of the people's national consciousness.

In conclusion, it can be said that the cognitive approach unites the theoretical aspects of linguistics with the human factor. Language is no longer just an object of study but becomes a laboratory for learning the principles of the human intellect. The semantic richness of the Azerbaijani language, especially expressions resulting from artistic-figurative thinking, proves that our language does not merely transmit information but also offers a special way of internalizing the world. This approach, developing in unity with linguoculturology and psycholinguistics in future linguistic research, will serve to explain the unique place of the Azerbaijani language in the global language system from a more grounded theoretical perspective. . Axundov, A. (1992)

Results and Discussion

The research has determined that the structural and semantic aspects of language are inseparable components that complement each other.

1. The study reveals that linguistic units gain functionality within the system only when they possess a specific structure and a corresponding semantics that expresses a concrete concept.
2. Discussions prove that changes in form (structure) in language inevitably lead to a transformation of semantic nuances.
3. The article theoretically substantiates that paradigmatic relations represent the potential possibilities of the language, while syntagmatic relations represent the linear realization in speech.
4. It is emphasized that the agglutinative structure of the Azerbaijani language creates favorable conditions for establishing these linguistic relationships in a more mathematical and systematic way.
5. Analyses conducted within the framework of the cognitive approach show that phraseological units and metaphors in the Azerbaijani language are direct manifestations of the people's mental-cultural model.

Conclusion

In conclusion, the study of the theoretical aspects of Azerbaijani linguistics demonstrates how perfectly the internal structure of the language is organized. The semantic and structural unity of linguistic units is the primary factor ensuring both the stability and the development of the language. In future research, the application of this unity in computational linguistics and artificial intelligence platforms should be considered a highly relevant direction.

Internal research on the theoretical foundations of Azerbaijani linguistics shows that language is not just a means of communication, but a complex system with a perfect mathematical and logical hierarchy. The organization of this system's internal structure, the close connection between

linguistic units, and the inseparability of these units in terms of both form and meaning allow the language to exist as a living organism. The semantic and structural unity of linguistic units is, in fact, the most fundamental factor providing both the stability and the evolutionary dynamics of the language. Stability lies in the fact that linguistic rules and structural patterns remain unchanged across generations, ensuring mutual understanding; development lies in the fact that, thanks to the flexibility of the internal structure, new meanings and concepts are easily realized within existing frameworks.

As a final result of the article, it can be stated that examining the theoretical aspects of Azerbaijani linguistics reveals the excellence of the language's internal organizational structure. This perfection is especially evident in the agglutinative structure of the language, where each morpheme has a precise place and function. The semantic and structural unity of language units is the key factor ensuring language stability and development. If this unity were disrupted, the language would lose its functional integrity and chaos would ensue. The internal order of the language is designed such that every transformation of form leaves certain traces on the semantic layer, and this process is regulated while preserving the internal balance of the system.

From the perspective of modern requirements, linguistic science can no longer remain solely within the framework of theory. In future studies, the application of this unity in computational linguistics and AI platforms must be evaluated as a priority. The structural transparency and logical consistency of the Azerbaijani language make it an extremely suitable object for digital processing. To enable AI algorithms to understand and process natural speech in Azerbaijani, digital models of the language's internal structural patterns must be created. This is vital not only for the study of the language but also for strengthening its position in the global information environment. (Mammadov, T. (2021)).

Future work in the field of computational linguistics involves mapping the semantics of the language and transferring it to machine memory. Mathematically modeling the semantic and structural unity will help AI more deeply perceive subtle differences in meaning, metaphors, and phraseological units within the Azerbaijani language. This, in turn, will improve the quality of translation programs, enhance voice control systems, and accelerate the creation of digital content in Azerbaijani. Thus, every fundamental conclusion reached in theoretical linguistics should serve as a base for applied sciences.

Ultimately, the theoretical potential of Azerbaijani linguistics is vast, and bringing this potential into a practical dimension is one of the main tasks facing modern science. The study of the language's internal structure shows that we are heirs to a system built on both ancient and simultaneously very modern principles. Protecting, studying, and adapting this system to the requirements of the digital age will further elevate the prestige of Azerbaijani linguistics in both national and international scientific arenas. The complementary power of structure and semantics makes our language indispensable for the technologies of the future.

STRUCTURAL-SEMANTIC ORGANIZATION OF TEXT AND DISCOURSE ANALYSIS: THEORETICAL AND PRACTICAL ASPECTS OF APPLIED LINGUISTICS

Nurana Vugar ALAKBAROVA

Lecturer, Department of Foreign Languages, Mingachevir State University

E-mail: nurana.alakbarova@mdu.edu.az

ORCID ID: [0009-0004-3580-9026](https://orcid.org/0009-0004-3580-9026)

Abstract: This article provides a comprehensive investigation into the complex structural-semantic organization of text and discourse within the contemporary field of applied linguistics. The research adopts an integrated theoretical framework that synthesizes Text Linguistics, Systemic Functional Linguistics (SFL), and Discourse Analysis to examine how meaning is systematically constructed through the dynamic interplay of linguistic structures, cognitive processes, and communicative contexts. Central to this study are the pivotal concepts of cohesion and coherence, Halliday's ideational and textual metafunctions, and van Dijk's foundational notions of macrostructures and superstructures.

Employing a rigorous qualitative analytical approach, the study draws on diverse illustrative examples from various genres, including formal academic writing, everyday interpersonal communication, and complex argumentative discourse. The analysis demonstrates that while cohesive devices—such as reference, conjunction, and lexical repetition—establish essential surface-level connectivity, it is the underlying semantic relations that ensure global coherence and interpretability. Furthermore, the research highlights how clause-level structures contribute significantly to meaning construction through intricate transitivity patterns and thematic organization. At a broader level, macrostructures and superstructures are shown to organize discourse globally, serving as cognitive frameworks that guide both linguistic production and audience comprehension.

The findings reveal that structural-semantic organization operates as a multi-layered system, spanning from micro-level linguistic features to macro-level discourse patterns. This hierarchical organization is crucial for achieving effective, meaningful, and contextually appropriate communication. Ultimately, the article emphasizes the practical implications of these insights for applied linguistics, particularly in enhancing language pedagogy, translation studies, academic writing methodologies, and natural language processing (NLP). In conclusion, the study underscores the necessity of integrating structural and functional approaches to better decode the complexities of language use in real-world settings.

Keywords: structural-semantic organization, discourse analysis, cohesion, coherence, Systemic Functional Linguistics (SFL), applied linguistics, textual metafunction, macrostructures, superstructures, transitivity, thematic organization, academic writing, communicative context.

MƏTNİN STRUKTUR-SEMANTİK TƏŞKİLİ VƏ DİSKURS ANALİZİ: TƏTBİQİ DİLÇİLİYİN NƏZƏRİ VƏ PRAKTİK ASPEKTLƏRİ

Nuranə Vüqar ƏLƏKBƏROVA

Müəllim, Xarici Dillər Kafedrası, Mingəçevir Dövlət Universiteti

E-mail: nurana.alakbarova@mdu.edu.az

ORCID ID: 0009-0004-3580-9026

Xülasə: Bu məqalə tətbiqi dilçilik müstəvisində mətn və diskursun mürəkkəb struktur-semantik təşkilini dərinlən araşdıraraq, məna quruculuğunun fundamental mexanizmlərini müəyyən etməyə xidmət edir. Tədqiqatın nəzəri-metodoloji bazası Mətn Dilçiliyi, Sistemli Funksional Dilçilik (SFL) və Diskurs Analizini özündə birləşdirən integrasiya olunmuş elmi çərçivəyə əsaslanır. Bu multidissiplinar yanaşma dil strukturları, koqnitiv proseslər və kommunikativ kontekstlər arasındakı dialektik əlaqəni hərtərəfli analiz etməyə geniş imkanlar yaradır. Tədqiqatda əsas diqqət M. Halliday-ın ideyası və mətn metafunksiyalarına, eləcə də T. van Dijk-in diskursun qlobal təşkilini izah edən makrostruktur və superstruktur nəzəriyyələrinə yönəldilmişdir.

Keyfiyyət analizi metodundan istifadə olunmaqla, akademik yazı, gündəlik ünsiyyət və arqumentativ diskurs kimi müxtəlif janrlardan götürülmüş representativ nümunələr təhlil edilmişdir. Araşdırma nəticəsində məlum olur ki, referensiya, bağlayıcılar və leksik təkrarlar kimi kogeziya vasitələri mətnin səthi əlaqəliliyini təmin etdiyi halda, koherentlik məndaxili dərin semantik münasibətləri və interpretasiya imkanlarını şərtləndirir. Eyni zamanda, klauza səviyyəsindəki tranzitivlik nümunələri və tematik təşkilatın məna istehsalında və məlumat axınında həlledici rolunu elmi əsaslarla sübut edilmişdir.

Tədqiqatın nəticələri göstərir ki, struktur-semantik təşkilat mikrosəviyyəli dil vahidlərindən makrosəviyyəli diskurs modellərinə qədər uzanan çoxlaylı bir sistemdir. Bu mürəkkəb təşkilat forması effektiv və məqsədyönlü kommunikasiyanın qurulmasında həlledici şərtədir. Məqalədə əldə olunan elmi qənaətlərin tətbiqi dilçiliyin perspektiv sahələri olan dil tədrisi, tərcüməşünaslıq, akademik yazı metodologiyası və təbii dilin emalı (NLP) üçün mühüm praktik əhəmiyyət kəsb etdiyi vurğulanır. Yekun olaraq, struktur və funksional yanaşmaların sintezi real dünya kontekstində dilin işlənmə qanunauyğunluqlarını anlamaq üçün ən səmərəli elmi metod kimi təqdim olunur.

Açar sözlər: struktur-semantik təşkilat, diskurs analizi, kogeziya, koherentlik, sistemli funksional dilçilik (SFL), tətbiqi dilçilik, mətn metafunksiyası, makrostrukturlar, superstrukturlar, tranzitivlik, tematik təşkilat, akademik yazı, kommunikativ kontekst.

Introduction

The intricate relationship between linguistic form and meaning has long been a cornerstone of inquiry across various subdisciplines of linguistics. Within this vast landscape, the structural-semantic organization of text and discourse stands out as a critical domain, offering profound insights into how human cognition processes and produces coherent communication. Far from being a mere juxtaposition of words and sentences, text and discourse are dynamic, hierarchically structured entities whose meaning emerges not only from individual lexical items and grammatical constructions but also from the complex interplay of their arrangement and contextual embedding. This article delves into the theoretical underpinnings and practical applications of analyzing this structural-semantic organization, positioning it firmly within the purview of applied linguistics.

Historically, approaches to language have oscillated between purely formalist and predominantly functionalist perspectives. However, a comprehensive understanding of language use necessitates a robust framework that integrates both the systematic arrangement of linguistic units and their communicative functions in real-world contexts. The advent of modern linguistics, particularly with the development of discourse analysis and text linguistics, has provided the methodological and conceptual tools to bridge this gap. These fields offer a lens through which to

examine how linguistic structures contribute to the construction of meaning, coherence, and cohesion within extended stretches of language, thereby enabling effective communication. Key foundational works such as Saussure's *Course in General Linguistics* (1916) introduced the concept of language as a structured system, while Chomsky's *Syntactic Structures* revolutionized the study of sentence-level grammar. However, the subsequent emergence of text linguistics and systemic functional linguistics, notably through the work of de Beaugrande and Dressler (2013) and Halliday and Hasan, explicitly shifted focus to supra-sentential organization and the functional realization of meaning in texts. Later, van Dijk's contributions further integrated cognitive and social dimensions into the study of discourse.

This article aims to synthesize key theoretical constructs from text linguistics, systemic functional linguistics, cognitive linguistics, and pragmatic theories to illuminate the multifaceted nature of structural-semantic organization. We will explore how different levels of linguistic analysis—from morphology and syntax to supra-sentential structures and intertextual connections—contribute to the overall meaning and function of a text. Crucially, beyond theoretical elucidation, this discussion will pivot towards the practical implications of such analyses within applied linguistics. Understanding the structural-semantic scaffolding of various text types—be it academic writing, legal documents, media discourse, or everyday conversation—is paramount for addressing real-world linguistic challenges. This includes, but is not limited to, improving language teaching methodologies, enhancing translation practices, developing effective communication strategies, analyzing persuasive discourse, and designing robust natural language processing applications. By integrating theoretical rigor with practical applicability, this article seeks to underscore the indispensable role of structural-semantic analysis in advancing our understanding of human language and communication in its diverse manifestations.

Literature Review

Key Contributions to Structural-Semantic Analysis

The study of how texts and discourse are organized both structurally and semantically has evolved significantly, moving from abstract linguistic systems to context-rich analyses of language use. Early linguistic thought, particularly Ferdinand de Saussure's *Course in General Linguistics* (1916), established the foundational concept of language as a structured system (*langue*), where meaning is derived from the differential relationships between signs. While not directly addressing text-level organization, Saussure's structuralist approach paved the way for systematic linguistic analysis. Noam Chomsky's generative grammar further refined the study of underlying syntactic structures and their relation to sentence-level semantics, yet his focus on grammatical competence largely abstracted away from suprasentential units and contextual factors governing text cohesion.

The limitations of sentence-bound grammars in explaining coherent communication led to the emergence of text linguistics. Robert de Beaugrande and Wolfgang Dressler's *Introduction to Text Linguistics* (2013) was instrumental in defining textuality, distinguishing between cohesion (surface-level linguistic ties like anaphora and conjunctions) and coherence (the underlying semantic and pragmatic unity that makes a text meaningful). This work established a framework for analyzing how individual linguistic elements contribute to the overall structure and meaning of a text.

A pivotal contribution came from M.A.K. Halliday's *Systemic Functional Linguistics* (SFL), particularly his work with Ruqaiya Hasan in *Cohesion in English*. Halliday and Hasan meticulously cataloged cohesive devices, demonstrating how linguistic choices systematically build textual

connectivity and overall semantic structures. SFL posits that language functions to make meaning, and the textual metafunction specifically organizes language to create coherent discourse, thus integrally linking structural choices to semantic outcomes.

Expanding beyond text-internal features, Teun A. van Dijk's work was crucial in developing discourse analysis. Van Dijk introduced concepts like macrostructures (global semantic themes) and superstructures (conventional schemata) to explain how texts are organized at higher levels, and how these structures guide comprehension. He further integrated cognitive and social dimensions, emphasizing that semantic structures are not just textual properties but are actively constructed by users and shaped by social contexts (Van, Discourse and Knowledge, 2014).

These foundational and evolving theories underscore that the structural-semantic organization of text is a complex interplay of linguistic forms, cognitive processes, and communicative functions. The insights derived from these theoretical frameworks are indispensable for applied linguistics, informing areas such as language education, translation studies, and the development of natural language processing applications, by providing systematic ways to analyze, interpret, and generate coherent and meaningful discourse.

Theoretical Framework

This article adopts a synthetic theoretical framework, integrating key insights from Text Linguistics, Systemic Functional Linguistics (SFL), and Discourse Analysis to comprehensively examine the structural-semantic organization of text and discourse. This integrated approach acknowledges that meaning-making in language is a multi-layered phenomenon, requiring attention to both the internal linguistic arrangements and the broader communicative contexts. The framework posits that the effective analysis of text and discourse hinges upon understanding the intricate interplay between micro-level linguistic structures and macro-level semantic and pragmatic functions.

At its core, the framework builds upon the foundational principles of Text Linguistics, particularly the distinctions between cohesion and coherence as articulated by de Beaugrande and Dressler (1981). Cohesion refers to the explicit linguistic ties and dependencies that connect sentences and clauses, creating surface-level unity within a text (e.g., anaphora, conjunction, lexical reiteration). Coherence, conversely, pertains to the underlying semantic and pragmatic relationships that make a text meaningful, logical, and relevant to its communicative purpose and context. A text's structural organization is thus inherently tied to its ability to manifest both cohesive links and coherent meaning.

To further unpack the realization of semantic structures, the framework incorporates elements from M.A.K. Halliday's Systemic Functional Linguistics (SFL). SFL offers a powerful model for understanding how linguistic choices serve communicative functions. Specifically, the ideational metafunction provides tools to analyze how language represents experience and constructs the "content" of a message, thus illuminating the semantic structures embedded within clauses and clause complexes. Crucially, the textual metafunction addresses how language is organized to create coherent and cohesive stretches of discourse, providing a direct link between linguistic choices and the textual flow. This SFL perspective enables a functional understanding of how specific structural patterns contribute to overall semantic construction and textual flow.

Finally, the framework extends to the broader socio-cognitive dimensions offered by Teun A. Van Dijk's approach to Discourse Analysis (2014). Van Dijk's work introduces the concepts of macrostructures (global semantic representations of a text's main topic or gist) and superstructures

(conventional schemata that organize the overall form of certain text types, such as narrative or argumentation). These concepts are vital for understanding how longer stretches of discourse are globally organized and how readers/listeners cognitively process and construct meaning beyond sentence boundaries. By integrating van Dijk's insights, the framework acknowledges that the structural-semantic organization of discourse is not merely an internal textual property but is dynamically constructed through cognitive processes within specific social and communicative contexts.

In synergy, these theoretical pillars allow for a comprehensive analysis of how the choice and arrangement of linguistic features (cohesion), the representation of meaning (ideational metafunction), and the global organization of content (macro/superstructures) converge to create meaningful and purposive texts. This integrated framework is particularly well-suited for the applied linguistic perspective, providing robust tools to analyze and address real-world communicative challenges related to text production, comprehension, and interpretation across diverse domains.

Methodology and Materials

This article employs a qualitative and analytical methodology, drawing upon principles derived from the integrated theoretical framework of Text Linguistics, Systemic Functional Linguistics (SFL), and Discourse Analysis. The primary objective is to investigate the theoretical constructs of structural-semantic organization and their practical implications through critical textual examination rather than empirical data collection and statistical analysis. This approach allows for a deep, interpretive exploration of linguistic phenomena as they relate to text cohesion, semantic structures, and overall discourse coherence.

The methodological procedure will involve a multi-layered analytical approach:

Selection of Illustrative Textual Examples: Given the theoretical and practical focus, the methodology will involve the selection of diverse textual examples from various communicative contexts (e.g., academic writing, persuasive discourse, everyday conversation excerpts). These examples will be chosen not for their representativeness of a larger corpus, but for their capacity to clearly illustrate specific theoretical points regarding structural-semantic organization, cohesive devices, and semantic patterning. The selection will prioritize texts that exemplify both effective and, at times, less effective organizational strategies to highlight the practical aspects of applied linguistics.

Textual Analysis Guided by Text Linguistic Principles:

Cohesion Analysis: Following de Beaugrande and Dressler and Halliday and Hasan (2013), the analysis will meticulously identify and categorize various cohesive ties within the selected texts. This includes grammatical cohesion (reference, substitution, ellipsis, conjunction) and lexical cohesion (reiteration, collocation). The aim is to demonstrate how these explicit linguistic signals contribute to the surface-level interconnectedness of sentences and clauses, forming a unified text.

Coherence Interpretation: Beyond surface cohesion, the analysis will interpret the underlying coherence of the texts. This involves examining how semantic relationships, logical progression, and pragmatic inferences contribute to the overall meaningfulness and understandability of the text for its intended audience, often extending beyond explicit linguistic markers.

Semantic Structure Analysis via SFL:

Ideational Analysis: Utilizing the ideational metafunction of SFL, the analysis will explore how participants, processes, and circumstances are represented in the chosen texts. This involves

identifying transitivity patterns (e.g., material, mental, relational processes) to uncover the primary semantic structures and the way reality is construed within the discourse. This layer of analysis reveals how meaning is encoded in clauses and clause complexes.

Textual Analysis: The textual metafunction will be applied to analyze thematic organization (Theme-Rheme structures) and information flow. This will highlight how linguistic choices guide the reader's attention and contribute to the text's progression and overall textual coherence (Martin & Rose, 2007).

Discourse Organization through Macro- and Superstructures:

Macrostructure Identification: Drawing on van Dijk's (2014) framework, the analysis will identify the macrostructures or global topics/themes that organize larger sections of the discourse. This involves inferring the main propositions or gist that readers/listeners would extract from the text, demonstrating how specific textual segments contribute to the overall message.

Superstructure Analysis: Where applicable, the methodology will examine the presence and realization of superstructures (e.g., narrative schema, argumentative structure, problem-solution pattern). This analysis will demonstrate how conventional rhetorical patterns guide the overall organization of the discourse and influence expectations regarding its content and progression.

The analytical process is iterative, moving between detailed linguistic analysis and broader interpretive synthesis. The findings from each analytical layer will be integrated to provide a holistic understanding of how structural choices contribute to semantic organization and overall communicative effectiveness. The practical aspects will be highlighted by demonstrating how these analytical tools can be applied to address real-world challenges in areas such as language teaching, technical writing, or communication analysis.

Illustrative Analysis and Findings

This section presents the findings from the application of the integrated theoretical framework—encompassing Text Linguistics, Systemic Functional Linguistics (SFL), and Discourse Analysis—to selected textual examples. The analysis demonstrates how the structural-semantic organization of texts and discourse is realized through various linguistic mechanisms, contributing to both cohesion and coherence, and ultimately shaping overall meaning construction. While not a presentation of empirical data, this section illustrates the explanatory power of the framework by deconstructing specific instances of language use.

1. Cohesive Devices and Textual Interconnectedness

Analysis of various texts consistently reveals the pivotal role of cohesive devices in establishing surface-level textual interconnectedness. For instance, in an academic abstract (e.g., Abstract A), the predominant use of grammatical cohesion, specifically anaphoric reference (e.g., pronouns "it," "this research" referring back to the study), coupled with a high density of conjunctions (e.g., "however," "consequently," "furthermore"), demonstrably creates a tightly knit argumentative structure (Halliday & Hasan, 1976). This linguistic chaining ensures that each sentence builds directly upon the preceding one, guiding the reader through the logical progression of ideas.

Conversely, in an excerpt from an online forum discussion (e.g., Forum Thread Snippet B), lexical cohesion, particularly through reiteration and the use of collocations related to the topic, often plays a more dominant role. While grammatical cohesion might be less explicit, the continuous re-use of keywords and semantically related terms anchors the conversation around a central theme, contributing to a sense of thematic unity despite potential shifts in participants or

turn-taking (de Beaugrande & Dressler, 1981). These observations underscore that while different text types may privilege distinct cohesive strategies, their presence is fundamental to establishing semantic ties.

2. Semantic Structures through Ideational and Textual Metafunctions

The application of SFL's metafunctions provides profound insights into the construction of semantic structures. In analyzing a scientific report's 'Methods' section (e.g., Scientific Method Section C), the ideational metafunction reveals a strong prevalence of material processes (e.g., "samples were collected," "data were analyzed") and circumstances of manner and means. This structural patterning reflects the scientific discourse's emphasis on objective action and experimental procedure, where the 'doings' and 'happenings' are foregrounded, constructing a semantic world of verifiable actions and results (Halliday, 1985).

Simultaneously, the textual metafunction often shows a consistent Theme-Rheme progression in such reports, where the 'Given' information is typically the subject of the clause, facilitating a smooth flow of information and maintaining focus on the experimental steps. For instance, a sequence of sentences where each Rheme becomes the Theme of the subsequent sentence (creates a clear, logical progression of information. This demonstrates how structural choices at the clause level directly contribute to the clarity and persuasive force of the overall semantic argument.

3. Macrostructures, Superstructures, and Global Discourse Organization

Beyond sentence and clause-level analysis, the framework successfully illuminates the role of macrostructures and superstructures in organizing global discourse. In analyzing an argumentative essay (e.g., Argumentative Essay D), the identification of a clear macrostructure (e.g., "Argument X is valid because of reasons Y and Z") is supported by the textual arrangement into distinct paragraphs, each developing a sub-argument. The superstructure of argumentation (e.g., introduction-thesis-body paragraphs with evidence-counter-argument-conclusion) provides a conventional roadmap for both authorial construction and reader comprehension. Disruptions to this conventional superstructure, for example, by embedding a counter-argument too early without proper signaling, can lead to perceived incoherence, even if individual sentences are grammatically correct.

In narrative texts (e.g., Short Story Excerpt E), the narrative superstructure (e.g., orientation-complication-resolution) provides a framework for interpreting the sequence of events and character development. The macrostructure, in this case, would be the main plot or theme of the narrative. Even in brief exchanges, as in a service encounter (e.g., Service Encounter Transcript F), a discernible macrostructure (e.g., "requesting service – providing service – confirming completion") is evident, guiding the participants' expectations and contributions (van Dijk, 2014). This level of analysis highlights how global semantic and schematic patterns are fundamental to processing and producing extended discourse.

Conclusion of Findings

Collectively, these illustrative analyses underscore that the structural-semantic organization of text and discourse is a deeply interwoven phenomenon. Cohesive devices provide the linguistic glue, SFL's metafunctions reveal the situated meaning-making at the clause level, and macro/superstructures shape the global understanding. The findings confirm that understanding these interconnections is not merely a theoretical exercise but provides concrete tools for analyzing and improving communication in various applied linguistic contexts. The implications of these findings for areas such as effective writing pedagogy, cross-cultural communication training, and

the design of intelligent language systems are substantial, demonstrating the practical relevance of a robust structural-semantic analysis

Discussion

The illustrative analyses presented in the previous section underscore the intricate and multi-layered nature of the structural-semantic organization of text and discourse. The findings confirm the enduring relevance of an integrated theoretical framework, drawing upon Text Linguistics, Systemic Functional Linguistics (SFL), and Discourse Analysis, for comprehensively understanding how language users construct and interpret meaning beyond the sentence level. This discussion interprets these findings, re-situates them within the broader theoretical landscape, and explores their significant implications for applied linguistics.

Interplay of Cohesion and Coherence

Our analysis consistently demonstrated that cohesion and coherence, while conceptually distinct (de Beaugrande & Dressler, 1981), are inextricably linked in practice. The identified cohesive devices – whether grammatical (e.g., anaphora, conjunctions) or lexical (e.g., reiteration, collocation) – serve as crucial surface-level signals that guide the reader/listener towards a coherent interpretation. The varied reliance on these devices across different text types (e.g., academic abstract vs. online forum) suggests that communicative context and purpose significantly modulate their deployment. This reinforces Halliday and Hasan's assertion that cohesion is not merely an optional embellishment but an integral part of the semantic system, actively contributing to the text's meaning-making potential.

However, the distinction between surface cohesion and underlying coherence remains vital. A text can exhibit high levels of cohesion but still lack coherence if the underlying semantic and pragmatic connections are unclear or illogical. Our analysis, by moving beyond mere identification of cohesive ties to an interpretation of their functional impact on meaning, highlights this critical aspect. Coherence, therefore, emerges as a cognitive and interpretive construct, facilitated by linguistic structures but ultimately established through the interaction between the text and the reader's background knowledge and expectations.

Functional Realization of Semantic Structures

The application of SFL's metafunctions proved particularly powerful in explicating how semantic structures are functionally realized through linguistic choices. The dominance of material processes and specific circumstances in scientific discourse, as identified through the ideational metafunction, is not merely a stylistic preference but a systemic choice that constructs a semantic world characterized by empirical action and objective reporting. This demonstrates how linguistic patterns are intrinsically tied to disciplinary conventions and epistemological stances.

Furthermore, the analysis of Theme-Rheme progression via the textual metafunction illuminated how information is organized to create a logical flow and emphasize particular aspects, guiding reader comprehension and contributing to the text's rhetorical effectiveness (Martin & Rose, 2007). This functional perspective transcends purely formal descriptions of syntax, showing how syntactic structures are deployed to achieve specific communicative ends, thereby shaping the semantic impact of the discourse. The choice of Theme, for instance, significantly influences what is presented as 'given' and 'new' information, directly impacting the cognitive burden and interpretive pathway for the recipient.

Macro-level Organization and Contextual Understanding

The integration of van Dijk's (1977, 2014) concepts of macrostructures and superstructures proved indispensable for understanding the global organization of discourse. Our analysis showed how these higher-level semantic and schematic frameworks provide a blueprint for both text production and comprehension. The recognition of a conventional argumentative superstructure, for example, allows authors to strategically arrange their points and enables readers to anticipate the text's progression and locate its main arguments. Disruptions to these expected patterns, when not intentionally managed, can lead to breakdowns in comprehension, even if local coherence is maintained.

This macro-level perspective reinforces that the structural-semantic organization extends far beyond sentence boundaries, operating at a level that guides the overall meaning and purpose of a text. It highlights the dynamic interplay between textual properties and cognitive processing, where macrostructures represent the mental models that readers build to grasp the main topic, while superstructures activate cultural and genre-specific expectations about how information will be presented.

Implications for Applied Linguistics

The insights gleaned from this integrated framework have substantial implications for various domains within applied linguistics:

Language Pedagogy: Understanding how cohesion, coherence, and macrostructures are realized in different genres can significantly enhance teaching methodologies. Explicit instruction on cohesive devices and common textual patterns can empower learners to produce more sophisticated and coherent written and spoken discourse (Halliday & Hasan, 2013).

Academic and Professional Communication: The ability to analyze the structural-semantic organization is critical for effective academic writing, technical reporting, and persuasive communication. It provides writers with tools to consciously organize their arguments and information for maximum clarity and impact, while equipping readers with strategies for critical discourse analysis.

Translation Studies: Translators must not only transfer lexical and grammatical meaning but also ensure that the structural-semantic organization and its intended communicative effect are maintained across languages and cultures. This framework provides a robust basis for evaluating and achieving such equivalence.

Natural Language Processing (NLP): The detailed linguistic insights into cohesion, semantic roles, and global discourse structures are invaluable for developing more sophisticated NLP applications, such as automatic text summarization, machine translation, and dialogue systems, which require an understanding of meaning beyond individual sentences.

Critical Discourse Analysis (CDA): By systematically linking linguistic choices (structure) to communicative functions (semantics) and overarching discourse organization, this framework provides a powerful lens for uncovering ideological underpinnings and power dynamics embedded within texts, allowing for a more critical engagement with language in social contexts (Van Dijk, 2014).

Conclusion of Discussion

In sum, this discussion confirms that the structural-semantic organization of text and discourse is a complex, yet analyzable, phenomenon. The integrated theoretical framework successfully accounts for the intricate mechanisms by which linguistic structures contribute to meaning-making, from explicit cohesive ties to global discourse patterns. The enduring relevance of

these theoretical insights for addressing practical challenges in applied linguistics underscores the necessity of moving beyond sentence-level analysis to a holistic appreciation of language as a coherent and purposeful communicative act. Future research could further explore the cross-linguistic variations in structural-semantic organization and their implications for intercultural communication, as well as the real-time cognitive processing of these organizational principles by language users.

Conclusion

This article has explored the multifaceted domain of the structural-semantic organization of text and discourse, elucidating both its theoretical underpinnings and its practical implications within applied linguistics. By tracing the historical trajectory from early structural linguistics to contemporary discourse analysis, and by employing an integrated theoretical framework, we have demonstrated the indispensable role of analyzing how linguistic structures contribute to the construction of meaning, coherence, and cohesion in extended stretches of language.

The theoretical framework, synthesizing insights from Text Linguistics, Systemic Functional Linguistics, and Discourse Analysis, proved highly effective in dissecting the complex interplay between form and meaning. We underscored that the structural-semantic organization is realized through various linguistic mechanisms: from the explicit cohesive devices that link surface forms, to the functional choices made at the clause level that instantiate semantic structures (e.g., through SFL's ideational and textual metafunctions), and finally, to the global cognitive and rhetorical patterns of macrostructures and superstructures that shape the overall discourse. This layered approach reveals that texts and discourse are not merely agglomerations of sentences but intricately designed, purposeful communicative acts.

The illustrative analyses confirmed that understanding these organizational principles is not merely an academic exercise. The consistent patterns observed across diverse textual examples highlight the universal aspects of structural-semantic organization, while also pointing to genre-specific adaptations. These findings reinforce that coherence is a negotiated outcome between textual signals and reader interpretation, and that functional linguistic choices are deeply embedded in the communicative goals and contexts.

The practical implications of these insights for applied linguistics are profound and far-reaching. A nuanced understanding of structural-semantic organization empowers researchers, educators, and practitioners to:

- Enhance language pedagogy by providing explicit tools for teaching effective writing and reading comprehension.

- Improve translation quality by ensuring semantic and structural equivalence across languages.

- Strengthen academic and professional communication by enabling the production of clearer, more persuasive, and coherent texts.

- Advance the development of more intelligent Natural Language Processing (NLP) applications that can genuinely process and generate human-like discourse.

- Facilitate critical discourse analysis by unveiling the ideological and power dynamics embedded in textual structures.

In conclusion, the structural-semantic organization of text and discourse remains a vibrant and critical area of linguistic inquiry. It stands as a testament to the dynamic relationship between language, cognition, and society. By moving beyond sentence boundaries and embracing an integrated, functional, and discourse-oriented perspective, we gain a more profound appreciation for

the subtle yet powerful ways in which language structures meaning, facilitates communication, and shapes our understanding of the world. Future research could profitably extend these analyses into cross-cultural contexts to explore the universality and culture-specific manifestations of these organizational principles, and to delve deeper into the cognitive processing strategies employed by language users in constructing and deconstructing coherent meaning.

GRAMMATICAL METAPHOR AND ITS TYPES

Lala Mohubbat RZAYEVA

PhD student at the Department of English Grammar

Azerbaijan University of Languages

Email: rzayeva.lala@yahoo.com

ORCID ID: 0009-0006-7579-6594

Abstract: The article discusses grammatical metaphor and its types in modern linguistics. It explains the study of the nature of language and how human language is structured by grammarians as well. English is a language that has given rise to an interest in the form and function of academic language, and this issue draws attention in this research work. "Inappropriate" ways of encoding language are called "grammatical metaphors", and it is widely explained in the article. The article provides some information about the definition of the concept of "grammatical metaphor" given by M.A.K. Halliday. He explains grammatical metaphor within Systemic-Functional Grammar and specifically emphasizes its importance. The article specifically examines the types of grammatical metaphor. The examples given clarify the importance of using grammatical metaphors in academic writing.

Keywords: metaphor, grammar, type, systematic, functional, ideational grammatical metaphor, interpersonal grammatical metaphor

GRAMMATİK METAFORA VƏ ONUN NÖVLƏRİ

Lalə Məhəbbət RZAYEVA

İngilis dilinin qrammatikası kafedrasının doktorantı

Azərbaycan Dillər Universiteti

E-mail: rzayeva.lala@yahoo.com

Xülasə: Məqalədə müasir dilçilikdə qrammatik metafora və onun növləri müzakirə olunur. Burada dilin təbiətinin öyrənilməsi və insan dilinin qrammatiklər tərəfindən necə strukturlaşdırıldığı izah edilir. İngilis dili akademik dilin forma və funksiyasına maraq yaradan bir dil olduğu üçün bu məsələ tədqiqat işində xüsusi diqqət cəhətdir. Dildə mənanın "qeyri-münasib" (dolayı) yollarla kodlaşdırılması "qrammatik metaforalar" adlanır və bu anlayış məqalədə geniş şəkildə şərh olunur. Məqalədə M.A.K. Hallidey tərəfindən verilmiş "qrammatik metafora" konsepsiyasının tərfi haqqında məlumat verilir. Hallidey qrammatik metaforanı Sistemli-Funksional Qrammatika çərçivəsində izah edir və onun əhəmiyyətini xüsusi vurğulayır. Məqalədə qrammatik metaforanın növləri spesifik şəkildə nəzərdən keçirilir. Verilən nümunələr akademik yazıda qrammatik metaforalardan istifadənin vacibliyini aydınlaşdırır.

Introduction

Language, as a well-organized tool, is utilized to express meaning across diverse contexts. It has been a long time since grammarians first sought to understand the nature of language and the architecture of human speech. Recently, there has been a noticeable surge of interest in the form and function of academic language, particularly among teachers of English as a Foreign Language (EFL).

As a feature of sophisticated literary language, metaphors shift the focus from cognitive linguistics toward functional trends. This shift resulted in M.A.K. Halliday proposing the concept of Grammatical Metaphor (GM) within the framework of Systemic-Functional Grammar (SFG). SFG draws attention to the distinction between social and linguistic structures. According to X. Wang, this approach begins with the social context and explores both how language influences this context and how it is constrained by it. A core premise of this theory is that the form and function of grammar are fundamental to the shaping of discourse (Wang, X., 2011). Consequently, SFG represents a new trend in grammatical studies that fundamentally differs from the traditional view of language as a mere set of rules for defining grammatical structures.

There are natural ways in which languages encode the meanings they express, referred to as "congruent" modes. Conversely, "incongruent" ways of encoding language are termed "grammatical metaphors." M.A.K. Halliday introduced the concept of Grammatical Metaphors (GM) within the scope of Systemic-Functional Grammar (Halliday, M.A.K., 1985). According to SFG, GMs are divided into two broad domains: *ideational* and *interpersonal*.

Ideational metaphor encompasses process and *nominalization*, while interpersonal metaphor includes *modal metaphor* and *mood metaphor*. According to Halliday and others, GMs are perceived as processes naturally expressed by verbs that are transformed into entities and realized as nouns (Halliday, M.A.K., & Matthiessen, 1999).

Halliday notes that understanding how to employ grammatical metaphors is an integral part of developing academic language proficiency (Halliday, M.A.K., 1985). Halliday and his colleagues argue that writers who effectively utilize GM produce more complex and engaging prose than those who do not. Within the SFG framework, GM is one of the most vital concepts because it enables an understanding of the nature of language, the semogenic process, and the relationship between language and context (Halliday, M.A.K., & Matthiessen, 1999). Halliday posits that grammatical

metaphor is a systematic resource for expressing meaning within a context. This perspective implies that language must be studied within its specific situational context.

M.A.K. Halliday was the first scholar to define the term GM, identifying it as the substitution of one grammatical class or structure for another (Halliday, M.A.K., 1985). There is a genuine need for GM in discourse and text as it opens a new dimension of semantic space. Halliday and others claim that GM serves as a vehicle for concepts to possess dual qualities. A transcribed word or phrase may lose its "originality" due to the nature of the semantic features it combines. For instance, "...like" is a quality; when a person says "mouse-like," it remains a quality. However, a metaphorical element does not lose its original essence because its structure does not change simply because it is associated with a new semantic property. In other words, its new semantic property stems from the process of metaphorization. Therefore, "failure" is both a process and a concept. It is a process formed as a concept; its primary status remains a process. Yet, because it is nominalized – and the prototypical meaning of a noun is a concept – it gains semantic status as a concept involved in processes.

Halliday and others further explored the nature of GM by situating it within the broader theoretical environment of the "meaning base" in languages. Halliday writes that the emergence of GM is related to the natural development of the content plane in language. Thus, he defines GM as a phenomenon where a range of forms exists in language, possessing different correspondences between semantic and grammatical categories (Halliday, M.A.K., & Matthiessen, 1999).

GM is regarded as the incongruent realization of a given semantic configuration in the lexicogrammar (Hadidi, Y., & Raghmi, A., 2012). Consequently, some researchers have sought to investigate the correlation between the use of GM and writing complexity. They believe that the writing of those who master GM is more sophisticated and compelling than that of those who avoid metaphors. In other words, as a feature of written language, GM makes writing more expressive, complex, and engaging (Hadidi, Y., & Raghmi, A., 2012).

The study of GM use is particularly beneficial in revealing how processes are transformed into objects. In this case, GM alters not only the grammar of texts but also the reader's reaction to them. Political and business texts, especially regarding GM, have always been an interesting field for analysis. Discourse analysis of political and business texts has a long history, yet most analyses focus on lexical features; few studies compare these texts through the lens of GM (Hadidi, Y., & Raghmi, A., 2012).

The *ideational metafunction* examines language as representation: it focuses on the role of language in representing and shaping reality.

1. *Mary liked the present very much.*
2. *The book is very interesting.*

Example (1) refers to a process involving two participant entities: Mary and another entity. Example (2) indicates a highly interesting quality of the entity described by the book. Therefore, a key aspect of the ideational (or representational) component of SFG models is the classification of various types of processes and the participants they can accommodate.

The *interpersonal metafunction* examines language as interaction: it focuses on the role of language in enacting interpersonal relationships and establishing intersubjective positions through linguistic interaction. The operation of the interpersonal metafunction is most evident in the expression of subjective meanings through evaluative words. In addition to evaluative vocabulary (lexis), the grammar of a language also possesses significant interpersonal aspects.

Language fulfills this function by dividing reality into occurring processes, entities that participate in these processes (animate beings; concrete and abstract things), and qualities used to describe these entities.

One of the interpersonal domains belonging to the interpersonal component of grammar is *modality*. Modality expresses how we convey our assessment of the probability of something occurring in reality. Modal meaning (e.g., certainty, probability, hypothesis, etc.) is typically expressed via modal verbs or modal adverbs:

1. *She might/may/can/could/will come to the meeting tomorrow.*
2. *a. Maybe he hasn't left yet; the lights are still on. b. He surely hasn't left yet; the lights are still on.*

Another grammatical domain within the interpersonal component is the *grammar of mood*. This is the grammar of questions, commands, and similar instances. Choosing between these mood types creates opportunities: it allows for arguing about propositions (e.g., using interrogative mood to provide/seek information) or negotiating actions (e.g., using imperative mood to issue a command).

1. *Where have you put the bottle?*
2. *The bottle is in the fridge.*
3. *Give me the bottle!*

The ideational and interpersonal metafunctions complement each other and constitute the core components of language. In the systemic functional model, they are supported by a third metafunction: the *textual metafunction*. This relates to the textual organization of language, dealing with, for example, the placement of new and given information within a longer discourse phase.

In Systemic Functional Linguistics (SFL), the developed concept of Grammatical Metaphor (GM) refers to variations in grammatical forms where a semantic choice is expressed through a "metaphorical" structure. The two primary types are *Ideational (Transitivity)* and *Interpersonal (Mood/Modality)*, which change how meanings are weighted and shared.

1. Ideational Metaphor (Transitivity): Involves the transformation of typical process configurations (actions, events) into more abstract, nominalized forms. This includes:

Experiential Metaphor: This involves nominalization (the most frequent realization), where processes (verbs) or qualities (adjectives) are realized as nouns.

- *Compare:*
- *"The company managed the project well."*
- *"The management of the project was efficient." (Metaphorical)*

Logical Metaphor: Metaphorical ways of realizing causal-temporal relationships within clauses rather than between them (e.g., using prepositions like "due to" instead of conjunctions like "because").

In analyzing complex types of transitivity metaphors, it is possible to demonstrate a "*chain of metaphorical interpretations*" between the metaphorical form and the (fully) congruent expression. Halliday provided such a chain in the following example (with variant 'e' being the most congruent):

- a. *Advances in technology are speeding up the writing of business programs.*
- b. *Advances in technology are making the writing of business programs faster.*
- c. *Advances in technology are enabling people to write business programs faster.*
- d. *Because technology is advancing, people are (becoming) able to write business programs faster.*

e. *Because technology is getting better, people are able to write business programs faster.*

"Many aspects have been shown regarding the division of transitivity metaphors. Full congruence or total incongruence is rarely encountered. It seems that in many types of discourse, both written and oral, we attempt to operate somewhere between these two extremes. Something fully congruent will sound 'flat,' whereas something fully incongruent often appears artificial and contrived" (Halliday, M.A.K., 1985, p. 349).

Generally, Halliday demonstrates that written language contains more ideational metaphors than spoken discourse. This complexity is explained by a general distinction: written language is characterized by "**lexical density**," while spoken language possesses "**grammatical intricacy**." In written language, various lexical meanings are often "packed" into a single nominal group. This is the context in which ideational metaphor emerges.

2. Interpersonal Metaphor: Involves the speaker's attitude, mood, or modality. These include:

- **Metaphors of Mood:** Where a speech function (e.g., a command) is realized through a different mood (e.g., interrogative). Examples:

1) "Command" functioning as a "request":

a. *"Close the door."*

b. *"Could you close the door?"*

2) "Command" functioning as a "warning":

a. *I wouldn't → ... if I were you.*

b. *don't..!*

3) Modalized "offer", typically functioning as "threat":

a. *I've a good mind to ..*

b. *Maybe I'll....*

4) Modulated "command", typically functioning as "advice"

a. *She'd better ...*

b. *She should....*

The possible explicit expressions of mood metaphors are quite diverse, and it can be difficult to decide whether a given expression should be interpreted as a mood metaphor.

- **Metaphors of Modality:** Subjective attitudes or probabilities are expressed as objective clauses.

1. a. *I believe she will come.* / b. *It is likely that she will come.*

2. a. *I think it's going to rain.* / b. *It is probably going to rain.*

Conclusion

Thus, the concept of grammatical metaphor, as established and defined by M.A.K. Halliday within the systemic functional model of language, is of paramount importance. Although the traditionally known concept of metaphor was initially perceived as "lexical metaphor," it eventually gained recognition as grammatical metaphor. This is because it is inherently linked to words and the lexicon of the language. As observed, grammatical metaphor can be explained in relation to lexical metaphor: it is based on the same metaphorical movement but is rooted in the grammar of the language, thereby utilizing grammatical resources. Considering the general organization of these resources into the major metafunctions language serves, we have seen how Halliday distinguishes ideational metaphors – related to alternative ways of describing reality – from interpersonal

metaphors, which offer alternative possibilities for expressing modal meanings (modality metaphors) or exchanging commands (mood metaphors).

Introduction

The terminological layer differs from the word groups included in the general vocabulary according to its special position, function, essence and role, according to its essence, areas of development and characteristics. These different features connect the terms of logic, psychology, linguistics and other fields of knowledge. However, terms are mainly based on two aspects, the concept and its linguistic sign and form. They have special content and structure as lexical language elements. This special layer of the lexicon differs significantly from the general lexicon with its unique semantics, structure and laws in many aspects. The forms of unification and standardization of terminology is one of the actual problems of linguistics and terminologies of languages have been theoretically studied. Therefore, terminology, its theoretical and practical problems are closely related to the pace of development of society. The development of terminology as a whole is closely related to the development of society, as a result of it, the development of the terminological layer of the language is directly related to this development and progress.

Materials and Methods

This study is based on the analysis of scientific literature and research related to Azerbaijani terminology. Relevant linguistic studies, terminological dictionaries, and works on the formation, development, unification, and standardization of terms were examined. A descriptive and analytical approach was used to identify the main features of terminology in the Azerbaijani language. Particular attention was given to the formation of national terms, the role of borrowed terms, lexical parallels, and the standardization of terminology.

Discussions

Terms as the units of scientific language are studied as the main object of terminology. The development of terminology in the modern Azerbaijani language, the actual problems of terminology, the role of borrowings in the enrichment of the Azerbaijani language were extensively

analyzed. The specific features of the terms are: "a term related to that field cannot be created outside the field; field terms begin to emerge in the process of defining its basic concepts and increase with further development of the field; since one concept of the field is defined based on others, other units of that terminological field are also involved in the definition of the term related to the field; in the process of clarifying concepts related to the field, the term may change and new variants of the term may appear." In connection with the development of society, the vocabulary of the language is constantly changing, updating and enriching. (1)

Terminology of the Azerbaijani language has been sufficiently formed in various fields of technology. The problem of standardization of terminology is one of the most urgent problems. Innovations in scientific-technical, socio-economic and cultural life are more prominently observed in the constantly updated and enriched terminology. The most convenient way to create and enrich terminology in the Azerbaijani language is to create terms, term-word combinations based on the internal capabilities of the language. The process of creating terms in Azerbaijani language, goes mainly in two directions. One of them is to use the vocabulary of the language, and the second is to acquire scientific terms. At the same time, it is justified by rich facts that the terminological base of various fields of science in the Azerbaijani language was formed on the basis of international terms taken from Russian, European, Turkish languages, in addition to the language's own internal capabilities. Thus, the terms of each of the assigned languages should be selected for different fields.

S. Sadygova also writes that if we want to develop our scientific language, we must collect the rich vocabulary of the people's language and use it comprehensively in term creation. This idea seems to have been said at the beginning of the last century: after all, the rich vocabulary of the people's language began to be collected as early as the 20s-30s of the last century, very significant works have been written in this direction, dialectological dictionaries have been published. It remains to use those dictionaries in term creation! We will now pay attention to several historical terms. The terms we will give as examples have already found their place in dictionaries and have been developed. We will simply try to explain them.

In Azerbaijani language creation of terms based on the internal capabilities of the language. For this purpose, the Azerbaijani language has wide functional possibilities. The study shows that today the terms created on the basis of the internal capabilities of the language constitute the main part of the terminological base. In Azerbaijani language the creation of the national term is based on the common literary language. These terms have a positive effect on easy understanding, pronunciation, quick memorization, term creation process. Termination process is grouped as transfer of meaning, expansion of meaning, clarification of meaning. Terminological layer is the main part of the vocabulary of language, is enriched not by borrowed words, but by the creation of national terms. (2)

Doublets and lexical parallels are main aspects in the terminology. Every doublet has two aspects - the first aspect is the general nature of the doublet, which puts it in a parallel order with other words. They are called "lexical parallelism" or "lexical parallels". Parallels are special types of expression of the same concept in different words. Parallelism in terminology actually appears a positive event.

Unification and standardization of terminology define concepts and bringing them into a certain system in the Azerbaijani language. Systematicity in terminology should be organized according to both extra linguistic and linguistic features. In linguistics, the lexical-semantic and

grammatical requirements for terms, their genealogical composition, structural-semantic, lexical-grammatical features, extensive analysis facilitate the work of arranging terminology. Standardization of terminology consists of three stages - inventory of terminology, arrangement of terminology, unification of terminology. (3)

Result

Terminological dictionaries serve to organize terms. Terminological dictionaries are mainly divided into two groups, monolingual and multilingual. Monolingual terminological dictionaries are more explanatory dictionaries, in which terms related to a specific field and their explanation are given. The terminological dictionaries are divided into three groups due to the purpose: bilingual terminological dictionaries, multilingual terminological dictionaries, explanatory terminological dictionaries.

Conclusion

In the era of globalization, terminology is experiencing a period of rapid development. Of course, the increase in the number of fields is related to scientific and technical progress. Because language is a social event related to society.

LANGUAGE AND STYLE FEATURES OF THE FIRST KARABAKH WAR IN HASAN ELSAVAR'S PROSE CREATION

Natavan Məhəmmədəli İBRAHİMOVA

Doctoral student, employee of the Department of Literary Studies, Nakhchivan Branch of ANAS

E-mail: ibrahimovanatavan798@gmail.com

ORCID ID: [0009-0000-8145-5717](https://orcid.org/0009-0000-8145-5717)

Abstract: The article examines the work of Hasan Elsavar (1925–2003), one of the prominent representatives of the Nakhchivan literary environment, a member of the Azerbaijan Writers and Journalists Union, and focuses on the language and style features of the stories he wrote during the years of independence. The socio-political events of the years of independence were artistically reflected in the writer's stories, and the influence of these processes on the author's language and style was determined. The atmosphere of the years of independence, national spirit and patriotic feelings are vividly reflected in the works of Hasan Elsavar, who is familiar with the richness of the Azerbaijani language. The writer's prose works present the difficult psychological moments and moral shocks caused by the war in an artistic language. The author used the language factor, means of artistic expression and description, dialogues and monologues in describing events and opening epic plots. The emotional shades in the writer's works increase the impact of the work. The writer's language is distinguished by its simplicity, imagery, emotionality, and

effectiveness. In presenting the internal family of images, the author took advantage of the possibilities of folk speech styles. In general, Hasan Elsevarin, by giving an artistic description of the historical events of the period in the language of his works, revealed his civic position in preserving the phonetic, lexical and grammatical structure of the Azerbaijani language. It should be especially noted that the language and stylistic features of the stories dedicated to the Karabakh war, which the prose writer sensitively wrote, attract attention as a successful result of the search for a new topic in literature during the years of independence.

Keywords: Karabakh problem, artistic language, years of independence, style, prose.

HƏSƏN ELSƏVƏRİN NƏSR YARADICILIĞINDA BİRİNCİ QARABAĞ MÜHARİBƏSİNİN DİL VƏ ÜSLUB XÜSUSİYYƏTLƏRİ

Xülasə: Məqalədə Naxçıvan ədəbi mühitinin görkəmli nümayəndələrindən biri, Azərbaycan Yazıçılar və Jurnalistlər birliklərinin üzvü Həsən Eləvər (1925–2003) yaradıcılığı araşdırılmış, xüsusilə müstəqillik illərində qələmə aldığı hekayələrin dil və üslub xüsusiyyətləri tədqiqatə cəlb edilmişdir. Müstəqillik illərinin ictimai-siyasi hadisələri yazıçının hekayələrində bədii şəkildə əks olunmuş, həmin proseslərin müəllifin dil və üslubuna təsiri müəyyənən olmuşdur. Azərbaycan dilinin zənginliyinə bələd olan Həsən Eləvərin əsərlərində müstəqillik illərinin ab-havası, milli ruh və vətənpərvərlik duyğuları qabarıq şəkildə əks olunur. Yazıçının nəsr əsərlərində müharibənin yaratdığı ağır psixoloji məqamlar, mənəvi sarsıntılar bədii dillə təqdim edilir. Müəllif hadisələrin təsvirində və epik lövhələrin açılmasında dil faktorundan, bədii ifadə və təsvir vasitələrindən, dialoqlar və monoloqlardan istifadə etmişdir. Yazıçının əsərlərindəki emosional çalarlar əsərin təsir gücünü artırır. Yazıçının dili sadəliyi, obrazlılığı, emosionallığı, təsirliyi ilə seçilir. Obrazların daxili ailəsinin təqdimində müəllif xalq danışığı üslublarının imkanlarından yararlanmışdır. Ümumilikdə, Həsən Eləvərin dövrün tarixi hadisələrinin bədii təsvirini öz əsərlərinin dilində verməklə Azərbaycan dilinin fonetik, leksik və qrammatik quruluşunun qorunmasında öz vətəndaşlıq mövqeyini ortaya qoymuşdur. Xüsusilə qeyd etmək lazımdır ki, nasirin həssaslıqla qələmə aldığı Qarabağ müharibəsinə həsr olunmuş hekayələrinin dil və üslub xüsusiyyətləri müstəqillik illərində ədəbiyyatda yeni mövzu axtarışının uğurlu nəticəsi kimi diqqəti cəlb edir.

Açar sözlər: Qarabağ problemi, bədii dil, müstəqillik illəri, üslub, nəsr.

Introduction

One of the talented writers of the 20th century was Hasan Elsevar, who always stood out with his distinctive style. Hasan Mehdi oğlu Fatullayev was born on May 25, 1925, in the ancient land of Azerbaijan, the city of Nakhchivan. He received his primary education at School No. 1 named after İslam Safarlı, and later continued his studies at the M. F. Akhundov State Pedagogical Institute of Russian Language and Literature in Baku. He began his literary career in 1942 with a poem titled "Azərbaycan fəxr edir," published in the *Şərq qapısı* newspaper. Although Hasan Mehdi oğlu Fatullayev started his literary journey with poetry, he also earned a unique place in our literature as a prose writer and playwright. Hasan Elsevar's books *Ürək daşdan deyil* (1982) and *Zəlzələ* (1987) were published later. As in his previous works, in the poems and verses included in these books, the author calls upon readers to embrace nobility and kindness (Akhund & Veliyev, 2008).

Materials and Methods

The Republic of Azerbaijan gained its independence on October 18, 1991, following the collapse of the Soviet empire. These political processes significantly influenced our literature. Characterizing the literature of that period, Academician Isa Habibbayli writes: "Müstəqillik dövrü Azərbaycan ədəbiyyatı iki mərhələdə inkişaf etmişdir. 1990-cı illər və 2000-ci illər. Birinci mərhələni əhatə edən 1990-cı illər ədəbiyyatı sovet hakimiyyətinin son illərindən müstəqillik dövrünə 'keçid əlamətləri' ilə səciyyələnir" (Habibbayli, 2016). A certain part of Hasan Elsevar's work belongs to this transitional era and the years of independence. His prose book *Qaçmaq igidlik deyil* was also written during the early years of independence. This period is characterized by painful issues such as the First Karabakh War, the Karabakh problem, the occupation of lands, and the martyrdom and missing status of compatriots. Especially the events occurring during the First Karabakh War left deep marks in the memory of the people, and these themes were broadly reflected in literature. During that time, martyrdom and the Karabakh problem became leading themes in both poetry and prose. "Ayrıca tədqiq edilməyən Naxçıvan tarixi və klassik ədəbiyyat nümunələrinin öyrənilməsi yalnız milli müstəqillikdən sonra diqqət mərkəzinə gəlmiş və əsasən ümumi araşdırmalar çərçivəsində tədqiq edilmişdir" (Gasimov, 2018).

Results and Discussion

The stories included in Hasan Elsevar's book *Qaçmaq igidlik deyil*, written during the years of independence, belong to the series of works dedicated to the theme of the First Karabakh War. The stories *Qaçmaq igidlik deyil* (1994), *Kəşfiyyatçılar* (1994), and *Girovlar* (1995) are dedicated to the First Karabakh War. The writer's book of stories titled *Qaçmaq igidlik deyil* was published in 1998 by the "Gənclik" publishing house in Baku. The language of the book *Qaçmaq igidlik deyil* is simple, fluent, and impressive. Through the depiction of combat scenes in the story, the author emotionally reflects the bitter consequences of war using vivid descriptive and expressive means, finding a way into readers' hearts with simple, concise, and impactful sentences. "Yazıçı, hər şeydən əvvəl sözü duymalı, sözün yerini və qədrini bilməli, canlı danışığı və ümumxalq dilini də dərinlən öyrənməli, bədii təfəkkürlə, poetik dərrakə ilə fəlsəfi təfəkkürü və psixoloji müşahidəni birləşdirməlidir. Dünya ədəbiyyatının ən yaxşı nümunələri dildən bu şəkildə istifadə üsulu ilə yaranmışdır. Bütün dövrlərdə bədii dil canlı danışq dilindən alınan sözlər hesabına zənginləşmişdir" (Gurbanov, 2019). From this perspective, Hasan Elsevar's work serves as a clear example. In the writer's works, these events are presented not only from a historical perspective, but also through the prism of human destinies, love for the homeland and native land, and spiritual turmoil. The author has not used heavy dialects or unnecessary loan words in his works. The language of his works is simple and close to the colloquial language of the people.

It is known from historical facts that the Azerbaijani Army was defeated in the First Karabakh War, losing approximately twenty percent of its territory. Our enemies, whose eyes are constantly set on Azerbaijani lands, have never abandoned their malicious intentions. On the eve of the First Karabakh War, Azerbaijani literature and poetry played an important role in awakening the national spirit of the people, preparing them for upcoming events, and calling people to solidarity. The heroes of Hasan Elsevar's stories dedicated to the First Karabakh War are brave sons and daughters of Azerbaijan who dealt heavy blows to the enemy. "O, əsərlərində müharibə səhnələrini bacarıqla yaratdığı kimi döyüşçü əsgər və zabitlərin obrazlarını da hərtərəfli şəkildə işıqlandırılmışdır" (Habibbayli, 2015). This stems from the author's professionalism in presenting his people not in the image of the defeated, but in the image of the victor. Motifs of belief in victory, high spirits, and a

call to struggle are strong in his works. Academician Isa Habibbayli writes about this: "Həsən Elşəvərin müharibə dövrü nəsrindəki vətənpərvərlik ideyaları yeni nəsillər üçün mühüm əhəmiyyətə malikdir. Yazının müasirlərimizin həyatından bəhs edən əsərlərində ictimai motivlər insan mənəviyyəti ilə vəhdətdə təqdim olunmuşdur. O, bütün yaradıcılığı boyu cəmiyyət və qəhrəman münasibətlərinin bədii təqdiminə üstünlük vermişdir" (Habibbayli, 2018).

The author used both historical facts in his stories and added extra details to the work through his artistic imagination. In works addressing the First Karabakh War, female characters are also presented as heroes; they are brave characters who actively participate in the struggle against the enemy and conduct reconnaissance. The characters created by the writer represent the patriotic individual of Azerbaijan who is ready to give their life for the motherland, does not fear death, and does not retreat in battles. The Karabakh problem is presented in his works not only as a loss of territory, but also as a test of national identity and moral values, which prompts the reader to think and approach events with greater sensitivity.

In the story *Qaçmaq igidlik deyil* (1994), events unfold in the city of Shusha. The hero of the story is 36-year-old Shamistan. He defends the city fighting alongside his family until his last breath and calls people to struggle for the homeland. Shamistan turns his house into a fortress and, together with his wife Zulfiyyə and daughter Goncha, offers resistance until the end. Enemy forces keep the house under siege for a long time but cannot break inside. On the 21st day of the siege, Shamistan sprinkles gasoline and oil on the house, and when the enemy enters, he engulfs the house in flames, dealing them a heavy blow. In the end, Shamistan and his family ascend to the peak of martyrdom. This event is described by the author with high artistic mastery. Through this character, the author conveys the nationwide tragedy that occurred in Karabakh in the 1990s to his reader and the public. Alongside the real bitterness of war, love for the homeland and the spirit of resistance are brought to the forefront in the work.

The language of the story is simple, fluent, and emotional. However, in some episodes (especially the combat scenes of young Goncha), an predominance of artistic exaggeration and imagination is observed. Overall, the book of stories *Qaçmaq igidlik deyil* is written in an optimistic spirit. Hasan Elşəvar also uses elements of verse in some stories, which is an indicator of his poetic style. For example:

Şuşa, oğlunam sənin, Əskəriyəm vətənin, Yaz köksünə, eşit, bil, Qaçmaq igidlik deyil!
(Elşəvərli, 1998).

We know that creative people use language in accordance with their goals. Poets and writers must use pure Azerbaijani words in their works, take care of the language, serve the purity and protection of the Azerbaijani language, and protect it from foreign influences. Creating aesthetic pleasure in the reader becomes the primary goal for the artist. A number of linguistic and social factors in the development of language are undeniable. The role of the literary language in the development and promotion of language among the peoples of the world is undeniable. As we know, Hasan Elşəvar's works have been translated into 11 languages and have gained a large readership in various countries around the world.

Another remarkable story by Hasan Elşəvar is *Kəşfiyyatçılar*. In the work, Azerbaijani scouts Shahnaz and Sayyar operate in enemy territory, carry out various operations, and successfully return. They infiltrate the enemy environment and gather important intelligence information. Through these characters, the author reflects the bravery and heroism of the Azerbaijani people. The love line between Shahnaz and Sayyar adds artistic and aesthetic value to the work. At the same

time, the real socio-political landscape of the 1990s is accurately depicted. Reading the stories written during the independence period brings us back to that era and wartime events. It is as if the episodes of that period and the battles on the frontline come to life before our eyes. The author described the events occurring during the First Karabakh War not only with historical facts, but also with real and impressive colors thanks to the possibilities of writer's imagination. Lost dreams, fantasies, and alongside them the shattering of hopes for the future constitute the main thread of the author's works. The heroes of the story never lose their hopes, their faith in the future, and their belief that they will one day return to their ancestral lands. In this work as well, the author skillfully used pure Azerbaijani words, dialects, and artistic descriptive and expressive means. The language of the work is simple. Through the story, we can see how deeply attached Hasan Elsevar is to our people, our native land, and our language.

In the story *Girovlar* (1995), events take place in the village of Samandar. This village bears a symbolic character and represents a generalized Azerbaijani village. The attack of Armenian forces on the village and the capture of the population as prisoners constitute the main conflict line in the work. Female characters are also presented as heroes in the work. Particularly, the characters Khanumzar and Shahnaz stand out with their bravery and patriotism. Through these characters, the author conveys the real picture of the war and the tragedy experienced by the people to the reader. One of the interesting facts in the work is that the hero nicknamed Haso is actually Khanumzar, the daughter of teacher Mirza from the same village as Famil. The author chooses women as heroes even in the Karabakh war, bringing the legendary life paths and fighting spirit of heroes who sacrificed their lives on the path of defending their native lands into literature during the independence years. By the way, among the prose writer's female figures, Khanumzar and Shahnaz are particularly noteworthy characters. Both characters stand out with their heroism and valor. The author conveys the historical realities of this period to the reader by bringing up the massacres committed by Armenians in Nagorno-Karabakh. The historical past and realities of the Samandar village and these regions serve as a living chronicle. Hasan Elsevar's work is distinguished by the diversity of its themes and depth of content. The use of figurative expressions, recourse to phraseological units, and metaphoricity indicate that the language of the author's works is at a high level.

Overall, love for the homeland, attachment to the native land, and the national spirit are strongly expressed in Hasan Elsevar's stories. The writer calls upon the reader not to forget the realities of the era and to comprehend them deeply.

Conclusion

The prose language of Hasan Elsevar stands out for its purity and cleanliness. These stories dedicated to the First Karabakh War hold an important place in the context of the Azerbaijani language with their linguistic and stylistic features. The writer's language is distinguished by its simplicity, figurativeness, emotionality, and impactfulness. In uncovering the inner world of the characters, the author approached with his own psychological stance and skillfully used the popular conversational style. Acting from a civic position, the author gives a moral assessment to the First Karabakh War, creates a kind of literary monument through words, and stands guard over the Azerbaijani language. Hasan Elsevar's language is a perfect language with a rhyme and meter system that meets all the norms of the Azerbaijani language. This is a clear manifestation of the author's excellent mastery of the phonetic, lexical, and grammatical norms of our language. His stories concerning the First Karabakh War written during the years of independence not only made

an important contribution to the enrichment of Azerbaijani prose, but also served the enrichment, purity, and clarity of the Azerbaijani language, and Hasan Elsevar was distinguished by his unique stylistic features.

PERSONALITY-RELATED PROVERBS IN HIGHER EDUCATION: LEXICAL, DISCOURSE AND PEDAGOGICAL PERSPECTIVES

Nargiz Polad HASHIMOVA

Doctoral Student, Azerbaijan University

E-mail: nargiz.hashimova@azmiu.edu.az

ORCID ID: 0000-0002-0216-4784

Abstract: This study investigates the semantic, discourse and pedagogical functions of proverbs characterizing personality in higher education language teaching. The research focuses on English and Azerbaijani proverbs related to positive and negative personality traits, intellectual qualities and social behavior. The study applies qualitative semantic and discourse analysis in order to classify proverbs according to their thematic and cultural characteristics. Particular attention is paid to metaphorical meaning, moral evaluation and discourse functions reflected in proverb usage.

The article also examines the pedagogical applicability of personality-related proverbs in EFL and higher education contexts. Proverbs are analyzed as effective tools for vocabulary development, intercultural communication, discourse competence and critical thinking activities. The study demonstrates that proverbs can enrich lexical knowledge, improve argumentative speaking skills and increase students' awareness of cultural values reflected in language. The findings suggest that integrating proverb-based activities into higher education language teaching contributes to the development of linguistically and culturally competent learners.

Key words: proverbs, personality traits, discourse competence, vocabulary teaching, intercultural communication, higher education, semantic analysis

ALİ TƏHSİLDƏ ŞƏXSİYYƏTLƏ BAĞLI ATALAR SÖZLƏRİ: LEKSİK, DİSKURSİV VƏ PEDAQOJİ YANAŞMALAR

Nərgiz Polad HƏŞİMOVA

Azərbaycan Universitetinin doktorantı

E-mail: nargiz.hashimova@azmiu.edu.az

ORCID ID: 0000-0002-0216-4784

Xülasə: Bu tədqiqat ali təhsil müəssisələrində dil tədrisi prosesində şəxsiyyət xüsusiyyətlərini xarakterizə edən atalar sözlərinin semantik, diskursiv və pedaqoji funksiyalarını araşdırır. Tədqiqatın əsas məqsədi ingilis və Azərbaycan dillərində müsbət və mənfi şəxsiyyət keyfiyyətlərini, intellektual xüsusiyyətləri və sosial davranışı ifadə edən atalar sözlərinin təhlil edilməsidir. Araşdırmada atalar sözlərinin tematik və mədəni xüsusiyyətlərinə görə təsnifləndirilməsi üçün keyfiyyət yönümlü semantik və diskurs təhlili metodlarından istifadə edilmişdir. Xüsusi diqqət atalar sözlərində əks olunan məcazi mənaya, mənəvi qiymətləndirməyə və onların ünsiyyət prosesində yerinə yetirdiyi diskurs funksiyalarına yönəldilmişdir.

Məqalədə, həmçinin şəxsiyyətlə bağlı atalar sözlərinin xarici dil kimi ingilis dilinin (EFL) və ali təhsil mühitində tədris imkanları araşdırılır. Atalar sözləri lüğət ehtiyatının zənginləşdirilməsi, mədəniyyətlərarası ünsiyyət bacarıqlarının inkişafı, diskurs kompetensiyasının formalaşdırılması və tənqidi düşünmə fəaliyyətlərinin təşviqi baxımından effektiv vasitə kimi təqdim olunur. Tədqiqatın nəticələri göstərir ki, atalar sözlərindən istifadə tələbələrin leksik biliklərini genişləndirir, arqumentativ nitq bacarıqlarını inkişaf etdirir və dil vasitəsilə ifadə olunan mədəni dəyərləri daha dərinlən dərk etmələrinə kömək edir. Nəticə etibarilə, ali təhsil dil tədrisinə atalar sözlərinə əsaslanan fəaliyyətlərin integrasiyası həm dil, həm də mədəni baxımdan səriştəli öyrənmələrin hazırlanmasına mühüm töhfə verir.

Açar sözlər: atalar sözləri, şəxsiyyət xüsusiyyətləri, diskurs kompetensiyası, lüğət tədrisi, mədəniyyətlərarası kommunikasiya, ali təhsil, semantik təhlil

Proverbs use metaphor, antonymy, and synonymy to express moral and social values. For example, "Honesty is the best policy" expresses ethical values, while "Cowards die many times before their death" expresses attitudes toward cowardice. Although proverbs have been analyzed from folkloric, semantic and cultural perspectives, limited attention has been paid to their role in developing discourse competence and personality-oriented vocabulary in higher education classrooms. In particular, comparative pedagogical applications across Azerbaijani and English educational contexts remain insufficiently explored. Therefore, this study aims to investigate the semantic, discourse and pedagogical potential of personality-related proverbs in higher education language teaching.

Research Questions

1. How do personality-related proverbs contribute to vocabulary development in higher education?
2. What discourse functions do these proverbs perform in educational communication?
3. How can proverb-based activities improve intercultural and critical thinking skills?

Methodology

The study applies qualitative semantic and discourse analysis to English and Azerbaijani proverbs characterizing personality traits. A comparative descriptive method was used to classify proverbs into semantic groups such as positive qualities, negative qualities, appearance, intellectual

traits and social behavior. The selected proverbs were examined in terms of their lexical meaning, metaphorical structure, cultural value and discourse function.

The analysis focuses on how personality-related proverbs express moral evaluation, social judgment and cultural attitudes toward human character. Special attention was paid to semantic relations such as synonymy, antonymy, contrast and metaphor, as these elements play an important role in proverb meaning.

The pedagogical applicability of these proverbs was evaluated within higher education language teaching contexts. In this regard, the study considers how proverbs can be used for vocabulary development, discourse competence, intercultural awareness, translation practice and critical thinking activities. Thus, the methodology combines linguistic analysis with pedagogical interpretation.

Syntactic features: Many proverbs use structures such as parallelism (“Like father, like son”), ellipsis (“Out of sight, out of mind”), and conditional constructions (“If the shoe fits, wear it”). These structures have great educational potential. Discourse functions. Proverbs are used to generalize ideas, draw moral conclusions, or create rhetorical emphasis. They serve as pre-formed discourse markers in both written and oral speech. Although proverbs have been widely studied in Western, Turkological, and Azerbaijani linguistic traditions, the issue of the pedagogical application of proverbs characterizing personality remains a relatively understudied area.

The semantic field of proverbs characterizing personality

Proverbs related to personality have high semantic density and can be divided into micro-domains that reflect universal and national-cultural aspects of human character .

Results and Discussion

The analysis demonstrates that personality-related proverbs can be classified into several semantic groups with different pedagogical and discourse functions. The following table summarizes the main semantic categories and their educational applications.

Semantic Group	Example	Educational Function
Positive qualities	Honesty is the best policy	ethical vocabulary development
Negative qualities	Liars need good memories	critical discussion and moral evaluation
Intellectual qualities	Empty vessels make the most noise	analytical and reflective thinking
Appearance	Fine feathers make fine birds	intercultural comparison
Social behavior	Actions speak louder than words	discourse and communication skills

Positive qualities

Proverbs expressing positive personality traits promote moral values, wisdom and socially approved behavior. Examples such as “Honesty is the best policy,” “Actions speak louder than words,” and “Patience is a virtue” emphasize honesty, responsibility and self-control as important qualities of human character. These proverbs reflect positive ethical standards and encourage socially constructive behavior.

From a pedagogical perspective, such proverbs are useful for teaching value-oriented vocabulary, developing speaking and discussion skills, and encouraging students to express opinions on ethical issues. They also contribute to intercultural understanding by demonstrating how different societies value honesty, patience and responsibility.

Negative qualities

Proverbs in this group, such as “A coward dies a thousand deaths,” “Liars need good memories” and “Fools rush in where angels fear to tread,” demonstrate the consequences of negative behavior. Traits such as cowardice, lying and thoughtlessness are presented as objects of public condemnation in both English and Azerbaijani folklore. These proverbs are built on the principle of antithesis: cowardice against courage, lying against honesty, foolishness against wisdom.

Their main function is to define moral boundaries by criticizing negative behavior. Proverbs expressing negative qualities strengthen the didactic and normative function of language. They play the role of moral warning at the lexical-semantic level and serve to form ethical awareness and critical thinking in students. In teaching, such examples are suitable for contrastive analysis and critical discussion tasks.

Intellectual qualities Proverbs in this section, such as “A wise man learns by the mistakes of others” and “Empty vessels make the most noise,” express the difference between intelligence and wisdom and foolishness and self-showing. The former criticizes learning from experience and observation, while the latter criticizes empty talk and lack of knowledge. Proverbs of this type are indicators of cognitive culture and social behavior. They also reflect principles such as cognitive values (learning, thinking, analyzing) and discourse etiquette (speech should be meaningful and purposeful) [6]. Proverbs expressing intellectual qualities are of particular importance in terms of cognitive linguistics and pedagogical language teaching. They show the manifestation of the culture of thought through language and help to form analytical and reflective thinking skills in students.

Methodological applications in higher education

Proverbs play an important role as a bridge between language knowledge and cultural knowledge, and their integration into teaching in higher education serves to form students' lexical, discourse and cultural competence. In this regard, the methodological application of proverbs can be carried out in several directions. First, in terms of vocabulary development, grouping proverbs by semantic areas (for example, honesty, cowardice, wisdom), teaching idiomatic expressions and collocations used in them, as well as matching tasks with personality traits strengthen students' ability to understand semantic relationships and expand their vocabulary. Second, in terms of discourse competence, proverbs can be used as topic or conclusion sentences in dialogues, essays and academic speech. This approach provides students with discourse skills such as rhetorical emphasis, argumentation and logical inference. Third, in terms of intercultural understanding, comparing the equivalents of proverbs in Azerbaijani, English, German and Turkish reveals cultural parallels. Discussing how personality traits are valued in different nations and critically analyzing the relevance of ancient wisdom in the modern era forms the flexibility of cultural thinking in students. Finally, at the level of practical application, this knowledge can be strengthened through various classroom tasks: - matching proverbs with appropriate adjectives; - developing memory and attention by completing missing parts; - improving translation skills by comparing equivalents in different languages; - developing critical and creative thinking by using proverbs as arguments in debates. Thus, the systematic integration of proverbs into the teaching process in higher education can be evaluated as a multidimensional methodological approach that increases both students' lexical and discourse skills, as well as the level of cultural and ethical thinking.

Conclusion

Proverbs that characterize personality create an important link between linguistics and pedagogy. Their semantic content, stylistic and discourse features serve as an effective tool for

teaching vocabulary and discourse at the higher education level. As a result of including proverbs in teaching, teachers can achieve a threefold pedagogical goal:

- enriching lexical knowledge
- strengthening discourse skills
- forming intercultural understanding.

Future research could expand the comparative analysis of proverbs related to identity across languages and explore their application in the development of critical thinking, argumentation, and rhetorical skills.

The integration of proverb-based pedagogy into higher education supports not only lexical enrichment but also the formation of culturally aware, critically thinking and discourse-competent learners.

THE INTERACTION BETWEEN LANGUAGE AND SOCIETY

Nazrin Rovshan ASGARLI

Karabakh University

E-mail: esgerlinezrin50@gmail.com

ORCID ID: 0009-0000-1705-1312

Abstract: Language is a complex system of signs that serves as the main means of communication among people. These signs have different forms and functions, reflecting the cultural and social characteristics of a community. Sociolinguistics is a branch of linguistics that studies the relationship between language and society, focusing on how social factors influence language use and development. Various social factors, including age, gender, social class, ethnicity, religion, and education, can affect the way individuals use language in different contexts. The field of sociolinguistics is generally divided into two main areas: micro-sociolinguistics and macro-sociolinguistics. Micro-sociolinguistics examines language use in individual and interpersonal contexts, while macro-sociolinguistics focuses on broader social and institutional aspects of language. One of the important topics in sociolinguistics is bilingualism and multilingualism. Bilingualism refers to the ability to use two languages, whereas multilingualism involves the use of more than two languages. Multilingualism can be classified into individual and societal types. Furthermore, sociolinguistics investigates language variation and change, language attitudes and ideologies, language and identity, as well as language planning and policy. The study of the relationship between language and social class demonstrates how social structures influence linguistic choices and communication patterns. Sociolinguistic research helps to better understand the role of language in society and its connection with social, cultural, and historical processes.

Key words: language, society, sociolinguistics, micro sociolinguistic, macro sociolinguistic, bilingualism, multilingualism.

DİL VƏ CƏMİYYƏT ARASINDAKI QARŞILIQLI ƏLAQƏ

Nəzrin Rövşən ƏSGƏRLİ

Qarabağ Universiteti

E-mail: esgerlinezrin50@gmail.com

ORCID ID: 0009-0000-1705-1312

Xülasə: Dil və cəmiyyət bir-biri ilə sıx qarşılıqlı əlaqədə olan mühüm anlayışlardır. Dil insanların fikir, hiss və düşüncələrini ifadə etməsinə xidmət edən əsas ünsiyyət vasitəsidir. Dil işarələr sistemindən ibarətdir və bu sistem müxtəlif növ işarələri özündə birləşdirir. Dilin cəmiyyətlə qarşılıqlı münasibəti nəticəsində dil və sosial prosesləri öyrənən sosialinqvistika elmi yaranmışdır. Sosialinqvistika cəmiyyətdə dil istifadəsinə təsir göstərən sosial amilləri araşdırır. Yaş, cins, sosial sinif, din, təhsil və digər sosial xüsusiyyətlər insanların nitq davranışına və dil seçimlərinə təsir edən əsas amillər hesab olunur.

Sosialinqvistika əsasən mikro və makro sosialinqvistika olmaqla iki istiqamətə bölünür. Bu sahənin mühüm tədqiqat mövzularından biri ikidillilik və çoxdillilikdir. İkidillilik iki dildən istifadəni, çoxdillilik isə ikidən artıq dilin istifadəsini ifadə edir. Çoxdillilik fərdi və ictimai olmaqla iki növə ayrılır. Bundan əlavə, sosialinqvistika dil müxtəlifliyi, dil münasibətləri və ideologiyası, dil və şəxsiyyət, dil planlaması və siyasəti kimi sahələri də əhatə edir. Dil və sosial sinif arasındakı əlaqənin öyrənilməsi zamanı istifadə olunan metodlar və əldə edilən nəticələr dilin cəmiyyətdəki rolunu daha dərinlən anlamağa imkan verir.

Açar sözlər: dil, cəmiyyət, sosialinqvistika, mikro sosialinqvistika, makro sosialinqvistika, ikidillilik, çoxdillilik.

Introduction

Language - a system of conventional spoken, manual (signed), or written symbols by means of which human beings, as members of a social group and participants in its culture, express themselves. **Society**- is a complex and organized group of individuals who share culture, norms and interactions within a defined geographical or social space. Language is indissolubly linked with the members of the society in which it is spoken and social factors are inevitably reflected in their speech. Every community develops its own way of speaking, shaped by its history, culture, identity, and social structure. In the same way, language influences how people think, behave, and interact. Exploring language and society helps us understand why languages change, why dialects form, and how culture shapes communication. (Downes,1998) Language also is a system of signs. These signs have been classified into two: Natural (smoke, heat) and Conventional (road signs). Men also use other ways to create and convey symbols. For instance, they symbolize through personal gestures like hugs, handshakes, winks or nods. (Noah and Olagbemi,1998). Language and society are inseparable parts. They are like flesh and nails. Language is formed in society, and society develops on the basis of language. Without language, there can be no society and without society, language cannot develop. As a result of their mutual interaction, sociolinguistics emerges.

Sociolinguistics - According to Peter Trudgill, sociolinguistics is the study of the relationship between language and society. According to William Labov, sociolinguistics is the study of the interaction between language and society, and how language use varies according to social factors such as class, ethnicity, and gender. According to Dell Hymes, sociolinguistics is the study of language in its social context, including the way people use language in different social situations and the social norms that govern language use. Based on the three opinions, the conclusion of the definition of sociolinguistics is the study of how language is used in different social contexts and how it is influenced by social factors such as class, gender, ethnicity, and education. (Widiastuti et al., 2023). Sociolinguistics examines how people use language in everyday communication to negotiate social identity, build solidarity, or establish power dynamics, and how language choices are influenced by social, cultural, and situational factors (Dr. Buhari, 2021). The social aspects of language were in the modern sense first studied by Indian and Japanese linguists in the 1930s, and also by forerunners in Denmark and Switzerland around the turn of the 20th century. The first attested use of the term sociolinguistics was by Thomas Callan Hodson in the title of his 1939 article "Sociolinguistics in India" published in *Man in India*.

Social Factors Affecting Language

Sociolinguistics reviews take note of any social factors in society that affect language usage. The social factor is:

Gender - Richard Nordquist (2025) said that “it is well known that subtle, sometimes not-so-subtle, distinctions are made in the choice of vocabulary used to describe women and men. Although words that refer to a profession, such as actor, peddler, and salesman, are considered neutral, these professions are often thought of as belonging more to men.” As a result, women's roles are diminished. Reviewing the evidence, Romaine (1999, pp. 312-13) concludes that “attitudes toward gender equality did not match language usage. Those who had adopted gender-inclusive language did not necessarily have a more liberal view of gender inequalities in language.”

Religion - In religious meetings, in which language and religion interrelate, special religious languages or language varieties are employed for different purposes, such as preaching and prayers. This interchange is termed “glossolalia” by Sawyer, or speaking in tongues, which is “a conspicuous example where utterances in a language unintelligible to virtually everybody present adds a prophetic dimension to public worship” Therefore, the functions and reasons for employing particular languages in specific religious contexts vary and overlap. They depend on the context, audience and intention of the speaker. As reviewed in this section, the attempt to preserve liturgical languages because of their powerful position and emotional impact on believers are some (but not all) of the reasons that encourage speakers to choose carefully which language to employ. (Alsaawi, 2022)

Social class - Families differ in social prestige, wealth, and education. Since language is learned in social interaction, there is variation in child language that correlates with social class. Language education should be seen as enrichment of children’s home language. Within an atmosphere of tolerance and mutual respect, children must be made aware of the potential and validity of language variation in social context. (Vorhoeven, 1998).

Age - in childhood, from the very beginning, children are like sponges and they remember everything, listen to everything, and imitate, and because of that they very easily acquire the language and everything that comes with it. Unlike adults, infancy is characterized by a specific and simple register of words, short and simple grammatical constructions and slow articulation. (Alijagic, 2023). Adolescence- "They often choose their words in ways that deviate from adult usage. By doing so the young demonstrate that the language they received from their seniors is theirs and that they use it as they see fit" (Coulmas, 2013, p. 68). Adulthood and old age- Probably because in these periods of life, language is used according to a template that is firmly established in people's minds. What adults talk about is usually a picture and an example for the younger generation to do the same. "Adult language is the norm, as it were the unmarked choice for all age groups" (Coulmas, 2013, p. 61).

Micro and Macro Sociolinguistics

The major study of sociolinguistics is divided into two: micro sociolinguistics and macro sociolinguistics. Micro sociolinguistics refers to the linguistic perception of speech, such as dialect and stylistic variations. Macro sociolinguistics on the other hand, looks at the overall behavior of language and how it is lost or retained by a community, particularly with regards to social identity impacting language choice. (Torres, 2021). At the micro level, researchers focus on issues such as variations in pronunciation and grammar and ask why these variations exist. At the macro level, entire communities are examined, and researchers ask how events, such as the contact of a language with another language, create linguistic change.

Major Topics of Sociolinguistics

Sociolinguistics focuses on the study of variation in language, or more precisely of variation within speech communities, since the purely geographical aspects of variation had been studied for generations by the students of dialect geography, the study of regional dialects. There is considerable variation among individuals: you do not use the language in the same way when you are chatting to friends in a bar, when you are being interviewed for a job, when you are writing an essay, and when you are being introduced to the Queen. Another key topic in sociolinguistics is bilingualism and multilingualism. (Jasem and Alshami, 2021) **Bilingualism** is the fact of using or being able to speak two languages. Bilingualism impacts on areas as diverse as education; in

assessing which language instruction should be in, brain function; how the languages relate and affect the speaker, and identity; does the speaker relate to one language more than the other? The French scholar A. Boileau classified bilingualism into two types: natural (unconscious) and artificial (conscious). It involves the simultaneous ability to express thoughts, emotions, and other aspects in both languages. Artificial bilingualism emerges as a result of formal language learning. (Turdaliyevck, 2024) **Multilingualism** is the use of more than one fact, either by an individual speaker or by a group of speakers. It is believed that multilingual speakers outnumber monolingual speakers in the world's population. More than half of all Europeans claim to speak at least one language other than their mother tongue. Multilingualism is becoming a social phenomenon governed by the needs of globalization and cultural openness. It is convenient and logical to distinguish between **individual** and **societal multilingualism**. Individual multilingualism relates to the personal sphere and covers the acquisition and use of several languages by an individual. Societal multilingualism refers to the contexts, circumstances, order, manner and routines of use of languages in different kinds of communities, organizations and group. People are not only aware of, but often regulate their language practices through the way they deal with the language varieties they know, and by introducing additional language varieties into their communal life. (Aronin, 2018, pp. 3-34)

Types of Sociolinguistics

Here are several types or branches of sociolinguistics. Here are a few prominent ones;

Language Variation and Change - This branch focuses on studying how language varies and changes in different social groups, regions, and contexts. This variation can manifest in various forms, including accents, dialects, and sociolects. **Language Attitudes and Ideologies**- It explores the social, cultural, and political factors that shape language ideologies and the implications these attitudes have for linguistic diversity and language policies. Language attitude refers to people's feelings, beliefs, and opinions about languages, dialects, accents, or speakers of different languages. (Umrani, 2023)

Language and Identity - This area of sociolinguistics explores how language use and choice contribute to the construction and negotiation of personal and social identities. Bonny Norton (1995-2013) empathizes that language identify is shaped by social, cultural and historical contexts, evolving over time through interactions. Language plays a crucial role in reflecting and constructing various social identities, including ethnic, national, religious and gender identities. Individual identity refers to personal traits and self-perception, such as how one view oneself and is perceived by others. Social identity theory aims to specify and predict the circumstances under which individuals think of themselves as individuals or as group members. Ethnic identity refers to an individual's sense of belonging to a particular ethnic group, typically based on shared cultural practices, language, ancestry, national or regional origins, and historical experience. National identity- is a person's identity or sense of belonging to one or more states or one or more nations. (Dr. SALHI, 2024-2025)

Language Planning and Policy - The goal of language planning can vary widely, from promoting linguistic diversity and preserving endangered languages to facilitating communication and integration within a multilingual society. It helps shape the linguistic landscape of a society and addresses issues related to language use, identity and power dynamics. Language Policy encompasses the laws, regulations and rules that govern language use in a society. Types of Language Planning: corpus, status and acquisition planning. Corpus Planning focuses on its internal

structure, including vocabulary, grammar and writing systems. Status Planning involves efforts to change the function of a language within society, focusing on the social and political roles of languages. Acquisition Planning involves efforts to influence the learning and teaching of a language, focusing on educational policies and programs designed to promote language proficiency and literacy. (Dr. SALHI, 2024-2025)

Materials and Methods

In 1960, William Labov conducted research related to language and class diversity. This analysis is shown in the form of a table below:

Non- standard dialect (associated with lower classes)	Standard dialect. (associated with higher classes)
It looks like it ain't gonna rain today)	It looks as if it isn't going to rain today.
You give it to me yesterday.	You gave it to me yesterday.
Y'gotto do it the right way.	You have to do in the right way.

Results and Discussion

This table shows that it is possible to distinguish the layers of people's speech through their language. Looking at the first sentence, the form of to be is used instead of is, and the correct tense form is used in the second sentence, etc. In the second part of the table the standards of clarity, accuracy and literary language are preserved. As a result, the level of colloquial speech of the lower class is low, non- standard form, while the middle and upper classes are in a high standard form.

Conclusion

Language is one of the most important factors of society. Through it, society develops in all aspects- economically, socially, politically, and ethnically. Humboldt said that "language is a manifestation of the spirit of the people; language is its spirit, and spirit is its language". Society is its language from the very beginning, through language society makes innovations, grows and develops every day. Their mutual relationship creates sociolinguistics, which ultimately allows us to learn how language changes, in what context it is learned, the relationship between society and language and the results of this relationship. In addition, it is possible to learn how and which style of speech people use in different places, with different people depending on the situation. As a result, the language must always be developed, protected and passed on to future generations by the society.

FROM REFERENCE TO INFERENCE: A PRAGMATIC APPROACH TO METONOMY IN ENGLISH

Aysel Akif MEHDIYEVA

Ph.D. student, Ganja State University

Lecturer, Department of Lexis and Country Studies

E-mail: aysel.mehdiyeva@au.edu.az

ORCID ID: 0009-0000-2528-1580

Abstract: Metonymy, along with metaphor, is one of the most frequently used units of language, so its study is of particular interest. A general approach to studying this phenomenon is expressed in the following definition: Metonymy (from the Greek metonymia - renaming) is a trope or mechanism of speech consisting of the regular or occasional transfer of a name from one class of objects or an individual object to another class or individual object associated with it by contiguity, adjacency, or involvement in the same situation. Metonymy is one of the objects of study in the stylistics of modern English. Many researchers define it as a trope based on the interaction of the dictionary and contextual meanings of a word, based on contiguity. As a stylistic device, metonymy carries certain stylistic and aesthetic information. However, metonymy is not always a figure of emphasis and, therefore, does not serve a stylistic or aesthetic function. For example: The kettle boiled (meaning "water in the kettle"), Go to the board (meaning "to answer in class"), He got behind the wheel (meaning "to start driving"). Such examples are called hackneyed metonymy, established metonymy, or regular, standard metonymy. Therefore, it is more correct to speak of two types of metonymy: stylistically marked and stylistically neutral, regular (in foreign linguistics, the term "default" is used), which requires special research methods.

Key words: metonymy, standard metonymy, pragmatic linguistics, pragmatic principle, pragmatic approach

İSTİNADDAN NƏTİCƏYƏ: İNGİLİS DİLİNDƏ METONOMİYAYA PRAQMATİK YANAŞMA

Xülasə: Metonimiya, metafora ilə birlikdə, dildə ən çox istifadə olunan vahidlərdən biridir, ona görə də onun öyrənilməsi xüsusi maraq doğurur. Bu fenomenin öyrənilməsinə ümumi yanaşma aşağıdakı tərifdə ifadə olunur: Metonimiya (yunanca metonymia - adını dəyişmək) adın bir sinif obyektindən və ya fərdi obyektindən digər sinifə və ya fərdi obyektə, eyni vəziyyətdə bitişiklik, qonşuluq və ya iştirak yolu ilə müntəzəm və ya təsadüfi köçürülməsindən ibarət olan trop və ya nitq mexanizmidir.

Metonimiya müasir ingilis dilinin stilistikasında tədqiqat obyektlərindən biridir. Bir çox tədqiqatçı onu lüğətin və sözün kontekstual mənalарının qarşılıqlı təsirinə əsaslanaraq, bitişikliyə əsaslanaraq trop kimi təyin edir. Stilistik bir vasitə kimi metonimiya müəyyən stilistik və estetik məlumatlar daşıyır.

Lakin, metonimiya həmişə vurğu fiquru deyil və buna görə də stilistik və ya estetik funksiyanı yerinə yetirmir. Məsələn: Çaydan qaynadı ("çaydandakı su" deməkdir), Lövhyə keçdi ("dərsdə cavab vermək" deməkdir), Sükan arxasına keçdi ("maşını sürməyə başlamaq" deməkdir). Bu cür nümunələrə hackney

metonimiya, qurulmuş metonimiya və ya müntəzəm, standart metonimiya deyilir. Buna görə də, xüsusi tədqiqat metodları tələb edən iki növ metonimiyadan danışmaq daha düzgündür: stilistik cəhətdən qeyd olunmuş və stilistik cəhətdən neytral, müntəzəm (xarici dilçilikdə "standart" termini istifadə olunur).

Açar sözlər: metonimiya, standart metonimiya, pragmatik dilçilik, pragmatik prinsip, pragmatik yanaşma

Introduction

According to I.A. Shchirova, turning to a paradigm that combines cognitive, discursive, and interpretive characteristics will help deepen our understanding of language (1, p. 131). The cognitive approach to studying language units is based on the premise that linguistic activity is one of the general types of human cognitive activity, including the cognitive processes of perception, thinking, cognition, understanding, and explanation. In this approach, cognitive structures and processes in the human mind are primary. The goal of a cognitive description of language units is to identify and describe the connection between thought (the field of cognitive science) and its representation in discourse (the field of linguistics).

According to researchers in the field of cognitive linguistics, regular metonymy in language reflects its conceptual essence. J. Lakoff and M. Johnson suggested in their work that metonymy, like metaphor, is a powerful cognitive tool through which human cognition of the world is constructed. Metonymic concepts structure not only language, but also thinking, relationships and actions (4, p. 37).

R. Langacker also understands metonymy as a unit of cognitive science and defines it as a cognitive process in which the mental perception of one concept occurs through another (5, p. 30). A. Blank views metonymy as a linguistic device based on clear conceptual relationships between elements of a cognitive frame (3, p. 174). The work of G. Radden and Z. Kovecses, "On the Theory of Metonymy," deserves special attention. In this article, metonymy is considered a conceptual phenomenon involved in cognitive processes and operating within idealized cognitive models (hereinafter, ICMs) (8, pp. 17-61).

Materials and Methods

The conceptual nature of metonymy is explained by the fact that it is based on a reference to a specific concept. Metonymy, like metaphor, is part of our everyday thinking, is based on experience, is subject to general and systemic principles, and structures our thoughts and actions.

The concept of contiguity is fundamental to the examination of metonymy from the perspective of the traditional and cognitive approaches. The traditional perspective places contiguity relations in objective reality, while the cognitive approach examines them at the conceptual level. J. Lakoff examines metonymic contiguity within the framework of idealized cognitive models (ICM) (3, pp. 79-90).

Based on the three cognitive properties of metonymy discussed above, G. Radden and Z. Kovecses offer the following definition of metonymy: "Metonymy is a cognitive process in which one conceptual entity, the vehicle, provides mental access to another conceptual entity, the target, within the same idealized cognitive model" (6, p. 21).

Works devoted to examining regular or standard metonymy (default metonymy) from a cognitive science perspective focus on the study of idealized cognitive models of our thinking, the types of metonymic relationships that arise between concepts within such models, the choice of the source or vehicle of metonymy, and its desired target.

Depending on the type of ontological sphere, three types of ICM are distinguished: iconic, referential, and conceptual. Each of the main types encompasses a range of specific models of metonymic relationships. For example, iconic ICMs serve as the basis for such types of metonymy as "Form instead of Concept" ("dollar" instead of "money"); referential ICMs: "Form or Concept instead of Object or Event" (the word "cow" instead of the real "cow"); conceptual ICMs: "Form or Concept instead of Form or Concept" ("buses are on strike" instead of "bus drivers")

Further, all possible types of metonymic relations within ICMs are combined into two broad configurations: "Part-Whole" and "Part-Part":

The "Part-Whole" configuration may include the following ICMs: Quantitative, Constitutional, Event-Based, Categorical-Objective, Categorical-Feature-Based, and Abbreviated. For example:

1. Quantitative: "The extreme value instead of the entire scale" (How old are you?)
2. Constitutional (material): "A substance instead of an object consisting of it" (The marble spoke).
3. Eventual: "The entire event instead of an element of the event" (Bill smoked marijuana). (The entire event—lighting a marijuana cigarette, bringing it to your lips, inhaling the smoke, etc.)

The "Part-Part" configuration is more diverse and is represented by the following types of ICM: Action, Perception, Cause, Product, Control, Possession, and others. For example:

1. Perception: "The perceived object instead of the perception": "There goes my knee." (perception - knee pain).
2. Cause: "The condition instead of the object causing it": "She was my ruin."
3. Product: "The manufacturer instead of its product": "I've got a Ford."
4. Control: "The controlled instead of the controller": "The Mercedes has arrived."
5. Possession: "The object of possession instead of the owner": "He married money."
6. Place: "The place instead of the event": "Waterloo was a great event."

Results and Discussion

Metonymic relationships arise between two cognitive units and can be either unidirectional or bidirectional. The choice of source, the starting point in metonymic pairs, is governed by certain rules. G. Radden and Z. Koveksis believe that the choice of metonymic direction is based on certain cognitive principles determined by our human experience, the selectivity of our perception of reality, and cultural preferences.

Let's consider the role of each of these cognitive principles of metonymy.

Human Experience

Our human experience, as the determinant of our cognition and perception of the world, is guided by an anthropocentric view of the world and our personal interactions within it. This implies that:

- the animate prevails over the inanimate;
- the world is perceived through the prism of the subjective, not the objective;
- concrete objects are more salient to perception than abstract entities;
- objects involved in our interaction are perceived more quickly than those with which we do not interact;
- functional objects are more important to our perception than non-functional ones, etc.

These postulates underlie the cognitive principles that govern metonymy:

1. Animate over Inanimate. This principle underlies regular metonymy of the following types: Product, Control, Possession, etc.:

- Producer instead of Product produced by them: I've got a Ford. He bought a Lada. (The name of the owner of the concern or manufacturing company instead of the car produced by them.)
- Owner instead of Possession: I have a flat tire. (I own a car that has a flat tire.)

2. Subjective over Objective. Our perception is fundamentally subjective, which determines our subjective view of the world. This cognitive principle underlies the following types of metonymy:

- Perception instead of Perceived Object: What a beautiful sight. (The result of perception instead of the perceived object.)

Here we gain access to the world of objective reality through the subjective world of concepts.

3. Concrete over Abstract. For our human experience, concrete physical objects are more meaningful than abstract ones, which we don't directly perceive. This underlies the following types of metonymy:

- Concrete instead of Abstract: The book is written in a careful hand. ("careful hand" instead of "carefully written").
- Physical instead of Emotional: She has a kind heart. (instead of "kindness").
- Physical instead of Action: Hold your tongue. (instead of "shut up").
- Concrete objects are visible to us.
- Visible instead of Invisible: It saved his skin. ("skin" instead of "life").
- Container instead of Contents: The kettle is boiling.

4. Interacting over Non-Interacting. We gain our life experience through interaction with the perceived world. Often, we interact with specific parts of a larger whole. This principle generally determines the types of metonymy that include:

- Part instead of Whole: He sat behind the wheel. He sat behind the wheel ("steering wheel" instead of the whole action of "driving"). The parts of a car that are directly involved in its movement are the wheels, engine, and steering wheel, so we say metonymically: "sit behind the wheel," "24-wheeler," "a motorway." Examples of metonymy involving car parts not directly involved in driving are less likely: wipers, fenders, windshield wipers, bumper, hood, etc.

5. Functional over Non-functional. Our attention, and therefore perception, is drawn more to the active mechanisms, which determines the metonymy: We spent the whole day in front of the tube. (He spent the whole day in front of the screen.)

Cultural Conditionality

Society, as the bearer of culture, also imposes certain constraints on the types of metonymic relationships. Thus, culture favors the ideal as more correct and desirable. The ideal embodies all the typical traits of a certain class. This can be expressed by an inherent trait ('ideal love') or allusions to a "second Tretyak." Negative categories also have ideal representatives that replace the entire category: Judas (the embodiment in our culture of the ideal image of a traitor, thus replacing the entire class of traitors). This allows us to formulate certain types of metonymy.

1. Typical over Atypical. When perceiving an entire class of objects, we select its most typical representative. For example, when we see someone coughing or sneezing, we immediately say "You've got a bad cold."

2. Beginning/End over Middle. In our understanding of events, the initial or final stages seem more important than the middle. To pull the trigger. (Focuses on the beginning of the action). To sign a contract. (Emphasis on the final stage of the event).

3. Basic over Unbasic. This principle applies to common and well-known categories. We use the expression "I've told you a hundred times." ("Hundred" is the basic value).

4. Important over Unimportant. This principle explains the use of to be on stage (instead of "to serve in the theatre, to be an actor") as the most important part of the ICM "theatre", to speak a language (in the meaning of "to speak a language"), Moscow (instead of the whole country).

It can be seen that the identified types of metonymic relations within idealized cognitive models correlate with the types of metonymy traditionally identified in stylistics (e.g., "a container instead of the object placed within it," "a substance instead of a product made from it," etc.). However, the scientific approach to this phenomenon is fundamentally different. Cognitive linguistics assumes the primacy of cognitive activity, which allows for a deeper understanding of the processes underlying metonymy and the metonymic relations between two concepts.

Conclusion

Thus, metonymy is an object of analysis in both traditional and cognitive linguistics. From the perspective of modern English stylistics, metonymy is a stylistic figure of speech that carries a specific stylistic or aesthetic function and is built on the transfer of meanings based on contiguity. However, another type of metonymy exists: regular metonymy, which is stylistically neutral. To explain this, a cognitive approach is used, linking metonymy with cognitive processes of perception. Metonymy is based on conceptual entities that form metonymic relationships within idealized cognitive models. The types of metonymic relationships and their direction are regulated by cognitive principles based on human experience, selective perception, and cultural conditioning.

EXPRESSIVE MEANS AND STYLISTIC DEVICES IN ENGLISH: A COMPREHENSIVE STUDY OF SIMILE, EPITHET, METAPHOR, AND RELATED FIGURES OF SPEECH

Laman Maqsad SHAMMADOVA

Student, Department of Foreign Languages, Mingachevir State University

E-mail: lanan.shammadova.de24@mdu.edu.az

ORCID ID: 0009-0006-1700-9169

Abstract: In the study of English language and literature, expressive means and stylistic devices play a crucial role in enriching communication, creating imagery, and enhancing emotional impact. These linguistic tools allow speakers and writers to express ideas more vividly, creatively, and persuasively. Among the most significant stylistic devices are simile, epithet, metaphor, personification, hyperbole, and irony, all of which contribute to the artistic and communicative value of language.

This study explores the nature, functions, and significance of expressive means and stylistic devices in English. Special attention is given to simile, which creates comparison through explicit markers such as "like" or "as"; metaphor, which implies deeper imaginative comparison; and epithet, which emphasizes distinctive qualities through descriptive expression. These devices not only beautify language but also strengthen meaning, influence readers' perception, and contribute to stylistic individuality.

Furthermore, the article examines how stylistic devices are widely used in literary texts, poetry, speeches, and everyday communication. Writers employ these techniques to create emotional resonance, vivid mental images, and aesthetic appeal. In educational contexts, understanding stylistic devices improves learners' analytical reading, critical thinking, and language production skills.

The study also highlights that expressive means are essential in both linguistic and literary analysis because they reveal how language can go beyond literal meaning to achieve artistic expression.

Overall, the findings suggest that the study of stylistic devices is fundamental to understanding the richness, flexibility, and beauty of the English language.

Keywords: expressive means, stylistic devices, simile, epithet, metaphor, figurative language, English stylistics, literary analysis

İNGİLİS DİLİNDƏ İFADƏ VASİTƏLƏRİ VƏ ÜSLUBİ FİQURLAR: TƏŞBEH, EPİTET, METAFORA VƏ ƏLAQƏLİ NİTQ FİQURLARININ GENİŞ TƏDQIQI

Xülasə: İngilis dili və ədəbiyyatının öyrənilməsində ifadə vasitələri və üslubi fiqurlar ünsiyyəti zənginləşdirmək, obrazlılıq yaratmaq və emosional təsiri gücləndirmək baxımından mühüm rol oynayır. Bu dil vasitələri danışan və yazana fikirlərini daha canlı, yaradıcı və təsirli şəkildə ifadə etməyə imkan verir. Ən mühüm üslubi vasitələr sırasında təşbeh, epitet, metafora, şəxsləndirmə, mübaliğə və ironiya yer alır. Bu məqalədə ingilis dilində ifadə vasitələrinin və üslubi fiqurların mahiyyəti, funksiyaları və əhəmiyyəti araşdırılır. Xüsusi diqqət "like" və "as" kimi vasitələrlə müqayisə yaradan təşbehə, gizli və daha dərin müqayisə forması olan metaforaya, eləcə də əşya və ya hadisənin xarakterik xüsusiyyətini vurğulayan epiteta yönəldilir. Bu vasitələr dili yalnız bədii cəhətdən zənginləşdirmir, həm də mənanı gücləndirir, oxucunun qavrayışına təsir edir və fərdi üslub formalaşdırır.

Bundan əlavə, məqalədə üslubi fiqurların bədii mətnlərdə, poeziyada, nitqlərdə və gündəlik ünsiyyətdə geniş istifadəsi təhlil olunur. Yazıçılar və nətiqlər bu vasitələrdən emosional təsir yaratmaq, canlı təsəvvür formalaşdırmaq və estetik gözəllik əldə etmək üçün istifadə edirlər. Təhsil baxımından isə bu anlayışların öyrənilməsi tələbələrin analitik oxu, tənqidi düşüncə və dil bacarıqlarını inkişaf etdirir.

Tədqiqat göstərir ki, ifadə vasitələri və üslubi fiqurlar dilin yalnız birbaşa deyil, həm də bədii və estetik imkanlarını anlamaq üçün əsasdır.

Ümumilikdə, nəticələr göstərir ki, üslubi vasitələrin öyrənilməsi ingilis dilinin zənginliyini, elastikliyini və gözəlliyini daha dərindən başa düşmək üçün vacibdir.

Açar sözlər: ifadə vasitələri, üslubi fiqurlar, təşbeh, epitet, metafora, obrazlı dil, ingilis üslubiyyəti, ədəbi təhlil

Introduction

Language is not merely a tool for communication; it is also a powerful medium of artistic expression. In English, expressive means and stylistic devices serve to enrich speech and writing by adding imagery, emotional coloring, and aesthetic value. According to Galperin (1977), stylistic devices are conscious and intentional intensifications of language elements used to achieve a specific communicative or artistic effect. These devices enable language users to move beyond literal expression and create deeper layers of meaning.

The study of stylistics examines how linguistic forms function in different contexts to produce expressive impact. Leech and Short (2007) note that stylistic analysis helps reveal the relationship between language form and artistic function, especially in literary discourse. Among the most common stylistic devices in English are simile, metaphor, epithet, hyperbole, personification, irony, and oxymoron.

Simile, for instance, explicitly compares two different things through connectors such as “like” or “as,” while metaphor creates implicit comparison by identifying one thing with another. Epithets emphasize descriptive qualities, often producing emotional or imaginative effects. These devices are fundamental not only in literature but also in speeches, advertisements, journalism, and daily communication.

Understanding expressive means is especially important for students of English language and literature because it strengthens textual interpretation, communicative competence, and appreciation of artistic language.

Methodology and Materials

Research into stylistic devices has demonstrated that figurative language is essential for effective communication because it shapes perception, strengthens emotional response, and enhances memorability. According to Simpson (2004), stylistics bridges linguistics and literary criticism by examining how language choices produce meaning and effect.

Simile is one of the most accessible stylistic devices because it creates vivid comparison through explicit linguistic markers. For example, in the phrase “as brave as a lion,” bravery is emphasized through association with a culturally recognized symbol of courage. Wales (2014) argues that similes clarify abstract qualities by connecting them with familiar images.

Metaphor, however, often produces a deeper conceptual effect. Lakoff and Johnson (1980) explain that metaphor is not merely decorative language but a fundamental cognitive mechanism through which humans understand abstract concepts. Expressions such as “time is money” shape thought patterns by transferring meaning from one conceptual domain to another.

Discussion

Epithets also hold an important place in English stylistics. Galperin (1977) defines epithet as an expressive attribute that characterizes an object from a subjective or emotional perspective. For example, phrases such as “a sleepless night” or “heartbreaking news” intensify emotional engagement.

Other stylistic devices such as hyperbole exaggerate meaning for emphasis, while personification attributes human qualities to non-human entities. Irony, on the other hand, conveys meaning through contrast between literal and intended interpretation. Each device serves unique communicative purposes while enriching stylistic complexity.

In literature, authors such as William Shakespeare, Charles Dickens, and Emily Dickinson employed stylistic devices extensively to create imagery and emotional resonance. In modern contexts, advertising also relies heavily on figurative language to capture attention and persuade audiences.

From an educational perspective, teaching stylistic devices develops learners’ interpretative skills and creative writing abilities. Carter and McCarthy (2006) emphasize that awareness of figurative language improves both language comprehension and production. Students who understand stylistic devices can analyze texts more critically and produce more expressive communication.

Furthermore, stylistic devices contribute significantly to intercultural communication, as many figurative expressions reflect cultural values and conceptual systems. Therefore, studying expressive means is essential not only for literary scholarship but also for broader linguistic competence.

Overall, expressive means and stylistic devices demonstrate that language is not simply informational but also imaginative, persuasive, and emotionally powerful.

Conclusion

In conclusion, expressive means and stylistic devices are fundamental components of English language and literature. Simile, metaphor, epithet, and related figures of speech enrich language by creating imagery, emotional depth, and artistic expression. Their use extends beyond literature into everyday communication, education, media, and public discourse. The findings suggest that understanding stylistic devices enhances linguistic awareness, critical analysis, and communicative effectiveness. Therefore, the study of expressive means remains essential for anyone seeking a deeper understanding of English language structure, creativity, and beauty.

THE PHONEMENON OF CATHARSIS AND ITS ARTISTIC AND AESTHETIC EMBODIMENT

Tamella Intigam GULIYEVA

Master Student, Sumgayit State University

E-mail: Tamellaquliyeva800@gmail.com

ORCID ID: 0009-0003-8121-9089

Abstract: The phenomenon of catharsis is one of the important aesthetic concepts expressing the emotional, spiritual and psychological purification of a person. This term originated from ancient Greek philosophy and was first theoretically substantiated by Aristotle. In Aristotle's "Poetics", catharsis is explained as an internal cleansing of a person through feelings of fear, compassion and suffering. In later times, this concept was widely studied not only in the philosophical and aesthetic plane, but also in various fields of literature, theater, psychology and art.

The article examines the theoretical essence of the phenomenon of catharsis, the sources of its occurrence and forms of artistic and aesthetic embodiment. Special attention is paid to the influence of Catharsis on the inner world of a person, the role played by him in the process of overcoming emotional tension and spiritual perfection. At the same time, in works of fiction, the function of creating catharsis of tragedy, suffering, love, moral conflict and internal conflicts is analyzed. The study shows that catharsis not only produces aesthetic pleasure, but also affects the thoughts and emotions of the reader and viewer, making it spiritually refined. Consequently, the phenomenon of catharsis as one of the main components of artistic and aesthetic thought is of paramount importance in the formation of the spiritual world of man.

ORCID ID: 0009-0003-8121-9089

Özet: Katarsis olgusu, bir kişinin duygusal, ruhsal ve psikolojik temizliğini ifade eden önemli estetik kavramlardan biridir. Bu terim eski Yunan felsefesinden türemiştir ve ilk olarak Aristoteles tarafından teorik olarak doğrulanmıştır. Aristoteles'in Poetika'sında katarsis, korku, şefkat ve ıstırap duygularıyla insanın içsel temizliği olarak açıklanır. Daha sonraki zamanlarda bu kavram sadece felsefi-estetik düzlemde değil, aynı zamanda edebiyat, tiyatro, psikoloji ve sanatın çeşitli alanlarında da geniş çapta incelenmiştir.

Makale, katarsis olgusunun teorik özünü, oluşumunun kaynaklarını ve sanatsal ve estetik düzenlemenin biçimlerini incelemektedir. Katarsisin bir kişinin iç dünyası üzerindeki etkisine, duygusal gerilimi azaltma ve ruhsal gelişim sürecinde oynadığı role özellikle dikkat edilir. Aynı zamanda kurgu eserlerinde trajedinin, ıstırapın, sevginin, manevi çatışmanın ve katarsise neden olan iç çatışmaların işlevi analiz edilmektedir. Çalışma, katarsisin sadece estetik bir zevk sağlamakla kalmayıp aynı zamanda okuyucunun ve izleyicinin düşünce ve duygularını etkileyerek onu ruhsal olarak arındırdığını göstermektedir.

Bu nedenle, sanatsal-estetik düşüncenin ana bileşenlerinden biri olarak katarsis olgusu, insanın manevi dünyasının oluşumunda esastır.

Anahtar Kelimeler: katarsis, Aristoteles, fenomen, terim, arınma

Introduction

Catharsis is a word of Greek origin and is expressed as "spiritual cleansing". Purification is understood as the liberation of the human soul from evil. A person sometimes thinks that he will not be understood and finds it difficult to express himself, as a result of his fears, he suppresses his feelings by being silent. These emotions grow and emerge over time. A person can be cleansed of these emotions through catharsis. At this time, the human mind acquires emotional relief. It allows a person to relax and reveal subconscious emotions, ending their inner tension. The repressed emotions within him are released by surfacing. Buddha allows a person to relieve all tension and gain emotional comfort. "In the process of catharsis, the emotional, thought, behavioral and artistic aspects of a person are revealed." (Hülya Can)

Catharsis is a term that originated in Ancient Greece and occupies an important place in psychology. The term "catharsis" "derives from the Greek verb" katharein, which means "to purify, to purify". This concept is also present in Homer, he used this word in the meaning of physical and material purity. Empedocles, on the other hand, used this concept in the sense of cleansing the soul. Plato in the dialogues "sophist" and "Fedon" expressed this word as artistic and spiritual cleansing. He worked in the sense of the separation of the spiritual from the carnal and the elevation of knowledge between the beauty of the body and the beauty of the soul.

However, the complete theoretical basis of this concept was given by the Greek thinker Aristotle. Aristotle first mentioned this term in his work "Poetics". Aristotle applied this term to understand the essence of what is tragic. "Catharsis, present throughout history in various sciences and cultures, has left notable marks, especially in Aristotle's philosophy and in the fields of literature." (Rahimli.C, 2025) the basis of Aristotle's teaching on tragedies is directly catharsis. Catharsis, according to Aristotle, is the liberation of the viewer of tragedy from these feelings by experiencing feelings of compassion and fear. Aristotle in his work "Poetics" gives a classical definition of tragedy. In his opinion, tragedy is an artistic description of a vital and complete event. This description is carried out not simply by telling events, but by showing actions, and as a result, it causes fear and compassion in the viewer, creating a purification from those feelings – catharsis. Fear means not only the feelings caused by the upcoming disaster, but also other emotions, for example, the painful emotions caused by the disaster that is about to happen or has happened. In a tragedy, a person is cleansed of those feelings, thinking that events happen to him. Waking up, a person, as soon as he comes to his senses, rejoices that he got rid of the turmoil and hardships that he experienced in a dream. Looking at the tragedy, the viewer finds solace in the same way, realizing that the hero is far from the misfortune in which he fell. This feeling brings a person some kind of lightness, comfort. And this comfort is reminiscent of catharsis. Seeing how the hero experiences suffering in the Faji work, a feeling of pity, compassion arises in the heart of the viewer, and the Buddha passes into a feeling of fear. At this time, the viewer thinks, "I can get into this, so I have to refrain from such and such deeds." "The fear and mercy caused by tragedy morally purify and virtuate a person." (Aristotle, 2006) it is clear that the death of every person does not produce the same degree of compassion and fear. If misfortune happens to a corrupt and sinful person, then his destruction is considered fair and not tragic. But if misfortune happens to a moral

and decent person, it provokes a feeling of injustice and hatred. According to Aristotle, not every death and misfortune is considered a tragedy. For a tragedy to happen, the hero must fall into the catastrophe not because of his own meanness or lack of spirituality, but as a result of a certain tragic mistake – “hamartia”. Before this hero is in an honorable, respectable and happy position, but a small misalliance leads him to disaster. Thus, according to Aristotle, the catastrophe of the hero of the tragedy occurs as a result of an error. The concept of “tragic error” (hamartia) has been explained in different ways by Aristotelian commentators. Some understand this as the moral guilt of the hero, leading to tragedy. Some others show that the notion that Aristotle calls “hamartia” is not a moral sin, but rather a mistake made without knowing or wanting to. There are various interpretations on the meaning of “hamartia”: some explained it as a “tragic sin” of the hero, while others simply assessed it as an unintentional, involuntary mistake.

Artistic and Aesthetic Dimensions of Catharsis

The explanation of catharsis given by Aristotle in “poetics” is interpreted more broadly in his work “politics”. Here he talks about catharsis related to music. Music awakens compassion, fear, excitement and other feelings in people, as a result of which they are cleared of these emotions through music. Aristotle explains purification through music also in relation to pleasure and relaxation, thus emphasizing the aesthetic nature of catharsis. The work “Politika” says that all people are exposed to emotions such as pity, fear, excitement. Some, on the other hand, experience these emotions more strongly through the music played at religious ceremonies and, as a result, experience inner discharge, relief and pleasure. So catharsis means not only cleansing, but also aesthetic pleasure. Thus, in the eyes of Aristotle, catharsis is the end result of the effect that tragedy or music has on the viewer: a person experiences fear and compassion, purifies through these emotions and at the same time acquires aesthetic pleasure. Here, as in the work “Poetics”, we are talking about purification, which is realized through fear and mercy. But the novelty is that this time Aristotle associates this purification with pleasure and relaxation. That is, for Aristotle, the basis of pleasure is purification, because, in his opinion, no intellectual or aesthetic pleasure is possible without purification. Undoubtedly, by “pleasure” Aristotle meant the cleansing and deliverance of the human soul from suffering. “He believed that the relief obtained as a result of such suffering (sadness and fear) could be called “pleasure” and “comfort.”” (B. P. Şestakov, 2007)

The theory of ancient catharsis is based on a sequence of four elements: imitation, fear, compassion and pleasure.

Catharsis occurs as a result of the interaction of all of these elements. If one of them comes out, the process is no longer called Catharsis.

Psychological and Clinical Applications

Catharsis is explained in psychology as a process of emotional release. This process is considered an effective way to cope with trauma or stressful situations. At this time, a person feels better and experiences inner peace. Emotional catharsis can occur in different ways, such as crying, screaming, or expressing emotions through writing. However, catharsis may not always give a positive result. Constantly recurring traumatic events can negatively affect a person’s mental health. Therefore, catharsis plays an important role in both individual and therapeutic processes and is considered an effective means of maintaining emotional health. Psychological catharsis plays an important role in restoring a person’s emotional balance by reducing his mental load. As a result of revealing repressed feelings, anxiety, stress and other negative emotions weaken, thereby alleviating the symptoms of depression. Catharsis also creates conditions for a deeper understanding of the

inner world of the individual and increasing the level of self-awareness, which gives an impetus to the development of the personality.

Josef Breuer was the first to use catharsis in psychoanalysis. Breuer used the catharsis method to reveal the underlying problems in the subconscious of a patient suffering from a physical and psychological illness. According to the catharsis method in psychology, a patient in a state of hypnosis could easily establish a connection between his illness and events in the past. Breuer put patients in a state of hypnosis, requiring them to tell about the events that preceded the emergence of the disease. This method led to a decrease in emotional tension, as a result of which relief was observed in patients. Hypnosis was important because the patient could not remember anything in a normal, sober state due to the strength of resistance. The patient, experiencing his secret dreams under hypnosis, was recovering from catharsis, like the audience of ancient tragedies. Breuer Associated this phenomenon with Aristotle's term "catharsis". Sigmund Freud also used this method in his psychological practice. In the twentieth century, Sigmund Freud raised the concept of catharsis to a new level. He turned his attention from "purification" to "compensation", that is, the restoration of what was lacking. This view made it possible to evaluate the problem of catharsis from the aspect of internal change and creative development of the individual. Z. Freud gave this method the name "catharsis treatment". This method became widely known due to the fact that it was first applied in the treatment of hysteria. Catharsis term Z. It occupies a significant place in Freud's psychoanalytic theory. Together with Freud Breuer, he published a book called "the study of hysteria" in 1895. In this work, catharsis is explained as a method of overcoming fears and suppressed emotions. Apparently, in Freud and Breuer, the Aristotelian catharsis takes on a completely new meaning. If earlier it was perceived as an artistic effect on an aesthetic event or tragedy, then it is already interpreted by Breuer and Freud as a medical-psychotherapeutic process. Catharsis is understood here as the process of overcoming fears and repressed emotions. From this point on, Aristotelian catharsis begins to be used in a completely new context, passing into the language of psychoanalysis.

Interest in Aristotle's theory of tragedy was preserved even in the era of classicism. Pierre Corn  ll, a prominent representative of French classicism, was one of the first to develop Aristotle's idea. In accordance with the tradition of classicism, Corn  ll accompanied his tragedies with small theoretical preludes (prefaces), in which he explained his aesthetic principles. One of them sounded like this: tragedy should morally purify the viewer, awakening feelings of pity and fear. Corn  ll believed that the essence of tragic catharsis is that by observing the misfortunes and suffering of others, a person realizes both himself and others, which creates compassion, restraint and spiritual strength in his soul.

In the aesthetics of antiquity, the concept of "catharsis" was considered as one of the concepts expressing the main essence of the aesthetic impact that art exerts on a person. Aristotle noted that under the influence of music and songs, the inner world of a person comes to life, strong emotional states appear. And as a result of the perception of an artistic work, a kind of "purification" occurs, and this process is accompanied by aesthetic pleasure. And the cathartic effect of tragedy is understood as "purification of similar feelings" in a special form of "imitation through action".

Catharsis for the artist is a complex, repetitive and cyclical process. Art is a phenomenon consisting in the unity of creativity and perception in general. Works of art "come to life" only when people realize their meaning and find an echo in their hearts and thoughts, that is, experience artistic catharsis.

Conclusion

Consequently, the inclusion of catharsis in everyday life strengthens a person's emotional balance, improves the quality of life and forms a more positive mindset. By applying these techniques to your life in small but continuous steps, it is possible to build a calmer, healthier and more harmonious life. This concept was first formed in ancient Greek thought and developed in later times as one of the main functions of artistic creativity. Catharsis is explained as the fact that a person experiences strong emotions through a work of fiction, this is an internal discharge of emotional tension and, as a result, the restoration of psychological balance. Thus, catharsis is not only an aesthetic effect, but also an important phenomenon that serves the spiritual development of a person.

BRIDGING THE "EMBODIMENT GAP": GROUNDING ADPOSITIONS IN 3D SIMULATORS

Khuraman MIRZAYEVA

English instructor, PhD.Student

E-mail: xuraman.mirzeyeva@adu.edu.az

ORCID ID: [0000-0002-0021-5453](https://orcid.org/0000-0002-0021-5453)

Abstract: The "Embodiment Gap" represents one of the most significant hurdles in the field of Artificial Intelligence (AI) and Natural Language Processing (NLP). While Large Language Models (LLMs) have achieved unprecedented success in predicting linguistic tokens, they lack a functional, sensory-driven understanding of the physical world they describe. This paper explores the critical necessity of grounding English spatial adpositions—specifically *at*, *on*, *in*, and *through*—within 3D simulated environments to foster "Embodied AI." By moving beyond 2D text-based pattern matching, we propose a framework where AI agents utilize physics-enabled simulators to map linguistic relationships to volumetric, gravitational, and topological constraints. We analyze the geometric dimensionality of adpositions, from 0D point-based coordinates to 3D volumetric enclosures, and examine how "Synthetic Embodiment" enables AI to respect the human cognitive laws of "Figure-Ground" asymmetry. Our research demonstrates that agents trained in these 3D environments exhibit superior accuracy in robotic task execution, a more nuanced grasp of functional control versus simple proximity, and a surprising proficiency in navigating abstract temporal metaphors derived from spatial logic. This study provides a roadmap for integrating cognitive linguistics into the next generation of autonomous systems to bridge the gap between abstract language and physical reality.

CİSMLƏŞMƏ BAĞLI BOŞLUĞUN ARADAN QALDIRILMASI: MƏKAN QOŞMALARININ 3D SİMULYATORLARDA ƏSASLANDIRILMASI

Xuraman MİRZƏYEVA

İngilis dili müəllimi, doktorant, Azərbaycan Dillər Universiteti

E-mail: xuraman.mirzeyeva@adu.edu.az

ORCID ID: 0000-0002-0021-5453

Xülasə: "Cismləşmə Boşluğu" Süni İntellekt (Sİ) və Təbii Dilin Emalı (NLP) sahəsində ən vacib problemlərdən birini ifadə edir. Böyük Dil Modelləri (LLM) sözləri və cümlələri proqnozlaşdırmaqda çox böyük irəliləyiş əldə etsələr də, onlar danışdıqları fiziki dünyanı həqiqi şəkildə "anlamırlar". Yəni bu modellər üçün dünya hiss edilən, yaşanan bir mühit deyil sadəcə statistik mətn nümunələridir.

Bu məqalə Sİ sistemlərinin daha "cismləşmiş" və real dünyaya uyğun ola bilməsi üçün ingilis dilindəki məkan ifadələrinin - xüsusilə *at*, *on*, *in* və *through* kimi sözlərin - 3D simulyasiya mühitlərində necə öyrədilə biləcəyini araşdırır. Sadə mətn üzərində işləmək əvəzinə, biz Sİ agentlərinin fizika qanunlarının işlədiyi virtual mühitlərdə təlim almasını təklif edirik. Burada obyektlər arasında münasibətlər təkcə sözlərlə yox, cazibə qüvvəsi, toqquşma və həcm kimi real fiziki məhdudiyyətlərlə müəyyən olunur.

Eyni zamanda, bu adpozisiyaların necə fərqli məkan səviyyələrini ifadə etdiyini izah edirik-sadə bir nöqtədən (0D), səth üzərində əlaqələrə (2D), və tam həcmli mühitlərdə yerləşmə və hərəkətə (3D) qədər. Bu yanaşma Sİ sistemlərinə insan düşüncəsinə bənzər şəkildə "şəkil-zəmin" (Figure–Ground) münasibətlərini daha yaxşı anlamağa kömək edir yəni hansı obyektin əsas, hansının isə ona görə təsvir olunduğunu ayırd etməyə imkan verir.

Araşdırmalar göstərir ki, bu cür 3D mühitlərdə öyrədilən Sİ agentləri daha yaxşı nəticələr əldə edir: onlar robotik tapşırıqları daha dəqiq yerinə yetirir, "sadəcə yaxınlıq" ilə "funksional əlaqə" arasındakı fərqi daha yaxşı başa düşür və hətta məkan anlayışından yaranan zaman metaforalarını (məsələn, "vaxtın içində") daha düzgün şərh edə bilirlər.

Ümumilikdə, bu yanaşma göstərir ki, dilin real dünya ilə əlaqələndirilməsi Sİ-nin daha ağıllı və çevik sistemlərə çevrilməsi üçün əsas şərtlərdən biridir. Bu da gələcəkdə dil, qavrayış və hərəkətin birləşdiyi daha inkişaf etmiş süni intellekt sistemlərinə doğru mühüm bir addımdır.

Açar sözlər: Cismləşmiş Sİ, Məkan Adpozisiyaları, 3D Əsaslandırma, Koqnitiv Dilçilik, İnsan-Robot Qarşılıqlı Əlaqəsi, Semantik Xəritəçəkmə, Şəkil-Zəmin Asimmetriyası.

1. Introduction

The relationship between language and the physical environment is at the heart of human cognition. Spatial adpositions the class of words including prepositions and postpositions serve as the primary linguistic tools for encoding the coordinates, trajectories, and boundaries of objects in the world. For humans, a word like "in" is not just a statistical neighbor to "box"; it is a conceptualization of containment derived from a lifetime of physical interaction with volumetric objects. Human cognition is inherently embodied, meaning that knowledge arises through interaction with the physical environment (Barsalou, 2008). Language, particularly spatial language, reflects this embodiment. Words such as *in*, *on*, and *through* encode relationships that are grounded in physical experience, including containment, support, and movement through space (Lakoff & Johnson, 1980; Talmy, 2000).

Despite significant advances in AI, current systems largely operate on disembodied representations. LLMs process language as statistical patterns without direct access to the physical world, resulting in limited semantic depth (Bisk et al., 2020). This disconnect is especially

problematic in applications requiring spatial reasoning, such as robotics and human-computer interaction.

However, modern AI suffers from what researchers call the "Embodiment Gap". Current models are "disembodied," processing language as a series of abstract symbols without any underlying physical experience. This results in a "hollow" semantics where an AI can talk about space but cannot navigate it. To address this, current approaches suggest that AI must be grounded in 3D simulators where the laws of physics, such as gravity, collision, and enclosure enforce the true meaning of spatial language.

2. Theoretical Framework: The Geometry of Space

2.1. Dimensionality in Adpositions

Drawing from cognitive linguistics and spatial semantics, this study categorizes spatial adpositions according to their underlying geometric dimensionality, arguing that linguistic expressions of space are not merely syntactic constructs but reflections of structured perceptual and conceptual geometry (Talmy, 2000; Clark, 1973). In this view, prepositions encode progressively more complex spatial schemas, ranging from point-like abstraction to full volumetric reasoning.

0-Dimension (*At*) represents the most minimal spatial abstraction, corresponding to a dimensionless point or precise coordinate within a spatial system. In this interpretation, "*at*" ignores internal structure, scale, or orientation of the referenced object and instead reduces it to a singular location in space. For example, "*at the station*" does not imply interaction with the station's physical properties but rather positions the Figure at a specific conceptual or navigational anchor point. For AI systems, this requires the ability to perform coordinate-level localization without needing to model object geometry or affordances in detail.

2-Dimensions (*On*) introduces surface-based spatial reasoning, where relationships are defined along a planar interface. The adposition "*on*" encodes contact, support, and alignment along a 2D manifold, typically involving gravitational interaction and structural stability. For instance, "*on the table*" requires the Figure to be supported by the Ground's upper surface, implying an understanding of force distribution and equilibrium. In embodied AI systems, this necessitates modeling not only spatial adjacency but also physical constraints such as friction, weight support, and stability thresholds.

3-Dimensions (*In / Through*) represent the most complex category, involving full volumetric spatial reasoning. The adposition "*in*" denotes containment within a bounded 3D region, requiring the system to recognize closed or partially enclosed geometries and enforce boundary constraints. This involves reasoning over object interiors, occlusion, and persistence within a container. In contrast, "*through*" encodes trajectory-based volumetric traversal, where an entity moves across or penetrates an internal space, requiring the modeling of continuous paths, entry and exit points, and temporal progression within a bounded structure.

From an AI perspective, these dimensional distinctions imply increasing levels of representational complexity: from point localization (*at*), to surface interaction (*on*), to full spatial-temporal volumetric reasoning (*in/through*). Importantly, this hierarchy reflects not only geometric sophistication but also cognitive demands, as each level requires progressively richer integration of perception, physics, and action understanding.

By grounding these distinctions in 3D simulation environments, AI agents can internalize adpositional meaning as embodied spatial constraints rather than abstract linguistic labels, enabling

more accurate generalization across real-world navigation and interaction tasks (Bisk et al., 2020; Savva et al., 2019).

2.2. The Figure-Ground Asymmetry

A fundamental principle in spatial linguistics is the Figure–Ground asymmetry, which governs how humans conceptualize and verbalize spatial relationships (Talmy, 2000; Clark, 1973). In any spatial description, the Figure refers to the entity whose location, movement, or state is of primary interest, while the Ground serves as the reference frame against which the Figure is positioned. This distinction is not arbitrary; rather, it reflects cognitive preferences shaped by perception, attention, and physical experience. Typically, the Figure is smaller, more mobile, less familiar, or less spatially stable, whereas the Ground is larger, more static, and more contextually salient (Talmy, 2000).

For instance, the sentence *“the bicycle is near the house”* is considered natural because the bicycle (Figure) is a movable object whose location is meaningfully described relative to the house (Ground), which is stable and spatially dominant. In contrast, reversing the relationship—*“the house is near the bicycle”*—violates these cognitive expectations and sounds marked or unnatural, despite being logically equivalent (Clark, 1973). This asymmetry demonstrates that spatial language is guided not only by geometric relations but also by hierarchical structuring of attention and relevance.

From an AI perspective, capturing Figure–Ground asymmetry requires more than encoding positional coordinates. It necessitates integrating object properties such as size, mass, stability, and functional role within an environment. In 3D simulated settings, these properties can be operationalized through physics engines that model gravity, inertia, and object affordances. By interacting with such environments, embodied agents can learn to prioritize stable objects (e.g., tables, buildings) as reference points and assign more dynamic objects (e.g., tools, vehicles) as Figures.

Moreover, Figure–Ground asymmetry plays a crucial role in language understanding, scene interpretation, and action planning. In human-robot interaction, for example, correctly identifying the Ground object ensures that spatial instructions are interpreted accurately (Tellex et al., 2013). Failure to model this asymmetry can lead to ambiguous or incorrect behavior, particularly in complex environments with multiple potential reference objects.

Ultimately, bridging the embodiment gap requires AI systems to internalize Figure–Ground relations as a cognitive constraint rather than a purely linguistic pattern. By grounding these relationships in embodied experience, AI can move toward more human-like spatial reasoning, improving both interpretability and real-world performance (Barsalou, 2008; Bisk et al., 2020).

3. Materials and Methods: Synthetic Embodiment

3.1. 3D Simulation Engines

To operationalize the grounding of spatial language, this study employs high-fidelity 3D physics engines such as Unity and MuJoCo, which serve as controlled environments for simulating real-world physical interactions. These platforms provide what can be described as a *“synthetic body”* for AI agents, enabling them to experience and learn from physical constraints rather than relying solely on abstract symbolic representations (OpenAI, 2018; Savva et al., 2019). Through embodied interaction, agents can “feel” the effects of gravity, collision, and spatial boundaries, which are essential for developing a functional understanding of spatial adpositions.

A key component of this setup is the use of geometric primitives, including cubes, spheres, and cylinders, which allow for the systematic isolation of spatial variables. For example, flat planes are used to model surface relationships relevant to the adposition “*on*,” while hollowed or concave structures (e.g., open boxes or containers) are used to represent volumetric enclosure for “*in*.” Cylindrical tunnels or channels can be introduced to simulate traversal paths required for understanding “*through*.” By simplifying the environment into these controlled geometric forms, the system can learn core spatial concepts without interference from unnecessary visual complexity (Talmy, 2000).

In addition to geometry, physics constraints play a crucial role in ensuring that learning is grounded in functional reality. Gravity enforces vertical orientation and support relationships, friction governs stability and resistance to movement, and collision detection ensures that objects cannot occupy the same physical space simultaneously. These constraints transform spatial relationships from mere visual arrangements into physically meaningful interactions. For instance, an object placed “*on*” a surface must remain supported under gravitational force, while an object placed “*in*” a container must remain enclosed within its boundaries even when the container is moved.

By integrating geometric primitives with realistic physics modeling, the simulation environment enables AI agents to move beyond superficial pattern recognition and toward causal, embodied understanding of spatial language. This approach ensures that adpositions are learned not just as linguistic tokens, but as actionable concepts grounded in the laws of the physical world (Barsalou, 2008; Bisk et al., 2020).

3.2. Training Methodology: Reinforcement Learning (RL)

The AI agent is trained using a Reinforcement Learning (RL) framework, where learning emerges through interaction with a dynamically simulated 3D environment rather than through explicit supervision. In this setup, the agent receives natural language instructions as input and must translate these linguistic signals into a sequence of physical actions that modify the state of the environment. Each instruction functions as a goal specification grounded in spatial language, requiring the agent to interpret semantic content such as containment, support, or motion and map it onto executable motor policies (Sutton & Barto, 2018; Bisk et al., 2020).

During training, the agent explores the environment by performing actions such as moving, grasping, and placing objects. After each action, the environment transitions into a new state governed by physics-based simulation rules. A reward function is then computed to evaluate whether the agent’s behavior satisfies the linguistic instruction. This reward is sparse and task-specific, ensuring that learning is driven by successful completion of physically grounded goals rather than superficial pattern matching.

For example, in the instruction “*put the ball in the bowl*,” success is not determined by visual proximity or partial overlap, but by strict volumetric containment criteria. The agent receives a positive reward only if the ball’s XYZ coordinates are fully bounded within the 3D interior volume of the bowl, taking into account collision geometry and object boundaries defined by the physics engine. If the ball rests on the rim, is partially outside the container, or merely adjacent to it, the reward is not granted. This forces the agent to develop a precise understanding of the adposition “*in*” as a constraint over 3D space rather than a loose spatial association.

Through repeated interaction and reward-based optimization, the agent gradually learns to align linguistic representations with physically verifiable outcomes. Over time, this process leads to

the emergence of grounded semantic policies, where language is directly coupled with perception and action. Consequently, spatial instructions are no longer treated as abstract token sequences but as executable directives tied to measurable changes in the physical state of the environment (Savva et al., 2019; Gupta et al., 2020).

4. Results and Discussion: Beyond Pattern Matching

4.1 Functional Control vs. Proximity

One of the most significant outcomes of grounding language in 3D simulation environments is the emergence of a clear distinction between mere spatial proximity and functional control relationships. In traditional 2D text-based models, spatial expressions such as “*next to*,” “*on*,” and “*in*” may appear statistically similar when they co-occur in comparable linguistic contexts. As a result, disembodied language models often rely on distributional patterns rather than physically meaningful distinctions, leading to shallow or ambiguous interpretations of spatial relations (Bisk et al., 2020).

In contrast, within a 3D physics-based simulator, spatial relationships are constrained by environmental dynamics such as gravity, collision, and object permanence. This allows the agent to experience the difference between objects that are merely adjacent in space and those that are bound by functional containment or support structures. For example, an object placed *inside* a box becomes subject to the box’s physical boundaries, meaning its movement is restricted by the container’s geometry. Crucially, this relationship persists even when the container itself is moved or reoriented, reflecting a form of dependency that is absent in simple proximity-based relationships.

By comparison, an object that is merely *next to* a box has no such dependency. Its position is independent of the box’s motion, and it will not be carried along if the box is translated through space. Through repeated interaction with such scenarios, the agent learns that spatial prepositions encode not only distance but also causal and structural constraints on object behavior.

This distinction gives rise to what can be described as functional control reasoning, where spatial language is interpreted in terms of how objects constrain or govern one another within a physical system. Containment (*in*) implies that the Ground object exerts a persistent spatial constraint on the Figure, while proximity (*next to*) implies only relational adjacency without control or dependency. This insight is central to human spatial cognition, where language encodes not just where objects are, but how they behave relative to one another under physical laws (Talmy, 2000; Clark, 1973).

In embodied AI systems, learning this distinction is critical for robust generalization. It enables agents to correctly interpret instructions in dynamic environments, such as recognizing that an object placed in a container should remain associated with it even as both objects move through space. This represents a shift from statistical co-occurrence reasoning toward causal spatial understanding, which is essential for real-world applications in robotics and human-robot interaction (Savva et al., 2019; Bisk et al., 2020).

4.2 Correcting Hierarchy Errors

Grounding AI systems in 3D simulated environments naturally leads to the correction of hierarchical and referential errors that are commonly observed in disembodied Large Language Models (LLMs). In purely text-based systems, spatial relations are inferred from statistical co-occurrence rather than physical properties, which often results in unstable or contextually inappropriate Figure–Ground assignments. For example, LLMs may inconsistently treat small, movable objects as reference points simply because they appear frequently in similar syntactic

constructions. This reflects a limitation of distributional semantics, where linguistic frequency is not aligned with physical plausibility (Bisk et al., 2020).

In contrast, within a physically grounded 3D environment, AI agents can directly observe and interact with object properties such as mass, volume, stability, and mobility. These properties provide critical cues for determining which entities should function as Grounds in spatial descriptions. Larger, heavier, and immovable objects—such as tables, walls, or buildings—naturally exhibit higher stability and persistence within the environment. As a result, they serve as more reliable spatial reference frames compared to smaller, transient, or manipulable objects such as pencils, tools, or balls.

Through repeated interaction, the agent begins to internalize these physical regularities, developing an implicit hierarchy of objects based on their structural and dynamical significance within the environment. This leads to more human-like Figure–Ground assignments, where stable objects are consistently prioritized as reference points, aligning with cognitive principles observed in human spatial language processing (Talmy, 2000; Clark, 1973).

For instance, the statement *"the book is on the table"* becomes preferred not merely due to linguistic convention, but because the table is recognized as a stable support structure, while the book is treated as a movable Figure. Conversely, reversing this relationship (*"the table is on the book"*) is correctly identified as implausible within the physical model due to violations of stability and support constraints.

This correction of hierarchy errors highlights a fundamental advantage of embodied learning: spatial reasoning is no longer derived from lexical patterns alone, but from physically grounded object hierarchies. By incorporating mass distribution, mobility constraints, and support relationships, the AI develops a more robust and semantically consistent understanding of spatial structure. This shift is essential for achieving reliable performance in real-world tasks such as robotic manipulation, scene understanding, and human-robot interaction, where correct Figure–Ground assignment directly impacts task success (Savva et al., 2019; Tellex et al., 2013).

4.3 Space-to-Time Mapping

Research in cognitive linguistics and embodied cognition suggests that the benefits of physical grounding extend beyond spatial reasoning into abstract conceptual domains, particularly time. Human language frequently uses spatial structures to describe temporal relationships, indicating that time is often understood through spatial metaphors rather than as an independent cognitive primitive (Lakoff & Johnson, 1980; Barsalou, 2008). Expressions such as *"in the future,"* *"within the hour,"* or *"throughout the day"* demonstrate that temporal reasoning is systematically structured using spatial schemas, especially those related to containment, motion, and bounded regions.

In embodied AI systems, agents that learn the spatial meaning of adpositions such as *"in"* as a form of volumetric containment within a 3D environment exhibit improved performance when interpreting temporal language. This occurs because the learned concept of containment is not limited to physical objects but becomes an abstract relational schema that can be transferred across domains. As a result, when the agent encounters phrases like *"in the future,"* it can reinterpret them as membership within a bounded temporal interval, analogous to an object existing within a spatial container (Talmy, 2000).

This process can be further understood through the notion of a conceptual mapping between spatial and temporal dimensions, where time is represented as a structured continuum with

boundaries, regions, and traversal paths. In this framework, temporal intervals function as “containers” that define the scope of events, while deadlines act as boundary constraints similar to the walls of a physical object. For example, “*within the hour*” is processed as an event that must occur inside a fixed temporal boundary, mirroring how an object must remain inside a box in spatial reasoning tasks.

By leveraging this analogy, AI agents trained in physically grounded environments develop a form of transferable relational reasoning, where spatial logic learned through interaction with 3D objects is repurposed for temporal interpretation. This leads to improved understanding of scheduling tasks, deadline compliance, and sequential reasoning, as the same constraint-based logic governing physical containment is applied to abstract time structures.

Ultimately, this supports the hypothesis that spatial grounding is not an isolated capability but a foundational mechanism for broader cognitive abstraction. By embedding language in physical simulation, AI systems acquire reusable cognitive structures that extend naturally into non-spatial domains, reinforcing the idea that embodiment is essential for general intelligence (Bisk et al., 2020; Barsalou, 2008).

5. Conclusion

The “Embodiment Gap” should not be interpreted as a deficiency in data availability or model scale, but rather as a fundamental absence of structured physical context in current language-centric AI systems. While modern Large Language Models (LLMs) are trained on vast corpora of textual data, their learning remains confined to 2D symbolic sequences that lack direct grounding in perception, action, or physical causality (Barsalou, 2008; Bisk et al., 2020). As a result, these systems can generate linguistically coherent statements about the world without possessing an operational understanding of how that world functions.

By grounding English spatial adpositions within 3D physics-based simulators, we introduce a form of contextual embodiment that links linguistic representations to measurable physical states. In this framework, words such as “*in*,” “*on*,” and “*through*” are no longer treated as abstract tokens but as executable constraints defined over volumetric space, object boundaries, and dynamic interactions. This shift enables AI systems to move from pattern-based language prediction toward interaction-based semantic understanding, where meaning is validated through engagement with a structured environment governed by physical laws (Savva et al., 2019).

This transition from 2D token prediction to 3D volumetric reasoning represents a foundational step toward the development of robots and intelligent agents capable of operating effectively in the physical world. In such systems, language becomes tightly coupled with perception and action, allowing instructions to be interpreted not only syntactically but also spatially and causally. Consequently, robots equipped with grounded language understanding can more reliably execute complex tasks involving navigation, manipulation, and interaction in dynamic environments.

Looking forward, a critical direction for future research lies in multimodal fusion, where visual perception, depth estimation, and physical interaction signals are integrated directly into the semantic architecture of language models. Rather than treating vision, language, and action as separate modules, next-generation systems should unify these modalities into a single coherent framework of embodied intelligence. Such integration would enable models to simultaneously perceive the environment, interpret linguistic instructions, and execute physically grounded actions in real time.

Ultimately, bridging the Embodiment Gap requires a paradigm shift from purely data-driven language modeling to context-rich, physically grounded learning systems. By embedding language within interactive 3D environments and fusing it with multimodal perception, AI systems can progress toward a more human-like form of intelligence—one that is not only capable of generating language but also of understanding and acting within the world it describes (Lakoff & Johnson, 1980; Talmy, 2000).

A STUDY OF THE FEATURES OF THE CLASSICAL LITERARY LANGUAGE IN THE WORKS OF TOFIQ HAJIYEV

Aygun Mobil AHMADOVA

Doctoral Candidate, Department of Azerbaijani Language, Ganja State University

Email: ahmadovaa403@gmail.com

ORCID ID: 0009000252284757

Abstract: Tofiq Hacıyev investigated the Azerbaijani literary language within a broader Turkic context based on linguistic evidence. According to the scholar, the dominant language of the 13th–16th centuries was the classical bookish style, and during this period the literary language was formed on the basis of three stylistic domains. He concludes that in all three styles, two linguistic manifestations can be observed simultaneously.

The scholar provides examples from the folklore–colloquial style within artistic language, drawing on works by authors such as Shah Ismail Khatai and Amani. For instance: “Qarşudakı qarlu dağı gördünmü?” (Sh. I. Khatai); “Sıçradü, palçuğa batüb öldü, Qarunun bəñizü qüssədən soldı” (Amani). As these examples demonstrate, the scholar’s observations are well-founded. Notably, these samples show remarkable similarity to the contemporary language. Despite the passage of centuries, the close resemblance of these texts to modern Azerbaijani is striking.

It may be assumed that the language of artistic literature is inherently simpler, which could explain such similarities. However, the scholar strengthens his argument by providing examples not only from artistic texts but also from other stylistic domains, demonstrating that this proximity and resemblance extend beyond the artistic style alone.

ORCID ID: 0009000252284757

Xülasə: Tofiq Hacıyev Azərbaycan ədəbi dilini dil faktlarına əsaslanaraq ümumtürk kontekstində tədqiq etmişdir. Alimin fikrincə, XIII – XVI əsrlərin aparıcı dili klassik-kitab üslubdur və bu dövrdə ədəbi dil üç üslub əsasında təşəkkül tapır. Alim bu qənaətə gəlir ki, hər üç üslubda iki dil təzahürü özünü göstərir. Alim folklor–danışiq dilinə bədii üslubda Ş.İ.Xətəidən, M.Əmanidən nümunələr verir. Məsələn, “Qarşudakı qarlu dağı gördünmü? (Ş.İ.Xətai); Sıçradü, palçuğa batüb öldü, Qarunun bəñizü qüssədən soldı (Əmani)”. Nümunələrdən də göründüyü kimi, alimin dediklərində böyük həqiqət vardır. Verilən nümunələr bugünkü günümüzə çox səsləşir. Əlbəttə, əsrlərlə vaxt keçməsinə baxmayaraq, nümunələrin hazırki dilimizə bu qədər oxşar olması maraq doğurur. Digər tərəfdən, fikirləşmək olar ki, bədii ədəbiyyatın dili sadə ola bilər və bu səbəbdən də bədii əsərlər bu qədər oxşar xüsusiyyətlərə malik ola bilərlər. Amma alim bədii

ədəbiyyatdan nümunələr gətirməklə yanaşı digər üslublardan da nümunələr gətirməklə öz fikirlərini daha da möhkəmləndirir və sübut edir ki, bu yaxınlıq və oxşarlıq təkcə bədii üslub səviyyəsində deyil.

Açar sözlər: Ədəbi dil, üslub, xüsusiyyətlər, araşdırma, müqayisəli təhlil

Introduction

The examples provided by the scholar from the scientific style within the folklore–colloquial framework are particularly noteworthy: “Cəmrə şol nəsnədir ki, Günəşin ıssısı zəmhərirün ağusını alır. Sunın buxarını və həvanın şiddətini, yerün buğuni bu üç nəsnə götürür. Cəmrə düşdi dedükləri bu üç nəsnədir. Cəmrədən sonra yerün tamarı açılır” (Abu Khwaja Ibn Adil, *Ikhtiyārāt-i Qawā'id-i Kulliyā*, 15th century). As can be observed from this example, even a text belonging to the scientific style appears relatively clear and comprehensible. It should be emphasized that this example dates back to the 15th century. Despite the passage of approximately five centuries, the language remains remarkably accessible to modern readers.

The examples drawn by the scholar from the official–administrative style are also noteworthy: “Səadətü padüşahımızun xaki-pay kimiya əsərlərinə yüz sürməkdən sonra ərzi-hal budur ki, bu duaguyunuz Cahanşah padüşahın oğlunun oğlu olub, sürxsər zalım vilayətimizi talan eləyüb, zəbt edərkən Şirvan vilayətinə varub, mütəməkin olmuş idi. Hətta iki dəfə Şirvan padüşahından şah bu duaguyunizi tələb edədi, vermədi...” (from a petition-letter addressed to the Ottoman ruler Sultan Selim by the grandson of the Qara Qoyunlu ruler Jahan Shah) (Hacıyev, p. 260).

It is well known that the official–epistolary style is considered one of the most slowly changing functional styles of language. This style, in all cases, remains distant from colloquial speech. Therefore, the presence of less comprehensible or obscure words in official discourse should be regarded as natural. However, if we examine the given examples, we observe that a considerable number of lexical items remain clear and understandable even for present-day readers. This indicates that, despite the passage of five hundred years, the changes that have occurred in our language have been relatively limited.

Tofiq Hacıyev rightly notes that there are documented instances of the use of the Azerbaijani language in the royal court during the Qaraqoyunlu period. Nevertheless, it was during the Safavid period that the Azerbaijani language underwent comprehensive development. As evidence, the scholar refers to the letters of Shah Ismail I and his son Shah Tahmasp I. It is known that during the Safavid era, the Azerbaijani language entered a new stage of development, which in turn led to its active use within the royal court.

Moreover, the presence of ashugs (traditional poet-singers) at the court during the Safavid period played a significant role in the subsequent nationalization of the Azerbaijani language. The majority of researchers agree that in the 16th-century Azerbaijani literary language, a substantial portion of the vocabulary consisted of native Azerbaijani words. The proportion of native and borrowed words varies across different stylistic domains: at times one predominates, at other times the other, and in some cases a balance is observed.

Nevertheless, regardless of this variation, Azerbaijani lexical units remain of primary importance. They shape the grammatical system of the literary language, enhance its stability and resilience, make it possible to identify its internal developmental laws and regularities, and clarify the prospects for its future grammatical evolution. At the level of vocabulary composition, native Azerbaijani words decisively outnumber borrowed ones. This is because the qualitative richness of

Azerbaijani lexical items is so high that even when they are fewer in number, they do not remain overshadowed by the quantitative abundance of borrowed words (*Azərbaycan ədəbi dil tarixi*, p.306).

Study of the Literary Language

Undoubtedly, the process of vernacularization of the Azerbaijani language at the end of the 15th century and the beginning of the 16th century is closely associated with the name of Aşıq Qurbani. The scholar rightly notes that the language of poetry composed within the genre of oral folk literature reflects the actual spoken language of the people at the time those poems were created. In this sense, the artistic language of Aşıq Qurbani corresponds to the language spoken by the Azerbaijani people in the 16th century, namely Azerbaijani Turkic.

According to the scholar, this language, with its vernacular vocabulary and well-established national grammatical structure, is manifested not only in the style of folk poetry but also in the works of poets who wrote in the aruz meter. This is evident in the verses of Muhammad Fuzuli and Shah Ismail I (Khatai), which demonstrate that even within classical poetic forms, the influence of the spoken language remained strong (Hacıyev, p.22).

When discussing Qurbani, the scholar emphasizes that the 16th century in Azerbaijani literary thought is characterized by the absolute dominance of the genius of Muhammad Fuzuli. The perfection of Fuzuli's language is such that the linguistic landscape of the period is often perceived within the boundaries of his творчество alone. However, when one turns to the legacy of his contemporary, Aşıq Qurbani, it becomes evident how vivid, dynamic, and phonetically and grammatically close the 16th-century Azerbaijani spoken language was to the modern language.

The grammatical structure and lexical base found in Qurbani's qoşma poems are almost indistinguishable from those of modern Azerbaijani Turkic. For example, expressions such as "Dağlar, sənin ilə həmdəm olmadam" ("Mountains, to be in companionship with you") or "Dedi: sözün yoxdur, bəhanədir bu" ("He said: you have no words, this is merely an excuse") demonstrate a linguistic layer that, despite the passage of five centuries, remains fully compatible with the comprehension and aesthetic perception of contemporary readers. This clearly proves that by the 16th century, the spoken language had already reached a fully developed, refined, and stable system.

It is also noteworthy that certain simple and sincere expressions used by Fuzuli himself (for instance, the advice "If you are a girl, do not cheapen yourself; know your worth") indicate that even this great poet conceptualized his ideas within the same phonetic environment to which Qurbani's language belonged. Researchers rightly point out that the complex orthographic layer of Fuzuli's works should, in fact, be interpreted and read within the natural phonetic framework represented by Qurbani.

Thus, in the 16th century, alongside Fuzuli's philosophically rich and highly artistic literary language, there existed the delicate, fluent, and lyrical language of Qurbani, shaped by oral folk tradition. The famous poem "Bənövşə" by the ashug continues to resonate with the same aesthetic power today, serving as strong evidence of the historical stability and perfection of the Azerbaijani vernacular language (*Azərbaycan ədəbi dil tarixi*, p.306).

Tofiq Hacıyev notes that in the 13th–14th centuries, the Azerbaijani literary language developed directly on the basis of folk creativity. A distinctive feature of this period is that there was no sharp communicative boundary between borrowed words and native vocabulary; both

groups of lexical units were equally assimilated by the people. However, the later evolution of classical literary genres gradually weakened this internal unity.

One of the most important monuments of this period, the *Dastani-Əhməd Hərami*, stands out for its refined expression and natural masnavi structure. The language of this work shows strong parallels with the *Kitabi-Dədə Qorqud* epics. For example, antonymic pairs such as *ulu–kiçi* (“great–small”) and *sağ–əsən* (“safe–sound”), as well as the purity of syntactic structures, demonstrate that both monuments originate from the same Turkic народная linguistic foundation. Lexical items such as *bəkçi*, *bilüm*, and *haldaş* found in the text serve as important indicators of both antiquity and the national foundations of the language (Hacıyev, p.175).

As is well known, the first complete *divan* that has reached us in the Azerbaijani language is the *Divan* of Qazi Burhanaddin. Since Qazi Burhanaddin belonged to the Salur tribe of the Oghuz Turks, the scholar notes that Oghuz linguistic elements should be concentrated in his language, and indeed confirms that such elements are abundantly present (Hacıyev, p.180).

The scholar further demonstrates, through examples drawn from classical authors of the period, that the foundations for the language later represented by Qurbani were already formed in the 13th–14th centuries. For instance, a careful examination of the language of Imadaddin Nasimi reveals that, in comparison with the classical literary norm, it is significantly closer to the vernacular speech of the people.

Tofiq Hacıyev rightly draws attention to the fact that, in the history of medieval Azerbaijan, the creation of literary works in the native language by state rulers constituted a strategic cultural line that began with Qazi Burhanaddin and developed continuously until the 16th century. This phenomenon was not merely a reflection of the personal literary interests of rulers; rather, it also carried important implications for governance, embodying principles of humanism and closeness to the people.

During this period, the composition of poetry in the native language by rulers brought about revolutionary changes in the literary environment in two major directions. Firstly, artists who created in the Azerbaijani language were supported and encouraged by the royal court. Secondly, the rulers’ use of the native language inspired other poets to compose in Azerbaijani as well, which significantly expanded both the readership and the sphere of influence of Azerbaijani-language literature.

The 15th century may be characterized as the period of Jahan Shah (Haqiqi). While in earlier periods the Azerbaijani language had penetrated the court environment informally, in the 15th century it gained official and widespread status under the Kara Koyunlu ruler Mirza Jahan Shah Haqiqi. Writing under the pen name “Haqiqi,” the ruler appears in his творчество as a follower of the school of Nasimi and the philosophy of Hurufism. The traces of Nasimi’s style in Haqiqi’s poetry are so profound that certain couplets in his ghazals can be regarded as direct reflections and developments of the classical tradition.

This process continued into the 16th century and was further advanced by the Safavid ruler Shah Ismail I (Khatai). In addition to being a poet, Shah Ismail attached great importance to the Azerbaijani language. It was during his reign that the language firmly entered the court. His language policy had a more fundamental character: for him, the concept of the native language held central importance in the formation of a unified and centralized Azerbaijani state. Being both a ruler and a talented poet allowed Shah Ismail Khatai to deeply perceive the aesthetic richness of the

language. Thus, the combination of political power and poetic genius ensured a renaissance and historical triumph of the Azerbaijani language (Hacıyev, p.250).

In his poem "Dahnama," Khatai not only employed both classical and folk lexical elements but also created new words by making use of existing vocabulary and derivational suffixes in the language (Cavadova, p.21).

The scholar pays particular attention to the analysis of Qurbani's language as a representative example of folkloric and colloquial speech. According to him, this language closely resembles modern Azerbaijani. In particular, while analyzing the above-mentioned poem "Bənövşə," the scholar notes that only a single archaic word, "sayru," is used in the poem.

One of the strongest pieces of evidence demonstrating the purity of the living folk language in 16th-century Azerbaijani poetry is precisely the rare occurrence of archaic elements in the texts. Such archaisms function as linguistic markers confirming the historical period in which the work was created, while simultaneously revealing the extent to which other layers of the language coincide with modern Azerbaijani Turkic.

In the famous line by Qurbani, "Könlüm səndən sayrudur" ("My heart is afflicted because of you"), the word "sayru" (meaning "ill" or "distressed") performs exactly this function. If not for this single archaism, it would be difficult to distinguish the language of the poem from that of contemporary usage. Interestingly, however, the poet employs this word within such a powerful artistic and logical context that the reader's attention is directed not to the dictionary meaning of the archaism, but to the striking poetic image created by the verse. The melodic harmony of the first couplet gives way in the second to a deeper and more profound poetic gravity.

Aşıq Qurbani writes: "Könlüm səndən sayrudur, / Neyləmişəm, yarım məndən ayırır? / Ayrılıqımı çəkmiş, boynu əyridir, / Heç yerdə görmədim düz bənövşəni."

In this poem, Qurbani does not present the violet flower (bənövşə) merely as a natural element; rather, he immortalizes it as a symbolic representation of the beloved's spiritual and physical portrait. The natural characteristics of the flower, its delicacy and the inclination of its stem, form a striking parallel with the condition of the lover, weakened by longing and bowed under the weight of sorrow. This is not a simple comparison, but an artistic discovery shaped by wit and refined thought.

Such a perfect and expressive depiction transforms the violet into an eternal statue of the lyrical hero, while the poem itself becomes a sincere hymn of love. The fact that such a profound and complex idea is conveyed in a simple, natural, and fluent language serves as one of the clearest proofs of the high level of development and aesthetic power of the 16th-century Azerbaijani vernacular language (Hacıyev, p.274).

When discussing Qurbani, Qasim Kazimov rightly emphasizes that Qurbani, regarded as the first great creator of folk poetry and early realist verse, as well as the founding figure of the ashug-saz artistic tradition, exerted a profound influence on all subsequent poets who composed within the framework of folk poetry. His творчество served as a primary model and a foundational school for later generations of artists.

At the turn of the 15th to the 16th century, the poet introduced into the language of poetry expressions belonging to the common vernacular, simple, everyday, yet essential concepts, with such boldness and mastery that, in later periods, there remained no hesitation in following this path. Within the poetic core of Qurbani's works, one encounters sincere and nationally grounded poetic expressions such as "qadasın aldığım" ("may I take your troubles upon myself"), "qurban olduğum"

("the one I sacrifice myself for"), and "durum dolanım başına" ("let me revolve around you"), alongside characteristic symbolic lexicon such as *peri* (fairy), *khuda* (God), *shahi-mardan*, *sar* (head), *payandaz* (carpet spread before someone), and *akhirzaman* (end of times).

These elements later became widely used in the poetic language of master ashugs such as Abbas Tufarqanlı, Xəstə Qasım, Aşıq Valeh, and Aşıq Ələsgər, as well as poets like Molla Panah Vagif and Qasım bəy Zakir, thereby gaining broader acceptance and a wider sphere of use.

Although such words and expressions had appeared in poetic language even before Qurbani, for folk poets and master ashugs their primary source was, in most cases, the influential poetry of Qurbani. This is clearly demonstrated by the repeated recourse of later poets to Qurbani's modes of expression, imagery, themes, rhymes and refrains, wordplay (*cinas*), as well as his curses and humor.

Qurbani's poetic images were embraced and celebrated by subsequent generations, while the figures and character types he condemned continued to be denounced, becoming objects of satire and invective in later works. Following Qurbani's famous "Bənövşə," countless poems bearing the same motif were composed, further testifying to the enduring impact of his poetic legacy (Kazımov, p.44).

Indeed, Aşıq Qurbani occupies a distinctive position in Azerbaijani poetry and plays a crucial role in the formation and development of the subsequent ashug tradition.

Tofiq Hacıyev reiterates this point and rightly emphasizes that, since Qurbani's artistic language directly reflects the spoken language of the people, any discussion of his language is, in essence, a discussion of the 16th-century Azerbaijani vernacular itself. The lexical imagery and borrowed elements present in his language indicate that such forms had already gained full acceptance and functional status within the spoken language of the period.

Even in the 16th century, native equivalents were used alongside borrowed epithets. For example, instead of the borrowed adjective meaning "multicolored," the native expression "al-yaşıl" ("bright red-green") is employed: "Al-yaşıl geyinib durma qarşıda, / Yayın bədnəzərdən, göz dəyər sənə" ("Do not stand before me dressed in bright colors; / protect yourself from the evil eye, it may befall you").

In Qurbani's language, the word "qubar" is used both in its original Persian meaning ("dust") and in the later Azerbaijani sense of "sorrow" or "melancholy." For instance: "Dəstələ zülfərini yerə dəyməsin, / Yollar qubarlanır, toz dəyər sənə" ("Let not your tresses touch the ground, / the roads will gather dust, it will fall upon you"), where the meaning of *qubarlanmaq* ("to become dusty") is reinforced through the expression "toz dəyər" ("dust will touch"). Similarly, in "Gözüm gördü, könlüm eylədi qubar" ("My eye saw, my heart became sorrowful"), the semantic shift toward emotional meaning is evident.

The compound "var-gəl" (meaning "to go back and forth") retains the semantics of both components, demonstrating the process of lexical-grammatical formation: "Var-gəl ilə düzəltginən sən halı" ("Set your state right through coming and going").

Borrowed elements in metaphors and expressions immediately evoke their native equivalents: "çeşmin yağı" corresponds to "the eye's light," "nan ilə nəmək" corresponds to "bread and salt." For example: "Yeyərlər nan ilə nəmək, / Bir gündə bərbad eyləyər" reflects the idiomatic meaning of losing one's livelihood or sustenance.

Folk similes are also actively employed, such as the comparison of the world to a sieve: "Bu dünya dediyin bir boş ələkdir" ("This world you speak of is an empty sieve"). Neutral lexical items

become poetically charged within artistic speech, as seen in the verb “bulanmaq” (“to become imbued or mixed”): “Heç çıxmadım nazlı yarın köşkünə, / Bulanmadım ənbərinə, müşkünə” (“I never entered the beloved’s pavilion, / I did not immerse myself in her amber and musk”) (Hacıyev, p.274).

Overall, Tofiq Hacıyev assigns great value to Qurbani’s творчество, noting that the poet also fulfilled an important cultural and didactic function. He emphasizes that Qurbani contributed to making classical literature more accessible by incorporating the vocabulary and figurative expressions of classical poetry into a language that was understandable to the broader public.

Methodology and Materials

Descriptive and comparative methods are used in the article. The main source for the article was Tofiq Hacıyev's works on the history of language.

Discussion

Tofiq Hacıyev made unique contributions to the study of the history of the Azerbaijani literary language. The features of the classical literary language in Tofiq Hacıyev’s work are discussed in the article.

Conclusion

It is well known that, in the history of the formation of the Azerbaijani literary language, the 17th century is sometimes characterized as a period of decline and stagnation. However, Tofiq Hacıyev disagrees with this view, emphasizing that the Azerbaijani national literary language has consistently developed along an upward trajectory. He notes that the 17th–18th centuries, which serve as a bridge between Muhammad Fuzuli and Mirza Fatali Akhundov, represent two valuable centuries within this continuous process of development.

According to the scholar, although a certain degree of slowing can be observed, it does not concern the literary language as a whole, but rather one of its stylistic branches. This is because the classical, or bookish, language norm reached its peak in the works of Fuzuli, while during this period the previously secondary stylistic branch, namely, the oral folk and colloquial language, entered a phase of remarkable growth and flourishing.

VOICES OF POWER: USING APPLIED LINGUISTICS TO BRIDGE CULTURAL DIVIDES

Gulnar Tahir KARIMLI

Phd on philology, Foreign languages faculty, Nakhchivan State University

E-mail: gulnarkarimli@ndu.edu.az

ORCID ID: 0009-0001-2587-8667

Abstract: This article explores the social dimension of applied linguistics, emphasizing the role of language in shaping identity, power relations, and communication across diverse communities. It argues that language is not a neutral system of communication but a social force that can both connect and divide people depending on how it is used and valued within society.

The study discusses key concepts such as linguistic discrimination, Critical Discourse Analysis, linguistic landscapes, translanguaging, and linguistic human rights. These frameworks are examined in relation to real-life contexts, including education, healthcare, legal systems, workplace communication, and digital technologies. Particular attention is given to how dominant language ideologies can marginalize non-standard varieties and how applied linguistics seeks to challenge these inequalities.

Furthermore, the article highlights the importance of intercultural communication and the role of linguistic mediation in promoting mutual understanding in globalized environments. It also addresses emerging issues in the digital era, such as algorithmic bias and the underrepresentation of linguistic diversity in artificial intelligence systems.

In conclusion, applied linguistics is presented as a socially engaged field that contributes to greater inclusivity, equity, and cultural awareness. It demonstrates how language awareness can be used as a tool for reducing social barriers and fostering more balanced and respectful forms of global communication.

Key words: linguistic landscape, linguistic rights, society, bridge, inclusivity.

GÜCÜN SƏSLƏRİ: MƏDƏNİ FƏRQLƏRİ ARADAN QALDIRMAQ ÜÇÜN TƏTBİQİ DİLÇİLİKDƏN İSTİFADƏ

ORCID ID: 0009-0001-2587-8667

Xülasə: Bu məqalə tətbiqi dilçiliyin sosial aspektlərini və dilin cəmiyyət daxilində oynadığı güc, kimlik və qarşılıqlı anlaşıma rolunu araşdırır. Məqalədə dilin yalnız ünsiyyət vasitəsi deyil, həm də sosial münasibətləri formalaşdıran və bəzən qeyri-bərabərliyi gücləndirən bir sistem olduğu göstərilir. Xüsusilə dil ayrı-seçkiliyi, standart dil ideologiyası və müxtəlif dialektlərin sosial qiymətləndirilməsi məsələlərinə diqqət yetirilir.

Tədqiqat çərçivəsində kritik diskurs analizi, linqvistik landşaft, translanguaging və dil hüquqları kimi anlayışlar izah olunur və onların real həyatda – təhsil, hüquq, səhiyyə və iş mühiti kimi sahələrdə tətbiqi təhlil edilir. Məqalə həmçinin mədəniyyətlərarası ünsiyyətdə yaranan anlaşılmazlıqların səbəblərini və bu problemlərin həllində tətbiqi dilçiliyin rolunu vurğulayır.

Bundan əlavə, rəqəmsal texnologiyalar və süni intellekt dövründə dil müxtəlifliyinin qorunması məsələsinə toxunulur. Dilin alqoritmik sistemlərdə əks olunması nəticəsində yarana biləcək yeni bərabərsizlik formaları müzakirə edilir və daha inklüziv yanaşmaların vacibliyi qeyd olunur.

Nəticə olaraq, məqalə tətbiqi dilçiliyin cəmiyyətlər arasında körpü rolunu oynadığını və dilin sosial ədalət, inklüzivlik və mədəni müxtəlifliyin qorunmasında əsas vasitələrdən biri olduğunu göstərir.

Açar sözlər: linqvistik landşaft, dil hüquqları, cəmiyyət, körpü, inklüzivlik

Introduction

Language is far from being a neutral tool of communication. When we speak, we operate within a network shaped by social hierarchies, historical experiences, and cultural identities. While theoretical linguistics focuses on the structure and rules of language, applied linguistics deals with real-life communication and raises critical questions: Who has the right to speak? Whose voices are valued? And how can existing inequalities be addressed?

One of the most significant issues in this field is linguistic discrimination. In many communities, a particular form of language is labeled as the “standard,” usually associated with social prestige, political power, or dominant cultural groups. (Baker, C. 2011). This standard often functions as a barrier. People who use regional dialects or non-standard varieties may face unfair treatment, such as being denied employment opportunities simply because of their accent or way of speaking. Applied linguists examine how such biases operate in different environments, including education, legal systems, and workplaces, and they advocate for the recognition of linguistic rights. (Shohamy, E. 2006)

Methodology and Materials

This study adopts a mixed-method approach in order to explore the social dimension of Applied Linguistics and its role in shaping identity, power relations, and communication across diverse communities. Drawing on Critical Discourse Analysis as a central analytical framework, the research combines both qualitative and quantitative methods to provide a comprehensive understanding of how language functions as a social force.

The methodology is based on both primary and secondary data sources. Secondary data include an extensive review of existing literature on linguistic discrimination, Translanguaging, Linguistic Landscape, and Linguistic Human Rights. Academic articles, policy documents, and previous empirical studies are analyzed to establish a theoretical foundation for the research.

Primary data are collected through qualitative techniques such as case studies, discourse analysis of real-life communicative situations, and observations in contexts like education, healthcare, legal systems, workplace communication, and digital platforms. In addition, selected examples of digital communication are examined to identify instances of algorithmic bias and the representation of linguistic diversity in artificial intelligence systems.

The materials used in this study include written texts, recorded interactions, institutional documents, and online content. These materials are analyzed to identify patterns of language use, power dynamics, and instances of inclusion or exclusion. By integrating multiple data sources and analytical perspectives, the study ensures a holistic and reliable examination of the role of language in contemporary society.

Discussion

One of the important area is pragmatics, which studies how meaning is shaped by context. Effective communication across cultures involves more than translating words; it requires understanding intentions and social norms. For instance, in some cultures, saying “yes” indicates

agreement, while in others it may only signal attentiveness. Misunderstandings like these can lead to serious communication breakdowns. Applied linguistics helps identify these differences and provides strategies to improve intercultural interaction in fields such as diplomacy and international business. (Spolsky, B. 2004)

Language policy is another domain where applied linguistics has practical importance. Governments and institutions rely on linguistic expertise to create inclusive systems. This includes designing educational programs that support both native languages and widely used international languages, ensuring that health information is communicated in culturally appropriate ways, and facilitating effective communication during emergencies or humanitarian crises.

In today's digital age, the role of applied linguistics is becoming even more crucial. Artificial intelligence systems, especially large language models, are trained on extensive datasets that may reflect existing social biases. (Halliday, M. A. K. 1978) If such technologies primarily recognize dominant language varieties, they risk excluding speakers of other dialects. Applied linguists collaborate with technology developers to make these systems more inclusive and sensitive to linguistic diversity, helping to prevent the reinforcement of social inequalities through digital tools. (Crystal, D. 2003)

To better understand the social role of applied linguistics, it is important to examine the practical processes that make language a tool for connection rather than division. When theory is applied in real contexts, the field becomes not only descriptive but also transformative, aiming to address inequalities and improve communication.

One of the key approaches in this area is Critical Discourse Analysis (CDA), which focuses on how language reflects and reinforces power structures. By carefully analyzing political speeches, media texts, and legal language, researchers can uncover underlying assumptions and biases that often go unnoticed. For example, the use of passive constructions can hide responsibility, while active forms clearly identify the agent of an action. Similarly, metaphorical expressions can shape how people interpret events; describing an economic problem as a "natural disaster" may imply that it is unavoidable, rather than caused by human decisions. (Blommaert, J. 2010) Through such analysis, applied linguistics helps individuals develop a more critical awareness of public discourse. (Gumperz, J. J. 1982)

Another important concept is the linguistic landscape, which refers to the languages that appear in public spaces such as street signs, advertisements, and shop names. These visible signs of language use reflect deeper social and cultural dynamics. When minority languages are included in public signage, it can create a sense of belonging and recognition for those communities. On the other hand, their absence may signal exclusion. In some cases, especially for indigenous groups, restoring traditional place names and languages in public spaces plays a significant role in cultural revival and historical reconciliation. (Phillipson, R. 1992)

Communication challenges are particularly critical in healthcare settings, where misunderstandings can have serious consequences. (Canagarajah, S. 2013) Applied linguistics contributes to improving interactions between medical professionals and patients from different linguistic and cultural backgrounds. By developing better translation practices and promoting cultural awareness, linguists help ensure that essential information is accurately understood and that patients receive appropriate care.

A more recent and influential concept in the field is translanguaging. (Wodak, R., & Meyer, M. 2009) Traditional educational systems often required students to strictly separate their languages,

treating bilingualism as a problem. However, current research shows that bilingual individuals use their languages as part of a unified system. When students draw on multiple languages while learning, they are not making errors but rather using all available cognitive resources. Encouraging translanguaging in education helps connect students' home experiences with academic learning and recognizes their linguistic abilities as strengths rather than limitations. (Heller, M. 2007).

In today's globalized environment, applied linguists often function as mediators between cultures and communities. Their role goes beyond simple translation; they ensure that communication is fair, accurate, and sensitive to context. For instance, when refugees are interviewed, linguists help account for the effects of trauma on speech patterns. In international workplaces, they support the creation of shared communicative practices that are not tied to a single culture but are mutually understood by all participants. (Cook, G, 2003) In legal contexts, they may also clarify that silence or minimal responses are not always signs of guilt, but can reflect cultural norms such as respect or caution.

To better understand how language relates to power, applied linguistics can be viewed as a diagnostic tool for social equality. It does not merely describe how language is used; it identifies situations where language creates exclusion and seeks ways to transform it into a means of inclusion.

In cross-cultural interactions, people constantly adjust how they speak in a process known as identity negotiation. This often involves code-switching, where individuals modify their language, accent, or communicative style to align with dominant social expectations.

However, this adaptation is not always balanced. In many cases, individuals from marginalized groups are expected to carry the full burden of adjustment, while dominant groups make little effort to accommodate others. Applied linguistics challenges this imbalance by promoting mutual adaptation.

A related concept is "acoustic justice," which focuses on how listening practices can reinforce inequality. From this perspective, the issue is not the speaker's accent, but the listener's unwillingness to engage with linguistic diversity. Encouraging more flexible and attentive listening is therefore an important step toward fairness in communication.

The consequences of miscommunication are particularly serious in legal settings. Applied linguists often contribute as experts to ensure that linguistic and cultural misunderstandings do not lead to unjust outcomes.

For example, in some cultures, individuals may agree with authority figures out of politeness or a desire to avoid conflict, even when the information is inaccurate. Without proper interpretation, this behavior can be misread as a confession. Additionally, the complexity of legal language itself can create barriers. Applied linguists advocate for clearer, more accessible forms of legal communication so that individuals from different educational and cultural backgrounds can fully understand their rights.

In professional environments, language can influence who is seen as competent or suitable for leadership roles. Different cultures follow different communication styles. Some prioritize direct and concise expression, while others value indirectness and contextual explanation. When only one style is considered "effective," individuals who communicate differently may be unfairly judged.

Applied linguistics helps organizations recognize these differences as variations rather than deficiencies. It also contributes to training programs that encourage inclusive communication

practices and support diversity in the workplace. In this way, companies can benefit from a broader range of perspectives and talents. (Cook. G, 2003)

In post-conflict situations, language plays a crucial role in rebuilding trust. Applied linguists assist in drafting agreements and public statements that avoid emotionally charged or historically sensitive terms. By carefully selecting neutral and inclusive language, they help create space for dialogue and mutual understanding between conflicting parties.

There is growing interest in the idea of linguistic intelligence, sometimes referred to as LQ. This concept highlights the importance of being aware of how language shapes interaction. It includes the ability to recognize personal linguistic biases, adapt communication to different cultural contexts, and appreciate the linguistic abilities of others as valuable resources rather than limitations.

In migration contexts, language can directly affect people's lives. Asylum decisions often depend on spoken narratives provided during interviews. Applied linguists play an important role in ensuring these processes are fair.

For example, language analysis techniques are sometimes used to determine a person's origin. Linguists help ensure that such methods are applied carefully, recognizing that displacement may influence how someone speaks. Additionally, individuals who have experienced trauma may struggle to present their stories in a clear, linear way. Applied linguistics helps interviewers understand that fragmented narratives are not necessarily signs of dishonesty, but may reflect psychological distress. (Blommaert, J. 2010)

With the rapid development of artificial intelligence, language-related issues are becoming increasingly important in digital spaces. Algorithms trained on dominant language varieties may unintentionally disadvantage users who communicate differently. This can affect areas such as hiring systems, online content moderation, and access to information.

Applied linguists work alongside technology developers to reduce such biases and to support the inclusion of less widely used languages. Given that thousands of languages exist worldwide but only a few dominate the internet, this work is essential for preventing new forms of digital inequality.

For many communities, especially indigenous groups, language is closely tied to cultural identity and historical memory. Applied linguistics contributes to efforts aimed at preserving and revitalizing endangered languages. This includes documenting languages, developing writing systems, and supporting their use in education. (Blommaert, J. 2010)

There is also a strong connection between linguistic diversity and environmental knowledge. Many traditional languages contain detailed information about local ecosystems. Preserving these languages therefore contributes not only to cultural survival but also to environmental sustainability.

Looking ahead, organizations may increasingly adopt practices such as linguistic audits to evaluate how communication functions within their structures. This process can identify barriers caused by jargon, hierarchy, or cultural differences. It may also encourage clearer communication guidelines and promote the value of multilingualism.

Rather than viewing bilingual employees simply as translators, organizations can recognize them as cultural intermediaries with specialized skills that enhance global collaboration. In conclusion, applied linguistics plays a vital role in shaping more equitable and inclusive societies. (Gumperz, J. J. 1982) By examining how language operates in real-world contexts, it helps uncover

hidden inequalities and offers practical solutions. Whether in migration, technology, education, or global cooperation, its ultimate goal is to transform language from a source of division into a powerful means of connection.

If we imagine society as a constructed system, language can be seen as the element that holds it together. When communication is unstable or unequal, social structures become fragile and divisions deepen. In this sense, applied linguistics plays a crucial role in reinforcing the foundations of interaction, helping to create more balanced and effective communication across different groups. (Shohamy, E. 2006)

Conclusion

To conclude, the social dimension of applied linguistics highlights that human life is shaped not only by physical realities but also by shared meanings. By examining how power operates through language, we gain the ability to challenge existing inequalities and promote more inclusive forms of communication. This perspective encourages a shift toward a more diverse and dynamic communicative environment, where multiple voices can coexist, interact, and influence one another without being suppressed.

At its core, applied linguistics is closely connected to empathy. It emphasizes that every language and dialect is a complex and fully developed system capable of expressing human thought and experience. By critically analyzing how certain voices are privileged while others are marginalized, we can begin to reduce the barriers that divide societies. In doing so, we move toward a world in which all individuals have the opportunity to be heard and understood.

MODERN PROBLEMS AND DEVELOPMENT PROSPECTS OF APPLIED LINGUISTICS AND LEXICOGRAPHY IN AZERBAIJAN

Prof.Dr. Hajar HUSEYNOVA

ASPU, Faculty of Philology, Department of Azerbaijani Linguistics

E-mail: hacerhuseynova@mail.ru

ORCID ID: [0000-0002-3223-427X](https://orcid.org/0000-0002-3223-427X)

Abstract: This article is dedicated to the analysis of the current state, main challenges, and development prospects of applied linguistics and lexicography in Azerbaijan. The author notes that against the backdrop of globalization and language policy, the standardization of terminological units-especially in information technology and law-remains a vital necessity. In the field of lexicography, alongside traditional printed dictionaries, the creation of electronic and corpus-based dictionaries is highlighted as a key priority. However, the absence of a fully developed large-scale national language corpus continues to present a significant challenge for the discipline. Furthermore, developing applied linguistic tools, such as machine translation systems and language technologies in a multilingual environment, is essential for preserving and promoting the Azerbaijani language. Consequently, standardizing terminology and expanding electronic resources will effectively strengthen the scientific and practical standing of the Azerbaijani language in the modern era

Keywords: Applied linguistics, lexicography, terminology, Azerbaijani language, electronic dictionaries, corpus linguistics, digital technologies, language policy.

AZƏRBAYCANDA TƏTBİQİ DİLÇİLİK VƏ LEKSİKOQRAFIYANIN MÜASİR PROBLEMLƏRİ VƏ İNKİŞAF PERSPEKTİVLƏRİ

Prof.Dr. Həcər HÜSEYNOVA

ADPU, Filologiya fakültəsi, Azərbaycan dilçiliyi kafedrası

ORCID ID: [0000-0002-3223-427X](https://orcid.org/0000-0002-3223-427X)

Xülasə: Təqdim olunan məqalə Azərbaycanda tətbiqi dilçilik və leksikografiyanın müasir vəziyyəti, əsas problemləri və inkişaf istiqamətlərinin təhlilinə həsr olunmuşdur. Müəllif qeyd edir ki, qloballaşma və dil siyasəti fonunda terminoloji vahidlərin standartlaşdırılması, xüsusilə informasiya texnologiyaları və hüquq sahələrində vahid sistemin formalaşdırılması mühüm zərurətdir. Leksikografiya sahəsində isə ənənəvi çap lüğətləri ilə yanaşı, elektron və korpus əsaslı lüğətlərin yaradılması prioritet məsələlərdəndir. Lakin genişmiqyaslı milli dil korpusunun hələ də tam olmaması sahənin qarşısında duran əsas çağırışlardan olaraq qalır. Eyni zamanda, çoxdilli mühitdə avtomatik tərcümə sistemləri və dil texnologiyalarının inkişaf etdirilməsi Azərbaycan dilinin qorunması və təbliği baxımından vacibdir. Nəticədə, terminologiyanın qaydaya salınması və elektron resursların genişləndirilməsi ölkədə dilçilik elminin praktiki mövqeyini gücləndirəcək

Açar sözlər: Tətbiqi dilçilik, leksikografiya, terminologiya, Azərbaycan dili, elektron lüğətlər, korpus dilçiliyi, rəqəmsal texnologiyalar, dil siyasəti.

Introduction

Applied linguistics stands as a dynamic and vital academic discipline that systematically investigates the practical applications of language across a diverse spectrum of societal and professional domains. Encompassing core pillars such as foreign language pedagogy, professional translation, specialized terminology management, speech technologies, and modern lexicography, this field bridges theoretical linguistic models with real-world communicative needs. In contemporary Azerbaijan, the continuous evolution of applied linguistics has been profoundly shaped by dynamic state language policies and the multifaceted forces of global integration. Lexicography, functioning as a foundational sub-discipline, plays a pivotal role in this ecosystem by orchestrating the meticulous systematization of national vocabulary and advancing dictionary compilation methodologies to meet modern academic and professional standards.

Main Body

A primary challenge currently confronting applied linguistics in Azerbaijan involves the systematic standardization of terminological units across specialized sectors. The ongoing absence of a fully unified, universally accepted system of terms-particularly within fast-growing industries such as information technology, cybernetics, and modern jurisprudence-frequently generates professional ambiguity and communicative friction among practitioners.

Within the realm of lexicography, the paradigm has shifted dramatically; alongside traditional printed references, the rapid expansion of electronic dictionaries and digital lexical databases has become indispensable. In the modern era, leveraging corpus linguistics methodologies to compile corpus-based dictionaries is of paramount importance for analyzing authentic word usage patterns, semantic shifts, and phraseological behavior within actual communicative contexts. Although notable institutional initiatives and preliminary steps have been undertaken within Azerbaijan to foster digital lexicography, the absence of a comprehensive, fully developed, large-scale national language corpus continues to present a considerable obstacle for advanced computational and empirical research.

Furthermore, navigating a complex multilingual environment requires robust investment in applied linguistic tools. The strategic development of automated machine translation engines, speech recognition software, and advanced language technologies remains fundamentally essential for safeguarding, modernizing, and globally promoting the Azerbaijani language.

Conclusion

Accelerating the growth and academic sophistication of applied linguistics and lexicography in Azerbaijan requires a resolute commitment to several key strategic priorities. Foremost among these is the rigorous, scientifically grounded standardization of technical terminology across all emerging professional sectors. Furthermore, the systematic expansion of reliable electronic resources and the institutional establishment of a comprehensive national language corpus are paramount for modernizing linguistic research. Successfully developing these critical domains will substantially enhance both the academic rigor and the practical utility of the Azerbaijani language, ensuring its dynamic adaptation to contemporary technological demands, strengthening its scholarly foundations, and elevating its overall standing in both domestic and international spheres.

METHODS OF EXPRESSING QUALITY IN PHRASEOLOGICAL UNITS OF THE MODERN AZERBAIJANI LANGUAGE

Narmin Allahverdi MAMMADLI

PhD Candidate, Department of Azerbaijani Linguistics, Baku State University

E-mail: narminabdulhuseynli@bsu.edu.az

ORCID ID: [0009-0006-3275-3893](https://orcid.org/0009-0006-3275-3893)

Abstract: The presented article analyzes in detail the expression of the category of quality in phraseological units. It is noted that language is not only a means of communication, but also a form of expressing human thoughts and emotions; therefore, the category of quality holds particular significance. The author emphasizes that quality is often expressed not directly, but figuratively and metaphorically, especially through phraseological units.

Different approaches to the nature of phraseology-narrow and broad, are compared, and preference is given to the narrow approach as it is considered more systematic. The main features of phraseological units, such as stability, figurativeness, and semantic integrity, are explained, and it is shown that in these units the original meanings of words change to form a new, unified meaning.

The article illustrates how quality is formed in phraseological expressions through various examples, highlighting the important roles of metaphORIZATION, comparison, and emotional intensification. It is noted that phraseological units add imagery and emotional expressiveness to speech.

In addition, it is emphasized that these expressions reflect national and cultural characteristics and are closely connected with the worldview and way of life of a people. Their role in fiction is also underlined, particularly in presenting characters in a concise and expressive way.

Finally, the dynamic nature of the phraseological system is discussed: new expressions emerge while others become passive, which demonstrates that language develops alongside society. Overall, the expression of quality in phraseological units is evaluated as an important field reflecting the semantic and stylistic richness of language.

Keywords: phraseology, category of quality, phraseological units, metaphORIZATION, semantic transformation

Xülasə: Təqdim olunan məqalədə frazeoloji birləşmələrdə keyfiyyət anlayışının ifadə olunması geniş şəkildə təhlil edilir. Qeyd olunur ki, dil yalnız ünsiyyət vasitəsi deyil, həm də insanın düşüncə və hisslərinin ifadəsidir və bu baxımdan keyfiyyət kateqoriyası xüsusi əhəmiyyət daşıyır. Müəllif vurğulayır ki, keyfiyyət hər zaman birbaşa deyil, çox vaxt məcazi və obrazlı şəkildə, xüsusilə frazeoloji birləşmələr vasitəsilə ifadə olunur.

Frazeologiyanın mahiyyəti ilə bağlı həm dar, həm də geniş yanaşmalar nəzərdən keçirilir və daha sistemli olduğu üçün dar yanaşmaya üstünlük verilir. Frazeoloji birləşmələrin sabitlik, məcazilik və semantik bütövlük kimi əsas xüsusiyyətləri izah olunur. Bu vahidlərdə sözlərin ilkin mənalarının dəyişərək yeni, bütöv mənə yaratdığı göstərilir.

Məqalədə keyfiyyətin frazeoloji ifadələrdə necə formalaşdığı müxtəlif nümunələrlə açıqlanır. Bildirilir ki, bu prosesdə məcazlaşma, müqayisə və emosional gücləndirmə mühüm rol oynayır. Frazeoloji birləşmələr keyfiyyəti daha təsirli və yadda qalan formada təqdim edir, nitqə obrazlılıq və emosional çalar qatır.

Eyni zamanda vurğulanır ki, bu ifadələr milli-mədəni xüsusiyyətləri əks etdirir və xalqın dünyagörüşü, həyat tərzilə sıx bağlıdır. Onların bədii ədəbiyyatda rolu xüsusi qeyd olunur: frazeoloji vahidlər obrazların xarakterini yığcam və təsirli şəkildə açmağa imkan verir.

Sonda qeyd edilir ki, frazeoloji sistem dinamikdir, yəni yeni ifadələr yaranır, bəziləri isə passivləşir. Bu da dilin cəmiyyətlə birlikdə inkişaf etdiyini göstərir. Ümumilikdə, frazeoloji birləşmələrdə keyfiyyətin ifadəsi dilin semantik və üslubi zənginliyini əks etdirən mühüm bir sahə kimi dəyərləndirilir.

Açar sözlər: frazeologiya, keyfiyyət kateqoriyası, frazeoloji birləşmələr, məcazlaşma, semantik transformasiya

Introduction

Language is not only a means of communication but also a fundamental tool through which humans perceive, interpret, and evaluate the surrounding world. In this respect, the category of quality occupies a special place among linguistic units, as it not only names objects and phenomena but also reflects the speaker's attitude and evaluation toward them. The expression of quality, however, is not always carried out directly and explicitly; in many cases, this meaning is conveyed more effectively and vividly through indirect means, particularly through phraseological units. In modern Azerbaijani linguistics, phraseological units attract special interest as one of the richest and most expressive layers of language. These units not only carry semantic content but also reflect the worldview of the people, their historical experience, and their system of emotional attitudes. The study of the ways in which quality is expressed in phraseological units is therefore of great importance for revealing both the internal mechanisms of language and its cultural foundations.

The relevance of the topic lies in the fact that, despite extensive research in the field of phraseology, the methods of expressing quality in phraseological units of the modern Azerbaijani language have not yet been sufficiently systematized. At the same time, in the modern era, the dynamic development of language, new socio-cultural conditions, and the influence of communication tools lead to the

emergence of new expressions, while existing phraseological units undergo certain semantic changes. This makes it necessary to re-examine the issue from a broader and more comprehensive perspective.

In this regard, the aim of the present article is to investigate the methods of expressing quality in phraseological units of the modern Azerbaijani language, to analyze their semantic and functional features, and to reveal the interrelationship between language and culture. Such an approach contributes to the study of phraseology not only from a linguistic perspective but also as a cultural phenomenon.

Methodology and Materials

The following research methods were employed in the article: descriptive, comparative, analytical, functional-semantic, and systemic-structural analysis.

Discussion

Language is not merely a means of communication; it is also an expression of human emotions, thoughts, and worldview. In this respect, each linguistic unit carries a certain semantic load, within which the notion of quality occupies a special place. When perceiving the surrounding world, humans do not limit themselves to naming objects; they also evaluate them, express attitudes toward them, and highlight their various characteristics. It is precisely at this point that the category of quality emerges. However, quality is not always expressed directly and explicitly. Quite often, this notion is conveyed more effectively and vividly in an indirect manner, where phraseological units play a particularly significant role.

S. Jafarov presents fixed word combinations, the object of study of phraseology, within a broader framework. He includes idioms, set expressions, wise sayings, proverbs, aphorisms, and riddles in this category (Jafarov S., 2007). However, this remains a controversial issue in linguistics. Scholars who adopt a narrow understanding of phraseology include only idioms and set expressions as stable word combinations within this field. In this approach, the main criteria are stability, figurativeness, and semantic unity.

According to another perspective, scholars who approach phraseology from a broader standpoint also include proverbs, wise sayings, and riddles, as these are fixed and ready-made linguistic units. Nevertheless, in our view, the narrow approach appears more systematic and precise, as it confines phraseology to the framework of lexical-semantic units. Although the broader approach enriches the material, it sometimes excessively expands the boundaries of phraseology, leading to its overlap with paremiology (the study of proverbs and sayings). Therefore, contemporary linguistics tends to favor the narrower interpretation, examining phraseology primarily within the limits of idiomatic and fixed expressions, while proverbs and other aphoristic expressions are typically studied within paremiology as a separate field.

Phraseological units are considered one of the most vivid and expressive layers of language. They not only convey meaning but also embody national modes of thinking, historical experience, and emotional attitudes. M. Adilov identifies three meanings of the term "phraseology." He defines it as a branch of linguistics, as the totality of phraseological units belonging to a particular language, and as the set of distinctive expressive means characteristic of a specific social group, literary figure, or artistic movement. According to the scholar, the subject of phraseology is the study of the categorical features of phraseological units (Adilov M., 2019).

In phraseological expressions, words partially or completely lose their direct lexical meanings and form a new, unified semantic whole. As a result, the meaning that emerges is often more

powerful and expressive than a literal expression. For this reason, the expression of quality through phraseological units is of particular interest both in linguistics and stylistics. H. Hasanov's observation is especially noteworthy in this regard. He states that words within phraseological units partially lose some characteristics typical of independent lexical items, yet they do not become entirely functionless. To a certain extent, they retain their nominative function while functioning as a unified semantic entity. In this respect, phraseological units differ from free word combinations both in terms of stability and internal structure (Hasanov H., 2005).

In our opinion, the role of internal form in the formation of phraseological units should also be emphasized. The internal form arises from the semantic and structural relationships between components and ensures the integrity of the unit. Thus, the semantic connection between components is of great importance in phraseological units. To illustrate this, consider the expression "to have one's heart burn" (meaning to feel compassion). We use this expression naturally because of the semantic compatibility between its components. However, a phrase like "to have one's heart write" is impossible, as there is no semantic connection between its elements.

Expressions frequently encountered in everyday speech and literary texts—such as "a dark day," "to be left open-mouthed," "to have a heart of stone," and "to spit fire"—may appear at first glance to be simple word combinations. However, in these expressions, quality is conveyed not directly but figuratively and metaphorically. For example, in the expression "a dark day," although the adjective "dark" denotes color, the notion of color recedes into the background, giving way to meanings such as hardship and difficult living conditions. The choice of "dark" is not accidental; it carries a negative connotation, which demonstrates that quality in phraseological units is formed through semantic transformation.

In such expressions, the representation of quality is often linked to metaphorization. Metaphorization is one of the most powerful expressive means of language, enabling the presentation of concrete notions in a more abstract and generalized form. For instance, in the expression "to have a heart of stone," the hardness and insensitivity of stone are transferred to a person's character, transforming a physical property into a psychological quality. A similar process can be observed in expressions like "light-minded," where "light," typically referring to physical weight, acquires meanings such as irresponsibility and frivolity in context. Such semantic shifts are among the defining features of phraseological units.

Another noteworthy aspect is that quality in phraseological expressions is often presented in an intensified form. In everyday language, one may simply say "an angry person," but the expression "to spit fire" conveys the same quality in a more emotional and vivid manner. In this case, the listener or reader not only receives information but also experiences the intensity of the situation. Similar effects can be observed in expressions such as "to be seized with panic" or "to have one's heart in one's mouth." Replacing these with the simple verb "to fear" would weaken their expressive force; phraseological units convey the severity of the situation more effectively. In other words, such expressions do not merely denote quality—they make it emotionally tangible.

Furthermore, quality in phraseological units is often expressed through comparison and simile. Expressions like "as brave as a lion," "as clear as water," and "as hard as stone" present qualities through concrete imagery. This facilitates clearer understanding and better retention. It can be argued that people comprehend and remember abstract concepts more easily when they are associated with concrete images, and phraseological units make use of this psychological mechanism.

It is also important to note that the qualities expressed in phraseological units are often closely linked to national and cultural characteristics. Every language contains expressions that reflect the lifestyle, mindset, and values of its speakers. For example, the expression “a submissive person” (literally “a slap-receiving person”) reflects not only a linguistic fact but also social relationships and character types. In this sense, the expression of quality in phraseological units is not only a linguistic phenomenon but also a matter of cultural heritage.

Similarly, the expression “a person with a golden heart” illustrates how a word denoting material value can, in a phraseological context, express high moral qualities such as kindness and compassion. Here, a physical attribute serves to convey an internal human quality.

The expression “not letting the tongue rest” (i.e., being excessively talkative) is another interesting example, where quality is expressed through behavioral patterns rather than directly (Maharramli G., İsmayilov R., 2018). Likewise, the expression “to bring honor” signifies gaining respect and maintaining dignity (Maharramli G., İsmayilov R., 2018), while its opposite, “to bring shame,” conveys negative evaluation, associated with disgrace and dishonor (Maharramli G., İsmayilov R., 2018). These expressions reflect the cultural association of “face” with honor and reputation.

Another example is the expression “to have bread on one’s knee,” which denotes irresponsibility and instability (Maharramli G., İsmayilov R., 2018). Such expressions are closely tied to everyday life and derive their semantic load from practical experience.

These examples demonstrate that the expression of quality in phraseological units is not limited to the internal mechanisms of language but is also closely connected with a people’s history, lifestyle, and worldview.

From a functional perspective, phraseological units expressing quality play a significant role. They make speech more vivid and expressive, elevating it from a purely informative level to an emotional and artistic one. In literary texts, such expressions are particularly important in revealing character traits. Instead of lengthy descriptions, a writer can convey a character’s personality through a single phraseological expression. For instance, the character Iskandar in the play *The Dead* is portrayed as bold, outspoken, and critical of society. Expressions such as “speaking without restraint” and “telling the truth to someone’s face” clearly reflect his courageous and uncompromising nature.

Similarly, the character Mashadi Ibad in *Arshin Mal Alan* is remembered for his stinginess and outdated worldview. Expressions such as “tight-fisted” and “never satisfied with money” effectively convey these traits without the need for extensive explanation.

Moreover, phraseological units are often more concise and expressive than free word combinations. Instead of saying “something useless” or “unnecessary,” the expression “not worth a straw” conveys the same meaning more vividly. This aligns with the principle of linguistic economy, allowing more meaning to be expressed with fewer words.

In the modern era, the development of language has also led to changes within the phraseological system. New social and cultural conditions give rise to new expressions, with media and everyday speech playing an active role in this process. At the same time, some older expressions become obsolete or acquire new shades of meaning. This demonstrates that although phraseological units are stable, they are not entirely unchangeable and remain subject to the general laws of language development. For example, traditional expressions such as “to get into trouble” or “to lose one’s head” are still in use, but new expressions like “to trend,” “to collect likes,” and “to

go viral” have emerged in modern discourse. Over time, these may stabilize and acquire phraseological characteristics.

Conversely, some older phraseological units have become less active. Expressions related to traditional ways of life are no longer as widely used and are often preserved in literary texts or in the speech of older generations. Such examples illustrate that the frequency of phraseological units is directly related to societal conditions. As lifestyles change, some expressions lose their relevance and move into the passive lexicon, yet they do not disappear entirely and remain preserved in the collective linguistic memory.

Conclusion

In conclusion, the expression of quality in phraseological units is a multifaceted and complex process. It involves metaphorization, emotional intensity, comparison, and national-cultural factors. The resulting expressions demonstrate both the semantic richness and stylistic diversity of language. These observations confirm that phraseological units occupy a special place in expressing the category of quality, possessing not only informative but also aesthetic and emotional value. Their study enables a deeper understanding of the inner layers of language and contributes to more expressive and effective communication.

THE ROLE OF CONJUNCTIONS IN EXPRESSING A SUBORDINATE CLAUSE OF TIME IN ENGLISH

Aynur Elman HUMMETOVA

CA Academy Training Center, teacher, director

E-mail: ahummetova@mail.ru

ORCID ID: 0000 0002 7601 9985

Abstract: This article examines the fundamental principles governing the functioning of English sentences with temporal clauses. Within the scope of this type of work, their key stylistic, lexical-semantic, and structural-functional characteristics are reviewed. The author focuses exclusively on the special conjunctions that connect both parts of a complex English sentence of this type. Furthermore, linguistic analysis examines the key features and functional characteristics of temporal forms in the two parts of the

sentence, taking into account the difficulties and interference that naturally arise when analyzing this grammatical category when studied by a foreign-language audience. Thus, the article focuses on certain differences between languages of different groups in expressing the aforementioned relationships. It is emphasized theoretically and proven through the practice of linguistic research that the precise use of these English subordinate clauses is essential for expressing correct speech in several aspects simultaneously: grammatical and communicative. The article also analyzes the syntactic synonymy of subordinate clauses of time with semi-predicative constructions and the conditions of their transformation.

Key words: subordinate clauses of time, complex English sentence, conjunctions of time, conjunction words, grammatical structure, syntax, vocabulary, semantics, presence of tense forms.

İNGİLİS DİLİNDƏ ZAMAN BUDAQ CÜMLƏSİNİN İFADƏSİNDƏ BAĞLAYICILARIN ROLU

Aynur Elman qızı HÜMMƏTOVA

CA Academy Tədris Mərkəzi, müəllim, direktor

Xülasə. Bu məqalədə zaman budaq cümlələri olan ingilis cümlələrinin funksiyasını tənzimləyən fundamental prinsiplər araşdırılır. Bu tip işin əhatə dairəsi daxilində onların əsas stilistik, leksik-semantik və struktur-funksional xüsusiyyətləri nəzərdən keçirilir. İngilis dilində zaman budaq cümlələrinin tədqiqinin aktuallığı ondan ibarətdir ki, tabeli mürəkkəb cümlə sisteminin təsnifatını aydınlaşdırır, budaq cümlə probleminin ümumnəzəri aspektlərini müəyyən edir. Müəllif yalnız bu tip mürəkkəb ingilis cümləsinin hər iki hissəsini birləşdirən xüsusi bağlayıcılara diqqət yetirir. Bundan əlavə, linqvistik təhlil, xarici dilli auditoriya tərəfindən öyrəniləndə bu qrammatik kateqoriyanı təhlil edərkən təbii olaraq yaranan çətinlikləri və müdaxilələri nəzərə alaraq, cümlənin iki hissəsindəki zaman formalarının əsas xüsusiyyətlərini və funksional xüsusiyyətlərini araşdırır. Beləliklə, məqalə yuxarıda qeyd olunan əlaqələri ifadə etməkdə müxtəlif qrupların dilləri arasında müəyyən fərqlərə diqqət yetirir. Nəzəri olaraq vurğulanır və linqvistik tədqiqat təcrübəsi ilə sübut edilir ki, bu ingilis tabeli cümlələrinin dəqiq istifadəsi eyni vaxtda bir neçə aspektdə: qrammatik və kommunikativ olaraq düzgün nitqi ifadə etmək üçün vacibdir. Məqalədə həmçinin predikativ konstruksiyaları olan zaman tabeli cümlələrinin sintaktik sinonimliyi və onların çevrilmə şərtləri təhlil edilir.

Açar sözlər: zaman budaq cümlələri, mürəkkəb cümlə, zaman ifadə edən bağlayıcılar, bağlayıcı sözlər, qrammatik quruluş, sintaksis, lüğət, semantika, zaman formalarının mövcudluğu.

Introduction

It is well known that English complex sentences of any type are of considerable importance in the overall system of this language, serving as a semantic signaling device “between different parts of speech” (Quirk et al., 1985). The type of subordinate clause we are interested in in this article is quite common. And most linguists agree with this position. For example, D. Biber, S. Johansson, and others use these subordinate clauses to precisely determine the tense in which a specific action, expressed by the first (i.e., main) part of an English complex sentence, takes place (Biber et al., 1999).

It is significant that the aforementioned European scholars, and many others, recognize the fact that the question posed in the title of this article is of considerable interest in both theoretical and applied terms. From a theoretical standpoint, temporal clauses in modern English are a serious

subject of research for linguists directly involved in syntax; the practical purpose of such works is mainly associated with their correct use in the speech of non-native speakers in the context of practicing communication skills and abilities. In addition, orthoepy is also of considerable importance. In principle, this is a large and ramified complex of features of this type of English subordinate clauses. Therefore, only at a cursory glance may it seem that temporal clauses have a simple architectonics. In reality, this issue is connected with the analysis of the grammatical structure of the language, and along this path, features and characteristics are discovered that require further in-depth consideration by specialists. Finding out how this process is carried out both in theory and in practice is the main goal of our article.

Sources and methodology of work.

Our primary sources are the most productive English grammatical constructions with temporal clauses. Our material includes relevant works on the topic, such as reference books, specialized works on vocabulary and syntax, and grammar textbooks. The theoretical basis of this article is drawn not only from European scholars (for whom English is, understandably, both their native and international language) but also from leading contemporary Azerbaijani linguists. It is significant that most of the works we consider in proving our assertions lie at the intersection of two branches of a single discipline: the theory of English sentences with temporal clauses, on the one hand, and its practical application in the analysis of “functional grammar” (Azar, Hagen, 2017; Swan, 2016), on the other.

In our work, we primarily relied on four scientific methods: descriptive; comparative-contrastive; contextual; and syntactic analysis.

The first allowed us to provide a clearer and more precise characterization of the lexical-semantic and structural features of the aforementioned temporal clauses;

The second enabled us to compare and contrast the most significant forms of expressing temporal relationships in the two parts of a complex English sentence and to identify the specific uses of temporal forms in the main and subordinate clauses of the sentence;

The third provided us with a comprehensive overview of their functioning in various communicative contexts in linguistic and literary texts;

The fourth revealed the construction of temporal clauses while simultaneously establishing the most essential functions of conjunctions or conjunctions.

The harmonious combination of these four methods during the analysis allowed us to generalize and systematize all available information. We also conducted a data classification and final conclusions. This work is based on specific examples drawn from the annals of scientific, educational, and fiction literature. Since much of the work is related to English grammar, temporal conjunctions occupy a central place in our study. These include: *when*, *while*, *before*, *after*, *until*, *since*, *as soon as*, *once*, and several others. Naturally, they are not only listed but also incorporated into the sentences analyzed throughout the work, highlighting the main features and characteristics of their use in different types of texts. The results of this study allowed us to establish patterns and norms for the corresponding English syntactic constructions.

Results and discussion

According to a well-established definition, the true form of an English subordinate clause is its dependent clause, “indicating the time of the action, which, in turn, is indicated by the main clause” (Quirk et al., 1985). They answer the following questions: *when?*, *how long?*, *until when?* (Eastwood, 2019).

Modern English has a specific system for the distribution and use of tenses. For example, the future is almost never used in temporal clauses. It is most often expressed indirectly. Specifically, when expressing an action related to the definite (or indefinite) future, the "Present Simple" or "Present Perfect" is used directly. To be clear, this is part of the basic norms of foreign-language grammar, and these tenses are of great importance when using the corresponding temporal clauses. It should be added that English verbs also retain the same tense. For example: "I will call you when I arrive". This is the correct form, but "when I will arrive" is incorrect.

It was noted above that the methods used provided a real opportunity to point out various classifications within English grammar. One of them states that temporal clauses are primarily adverbial (Biber et al., 1999). They have a specific function: to specify the time of a certain action or event.

For example:

When Leyla arrived, we started the cooking.

The first part of the sentence is a subordinate clause, and it indicates the time of the action expressed in the main clause.

A prominent feature of English subordinate clauses of time are conjunctions: *when, while, as, before, after, until, since, as soon as* и *once* (Carter, McCarthy, 2006). When named individually, they express a particular type of time in which an event occurs (Thomson, Martinet, 1986). Thus, "before" tells us that one action (event) precedes another. In turn, "after" indicates their sequence and purposefulness, among other things (Eastwood, 2019). Linguists have noted that so-called independent conjunctions most often function in texts of different types. At the same time, "since", "until", "before", and "after" primarily contribute to establishing lexical-semantic and syntactic relationships between two parts of a sentence.

Both in speech and in writing, conjunctions such as:

When, while, as, before, after, until/till, since, as soon as, whenever, once. The connecting links are most often *when, while, as, before, after, until, and since*. It is a well-established fact that the subject of complex sentences always takes the finite form, and this rule, incidentally, is closely aligned with the order of application of English tenses. At the same time, English morphology urgently requires systematization. Therefore, the tense system can be represented in the form of diagrams/models.

For example:

1. *I'll text you when the guests arrive.*
2. *He was watching a movie while she was talking on the phone.*
3. *After they had finished their work, they went home.*
4. *Don't go anywhere until I get back.*

Based on each of the four points we've mentioned, it's clear that they individually express a strictly defined type of relationship regarding the time of occurrence of a fact, event, or phenomenon.

Thus, "before" occupies a preposition in relation to a subsequent action:

Call a friend before leaving work.

"After" expresses a polar meaning, while emphasizing the direct sequence of actions performed by the subject:

After we had dinner, John walked me home.

The four scientific methods we've listed above, relying (in this case) on the comparative method, in our view, lead to the conviction that in modern English, temporal relations [or the paradigm corresponding to them] analytically form a contrast within the subordinate clause system itself. In other words, the presence of analytical constructions is clearly visible through the combination of, for example, "when" with "even", where the latter functions as a preposition. As a result, the following expression is constructed in the following chain: "even when" - even if... or "although".

It's instructive for English learners to note that, unlike many other conjunctions, temporal conjunctions (for example, when, after, before, until, as soon as, etc.) are more prevalent throughout history and continue to be used today. This is especially true when applied to the future. However, "Future Simple" is generally used significantly less frequently.

I will tell her when she phones.

I will tell her when she will phone.

Let us pay attention to the fact that the main action of the main clause in the two given phrases expresses the future tense, but the subordinate clause is in It is characteristic that this pattern also exists when using some other temporal conjunctions. For example:

As soon as Dad arrives, we'll begin.

Before leaving their office, please turn off the lights.

She'll wait for you until you return.

Unlike the Present Simple, the Present Perfect is more often used by the English to show the completion of an action in the future.

I will go home after I have finished my work.

The example above shows that the first action ends before the second.

Finally, it should be noted that English temporal clauses convey a wide variety of meanings. For example, the construction "scarcely ... when, hardly ... when, no sooner ... than" plays a kind of "cementing" role in the structure and lexical-semantic organization of the text. Here, time can, as it were, branch off from other relationships expressed by the clauses. Specifically, in modern cognitive linguistics, they can have two or more terms.

On the one hand, this process generally "impoverishes" the terminology, because it should ideally be unambiguous. On the other hand, temporal clauses manifest the functioning of complex conjunctions in texts in the presence of correlative (or, in other terminology, reciprocal) elements. "Conjunctive adverbs" may also be present; they demonstrate that events follow one another and occur quickly. As before, they can be classified as specific patterns/models. Their merits are easy to discern. Firstly, in our opinion, they cease to be stylistically neutral, thereby creating a more rigorous style. Secondly, they actively contribute to the enhancement of artistry and expressiveness in classical literature. And this, incidentally, does not at all negate the observance of necessary grammatical norms, for example, the phenomenon of inversion, etc. Not on a stylistic, but rather a syntactic level.

Simultaneity of actions.

The phenomenon of simultaneity is often created by the conjunctions "while" and "as":

While I was taking a shower, my sister was watching TV.

Here, the two actions are simultaneous.

Sequence of actions.

In this case, conjunctions such as *before, after, as soon as*:

As soon as the concert ended, people left the hall.

That is, the concert is over, and people are essentially leaving the hall.

Duration of an event or action over time.

In this section, it's important to consider the time frame of the events and actions. Conjunctions such as "since" and "until" are used.

For example:

We have lived in Germany since I was a child.

They waited until the bus arrived.

The first sentence records the initial moment of the action or event; the second, the fact of its completion.

Factors for overcoming difficulties in learning English sentences with temporal clauses.

A typical mistake made by many non-native English speakers is the incorrect use of the future tense expressed in a temporal clause.

When my mother will arrive, they will start.

Here is the correct version:

When my mother arrives, they will start.

Another mistake is the choice of exact conjunction. For example, it is unacceptable to mix the different functions of "when", "while", and "as".

The first denotes a specific moment in time;

The second denotes the duration of the process itself;

The third denotes the simultaneity of the occurrence of a phenomenon or action.

School and university experience clearly demonstrates that students experience particular difficulties when translating sentences with "since". Teachers have noted that difficulties arise primarily from a failure to distinguish between the temporal and causal functions.

I have read this book since we were students (temporary meaning)

Since it was dark, we didn't go into the forest (causal meaning).

The contextual environment should also be taken into account. For example, the concept in question can be used in both oral and written speech, appearing in linguistic texts, fiction, business etiquette, and everyday communication.

It should be noted that the correct use of all the examples we've provided in texts demonstrates not only professional literacy, taking into account the study of various areas of modern English linguistics, but also the logical construction of sentences. Otherwise, a gap in time will occur between events, not to mention improving general language proficiency.

Conclusion

Thus, we conclude that English sentences with temporal clauses, without exaggeration, form the backbone of the vocabulary, style, and syntax of the entire language system. A close connection between actions and the time of their completion is evident. The examples and constructions provided logically substantiate the precision and clarity of the statement. In our view, the conducted linguistic analysis has demonstrated the necessity of using special conjunctions (or conjunction words) of time to create correct constructions with the specified types of subordinate clauses. They also help establish standards for the coordination of the corresponding forms, as well as demonstrate the richness of the semantic system as a whole. Within this general system, we have specifically identified the present and future tenses; arbitrary mixing of these is fundamentally unacceptable, yet still causes difficulties for students of all ages. We are convinced that further

research in this area will contribute to the deepening of this problem, which is important and relevant in modern cognitive linguistics.

Xülasə: Bu mətn yeniyetmələr arasında slenqin əhəmiyyətini və funksiyasını geniş şəkildə izah edir. Slenq gənclər üçün sadəcə qeyri-rəsmi sözlər toplusu deyil, həm də özünüifadə vasitəsi, emosiyaların ötürülməsi və sosial qrupa aidiyyət hissinin formalaşdırılması üçün mühüm alətdir. Hər bir nəsil özünəməxsus sözlər yaradır və bu sözlər zamanla dəyişərək köhnəlir. Müasir dövrdə slenqin əsas mənbələri sosial media platformaları, memlər, TikTok, YouTube və oyun mədəniyyətidir. Qloballaşmanın təsiri ilə bir çox sözlər ingilis dilindən alınaraq yerli dillərə uyğunlaşdırılır. Slenq yeniyetmələrin kimlik axtarışında da mühüm rol oynayır və onları yaşıdları arasında qəbul olunmağa kömək edir. Araşdırmaya əsasən, gənclərin əksəriyyəti slenqdən vərdişə görə istifadə edir, digərləri isə fikirlərini daha qısa və aydın ifadə etmək, emosiyalarını çatdırmaq və ya “cool” görünmək üçün bu vasitəyə müraciət edir. Böyüklərin slenqi anlamağa çalışması uşaqlarla münasibətləri gücləndirə bilər. Slenq dilin canlı və dəyişkən hissəsidir və düzgün istifadə edildikdə dili daha rəngarəng və ifadəli edir.

Açar sözlər: slenq, yeniyetmələr, ünsiyyət, qloballaşma, kimlik

YENİYETMƏ ÜNSİYYƏTİNDƏ SLENQİN ROLU: ŞƏXSİYYƏTİN FORMALAŞMASI, RƏQƏMSAL TƏSİR VƏ DİLİN TƏKAMÜLÜNÜN SOSİOLİNGVİSTİK ANALİZİ

Abstract: The text explores the importance and function of slang among teenagers. Slang is not just a collection of informal words; it is a key tool for self-expression, emotional communication, and creating a sense of belonging within a social group. Each generation invents its own vocabulary, which quickly evolves and often disappears over time. In the modern world, the main sources of slang are social media platforms, memes, TikTok, YouTube, and gaming culture. Due to globalization, many slang terms are borrowed from English and adapted into local languages. Slang also plays a significant role in the process of identity formation, helping teenagers feel accepted among their peers. According to research, most young people use slang out of habit, while others use it to express ideas more clearly, convey emotions, or appear “cool.” For adults, trying to understand slang can improve communication and strengthen relationships with teenagers. Slang should not be seen negatively, as it is a natural and evolving part of language. When used appropriately, it enriches communication, making it more expressive, dynamic, and reflective of contemporary culture and youth identity.

Keywords: slang, teenagers, communication, globalization, identity

Introduction

In contemporary society, language is constantly evolving under the influence of social, cultural, and technological factors. One of the most noticeable manifestations of this evolution is youth slang. Slang is widely used by teenagers as a means of informal communication and plays a crucial role in shaping their identity and social belonging. It reflects not only linguistic creativity but also the values, emotions, and experiences of a particular generation.

The growing influence of digital media and globalization has significantly accelerated the development and spread of slang expressions. As a result, understanding this phenomenon has become increasingly important for linguists, educators, and parents. This study aims to analyze the functions, sources, and social significance of slang among teenagers.

Methodology and Materials

This research is based on a combination of theoretical and empirical methods.

Firstly, a theoretical analysis of academic literature and online resources was conducted to explore the origin and evolution of modern slang expressions such as “auf,” “sigma,” and “red flag.”

Secondly, a sociological survey was carried out among teenagers to identify the frequency and reasons for slang usage in everyday communication.

Thirdly, a linguistic analysis was applied to examine slang as a dynamic system, focusing on the adaptation of English borrowings (e.g., “vibe” → “vaib”) and gaming terminology (e.g., “noob,” “imba”).

Finally, a comparative method was used to evaluate differences in slang usage across generations and its impact on communication between teenagers and adults.

The materials of the study include online texts, social media content, and survey data collected from young participants.

Discussion

Youth slang is a popular phenomenon among young people, representing a unique form of communication and self-expression. It is a special linguistic style that teenagers use within their social environment. Slang may arise for various reasons: to create their own communication code, to express emotions, or to achieve a humorous effect. Each generation invents new words to communicate in its own original way. What seemed “cool” ten years ago may feel “cringe” today and will likely be forgotten tomorrow.

For teenagers, words are not only a means of communication but also part of their style, generational identity, and a kind of game. Slang allows them to express themselves, stand out, and demonstrate belonging. As a person grows, they search for identity, and slang becomes a helpful tool in this process. Adults often do not understand why a child says “imba” instead of “good,” but the reason is simple: teenagers want to feel accepted among their peers. Knowing slang is like having access to a closed club — it helps distinguish who belongs and who does not. Like a password in a game, a single word such as “vibe” can create instant understanding.

Slang is constantly changing, and it is difficult to keep up with it. However, for parents who want to be closer to their children, it is important at least to try to understand this “code” — not to use it themselves, but to build communication and understand the child’s emotions and inner experiences.

Teen slang is largely formed on the internet. Social media platforms, memes, TikTok, YouTube, and comment sections are the main sources of new expressions. Teenagers learn popular words there and actively use them in school, online chats, and everyday life. Another important factor is globalization. Many slang words come from English, are adapted into local languages, and sometimes change their original meaning. For example, “cringe” becomes “krinj,” and “vibe” becomes “vaib.”

Modern language is flexible and convenient for everyday communication. Gaming culture has also had a strong influence. Terms from video games and streaming have become part of teenage speech, such as “noob,” “imba,” “skill,” and “skin.” Virtual worlds increasingly affect real life, and teenagers easily move between these spaces, bringing expressive phrases with them.

Modern youth slang is not just a set of strange words incomprehensible to adults. Each expression carries meaning, emotion, and sometimes even a story. Let us look at some popular expressions of 2026:

Auf – an expression of excitement or approval; similar to “wow” or “cool.”

Red flag – a warning sign in someone’s behavior.

Sigma – an independent, self-confident personality type (often contrasted with “alpha”).

Glow-up – a transformation or improvement in appearance or personality.

Language is like a living organism; it constantly evolves and adapts to new generations. Tomorrow, teenagers will create new words, while old ones will disappear. Understanding such expressions is an important step toward meaningful communication and emotional connection with children.

Sometimes teenagers simply need to be heard -without judgment, criticism, or phrases like “In our time, it wasn’t like this.” It is important to pay attention to their words, clarify meanings when necessary, and notice hidden emotions. This is especially important when a teenager is going through difficulties but is not ready to speak openly. Paraphrasing what they say and showing understanding helps to recognize their emotional state and provide support. (Allan, K., & Burrige, K., 2006)

Many adults do not understand youth slang and often mock it. This approach is fundamentally wrong. Slang is an important part of a teenager's world: it is how they communicate, joke, build friendships, and express feelings.

A survey on the reasons for using slang showed that:

51.7% use slang out of habit,

19.5% use it to express thoughts more clearly and briefly,

17.5% use it to express emotions easily,

11.3% use it to appear "cool" among peers. elodic phrase), sample (borrowed audio segment), and shred (virtuosic guitar performance).

In the course of this research, the works of prominent linguists such as I.R. Galperin, R. Spears, V.A. Khomyakov, Ch. Fries, E. Partridge, J. Greenough, C.L. Kittredge, J.C. Hotten, D.K. Chesterton, D.H. McKnight, A.I. Smirnitsky, I.V. Arnold, T.A. Solovyova, and others were examined.

Music. This category encompasses vocabulary associated with music and its genres, including terms that describe instruments, performance styles, and structural elements of songs. Illustrative examples are chops (instrumental skill), cover (reinterpretation of a song), chorus (repeated section), groove (rhythmic feel), hook (memorable musical element), jam (improvised session). **Sport.** This group consists of lexical items related to athletic activities and competitions. Among them are ace (a successful serve), benchwarmer (a substitute player), blowout (a game with a large score difference), clean sheet (no goals conceded), doubleheader (two consecutive games), as well as terms like home run, huddle, sack, slam dunk, and touchdown.

Technology. This category includes slang connected with information technologies and computing. Representative examples include bug (a software malfunction), crash (system failure), firewall, hacker, kernel, protocol, script, and worm (a self-replicating malicious program). (Crystal. D, 2003)

Fashion. This domain covers vocabulary related to clothing, aesthetics, and stylistic expression. Typical examples are chic, fierce, glam, haute, luxe, statement piece, swag, trendsetter, vintage, and wardrobe staple.

Social Life. This group comprises slang used in digital communication and social networking environments. Examples include bae (a significant other), FOMO (fear of missing out), gucci (meaning "good" or "fine"), lit (exciting or enjoyable), slay (to perform exceptionally well), squad (a close group of friends), and throw shade (to subtly criticize). (Eble, C., 1996)

Student Life. This category refers to vocabulary associated with academic settings and student experiences. Examples include hazing (initiation practice), kegger (party with beer), pulling an all-nighter (staying awake all night to study), rager (large, noisy party), and TA (teaching assistant). (Eble C., 1996).

Additionally, slang serves as a marker of group identity. It creates a sense of belonging and distinguishes insiders from outsiders. Knowledge of specific slang expressions functions similarly to a "social code," allowing individuals to integrate into peer groups.

The study also highlights the significant role of digital platforms such as TikTok, YouTube, and online gaming communities in shaping modern slang. These platforms facilitate the rapid dissemination of new expressions across different cultures.

Statistical data indicate that the majority of teenagers (51.7%) use slang out of habit, while others use it for clarity (19.5%), emotional expression (17.5%), or social recognition (11.3%).

Despite some negative attitudes toward slang, it should not be considered merely a distortion of language. On the contrary, it represents a natural and creative aspect of linguistic development.

Conclusion

Young people frequently use slang — it is like a second language for them. It adds emotion to speech. Even those who do not actively use slang usually understand its meaning. The most common source of slang is small social groups. It is mostly used in spoken language. Some slang words eventually become part of the standard language and appear in literature, newspapers, magazines, and television programs, making language more expressive and modern.

Slang is a universal cultural phenomenon. Its equivalents can be found in ancient times, the Middle Ages, and the modern era. All slang follows similar developmental cycles. Today, writers freely use slang, especially in fiction and drama. It has become a tool for satirists, humorists, and journalists. Slang is socially acceptable because, when used appropriately, it enriches language and adds a new dimension.

The processes by which words become slang are similar to those by which other words in a language change their form or meaning. It is important from childhood to develop good taste in books, music, films, and games. Spending time together reading and watching quality content, visiting theaters and exhibitions, helps shape a child's speech. If a child grows up hearing correct and educated and beautiful speech, they are more likely to speak in the same way.

Parents must set an example. If adults themselves speak poorly, they cannot expect better from their children. Teenagers clearly understand when slang is appropriate and when formal language is needed. To reduce the "pollution" of speech, adults can suggest standard alternatives and help expand vocabulary. Over time, teenagers will no longer feel the need to "fit in" artificially and will choose a social circle that matches their intellectual level, where they can communicate naturally.

RESEARCH DIRECTIONS OF TEMPORAL PHRASEOLOGY IN GERMANIC STUDIES

Azar Suratulla FARAMAZOV

Lankaran State University

E-mail:20115@lsu.edu.az

ORCID ID: 0000-0002-7601-9985

Abstract: Temporal phraseology in Germanic studies is one of the important areas of modern phraseological research. Particular attention is paid to the semantic, structural, and functional features of phraseological units containing temporal components. Based on different theoretical approaches, the main directions of temporal phraseology research are summarized, and the ways in which the concept of time is expressed through phraseological units are examined. Special emphasis is placed on the role of temporal phraseological units in reflecting the national and cultural characteristics of a language as well as its figurative and expressive potential. A comparative analysis of studies in Germanic linguistics demonstrates that temporal phraseology occupies an important place in contemporary linguistic research and remains one of its most relevant fields.

Although numerous studies on time have been conducted in the history of linguistics within the field of phraseology, the systematic classification and presentation of temporal phraseological units containing elements such as time, season, month, days of the week, as well as the semantic microfields of duration and length, time span, moment and point in time, temporal relations, the measurement of time, and the repetition of time within their field structure, have still not been carried out to a sufficient extent. This fact once again confirms the necessity of investigating temporal phraseological units in Germanic linguistics on the basis of a special classification and a field-based approach.

Keywords: Germanic studies, phraseology, temporal phraseology, phraseological unit, concept of time, semantics.

ALMANŞÜNASLIQDA TEMPORAL FRAZEOLÖGİYANIN TƏDQİQAT İSTİQAMƏTLƏRİ

Əzər Surətulla FƏRƏMƏZOV

Lənkəran Dövlət Universiteti

Xülasə: Germanşünaslıqda temporal frazeologiya müasir frazeoloji tədqiqatların mühüm istiqamətlərindən biridir. Temporal komponentli frazeoloji vahidlərin semantik, struktur və funksional xüsusiyyətləri bu sahədə aparılan araşdırmaların əsas mövzularını təşkil edir. Müxtəlif nəzəri yanaşmalar əsasında temporal frazeologiyanın inkişaf istiqamətləri ümumiləşdirilir, zaman konseptinin frazeoloji vahidlərdə ifadə formaları nəzərdən keçirilir. Eyni zamanda, temporal məzmunlu frazeoloji vahidlərin dilin milli-mədəni xüsusiyyətlərinin və obrazlı ifadə imkanlarının formalaşmasındakı rolu vurğulanır. Germanşünaslıqda aparılan tədqiqatların müqayisəli təhlili temporal frazeologiyanın müasir dilçilikdə aktual elmi istiqamətlərdən biri olduğunu göstərir.

Dilçilik tarixində frazeologiyada zamanla bağlı çoxsaylı tədqiqatlar aparılsa da, temporal komponentli frazeoloji birləşmələrin tərkibində zaman, vaxt, fəsil, ay, həftənin günləri və s. kimi vahidlərin, həmçinin bu birləşmələrin sahə strukturunda müddət və uzunluq, zaman kəsiyi, zaman anı və nöqtəsi, zaman

münasibətləri, zamanın ölçülməsi və zamanın təkrarlanması kimi semantik mikrosahələrin sistemli şəkildə təsnif olunaraq təqdim edilməsi hələ də yetərli səviyyədə həyata keçirilməmişdir. Bu fakt germanşünaslıqda temporal komponentli frazeoloji birləşmələrin xüsusi təsnifat və sahə yanaşması əsasında araşdırılmasının zəruriliyini bir daha təsdiqləyir.

Açar sözlər: germanşünaslıq, frazeologiya, temporal frazeologiya, frazeoloji vahid, zaman konsepti, semantika.

Introduction

In modern linguistics, phraseology is regarded as one of the major fields of research that reflects the national and cultural characteristics of a language, its figurative mode of thinking, and its communicative potential. In particular, phraseological units expressing the concept of time are of special interest because they embody speakers' worldview, their perception of events, and their conceptualization of time. From this perspective, the study of temporal phraseology contributes not only to identifying the semantic characteristics of the phraseological system but also to clarifying the interrelationship between language and thought.

In Germanic linguistics, the study of temporal phraseology has expanded considerably in recent years through structural-semantic, cognitive, and lingo cultural approaches. Various theoretical perspectives have provided a systematic framework for investigating the formation, semantic structure, and functional properties of phraseological units with temporal meaning. Consequently, temporal phraseology has become recognized as one of the significant and dynamic areas of contemporary linguistic research.

The aim of this article is to examine the principal research directions in temporal phraseology within Germanic linguistics, to summarize the theoretical approaches developed in this field, and to analyze the semantic and functional characteristics of phraseological units containing temporal components on the basis of relevant scholarly literature. The study employs descriptive, comparative, and general scientific methods of analysis. The scientific novelty of the research lies in the systematization of the existing theoretical approaches to temporal phraseology in the context of Germanic linguistics and in their evaluation from the perspective of contemporary linguistic theory.

Materials and Methods

This study is based on a qualitative review of scientific literature devoted to phraseology in Germanic linguistics, with particular emphasis on temporal phraseological units. Relevant books, peer-reviewed journal articles, monographs, and theoretical studies by leading scholars in phraseology, cognitive linguistics, and lingo cultural studies were analyzed using descriptive, comparative, and semantic methods. The collected data were examined to identify the structural, semantic, functional, and cognitive characteristics of temporal phraseological units, as well as their role in reflecting cultural and conceptual representations of time.

Results and Discussion

Phraseology is regarded as one of the most dynamically developing fields of modern linguistics, investigating the semantic integrity, structural stability, and functional characteristics of phraseological units. Contemporary linguistic research considers phraseological units not only as lexical formations but also as linguistic phenomena reflecting the national, cultural, and conceptual features of a language. Charles Bally emphasized that phraseological units are an essential component of the stylistic system and contribute significantly to the expressive potential of language. (5, p.112) Similarly, A.V. Kunin argued that semantic unity and structural stability

distinguish phraseological units from free word combinations and determine their independent lexical status. (7, p.36)

Modern studies demonstrate that phraseological units perform not only semantic but also communicative, cognitive, and lingo cultural functions. They preserve historical experience, express speakers' worldview, and transmit cultural values from one generation to another. In this respect, temporal phraseological units occupy a special place because they reveal how different language communities conceptualize time, the sequence of events, duration, and human experience. Therefore, the investigation of temporal phraseology has become one of the important research directions in both theoretical linguistics and Germanic studies.

Various theoretical approaches have contributed to the development of phraseological research. V.V. Vinogradov classified phraseological units according to their degree of semantic integrity and established the principal criteria distinguishing them from free word combinations. (6, p.145) Based on corpus studies, R. Moon demonstrated that phraseological units may undergo lexical and structural variation despite their general stability. (4, p.98) Furthermore, A. Langlotz, relying on cognitive linguistic principles, argued that idiomatic expressions are stored in the human mind as holistic conceptual units whose meanings cannot be explained solely through their individual lexical components. (3, p.64)

Research indicates that phraseological units expressing temporal meaning not only denote the sequence and duration of events but also reflect emotional and evaluative attitudes toward time. The concepts of the past, present, and future are frequently represented metaphorically, highlighting the national-cultural characteristics of a language. Moreover, temporal phraseological expressions perform important stylistic functions in both literary and everyday discourse, making communication more expressive and meaningful.

The practical significance of phraseological studies has also been emphasized by numerous scholars. A.P. Cowie noted that the systematic investigation of phraseological units contributes not only to theoretical linguistics but also to applied linguistics, lexicography, and foreign language teaching. According to the scholar, the meaning of fixed expressions can be interpreted more accurately through their communicative function within a particular context. (1, p.192) Likewise, V.N. Teliya regarded phraseological units as carriers of national-cultural experience and collective linguistic consciousness, reflecting the historical development and worldview of a people. (8, p.91) W. Fleischer also demonstrated that phraseological units function as stable and reproducible lexical formations within the language system, providing an important theoretical basis for their classification and functional analysis. (2, p.104)

Conclusion

The study of temporal phraseology in Germanic linguistics is based on the comprehensive investigation of the structural, semantic, cognitive, and lingo cultural characteristics of phraseological units. The various theoretical approaches developed in this field make it possible to determine more comprehensively the place of temporal phraseological units within the language system, as well as their functional potential and semantic organization. In particular, phraseological units containing temporal components expand the expressive potential of language by reflecting not only the chronological but also the national-cultural and conceptual aspects of the notion of time.

Contemporary research in Germanic linguistics demonstrates that temporal phraseology has developed into an independent field of scholarly inquiry, in which structural-semantic, cognitive, corpus-based, and lingo cultural approaches are applied in an integrated manner. These approaches

provide opportunities for a more profound investigation of the mechanisms underlying the formation of temporal phraseological units, their semantic characteristics, and their communicative functions.

In conclusion, the study of temporal phraseology makes a significant scientific contribution both to the development of phraseological theory and to the systematic investigation of the linguistic means used to express the concept of time in the English language. Future research based on corpus materials and employing comparative and cognitive approaches to the analysis of temporal phraseological units may provide a foundation for obtaining new scientific findings in this field.

NEW INVENTIONS AND THEIR EFFECTS ON HUMAN LANGUAGE AND COMMUNICATION: A PHILOLOGICAL PERSPECTIVE

Rana KHALILOVA

Doctor of Philosophy (Ph.D) on Philology, Azerbaijan State of Marine Academy

E-mail: Xalilovarena88@gmail.com

ORCID ID: 0009-0007-7207-442X

Abstract: The rapid advancement of technology in the modern era has had a profound impact on human language and communication. From a philological perspective, language is a dynamic system that evolves under the influence of social, cultural, and technological factors. This study examines how new inventions, particularly digital technologies such as the internet, smartphones, and artificial intelligence, shape linguistic structures, discourse patterns, and communicative practices. The paper analyzes key aspects including lexical innovation, semantic shifts, the

emergence of digital discourse, and changes in pragmatic and sociolinguistic behavior. Furthermore, it evaluates the dual nature of technological influence by highlighting both its advantages and disadvantages. On the one hand, technological progress enhances global communication, facilitates access to information, and supports language learning and research. On the other hand, it may contribute to language simplification, reduced attention to grammatical accuracy, and increased dependency on digital tools. The findings suggest that while new inventions significantly enrich communication and linguistic diversity, they also pose challenges to traditional language norms and literacy skills. Therefore, a balanced and critical approach to technology use is essential in order to preserve linguistic quality while benefiting from innovation.

Keywords: philology, digital discourse, language evolution, technology, communication, sociolinguistics, pragmatics, artificial intelligence, internet linguistics, lexical innovation

YENİ İXTİRALARIN VƏ ONLARIN İNSAN DİLİ VƏ ÜNSÜYYƏTİNƏ TƏSİRİ: FİLOLOJİ PERSPEKTİV

Rəna XƏLİLOVA

Azərbaycan Dövlət Dəniz Akademiyasının filologiya üzrə fəlsəfə doktoru

E-mail: Xalilovarena88@gmail.com

ORCID ID: 0009-0007-7207-442X

Xülasə: Müasir dövrdə texnologiyanın sürətli inkişafı insan dili və ünsiyyətinə dərin təsir göstərmişdir. Filoloji baxımdan dil sosial, mədəni və texnoloji amillərin təsiri altında daim inkişaf edən dinamik bir sistemdir. Bu tədqiqat yeni ixtiraların, xüsusilə internet, smartfonlar və süni intellekt kimi rəqəmsal texnologiyaların dil strukturlarına, diskurs modellərinə və kommunikativ praktikaya təsirini araşdırır. Məqalədə leksik yeniliklər, semantik dəyişmələr, rəqəmsal diskursun yaranması, həmçinin pragmatik və sosiolinqvistik davranışdakı dəyişikliklər təhlil edilir. Bununla yanaşı, texnologiyanın təsirinin ikili xarakteri – həm müsbət, həm də mənfi tərəfləri qiymətləndirilir. Bir tərəfdən, texnoloji inkişaf qlobal ünsiyyəti genişləndirir, informasiyaya çıxışı asanlaşdırır və dil öyrənməsini dəstəkləyir. Digər tərəfdən isə dilin sadələşməsinə, qrammatik dəqiqliyin azalmasına və rəqəmsal vasitələrdən asılılığın artmasına səbəb ola bilər. Nəticələr göstərir ki, yeni ixtiralar dili zənginləşdirsə də, ənənəvi dil normaları və savadlılıq səviyyəsi üçün müəyyən risklər yaradır. Buna görə də texnologiyadan balanslı və tənqidi şəkildə istifadə olunması vacibdir.

Açar sözlər: filologiya, rəqəmsal diskurs, dilin inkişafı, texnologiya, kommunikasiya, sosiolinqvistika, pragmatika, süni intellekt, internet dilçiliyi, leksik yeniliklər

Introduction

Language is a dynamic and open semiotic system that continuously evolves in response to socio-cultural and external influences. In the contemporary era, technological innovation has emerged as a primary catalyst for linguistic shift, accelerating the pace of development beyond historical precedents. The 21st century is defined by a digital paradigm shift; inventions such as high-speed internet, smartphones, and generative artificial intelligence have fundamentally reconfigured the architecture of human interaction. These technologies do not merely serve as tools for transmission but act as environments that dictate new rules of engagement from a philological

perspective, the impact of these inventions is multifaceted. Firstly, there is a profound expansion of the lexical fund, characterized by the emergence of neologisms, professional terminologies, and the resemanticization of existing words. Secondly, digital discourse has facilitated a "hybridization" of speech, where the boundaries between formal written language and informal oral communication become increasingly blurred. This phenomenon leads to the formation of new syntactic structures and a reliance on multimodal elements, such as emojis and acronyms, to convey pragmatic nuance. The relevance of this study is underscored by the rapid integration of AI-driven communication tools, which challenge traditional notions of authorship and linguistic creativity. Despite the extensive literature on digital linguistics, the continuous emergence of new inventions necessitates an updated analysis of how technological determinism shapes sociolinguistic norms. This paper aims to explore the transformative impact of recent inventions on global communication systems by focusing on three critical dimensions: the expansion of terminological frameworks (linguistic), the evolution of social interaction patterns (sociolinguistic), and the shifts in communicative intent and interpretation (pragmatic). By analyzing these shifts, the research seeks to provide a comprehensive understanding of the current trajectory of language in the digital age.

Language Evolution in the Digital Age. Technological advancement has accelerated the process of language change. New lexical items emerge rapidly, often driven by digital communication. Crystal (2011) notes that the internet has introduced a new variety of language known as "Internet linguistics," which reflects the unique features of online communication. In addition to lexical innovation, semantic shifts are also common. Words acquire new meanings in digital contexts, demonstrating the flexibility of language (Yule, 2017). For instance, terms like "friend," "follow," and "share" have developed specialized meanings in social media environments.

Digital Discourse and Its Features. Digital communication has led to the emergence of new discourse types. According to Herring (2013), computer-mediated communication (CMC) combines elements of both written and spoken language, creating hybrid forms.

These forms are characterized by:

- brevity and speed,
- use of abbreviations,
- incorporation of visual elements such as emojis.

From a discourse analysis perspective, digital genres such as tweets, blogs, and instant messages have their own structural and stylistic conventions. These genres challenge traditional distinctions between formal and informal language.

Sociolinguistic Implications

The internet serves as a complex sociolinguistic laboratory where the forces of language standardization and variation coexist in a state of constant tension. In the digital epoch, the global hegemony of English as a *lingua franca* has fostered a level of linguistic homogenization unprecedented in human history. However, contrary to the early technological predictions of total linguistic convergence, digital platforms have increasingly become sanctuaries for linguistic diversity and the revitalization of marginalized dialects (Androutsopoulos, 2014). The architecture of social media, characterized by decentralized communication, allows for the flourishing of "digital ethno-lects," which users employ to navigate their multifaceted online identities. One of the most significant sociolinguistic phenomena in the digital sphere is the strategic use of code-switching. In polycentric digital environments, users fluidly transition between standard languages,

local dialects, and specialized internet slang to signal group membership and cultural affiliation. This fluidity suggests that language in the 21st century has become more than a tool for information exchange; it is a dynamic marker of social boundaries. The use of specific linguistic variants—ranging from orthographic deviations to the incorporation of vernacular syntax—functions as a performative act of identity. By choosing a particular linguistic "style," individuals negotiate their position within global and local networks, effectively bridging the gap between their physical heritage and their digital presence. Furthermore, the emergence of "translingual" practices challenges traditional sociolinguistic definitions of speech communities. Online communities are no longer bound by geographical proximity but by shared interests and linguistic norms that transcend national borders. This leads to the democratization of discourse, where the authority of traditional language institutions is increasingly questioned by the "bottom-up" evolution of communication norms. As technological inventions continue to blur the lines between the private and public spheres, the sociolinguistic function of language as a tool for social cohesion and identity construction becomes even more critical. The digital world does not merely reflect existing social structures; it actively reshapes them through the continuous negotiation of linguistic meaning.

Artificial Intelligence and Language Use. Artificial intelligence has introduced new possibilities in language processing. Tools such as machine translation and automated text generation facilitate communication across linguistic boundaries (Jurafsky & Martin, 2020).

However, these technologies are not without limitations. They often lack contextual understanding and cultural nuance. From a philological perspective, this raises concerns about the authenticity and quality of language produced by machines.

Impact on Literacy and Writing Skills. The proliferation of digital communication paradigms has profoundly influenced contemporary writing practices, often cultivating a preference for brevity, speed, and informality over syntactic complexity. As digital platforms and instant messaging applications prioritize rapid, real-time exchange, users frequently employ syntactic reduction, phonetic approximations, and acronyms to maximize communicative efficiency. Baron (2008) asserts that habitual engagement with such abbreviated formats can inadvertently erode traditional literacy skills. From a pedagogical perspective, concerns are frequently raised regarding the deterioration of formal grammatical competence, orthographic accuracy, and the diminishing capacity for "deep reading"—the cognitive ability to sustain attention and critically analyze extensive, complex academic or literary texts. Consequently, philologists and educators observe a growing tension between the rigorous morphological demands of standardized writing and the highly permissive, utilitarian norms of modern digital textuality. Conversely, it is imperative to acknowledge that the technological ecosystem is not strictly detrimental to linguistic proficiency; rather, it provides unprecedented scaffolding for language acquisition and academic development. The digital landscape offers an expansive array of sophisticated resources that actively enhance both writing and analytical capabilities. Advanced online educational platforms, automated writing evaluation (AWE) systems, and AI-driven stylistic checkers provide instantaneous, personalized feedback, thereby accelerating the drafting and revision processes for students and professionals alike. Furthermore, the accessibility of massive digital corpora—such as the British National Corpus or the Corpus of Contemporary American English—allows learners and researchers to empirically analyze semantic patterns, contextual collocations, and historical shifts in vocabulary on a scale previously unimaginable. Ultimately, the impact of new inventions on writing should not be viewed merely as a decline in traditional literacy, but as a paradigm shift towards "multiliteracies,"

requiring modern communicators to continuously adapt their linguistic strategies across diverse digital and physical environments.

Pragmatic Changes in Communication. Pragmatics, which studies meaning in context, is significantly affected by digital communication. The absence of non-verbal cues in online interaction requires alternative strategies for expressing meaning. Emojis, punctuation, and formatting serve as pragmatic markers (Danesi, 2016). However, the lack of context may still lead to misunderstandings, emphasizing the importance of digital communication competence.

Negative Effects of Technological Influence. Despite its advantages, technology can negatively impact language. One concern is linguistic simplification, where complex structures are replaced by shorter forms. Additionally, dependence on digital tools may reduce individuals' ability to use language independently. This raises concerns about the long-term effects on linguistic competence and critical thinking.

Positive Contributions to Language and Communication. On the positive side, technology enhances global communication and cultural exchange. It provides access to vast linguistic resources and supports academic research. Digital archives and corpora enable philologists to analyze language more effectively. This contributes to a deeper understanding of linguistic patterns and historical development.

Conclusion

In conclusion, the rapid proliferation of new inventions in the 21st century has exerted a profound and irreversible impact on the landscape of human language and global communication. As this research has demonstrated, the intersection of technology and philology reveals a complex dialectic: while digital tools provide unprecedented opportunities for linguistic innovation, they simultaneously challenge established morphological and syntactical paradigms. The evolution of language in the digital age is not merely a process of lexical accumulation but a fundamental shift in how meaning is constructed and decoded across diverse sociocultural contexts. From a philological perspective, the benefits of technological integration are evident in the democratization of information and the facilitation of instantaneous global interaction. The emergence of specialized terminological systems and the creative flexibility of digital discourse have enriched the linguistic repertoire of modern speakers. However, these advancements are accompanied by significant challenges, including the potential erosion of traditional literacy standards and the "fragmentation" of formal grammar. The reliance on automated linguistic tools and artificial intelligence poses a risk of standardizing human expression, potentially diminishing the stylistic nuances that characterize individual and cultural identity. A balanced and critical approach is therefore essential to navigate this transition. It is necessary to leverage the communicative efficiency offered by technological advancements while remains vigilant about preserving the qualitative depth of linguistic traditions. As we move further into an increasingly digital world, the relationship between language and technology will continue to be a central theme in philological inquiry. Future research should prioritize longitudinal studies on the impact of generative AI on cognitive linguistic processes and explore how minority languages can utilize digital platforms to ensure their survival and vitality in the globalized discourse. Ultimately, the resilience of language lies in its ability to adapt, ensuring that human communication remains a sophisticated reflection of our evolving technological reality.

APPLIED LINGUISTICS AND DISCOURSE STUDIES

Fatima Azer GULIYEVA

Student, Department of Azerbaijani Language and Literature, Mingachevir State University

E-mail: fatime.guliyeva@mdu.edu.az

ORCID ID: [0009-0002-1226-3089](https://orcid.org/0009-0002-1226-3089)

Abstract: Applied linguistics and discourse studies represent two closely interconnected fields that examine language use in real-life contexts. Applied linguistics focuses on the practical application of linguistic theories, particularly in language teaching, translation, and communication. Discourse studies, on the other hand, analyze language beyond the sentence level, emphasizing meaning, context, and interaction. This article explores theoretical foundations of applied linguistics and highlights its interdisciplinary nature. It further investigates discourse analysis as a tool for understanding textual and spoken communication, emphasizing functional features of texts such as cohesion, coherence, and pragmatics. The relationship between language and society is also discussed through sociolinguistic perspectives, showing how social factors such as identity, power, and culture influence language use. Additionally, modern communication environments, including digital media, are examined in terms of discourse strategies. The study demonstrates that effective communication depends not only on grammatical accuracy but also on contextual and social awareness. The findings suggest that integrating applied linguistics with discourse analysis provides a comprehensive understanding of language in both academic and real-world settings.

Introduction

Language is not merely a static system of grammatical rules and structures; rather, it is a living, evolving medium of human interaction that reflects cultural values, social identities, and contextual realities (Halliday, 2014). It operates not only through vocabulary and syntax but also through intention, interpretation, and shared knowledge between speakers. In this sense, language functions as a powerful tool that shapes and is shaped by the environments in which it is used (Crystal, 2003). From everyday conversations to institutional communication, meaning is constantly negotiated and reconstructed within specific social contexts. Within this broader perspective, applied linguistics has developed as a dynamic and interdisciplinary field concerned with addressing practical issues related to language use in real-life situations (Cook, 2003). Initially focused on language teaching and learning, applied linguistics has expanded to include areas such as translation studies, language policy, bilingualism, and intercultural communication (Richards & Rodgers, 2014). Its primary goal is not only to apply theoretical linguistic knowledge but also to provide solutions to real-world problems, particularly in increasingly globalized and multilingual societies. Parallel to this development, discourse studies have emerged as a crucial area of linguistic inquiry that goes beyond sentence-level analysis. Rather than examining isolated linguistic units, discourse studies investigate how language operates in extended stretches of spoken and written communication (Brown & Yule, 1983). This includes analyzing coherence, cohesion, pragmatics, and the role of context in shaping meaning (Coulthard, 2014). Discourse is viewed as a social practice, where power relations, ideologies, and cultural norms are embedded within language use (Fairclough, 1995).

Methodology and Materials

This study is grounded in qualitative research methodology, primarily based on the analysis of linguistic literature and established theoretical frameworks within the fields of applied linguistics and discourse studies (Dörnyei, 2007). Qualitative analysis was chosen as it allows for an in-depth exploration of language as a socially embedded phenomenon, focusing on meaning, interpretation, and contextual usage rather than numerical data (Creswell, 2014). Through this approach, the study aims to provide a comprehensive understanding of how language operates across different communicative settings. A significant component of the research involves a systematic review of

key scholarly works related to applied linguistics and discourse analysis. Foundational theories and models proposed by prominent linguists were examined in order to identify core concepts and methodological approaches (Halliday, 2014; Fairclough, 1995). This theoretical grounding enables the study to connect abstract linguistic principles with their practical applications in real-world communication. In addition, a comparative analysis method was employed to examine different approaches to discourse analysis, including structural, functional, and sociolinguistic perspectives. The structural approach focuses on the formal organization of language, such as sentence patterns and cohesion devices (Brown & Yule, 1983). The functional approach, on the other hand, emphasizes how language is used to achieve communicative purposes within specific contexts (Halliday, 2014). Meanwhile, the sociolinguistic perspective highlights the influence of social variables such as identity, power, and cultural norms on language use (Holmes, 2013; Wardhaugh & Fuller, 2015). By comparing these perspectives, the study seeks to demonstrate how each approach contributes to a more holistic understanding of discourse. Furthermore, the research incorporates illustrative examples drawn from everyday communication and digital media environments. These include informal conversations, social media interactions, and online discourse, which reflect contemporary patterns of language use (Crystal, 2011). Digital communication, in particular, provides a rich source of data for analyzing evolving discourse strategies, such as code-switching, abbreviations, and multimodal expressions involving text, images, and emojis (Herring, 2013). These examples serve to bridge the gap between theoretical analysis and real-life language practices. The combination of qualitative analysis, theoretical review, and comparative methodology allows for a multidimensional exploration of discourse. It ensures that the study not only examines linguistic structures but also considers the social and functional aspects of language use. Ultimately, this methodological framework supports a deeper investigation into how meaning is constructed, negotiated, and interpreted across different communicative contexts.

Discussion

Applied linguistics connects linguistic theory with practical language use, serving as a bridge between abstract concepts and real-world communication (Cook, 2003). Its main focus areas include second language acquisition, language teaching methodologies, translation studies, and language assessment (Richards & Rodgers, 2014). One of its most significant contributions is the development of communicative language teaching, which emphasizes meaningful interaction and language use in context rather than the memorization of grammatical rules (Hymes, 1972; Littlewood, 1981). This approach reflects a shift from form-focused instruction to communication-oriented learning, aligning language teaching with real-life needs. Discourse analysis examines language beyond sentence boundaries, focusing on how meaning is constructed across larger units of communication (Brown & Yule, 1983). It pays particular attention to how coherence and cohesion are achieved in spoken and written texts. Cohesion refers to the grammatical and lexical connections within a text, such as reference, substitution, and conjunction (Halliday & Hasan, 1976), while coherence relates to the logical and conceptual relationships that make a text meaningful to the reader or listener (Widdowson, 2007). In addition, pragmatic meaning plays a crucial role, as interpretation depends heavily on context, shared knowledge, and speaker intention (Levinson, 1983).

Conclusion

Applied linguistics and discourse studies together provide a comprehensive framework for understanding language in both its theoretical and practical dimensions (Cook, 2003; McCarthy, 1991). While applied linguistics focuses on addressing real-life language-related problems, particularly in areas such as language teaching and communication, discourse analysis explains how meaning is constructed, negotiated, and interpreted in actual communicative contexts (Richards & Rodgers, 2014; Brown & Yule, 1983). Sociolinguistic perspectives further enrich this framework by emphasizing the role of social factors in shaping language use. Variables such as social class, gender, ethnicity, and cultural background significantly influence how individuals use and interpret language (Holmes, 2013; Wardhaugh & Fuller, 2015). Language is therefore not only a means of communication but also a reflection of identity, power relations, and societal structures (Fairclough, 1995). In modern communication environments, particularly with the rise of digital technologies, discourse strategies continue to evolve rapidly. Online communication introduces new forms of interaction that are often informal, multimodal, and highly context-dependent (Crystal, 2011; Herring, 2013). Users adapt their language through various strategies, including abbreviation, code-switching, and the use of visual elements, demonstrating the flexibility and creativity inherent in human communication. Overall, integrating applied linguistics, discourse studies, and sociolinguistic perspectives enhances our understanding of language as a dynamic, socially embedded, and functional system (Halliday, 2014). Such an interdisciplinary approach not only deepens theoretical insight but also provides practical tools for analyzing and improving communication in diverse and evolving contexts.

THE SILENT ARCHITECT OF REALITY: A SOCIOLINGUISTIC STUDY ON HOW LANGUAGE SHAPES HUMAN PERCEPTION

Inci Rustem MUSTAFAYEVA
Mingachevir State University
E-mail: inci.mustafayeva@mdu.edu.az
ORCID ID: 0009-0005-5968-8051

Abstract: Language is not merely a means of communication but also a powerful factor that shapes human cognition, behavior, and social relations. This study examines how linguistic structures influence the way people perceive reality, interpret experiences, and interact within society. The research applies qualitative discourse analysis and a comparative review of linguistic theories, particularly the Sapir-Whorf hypothesis. It also analyzes semantic labels in contemporary media and sociolinguistic connections between grammatical structures and social behavior. The findings indicate that language functions as a cognitive filter that can influence perception, judgment, and social attitudes. Particular attention is given to the simplification of complex meanings in digital communication and the role of language in constructing social power and hierarchies. The study also considers the historical development of linguistic thought and its relationship with human cognition. The research concludes that linguistic structures can shape the boundaries of human perception, while learning additional languages can provide individuals with new perspectives on reality and human experience.

Keywords: sociolinguistics, linguistic relativity, discourse analysis, cognitive architecture, language and power.

REALLIĞIN SƏSSİZ ARXİTEKTURASI: DİLİN İNSAN QAVRAYIŞINI NECƏ FORMALAŞDIRDIĞINA DAİR SOSİOLİNGVİSTİK TƏDQİQAT

İnci Rüstəm MUSTAFAYEVA

Mingəçevir Dövlət Universiteti

Introduction

For centuries, humanity has operated under the persistent illusion that language is a neutral vessel used to transport thoughts between minds. However, modern sociolinguistics suggests that language is the very fabric of our existence. It does not merely describe the world we see, it actively constructs it and dictates the boundaries of what we can perceive and conceive. The primary objective of this research is to investigate the silent operator effect of language. We aim to understand how linguistic structures influence human behavior and social hierarchies. If we accept that language is not transparent, we must then ask whether we speak language or whether language speaks us.

Materials and Methods

The methodology of this study is rooted in qualitative discourse analysis and a comparative review of existing linguistic theories, specifically the Sapir Whorf hypothesis. We examined various semantic labels used in modern media and compared the cognitive responses triggered by different terminologies. The study also utilizes sociolinguistic data regarding the correlation between grammatical structures, such as future tense markers, and social behaviors, such as economic saving habits. This approach allows for a comprehensive understanding of how language and society interact in a feedback loop.

Discussion

The discussion focuses on the concept of semantic poverty in the digital age. As communication becomes faster and more restricted by platforms, we are witnessing a reduction of complex human experiences into simplistic hashtags and short soundbites. Furthermore, the role of language as a site of power is scrutinized. For instance, the choice between calling an individual a refugee versus an expat fundamentally alters the moral judgment and chemical response in the listener's brain. This suggests that language acts as a cognitive filter that influences behavior in ways we rarely notice. Another critical point of discussion is the historical development of linguistic thought. From the early Roman linguists like Varron and Donat to the psychological approaches of the Kazan and Moscow schools, the study of language has always been a study of the human mind (1). These historical frameworks provide the foundation for our understanding of how formal grammar and logic dictate the way we organize our world (1). If a society loses the specific word for an emotion, it may eventually lose the capacity to feel it in its full complexity. The evidence suggests that linguistic boundaries are indeed the boundaries of our world.

Conclusion

In conclusion, the true liberation of the human mind begins with the realization that our mother tongue is both a comfortable home and a psychological prison. Mastering a second language is not merely an academic achievement but the acquisition of a second soul and a new lens through which to view existence. To understand a society, we must look not only at what they say but at the hidden boundaries of what they are capable of saying. Language remains the most powerful architect of our shared reality.

DISCURSIVE FEATURES OF CULTURONYMS IN MODERN ENGLISH: IMPLICATIONS FOR FOREIGN LANGUAGE EDUCATION

Nuri ALAVIYYA

Doctorate student, Nakhchivan State University

E-mail: eleviyyenuri@ndu.edu.az

ORCID ID: 0000-0003-4219-1071

Abstract: In the context of globalization, foreign language education has increasingly focused on the development of communicative competence and intercultural awareness alongside linguistic accuracy. English, functioning as a global language, carries not only grammatical structures and lexical meanings but also deep cultural and ideological content. One of the most significant carriers of such content is culturonyms, which are culture-specific lexical units reflecting national history, traditions, beliefs, social institutions, and collective experience. These units play a crucial role in discourse by shaping meaning, influencing interpretation, and creating emotional, symbolic, and pragmatic effects.

This study aims to investigate the discursive features of culturonyms in modern English and to examine their relevance to foreign language education. Using descriptive, contextual, and discourse analysis methods, the research explores how culturonyms function in authentic texts and communicative situations. The analysis demonstrates that culturonyms often activate background knowledge and cultural schemas that are not explicitly stated in the text, making them particularly challenging for foreign language learners. As a result, misunderstanding or misinterpretation of culturonyms may lead to communicative breakdowns, even when learners possess sufficient grammatical knowledge.

In addition to its theoretical contribution, the study emphasizes the pedagogical value of culturonyms in English language teaching. It argues that culturonyms should be systematically integrated into foreign language education through reading, listening, speaking, and translation activities. Teaching culturonyms enables learners to develop intercultural communicative competence, pragmatic awareness, and deeper textual comprehension. Furthermore, the inclusion of culture-bound lexical units in classroom practice helps learners understand how language reflects social values and cultural identity in real communicative contexts.

The findings of the study suggest that incorporating culturonyms into foreign language education contributes to more effective language learning by bridging the gap between linguistic form and cultural meaning. Therefore, culturonyms should be regarded not only as objects of linguistic analysis but also as essential educational tools in modern English language teaching.

Keywords: culturonym, discourse, intercultural communication, global English, foreign language education

MÜASİR İNGİLİS DİLİNDƏ KULTURONİMLƏRİN DİSKURSİV XÜSUSİYYƏTLƏRİ: XARİCİ DİL TƏHSİLİ ÜÇÜN TƏSİRLƏRİ

Nuri ƏLƏVİYYƏ

Doktorant, Naxçıvan Dövlət Universiteti, Naxçıvan

Xülasə: Qloballaşma şəraitində xarici dil təhsili getdikcə yalnız dil dəqiqliyinə deyil, həm də kommunikativ səriştənin və mədəniyyətlərarası şüurun inkişafına yönəlir. Qlobal dil kimi fəaliyyət göstərən ingilis dili yalnız qrammatik strukturları və leksik mənalara deyil, həm də dərin mədəni və ideoloji məzmunu daşıyır. Bu məzmunun ən mühüm daşıyıcılarından biri kulturonimlərdir. Kulturonimlər milli tarix, ənənələr, inanclar, sosial institutlar və kollektiv təcrübəni əks etdirən mədəniyyətə xas leksik vahidlərdir. Bu vahidlər diskursda mühüm rol oynayaraq mənanın formalaşmasına təsir göstərir, interpretasiyanı istiqamətləndirir və emosional, simvolik və pragmatik effektlər yaradır.

Bu tədqiqat müasir ingilis dilində kulturonimlərin diskursiv xüsusiyyətlərini araşdırmağı və onların xarici dil təhsili üçün əhəmiyyətini müəyyənləşdirməyi məqsəd qoyur. Təsviri, kontekstual və diskurs analizi metodlarından istifadə etməklə araşdırma kulturonimlərin autentik mətnlərdə və kommunikativ situasiyalarda necə fəaliyyət göstərdiyini öyrənir. Təhlil göstərir ki, kulturonimlər çox vaxt mətnə açıq şəkildə ifadə olunmayan arxa bilikləri və mədəni sxemləri aktivləşdirir ki, bu da onları xarici dil öyrənənlər üçün xüsusilə çətin edir. Nəticədə, kulturonimlərin yanlış anlaşılması və ya səhv interpretasiyası, öyrənənlərin kifayət qədər qrammatik biliyə malik olmasına baxmayaraq, kommunikativ pozuntulara səbəb ola bilər.

Tədqiqat nəzəri əhəmiyyətlə yanaşı, kulturonimlərin ingilis dili tədrisində pedaqoji dəyərini də vurğulayır. Məqalədə qeyd olunur ki, kulturonimlər oxu, dinləmə, danışmaq və tərcümə fəaliyyətləri vasitəsilə xarici dil təhsilinə sistemli şəkildə inteqrasiya olunmalıdır. Kulturonimlərin tədrisi öyrənənlərdə mədəniyyətlərarası kommunikativ səriştənin, pragmatik şüurun və mətnin daha dərinlən anlaşılmasının inkişafına kömək edir. Bundan əlavə, mədəniyyətə bağlı leksik vahidlərin dərs prosesinə daxil edilməsi öyrənənlərə dilin real kommunikativ kontekstlərdə sosial dəyərləri və mədəni kimliyi necə əks etdirdiyini anlamağa imkan verir.

Tədqiqatın nəticələri göstərir ki, kulturonimlərin xarici dil təhsilinə inteqrasiyası dil öyrənməni daha effektiv edir, çünki bu, dil forması ilə mədəni məna arasındakı boşluğu aradan qaldırır. Buna görə də kulturonimlər yalnız lingvistik təhlilin obyektinə deyil, həm də müasir ingilis dili tədrisində mühüm pedaqoji vasitə kimi qiymətləndirilməlidir.

Açar sözlər: kulturonim, diskurs, mədəniyyətlərarası kommunikasiya, qlobal ingilis dili, xarici dil təhsili

Introduction

In the contemporary world, globalization and international mobility have significantly intensified intercultural communication (Beck, 2001; Valiyeva, 2018). As a result, foreign language education has moved beyond the traditional focus on grammar and vocabulary and has increasingly emphasized communicative competence, intercultural awareness, and pragmatic understanding (Valiyeva, 2018). English, as a global language, functions not only as a means of communication but also as a carrier of cultural meanings, values, and worldviews (Nuri, 2024; Valiyeva, 2018). Therefore, successful communication in English requires knowledge of both linguistic forms and cultural content.

One of the most important linguistic elements that reflect culture within a language is culturonyms. (Кабакчи, 2001). Culturonyms are culture-specific lexical units that encode national traditions, historical events, religious beliefs, social institutions, and collective experiences (Nuri, 2024). These units often carry meanings that cannot be fully understood through direct translation or dictionary definitions alone (Babayev & Nuri, 2023). Instead, they require background

knowledge and cultural awareness. In discourse, culturonyms play a crucial role in shaping meaning, expressing evaluation, and creating emotional and symbolic effects.

In foreign language education, culturonyms frequently present serious challenges for learners. Students may correctly understand the grammatical structure of a sentence but still fail to grasp its intended meaning due to unfamiliar cultural references. This problem is especially evident in reading authentic texts, watching films, listening to native speakers, or translating literary and media materials. Without proper guidance, culturonyms can become obstacles that hinder comprehension and reduce learners' confidence in communication.

For this reason, the study of culturonyms should not be limited to theoretical linguistics or translation studies. It should also be considered an essential component of foreign language education. By incorporating culturonyms into English language teaching, educators can help learners develop intercultural communicative competence, deepen their understanding of global English, and improve their ability to interpret discourse in real-life contexts. This article aims to analyze the discursive features of culturonyms in modern English and to highlight their pedagogical value in foreign language education.

Materials and Methods

The present study adopted a qualitative interpretive design to explore how culturonyms operate in modern English discourse and how they can be used in foreign language education. Since the research focuses on culturally marked lexical items, implicit meaning, and discourse-based interpretation, a qualitative framework was considered more suitable than a quantitative one. The study was grounded in linguistic description, contextual interpretation, and discourse-oriented analysis, with particular attention to the relationship between lexical meaning and cultural knowledge. Its conceptual basis was also informed by the author's earlier academic work on culturonyms, culturally bound meaning, discourse, and language teaching.

The research material consisted of culture-specific lexical units found in English-language discourse. These units included proper names, historical and literary references, religious allusions, and other expressions carrying meanings that extend beyond their direct lexical sense. The corpus was formed from authentic and semi-authentic examples selected from literary discourse, culturally loaded statements, and educationally relevant language material. The main selection principle was not frequency, but interpretive richness. In other words, the study focused on examples that require background cultural knowledge and therefore reveal the interaction between language, cognition, and discourse.

The sampled items were chosen through purposeful selection. Three criteria guided this process: cultural markedness, discursive significance, and pedagogical usefulness. First, the lexical unit had to reflect a specific cultural, historical, or social meaning. Second, it had to play an identifiable role in shaping discourse interpretation. Third, it had to be relevant to foreign language learning, especially in situations where learners may understand the grammar of a sentence but still fail to decode its intended meaning. This approach made it possible to treat culturonyms not as isolated dictionary items but as functional elements of communication.

The analytical procedure combined several complementary methods. A descriptive method was used at the first stage to identify the main semantic and functional characteristics of the selected culturonyms. This step allowed the study to classify the units according to their cultural source and communicative role. A contextual method was then applied to show how these lexical items gain meaning inside a particular utterance, text, or discourse situation. Because culturonyms often

depend on shared cultural memory, their interpretation was examined in close relation to surrounding textual cues and presupposed knowledge.

Discourse analysis formed the central methodological component of the study. It was used to examine how culturonyms contribute to evaluation, symbolism, identity construction, and meaning expansion in discourse. In this sense, the analysis moved beyond lexical definition and focused on how culturally loaded units influence the reader's or listener's interpretation. Particular attention was paid to the fact that many culturonyms activate associations that are not explicitly stated in the text. Their discursive force therefore lies not only in what they denote directly, but also in the historical, literary, ideological, and emotional meanings they evoke.

An interpretive-comparative perspective was also incorporated into the analysis. Through this procedure, the surface meaning of a lexical item was compared with its deeper culture-bound function in discourse. This was especially important for identifying possible comprehension problems among foreign language learners. In many cases, a learner may understand the literal structure of a sentence while missing the broader reference carried by a culturonym. For this reason, the study considered culturonyms as units that stand at the intersection of lexical meaning, cultural competence, and communicative interpretation.

The pedagogical dimension of the research was developed analytically rather than experimentally. The aim was not to test learners through classroom measurement, but to determine how the selected culturonyms could support foreign language teaching. On this basis, the study examined their possible use in reading tasks, classroom discussion, speaking practice, listening activities, and translation exercises. The analysis suggests that systematic attention to culturonyms can improve learners' intercultural awareness, discourse sensitivity, and ability to understand authentic English texts more deeply.

The study progressed through three main stages. First, culturally significant lexical items were selected from relevant English-language material. Second, these items were analyzed descriptively and contextually in order to reveal their semantic, cognitive, and discursive properties. Third, their educational relevance was interpreted in relation to foreign language teaching. This sequence helped connect theoretical linguistic analysis with practical pedagogical implications and ensured coherence between the research aim, material, and method.

To strengthen the trustworthiness of the analysis, examples were taken from more than one discourse environment and interpreted through more than one analytical lens. Descriptive, contextual, and discourse-based perspectives were used in combination so that no example would be explained only at the surface level. In addition, the discussion was aligned with the author's broader scholarly work on culturonyms and language education, which contributed to conceptual consistency while still allowing the present paper to remain structurally and stylistically independent.

Culturonyms and Discourse

Culturonyms function as markers of national and cultural identity. They activate background knowledge, associations, and emotions in the mind of the reader or listener (Valiyeva, 2012). In discourse, they help to represent events, evaluate situations, and create aesthetic or emotional effects.

For example, references to figures like Robinson Crusoe, Judas Iscariot, or Romulus and Remus cannot be understood properly without cultural and historical knowledge. Such culturonyms

require extralinguistic, encyclopedic information. This proves that language understanding always involves cultural competence.

Culturonyms in Foreign Language Education

In foreign language teaching, culturonyms often become barriers to comprehension. Students may understand the grammar of a sentence but fail to understand its meaning because they do not recognize the culturonym. Therefore, culturonyms should be taught deliberately as part of language education (Nuri & Ismaili, 2023).

They can be integrated into teaching in the following ways:

- In reading lessons: explaining culturonyms in literary and authentic texts.
- In speaking activities: using culture-based topics and role-plays.
- In listening tasks: working with films, songs, and interviews containing culturonyms.
- In translation practice: comparing how culturonyms are adapted in different languages.

Teaching culturonyms develops learners' intercultural communicative competence (Nuri, 2025). Students learn not only how to speak English correctly but also how to speak appropriately in different cultural situations.

Results and Discussion

The analysis of the selected data indicates that culturonyms occupy an important position in modern English discourse because they function not only as lexical units but also as carriers of historical memory, symbolic meaning, and culturally shared knowledge. Unlike ordinary vocabulary items, culturonyms often contain meanings that cannot be fully interpreted through grammar or dictionary definition alone. Their communicative value emerges when readers or listeners connect the linguistic form with wider cultural, literary, religious, or social associations (Van Dijk, 1997). In this regard, culturonyms are closely connected with the representation of knowledge in English discourse, since proper names and culturally marked references activate cultural, historical, and encyclopedic information in the process of interpretation (Quluzade, 2022). This finding confirms that meaning in discourse is frequently co-constructed through language and background knowledge rather than through lexical form in isolation.

One of the most significant findings of the study is that culturonyms regularly activate implicit knowledge structures. In many cases, the lexical item itself is short and simple, yet the interpretive load behind it is substantial. For example, references such as Robinson Crusoe may evoke isolation, survival, loneliness, or self-reliance, depending on the discourse context. Similarly, names such as Judas Iscariot may function as markers of betrayal, while references such as Romulus and Remus may index origin myths, political symbolism, or historical legitimacy. These examples show that culturonyms often operate as compressed cultural narratives. A single lexical item may replace a much longer explanation because speaker and audience are expected to share the same cultural frame. This function is also visible in literary discourse, where culturonyms help readers interpret characters, social relations, and cultural background. For instance, Charles Dickens's *Dombey and Son* contains culturally marked references that require contextual and cultural knowledge for accurate interpretation (Dickens, 1848). Similarly, Dickens's *The Adventures of Oliver Twist* includes culturally marked references, such as place names and social institutions, which cannot be fully understood without knowledge of nineteenth-century English society (Dickens, 1839).

The findings further demonstrate that culturonyms play an evaluative role in discourse. They are frequently used to praise, criticize, compare, ridicule, legitimize, or dramatize people and

events. When a public figure is described through a culturally loaded name or metaphor, the discourse immediately gains emotional and ideological force. This means that culturonyms are not neutral labels; they can guide audience perception and shape attitudes. In political discourse, media language, and everyday communication, such units may therefore function as subtle persuasive tools. Their pragmatic effect depends on whether the audience recognizes the cultural reference embedded in the expression.

Another important result concerns the relationship between culturonyms and identity construction. Many culturally marked lexical items reflect national traditions, collective memory, local institutions, or shared experiences. Their use can signal group membership and social belonging. Speakers who understand and appropriately use such references may be perceived as culturally competent insiders, while those who fail to recognize them may remain outside the interpretive community. This suggests that culturonyms contribute not only to meaning construction but also to the symbolic boundaries of discourse communities. In multilingual and international settings, this role becomes especially visible.

From an educational perspective, the study found that culturonyms represent a recurrent source of difficulty for foreign language learners. Students may decode grammatical structure successfully yet misunderstand the communicative intention of the message when the sentence contains a culture-bound reference. Literal translation often fails because the lexical item carries associative meaning rather than only denotative meaning (Бархударов, 1975). As a result, learners may interpret the sentence superficially while missing irony, humor, criticism, or symbolic nuance. This finding supports the argument that vocabulary knowledge alone is insufficient for successful comprehension of authentic discourse.

The analysis also indicates that culturonyms can be transformed from barriers into pedagogical resources when systematically integrated into instruction. In reading classes, they can be used to develop inferencing skills and contextual interpretation. In speaking activities, they can stimulate discussion of values, traditions, stereotypes, and cultural comparisons. In listening tasks, they prepare learners to understand real-world references in films, interviews, and media discourse. In translation practice, they help students evaluate equivalence strategies, adaptation choices, and intercultural transfer. Therefore, culturonyms should be viewed not merely as problematic vocabulary items, but as effective instruments for developing higher-order communicative competence.

A further result of the study is that teaching culturonyms may strengthen intercultural communicative competence. Learners who understand why a reference is meaningful in one cultural setting become more aware that language always reflects social values and historical experience. This awareness can reduce ethnocentric interpretation and encourage more flexible communication across cultures. In the context of global English, where users interact across national and linguistic boundaries, this competence is increasingly necessary. English communication today often involves negotiating meaning among speakers with different cultural backgrounds, and culturonyms form part of that negotiation process.

The discussion additionally suggests that culturonyms should be treated as dynamic rather than static units. Some traditional references remain stable across time, while others change meaning or lose relevance. New culturonyms may emerge through digital culture, popular media, global politics, and technological change. This means that language teaching materials should not

rely only on classical examples but should also incorporate contemporary references familiar to modern learners. In this sense, culturonyms reflect both cultural continuity and cultural change.

Overall, the results demonstrate that culturonyms occupy a multidimensional position in discourse. They function simultaneously as semantic units, cultural signals, persuasive devices, identity markers, and educational resources. Their interpretation requires more than linguistic competence; it requires access to social memory, contextual reasoning, and intercultural awareness. For this reason, any comprehensive model of foreign language education should include systematic attention to culture-bound lexical meaning. The findings of the present study therefore support a broader view of language learning in which grammar, vocabulary, discourse, and culture are treated as interconnected dimensions rather than separate components.

Conclusion

Culturonyms constitute a significant part of language because they preserve and transmit cultural meanings, historical associations, and socially shared values. The present study has shown that these units perform much more than a nominative function in discourse. They contribute to meaning construction, emotional coloring, symbolic representation, and pragmatic interpretation. In modern English, culturonyms frequently operate as condensed cultural signals that require not only linguistic knowledge but also background awareness and interpretive competence. For this reason, their role becomes especially important in the context of global English, where communication increasingly takes place across diverse linguistic and cultural settings.

The findings of the study indicate that culturonyms should not be treated solely as a theoretical concern of linguistics, discourse studies, or translation research. Their pedagogical value is equally important. When incorporated into foreign language education, culturonyms help learners move beyond surface-level comprehension and engage with the deeper cultural dimensions of language. They support the development of intercultural communicative competence, improve contextual interpretation, and enable students to understand how meanings are shaped by history, literature, religion, and collective experience. In this sense, the teaching of culturonyms strengthens not only vocabulary knowledge but also discourse awareness and communicative sensitivity.

Another important conclusion is that effective language learning requires a closer integration of linguistic and cultural knowledge. Learners may understand grammatical structures correctly and still fail to interpret the communicative intention of an utterance if culture-bound lexical units remain unfamiliar to them. Therefore, attention to culturonyms can reduce misunderstanding, enrich textual interpretation, and prepare students for more authentic interaction in English. As English continues to function as an international language, the ability to decode culturally marked elements becomes an increasingly necessary component of successful communication.

In sum, culturonyms should be recognized as both linguistic and educational resources. They illuminate the close relationship between language and culture, reveal the discursive depth of lexical meaning, and offer practical benefits for foreign language teaching. Their systematic inclusion in classroom practice can foster more reflective, culturally informed, and effective language users. Thus, culturonyms are not merely lexical items with culture-specific reference; they are powerful tools for developing deeper understanding of discourse and more meaningful participation in intercultural communication.

DISCOURSE STRATEGIES IN DIGITAL COMMUNICATION: A STUDY OF SOCIAL MEDIA LANGUAGE USE

Sevil Rahman JAFARZADEH

Young researcher, Mingachevir State University

E-mail: sevil.jafarzade@mdu.edu.az

ORCID ID: 0009-0001-7160-3373

Abstract: In the contemporary digital era, the rapid proliferation of social media platforms has fundamentally reshaped human interaction and linguistic norms. This article investigates discourse strategies employed in digital communication, with a specific focus on the functional characteristics of language used on platforms such as Instagram, Facebook, and TikTok. Grounded in Critical Discourse Analysis (CDA) and Computer-Mediated Communication (CMC), the study conducts a qualitative-descriptive analysis of over 300 linguistic samples from the Azerbaijani social media segment collected between October 2024 and March 2026. The research methodology involves purposive sampling across various age groups and digital sub-cultures to identify patterns in lexical choice, punctuation usage, and pragmatic functions of non-textual elements. The findings reveal that social media discourse is characterized by brevity, heightened emotionality, and interactivity. Users strategically employ code-switching, emojis, hashtags, and syntactic reductions to attract attention, establish online identities, and maintain social engagement. Furthermore, the study highlights the emergence of "meme-discourse" and the impact of platform algorithms on linguistic choice, introducing the concept of "Algorithmic Discourse Strategy." The research concludes that social media acts as a primary catalyst for linguistic evolution, blurring the lines between formal writing and informal speech, and that the Azerbaijani language demonstrates high adaptability by absorbing global influences while preserving its core syntactic structure.

Key words: discourse, social media, communication, language strategies, discourse analysis, digital linguistics, multimodal communication, computer-mediated communication (CMC).

RƏQƏMSAL KOMMUNİKASIYADA DİSKURS STRATEGİYALARI: SOSIAL MEDIA DİL İSTİFADƏSİNİN TƏDQIQI

Sevil Rəhman CƏFƏROVA

Magistr tələbəsi, Mingəçevir Dövlət Universiteti

E-mail: sevil.jafarzade@mdu.edu.az

ORCID ID: 0009-0001-7160-3373

Xülasə: Müasir rəqəmsal dövrdə sosial media platformalarının sürətli inkişafı kommunikasiya formalarına və dil istifadəsinə mühüm təsir göstərmişdir. Bu məqalədə rəqəmsal kommunikasiya mühitində diskurs strategiyaları və sosial media dilinin funksional xüsusiyyətləri təhlil olunur. Tədqiqat Tənqidi Diskurs Analizi (CDA) və Kompüter Vasitəli Kommunikasiya (CMC) nəzəri bazasına əsaslanaraq, 2024-cü ilin oktyabr – 2026-cı ilin mart ayları ərzində Azərbaycan sosial media segmentindən toplanmış 300-dən artıq dil nümunəsinin keyfiyyət-təsviri analizini aparır. Tədqiqat metodologiyası müxtəlif yaş qrupları və rəqəmsal sub-mədəniyyətlər üzrə məqsədyönlü seçməni əhatə edir. Araşdırma göstərir ki, sosial media diskursu qısa, emosional və interaktiv xarakter daşıyır. İstifadəçilər diqqət cəlb etmək, onlayn kimlik yaratmaq və sosial əlaqəni qorumaq üçün kod dəyişməsi, emojilər, heşteqlər və sintaktik ixtisarlardan strateji şəkildə istifadə edirlər. Eyni zamanda, məqalədə "meym-diskurs" anlayışı və alqoritmlərin dil seçiminə təsiri – "Alqoritmik Diskurs Strategiyası" konsepsiyası təqdim olunur. Nəticə olaraq qeyd olunur ki, sosial media dilin təkamülünə təsir edən əsas amildir və Azərbaycan dili qlobal təsirləri mənimsəyərək yüksək adaptasiya qabiliyyəti nümayiş etdirir.

Açar sözlər: diskurs, sosial media, kommunikasiya, dil strategiyaları, diskurs analizi, rəqəmsal dilçilik, multimodal kommunikasiya

Introduction

The 21st century is defined by the transition from analog to digital life. This transition is most visible in the way we use language. Social media platforms like Instagram, TikTok, and Facebook

are no longer just tools for sharing photos; they are complex discursive arenas where social identities are performed and negotiated. Unlike traditional written discourse, which is characterized by formal structure and grammatical rigidity, digital discourse is fluid, adaptive, and multimodal (D.Crystal, 2006).

In Azerbaijan, the digital linguistic landscape is particularly interesting due to its rapid globalization and the hybridization of the Azerbaijani language with global digital lexemes. This study aims to decode the discourse strategies used by Azerbaijani social media users, exploring how they balance brevity with emotional depth and how they utilize non-verbal cues in a text-based environment (J.P.Gee, 2011).

Theoretical Foundations of Digital Discourse

To understand social media language, one must move beyond classical linguistics. The concept of "discourse" as language-in-action (G.Brown & G.Yule, 1983) is the starting point. However, digital communication introduces the "Third Medium" theory. D.Crystal (2006) argues that internet language is a unique revolutionary stage because it possesses the speed of speech but the written form of text.

Furthermore, Critical Discourse Analysis (CDA) provides a lens to view how power is manifested in digital spaces. Users who master specific "slang" or discourse strategies gain more "cultural capital" (social followers and engagement). N.Fairclough's (1995) work on the social effects of language is highly relevant here, as digital platforms create new social hierarchies based on communicative styles.

Material and Methods

This research is based on a qualitative descriptive study of 300 linguistic units. Data was manually curated from public accounts on Instagram, TikTok, and Facebook within the Azerbaijani segment between October 2024 and March 2026. The sampling focused on: captions of viral posts, public comment sections, and direct response patterns. The analysis involved categorizing these units into five distinct discourse strategies: lexical hybridization, visual semantics, syntactic ellipsis, persuasive rhetoric, and algorithmic conformity (S.C.Herring, 2007).

Results and Discussion: Detailed Descriptive Analysis of Discourse Strategies

1. Lexical Hybridization and Translanguaging. In the Azerbaijani digital segment, "pure" language is often replaced by a hybrid form. This is a deliberate strategy to signal modernity. Example: "Videonu edit-ləmək lazımdır" or "Link-i bio-ya pin-ləmişəm". Using terms like vibe, aesthetic, or feedback allows the user to tap into a shared global semantic field (N.S.Baron, 2008).

2. Visual Semantics: Emojis as Digital Paralanguage. Emojis are the "body language" of the internet. They serve as pragmatic markers that change the entire meaning of a sentence. A statement like "Mənə cavab ver" can appear aggressive. The addition of "💎" or "😊" softens the communicative act into a friendly nudge. The use of "💀" or "🤪" is a sophisticated discursive move to signal sarcasm.

3. Syntactic Ellipsis and the Principle of Least Effort. The technical nature of social media demands a reduction in syntactic complexity. Omission of subjects: Instead of "Mən bugün çox yorulmuşam," a user writes "Çox yorğun...". This strategy creates an atmosphere of "pseudo-intimacy."

4. Persuasive Rhetoric in the Attention Economy. On platforms like TikTok, the first three seconds of discourse determine if a user stays or leaves. This has led to the "Hook Strategy."

Imperative Mood: "Sona qədər izləyin!". Hyperbolic Adjectives: "Şok," "İnanılmaz," "Möhtəşəm" are overused to trigger engagement (R.Wodak & M.Meyer, 2009).

5. Meme-Discourse and Intertextuality. Social media language is highly intertextual. A single phrase like "POV:" acts as a template. When an Azerbaijani user writes "POV: İmtahandan kəsildə mən...", they are activating a global meme format. The discourse here is shortcut.

The Human-Algorithm Interaction. A significant finding is the emergence of "Algorithmic Discourse." Users in Azerbaijan are increasingly aware that the platform's AI favors certain words and hashtags. The Keşfet/FYP Strategy: Users include words like "keşfet," "trend," or "viral" in their discourse not to communicate with people, but to communicate with the machine. This leads to a standardization of discourse.

Implications for Language Teaching and Research

The findings suggest that communicative competence in the modern world must include "Digital Literacy." Teaching formal Azerbaijani is no longer enough; students must understand the nuances of digital discourse to navigate the professional and social world. The integration of these strategies into linguistics curricula can help bridge the gap between academic theory and real-world practice (UNESCO, 2022).

Conclusion

Social media has permanently altered the trajectory of the Azerbaijani language. It has introduced a level of multimodality and speed that traditional grammar is still struggling to categorize. This study has shown that discourse strategies like lexical hybridization, visual paralanguage, and algorithmic adaptation are not signs of linguistic decay, but rather evidence of a highly adaptive and living language. As we move further into the digital age, these strategies will likely become more integrated into our daily non-digital speech, leading to a more globalized and interactive form of communication.

LEXICAL-STYLISTIC FEATURES OF HYPERBOLE IN LINGUISTICS

Nazrin Tahir ISMAYILOVA

Teacher, Faculty of Philology, ADPU

PhD student, Baku Slavic University

E-mail: nezrin.ismayilova@adpu.edu.az

ORCID ID: 0000-0002-4565-9664

Abstract: This article examines hyperbole as an important lexical-stylistic device in both literature and everyday speech. Hyperbole is a form of expression based on deliberate and purposeful exaggeration, and its main function is to make descriptions more vivid, figurative, and emotionally expressive. The article explains the nature of hyperbole, as well as its similarities and differences with general overstatement, and analyzes its rhetorical and artistic functions. Examples taken from folklore, everyday language, and classical literature demonstrate how hyperbole operates in various stylistic contexts. Special attention is paid to the role of hyperbole in satirical works, where it serves to highlight social, political, and cultural issues. In addition, the relationship between hyperbole and other stylistic devices such as metaphor and epithet is examined in a comparative manner. The study shows that hyperbole is not only an aesthetic tool but also a means of expressing the author's attitude and perspective more clearly. In conclusion, hyperbole is identified as a significant stylistic device that enhances the expressiveness of language, adds emotional depth and dynamism to a text, and strengthens communication between the author and the reader.

Key words: hyperbole, stylistic device, discussion, novel, experience, inversion.

DİLÇİLİKDƏ HİPERBOLANIN LEKSİK-STİLİSTİK XÜSUSİYYƏTLƏRİ

Nəzrin Tahir qızı İSMAYILOVA

Müəllim, Filologiya fakültəsi, müəllim, ADPU

Doktorant, Bakı Slavyan Universiteti

E-mail: nezrin.ismayilova@adpu.edu.az

ORCID ID: 0000-0002-4565-9664

Xülasə: Bu məqalədə hiperbola ədəbiyyatda və gündəlik nitqdə mühüm leksik-stilistik vasitə kimi geniş şəkildə araşdırılır. Hiperbola qəsdən və məqsədli şəkildə şişirtmə əsasında qurulan ifadə formasıdır və onun əsas funksiyası təsviri daha parlaq, obrazlı və emosional cəhətdən təsirli etməkdir. Məqalədə hiperbolanın mahiyyəti, onun adi şişirtmə ilə oxşar və fərqli cəhətləri izah olunur, həmçinin bu vasitənin ritorik və bədii funksiyaları təhlil edilir. Folklor nümunələri, xalq danışığı dili və klassik ədəbiyyatdan götürülmüş misallar hiperbolanın müxtəlif üslubi kontekstlərdə necə işlədiyini nümayiş etdirir. Xüsusilə satirik əsərlərdə hiperbolanın sosial, siyasi və mədəni problemlərin qabardılmasında mühüm rol oynadığı vurğulanır. Bununla yanaşı, hiperbolanın metafora, epitet və digər bədii ifadə vasitələri ilə qarşılıqlı əlaqəsi də müqayisəli şəkildə araşdırılır. Məqalədə göstərilir ki, hiperbola yalnız estetik funksiya daşıyır, həm də müəllifin mövqeyini və münasibətini daha aydın ifadə etməyə xidmət edir. Nəticə olaraq, hiperbolanın dilin ifadəliliyini artıran, mətnə emosional dərinlik və dinamika qazandıran, oxucu ilə müəllif arasında daha güclü kommunikasiya yaradan əhəmiyyətli üslubi vasitə olduğu qənaətinə gəlinir.

Açar sözlər: hiperbola, stilistik vasitə, müzakirə, roman, təcrübə, inversiya.

Introduction

The role of means of artistic expression is of particular importance in modern linguistics and literary criticism. Among these means, hyperbole stands out as one of the lexical-stylistic methods widely used both in everyday speech and in literary texts. Hyperbole is based on deliberate exaggeration, which increases the emotional impact of the expression, makes the image more vivid and memorable. The use of hyperbole, especially in folklore examples, satirical works and classical literature, serves to convey the author's idea more clearly. In this regard, the study of the functional properties of hyperbole, its interaction with other stylistic means and the possibilities of its use in various contexts is considered one of the current scientific issues. The aim of the article is to analyze the essence, functions and features of hyperbole as a lexical-stylistic means in literature. The concept of hyperbole has attracted considerable scholarly attention in linguistics, stylistics and rhetoric. The term derives from the Greek word '*hyperbole*', meaning excess or overstatement. Classical rhetoricians, including Aristotle and Quintilian, regarded hyperbole as a persuasive device capable of intensifying emotional expression and strengthening the impact of speech. Aristotle noted that hyperbole is a characteristic feature of youthful or passionate speech, as it reflects an intensified state of mind that naturally seeks to transcend standard linguistic boundaries. In classical antiquity, rhetoric served as the primary framework for public persuasion, legal argumentation, and epic performance. Within this context, hyperbole was not treated as a lie or a linguistic error, but as a legitimate tool of amplification (*amplificatio*). Quintilian argued that hyperbole is an elegant straining of the truth, designed not to deceive the audience, but to bring them closer to the emotional reality of the subject matter. Modern linguistic approaches examine hyperbole within pragmatics and cognitive linguistics, emphasizing its contextual interpretation and conceptual functions. Hyperbole reflects subjective evaluation, reinforces emotional intensity, and contributes to aesthetic expressiveness. From a cognitive perspective, hyperbole operates through the activation of mental scales where an attribute is pushed to its absolute semantic limit, creating a striking contrast that forces cognitive reassessment by the hearer (Gibs., 2000).

Materials and methods

The reader is not expected to really accept that this character killed a bear "when he was only three years old" or "knew every tree". The reader understands that these claims are not intended to be taken literally, but to emphasize the features of the character. "Overstatement" and hyperbole are sometimes used synonymously. However, there are certain differences in their usage and purpose. An expression that goes beyond what is considered realistic is called an overstatement (Zaffaris., 2017). Hyperbole is also an exaggeration, but it is more extreme and is mainly used as a literary and rhetorical device. Both are figurative expressions and should not be understood literally. However, hyperbole is not only a figurative form of language, but also a special stylistic device in literature and rhetoric. So why hyperbole? It enlivens speech, conveys the emotional and psychological state of the author or narrator to the reader. This allows the author to more clearly present the verbal environment of events. The function of hyperbole is to add brightness, emotionality and persuasiveness to the text. In addition, it is often used by satirical writers to create an ironic or humorous effect on the images. Hyperbole is easy to find in the text because it is distinguished from other expressions by its exaggerated forms. For example: "this girl had eyes the size of saucers" or "this dog was the size of an elephant." These expressions are a clear exaggeration of reality, because such situations do not exist in reality. These are examples of simple hyperbole used in Russian literature. Metaphor and hyperbole are widely used devices in literature. Metaphor

compares one thing to another. Sometimes the comparison is unusual and has the effect of exaggeration. However, hyperbole is different - its purpose is to overtly exaggerate. For example, the expression "his words are music" is a metaphor. But saying "his words are the most magnificent melody ever heard" is a hyperbole.

Hyperbole, in addition to being a means of exaggeration, also serves to create humor. For this reason, hyperbole in satire either exaggerates or diminishes images (Hudson., 2020).

Hyperbole is very effective as a literary device. It attracts the reader's attention by exaggerating the characteristics of the character, the author's tone, the idea, or the subject. At the same time, it makes the reader think, be skeptical of the narrator, or look for a hidden meaning.

In classical literature, authors have widely used hyperbole to convey their feelings to the reader. Artistic means help the author to convey his idea more effectively. Therefore, when studying classical works, students study means such as epithets and comparisons and try to understand the reasons for their use. Hyperbole is one of these means.

Hyperbole is a stylistic device used since ancient times (Leengen., 2019). It allows the author to deliberately exaggerate in order to create the desired effect. Hyperbole has various functional properties as a lexical-stylistic device, and these properties more clearly reveal its role in speech and artistic texts.

The functional properties of hyperbole can be explained more broadly as follows:

1. Emotional function - strengthening feelings and emotions

Exaggerated expressions cause the reader to experience emotions such as joy, surprise, fear, sadness or admiration more intensely. For example, the expression "my heart skipped a beat when I saw him" is not realistic, but it strongly conveys the emotional state.

2. Expressive function - making speech more expressive and effective

This function plays an important role, especially in artistic and journalistic style. For example, the phrase "I have said it a million times" emphasizes the intensity of the repetition of an idea.

3. Aesthetic function – beautification of artistic description

Hyperbole increases the aesthetic value of the text and makes the artistic description more vivid. This is especially evident in genres such as novels, stories and poems. For example, expressions such as "the sky was on fire" make the description more poetic.

4. Satirical function – exposing social flaws

This technique causes both laughter and thought in the reader. For example, in the works of Jonathan Swift, social problems are exposed through hyperbolic descriptions and an ironic meaning is created.

Satirical writers use hyperbole to draw attention to social, political and economic problems. In Swift's time, some people took his idea literally, which caused dissatisfaction. However, for the modern reader, this hyperbole achieves its main purpose – it makes you think about the problems of society (Literary devices., 2014).

Swift's satirical essay criticizes England's policy towards Ireland and the poor in the 18th century. In this work, the author suggests selling Irish children as food, which is one of the most famous examples of hyperbole. Of course, this idea is not realistic, but an extreme exaggeration. However, the author's serious presentation of this idea has a strong impact on the reader and creates an ironic meaning.

5. Pragmatic function - directing the reader's attention

Exaggerated expression highlights the important part of the text and ensures that the reader's attention is focused on the main idea without being distracted. This function is especially effective in advertising, journalism and literary texts. Hyperbole is also often used in everyday language. It forms a cornerstone of colloquial speech, acting as an involuntary linguistic response to routine experiences. For example: in the expression “we haven't seen each other for a hundred years,” “hundred” is not a real number. Similarly, a person who says “I have a million problems” simply emphasizes that he is experiencing a lot of difficulties. Everyday hyperboles undergo a process of conventionalization, where certain formulas become idioms within a linguistic community.

In oral traditions and folklor, hyperbole performs vital socio-cultural functions. In these oral environments, exaggerated representations help preserve collective memory and cultural values. Epic heroes are routinely described as possessing the strength of forty men, riding horses that outrun the wind, or wielding weapons that weigh hundreds of pounds. These hyperbolic descriptions serve to elevate historical or mythical figures into symbols of national identity, ensuring that tales remain memorable across generations without the aid of written records.

Results and Discussion

The concept of hyperbole has attracted considerable scholarly attention in linguistics, stylistics and rhetoric. The term derives from the Greek word 'hyperbole', meaning excess or overstatement. Classical rhetoricians regarded hyperbole as a persuasive device capable of intensifying emotional expression and strengthening the impact of speech. Modern linguistic approaches examine hyperbole within pragmatics and cognitive linguistics, emphasizing its contextual interpretation and conceptual functions. Hyperbole reflects subjective evaluation, reinforces emotional intensity, and contributes to aesthetic expressiveness. Hyperbole also performs socio-cultural functions in folklore, media discourse, advertising and digital communication. In oral traditions, exaggerated representations help preserve collective memory and cultural values. In contemporary contexts, speakers employ hyperbole to emphasize opinions, construct identities and attract attention. The distinction between hyperbole and metaphor remains theoretically significant: metaphor relies on comparison, whereas hyperbole foregrounds deliberate amplification. These theoretical perspectives demonstrate that hyperbole is both a stylistic device and a cognitive-pragmatic strategy central to human communication.

Conclusion

Thus, the article examined examples of hyperbole and its application in literature. This tool allows the author to make his speech more expressive and figurative, attracts the reader's attention and helps to convey his attitude to the described event. The interaction of hyperbole with metaphor and other means of artistic expression further expands its functional capabilities. Especially in satirical and artistic texts, hyperbole acts as an effective tool in highlighting social and cultural problems. Thus, it is concluded that hyperbole is an important lexical-stylistic tool that increases the expressiveness of the language and adds depth and dynamics to the text.

NORM IN THE LEXICAL AND TERMINOLOGICAL COMPOSITION OF THE LANGUAGE

Madina Aliqa RZAYEVA

Ph.D. student, Ganja State University

Senior Lecturer, Department of Lexis and Country Studies

E-mail: madinarzayeva@yahoo.com

ORCID ID: 0009-0009-3584-9091

Abstract. The article examines changes in the lexical-terminological composition of the Azerbaijani press language under conditions of globalization, with particular attention to the use and normalization of international terms. The flexibility and informative function of press language create favorable conditions for the introduction of new terms and neologisms. While this process enriches the lexical and terminological potential of the Azerbaijani language, it also contributes to the spread of unnecessary foreign elements that do not correspond to the norms of the native language. The study analyzes the influence of globalization on language processes, particularly the dominant role of English in the international information environment and its impact on national languages. It also discusses the normalization of terms through their widespread use in the press, as well as the temporary nature of non-normalizable terms that gradually disappear from usage. Examples such as *fiasco* demonstrate that the use of foreign words is not always necessary when clear and well-established equivalents already exist in Azerbaijani. The study emphasizes that, alongside adapting to global information processes, preserving lexical-semantic norms is essential for maintaining the stability, development, and national identity of the Azerbaijani language.

DİLİN LEKSİK-TERMINOLOJİ TƏRKİBİNDƏ NORMA

Mədinə Əliqə RZAYEVA

Gəncə Dövlət Universitetinin doktorantı

Leksika və Ölkəşünaslıq kafedrasının baş müəllimi

E-mail: madinarzayeva@yahoo.com

ORCID ID: 0009-0009-3584-9091

Xülasə. Məqalədə qloballaşma şəraitində Azərbaycan mətbuat dilinin leksik-terminoloji tərkibində baş

verən dəyişikliklər, beynəlmiləl terminlərin işlənməsi və onların dil normasına uyğunlaşması məsələləri araşdırılır. Mətbuat dilinin çevikliyi və informasiya ötürücülüüyü yeni termin və neologizmlərin dilə daxil olmasına əlverişli şərait yaradır. Bu proses, bir tərəfdən, Azərbaycan dilinin leksik-terminoloji potensialını zənginləşdirir, digər tərəfdən isə normaya uyğun olmayan və zərurətsiz alınma sözlərin yayılmasına səbəb olur. Tədqiqatda qloballaşmanın dilə təsiri, xüsusilə beynəlxalq informasiya mühitində ingilis dilinin üstün mövqeyi və bunun milli dillər üçün yaratdığı problemlər təhlil edilir. Mətbuat dilində işlənən terminlərin kütləviləşmə yolu ilə normallaşması, eləcə də müəyyən müddətdən sonra istifadədən çıxan qeyri-normativ terminlər haqqında fikir irəli sürülür. Araşdırmada “fiasco” kimi sözlərin Azərbaycan dilində mövcud və normaya uyğun qarşılıqları olduğu halda istifadəsinin məqsədəuyğun olmadığı göstərilir. Nəticə olaraq, qloballaşma dövründə Azərbaycan dilinin inkişafı və informasiya imkanlarının genişləndirilməsi ilə yanaşı, onun leksik-semantik normalarının qorunmasının vacibliyi vurğulanır.

Açar sözlər: çeviklik, qloballaşma, intensivlik, söz yaradıcılığı imkanları, vahidlər

Introduction

The use of unnecessary foreign elements in the language of the press is not only a negligent approach to language, but also a result of modern global influences. Global influences inevitably create a deceptive impression that if alien, foreign language elements are not used, intensification in the dissemination of information cannot occur.

The main advantage of globalization is that social, political, and public relations with the international world are expanding, integration opportunities are increasing manifold, and new conditions for cooperation in the field of scientific and technical progress are emerging. Joseph E. Stiglitz writes: “...globalization has not improved the lives of those who most need the promised positive changes. Each of us understands well that certain, very wrong steps have been taken. In a very short time, globalization has become one of the most painful problems of our time. This problem is discussed everywhere in the world, from the boardroom to the editorial columns of newspapers, even in schools” (1, p.4).

The flexibility of the press language in the conditions of globalization leads to the use of many new words under the name of neologisms. Neologism is understood in linguistics as a group of words that convey a new concept. L.P. Krisin briefly explains neologisms as a new word and expression, as well as the use of an old word in a new sense.

The globalization stage allows economically developed countries to exert a strong influence on other countries, leading them to a state of self-dependence. Following this, globalization affects national cultures, provoking them to follow it. This invisible force also attracts information to its surroundings. Information related to each nation, its social, every day, and cultural life becomes a component of big information. As a result, the entry of any words from the big information space into the languages that receive information becomes an irresistible process. Therefore, in the era of globalization, fulfilling the task of receiving information alone leads to becoming a prisoner of this information. Therefore, it is necessary to find ways to represent ourselves in the international world with the necessary information by receiving information. The most powerful weapon of language in this area is the protection of its norms. If we combine our efforts to receive information and provide information, then we are developing the norms of our language. Thus, even if we cannot turn our language into one of the international information tools, we will have earned the right to be represented in the vast information space with our national cultural traditions and successes in public life.

Globalization, on the one hand, by moving from borders to borders, from distances to distances, unites human society with universal values acquired over time, leading to the creation of social, political and psychological unity. It gives impetus to economic revival, which affects the elimination of poverty and the improvement of the material well-being of mankind. On the other hand, social life has to face the contradictory consequences of globalization. It is obvious that in the modern era it is impossible to achieve socio-economic development without joining international integration. The integration space is not only related to the economy. "The economy is a material stimulus for the joining of other areas to the integration space. Economic integration expands the space of communication of political, diplomatic, cultural, etc. areas" (7, p. 117-119).

"In the modern era, due to the expansion of the international information environment, the process of spreading international terms and terminological tools is becoming more and more active. The intensification of information easily eliminates all restrictions in the process of spreading words. Thus, newly emerging words quickly enter the spoken language due to their semantic and conceptual significance, creating a fertile ground for themselves in the mass media network". The impact of globalization on language processes is more manifested in lexical-terminological units. Therefore, the issue of term creation in accordance with new concepts stands out as the main problem that worries specialists. It is clear that the lexical-terminological potential of the language, at the modern stage, cannot fully reveal the possibilities of word formation in the face of new concepts with the power of its internal sources. Therefore, finding translation or calque variants of the other part by adopting a certain part of the words can be considered the most suitable method in terms of norms. Therefore, at the present stage, when global information is revived and rapidly spread, the search for new methods requires more responsibility from specialists. For example, first of all, it consists in determining the prospects for the development of the Azerbaijani language in the globalization stage. In the philosophical concept dealing with issues of public thought, such an idea is of interest that "Globalization, which is the newest stage of world historical processes and a large-scale and planetary event that combines the integrative features of the leading trends of modernity, is closely related to the "philosophy of harmony", "teaching about harmony", "theory of harmony" with ancient history" (5, p.11).

This means that in the globalization phase, it is necessary to ensure the creation of harmonious conditions so that language processes do not lose their balance. Otherwise, it is impossible to achieve stability and improvement of language norms. In an interesting study by A. Garibli dedicated to this field, it is said that globalization is a universal process covering the most diverse areas of life, which brings together, at an unprecedented speed, the phenomena, national or regional characteristics, habits, complexes that have been separated from each other to one degree or another for hundreds or even thousands of years, and brings them closer together under the strong influence of modern technologies, and as a result, by creating an economic, socio-political and spiritual-ideological whole characterized by multifaceted relations, it limits the isolation and brings the events and processes taking place in the world into a single channel". As for the issue of general information in the globalization process, as shown here, the main information medium of the modern world is the English language. The USA, which inspired globalization, and then Great Britain, quite naturally turn English into the main means of communication in the globalized world, and the connection between different languages is carried out directly through English. With the mediation of English, the functional styles of different languages receive special energy gains. However, the reactions are different. As it is said here, "as a result of such contact, languages that

do not have a developed norm gradually lose their influence and cannot carry a functional significance in the transmission of current information" (2, p.11).

Regarding the reaction of local languages in the process of globalization, experts express the opinion that at the present moment it is about creating an information society. From this it is understood that in an information society, expressing new concepts through the elements of the language that provides information is not the only necessity and way out. The existence of such a society does not exclude the expression of new concepts in the language specific to that society. According to Fakhraddin Veysalli, "In the conditions of globalization, the dominance of the English language leads to the adoption of this language by the USA and Great Britain, which are considered the mother of this language, using economic, political and military means. Thus, a fatal blow is dealt to the culture of other languages" (6, p.14).

There is a positive point in each of the ideas put forward to avoid the consequences of globalization on language and to protect against the destructive effects of this process. In this regard, the position of the "Globalizing Azerbaijan" Civil Development Center is also interesting. The book "Towards Globalization" published by the Center states that "The undeniable facts of globalization are acceptable for countries that are not afraid of this process and are able to manage it in the best way. It is important to pay attention to the fact that Azerbaijan remains outside globalization and that its harm in this process is minimal and its benefits are maximum. In our opinion, our country should start the globalization process precisely with education". In some studies, it is considered appropriate to use other methods to avoid the destructive effects of globalization. One of such studies shows that "It would be difficult to meet the demands of globalization without studying and mastering the modern problems of derivative (generative – i.e., having the same root) functional and cognitive (related in origin) linguistics, as well as applied linguistics, which emerged as a result of the rapid development of modern linguistics, and applying them to the study and use of the Azerbaijani language" (3, p. 70-75).

When we talk about the application of linguistics, we first of all mean the application of norms. At the same time, the development of other areas of applied linguistics, especially computer linguistics, and electronic translation issues, is one of the leading directions. The application of electronic translation can be successful only if the language norms are stabilized and can correspond to the standards of the languages being compared.

In separate research works on neologisms used in the language of the press, their norms and normalization features are also investigated. It is interesting that, as Sayali Sadiqova said, "In recent years, there has been a development in the direction of standardization of information terms in the Azerbaijani language" (4, p.140-142).

Materials and Methods

In connection with globalization, in the Azerbaijani press, especially in the press language covering the period of 2000-2015, one can find the use of a certain group of words that have an exotic character as a foreign language element that does not comply with the requirements of lexical-semantic norms. Some of them, even if registered in the spelling dictionary, are deprived of the ability to meet the lexical-semantic requirements according to the norm. Therefore, it can be considered that these words should be included in the units used for the sake of fashion, according to the tendencies of addiction to foreign words under the influence of global information. The following examples of such words can be given: 1) those used as simple words

Some of such words, which do not comply with the lexical-semantic norms of the native language and are used within the framework of the limited press language without being assimilated in terms of meaning, consist of ordinary lexical units in structure. The meaning of such words can be found and determined not from the text, but only from relevant dictionaries. Due to their content, such words are used in the press only for the sake of fashion, or more precisely, based on the tendency to artificially "join the international information space" without any necessity. The following are clear examples of this.

Discussion

Fiasco. The word fiasco is originally from the Italian language. Its meaning in Azerbaijani is failure. The other equivalent of the word in Azerbaijani is the Arabic word iflas (defeat, failure), which is a lexical unit that has long been assimilated in the native language. While this equivalent exists in the press, there is no need to use the Italian word fiasco. However, for some reason, the word fiasco is even included in the "Spelling Dictionary of the Azerbaijani Language". In the press, the word fiasco is used without any explanatory option. "Republicans have completely taken control of Congress. Obama has failed"; "The concert he wanted to hold in Turkey has failed". It is clear that for the Azerbaijani reader, the word fiasco used in sentences cannot be mass in meaning. The word fiasco in the first sentence could be used more clearly with the equivalent of defeat, and in the second sentence with the equivalent of failure.

Conclusion

While the main requirement of press language is mass communication, this artificial aggravation cannot benefit the language.

INTELLECTUAL COMMUNICATION AND LANGUAGE FACTORS

Nigar Ali MUSAYEVA

Student, Department of Foreign Languages, Mingachevir State University

E-mail: nigar.musayeva.de24@mdu.edu.az

ORCID ID: 0009-0008-9590-8279

Abstract: The article examines the complex interplay between human intellect and the linguistic mechanisms used to express high-level cognitive processes. It posits that intellectual communication is not merely a transmission of data but a sophisticated synchronization of mental models between individuals. The

text explores how the precision of a speaker's vocabulary and the structural complexity of their syntax directly impact the recipient's ability to reconstruct complex abstract ideas. Furthermore, the research investigates the role of cognitive load, suggesting that effective intellectual discourse relies on the optimization of linguistic signals to prevent informational overload. A significant portion of the study is dedicated to the concept of semantic alignment, where participants must navigate through potential ambiguities by utilizing specialized terminology and logical connectors. The article also delves into the psychological aspects of language, emphasizing that verbal intelligence acts as a catalyst for creative problem-solving within a group dynamic. It argues that the mastery of rhetorical strategies and the ability to adapt one's linguistic register to the intellectual level of the audience are essential components of successful academic and professional interaction. Ultimately, the work concludes that language serves as the primary architecture for thought, meaning that the boundaries of one's language often define the boundaries of their intellectual reach and collaborative potential.

Keywords: intellectual synergy, linguistic architecture, cognitive synchronization, semantic alignment, verbal intelligence, abstract conceptualization, communicative efficiency, discourse complexity, metacognitive awareness, information processing load.

MƏDƏNİYYƏTLƏRARASI KOMMUNİKASIYA VƏ DİL FAKTORLARI

Xülasə: Məqalə insan intellekti ilə yüksək səviyyəli koqnitiv prosesləri ifadə etmək üçün istifadə olunan linqvistik mexanizmlər arasındakı mürəkkəb qarşılıqlı əlaqəni nəzərdən keçirir. Burada qeyd olunur ki, intellektual ünsiyyət sadəcə məlumat ötürülməsi deyil, fərdlər arasında mental modellərin mürəkkəb sinxronizasiyasıdır. Mətnə nətiqin lüğət tərkibinin dəqiqliyinin və sintaksisin struktur mürəkkəbliyinin qəbul edən tərəfin mücərrəd ideyaları yenidən qurma qabiliyyətinə necə birbaşa təsir etdiyi araşdırılır. Bundan əlavə, tədqiqat koqnitiv yük anlayışını təhlil edərək təklif edir ki, effektiv intellektual diskurs informasiya həddini aşmağın qarşısını almaq üçün linqvistik siqnalların optimallaşdırılmasına söykənir.

Tədqiqatın əhəmiyyətli bir hissəsi semantik uyğunlaşma konsepsiyasına həsr edilmişdir; burada iştirakçılar xüsusi terminologiya və məntiqi bağlayıcılardan istifadə etməklə potensial qeyri-müəyyənlikləri aradan qaldırmalıdır. Məqalə həmçinin dilin psixoloji tərəflərinə toxunaraq vurğulayır ki, verbal intellekt qrup dinamikası daxilində yaradıcı problem həlli üçün katalizator rolunu oynayır. Müəllif iddia edir ki, ritorik strategiyalara vəqif olmaq və linqvistik üslubu auditoriyanın intellektual səviyyəsinə uyğunlaşdırmaq bacarığı uğurlu akademik və peşəkar qarşılıqlı əlaqənin əsas komponentləridir. Nəticə olaraq vurğulanır ki, dil düşüncənin əsas memarlığı rolunu oynayır, yəni insanın dilinin sərhədləri çox vaxt onun intellektual imkanlarının və əməkdaşlıq potensialının sərhədlərini müəyyən edir.

Açar sözlər: intellektual sinerji, linqvistik memarlıq, koqnitiv sinxronizasiya, semantik uyğunlaşma, verbal intellekt, mücərrəd konseptuallaşdırma, kommunikativ səmərəlilik, diskurs mürəkkəbliyi, ritorik strategiyalar, metakoqnitiv fərqiindəlik, informasiya emalı yükü.

Introduction

Intellectual communication represents the pinnacle of human interaction, characterized by the exchange of complex ideas, abstract theories, and logical arguments. Unlike daily conversational speech, intellectual discourse requires a high degree of cognitive alignment and linguistic precision. The primary objective of this study is to examine how various language factors ranging from lexical density to syntactic complexity function as the foundational framework for this type of interaction.

As globalization and academic specialization increase, the ability to navigate through diverse linguistic landscapes becomes a critical competency. This introduction posits that the effectiveness of intellectual exchange is not solely dependent on the participants' knowledge base but is significantly moderated by their mastery of the communicative tools provided by language. Effective intellectual exchange is not solely dependent on the participants' knowledge base but is significantly moderated by their mastery of the communicative tools provided by language. In many cases, the breakdown of academic dialogue is attributed not to a lack of intelligence, but to a failure in achieving linguistic synchrony between the parties involved. By analyzing these factors, we can better understand the mechanics of how language serves as a bridge for collective human progress and shared intellectual discovery. Consequently, this introduction posits that the mastery of specific linguistic registers is not merely a social asset but a cognitive necessity for anyone engaging in the rigorous demands of higher-level intellectual pursuit.

Methodology and Materials

The methodology of this research is based on a qualitative and comparative analysis of linguistic interactions within academic and professional environments. To examine the influence of language factors on intellectual communication, a diverse range of materials was utilized, including transcripts of high-level academic seminars, peer-reviewed journals, and transcripts of collaborative problem-solving sessions. These materials provided a rich dataset for observing how specialized terminology and complex syntactic structures are employed in real-time intellectual exchange. The research primarily adopts a socio-cognitive approach, focusing on how linguistic choices correlate with the successful synchronization of mental models between participants.

In terms of data processing, a discourse analysis technique was applied to identify recurring linguistic patterns, such as the use of logical connectors, rhetorical markers, and meta-communicative cues. The selection of materials was carefully curated to include participants from various linguistic backgrounds, allowing for an investigation into how cultural-linguistic schemas affect the delivery of abstract concepts. Additionally, the study incorporated established linguistic frameworks to evaluate the semantic density and lexical diversity of the analyzed texts. By synthesizing these materials and methods, the research aims to provide a clear empirical basis for the claim that linguistic competence is a fundamental prerequisite for effective intellectual synergy. This structured approach ensures that the findings are both replicable and applicable to diverse academic contexts where language serves as the primary medium for knowledge construction.

Discussion

The core of this research focuses on the "Cognitive-Linguistic Interface," where internal thought processes are systematically converted into verbal signals to facilitate mutual understanding. One of the primary findings suggests that semantic precision acts as a crucial filter for intellectual clarity, as without a shared understanding of specialized terminology, the "noise" in communication increases and leads to conceptual fragmentation. The study further explores the indispensable role of metacognition, which involves the ability of speakers to actively monitor their own linguistic output and adjust it in real-time based on the perceived comprehension levels of the listener. Research data indicates that high-level intellectual synergy is most effectively achieved when participants utilize a wide array of logical connectors to create a coherent narrative structure that supports complex argumentation.

Research

The core of this research focuses on the “Cognitive-Linguistic Interface,” where thought processes are converted into verbal signals. One of the primary findings suggests that Semantic Precision acts as a filter for intellectual clarity; without a shared understanding of specialized terminology, the “noise” in communication increases, leading to conceptual fragmentation. The study further explores the role of Metacognition the ability of speakers to monitor their own linguistic output and adjust it based on the perceived comprehension of the listener.

Research data indicates that high-level intellectual synergy is achieved when participants utilize Logical Connectors to create a coherent narrative structure. Furthermore, the discussion addresses the impact of Linguistic Register, arguing that the ability to shift between formal academic prose and creative metaphorical explanations allows for a more robust “mental mirroring” between the interlocutors. The research also highlights that language barriers in intellectual settings are often not about vocabulary alone, but about differing Cultural-Linguistic Schemas that dictate how logic is structured and presented.

Conclusion

In conclusion, the investigation into intellectual communication reveals that language factors are the primary architects of shared understanding. The study demonstrates that linguistic competence is inextricably linked to intellectual performance; a limitation in the former inevitably results in a constriction of the latter. To foster effective intellectual synergy, it is essential to prioritize not only the content of the discourse but also the precision and adaptability of the linguistic delivery. Ultimately, the success of any high-level collaborative effort depends on the participants’ ability to synchronize their mental models through a refined and mutually accessible linguistic framework. Strengthening these language factors is, therefore, a prerequisite for advancing both individual and collective intellectual growth.

TRANSLATION AND INTERCULTURAL COMMUNICATION

RELEVANCE OF TEACHING FOREIGN LANGUAGES IN INTERCULTURAL DIALOGUE AS A FACTOR IN SUSTAINABLE DEVELOPMENT

Nigar Chingiz VALIYEVA

Professor, Doctor of Philology, Azerbaijan University of Languages

Abstract: The article is devoted to the problem of interaction between humanity in the era of globalization in the context of maintaining multiculturalism. It is not without reason that throughout the history of language interaction, one can see that once frequently used borrowings do not take root in the recipient language, while some are assimilated according to all the canons of the language in such a way that they become full-fledged elements of the host language, i.e. some borrowed words become natural for native speakers and become “their own.” A person, who does not know English but knows Latin, Greek, French, Italian, Spanish, is certain to recognise a great number of familiar-looking words when skipping through an English book. It is true that English vocabulary, which is one of the most extensive amongst the world’s languages, contains an immense number of words of foreign origin. Explanations for this should be sought in the history of the language which is closely connected with the history of the nation speaking the language.

Sometimes a word is borrowed twice from the same language, and as the result, we have two different words with different spellings and meanings but historically they come back to one and the same word, which are called etymological doublets. Loan words have a big and significant role on the formation of the bookish language of English. It is worth mentioning that borrowed words made up a large part of the vocabulary of English, Russian and Azerbaijani languages. Some words have lost their foreign character by being stylistically suitable in the language. Translation loans are word-for-word or morpheme-for-morpheme translations of some foreign words or expressions. Loan words are the words adopted by the speakers of one language from the different source language. Literary coinages are the new words which appear during the great social changes.

For the last ten years a great number of Anglicisms have flown into modern Azerbaijani and Russian languages and this process is actively going on nowadays. Most of these words not long ago were the terms and used only by the specialists of different areas. In the period of general globalization and intercultural dialogue, it is impossible to stop the flow of borrowings, but we must preserve the national character of our native Azerbaijani language as much as possible.

Açar sözlər: qloballaşma, multikulturalizm, mədəniyyətlərarası ünsiyyət, xarici dillərin tədrisi, sosial şəbəkələr, ingilis mənşəli sözlər, alınma sözlər, resipient (qəbul edən) dil.

MƏDƏNİYYƏTLƏRARASI DİALOQDA XARİCİ DİLLƏRİN TƏDRİSİNİN AKTUALLIĞI DAVAMLİ İNKİŞAFIN AMİLİ KİMİ

Nigar Çingiz VƏLİYEVƏ

Xülasə: Məqalə multikulturalizmin qorunması kontekstində qloballaşma dövründə insanların qarşılıqlı əlaqəsi probleminə həsr olunub. Səbəbsiz deyil ki, dillərin qarşılıqlı əlaqə tarixi boyu bir vaxtlar tez-tez istifadə olunan alınmaların mənimsəyən dildə necə kök salmadığını və bəzilərinin dilin bütün qanunlarına uyğun olaraq qəbuledici dilin tam hüquqlu elementlərinə çevrildiyi şəkildə assimilyasiya edildiyini müşahidə etmək olar, yəni dil daşıyıcıları üçün bəzi alınma sözlər doğmalaşır, “özünkü”nə çevrilir. İngilis dilini bilməyən, lakin latın, yunan, fransız, italyan, ispan dillərini bilən şəxs, çox güman ki, ingiliscə kitab vərəqləyəndə çoxlu sayda tanış sözləri tanıyacaq. Düzdür, dünya dilləri arasında ən geniş yayılan ingilis dili lüğətində çoxlu sayda xarici mənşəli sözlər var. Bunun izahını bu dildə danışan xalqın tarixi ilə sıx bağlı olan dil tarixində axtarmaq lazımdır.

Bəzən bir söz eyni dildən iki dəfə alınır və nəticədə bizdə müxtəlif yazılış və mənalı iki fərqli söz yaranır, lakin tarixən onlar eyni sözə qayıdırlar ki, bunlar etimoloji dubletlər adlanır. Alınma sözlər ingilis dilinin kitab dilinin formalaşmasında böyük və əhəmiyyətli rol oynayır. Qeyd edək ki, alınma sözlər ingilis, rus və Azərbaycan dillərinin lüğət tərkibinin böyük hissəsini təşkil edir. Bəzi sözlər üslub baxımından dilə uyğun olaraq özünəməxsus xarakterini itirmişdir. Tərcümə alınmaları bəzi xarici söz və ya ifadələrin hərfi və ya morfem-morfem tərcüməsidir. Alınma sözlər bir dildə danışanların başqa mənbə dildən qəbul etdiyi sözlərdir. Ədəbi dildə yeni alınmalar böyük sosial dəyişikliklər zamanı meydana çıxan yeni sözlərdir.

Son on il ərzində müasir Azərbaycan və rus dillərinə çoxlu sayda ingilis mənşəli sözlər daxil edilmişdir və bu proses hazırda da fəal şəkildə davam etdirilir. Bu sözlərin əksəriyyəti son vaxtlara qədər terminlər olub və yalnız müxtəlif sahələr üzrə mütəxəssislər tərəfindən istifadə olunurdu. Ümumi qloballaşma və mədəniyyətlərarası dialoq dövründə alınma sözlərinin axınını dayandırmaq mümkün deyil, lakin, biz doğma Azərbaycan dilimizin milli koloritini maksimum dərəcədə qoruyub saxlamalıyıq.

Introduction

The problem of interaction between humanity in the era of globalization in the context of maintaining multiculturalism is highly relevant. Cultural differences are one of the most important causes of global tension and conflict. In these circumstances, intercultural dialogue seems to be the most appropriate format of communication. The main aspects of establishing a dialogue of cultures are considered separately. In particular, special attention is paid to the issues of the role of language in the process of forming the cultural identity of various social groups, as well as the grounds for the spread of a single language of communication on a global scale. The emergence of the phenomenon of mass culture appears to be a positive trend due to the formation of a single universal basis for intercultural dialogue. Currently, there is an increasing importance of teaching foreign languages, especially English, in the process of intercultural communication at the beginning of the 21st century.

It is well-known that Baku often hosts various international forums. For example, the Baku International Humanitarian Forum is an international event aimed at discussing a wide range of global issues of interest to humanity. The forum has been held since 2011 in the capital of the Republic of Azerbaijan, Baku. In 2014, it was decided to hold the forum every 2 years. The main goal of the Baku International Humanitarian Forum is to build a dialogue, create an arena for discussing global issues, and define a strategy for the coming decades. The task for the organizers and participants of the forum, representatives of the social and humanitarian sciences, is to form a new humanitarian order, to consider a wide range of global problems at the international level. Important aspects of the forum's sessions and discussions include sharing best practices on living together in inclusive societies, promoting universal human rights and achieving sustainable development, finding an antidote to religious extremism, which is the breeding ground for terrorism, and expanding multiculturalism. For instance, the International Forum “Dialogue of

Cultures in a Changing World” was held at AUL. The international forum “Dialogue of Cultures in a Changing World” began its work within the walls of the Azerbaijan University of Languages. The forum brings together specialists from Russia and Azerbaijan in the field of international relations, cultural studies, journalism, pedagogy and literary studies.

Next example is the Global Baku Forum that took place on March 13-15, 2025. The Global Baku Forum is a traditional forum organized by the Nizami Ganjavi International Center since 2013 in the capital of Azerbaijan, Baku. As in previous forums, this event was attended by presidents, prime ministers, ministers, parliamentarians from various countries of the world, as well as former heads of state and government, and representatives of international organizations.

The 12-th Global Baku Forum discussed such important topics as current global issues, multilateral diplomacy, multipolar world order, the future UN pact, post-conflict reconstruction and the role of middle powers in the new world order. The event brought together international leaders to discuss issues such as global politics, security, technology and peace. The forum featured panel discussions on the topics of “Geopolitical Change: Responsible Partnership versus Competition,” “Rethinking Multilateralism for a Multipolar World,” and “A UN Pact for the Future: Creating a New Global Consensus”. The 2025 International Nizami Ganjavi Prize was awarded to a public figure who contributed to the cause of peace and harmony. There were also lunchtime sessions on the Middle East and the Ukrainian-European Union, as well as panel discussions on “The Road to Peace”, “Middle Powers in the New World Order” and “Peace – Post-Conflict Recovery and Restoration of Regional Stability”. The evening sessions discussed the topics “COP 29: Leap to Belem – Accelerating Transformation” and “The Future of Europe”. The forum also focused on new technologies, gender and security, the impact of climate change, global health crises and their solutions. In particular, important topics in this direction were touched upon in the panels “New Technologies for a New World”, “The Interrelationship between Gender Security and Climate” and “The Global Health Crisis: New Frontiers of Preparedness and Equality”. One of the most striking parts of the forum was the panel discussion “Let the youth speak, we listen”, dedicated to the opinions of young people (<https://ru.wikipedia.org>).

The main feature that characterizes the world of the late 20th - early 21st centuries and distinguishes this period of time from all of human history is the process of globalization, the essence of which lies in the unification of the world community into a single cultural and civilizational space. The combination of these processes ultimately led to the intensification of intercultural contacts, which in turn was caused by the following objective reasons: the growth of the numerical component of humanity, which has now reached 7.3 billion people, which is approximately 4.5 times more than at the beginning of the 20th century, and 7 times more than at the beginning of the 19th century; the active development of mass communication media - from the telegraph and telephone to satellite television and the global Internet, which has “entangled” humanity in a dense “web” of communication links; increasing the length of transport networks: railways, roads, air and sea routes. In addition, the vehicles themselves have changed significantly: they have become faster, more spacious and have a higher load-carrying capacity. Given the preservation of habitable areas at the same level, ultimately determined by the size of the Earth itself, the above factors inevitably led to an objective compression of social space and, as a consequence, an exponential increase in the number of contacts between representatives of different cultures.

Phenomena of intercultural contacts also existed in the distant past, for example, during the emergence of ancient civilizations, where they manifested themselves through the exchange of “cultural products”: household items, weapons, spices, jewelry, etc., and through genuine cultural borrowings, for instance, borrowing the names of gods with their subsequent inclusion in one’s pantheon. For further discussion, we will consider the role and place of culture, which to a large extent determines the nature of the processes of global interaction.

Culture is a kind of program code, a set of value-based and ideological attitudes, the bearer and at the same time the creator of which is every person, regardless of their social status and place of residence. In the context of global interaction, we are primarily interested not in individual subjects, but rather in various social groups that also possess one or another cultural component that represents something more than a simple set of cultures that are part of a given group of members. Due to the presence of often significant differences in cultural foundations, among which religious ones play the greatest weight, the interaction of social groups, or in other words, intercultural interaction, as a rule, has a meaningful conflict component, leading to situations of intercultural tension and rejection, which in their extreme manifestations can be resolved by violent means through open military conflict.

Considering that nine world powers currently have nuclear potential, not to mention chemical, biological and other types of weapons of mass destruction, the likelihood of its use as a last resort in a dispute seems an extremely negative phenomenon. The problem also lies in the fact that intercultural conflicts are difficult to resolve due to the peculiarities of the nature of their occurrence. As a rule, a bearer of another culture is perceived as an outsider, foreigner, different from the norm, and relations with who are not subject to the rules of relationships accepted in a given culture. This is why human history is full of examples where antagonisms between cultures were resolved either by the total absorption of one culture by another or by the complete destruction of a foreign culture by killing its bearers.

In modern conditions, taking into account the influence of external factors that compress social space, for objective reasons forcing humanity to establish various kinds of contacts, intercultural communication can only be built on the basis of establishing such a form of communication as intercultural dialogue (Chumakov, 2003, p.307-309).

The word “dialogue” is derived from Greek word “Διάλογος” which means “conversation”. Dialogue is a literary or theatrical form of oral or written exchange of statements, remarks, questions and answers between two people. There is also a written dialogue between two or more people through the writing of text in letters or by other methods. Dialogue is a specific form of communication. Dialogue is questions and answers between two or more opponents participating in a conversation or discussion of something. In literature, dialogue is an organic feature of dramatic genres, but sometimes it is also the basis of non-dramatic works.

In its direct meaning, “dialogue” means a way of transmitting information - through words, by means of speech. In order to establish a form of dialogue between representatives of different cultures, it is necessary to observe certain basic conditions, including the presence of: mutual respect between all participants in the dialogue; similar in their content value and ideological foundations; as well as a common language of communication.

In Azerbaijan such scientists as academician Nizami Jafarov, professor Aghayar Shukurov, professor Rovshan Mustafayev, professor Salahaddin Xalilov, professor Rabiyyat Aslanova, professor Nigar Valiyeva investigated the various aspects of globalization (Valiyeva, 2018, p.12).

Material and Methods. This study adopts a mixed-methods approach to examine the relevance of teaching foreign languages within the framework of intercultural dialogue as a factor in sustainable development. Both qualitative and quantitative data were used to ensure a comprehensive analysis of the relationship between globalisation, multiculturalism, and language education.

The research is based on a range of sources, including academic literature on intercultural communication, globalisation, and foreign language pedagogy; policy documents related to sustainable development and education; and linguistic studies on Anglicisms and loan-words in recipient languages. In addition, authentic materials from social networks (e.g., posts, comments, and online discussions) were analysed to observe real-life language use and the integration of foreign lexical elements. A corpus of texts in the recipient language containing Anglicisms and other loan-words was compiled for linguistic analysis.

The study employs several complementary methods. Literature analysis was used to review theoretical approaches to multiculturalism, intercultural communication, the role of foreign language teaching in sustainable development. Comparative analysis enabled the examination of differences and similarities in how Anglicisms and loan-words function across languages and cultural contexts. Content analysis of social network discourse was conducted to identify patterns of language use, frequency of loan-words, and their communicative functions in intercultural settings. Corpus-based linguistic analysis was applied to classify and interpret borrowed lexical items within the recipient language. Survey method involved questionnaires distributed to language learners and teachers to assess attitudes toward foreign language learning, multicultural interaction, and the influence of globalisation. Statistical analysis was used to process quantitative data obtained from surveys and corpus findings. This combination of methods allows for a multidimensional understanding of how teaching foreign languages contributes to intercultural dialogue and supports sustainable development in a globalised and multicultural world.

Discussion. Let us analyze each of these conditions in relation to the modern world community. To begin with, it is necessary to emphasize the important role in establishing intercultural dialogue of an approach based on mutual respect for other cultures and, as a consequence, for their representatives, since cultures do not exist on their own, in isolation from their bearers. The main condition under which a respectful attitude towards the interlocutor becomes possible is the presence of identification closeness or a high degree of awareness and self-control, which, unfortunately, is rare. Indeed, mutual respect between the subjects of communication is possible either when perceiving one's interlocutor at the level of a single identity, or on the basis of the principle of tolerance. Another option is closely connected with the cultural policy of multiculturalism, which has been pursued by leading states for many years, the crisis of which, which occurred relatively recently, as evidenced by the statements of such world politicians, revealed a large number of problems in the cultural aspect of world interaction.

Indeed, if earlier, before the beginning of the processes of active mixing of cultures, intercultural contacts were local and episodic in nature with the possibility of returning the contacting cultures to their original state, to the places of their historical habitat, then, as a result of the policy of multiculturalism, which allows immigrants to preserve their cultural foundations regardless of their actual place of residence, a situation of forced coexistence of humanity in conditions of multiculturalism arose, which, in turn, led to an increase in general intercultural tension.

Another important condition for dialogue is the presence of a common value-worldview platform between the interacting parties, and this is already the area of cultural and civilizational foundations of social structures. The question of similarity or difference of any social subjects lies in the area of hierarchy of identities: if the need for inclusion of the subject in a social group comes first, he looks for similar features, otherwise - differences. Until now, in the absence of awareness of a common human identity, culturally differentiating tendencies have prevailed.

The question of how quickly this kind of global identity, which would facilitate intercultural dialogue, will be realized on a global scale lies in the sphere of increasing the level of civilization and the degree of awareness of each individual and society as a whole. V.S. Stepin believes that one of the main conditions for an international dialogue of cultures is the definition and identification of what unites the contacting cultures, which, in turn, will contribute to the establishment of mutual understanding between them [Stepin: 2011, p.10]. However, despite the fact that many scientists, politicians and cultural figures recognize the objective need to find points of intercultural contact and establish a dialogue of cultures, some researchers have doubts about the possibility of implementing such a dialogue in practice. For example, A.A. Huseynov believes that the possibilities of establishing a dialogue between cultures are limited due to the fact that cultural differences, as a rule, are more important for cultures than their similarities with each other (Huseynov, 1999, p.20).

An aspect that hinders the establishment of intercultural dialogue is the existence of linguistic differences, since in the absence of a single language, dialogue in its original meaning through speech cannot be realized in principle, i.e. the communicative function of language is not revealed. Language also serves the function of accumulating the cultural experience of a particular ethnic group, including traditions, customs, and practices - everything that serves as a regulator of behavior within a culture. It is through language that cultural information; social experience and knowledge of the past are transmitted from generation to generation, which helps to preserve group identity and its integrity. Thus, language has a great influence on the formation of social groups, emphasizing their identity.

In addition to the communicative function, language also performs the opposite functions: ethno-differentiating, decommunicative, protective, and acting as an invisible barrier that does not allow a "foreigner" to enter the space of another culture; language separates "foreigners" from "ours". This component of language is of greatest interest in the context of establishing and building global relationships in modern society, acting as a "spoiler" of intercultural dialogue. Language, thus, occupies a very important place in the structure of culture, playing the role of the "circulatory system" of the organism-culture.

Proficiency in English, which is now widely used worldwide, is certainly of great importance in the process of establishing intercultural contacts. By the way, mastering a single language of communication is not enough, since "even if people speak the same language, they cannot always understand each other correctly, and the reason is often precisely the divergence of cultures" (Ter-Minasova, 2008, p.10).

It is important to clarify here: since each language has a very specific culture behind it and, as we have already shown, mastery of a particular language inevitably leads to the acquisition of certain cultural foundations, it can be concluded that over time, existing cultural differences will be leveled out. In the process of learning and mastering a language, a person simultaneously penetrates

into the culture related to that language; this is true for both native and foreign languages (Anikin, 2013, p.3-8).

In this regard, learning a second language, such as English, leads to the acceptance and superstructure of the value-based and ideological foundations of another culture over the framework of one's native culture, which, in our opinion, is a positive trend in the context of a globalizing world, creating additional points of contact and mutual understanding. Thus, language and culture are an inseparable whole. It can be said that without culture there would be no language and vice versa: without language - culture, since with the loss of language, culture also disappears, just as an organism dies without a circulatory system.

The importance of cultures having their own language is linked to the need for respect from the speakers of a given culture, since it is language that expresses their cultural identity and uniqueness. According to the English scientist David Crystal, one language goes out of circulation in the world every two weeks (Crystal, 2000). Despite the existence of great concerns on this account, the reduction in the number of languages on the planet appears to be a natural historical phenomenon, directly related to the processes of globalization, in the conditions of which the integration of humanity on the basis of a single cultural foundation and, as a consequence, a single universal language is seen as a positive and desirable result of the integration processes.

It is necessary to emphasize that we are not talking about total unification here. The uniqueness and color of national cultures, as well as languages, must certainly be preserved, but the presence of a second and perhaps even first in importance, language for communication in the global world is an objective necessity, since otherwise establishing a dialogue of cultures becomes very difficult. The absence of a single language of international communication for all people is, of course, a major problem in communication processes. The need for a common language was recognized in the mid-20th century, when the problem of establishing intercultural contacts arose after the end of World War II. In 1954, a petition from 16.5 million people from 78 countries was sent to the United Nations by members of the so-called "Esperanto movement". In modern society "people also go beyond both the literal and conveyed meanings of utterances to draw inferences about matters that are related to an utterance. Whenever we deal with speech in meaningful ways, we bring to bear our knowledge of the language and the world, and, perhaps most of all, our beliefs about ourselves and other people" (Valiyeva, 2018, p.124).

At the end of the 20th - beginning of the 21st centuries the problem of Anglicisms in the Azerbaijani and Russian languages arose. Touching upon the current period of human history, it is impossible not to mention the global process that has affected almost the entire world – the process of globalization. Today this word is on everyone's lips, from politicians and businessmen to doctors and teachers, and what is most interesting is that society has already become accustomed to associating all the most significant events in socio-political life with the process of globalization. Although the term "globalization" itself, according to the OED [Oxford English Dictionary], originated in 1930, much earlier, in 1897, in *Towards New Education*, the definition of this process was proposed by Charles Russell. The widespread use of this word by political scientists, economists, and specialists in other fields began in 1960, and this term and the process itself received "worldwide recognition" in the late 80s of the 20th century. Of course, the boom in information technology has influenced the development of the globalization process, and the process itself has subsequently influenced the economic, political and cultural spheres of society.

For this reason, many specialists study this phenomenon in various fields of knowledge - law, sociology, cultural studies, political science, computer science and, of course, linguistics.

There are two main points to consider here regarding globalization. Firstly, it is a widespread desire for homogenization, i.e., for the creation of a uniform structure in most areas of human life, the desire to create uniform cultural and moral values. Secondly, the achievement of a previously unknown state, a level of integration and interdependence of some forms of social thinking, in which, under the influence of globalization processes, a single, integral, generally accepted society is formed and functions. "Considering the process of "globalization", we can state that by the beginning of the 21st century, practically all of humanity is involved in it to one degree or another" (Inozemtsev, 2004, p. 27).

One cannot but agree with this opinion, since at present almost all areas of human activity, one way or another, exist and develop in connection with the process of globalization. The study of borrowings of English words and concepts in the Azerbaijani and Russian languages within the framework of the problem under study involves addressing issues related to the impact of processes related to global integration on language. When mentioning the concepts of "language" and "globalization" in the same context, one must admit that both concepts have become intertwined in recent decades, and for several decades now, it is the English language that has held the leading position as a means of interethnic communication. Of course, it must be acknowledged that it is more of an American variant of English, but this does not diminish its importance. Moreover, back in 1780, the future American President John Adams predicted that English would become a global language: "In the centuries to come, the English language is destined to become more widespread than Latin was in previous centuries and French is today" (Crystal, 1999, p.228). In other words, it is the "lingua franca" of modern society and evidence of this fact can be found in all areas of our lives. According to research by English linguist David Crystal, English is considered the second official language in more than 70 countries of the world (India, Singapore, Nigeria, Vanuatu, etc.), and in the remaining countries this language has become the most preferred foreign language in schools and even in kindergartens. According to various sources, the number of people in the world who speak English exceeds 1.4 billion, which is about a quarter of the world's population. 75% of all mail in the world, 60% of all international calls is made in English, and about 85% of all international organizations use it in their work as a business language (Crysta, 1999, p. 229).

This language is the undisputed leader in the fields of sports, aviation, computer technology, and show business. When it comes to computer technologies and the Internet, which has become an integral part of our society, at least a minimal level of English proficiency is implicitly assumed, since without basic knowledge of it no specialist will be able to feel confident in his work. And the further the process of globalization moves, the more acute the question of the ability to use the English language to improve professional knowledge and raise the level of qualifications becomes. It is also obvious that not only specialists with higher education need to know the language, but also ordinary citizens are faced with the need to master the language of interethnic communication.

Of course, it should be recognized that both the Azerbaijani and Russian languages have been subjected to a massive impact of new words, including from the English language, since the collapse of the USSR as a superpower and the subsequent rapprochement of the independent post-Soviet states with the world community. A huge role in this regard was played by open access to the World Wide Web, as well as the media: television, newspapers, magazines, and also different types of social networks: YouTube, Twitter - X, Telegram, Instagram, TikTok, Facebook, which

enthusiastically introduced new words and phrases of various directions, sometimes with meaning and sometimes without. It is no coincidence that in 1966 one of the famous Russian linguists called the process of penetration of English borrowings into the Russian language over the past decades a real flood (Kostomarov, 1966, p. 3-15). And this is not surprising, since when reading modern newspapers and magazines, listening to the radio and watching television, it is sometimes difficult to grasp the idea due to the Anglicisms used in the text. Borrowing implies the transition of elements of one language to another as a result of the interaction of languages or the elements themselves transferred from one language to another (Great Encyclopedic Dictionary, 2012).

The transition can be oral, reproducing the general phonetic appearance of the word, or written and bookish: transliteration of the word. Some linguists, such as A.A. Reformatsky, Yu.S. Maslov, L.P. Krysin, and many others understand borrowing as the process of penetration and assimilation of foreign words, phrases, and morphemes into the recipient language. This process is quite dynamic and allows linguists to identify, at a comparative historical level, the language contacts of certain peoples and countries, as well as to determine specific areas of their interlingual communication. E. Haugen, examining the problem of linguistic borrowings in a general theoretical context, notes that any borrowing presupposes a previous stage of at least minimal proficiency in two languages, and if we are talking about a significant level of borrowing, then, in his words, "for any mass borrowing of words, the presence of a significant group of bilinguals is necessary". E. Haugen, like many linguists, rejects the term "mixing" and quite rightly notes that "except for not entirely ordinary cases, it is not observed that speakers freely and simultaneously draw material from two languages. They can switch quickly from one language to another, but at any given moment they speak only one language, even if they sometimes resort to the help of another". As for the concept of "borrowing", E. Haugen defines it as an attempt to reproduce in one language patterns previously observed in another language. Therefore, in a borrowed language, at first, such a model is always an innovation, i.e. a successful, although sometimes not very perfect, imitation of a model of a foreign language. It is clear that such a substitution of the native language model can be carried out at any level of the language system: phonetic, grammatical and lexical (Yartseva, 1969, p.89).

If we concretize the concept of borrowing, according to the problem under consideration, it should be noted that we have to deal with neologisms, i.e. with words that have recently entered the language to define new phenomena, concepts and objects, and in this case, Anglicisms. New borrowed socio-political vocabulary is understood as a group of words denoting socio-political realities that have relatively recently entered the active composition of the language and have not yet been fully mastered by the linguistic consciousness of the people. An important feature of the perception of new words is that they are perceived as new. The meaning of new words is often not yet obvious to most native speakers, especially older people, and requires clarification. One of the main reasons for borrowing is considered to be the lack of suitable equivalents in the native language for things and concepts that have recently appeared in society. L.P. Krysin noted in his work that E. Richter considers the main reason for borrowing words to be the need to designate the names of things and concepts, but in addition to this, he also cites linguistic, social, psychological, aesthetic, etc. reasons for borrowing (Krysin, 1968, p.12).

Historically the Azerbaijani language was influenced by several languages, a great number of borrowed words have placed in the word stock of the language with their means. Among these languages, traditionally, Arabic, Persian, Russian, Turkish, as well as some European languages by

means of Russian, recently, in the condition of globalization English can be shown (Aghayev, 2024, p.3). The reasons for the spread of English in Azerbaijani include the fact that it is the most widely spoken language in the world, it is an international business language, most films are in English, English is easy to learn, it is related to many languages, it is possible to name objects in different ways, it sounds different around the world, it is assumed to be flexible and continue to change. English is present in Azerbaijan in all forms, except for the state language as a foreign language included in the language situation: behavioral language, fundamental language, communication language, research or search language forms. English is the leading language in the international relations of the Republic of Azerbaijan (Aghayev, 2024, p.21).

Results. The process of linguistic borrowing itself was considered by him to be inextricably linked with cultural and other contacts between two different linguistic societies and as a part and result of such contacts. Today, the following are the most pressing reasons for foreign language borrowings and the emergence of new words.

1. The most urgent and primary need for borrowing in modern society is the naming of new realities, a new object, a new concept that has appeared in public life. For example: “marketing, celebrity, volunteer, brand, badge, second-hand, flash mob, glamour - маркетинг, селебрити, волонтер, брэнд, бедж, сэконд-хенд, флэшмоб, гламур”. This mostly includes words denoting modern computer equipment and household appliances, for instance: “laptop, notebook, scanner, printer, blender, toaster, CD, DVD, fax, receiver, smartphone - лаптоп, ноутбук, сканер, принтер, блендер, тостер, CD, DVD, факс, ресивер, смартфон”. These are also words related to sports and the names of sport: “rafting, diving, windsurfing, darts, paintball, skateboarding; with cosmetology: scrub, peeling, spa, spray, make-up, coloring - рафтинг, дайвинг, виндсёрфинг, дартс, пейнтбол, скейтбординг; с косметологией: скраб, пилинг, спа-салон, спрей, визаж, колорирование”.

Interesting cases of borrowings that serve to designate concepts that are new to the recipient language, but not present in the source language, were identified by M.A. Breiter (Breyter, 1997, p.132). Most likely, the borrowing language needs to designate certain bright, significant phenomena in the life of society, but not finding such in its own language, it resorts to the help of another language, in this case, English, where there are two units that, when combined, are suitable for naming. That is, here we have not so much a borrowing as the formation of a new word in the language from foreign language elements. The examples of “Anglicism” are the well-known words “shop-tour” or “room-tour”, which is quite understandable to native speakers of Azerbaijani and Russian. This model of word composition is productive in English and corresponds to the word-formation potential of both languages. The words “car-wash, car-tour - авто-мойка, авто-тур” can also be included here.

2. There are also new words that denote phenomena that were previously present in the life of society, but did not have a corresponding designation, since their existence was hushed up, for instance: “tutor, student, mafia, racketeering, business, oligarch, killer, shopping, sponsor, broker - тьютор, студент, мафия, рэкет, бизнес, олигарх, киллер, шопинг, спонсор, маклер”.

3. In the period of globalization and development of ICT, the flow of words penetrating into the Azerbaijani and Russian languages cannot be controlled, and sometimes people are given the opportunity to choose the option of designating a word that is more convenient and completely replaces the Russian or Azerbaijani phrase. For example, the word “rating” is the position of a company, a political figure, a program in a list of similar ones; image, literally translated from English, means “image”, but in modern perception it has a more complex meaning: an idea (often

purposefully created) of someone's internal and external appearance, for instance: "the image of a politician"; "the image of a country"; "summit" – a high-level meeting; "slogan" – an advertising motto that conveys an advertising message in a condensed form, part of a brand's long-term communications platform; "briefing" – a short press conference for journalists, often devoted to one issue.

4. At this stage, I would like to note new words that arise not so much as a result of necessity, but rather because of society's desire to emphasize the partial change in the social role of an object in a changing society. Of course, the huge number of such borrowings, replacing existing words, cannot but alarm and even worry linguists, since many of these borrowings, firstly, can be avoided, and secondly, it is sometimes difficult to understand speech full of foreign vocabulary, especially for older people. For example, words such as "office" – an office, utility room; "savings bank", formerly called "a savings bank"; "reception" – formerly a reception area; "boutique" – a fashion store; "presentation" – a presentation of any product; "video, show" and their derivatives: "video film, video clip, video salon, show business, show room, show program". Although these words are recently borrowed, they do not "cut the ear" and are understandable to most people. And what about words like: "supervisor, merchandiser, retailer, promotion, separation, primaries, PR, parking, coffee break, dress code, face control, casting - супервайзер, мерчендайзер, ритейлер, промоушн, сепарация, праймериз, пиар, паркинг, кофе-брейк, дресс-код, фэйс-контроль, кастинг" and many others? Of course, some of these words are well known to specialists in various fields, as they are professional terms, but this does not mean that these foreign words are familiar to the general public who receive information from the media.

5. The last thing that unites the previous points is connected with the borrowing of new words, caused by the influence of foreign culture, or, more precisely, simply the fashion for foreign words. This is mainly evident among young people or in individual groups and communities, where the use of foreign words mixed with the native language is considered more prestigious and shows the level of a person's development. L.P. Krysin characterizes this reason for borrowing as socio-psychological, and also mentions the communicative relevance of the designated concept (Krysin, 1968, p.58).

The spread of English with the influence of the technical factors is considered more actual. Basing almost all the services being implemented through the internet today we can say that the increase of the number of communication installations per person gradually, with PC or laptop, mobile phone, tablet, smartphone, smartwatch, etc. installations being existed in every house we come across a sentence or word in English absolutely every day. Without finding equivalent to these language units yet as they are new they already begin to take part in people's lexicons. The most important issue brought to the notice here is to pay attention to the correspondence of the translations to the language made during the expression of the names of this kind of installations, their structural names in Azerbaijani (Aghayev, 2024, p.25). Such words as "business forum, business networking, note-working, integration, line up, uricide, ecocide, logistics, accreditation, coloration, screen, franchise, paragraph, protocol, quorum, hegemon, drone, computer device, news-maker, presentation, mutation, performance, prime shock, follower, biennale, like, spam, talk-show, stand-up show, stand-up comedy, vain, vainer, cortege, shop-tour, room-tour, picnic, post terminal, power-bank, tourniquet, modem, chip, sticker, brand, selfie, blogger, stock, dentist, doctor, make up, permanent, microblading, umber, dip-dye, tattoo, liner, high-lighter, nana-liner,

stick, piercing, crop, sandal” and many others are the examples of Anglicisms in modern Azerbaijani and Russian languages.

If the use of various kinds of “foreign” words on the Internet can be explained at least by the principle of an informal setting, then the use of foreign, completely replaceable, vocabulary in serious, official publications or by state channel presenters suggests that either the text was translated into Russian or Azerbaijani by a computer translator who does not know all the words in the target language and leaves the original word, or by an unwillingness to make the text understandable to the target audience due to snobbery or laziness. Apparently, the problem of borrowings will always be relevant and require special attention from linguists. In this case, the goal is not to evaluate this phenomenon from a negative side, since today no language, no culture exists and develops in isolation.

It is generally accepted that a culture aimed at self-knowledge and finding its identity in the face of modern problems needs to see itself through the eyes of another culture. We should not forget the fact that language is like a living organism with certain functions and patterns, the ability to self-cleanse and mobilize at the right moment.

Abstract: The text outlines the development of Azerbaijani translation traditions in connection with broader socio-political and cultural changes. It traces this evolution from early literary heritage to the nineteenth century, when integration into the Russian Empire enabled active intercultural exchange and expanded translation activity.

Translation became a key driver of literary growth, continuing to develop through the early twentieth century despite political constraints. Within this context, Ahmad Javad emerges as a central figure whose high-quality translations significantly enriched national literature. Despite repression and the loss of many works, his legacy remains fundamental, highlighting translation as both a cultural bridge and a force in shaping Azerbaijani literary identity.

Key words: Azerbaijani literature; translation traditions; intercultural exchange; national identity; literary translation; Ahmad Javad; cultural mediation; Russian and European literature; literary development; translation studies

ƏHMƏD CAVADIN TƏRCÜMƏLƏRİ VASİTƏSİLƏ AZƏRBAYCANDA TƏRCÜMƏ ƏNƏNƏLƏRİNİN GENESİSİ

Xülasə: Mətn Azərbaycan tərcümə ənənələrinin inkişafını daha geniş ictimai-siyasi və mədəni dəyişikliklər kontekstində təqdim edir. Bu inkişaf xətti erkən ədəbi irsdən başlayaraq XIX əsrə qədər izlənilir; məhz bu dövrdə Azərbaycanın Rusiya imperiyasına daxil olması mədəni qarşılıqlı təsiri genişləndirmiş və tərcümə fəaliyyətinə təkan vermişdir.

Tərcümə ədəbi inkişafın əsas hərəkətverici qüvvələrindən birinə çevrilmiş, siyasi məhdudiyyətlərə baxmayaraq XX əsrin əvvəllərində də inkişafını davam etdirmişdir. Bu kontekstdə Əhməd Cavad milli ədəbiyyatı zənginləşdirən yüksək səviyyəli tərcümələri ilə seçilən əsas fiqur kimi təqdim olunur. Repressiyalar və bir çox əsərlərinin itirilməsinə baxmayaraq, onun irsi fundamental əhəmiyyətini qoruyur və

tərcümənin həm mədəni körpü, həm də Azərbaycan ədəbi kimliyinin formalaşmasında mühüm amil olduğunu göstərir.

Açar sözlər: Azərbaycan ədəbiyyatı; tərcümə ənənələri; mədəniyyətlərarası əlaqə; milli kimlik; bədii tərcümə; Əhməd Cavad; mədəni vasitəçilik; rus və Avropa ədəbiyyatı; ədəbi inkişaf; tərcüməşünaslıq

Introduction

This study examines the historical development of translation traditions in Azerbaijani literature, with particular emphasis on the formative role of cultural and intellectual transformations in shaping literary processes. Drawing on a broad historical framework, it situates Azerbaijani translation activity within the wider context of national consciousness, humanistic values, and intercultural exchange. The paper traces the evolution of translation from its early manifestations in classical Azerbaijani literary culture to its institutional consolidation in the nineteenth and twentieth centuries, highlighting the contributions of prominent intellectuals who facilitated the transfer of Russian and European literary traditions into the Azerbaijani context.

Special attention is devoted to the figure of Ahmad Javad, whose translational activity represents a significant milestone in the professionalization and artistic development of Azerbaijani translation literature. By analyzing his engagement with major works of world literature and his methodological approach to translation, the study explores translation not merely as a linguistic operation but as a creative and cultural practice. Ultimately, the article seeks to demonstrate how translation functioned as a key mechanism of cultural mediation, contributing to the expansion of literary horizons, the enrichment of national language, and the formation of modern Azerbaijani literary identity.

Methodology and Materials. The study adopts a multidisciplinary approach combining several key methods. A historical-analytical method is used to trace the development of Azerbaijani translation traditions within their socio-political context. A comparative method examines translations alongside original texts to assess semantic and stylistic adaptation. Textual and stylistic analysis focuses on linguistic features and artistic expression in translated works.

In addition, a biographical approach is applied to understand Ahmad Javad's intellectual trajectory, while an archival method draws on manuscripts and historical sources. The study is also informed by translation theory, viewing translation as a form of cultural mediation and a factor in shaping national literary identity.

Discussion.

Historical background of Translation Studies in Azerbaijan

As scholars have noted, "the finest features of national psychology and national consciousness manifest themselves in revolutionary transformations, in the renewal of society, and in the rejection of impulses that humiliate the nation and suppress its free spirit" (Lomidze, 1972, p. 27). Within the broader trajectory of progress, such transformations also create conditions for a more adequate evaluation of literary processes, allowing phenomena that had long remained in the shadows to be reassessed.

In this context, new approaches to social and cultural phenomena have emerged, aimed at ensuring a comprehensive and unbiased study of literary history, as well as eliminating "blank pages" and previously "closed zones" of critical inquiry. The reinterpretation and re-evaluation of national literature become particularly possible during transitional historical periods. In such

moments, the unity, continuity, and indivisibility of a people's history and culture, along with their moral and ethical values and the essential nature of their literature, acquire special significance.

Azerbaijani literature, from its earliest stages, has remained deeply committed to humanistic traditions. Beginning with the immortal epic *Kitabi-Dede Qorqud* and continuing through the works of Nizami, Nasimi, Fuzuli, Sabir, and other prominent representatives of Azerbaijani intellectual thought, ideals such as humanism, equality, loyalty, and moral integrity have been consistently celebrated.

The twelfth century, regarded as the golden age of Azerbaijani culture, produced the great poet and thinker Nizami Ganjavi, who in his renowned *Iskandarnama* depicted an ideal realm of true happiness—one devoid of falsehood, theft, violence, and social inequality. In this "land of harmony," all individuals are equal; people love and support one another, sharing both good and evil collectively. Nizami's contemporary, the gifted poet Mahsati Ganjavi, articulated ideas of a free and happy life, as well as the intellectual and social independence of women. Another contemporary of Nizami, the distinguished poet and philosopher Khagani Shirvani, advocated for a just and equitable world order.

Among those who raised their voices in defense of the people's freedom and well-being were also the great fourteenth-century poet Nasimi, the eminent scholar and poet Muhammad Fuzuli of the sixteenth century, and the outstanding poet and statesman Molla Panah Vagif, who served as vizier of the Karabakh Khanate in the eighteenth century.

In the early nineteenth century, the Treaties of Gulistan (1813) and Turkmenchay (1828) precipitated a profound transformation in the political life of Azerbaijan, resulting in its incorporation into the Russian Empire. While this development marked the onset of a new phase of political dependency, it simultaneously inaugurated a significant cultural and intellectual reorientation, particularly through the expanded study of the Russian language and engagement with Russian culture. This ambivalent historical juncture—at once marked by subjugation and epistemic opening—created the conditions for intensified intercultural exchange and literary mediation.

Prominent Azerbaijani intellectuals and writers, including Abbasgulu Agha Bakikhanov, Mirza Shafi Vazeh, Mirza Fatali Akhundov, Mirza Jafar Topchubashov, and Mirza Kazimbey, played a decisive role in this process. Through their translations of major Russian authors—such as Alexander Pushkin, Mikhail Lermontov, Nikolai Gogol, Nikolai Nekrasov, Ivan Krylov, Leo Tolstoy, and Anton Chekhov—into Azerbaijani, they not only facilitated the dissemination of Russian literary and intellectual thought but also contributed to the formation of a new literary horizon within Azerbaijani culture. These translational practices functioned as a crucial mechanism of cultural transfer, simultaneously enabling reception, adaptation, and transformation.

Importantly, this process exerted a reciprocal influence on the development of national literature. On the one hand, Azerbaijani intellectuals translated both their own works and those of major national thinkers into Russian, thereby enabling their circulation within the broader imperial and European cultural space. On the other hand, the introduction of Russian literary classics—and, through the mediating function of the Russian language, canonical European texts—into Azerbaijani readership was achieved through the sustained efforts of a wide circle of translators. In a broader sense, these activities gave rise to a distinct tradition and institutional formation of translation as both practice and discipline.

Historical evidence suggests that Russian intellectuals were not indifferent to the Azerbaijani language and literary tradition. The richness and expressive capacity of the Azerbaijani language inspired a number of Russian writers to study it (Qurbanov, 1970, p.228). This interest must also be situated within a wider orientalist framework: Russian and European intellectuals demonstrated a sustained fascination with the “East” as a cultural and imaginative space. Indeed, the development of Western European literature was profoundly influenced by the artistic and aesthetic thought of Eastern cultures. The translation of works such as *One Thousand and One Nights*, *Kalila and Dimna*, and *The Seven Wise Masters* into European languages not only expanded the narrative repertoire of Western literatures but also intensified their engagement with Eastern motifs, narrative structures, and symbolic systems (Khalilli, 2002; Badalbeyli, 2004).

In the second half of the nineteenth century, the work of promoting the Azerbaijani language and literature—initiated by figures such as Akhundov, Topchubashov, and Kazimbey—was continued by a new generation of intellectuals, including Seyid Azim Shirvani, Hasan bey Zardabi, Najaf bey Vezirov, Jalil Mammadguluzadeh, Firidun bey Kocharli, Abdurrahim bey Hagverdiyev, Nariman Narimanov, Sultan Majid Ganizadeh (Valibeyov), Suleyman Sani Akhundov, and Abbas Sahhat. The works of these figures are widely regarded as exemplars of translational mastery: their renderings of Russian literature into Azerbaijani, as well as their translations of Azerbaijani literary masterpieces into Russian, made a substantial contribution to the development of translation as an art form. In particular, Abbas Sahhat’s translations of Russian and European literary works between 1909 and 1917, alongside their active dissemination, significantly enriched and consolidated these emerging traditions (Velikhanova, 1994, p.162).

The translational legacy of Abbas Sahhat was further developed by the distinguished educator and writer Abdulla Shaig (Talibzade), who emphasized the formative role of translated literature as a driving force in the evolution of national literary culture (Talibzade, 1966, p.207). Translation, in this sense, functioned not merely as a derivative practice but as a generative site of literary innovation and cultural self-definition.

The development of translation as a cultural institution in Azerbaijan reached a new stage during the period of the Azerbaijan Democratic Republic (1918–1920). As the scholar F. Velikhanova observes, the progressive intelligentsia of this period constituted an “intellectual community of outstanding expertise,” among whom particular attention is given to the translational activity of one of its leading figures, Mahammad Amin Rasulzade (1884–1955). Rasulzade’s works were published in Russian in major European centers such as Paris, Berlin, Warsaw, and Oxford, as well as in Turkey (Velikhanova, 1994, p.24). Notably, he translated from Persian into Turkish the work *The Philosophy of National Unity* by the Islamic reformer Jamal al-Din al-Afghani (1836–1897), thereby contributing to the transregional circulation of political and philosophical ideas.

Mahammad Amin Rasulzade, who highly valued the essence of the Azerbaijani language, emphasized the necessity of its development in his article “*Language as a Social Phenomenon*.” At the same time, demonstrating a broad intellectual curiosity toward innovation in various spheres of life, Rasulzade followed with keen interest the creative explorations of Fyodor Dostoevsky and Maxim Gorky. He even translated a passage from Gorky’s novel *Mother* into Azerbaijani (Velikhanova, 1994, p.24).

The new intellectual stratum formed during the period of the Azerbaijan Democratic Republic continued to serve the progress and cultural advancement of society in the subsequent decades. In particular, the community of translators was compelled to operate within the highly complex socio-

political conditions and ideologically restrictive environment of the 1930s–1950s. From this perspective, the literary processes of the 1930s acquire special analytical significance, as this period coincided with a broader historical context across the former Soviet space characterized by the ideological scrutiny of material and spiritual values, the suppression of individual agency, and the emergence of new structural constraints on historical development. For Azerbaijan as well, this was a period marked by profound historical burden and intellectual tension.

The life and tragic fate of the prominent Azerbaijani poet, public intellectual, and gifted translator Ahmad Javad unfolded within this very historical horizon.

1.1. Ahmad Javad's Translation Activity

Ahmad Javad, who made a significant contribution to the development of twentieth-century Azerbaijani literature and culture, was not only a distinguished poet but also an educator and journalist. In addition, he translated works of world literary classics into Azerbaijani.

Javad substantially enriched the corpus of twentieth-century Azerbaijani translation literature, contributed to its professionalization, and effectively established his own translational school. His translation trajectory—from Leo Tolstoy's short story *Ilyas and His Wife Shamshymaqı* to Shota Rustaveli's epic poem *The Knight in the Panther's Skin*—demonstrates both breadth and consistency. In this relatively short but intensive creative path, he introduced numerous high-quality literary examples into Azerbaijani translation literature. His translation activity began with engagement with the works of the great Russian writer Leo Tolstoy. In 1911, he translated Tolstoy's short story *Ilyas*, and from that year onward remained devoted to translation work throughout his life.

Azerbaijani translation literature, as an integral part of the broader literary process, has undergone a long and multifaceted development. Although its earliest examples date back to the medieval period, this field expanded significantly in the nineteenth century. As noted, prominent intellectuals such as Abbasgulu Agha Bakikhanov, Rafi Efendiyev, Firidun bey Kocharli, Abbas Sahhat, and Abdulla Shaig made important contributions to this tradition.

A new stage in Azerbaijani literary translation began in the 1920s–1930s, when works by major figures of world literature—including Homer, Dante, Cervantes, Shakespeare, Rustaveli, Alisher Navoi, Honoré de Balzac, Victor Hugo, Alexander Pushkin, Leo Tolstoy, Taras Shevchenko, Maxim Gorky, and others—were rendered into Azerbaijani and presented to readers in their native language. These translations were carried out by representatives of Azerbaijani literary culture, such as Mammad Arif, Samad Vurgun, Mikayil Rzaquluzade, Rasul Rza, Suleyman Rustam, Bakhtiyar Musayev, Ahmad Javad, Aziz Sharif, Jeyhun Majnunbeyov, and others.

In the 1950s–1960s, growing scholarly interest in the theoretical dimensions of translation became evident. Prominent scholars such as Mammad Arif, Mir Jalal Rafiqli, Mirza Ibrahimov, Mikayil Rzaquluzade, Jalal Mammadov, Aziz Mirahmadov, Bekir Nabiyeu, and others increasingly turned their attention to the theoretical, historical, and practical issues of translation studies. In subsequent decades, both theoretical and applied aspects of translation continued to attract scholarly interest, with significant contributions made by researchers such as F. Velikhanova, L. Samadova, T. Sharifli, T. Sultanova, and H. Arasli.

One of the key figures who contributed to the development of Azerbaijani translation traditions in the twentieth century was Ahmad Javad. In the 1920s–1930s, Javad translated dozens of works by Russian and European classical authors into Azerbaijani. His engagement with translation cannot be regarded as incidental. Rather, it reflects a consistent intellectual trajectory

within his broader literary practice. His early recourse to the works of Leo Tolstoy is indicative of the profound interest in the Russian writer's oeuvre within Azerbaijani literary culture at the time. The death of Tolstoy in 1910 deeply affected the young Javad, and as a result, his translation of the short story *Ilyas and His Wife Shamshymaqı* was published shortly thereafter.

The expansion of Javad's translational activity in the 1920s requires critical contextualization. At the beginning of the twentieth century, translation practices in Azerbaijan were still relatively underdeveloped, and the limited number of translated works did not satisfy the intellectual and cultural needs of readers. Consequently, Azerbaijani audiences were largely deprived of access to contemporary developments in world literature, a situation that created significant gaps in cultural and intellectual formation. Translation, in this sense, functions as a crucial mediating mechanism through which one literary system enters another, enabling processes of intercultural exchange and mutual enrichment. It operates not merely as linguistic transfer but as a form of cultural transmission, facilitating the circulation of aesthetic forms, ethical values, and symbolic structures. As Samad Vurgun aptly observed, "in the cultural history of every people, translations from other languages become part of its cultural wealth" (Vurgun, 1958).

As an experienced educator and intellectual, Ahmad Javad had a nuanced understanding of the aesthetic preferences and intellectual needs of readers, particularly younger generations. The scarcity of translations from world literature in Azerbaijan could not but concern him, as he clearly recognized that the translation and publication of foreign literary works was a necessary condition for the expansion of readers' intellectual horizons and cultural awareness. Accordingly, he assumed responsibility for addressing this cultural deficit through systematic translational practice.

Javad approached translation with a high degree of artistic and ethical responsibility, fully aware of its role in shaping both literary culture and inter-societal understanding. His translations were widely received with enthusiasm by both readers and the literary community, as they not only expanded access to world literature but also contributed to his reputation as a serious cultural mediator. He was particularly attentive to the moral and educational dimensions of the texts he selected, consistently prioritizing works of high ethical and aesthetic significance.

His translational practice was grounded in deep linguistic competence and sensitivity to stylistic nuance. This capacity was supported by his multilingual proficiency: alongside his native Azerbaijani, Javad had a command of Arabic, Persian, Russian, Georgian, and Lezgi languages. As academician Bakir Nabiyeu notes, translation for Ahmad Javad was not a secondary or auxiliary activity but "not a mere pastime, but a genuine creative process" (Nabiyeu, 1993, p.115), within which his artistic mastery became progressively refined.

Another significant factor that contributed to Javad's turn toward translation was the constraints he faced in his original literary production during certain periods of his creative life. Writing poetry or prose under external pressure or commission was incompatible with his conception of artistic integrity, as he regarded such conditions as a form of creative coercion. Preferring to write only on themes that engaged him emotionally and intellectually, he temporarily shifted his focus away from original composition and turned to translation as a space of freer intellectual and aesthetic expression.

Ahmad Javad's translation activity was diverse and multifaceted. He did not confine himself solely to poetic works but also engaged with prose and drama. Approaching translation as a creative process, Javad would, prior to translating any text, familiarize himself with the author's broader oeuvre, study the stylistic features and system of imagery of the work, and, when necessary, consult

translation specialists, theatre directors, and other professionals in the field. For this reason, his translations of such renowned works as *Othello*, *The Knight in the Panther's Skin*, *The Captain's Daughter*, *Fathers and Sons*, *The Hunger*, and others are regarded as exemplary achievements in Azerbaijani translation literature. Contemporary literary scholarship highly evaluates these translations: "From their very first pages, these translations captivate with their sincerity and credibility; in many cases, one forgets that one is reading a translated work" (Nabiyev, 1993, p.116).

As a translator, Javad maintained close collaboration with editors such as M. Arif, M. Rafili, A. Sharif, R. Rza, and A. Afandiyev, carefully considering and implementing their recommendations. He also maintained friendly relations with leading theatrical figures of his time—including J. Jabbarli, A. Tuganov, A. M. Sharifzadeh, U. Rajab, and others—respectfully taking into account their valuable guidance in his work.

Javad's translations were widely perceived as a logical continuation of his original creative output. In this sense, the poet Ahmad Javad and the translator Ahmad Javad constitute an inseparable artistic unity. The authors whose works he translated represent a wide range of national literatures: Russian and Ukrainian, English and French, Norwegian and German, Turkish and Georgian writers, including A. S. Pushkin, M. Yu. Lermontov, L. N. Tolstoy, M. Gorky, I. S. Turgenev, W. Shakespeare, F. Rabelais, J. de La Fontaine, Shota Rustaveli, A. Hamid, Knut Hamsun, and others. Most of these works were translated directly from the original languages, as Javad was, as noted above, fluent in several foreign languages.

When discussing Ahmad Javad's translation activity, it is also necessary to emphasize that during his final arrest in 1937, his apartment was completely destroyed, and his books and manuscripts were burned and confiscated by NKVD agents. The first researcher and devoted admirer of Javad's work, Ali Saladdin, notes in the introduction to the poet's *Selected Works* that "some of the outstanding artist's unpublished works were confiscated, burned, and destroyed during the repression period, while a portion of them were preserved somewhere by compatriots and acquaintances" (Saladdin, 1992).

Following his arrest, Javad's works were classified as "anti-state" and consequently concealed in the archives and underground repositories of the State Security Committee, remaining inaccessible to readers, the public, and scholars for many years. As a result, researchers of his poetic and translational legacy were deprived of access to invaluable manuscripts and documents.

An incomplete list of Javad's translated works was discovered in the archive of the Nizami Museum of Azerbaijani Literature. In his application to the postgraduate program of the research institute, Javad lists the following translations: V. King. *In Exile*; I. Turgenev, *Fathers and Sons*; M. Gorky, *My Universities*; M. Gorky, *Childhood*; M. Gorky, *How I Learned*; K. Hamsun, *Hunger*; B. Roné, *The Struggle for Fire*; T. Shevchenko, *The Worker* (Javad, Archive, no. 135)

With Azerbaijan's restoration of independence in the 1990s, archival materials related to victims of political repression—long stored in closed repositories—were opened to researchers. Among these materials were the archival documents of Ahmad Javad. Thus, previously concealed facts concerning the poet's life and creative legacy came to light. One of the first scholars to publish on Javad's work during this period, Emin Afandiyev, notes that his study was based on newly declassified archival sources (Afandiyev 1993).

Taking into account the fact that researcher E. Afandiyev was among the first to systematically address Ahmad Javad's translation activity, we present below a chronologically organized list of his translated works:

Alexander Pushkin, *The Captain's Daughter* (1928); Maxim Gorky, *How I Learned* (1929), *My Universities* (1929), *Childhood* (1929); Ivan Turgenev, *Fathers and Sons* (1929); F. Berezovsky, *Mother* (1929); V. Kin, *Beyond There* (1929); B. Roné, *The Struggle for Fire* (1930); Knut Hamsun, *Hunger* (1930); Taras Shevchenko, *Kobzar* (1934, co-translated with M. Mushfig); William Shakespeare, *Othello* (1935); François Rabelais, *Gargantua and Pantagruel* (1936); Alexander Pushkin, *The Bronze Horseman* (1937); Shota Rustaveli, *The Knight in the Panther's Skin* (1978).

At the same time, Ahmad Javad's translations were published in periodicals as well as in the first volume of his *Selected Works* (two-volume edition) (Javad, 1992, p.286–321). One of his dramatic works was staged on the Azerbaijani theatre scene, while many of his other translations have not yet been recovered. It can therefore be concluded that the above list does not fully reflect the scope of Javad's translational activity. For instance, his translations of Shakespeare's *Twelfth Night* and *Julius Caesar* have not yet been discovered (Javad, Archive).

The first phase of Ahmad Javad's multifaceted creative trajectory covers the years 1906–1920, encompassing his education at the Ganja madrasa, the First World War, and the establishment of the Azerbaijan Democratic Republic. During this period, alongside his literary production, he actively participated in the socio-political life of the republic, continued his teaching activity, and served at the front. He also worked as a special correspondent for several newspapers, publishing reports, travel notes, and essays. Through charitable organizations, he traveled to North Caucasus, Dagestan, Georgia, and Turkey, providing humanitarian assistance to refugees, the homeless, and orphans, and offering both material and moral support.

It was also during these years that Javad began his literary activity. Significantly, his first engagement with literature occurred in the capacity of a translator. His earliest original poem, *My Terrible Thoughts*, was published in 1913 in issue 18 of the journal *Shalala* (Saladdin, 1992, p. 142). However, his translation of Leo Tolstoy's short story *Ilyas* appeared earlier, in 1911, in the newspaper *Səda*.

Interest in Leo Tolstoy's work in Azerbaijan dates back to the late nineteenth century. Numerous Azerbaijani intellectuals translated Tolstoy's children's stories into Azerbaijani. Prior to Ahmad Javad, works by the Russian writer had already been translated by Rafi Efendiyev, Firidun bey Kocharli, Sultan Majid Ganizadeh, and A. Minasazov (Bagirov, 1963).

Although this translation represents Javad's first step in the field of literature, it already demonstrates a professional level of execution. The story reads in Azerbaijani not as a translation but as an original work. It is written in an accessible and fluid style, allowing for effortless comprehension. As an illustrative example, a short excerpt from the translation may be presented below: "*İlyasın bu qədər mal-dövlətindən ancaq əynində bir dəst paltarı ilə qocalmış olan övrəti qalmış idi. Ayrılan oğlu uzaq bir vilayətdə güzaran edib, əsla atasından bir xəbər tutmazdır. Qızı isə vəfat etmiş idi. Bu növ ilə qoca İlyas ilə övrətinin kömətinə heç bir gələn tox idi.... Sən və övrətin Şəmşimaqi gəlib bizdə güzaran edib, ömür sürünüz. Yazda mənimlə bağçada işlə, qışda da mal-qaraya bax, yem su ver. Şəmşimaqi isə süd sağıb, qatıq, yağ hazırlasın, mən sizi saxlaram, yemək-içmək, paltar verib, hər nə lazım isə sizə əsla müzayiqə etmərəm. İlyas razı oldu, ər-övrət hər ikisi*

Məmmədə qulluq etməyə başladılar. Hər cəndi əvvəlcə belə işlər bunlara çətin gəlirdisə də bir azdan sonra öyrəşib, var qüvvələri ilə işləyib, burada ömür sürdülər" (Javad, 1992, p.13-14).

Let us now turn our attention to the Russian original text of the work:

"All that remained to Ilyas of his property was the clothes on his body, a coat, a hat, and boots with shoes, and his wife, Sham-Shamagi, also an old woman. His son, having separated from the family, had gone to a distant land, and his daughter had died. There was no one to help the old couple... 'Come,' said his neighbour, 'Ilyas, live with the old woman. In summer, work for me in the melon fields according to your strength, and in winter tend the cattle, and Sham-Shamagi shall milk the mares and make kumys. I will feed and clothe you both, and whatever you need, just tell me, and I will give it to you.' Ilyas thanked his neighbour and began to live with his wife as workers in Muhamediyukh's household. At first it seemed difficult, but later they became accustomed, and the old couple continued to live and work according to their strength" (Tolstoy, 1987, p. 256).

In the original, the title of the work is *Ilyas*, whereas in Javad's translation the title is expanded, thereby shifting the semantic emphasis. In this reframing, not only Ilyas's fate but also that of his wife Sham-Shamagi-who supports him throughout his life-is brought to the foreground. This interpretive expansion suggests an early instance of translatorly agency, whereby the act of translation becomes a form of narrative reaccentuation.

From a translational perspective, the language of the translation is notably simple and transparent, reflecting the linguistic norms of Azerbaijani at that historical moment. The text is structured in accordance with the emotional atmosphere of the depicted life situation, producing an effect of narrative fatigue and intimacy. Rather than a formally distant literary rendering, the translation resembles a sincere oral account of a long and difficult life, told in a calm and understated tone.

Javad's translation of Tolstoy is, however, not an isolated case within his engagement with Russian literature. Russian literary texts occupy a significant place in his translational corpus. As academician Bakir Nabiyev notes, "Javad possessed a command of Russian at the level of those authors who created in that language." Nabiyev further emphasizes that one of the key factors contributing to the success of Javad's translations was his ability to penetrate the semantic core of the original text, to grasp the factual and contextual foundations of the narrative, and to understand the psychological states and worldview of the characters, as well as the historical logic of the events depicted.

Let us now turn to Javad's translation of Pushkin's *The Tale of the Golden Cockerel*:

Deyirlər keçmişdə,
Bir məmləkətdə
Tarixin bildiyi
Bir səltənətdə
Dadon dedikləri
Bir çar yaşarmış.
Özü də çox adlı,
Sanlı bir çarmış.
Hər kəs bac verərmiş
Bu cavan çara
Qonşular əlindən
Gəlirmiş zara.... (Javad, 1992, s.301-302)

“Somewhere in the thrice-ninth kingdom,
In the thrice-tenth realm,
There once lived the glorious Tsar Dadon.
In his youth he was a fearsome ruler,
And time and again, without hesitation,
He boldly inflicted harm upon his neighbors.” (Pushkin, 1968, p.267)

As can be observed, the translation closely echoes the original text in both semantic and rhythmic structure. By selecting appropriate lexical equivalents and idiomatic expressions, A. Javad masterfully conveys the distinctive features of Pushkin’s artistic imagination. A particularly important aspect of this translation is its rhythmic organization, which remains remarkably close to that of the original, thereby preserving its poetic cadence and expressive dynamism.

Another significant example of translation from Russian literature is Ivan Turgenev’s novel *Fathers and Sons*. It is worth noting that the original Russian title *Отцы и дети* could also be rendered as *Fathers and Children*. However, when translating literary works, Javad consistently prioritized the adaptation of the text to the cultural and axiological system of the target language community. As an Azerbaijani intellectual, he considered it essential to take into account the deeply rooted cultural and moral associations embedded in the concept of “father–son” relations—namely, genealogical continuity, moral inheritance, and the symbolic status of the son as the bearer of lineage and tradition. Accordingly, he introduced a deliberate modification in the title, guided by his own aesthetic and ethical sensibility.

Let us now turn to Turgenev’s Russian original:

“There is a small rural cemetery in one of the remote corners of Russia. Like almost all our cemeteries, it presents a sorrowful sight: the surrounding ditches are long overgrown, grey wooden crosses have bowed and are rotting under their once-painted roofs, stone slabs are all displaced, as if pushed from beneath, and two or three stripped trees barely cast a meagre shade... But among them there is one grave which no human hand touches; only birds perch upon it and sing at dawn. An iron fence surrounds it... From a nearby village, two already decrepit old people—a husband and wife—often come to it. Supporting one another, they walk with heavy steps, approach the fence, fall to their knees, and weep long and bitterly... and they cannot leave this place” (Turgenev 1978, pp. 223–224).

“Rusiyanın uzaq bucaqlarından birində kiçik bir kənd məzarlığı vardır. Demək olar ki, bizim bütün məzarlarımız kimi mənzərəsi adamı qüssələndirir. Onu əhatə edən çanovları çoxdan ot basmışdır. Boz, ağac xaçlar əyilmiş, qəbir daşlarının hamısı, aşağıdan birisi onları itələyirmiş kimi yerindən oynamışdır. Yarpağı tökülmüş iki-üç ağac azacıq kölgə salır. Lakin bu qəbirlər arasında.... bir məzar da vardır. Təkçə quşlar onun üzərinə qonub şəfəq çağı oxuyur. Bu qəbri dəmir çəpər əhatə edir. Yaxında bulunan kənddən bu qəbri ziyarət etməyə tez-tez ər-arvad, iki düşkün qoca gəlir..... acı-acı ağlayır, qəbir daşına diqqətlə baxır... uzun müddət bu yerdən ayrılı bilməyirlər...”.

Academician B. Nəbiyev, who cites these passages as exemplary translations of Russian literature by A. Javad, emphasizes that “when comparing this translation with the corresponding passages of the original, one experiences the same emotions, while at the same time an objective picture of the Azerbaijani literary language and the state of literary translation in the twentieth century emerges” (Nəbiyev, 1993, p. 116–117).

The poems of the renowned Ukrainian poet Taras Shevchenko were published in Azerbaijan in 1939, 1951, 1960, and 1964. However, even prior to these editions, a collection of his poems had

already been published in 1934 by the Azər nəşr publishing house. This edition of *Kobzar* included translations by the poets M. Mushfig and A. Javad, who would later become victims of the 1937 political repressions. Some of these translations were also published earlier, in 1936, in the newspaper *Ədəbiyyat qəzeti*, accompanied by the note “translated by M. Mushfig and A. Javad” (*Ədəbiyyat* 1936).

The last work translated by A. Javad into Azerbaijani was the well-known epic poem *The Knight in the Panther's Skin* by the Georgian poet Shota Rustaveli. The translation was made directly from the Georgian language, as Javad possessed a native-like command of Georgian. This was not incidental, as the poet's life and creative biography were closely connected with Georgia. The author of the poem “There Are Bewitching Beauties in Georgia” (Javad 1991, p. 38), he lived for a period in Georgia, learned the Georgian language, and was married to the Ajarian woman Shukriyyah.

Javad began translating the poem in October 1936 and approached the task with characteristic responsibility, completing the translation of more than 6,000 lines within a relatively short period. In December 1937, the literary community of the republic was preparing to solemnly celebrate the 750th anniversary of Shota Rustaveli, and numerous articles and books dedicated to his life and work were published in this context. However, none of these publications mentioned Ahmad Javad, nor was his translation published prior to the commemorative events. The reason was deeply tragic: in June 1937, A. Javad had been arrested as an “enemy of the people.” The translation was published only during the period of his posthumous rehabilitation—23 years after his death and 41 years after its completion (Rustaveli, 1978).

A significant role in the publication of this translation was played by the prominent Azerbaijani literary scholar Dilara Aliyeva, an active promoter of Georgian literature and a fluent speaker of the Georgian language.

Portions of the poem had already been published in various periodicals during the 1930s; however, as researcher E. Efendiyev notes, “the complete text of the translation was not available. The poet's children, close relatives, friends, and acquaintances managed to preserve part of his manuscripts. The surviving portions were transferred by the poet's family to the archives and museums of the republic in the 1960s” (Efendiyev, 1993).

Literary scholar Dilara Aliyeva conducted extensive research during the preparation of the book for publication and carried out significant reconstruction work on the lost portions of the text. Regarding this process, the researcher notes that the missing fragments of the poetic translation were reconstructed by the poet Alakbar Ziyatay on the basis of interlinear translations prepared by both Ahmed Javad and Dilara Aliyeva herself (Aliyeva, 1978, p. 14).

The poem was translated and restored with a high level of professional expertise and is presented as one of the most accomplished examples in Azerbaijani literary scholarship. Academician M. Arif, emphasizing the translator's professionalism, argued that the primary requirement for a creative translator is “to carry out the translation process with inspiration.” He further notes that “the translator must approach his work with seriousness, responsibility, and rigor—this constitutes the second essential condition of translation. Before undertaking the translation, the work must be examined from a creative standpoint... Its content, ideas, style, artistic features, and imagery must be studied in depth” (Arif, 1967, p. 346).

A close reading of Ahmad Javad's article *How I Work on Translation* reveals that the translator meticulously fulfilled all the requirements formulated by M. Arif. Javad writes: “While

translating this work, I refer to the Georgian original text, because only in this way can one study the artistic features of the great master's creativity." The article also notes that the translator particularly relied on interlinear Russian translations prepared for him by his Georgian colleagues (Efendiyev, 1993).

Javad's excellent command of the Georgian language greatly facilitated his translation of the poem. The poet approached each line with exceptional care and attention, thereby ensuring the preservation of both the semantic content and the artistic qualities of the original text.

Səhər tezdən qoç Avtandil, güya ki, bir təzə zanbaq,
Başdan-başa al geyinib, yaqut kimi parlayaraq,
Gəldi başda qızıl çalma, yaraşıqla silahıyla,
Şah hərəkət əmri verdi, mindiyi at qar kimi ağ.
Şah bəzəndi, mindi atı, sürdü şıkar olan yerə,
Qamarlanmış çöldə tamam kəsilmişdi keçid, bərə,
Səpələndi qoşun düzdə, başlandı ov qıyhaqlıla,
Girişdilər ox atmağa, ov vurmağa mərcə görə. (Rustaveli, 1978, p.23)

The fidelity of the translation to the original leaves no doubt: carefully selected lexical units, a refined analysis of intonation and rhythmic structure, as well as close attention to syntactic organization—all these elements collectively contributed to the translator's creative success.

Including his final translation, a significant portion of Ahmad Javad's creative activity was devoted to translation. His Azerbaijani renderings continue to preserve their artistic expressiveness, rhythmic specificity, and national coloration to this day.

Among the world classics whose works he translated is William Shakespeare (1564–1616), a representative of the European Renaissance. These translations occupy a special place both in Javad's literary oeuvre and in his translational practice. As a prominent representative of Azerbaijani Romanticism and a bearer of humanist ideas, Javad's engagement with Shakespearean thought reveals a distinctive interpretive approach shaped by his own aesthetic and philosophical orientation. Just as Shakespearean translation constitutes a distinct domain within Azerbaijani translation history, the "Shakespearean stage" also represents a particularly significant phase in Ahmad Javad's translational creativity.

Conclusion

The study shows that Azerbaijani translation traditions have been closely linked to the country's literary, cultural, and socio-political development, functioning not only as linguistic mediation but also as a means of intellectual exchange and cultural renewal.

The nineteenth and early twentieth centuries were a key stage in this process, when contact with Russian and European literature significantly expanded Azerbaijani literary horizons and strengthened intercultural dialogue.

Within this context, Ahmad Javad stands out as a major figure in Azerbaijani translation culture. His translations helped shape a professional and artistic translation tradition, enriching the national literary language and strengthening cultural ties with world literature. Despite repression and the loss of many works, his legacy remains central, confirming translation as a creative force in Azerbaijani literary history.

TRANSLATION AND TRANSLITERATION

Lala Gadir GURBANOVA

Institute of Linguistics named after Nasimi, National Academy of Sciences of Azerbaijan

Head of the Indo-European Languages Department

E-mail: lala.qedirova@mail.ru

ORCID: 0009-0002-2907-0208

Abstract. Over the past 20 years, the dynamics of interlingual communication have increased significantly. The correct spelling and pronunciation of words translated from English into Azerbaijani has always remained a focus. Words transferred from English to Azerbaijani are used in modified forms in accordance with the standard rules of the language. It is known that each language has its own accepted

phonetic, grammatical, and lexical rules. During the process of translation and word formation, along with the similarities between languages, their differences also emerge. Translation, which is the transfer of the alphabet of one language to another in a complete and similar form, is called transliteration. During transliteration, words are replaced in accordance with the spelling and orthoepic rules of the language. In modern linguistics, the transliteration process is carried out using artificial intelligence. However, errors sometimes occur in this process. Recently, due to the widespread use of the virtual world, the issue of transliteration in word translation has received little attention. This obscures the system of language rules and violates standard language rules. Therefore, translation from one language to another must be carried out by specialists to ensure that the rules of any language are not violated. A translator applying transliteration rules must have a perfect knowledge of the alphabet and phonemic system of both the source and target languages.

Keywords: transliteration, translation process, phonemic transliteration, orthographic transliteration, virtual world

TƏRCÜMƏ VƏ TRANSLİTERASIYA

Lalə Qədir QURBANOVA

Azərbaycan Milli Elmlər Akademiyası, Nəsimi adına Dilçilik İnstitutu,
Hind-Avropa dilləri şöbəsinin müdiri

Xülasə. Son 20 ildən çoxdur ki, dillərarası əlaqənin genişlənməsinin dinamikası artmışdır. İngilis dilindən Azərbaycan dilinə tərcümə edilən sözlərin düzgün yazılması və tələffüz olması daima diqqət mərkəzində olmuşdur. İngilis dilindən Azərbaycan dilinə keçən sözlər dilin standart qaydalarına uyğun dəyişərək işlədilir. Məlumdur ki, hər bir dilin qəbul edilmiş fonetik, qrammatik və leksik qaydaları vardır. Tərcümə zamanı və sözlərin prosesində dillərin oxşar cəhətləri ilə yanaşı onların fərqli cəhətləri də üzə çıxır. Tərcümə zamanı bir dilin əlifbasının digər dilə tam və oxşar formada köçürülməsi transliterasiya adlanır. Transliterasiya zamanı sözlər dilin orfoqrafik və orfoepiya qaydalarına uyğun olaraq əvəzlənir. Müasir dilçilikdə transliterasiya prosesi süni intellekdən istifadə olunaraq aprılır. Ancaq bu prosesdə bəzən səhvlər baş verir. Son zamanlar virtual aləmdən geniş istifadə edilməsi sözlərin tərcüməsində transliterasiya məsləsinə o qədər də fikir verilmir. Buda dilin qaydalar sisteminə kölgə salır və dilin standart qaydaları pozulur. Buna görə də dildən dilə tərcümə etmə mütəxəsislər tərəfindən aparılmalıdır ki, heç bir dilin qaydalarına zərər verilməsin. Transliterasiya qaydalarını həyat keçirən tərcüməçi mənbə və tərcümə olunacaq dilin əlifba və fonemlər sistemini mükəmməl bilməlidir.

Açar sözlər: tərcümə prosesi, transliterasiya, fonetik transliterasiya, orfoqrafik transliterasiya, virtual aləm.

Introduction

In the modern era, the expansion of language contacts has led to a significant increase in interlingual translation. The translation of literary and scientific works into other languages enables the study of the socio-cultural life of different nations, their ways of thinking, historical backgrounds, national values, and other distinctive characteristics. In an increasingly globalized world, interlingual translation plays a crucial role in fostering mutual understanding among different peoples. Translation refers to the process of transferring linguistic material from one language into another. It can be performed either orally or in written form. Oral translation, often referred to as interpreting, is believed to have emerged when people of different linguistic

backgrounds first needed to communicate with one another, whereas written translation is thought to have originated in Ancient Egypt. Consequently, oral translation is generally considered older than written translation.

Today, translation is practiced not only by linguists but also by representatives of various academic disciplines and social groups. Whereas translators previously relied primarily on bilingual and multilingual dictionaries, rapid technological advancement has transformed computers into an indispensable part of daily life. Computer technologies have considerably facilitated human activities, including translation. Translation software and computer-assisted translation tools have significantly simplified the translation process. In recent years, the rapid development of artificial intelligence and AI-based applications has further enhanced both translation practices and access to information. However, it should be emphasized that accurate translation remains difficult without a systematic understanding of linguistic principles and the grammatical rules of the languages involved. Various linguistic phenomena emerge during translation, including transliteration, transformation, and interference, all of which reveal both linguistic and extralinguistic factors influencing the translation process.

Materials and Methods

This article examines the translation and transliteration of anthroponyms from English into Azerbaijani. The study utilizes The Dictionary of Anthropology as its primary source. Descriptive and comparative-contrastive research methods have been employed to analyze the data.

Translation theory, which began to develop as an independent discipline in the 1950s and 1960s despite scholarly interest dating back to antiquity, addresses the challenges encountered during translation. It defines the objectives and functions of translation while also identifying the difficulties that arise throughout the translation process. Every language possesses its own phonetic, lexical, and grammatical system, which must be taken into consideration by translators.

As noted in the literature, although different forms of transliteration (graphic, phonetic, and grammatical) may occur in borrowed terms, such variations generally do not hinder communication among specialists in scientific fields, and semantic changes remain minimal.

Each language has its own standard linguistic system and rules. During translation, both similarities and differences between languages become evident. Therefore, translators must possess knowledge of the structural-semantic, morphological, and phonological characteristics of the source and target languages, as well as the culture, history, geography, and socio-political context of the communities that speak them. Without such knowledge, mistranslations may occur. Translation has historically played a vital role in the development of political, economic, scientific, and cultural relations among nations and is often described as a bridge of communication between peoples.

One of the major linguistic challenges encountered in translation is transliteration. Transliteration is among the most common linguistic phenomena observed during translation and refers to the process of transferring the graphemes and phonemes of one language into another in either a direct or adapted form. First introduced by L.V. Shcherba in 1940, transliteration involves adapting words from one language according to the orthographic and orthoepic norms of another language. Following Shcherba, scholars such as M.I. Matusevich and L.P. Zinder sought to distinguish transliteration from transcription.

According to one definition, "Transliteration is the process of representing the sounds of words in one language using the letters of another language; the notion of transliteration is based on representing written characters of one language by the characters of another language."

N.B. Yushmanov identifies four types of transliteration: letter-by-letter substitution, replacing one linguistic sign with several signs, replacing several signs with a single sign, and replacing multiple signs with multiple letters.

Anyone familiar with foreign languages knows that differences between languages often outweigh similarities. For example, English and Azerbaijani differ substantially in both their alphabetic and phonemic systems. English contains 26 letters, including 5 vowels and 21 consonants, and approximately 44 phonemes consisting of 20 vowels and 24 consonants. It includes 12 monophthongs, 8 diphthongs, and 5 triphthongs. Azerbaijani, by contrast, has 32 letters, including 9 vowels and 23 consonants, and 34 phonemes consisting of 9 vowels and 25 consonants. Unlike English, Azerbaijani lacks diphthongs and triphthongs. These significant differences create challenges when adapting graphemic systems during translation.

The Linguistic Encyclopedia distinguishes two types of transliteration: orthography-based transliteration and pronunciation-based transliteration.

Examples include:

James Smith → Ceyms Smit

John Williams → Con Uilyams

Michael Johnson → Maykl Conson

William Brown → Uilyam Braun

David Jones → Devid Cons

Robert Taylor → Robert Teylor

Joseph Davis → Cozef Devis

Mammadzade classifies transliteration into three categories: strict transliteration, where each letter in the source language corresponds to a single letter in the target language; weak transliteration, where one source-language letter is represented by two or more target-language letters; and extended transliteration, where letter combinations are transferred using special adaptation methods.

These examples clearly demonstrate how particular English letters and letter combinations are adapted in Azerbaijani. For instance, the English digraph “th” is often rendered as either “t” or “s,” while the English diphthong /ei/ is commonly represented as “ey” in Azerbaijani.

The examples also illustrate that transliterated words often acquire a pronunciation different from that of the original language. Consequently, translators must be familiar not only with transliteration principles but also with transcription systems, as transliteration should always take phonetic considerations into account. Although standardized transliteration tables have been developed to facilitate international communication, such conversion systems remain largely conditional when applied to languages belonging to different language families and structural systems. Due to substantial differences between English and Azerbaijani alphabets and phonological systems, direct letter-for-letter transliteration is often impossible without violating linguistic norms.

Additional examples include:

Mary Smith → Meri Smit

Patricia Williams → Patrisiya Uilyams

Jennifer Johnson → Cennifer Conson

Linda Brown → Linda Braun

Elizabeth Jones → Elizabet Cons

Barbara Taylor → Barbara Teylor

Susan Davis → Syuzan Deyvis

These examples demonstrate the application of strict, weak, and extended transliteration strategies. In general, transliteration may be grapheme-based, phoneme-based, or hybrid. Grapheme-based transliteration directly transfers written symbols without considering phonetic properties, whereas phoneme-based transliteration prioritizes pronunciation over orthography. Hybrid transliteration combines both graphemic and phonemic principles.

The rapid technological developments occurring worldwide have expanded opportunities for the use of languages in virtual environments. Nevertheless, the accurate and proper representation of languages within these digital spaces is not always ensured, making the study of translation and transliteration increasingly important in the contemporary linguistic landscape.

Materials and Methods: The article notes and explains the translation and transliteration of anthroponyms from English into Azerbaijani. "The Dictionary of Anthropology" was used in the research. The article employs descriptive and comparative-contrastive methods.

The problems that arise during the translation process are dealt with by translation theory (although translation theory began to take shape in the 1950s and 1960s, interest in it dates back to antiquity). It formulates the goals and tasks of translation while revealing the issues that emerge during the process. It is known that every language possesses its own existing phonetic, lexical, and grammatical rules.

"Although various types of transliteration (graphic, phonetic, grammatical) occur in borrowed terms, changes in the intra-term elements used by people working in scientific fields for mutual understanding do not create an obstacle, and semantic changes here are not particularly noticeable" (2, p. 23).

Every language has a standard language system and set of rules. During translation, interlingual similarities and differences come to light, and the translator must be aware of the languages involved in terms of structural-semantic, morphological, and phonological aspects, as well as the culture, history, geography, socio-political life, and other matters of the nation whose language they are translating. Otherwise, unintentional translation errors may occur. In general, translation has played a special role in the development of international political, economic, scientific, cultural, and other relations. Translation is also called an inter-ethnic speech bridge.

One of the main linguistic problems encountered during translation is the issue of transliteration. Transliteration is one of the most common language phenomena in translation. Transliteration is the process of completely or appropriately transferring the graphemes and phonemes of one language into another. First proposed by L. V. Scherba in 1940, transliteration refers to rendering words from one language in accordance with the orthographic and orthoepic rules of another language. Following L. V. Scherba, M. I. Matusevich and L. P. Zinder attempted to distinguish transliteration from transcription.

"Transliteration is the process of representing the sounds of words in one language using the letters of another language; the notion of transliteration is based on representing written characters of one language by the characters of another language" (8, p. 131).

N. B. Yushmanov identifies four types of transliteration: letter-for-letter substitution, replacing one language sign with several language signs, or conversely, replacing several language signs with one language sign, and replacing several language signs with several letters (4, p. 19).

Anyone familiar with a foreign language knows that while there are similarities between languages, differences are far more prevalent. For instance, the alphabet and phoneme systems of English and Azerbaijani exhibit significant differences. The English language has 26 letters, consisting of 5 vowels and 21 consonants, and possesses 44 phonemes – 20 vowels and 24 consonants. English features 12 monophthongs (five long, seven short), 8 diphthongs, and 5 triphthongs. In terms of quantity, the English sound system contains 5 long vowels, and although two of these long vowels are classified among monophthongs, /i:-u:/ are called diphthongoids because they are not fully monophthongal in quality. In contrast, the Azerbaijani language has 32 letters (9 vowels and 23 consonants) and 34 phonemes (9 vowels and 25 consonants); it lacks combinations of two or three vowel phonemes. As can be seen, there are many differences between the alphabet and phoneme systems of these two typologically distinct languages. Naturally, difficulties arise when aligning the grapheme systems of both languages during translation.

The Linguistic Encyclopedia notes two types of transliteration: 1) script-based; 2) pronunciation-based transliteration (1, p. 307).

For example: James Smith – Ceyms Smit, John Williams – Con Uilyams, Michael Johnson – Maykl Conson, William Brown – Uilyam Braun, David Jones – Devid Cons, Robert Taylor – Robert Teylor, Joseph Davis – Cozef Devis, etc.

S. Mammadzada divides transliteration into three categories: strict transliteration – replacing each letter in the graphics of one language with only one corresponding letter in the graphics of another language; weak transliteration – replacing a letter in the graphics of one language with two or more letters in the graphics of another language; and broad transliteration – replacing letter combinations in the graphics of the source language through a special method in the graphics of the target language (3, p. 166).

It is clear from the above examples how certain letters are replaced during translation. For instance, the English digraph *th* is replaced in Azerbaijani as either *t* or *s* (James Smith – Ceyms Smit). Azerbaijani lacks diphthongs, so in translation from English, *a[eɪ]* is replaced with *ey*.

As seen in the examples, words transliterated from English into Azerbaijani acquire a different pronunciation, which requires the translator to also know the transcription of the languages. This is because transcription must strictly be taken into account during transliteration. For this reason, unified transliteration tables exist globally for interlingual communication, considering the translation process. However, such unified conversion tables are conditional for typologically different languages. For instance, since the alphabet and phoneme systems of English and Azerbaijani differ significantly, letter-for-letter transliteration cannot be applied during translation. Doing so might violate the standard rules of the languages. Transliteration during translation must align with the alphabet and phoneme systems of both languages. For example: Mary Smith – Meri Smit, Patricia Williams – Patrisiya Uilyams, Jennifer Johnson – Cennifer Conson, Linda Brown – Linda Braun, Elizabeth Jones – Elizabet Cons, Barbara Taylor – Barbara Teylor, Susan Davis – Syuzan Deyvis, etc.

These examples illustrate that strict, weak, and broad transliterations were utilized during translation. Generally, transliteration in translation can be grapheme-based, phoneme-based, or hybrid-based. In grapheme-based transliteration, the phonetic features of the language are not taken as the primary basis; instead, graphemes of the source language are directly transliterated into graphemes of the target language (6). In phoneme-based transliteration, phonetic features are prioritized, and orthographic features are disregarded (5). In hybrid transliteration, graphemes are

replaced by phonemes (7). Rapid global technological advancement has created vast opportunities for every language to be used in virtual space. However, the correct promotion and representation of language in this space is not always carried out properly.

Discussion: Consequently, foreign words entering a language disrupt its standard rules, altering its vocabulary. Therefore, native language promotion and usage in the virtual realm must be managed carefully so that foreign words do not harm the national language. The translation and transliteration of borrowings must be approached with seriousness. In general, translation is a linguistic process in which shifts in word meanings also occur (e.g., English is polysemous from a lexical perspective; when translating a text into Azerbaijani, the specific meaning of the English word must be chosen so that the sense remains clear in Azerbaijani). However, there are words in English that lack semantic content. For example, onomastic units are transliterated rather than translated from language to language.

The transliteration of onomastic units is phonetically based, and onomastic units in English are adapted to the Azerbaijani language based on their pronunciation forms. Here, two processes occur: the English grapheme converts into an Azerbaijani phoneme, and the English phoneme is replaced by an existing Azerbaijani grapheme. Phoneme-based transliteration primarily considers pronunciation, making knowledge of transcription essential. Therefore, knowing the phoneme system of the source language during translation is imperative.

Special attention must be paid to anthroponyms and toponyms when translating works between English and Azerbaijani. They are rendered as proper names.

Proper names, including anthroponyms and toponyms, hold immense importance in translation as carriers of national color. As a rule, proper names are conveyed through transliteration during translation. The translator must not forget this aspect and must convey the meaning carried by each name accurately.

Conclusion

During translation from English into Azerbaijani, a tripartite – grapheme, phoneme, and hybrid – transliteration process occurs. The virtual space negatively affects translation and transliteration issues; therefore, a strict approach to transliteration is required to avoid damaging the language's alphabet and phoneme systems. Thus, substitutions should occur while accounting for the phonetic and graphic features of the languages. The transliteration of personal names and toponyms from English into Azerbaijani often exhibits variation. Standardized rules for English-Azerbaijani transliteration should be established so that everyone follows uniform guidelines during translation.

INTERCULTURAL COMMUNICATION CHALLENGES IN TRANSLATION

Aytan Bakhtiyar BUNYATOVA

Senior lecturer, Sumqayit State University

ORCID ID: 0000-0002-8410-2340

Abstract: Translation cannot be viewed solely as a linguistic activity; it is also a deeply cultural process that involves conveying meaning across different cultural frameworks. Languages are shaped by the traditions, values, and worldviews of their speakers, which means that translation inevitably requires more than the substitution of words from one language to another. In the context of globalization, where interaction among cultures is more frequent and complex, intercultural communication has become increasingly important, particularly within translation studies.

This paper examines the key challenges translators encounter when working with culturally embedded elements in texts. Among the most significant difficulties are idiomatic expressions, culture-specific references, and meanings that depend heavily on context. Such elements often lack direct equivalents in the target language, making literal translation ineffective or even misleading. To address these issues, the study employs qualitative analysis, focusing on selected examples from both literary and non-literary texts in order to illustrate how cultural meaning is negotiated in translation.

The findings reveal that successful translation depends not only on strong linguistic competence but also on a high level of intercultural awareness and sensitivity. Translators must be able to recognize subtle cultural nuances and make informed decisions that preserve the intent of the original message while ensuring clarity for the target audience. In this regard, strategies such as adaptation, localization, and cultural substitution are essential tools. These approaches enable translators to overcome cultural barriers and produce texts that are both accurate and meaningful within a new cultural context.

Xülasə: Tərcümə yalnız dil səviyyəsində həyata keçirilən mexaniki bir fəaliyyət kimi qiymətləndirilə bilməz; o, eyni zamanda müxtəlif mədəni mühitlər arasında mənanın ötürülməsini təmin edən mürəkkəb bir prosesdir. Hər bir dil onu danışan cəmiyyətin dəyərlərini, ənənələrini və dünyagörüşünü əks etdirdiyi üçün tərcümə zamanı sadəcə sözlərin bir dildən digərinə çevrilməsi kifayət etmir. Qloballaşmanın təsiri ilə mədəniyyətlərarası əlaqələrin daha intensiv və çoxşaxəli xarakter alması tərcümə prosesində mədəni komponentin rolunu daha da artırmışdır. Bu baxımdan, mədəniyyətlərarası kommunikasiya xüsusilə tərcümə tədqiqatlarında mühüm istiqamətə çevrilmişdir.

Bu məqalədə mətndə mövcud olan mədəni elementlərin tərcüməsi zamanı qarşıya çıxan əsas çətinliklər araşdırılır. Xüsusilə idiomatik ifadələr, müəyyən mədəniyyətə xas anlayış və istinadlar, eləcə də kontekstdən asılı olaraq dəyişən mənalar tərcüməçilər üçün ciddi problemlər yaradır. Bu tip dil vahidlərinin çox zaman hədəf dildə birbaşa qarşılığı olmur və onların sözbəsöz tərcüməsi mətnin məzmununu təhrif edə bilər. Araşdırmada bu problemləri daha aydın göstərmək məqsədilə həm bədii, həm də qeyri-bədii mətnlərdən seçilmiş nümunələr üzərində keyfiyyət yanaşmasına əsaslanan təhlil aparılmışdır. Bu yanaşma tərcümə prosesində mənanın necə formalaşdırıldığını və uyğunlaşdırıldığını daha dərinlən anlamağa imkan verir.

Tədqiqatın nəticələri göstərir ki, uğurlu tərcümə yalnız dil bilikləri ilə məhdudlaşmır, eyni zamanda yüksək səviyyədə mədəniyyətlərarası şüur və həssaslıq tələb edir. Tərcüməçi mətnin gizli mənalarını, incə mədəni çalarlarını düzgün dərk etməli və onları hədəf auditoriya üçün anlaşılan formada təqdim etməlidir. Bu prosesdə uyğun strategiyaların seçilməsi xüsusi əhəmiyyət daşıyır. Adaptasiya, lokallaşdırma və mədəni əvəzetmə kimi üsullar tərcümə zamanı yaranan mədəni maneələrin aradan qaldırılmasına kömək edir. Nəticə etibarilə, bu yanaşmalar vasitəsilə həm mətnin orijinal məzmunu qorunur, həm də onun yeni mədəni mühitdə qəbul olunması təmin edilir.

Açar sözlər: tərcümə, mədəniyyətlərarası kommunikasiya, lokallaşdırma, mədəni fərqlər, diskurs, qloballaşma

Introduction

Translation plays a fundamental and indispensable role in connecting societies by bridging both linguistic and cultural divides that naturally exist between different language communities. It serves as a key mechanism through which individuals from diverse backgrounds are able to communicate, understand one another, and engage in meaningful exchange. Beyond simply transferring words from one language to another, translation facilitates the circulation of knowledge, cultural values, academic ideas, and social experiences across national and cultural borders. In the contemporary era of globalization, where international interaction has become increasingly frequent, dynamic, and multidimensional, the importance and scope of translation have expanded considerably. As a result, translators are no longer perceived as simple linguistic converters; rather, they are regarded as cultural mediators who play a crucial role in ensuring that meaning is accurately interpreted, appropriately adapted, and effectively communicated across different cultural settings. However, despite this essential function, translation remains a highly complex process, as cultural differences often introduce layers of meaning and interpretation that cannot be addressed through literal or word-for-word translation alone (House, 2020).

Intercultural communication within the field of translation requires a profound and comprehensive understanding not only of linguistic systems but also of the cultural, historical, and social environments in which a text is produced. Every text is deeply rooted in a specific cultural context and reflects the values, beliefs, traditions, and communicative norms of its source community. Therefore, translators must be capable of interpreting both explicit meanings and implicit messages that are embedded within the text. These hidden or context-dependent meanings often require a high level of cultural sensitivity and background knowledge to be properly understood. As House (2015) emphasizes, an effective translation must preserve both semantic meaning and pragmatic function, ensuring that the original communicative intention is maintained while still being meaningful and relevant in the target language. This perspective highlights that translation is not merely a linguistic transfer process but also an interpretive act that demands careful attention to cultural nuance and communicative purpose.

Moreover, successful translation practice requires the integration of multiple competencies, including advanced linguistic proficiency, strong cultural awareness, and well-developed analytical and interpretive skills. Translators must be able to identify culturally specific elements within a text, assess their significance within the source culture, and determine the most appropriate way to render them in the target language. This decision-making process often involves choosing between different strategies such as adaptation, equivalence, localization, or contextualization, depending on the nature of the text and the expectations of the target audience. In this regard, translation can be understood as a dynamic, flexible, and creative process in which meaning is not simply transferred but actively reconstructed in a new cultural environment. As global communication continues to expand and intensify, the importance of intercultural competence in translation becomes increasingly evident, further reinforcing the translator's essential role as a mediator who facilitates understanding and interaction between cultures (Pym, 2023).

Methodology and Materials

This study adopts a qualitative research approach grounded in detailed textual analysis to investigate the complexities of intercultural translation. A range of materials was purposefully selected, including literary texts, media content, and examples from academic discourse, in order to provide a comprehensive perspective on how cultural elements are conveyed across languages. These diverse sources allow for a broader understanding of how translation operates in different communicative contexts and genres.

The analysis specifically concentrates on several key aspects that frequently present difficulties in translation. These include idiomatic expressions, which often carry figurative meanings that are not directly transferable; culture-specific references that may be unfamiliar to the target audience; elements of humor and symbolism that rely heavily on cultural background knowledge; and the broader socio-cultural context that shapes how meaning is constructed and interpreted. By examining these components, the study aims to highlight the intricate relationship between language and culture in the translation process (Munday, 2022).

In order to achieve this, a comparative analytical method was employed, whereby original texts were systematically compared with their translated counterparts. This approach makes it possible to identify shifts in meaning, losses or gains in cultural nuance, and the strategies used by translators to address potential misunderstandings. Particular attention was paid to how translators negotiate equivalence and adapt content to suit the expectations of the target readership.

Additionally, the research is supported by an extensive review of existing literature in the field of translation studies. Relevant theoretical frameworks and previous scholarly findings were incorporated to strengthen the analysis and provide a solid academic foundation. By combining practical textual examination with established theoretical insights, the study offers a more nuanced and reliable understanding of intercultural challenges in translation.

Results and Discussion

The analysis conducted in this study reveals a wide range of significant and interrelated challenges that emerge in the process of intercultural translation. These findings clearly demonstrate that translation cannot be reduced to a simple act of replacing linguistic units from one language to another. Instead, it is a highly interpretive process in which meaning must be carefully reconstructed within a different cultural and communicative framework. The complexity of this process becomes especially evident when dealing with culturally embedded elements that resist direct equivalence (Baker, 2021).

1. Culture-specific expressions. One of the most persistent and noticeable difficulties concerns culture-specific expressions that are deeply embedded in the traditions, history, and collective experience of a particular community. Such expressions often carry meanings that are not immediately transparent to outsiders and therefore do not have direct equivalents in the target language. Idiomatic expressions, proverbs, fixed phrases, and culturally loaded lexical items are particularly challenging because their meanings are typically metaphorical or symbolic rather than literal. When translated word-for-word, these expressions may lose their pragmatic function, distort the intended message, or sound unnatural and confusing for the target audience. As Newmark (1988) emphasizes, achieving cultural equivalence in such cases is essential, which often requires translators to identify functionally comparable expressions or to creatively reconstruct the meaning while maintaining the communicative intent of the original text. In many cases, this process involves a careful balance between fidelity to the source and acceptability in the target culture.

2. Contextual meaning. Another important challenge is associated with the inherently context-dependent nature of language use. Words and expressions do not operate in isolation; rather, their meanings are shaped by a combination of social, cultural, historical, and situational factors. As a result, a single linguistic unit may carry multiple interpretations depending on the context in which it is used. Without sufficient awareness of these contextual layers, translators risk producing inaccurate or misleading renderings. Therefore, effective translation requires going beyond surface-level lexical meaning and engaging in a deeper interpretive process that considers the broader communicative situation. This includes analyzing the background knowledge assumed by the source text, identifying implicit meanings, and understanding the author's communicative intention. Such an approach allows the translator to reconstruct meaning more accurately and avoid potential misunderstandings in the target language (Venuti, 2019).

3. Humor and irony. Humor, irony, and other forms of linguistic creativity present additional and often more subtle difficulties in intercultural translation. These elements are strongly tied to cultural norms, shared experiences, and specific ways of thinking within a community. What is perceived as humorous or ironic in one cultural setting may be completely lost, misunderstood, or even considered inappropriate in another. Wordplay, jokes, satire, and irony frequently depend on double meanings, cultural references, or linguistic ambiguity that cannot be easily transferred into another language. Consequently, translators are often required to move beyond literal translation and instead recreate the intended effect using culturally appropriate equivalents. This may involve

restructuring the message, replacing cultural references, or entirely reformulating the humorous element while preserving its communicative purpose and emotional impact.

4. Strategies for effective translation. To overcome these multifaceted challenges, translators employ a range of strategies designed to facilitate cross-cultural understanding and maintain communicative effectiveness. Among the most widely used approaches are adaptation, which involves modifying content to suit the cultural expectations and norms of the target audience; localization, which ensures that the text is fully aligned with the linguistic, cultural, and sometimes even technical context of the target readership; borrowing, where certain original terms are retained to preserve authenticity or cultural specificity; and cultural substitution, which replaces unfamiliar cultural elements with more familiar equivalents that are more easily understood by the target audience. In addition to these, translators may also use paraphrasing or explanatory additions when necessary to clarify meaning. The selection of an appropriate strategy depends on multiple factors, including the type of text, its communicative purpose, the target audience's cultural background, and the level of equivalence required (Chesterman, 2019).

Overall, the findings of this study strongly suggest that intercultural competence is a fundamental component in determining translation quality. Translators are required to continuously negotiate between remaining faithful to the original text and ensuring clarity, readability, and cultural appropriateness in the target language. This balancing act demands not only advanced linguistic proficiency but also critical thinking skills, cultural sensitivity, and the ability to make informed, context-specific decisions throughout the translation process. Ultimately, translation emerges as a dynamic and creative act of meaning reconstruction, where success depends on the translator's ability to mediate effectively between different cultural systems (UNESCO, 2022).

Conclusion

In conclusion, translation should be understood as a highly complex and multidimensional process that extends far beyond the simple replacement of words from one language to another. It involves the interaction of both linguistic structures and cultural frameworks, which are deeply interconnected in the production and interpretation of meaning. Every act of translation requires the careful negotiation of these two dimensions, as language cannot be separated from the cultural environment in which it exists. For this reason, intercultural communication plays an essential and central role in ensuring that translated texts are not only linguistically accurate but also meaningful, coherent, and culturally appropriate for the target audience.

The study clearly demonstrates that successful translation depends on a combination of competencies. While strong linguistic skills are fundamental, they are not sufficient on their own. Translators must also develop a high level of cultural awareness, sensitivity, and interpretive ability in order to recognize and appropriately handle culturally bound meanings. Without this intercultural competence, there is a significant risk of misinterpretation, loss of meaning, or distortion of the original message. Therefore, translation should be viewed as both a linguistic and a cultural act that requires continuous learning and adaptation (Nord, 2021).

Moreover, the findings emphasize the importance of employing effective translation strategies to overcome cultural and communicative barriers. Techniques such as adaptation, localization, and cultural substitution enable translators to bridge gaps between different cultural systems and ensure that the intended message is successfully transmitted. These strategies not only improve clarity and readability but also enhance the overall quality of communication between societies. In this sense,

translation contributes directly to strengthening intercultural understanding and cooperation in an increasingly interconnected world.

Finally, the study suggests several directions for future research. One promising area is the growing role of digital technologies in translation practice, including computer-assisted translation tools and machine translation systems. In particular, the rapid development of artificial intelligence raises important questions about how automated systems can handle culturally sensitive content and whether they can match the interpretive abilities of human translators. Further investigation into the interaction between human expertise and technological tools in intercultural translation will be essential for understanding the future development of the field.

EFFECTIVE TRANSLATION STRATEGIES FOR ACCURATE AND NATURAL TARGET TEXTS

Laman Maharram GASIMLI

PhD in Philology, Associate Professor

Department of Translation and Philology, Azerbaijan University

E-mail: laman.gasimli@au.edu.az

ORCID ID: 0000-0002-3486-3053

Abstract: This article examines the role of translation strategies in producing target texts that are both accurate and natural. Translation is not a simple process of word substitution; rather, it requires careful decision-making to preserve meaning while ensuring fluency and readability. The study draws on key theoretical frameworks proposed by Eugene Nida, Peter Newmark, and Lawrence Venuti, focusing on concepts such as equivalence, communicative translation, domestication, and foreignization. The paper analyzes a range of translation strategies, including literal translation, borrowing, calque, adaptation, modulation, transposition, and equivalence, highlighting their role in achieving either accuracy or naturalness.

Special attention is given to cultural factors and culture-specific items, which significantly influence the translator's choices. The article also discusses common challenges, such as over-literal translation, terminology issues, and cultural mismatches. The findings suggest that no single strategy is sufficient on its own. Instead, effective translation depends on the translator's ability to combine different strategies based on context, text type, and audience expectations. Ultimately, a balanced and flexible approach is essential for producing high-quality translations that are both faithful to the original and natural for the target reader.

Key words: translation strategies; accuracy; domestication; foreignization; equivalence; calque; semantic translation; communicative translation

DƏQIQ VƏ TƏBİİ HƏDƏF MƏTN LƏR ÜÇÜN SƏMƏRƏLİ TƏRCÜMƏ STRATEGİYALARI

Ləman Məhərrəm qızı QASIMLI

Xülasə: Bu məqalə tərcümə strategiyalarının həm dəqiq, həm də təbii hədəf mətnlərin yaradılmasındakı rolunu araşdırır. Tərcümə sadəcə sözlərin bir dildən digərinə ötürülməsi deyil; o, mənanın qorunması ilə yanaşı, mətnin axıcı və anlaşılan olmasını təmin edən mürəkkəb qərarvermə prosesidir. Tədqiqat Eugene Nida, Peter Newmark və Lawrence Venuti kimi alimlərin nəzəri yanaşmalarına əsaslanaraq ekvivalentlik, kommunikativ tərcümə, domestikasiya və foreignizasiya kimi anlayışları təhlil edir. Məqalədə literal tərcümə, borrowing, calque, adaptasiya, modulasiya, transpozisiya və ekvivalentlik kimi müxtəlif strategiyalar araşdırılır və onların dəqiqlik və təbilik əldə edilməsində rolu göstərilir. Xüsusilə mədəni faktorlar və mədəniyyətə xas vahidlərin tərcümə prosesinə təsiri vurğulanır. Həmçinin, həddindən artıq sözbəsöz tərcümə, terminoloji çətinliklər və mədəni uyğunsuzluqlar kimi problemlər müzakirə olunur. Nəticə olaraq, qeyd olunur ki, heç bir strategiya təkbaşına kifayət deyil. Effektiv tərcümə kontekst, mətn növü və auditoriyaya uyğun olaraq müxtəlif strategiyaların düzgün kombinasiyasını tələb edir. Beləliklə, balanslı və çevik yanaşma həm orijinala sadıq, həm də oxucu üçün təbii olan keyfiyyətli tərcümələrin yaranmasını təmin edir.

Açar sözlər: tərcümə strategiyaları; dəqiqlik; domestikasiya; foreignizasiya; ekvivalentlik; kalkalama; semantik tərcümə; kommunikativ tərcümə

Introduction

Translation is much more than simply replacing words from one language with their equivalents in another. It is a complex process that requires transferring meaning, intention, and cultural nuances from a source text into a target text. A successful translation should be both accurate and natural. Accuracy ensures that the original message is preserved, while naturalness allows the translated text to sound fluent and clear to its readers. In practice, achieving both of these goals at the same time can be challenging. A translation that is too focused on accuracy may sound unnatural or awkward, while a very natural translation may lose some important aspects of the original meaning. For this reason, translators rely on different strategies to make informed decisions during the translation process. This paper explores the most effective translation strategies that help produce target texts which are both accurate and natural. It also discusses key theoretical

perspectives and provides practical examples to demonstrate how these strategies are applied in real-life situations.

Theoretical Background

Translation studies offer several important theories that help explain how translators balance accuracy and naturalness. One of the most influential contributions comes from Eugene Nida, who introduced the distinction between formal equivalence and dynamic equivalence. Formal equivalence focuses on staying close to the original structure and wording, while dynamic equivalence aims to create the same effect on the target audience as the original text does on its readers (Nida, 1964). In many modern contexts, dynamic equivalence is preferred because it produces more natural-sounding translations.

Similarly, Peter Newmark proposed the concepts of semantic and communicative translation. Semantic translation emphasizes accuracy and loyalty to the source text, whereas communicative translation prioritizes clarity and readability for the target audience (Newmark, 1988). These two approaches reflect the ongoing tension between faithfulness and fluency in translation.

Another important perspective is offered by Lawrence Venuti, who introduced the ideas of domestication and foreignization. Domestication involves adapting the text to make it more familiar and natural for the target audience, while foreignization preserves elements of the source culture, even if they may seem unusual (Venuti, 1995). These approaches show how cultural factors influence translation strategies.

The concepts of domestication and foreignization, introduced by Lawrence Venuti, are among the most important approaches in modern translation studies. These two strategies describe how translators deal with cultural differences and how they position the target text in relation to the source culture (Venuti, 1995).

Domestication refers to the strategy of adapting the source text to make it more familiar and accessible for the target audience. In this approach, the translator reduces cultural distance by using expressions, references, and structures that are natural in the target language. As a result, the translated text reads smoothly and feels as if it was originally written in the target language. For example, culturally specific references may be replaced with more familiar ones, or complex expressions may be simplified to improve readability. This strategy is particularly useful in texts where clarity and reader engagement are important, such as advertisements, children's literature, or general media texts. On the other hand, foreignization takes the opposite approach. Instead of adapting the text, the translator deliberately preserves elements of the source culture, even if they sound unusual or unfamiliar to the target audience. This strategy allows readers to experience the "foreignness" of the original text and gain insight into another culture. For instance, culture-specific terms, traditions, or names may be kept in their original form, sometimes with minimal explanation. Foreignization is often preferred in literary translation or academic contexts where maintaining the authenticity of the original text is important.

Both strategies have their advantages and limitations. Domestication improves readability and ensures that the text is easily understood, but it may lead to a loss of cultural richness or original meaning. Foreignization, in contrast, preserves cultural identity and authenticity, but it may make the text more difficult to understand for some readers.

In practice, translators rarely rely entirely on one strategy. Instead, they often combine elements of both domestication and foreignization depending on the purpose of the translation, the

type of text, and the expectations of the audience. For example, a translator may keep key cultural terms (foreignization) while adapting the surrounding text for clarity (domestication).

Ultimately, the choice between domestication and foreignization is not simply a technical decision but also an ethical and cultural one. As Venuti (Venuti, 1995) emphasizes, translation is not neutral; it reflects the translator's choices and influences how cultures are represented and understood. Therefore, a skilled translator must carefully evaluate when to make the text more familiar and when to preserve its original cultural identity.

Overall, these theories highlight that translation is not a mechanical activity but a decision-making process that requires careful strategy selection.

Strategies for Accuracy

One commonly used approach to maintain accuracy is literal translation, where the translator follows the original wording and structure as closely as possible. This method can be effective in technical or scientific texts where precision is essential. However, it must be used carefully, as it can sometimes result in unnatural phrasing.

Another important strategy is borrowing, which involves directly transferring a word from the source language into the target language. This is especially common in specialized fields. For example, the English term "cardiology" is translated into Azerbaijani as "kardiologiya." This approach ensures terminological accuracy and consistency.

Calque, or loan translation, is also widely used. In this strategy, the components of a phrase are translated literally, but the structure is adapted to the target language. For instance, "skyscraper" becomes "göydələn." This method preserves meaning while maintaining clarity.

This strategy is especially useful when the components of the source expression are transparent and can be naturally reproduced in the target language. For example:

- skyscraper - göydələn
- brainwashing - beyin yuma
- software - proqram təminatı

In these cases, each part of the original term is translated directly, resulting in a term that is both understandable and linguistically acceptable in the target language. Calque plays an important role in the development of terminology, particularly in fields such as technology, science, and politics. Many modern terms enter a language through calquing because it allows the target language to create new expressions using its own lexical resources rather than relying entirely on foreign words. However, calque is not always successful. If used without careful consideration, it can produce unnatural or confusing expressions. This often happens when the structure of the source language does not match the natural patterns of the target language. For instance, a direct calque of idiomatic expressions may sound awkward or even meaningless. For this reason, translators need to evaluate whether a calque will be clear and acceptable for the target audience. In some cases, it may be better to use other strategies such as adaptation or equivalence instead. As noted in translation studies, the effectiveness of calque depends on linguistic compatibility and cultural familiarity (Munday, 2016).

In conclusion, calque is a valuable strategy that supports accuracy while still allowing some degree of naturalness. When used appropriately, it helps expand the vocabulary of the target language and maintains a close connection to the original meaning.

Strategies for Naturalness

To produce fluent and natural translations, translators often rely on more flexible strategies. One such strategy is adaptation, which involves modifying cultural references so that they are more familiar to the target audience. For example, a culturally specific sports might be replaced with depending on the context and audience.

Modulation is another effective technique that changes the perspective or wording of a sentence to make it sound more natural. For instance, instead of translating "It is not difficult" directly, it may be rendered as "Bu asandır" which sounds more natural in Azerbaijani. Transposition involves changing grammatical structures without altering the meaning. For example, "He decided to leave" can be translated as "O, getmək qərarına gəldi." This shift makes the sentence more natural in the target language. Equivalence is particularly useful for idiomatic expressions. A direct translation of idioms often fails, so translators find equivalent expressions instead. For example, "It's raining cats and dogs" is best translated as "leysan yağır" or "bir leysan yağır ki, tut ucundan göyə çıx" (from a popular movie of Azerbaijan) which conveys the same meaning naturally.

Balancing Accuracy and Naturalness

In real translation tasks, it is rarely enough to rely on a single strategy. Translators often combine multiple approaches to achieve the best result. Two useful techniques in this regard are omission and addition.

Omission involves removing redundant or unnecessary elements that do not add meaning in the target language. For example, "He nodded his head" can simply be translated as "O, başını tərpətdi." On the other hand, addition helps clarify meaning by including extra information when necessary. For instance, the word "Novruz" may be translated as "Novruz bayramı (spring festival in Azerbaijan)" to ensure understanding for international readers.

These strategies help create a balance between clarity, accuracy, and readability.

Cultural Factors in Translation

Cultural differences play a crucial role in translation. Many expressions are deeply rooted in a particular culture and may not have direct equivalents in another language. These are often referred to as culture-specific items (Baker, 2018).

For example, the American holiday "Thanksgiving" may not be familiar to Azerbaijani readers. In such cases, translators may use explanation or adaptation, such as "Amerikada qeyd olunan Şükran Günü." The choice between domestication and foreignization depends on the purpose of the translation. If the goal is readability, domestication is often preferred. However, if preserving cultural authenticity is important, foreignization may be more appropriate.

Challenges in Applying Translation Strategies

Despite the availability of various strategies, translation remains a challenging task. One common issue is over-literal translation, which can produce awkward and unnatural sentences. This often happens when translators focus too much on form rather than meaning. Another difficulty is related to terminology, especially in specialized areas such as medicine, law, or technology. Translators need both linguistic and subject-specific knowledge to ensure accuracy.

Additionally, cultural differences can create misunderstandings if not handled carefully. Translators must constantly evaluate their choices and adapt their strategies depending on the context.

Conclusion

In conclusion, effective translation requires a careful balance between accuracy and naturalness. Translation strategies play a key role in achieving this balance, as they provide practical solutions to various linguistic and cultural challenges.

No single strategy can solve all translation problems. Instead, successful translation depends on the translator's ability to select and combine appropriate strategies based on the context, purpose, and audience. By applying both theoretical knowledge and practical skills, translators can produce texts that are not only accurate but also natural and engaging.

IMPORTANCE OF TRANSLATION TRADITIONS IN TURKIC LANGUAGES

Shafiga Yusif NAJAFOVA

PhD, Associate Professor, Sumgayit State University

E-mail: shafiga.nacafova@bk.ru

ORCID ID: [0000-0002-8051-0304](https://orcid.org/0000-0002-8051-0304)

Abstract: The importance of translation traditions in Turkic languages is one of the important directions of cultural history and linguistic science of Turkic peoples. Translation is not only the process of translating texts from one language to another, but also acts as a means of transmitting cultures, ideas and historical experiences. In the article the stages of historical development of translation traditions, their cultural and scientific significance are shown. Translation activities in the Middle Ages were mainly based on the translation of religious and scientific texts from Arabic and Persian into Turkic languages. This process had a significant impact on the assimilation of the intellectual achievements of Islamic civilization by the Turkic peoples and the formation of national literature. Translations from European and Russian languages during the 19th–20th centuries contributed to the expansion of enlightenment movements, the processes of national awakening and the emergence of new literary genres. In modern times, there are both problems and wide opportunities in the field of translation. Terminological discrepancies, technical and literary translation difficulties are some of the main problems that stand out. At the same time, the development of digital technologies, automated translation systems and cultural cooperation among Turkic-speaking states further expands the prospects for translation traditions.

As a result, the systematic study of translation traditions in Turkic languages is of great importance both from the point of view of linguistic and cultural integration. The preservation and development of these traditions will further strengthen the intellectual and cultural unity among the Turkic peoples in the future.

Keywords: translation, tradition, language, development, Turkic, people

TÜRK DİLLERİNDE ÇEVİRİ GELENEKLERİNİN ÖNEMİ

Şəfiqə Yusif Nəcəfova

PhD, dosent, Sumqayıt Dövlət Universiteti

E-mail: shafiga.nacafova@bk.ru

ORCID ID: 0000-0002-8051-0304

Özet: Türk dillerinde çeviri geleneklerinin incelenmesi, Türk halklarının kültür tarihi ve dilbilim biliminin önemli yönlerinden biridir. Çeviri, yalnızca metinlerin bir dilden diğerine aktarılması süreci değil, aynı zamanda kültürlerin, fikirlerin ve tarihsel deneyimlerin aktarılmasının bir aracı olarak da işlev görür. Makalede çeviri geleneklerinin tarihsel gelişim aşamaları ele alınmış, bunların kültürel ve bilimsel önemi ortaya konulmuştur. Orta Çağ'da çeviri faaliyetleri esas olarak dini ve bilimsel metinlerin Arapça ve Farsçadan Türk dillerine aktarılması üzerine kurulmuştur. Bu süreç, Türk halklarının İslam medeniyetinin entelektüel kazanımlarını benimsemesine ve milli edebiyatın oluşmasına önemli katkı sağlamıştır. XIX–XX. yüzyıllarda ise Avrupa ve Rus dillerinden yapılan çeviriler, aydınlanma hareketlerinin genişlemesine, milli uyanış süreçlerine ve yeni edebi türlerin ortaya çıkmasına zemin hazırlamıştır. Günümüzde çeviri alanında hem sorunlar hem de geniş imkânlar bulunmaktadır. Terminolojik uyumsuzluklar ile teknik ve edebi çeviri zorlukları başlıca sorunlar arasında yer almaktadır. Bununla birlikte, dijital teknolojilerin, otomatik çeviri sistemlerinin ve Türk dilli devletler arasındaki kültürel iş birliğinin gelişmesi, çeviri geleneklerinin geleceğini daha da genişletmektedir. Sonuç olarak, Türk dillerinde çeviri geleneklerinin sistemli bir şekilde incelenmesi hem dilbilim hem de kültürel entegrasyon açısından büyük önem taşımaktadır. Bu geleneklerin korunması ve geliştirilmesi, gelecekte Türk halkları arasındaki entelektüel ve kültürel birliği daha da güçlendirecektir.

Anahtar kelimeler: çeviri, gelenek, dil, gelişim, Türk, halklar

Introduction

The Turkic language family is one of the oldest and most widespread language families in the world. The peoples speaking these languages have established at various stages of history close cultural and political relations with one another, resulting in the formation of a rich literary and scientific heritage. One of the key dimensions of these interactions is translation traditions. Translation is not merely the transfer of words among languages, but also a medium for transmitting cultures, worldviews and historical experiences.

Translation traditions in Turkic languages have a centuries-long history. During the Middle Ages, translations from Arabic and Persian sources played a significant role in the cultural development of Turkic peoples, while the translation of religious texts and classical poetry contributed to the formation of new literary genres. In the 19th and 20th centuries, translations from European languages facilitated the strengthening of national enlightenment movements and enabled the dissemination of new intellectual currents among Turkic peoples.

Written monuments of Turkic languages, especially the Orkhon-Yenisei inscriptions dating back to the 8th century, represent not only the earliest examples of writing in Turkic, but also reveal initial traces of translation processes. These inscriptions exhibit lexical influences from Chinese,

Buddhist and shamanistic traditions (Ergin, 2010: 52). In the 11th century Divani Lughat al-Turk by Mahmud al-Kashgari demonstrated not only the lexical richness of Turkic languages, but also the possibilities of mutual comprehension and translation among different dialects (Kashgari, 2006: 18). Through this work the meanings and usages of Turkic words were explained to Arabic readers.

With the spread of Islamic culture in Turkic regions during the Middle Ages, translations from Arabic and Persian became widespread. Religious texts, Sharia manuals, commentaries and hadith collections were translated into Turkic, contributing to the enlightenment of the population (Korkmaz, 2008: 134). During the 14th and 16th centuries, the translation of epics, heroic narratives and court literature expanded significantly. Particularly in Anatolia, Central Asia and the Kazan region, translations among Turkic languages ensured the continuity of cultural interaction.

In the modern era the globalization, integration among Turkic-speaking states and the development of information technologies have made the study of translation traditions even more relevant. On the one hand, there is a need for a common terminological base and translation standards to ensure mutual understanding and cultural integration among Turkic peoples. On the other hand, the development of translation theory enables Turkological research to be conducted within a broader analytical framework.

The main objective of this article is to trace the historical stages of translation traditions in Turkic languages, to demonstrate their cultural and scientific significance and to analyze contemporary challenges from a scholarly perspective. The following tasks are identified:

1. To examine the theoretical foundations of translation traditions in Turkic languages;
2. To investigate the main stages of translation practice from the Middle Ages to the present;
3. To analyze the role of translation in cultural integration among Turkic peoples;
4. To identify contemporary problems in the field of translation and propose possible solutions.

Thus, the relevance of the topic stems both from the shared history and culture of Turkic peoples and from the demands of modern intellectual development. Translation is not limited to the transfer of linguistic units from one language to another; it is also one of the most important means of intercultural communication. This is particularly significant in the context of Turkic languages, which, despite their common genetic roots, have diverged over centuries due to various historical, political and geographical factors, acquiring phonetic, lexical and grammatical differences. In this regard, translation serves not only as a communicative tool but also as an integrative function.

Modern translation theory has developed at the intersection of linguistics, semiotics, cultural studies and philosophy. Traditional theories of translation were primarily based on the concept of “equivalence” meaning that the meaning of a text should be transferred as accurately as possible into another language. However, achieving such equivalence can be challenging among Turkic languages due to:

- Divergent semantic developments of words over time;
- Terminological inconsistencies;
- The necessity of adapting figurative expressions to national-cultural codes in literary translation.

Materials and Methods

The study of translation traditions among Turkic languages presents several methodological challenges:

1. Fragmentation or loss of sources, many medieval written monuments have been lost or survive only in incomplete forms;
2. Language changes, shifts in alphabets (Arabic, Latin, Cyrillic) complicate the study of texts;
3. Dialectal variation, translation traditions have developed differently across regions;
4. Lack of theoretical foundations, although translation theory was developed in the West, its application in Turkological contexts remains insufficiently systematized.

At the beginning of the 20th century there was a strong need for translation activity among Turkic peoples. During the Soviet period, this activity became systematic, with classical and modern works translated into Turkic languages through Russian as an intermediary language. Works by Nizami, Fuzuli, Magtymguly, Abai, Jalil Mammadguluzade and others became widely disseminated among Turkic peoples. However, the use of Russian as an intermediary often resulted in the loss of certain stylistic features of the original texts (Mammadov, 2012: 147).

During the period of independence, direct translations among Turkic languages increased. Within the framework of cultural exchange among countries such as Turkey, Azerbaijan, Kazakhstan, Uzbekistan and Kyrgyzstan, both classical and contemporary authors began to be translated directly (Abdulkadir, 2020: 56).

Translation traditions in Turkic languages involve not only the transfer of literary texts but also the transmission of cultures. The translation of religious texts, epics and folklore has contributed to preserving the shared cultural memory of Turkic peoples. Today the translation of modern literature and scientific works strengthens intellectual unity among Turkic-speaking communities.

Results and Discussion

The study of translation traditions opens new opportunities for the comparative analysis of Turkic languages. Through translation materials, it is possible to:

- Trace the historical development of vocabulary;
- Identify directions of semantic change;
- Examine the level of interaction between languages.

All this demonstrates that the study of translation traditions is not only of philological interest, but also significant for evaluating the integrative potential of the Turkic world in a scientific context.

The Middle Ages represent a crucial stage in the literary and cultural development of Turkic peoples. During this period, translation activity in Turkic languages was widespread in both religious and literary domains. Due to the scientific and cultural prestige of Arabic and Persian, many works were translated into Turkic, enriching the national literary environment.

Although the Orkhon-Yenisei inscriptions are not direct examples of translation, they indicate early cultural contact with other languages. The most widespread field of translation in the Middle Ages was religious texts. Following the adoption of Islam, the Qur'an was translated into various Turkic languages, both orally and in written form, facilitating the spread of religious knowledge.

Additionally, philosophical and scientific works written in Arabic and Persian, such as those by Al-Farabi and Ibn Sina were partially translated and studied in Turkic contexts. The translations contributed not only to linguistic transfer, but also to the formation of new poetic styles.

Turkic epics and folklore were also translated into other languages. The Book of Dede Gorgud, in particular, was translated into various languages, reinforcing shared cultural memory.

Moreover, translations from Arabic and Persian introduced new literary genres such as qasida, ghazal and masnavi (Abdullayev, 2015: 96).

Scientific texts in astronomy, medicine, philosophy and mathematics were also translated, influencing the development of scientific thought. For example, works by Nasir al-Din Tusi were translated into Turkic and used extensively.

From the mid-19th century onward, a new phase began in the socio-political life of Turkic peoples. Enlightenment ideas, the press and new educational institutions emerged. Translations from European languages, primarily Russian, French and German played a crucial role in shaping intellectual elites and disseminating enlightenment ideals.

Figures such as Mirza Fatali Akhundov in Azerbaijan and similar intellectuals in Central Asia translated European classics, contributing to the development of new literary thinking. The rise of newspapers and journals further expanded translation activity, making it a vehicle for public discourse and reform.

Translations of works by authors such as Pushkin, Tolstoy, Shakespeare and Molière significantly influenced the development of national literatures, introducing new genres, styles and literary techniques.

In the early 20th century translation became a tool for preserving national identity. Alphabet reforms, terminology development and the production of educational materials were key priorities. During the Soviet era the translation was both a means of cultural enrichment and an instrument of ideological control.

Conclusion

The study of translation traditions in Turkic languages is an integral part of a rich cultural history. From medieval religious translations to modern intellectual exchange, translation has played a vital role in cultural development and integration. Despite contemporary challenges, such as terminological inconsistencies and technical limitations, advances in digital technologies and international cooperation offer promising prospects.

A systematic study of these traditions is essential not only for linguistics but also for understanding cultural, historical and integrative processes in the Turkic world. The preservation and development of these traditions will strengthen cultural unity and promote the global dissemination of Turkic literature and scholarship.

THE COMMUNICATIVE ROLE OF TRANSLATION IN THE ERA OF GLOBALIZATION

Leman Vahid ZEYNALOVA-MAMMADZADE

Lecturer, Department of Foreign Languages, Mingachevir State University

E-mail: aman.zeynalova.v@mdu.edu.az

ORCID ID: 0000-0003-1526-1409

Abstract: This article extensively examines the communicative role of translation in the era of globalization. In the modern world, the intensification of mutual relations between people of different languages and cultures has further increased the importance of translation. The study shows that translation not only performs the function of language mediation, but also acts as one of the main components of the intercultural communication process. The article analyzes the informative, expressive, appellative and cultural functions of translation, and determines its role in international cooperation, science, education and economics.

At the same time, the development of digital technologies and artificial intelligence-based translation systems has provided new opportunities for the translation process. However, these technologies have certain limitations in terms of the full transmission of cultural context and semantic subtleties. In this regard, the role of the human translator still remains important. The article also discusses the problems encountered in the translation process, including terminological inconsistencies, cultural differences and quality control issues.

In conclusion, it is noted that in the conditions of globalization, translation is an integral part of the global communication system and plays an important role in ensuring mutual understanding between different cultures. In the future, the development of human collaboration with technology will further increase the effectiveness of translation.

QLOBALLAŞMA DÖVRÜNDƏ TƏRCÜMƏNİN KOMMUNİKATİV ROLU

Ləman Vahid ZEYNALOVA-MƏMMƏDZADƏ

Müəllim, Xarici Dillər Kafedrası, Mingəçevir Dövlət Universiteti

E-mail: aman.zeynalova.v@mdu.edu.az

ORCID ID: 0000-0003-1526-1409

Xülasə: Bu məqalədə qloballaşma dövründə tərcümənin kommunikativ rolu geniş şəkildə araşdırılır. Müasir dünyada müxtəlif dillərə və mədəniyyətlərə mənsub insanlar arasında qarşılıqlı əlaqələrin intensivləşməsi tərcümənin əhəmiyyətini daha da artırır. Tədqiqat göstərir ki, tərcümə təkcə dil vasitəçiliyi funksiyasını yerinə yetirmir, həm də mədəniyyətlərarası ünsiyyət prosesinin əsas komponentlərindən biri kimi çıxış edir. Məqalədə tərcümənin informativ, ifadəli, apellyasiyaedici və mədəni funksiyaları təhlil edilir və beynəlxalq əməkdaşlıq, elm, təhsil və iqtisadiyyatdakı rolu müəyyən edilir.

Eyni zamanda, rəqəmsal texnologiyaların və süni intellekt əsaslı tərcümə sistemlərinin inkişafı tərcümə prosesi üçün yeni imkanlar yaratmışdır. Lakin bu texnologiyalar mədəni kontekstin və semantik incəliklərin tam ötürülməsi baxımından müəyyən məhdudiyyətlərə malikdir. Bu baxımdan insan

tərcüməçisinin rolu hələ də vacib olaraq qalır. Məqalədə həmçinin tərcümə prosesində rast gəlinən problemlər, o cümlədən terminoloji uyğunsuzluqlar, mədəni fərqlər və keyfiyyətə nəzarət məsələləri müzakirə olunur.

Nəticədə qeyd olunur ki, qloballaşma şəraitində tərcümə qlobal kommunikasiya sisteminin ayrılmaz hissəsidir və müxtəlif mədəniyyətlər arasında qarşılıqlı anlaşılanın təmin edilməsində mühüm rol oynayır. Gələcəkdə texnologiya ilə insan əməkdaşlığının inkişafı tərcümənin effektivliyini daha da artıracaq.

Açar sözlər: qloballaşma, tərcümə, kommunikasiya, mədəniyyətlərarası kommunikasiya, maşın tərcüməsi, dil, informasiya mübadiləsi

Introduction

In the 21st century, the process of globalization is characterized by the intensification of social, economic, political and cultural relations on a global scale. As a result of this process, the need for mutual understanding between people of different languages and cultures has increased sharply. In such a situation, translation acts not only as a language tool, but also as one of the main components of the global communication system (Baker & Saldanha, 2020).

Under the influence of globalization, the flow of information has accelerated, international cooperation has expanded, and a multicultural environment has been formed. In this context, translation plays the role of a bridge between different languages and cultures, ensuring the transfer of knowledge, ideas and values. The communicative role of translation is especially evident in the fields of diplomacy, international law, economics, science and education.

In modern times, the concept of translation has expanded to include not only written and oral translation, but also areas such as audiovisual translation, localization, subtitling and machine translation. This makes the communicative function of translation more complex and multifaceted.

The purpose of this article is to systematically analyze the communicative role of translation in the context of globalization, to identify its functions, problems and development prospects.

Materials and methods

The theoretical and methodological basis of the study is modern scientific research conducted in the field of translation studies, communication theory and intercultural communication. The study gave preference to international scientific sources published in the last 10 years.

Methods used

1. Analytical method

A systematic analysis of the scientific literature on modern translation theories was conducted. Through this method, various approaches to the communicative function of translation were compared.

2. Comparative method

Translation processes between different languages and cultures were compared and common and different aspects were identified. This method was used especially in identifying intercultural communication problems.

3. Descriptive method

The functions and features of translation were presented in a descriptive manner, and their systematization was carried out.

4. Discourse analysis

How communicative intent is conveyed in translated texts has been analyzed. This approach is particularly important in studying the role of translation in media and political discourse.

5. Contextual approach

The translation process has been examined within a social, cultural and technological context. This approach is important in terms of showing that translation is not just a linguistic phenomenon.

Research materials

- Articles published in international scientific journals
- Monographs on translation studies
- Research on digital translation technologies
- Reports of international organizations

Discussion

1. Communicative nature and functions of translation

Translation is an important component of the communication process and its main goal is to adequately transfer information from the source language to the target language. However, this process does not occur only at the semantic level; pragmatic, stylistic and cultural components also play an important role here (Munday, 2016).

The main communicative functions of translation are as follows:

- Informative function – information transfer
- Expressive function – emotional and aesthetic content delivery
- Appellative function – influencing the reader
- Cultural function – establishing intercultural relations

These functions are becoming increasingly relevant, especially in the context of globalization, and prove that translation is a multidimensional communicative tool.

2. Globalization and translation: new realities

Globalization has expanded the scope of translation activities and increased its importance. In modern times, international organizations, transnational companies and media institutions widely use translation.

The impact of globalization on translation is observed in the following areas:

- Preservation and dissemination of linguistic diversity
- Strengthening international cooperation
- Formation of multicultural societies
- Acceleration of global information flows

Cronin (2017) notes that translation is both a product and a driving force of globalization.

3. Digital technologies and the transformation of translation

In recent years, artificial intelligence and machine translation technologies have had a significant impact on the translation process. In particular, neural machine translation (NMT) systems provide more natural and contextual results (Kenny, 2020).

Advantages:

- Fast translation capabilities
- Processing of large databases
- Real-time communication

Limitations:

- Poor transmission of cultural context
- Mistranslation of idiomatic expressions
- Style and stylistic issues

O'Hagan (2019) emphasizes that although technologies facilitate the translation process, the role of the human translator still remains important.

4. Translation and intercultural communication

Translation is one of the main tools in the process of intercultural communication. Each text carries certain cultural codes, and the correct transmission of these codes is essential for successful communication.

The impact of cultural differences on translation:

- Idioms and phraseologisms
- National realities and terms
- Values and social norms

In these cases, the translator uses various strategies:

- Adaptation
- Transliteration
- Explanation
- Finding an equivalent

Pym (2018) notes that the translator fulfills the role of a “cultural mediator” and communicative success depends on this role.

5. Professional translation and ethical issues

In the era of globalization, the responsibility of the translator has increased. Accuracy and objectivity are essential, especially in the translation of legal, medical and political texts.

Basic ethical principles:

- Accuracy
- Confidentiality
- Neutrality
- Cultural sensitivity

Biel (2019) notes that the professional training of the translator is a key condition for communicative success.

6. Problems and challenges

Modern translation faces the following problems:

- Terminological inconsistencies
- Language barriers
- Technology dependence
- Quality control problems

In addition, crowdsourcing and automated systems further complicate quality issues (Jiménez-Crespo, 2017).

Conclusion

The study shows that in the era of globalization, translation is one of the main pillars of communicative processes. Translation is not only the transmission of information, but also the provision of intercultural mutual understanding.

Although digital technologies expand the capabilities of translation, the human factor is still indispensable. The role of professional translators remains great, especially in terms of the transmission of cultural and pragmatic aspects.

In the future, the development of artificial intelligence and human cooperation in the field of translation is expected. This will further strengthen the communicative role of translation and lead to the emergence of new research directions.

NAVIGATING THEOLOGICAL AND CULTURAL BOUNDARIES IN RELIGIOUS TRANSLATION: A CASE STUDY OF "AYAKLARIN HÜKMÜ"

Saida Vahid ASADOVA

Translator, Azerbaijan University of Languages

E-mail: Asadovasaida7@gmail.com.

ORCID ID: 0009-0006-3104-8041

Abstract: This research examines the complexities of translating specialized religious texts, specifically focusing on the Turkish translation of Olusegun Festus Remilekun's work, *"Deliverance of the Feet: The Mystery of Foot Washing."* The study explores the multifaceted challenges of transferring African-Christian theological metaphors into a Turkish linguistic and cultural context. Using a comparative-descriptive method, the paper analyzes the tension between formal and functional equivalence, particularly in how spiritual terminology is adapted for a target audience with a different religious background.

Key focus areas include the translator's decision-making process regarding the title and specific spiritual concepts that lack direct equivalents in the Turkish language. The research delves into the nuances of "cultural untranslatability" and how the translator acts as a cultural mediator to preserve the author's original intent while ensuring theological clarity. The study concludes that successful religious translation extends beyond mere linguistic substitution; it requires deep cultural mediation and a profound understanding of the source culture's spiritual nuances. Ultimately, this paper highlights the importance of maintaining the delicate balance between sacredness and accessibility in the translation of contemporary theological literature.

Keywords: religious translation, theological metaphors, intercultural communication, African-Christian theology, linguistic adaptation.

**DİNİ TƏRCÜMƏDƏ TEOLOJİ VƏ MƏDƏNİ SƏRHƏDLƏRİN KEÇİLMƏSİ:
"AYAKLARIN HÜKMÜ" ƏSƏRİ ƏSASINDA NÜMUNƏLİ TƏDQIQAT**

Səidə Vahid ƏSƏDOVA

Tərcüməçi, Azərbaycan Dillər Universiteti

E-mail: Asadovasaida7@gmail.com.

ORCID ID: 0009-0006-3104-8041

Xülasə: Bu tədqiqat işi dini xarakterli ixtisaslaşmış mətnlərin tərcümə mürəkkəbliyini, Olusegun Festus Remilekunun "Ayaqların Hükmü: Ayaq Yıkamanın Sırrı" adlı əsərinin ingilis dilindən türk dilinə tərcüməsi nümunəsində təhlil edir. Məqalədə Afrika-Xristian teoloji metaforalarının türk dil və mədəni mühitinə köçürülməsi zamanı qarşıya çıxan çoxşaxəli linqvistik çətinliklər araşdırılır. Müqayisəli-təsviri metoddan istifadə edilərək aparılan bu tədqiqatda formal və funksional ekvivalentlik arasındakı gərginlik, xüsusilə hədəf oxucu kütləsi üçün fərqli dini kontekst daşıyan mənəvi terminologiyanın adaptasiyası təhlil olunur.

Tədqiqatın əsas fokus nöqtələrini tərcüməçinin əsərin adı və türk dilində birbaşa qarşılığı olmayan spesifik ruhani anlayışlarla bağlı qərarvermə prosesi təşkil edir. Məqalədə "mədəni tərcüməolunmazlıq" nüanslarına toxunulur və müəllifin ilkin niyyətini qorumaqla yanaşı, teoloji aydınlığı təmin etmək üçün tərcüməçinin mədəni vasitəçi rolu araşdırılır. Tədqiqatın nəticəsində vurğulanır ki, uğurlu dini tərcümə sadəcə dil vahidlərinin əvəzlənməsi deyil, eyni zamanda mənbə mədəniyyətin ruhani incəliklərini dərinlən anlamağı tələb edən geniş mədəni vasitəçilik prosesidir. Yekun olaraq, bu iş müasir teoloji ədəbiyyatın tərcüməsində müqəddəslik və anlaşılıqlıq arasındakı zərif balansın qorunmasının vacibliyini işıqlandırır.

Açar sözlər: dini tərcümə, teoloji metaforalar, mədəniyyətlərarası kommunikasiya, Afrika-Xristian teologiyası, linqvistik adaptasiya.

Introduction

Translation is generally considered as a means of bridging the gap between languages and cultures. It is defined as being neither a creative art nor an imitative art, but stands somewhere between the two. The translator should take into account both the structure and the meaning before translating a particular text. Understanding the author's intent is the starting point of this process. Translators have to find the appropriate words and expressions in order to convey the exact meaning. They ought to work within the core of the target culture and know the rules of the target language community so as to find appropriate equivalents to achieve pragmatic competence which "...consists not only of linguistic knowledge but also of knowledge of the rules of language use". (Olshtain & Blum Kulka, 1996:16). However, the complexity of this process intensifies significantly when dealing with **sacred or theological texts**. Religious translation is not merely a transfer of vocabulary; it is a profound act of cultural and spiritual mediation. In this context, the translator faces the daunting task of preserving the "sanctity" of the original message while ensuring it resonates with a target audience that may hold entirely different cultural and religious presuppositions.

This challenge is particularly evident in the translation of contemporary African-Christian literature into the Turkish language. The linguistic environment of Turkey is deeply influenced by a different theological tradition, which often lacks direct equivalents for specific African-Christian spiritual metaphors and concepts. Therefore, the translator must move beyond **formal equivalence** (word-for-word translation) and strive for **functional or dynamic equivalence**. Consequently, equivalence means "the correspondence of effects: those of the original on the source language audience versus those of the translation on the target language audience". (Beaugrande, 1994:56).

This requires a deep dive into the source culture's spiritual nuances to ensure that the translated text evokes the same emotional and spiritual response in the Turkish reader as it did in the original English audience.

By analyzing the translation of Olusegun Festus Remilekun's *"Deliverance of the Feet: The Mystery of Foot Washing,"* this study seeks to demonstrate how these linguistic and cultural barriers are navigated. It focuses on the strategic choices made during the translation process to bridge the gap between two vastly different spiritual landscapes.

The specific objective of this paper is to evaluate the translator's role as a cultural filter and to analyze how specific terms like 'deliverance' and 'mystery' are adapted to maintain theological integrity in a cross-cultural setting.

Material and Methods

The primary material for this research is the contemporary theological work titled *"Deliverance of the Feet: The Mystery of Foot Washing"* by the Nigerian author Olusegun Festus Remilekun. This study specifically examines the original English text and its subsequent translation into Turkish, titled *"Ayakların Hükmü: Ayak Yıkamanın Sırrı."* The selection of this material is based on its rich usage of African-Christian spiritual terminology and metaphors, which present a unique challenge for cross-cultural linguistic transfer.

The methodology of this research follows a **qualitative and comparative-descriptive approach**. To ensure the highest level of accuracy and to bridge the gap between two distinct religious contexts, the following methods were employed during the translation and research process:

1. **Comparative Linguistic Analysis:** A rigorous comparative study was conducted between the source language (English) and the target language (Turkish) to identify lexical gaps and find appropriate functional equivalents for specialized theological terms.

2. **Thematic and Contextual Research:** Extensive research was performed using specialized religious dictionaries and academic literature to decode the metaphors specific to African-Christian theology.

3. **Direct Author Consultation (Interventionist Approach):** A distinctive feature of this research methodology involved direct communication with the author, Olusegun Festus Remilekun. In instances where metaphors or specific spiritual concepts were highly nuanced or culturally ambiguous, the author's primary intent was clarified through personal correspondence. This ensured that the translation did not merely reflect a literal substitution but a faithful reconstruction of the author's original spiritual vision.

4. **Application of Dynamic Equivalence:** The study utilizes Eugene Nida's framework of dynamic equivalence to assess how the translated text maintains the same pragmatic impact on the Turkish reader as the original text had on the English audience.

The research process was structured into three distinct phases to ensure linguistic precision and cultural relevance. The first phase involved a **pre-translational analysis**, where the entire manuscript was scanned for "culture-bound" terms—elements that are unique to the West African Christian experience and do not have an immediate conceptual framework in the Turkish social or religious structure. This phase was crucial for identifying potential areas of "semantic loss," where a literal translation would fail to capture the underlying spiritual authority of the text.

In the second phase, a **theological mapping strategy** was applied. Given that the target language, Turkish, is heavily influenced by Islamic linguistic traditions, the challenge was to select

terms that convey Christian theological concepts without creating conceptual confusion for the reader. This required a delicate balance between using established Turkish Christian terminology and introducing neologisms where existing vocabulary was insufficient. The translator's role thus evolved into that of a "lexical strategist," choosing words that maintain the sanctity of the original message while adhering to the grammatical and stylistic norms of the target language.

The final phase focused on **pragmatic validation**. Every chapter was reviewed to ensure that the "perlocutionary effect"-the effect intended by the author to inspire or guide the reader—was successfully replicated. By prioritizing the communicative purpose of the text over a rigid word-for-word structure, the research emphasizes the importance of "thick translation." This approach involves not just changing words, but providing enough context so that the Turkish audience can grasp the mystery and deliverance described in the original work. The synthesis of these methods provides a comprehensive framework for evaluating the success of translating contemporary religious literature across vastly different cultural paradigms.

Results and Discussion

The analysis of the translation process reveals that the primary challenge lies in the "theological shift" between the West African Christian context and the Turkish linguistic environment. A significant portion of the results focuses on the lexical choices made to bridge these two spiritual worlds.

One of the most critical examples of this study is the translation of the title itself: *"Deliverance of the Feet."* In the source text, the word **"Deliverance"** carries a heavy charismatic-theological weight, implying not just a physical freeing but a spiritual liberation from unseen bondages. In the Turkish translation, the choice of **"Hükmü"** (Authority/Dominion) or **"Kurtuluşu"** (Salvation/Rescue) was debated. Through an interventionist approach, it was determined that the term must evoke the "mystery" (Sır/Gizem) behind the act of foot washing. The study finds that using **"Ayakların Hükmü"** provides a stronger pragmatic resonance for the target audience, emphasizing the spiritual authority granted through this humble act.

Another vital aspect of the discussion involves the translation of **Biblical terminology** and specific metaphors found within the text. For instance, when dealing with concepts of "spiritual warfare" or "covenantal blessings," the research highlighted a lack of direct equivalents in standard Turkish dictionaries. During the translation of several complex passages, **personal communication with the author, Olusegun Festus Remilekun**, proved indispensable. In one particular instance involving a spiritual metaphor that appeared culturally ambiguous, the author clarified that the intent was to convey "divine intervention through physical obedience." This clarification allowed the translator to avoid a literal "word-for-word" trap and instead employ a **functional substitute** that preserved the author's original spiritual intensity.

Furthermore, the discussion addresses the adaptation of the term **"Mystery" (The Mystery of Foot Washing)**. While the Turkish word *"Gizem"* is common, the word *"Sır"* was selected for its deeper, more traditional, and theological connotations in Eastern spiritual literature. This choice reflects the study's finding that successful religious translation must often lean on the "sacred vocabulary" of the target culture to be accepted as an authentic spiritual text.

Conclusion

This research has demonstrated that the translation of contemporary religious texts, specifically within the African-Christian and Turkish linguistic paradigm, is a process that extends far beyond simple lexical substitution. Through the analysis of Olusegun Festus Remilekun's

"*Deliverance of the Feet*," it is evident that a successful translation requires a delicate balance between linguistic accuracy, theological integrity, and cultural resonance.

The study reaches several key conclusions:

1. **The Role of the Translator as a Cultural Mediator:** The translator does not merely translate words but acts as a bridge between two distinct spiritual worldviews. The necessity of moving from formal to functional equivalence is paramount when dealing with metaphors that have no direct conceptual counterpart in the target culture.
2. **The Importance of Author Consultation:** As shown in the research, direct communication with the author serves as a vital tool for resolving semantic ambiguities. This intervention ensures that the "spiritual authority" of the source text remains intact in the translation.
3. **The Impact of Sacred Vocabulary:** The choice of traditional and theological terms in the target language (such as selecting "*Sır*" over "*Gizem*") plays a significant role in the text's acceptance by the target audience as a legitimate spiritual work.

Ultimately, this paper highlights that translating theological literature is an act of **thick translation**, where the translator must be equipped with both linguistic expertise and deep cultural-religious knowledge. The findings suggest that for religious texts to remain effective and transformative across cultures, the translator must prioritize the "spirit of the word" over a rigid adherence to its literal form.

THE ROLE OF LITERARY TRANSLATION IN THE DEVELOPMENT OF INTERCULTURAL COMMUNICATION

Matanat Mirzakhan KHUDIYEVA

Doctor of Philosophy in Philology, teacher, Department of Translation and Philology
Azerbaijan University

E-mail: Matanat.Khudiyeva@au.edu.az

ORCID ID: 0009-0002-1653-1343

Abstract: The article examines the role of literary translation in the development of intercultural communication in the modern era. The literature enriched by these translations joins the world language and world literature. More precisely, any language in which world literature is translated creates and enriches literary connections. In this regard, the Azerbaijani language is no exception. It can be said that the comprehensive translation of classical Azerbaijani literature into Western European languages, including English, began in the 17th century and took a more intensive form in the 18th century. Since then, the works of such classics as Khagani, Nizami, Nasimi, and Fuzuli have been studied in Europe and at the same time translated into the languages of foreign peoples.

Key words: national and moral values, poetic translation, people, fiction, poetry

MƏDƏNİYYƏTLƏRARASI ÜNSİYYƏTİN İNKİŞAFINDA BƏDİİ TƏRCÜMƏNİN ROLU

Mətanət Mirzəxan XUDİYEVA

Fil. f.d., müəllim, Tərcümə və filologiya kafedrası, Azərbaycan Universiteti

Xülasə: Mədəniyyətlərarası əlaqələrin möhkəmlənməsində tərcümənin əvəzolunmaz yeri vardır. Tərcümə dil maneələrini aşaraq xalqları bir-birinə yaxınlaşdıran mənəvi körpüdür. Tarixi inkişaf prosesi göstərir ki, dünya ədəbiyyatının ayrı-ayrı dillərə tərcüməsi həmin dilləri və ədəbiyyatları zənginləşdirməklə yanaşı, onları ümumbəşəri mədəniyyətə inteqrasiya edir. Azərbaycan dili də bu prosesdən kənarda qalmamış, xüsusilə XVII-XVIII əsrlərdən etibarən klassik ədəbiyyatımızın görkəmli nümayəndələri Avropada tanınmağa başlamış, əsərləri ingilis və digər Avropa dillərinə tərcümə edilmişdir. Tərcüməçilik yalnız texniki fəaliyyət deyil, həm də yaradıcılıq tələb edən incə sənətdir. Mütərcim, orijinal mətni yalnız dil baxımından deyil, mənəvi-estetik dəyərlər baxımından da dolğun şəkildə çatdırmalıdır. Tərcümə də bir sənətdir: tərcüməçidən mükəmməl dil bilgisi, yazıçılıq məharəti, mətnin sətiraltı mənasını duymaq bacarığı tələb edən sənət, xüsusilə də, əgər söhbət bədii ədəbiyyat nümunələrinin tərcüməsindən gedirsə.

Müasir dünyada isə tərcümə artıq yalnız ədəbi deyil, eyni zamanda iqtisadi, sosial və siyasi əməkdaşlığın əsas ünsiyyət vasitəsinə çevrilmişdir. Bu sahələrdə tərcümənin mahiyyəti bədii ifadə ilə bitmir, burada daha çox tərcümə olunan mətnin məna yükünün ətraflı ifadə olunması önəm daşıyır.

Beləliklə, tərcümə – zaman və məkanlar arasında mədəni körpü funksiyasını daşıyan mənəvi bir missiyadır.

Açar sözlər: milli-mənəvi dəyərlər, poetik tərcümə, xalq, bədii ədəbiyyat, poyeziya

Introduction

Learning someone's language alone is not enough to communicate well with people from different cultures. Throughout history, the connections between cultures have been very important for all peoples and nations. Dialogue between cultures, sharing ideas and experiences, has always helped societies grow. However, language differences have always been a big obstacle to this kind of cultural exchange. That is why the translation of texts, the training of translators in foreign languages, and making communication between different peoples more effective have always been important goals. Mirza Ibrahimov once said about translation: "Translation is a great and unbreakable cultural bridge between peoples. It is one of the most powerful tools that enriches the inner world of a person, their feelings and understanding. Translation can also enrich the language of every nation, as long as it is beautiful, smooth, and lively."

When we look at the history of translation, we can clearly see how important it has been in shaping and developing cultures. The main job of a translation is to build bridges between different cultures and help them connect with each other.

Long ago in the Middle East, there were translation schools called "Houses of Wisdom." In these schools, useful texts from other cultures were translated into Persian. Such centers existed in Bukhara and Baghdad, where very rich libraries were kept. All ancient texts were first translated into Persian and then into Arabic.

When world literature is translated into a language, that language becomes richer and joins the world of global literature. In other words, any language that translates world literature, whether big or small, creates a meaningful bridge between peoples and grows stronger from the experience.

The Azerbaijani language is no exception to this. It can be said that the broad translation of classical Azerbaijani literature into Western European languages, including English, began in the 17th century and became even more active in the 18th century. From that time on, the works of great classical poets such as Khagani, Nizami, Nasimi, and Fuzuli began to be studied in Europe and translated into the languages of many foreign peoples.

Translation plays a very important role in bringing Azerbaijani culture to the world and in developing communication between different cultures. Translation is an art. It requires a deep knowledge of language, writing skill, and the ability to feel the hidden meaning of a text. This is especially true when it comes to translating works of literature. Translation is a noble, useful, and productive work, but it is also demanding and carries great responsibility.

The main job of a translator is to enrich the reader's emotional experience so deeply that the reader's soul comes alive and they feel real joy from the poetry. A great translator must be able to pick out what is unique, specific, and universal inside the work they are translating, and present it to the reader through a national and artistic lens.

Many well-known figures of Azerbaijani culture and public life, such as M.F. Akhundov, H.B. Zardabi, N. Narimanov, J. Mammadguluzade, A. Sahhath, and U. Hajibayli, all worked on translation and shared valuable thoughts about it. M.F. Akhundov once said: "The main condition of a good translation is that it must have nothing more and nothing less than the original. There can be no better, no higher translation than that."

Materials and Methods.

As this tradition continued over time, the art of translation became a subject of serious discussion and study. Thanks to the work of translators such as Mammad Araz, Jabir Novruz, Huseyn Sharif, Beydulla Musayev, Islam Ibrahimov, Mirza Ibrahimov, Mammad Arif, Ismayil Shikhli, Anar, R. Zaki Khandan, Latif Valiyev, Alaviyya Babayeva, and Natiq Safarov, many great works of world literature were read in Azerbaijani. One example is the works of the well-known Russian poet Sergey Vasilyev. Translators such as M. Araz, Gabil, J. Novruz, and R.Z. Khandan translated parts of his poems into Azerbaijani and published them.

Sergey Vasilyev was not only a translator of the great Azerbaijani poet and satirist Mirza Alakbar Sabir, but also one of his most important promoters on the world stage. As secretary of the Soviet Writers' Union, Vasilyev used to give his translations of Sabir's poems as gifts to visiting poets from foreign countries and ask them to translate and publish these works in their own countries.

Vasilyev was a poet who wrote in lyrical, epic, satirical, and parodic styles. In his works, he raised questions about society, life, social issues, philosophy, and morality. Alongside the fate of

the people, his poems also described the beauty of nature, the Russian steppe, and forests. Because of this, Vasilyev is valued as an artist with a strong national spirit who wrote in the clear, natural language of the people. The richness of folk life and the development of culture and traditions created new words, expressions, and phrases in his poetry. It is well known that a writer's richness of language depends on their theoretical knowledge, their artistic taste, their creative experience, their worldview, and their closeness to the life of the people and national traditions. All these qualities of Vasilyev's work are clearly seen in his poems and their translations.

The translator A. Jamil translated Vasilyev's poem "My Childhood Dove" into Azerbaijani not as a simple translation, but almost as if it were an original poem. In other words, Jamil skillfully preserved the poetic language and artistic imagery of the original while adding the beauty of the Azerbaijani language to it. In the translation, not only are Vasilyev's images, expressions, poetic world, lyrical spirit, and melody preserved, but Jamil's own personal style also reaches the reader.

Vasilyev's poem "I Love Baku" was translated into Azerbaijani at different times by different translators: J. Novruz in 1974, R.Z. Khandan in 1977, and M. Ismayil in 1975. In each of these translations, the individual and poetic style of each translator shows itself quite clearly.

Let us look at a small part of Vasilyev's original poem "Lyublyu Baku" and then compare it with the translated versions:

*Люблю Баку не потому,
что здесь отрадно как в Крыму. (Vasilyev, 1977, p.35)*

This poem, written by the Russian poet in 1969 as a declaration of love for Baku, was first introduced to Azerbaijani readers by J. Novruz in 1974:

*Bakını sevirəm
onunçün yox ki,
Yaşıldır, sakitdir,
kurortlar təki. (Vasilyev, 1974, p.56)*

M. Ismayil was also able to capture the compositional and content features of the poem in his own way:

*Mən təkcə ona görə
Bakını sevirəm ki,
Xoş duyğular oyadar
Görüşü Kırım tək. (Vasilyev, 1975, p.3)*

R.Z. Khandan gave a more colorful version of the poem's fragment by using the aruz meter:

*Sevirəm Bakını onunçün yox ki,
Kırımtək ruhumu oxşayır Bakı. (Vasilyev, 1977, p.2)*

When we look at all three translations of "I Love Baku," we can see that each one creates poetic feeling, emotion, and excitement in the reader. In general, what stands out in all these translations is how each translator takes a personal approach to the original and chooses the artistic tools that best fit.

Now let us look at another example from Vasilyev's poetry:

*Как мало прожил славный Джабарлы
и как, однако, много сделать смог!
Слова, как зерна, четки и круглы.
Язык упруг, прекрасен строгий слог
Как мало прожил!*

Только тридцать пять! (Vasilyev, 1979, p.426)

When J. Novruz turned to Vasilyev's poetry and tried to bring it to life in Azerbaijani, he made an effort to avoid being too literal or copying the original line by line. Even so, he managed to preserve both the form and the meaning in a creative way. For him, what mattered most was not just the individual words, phrases, or lines of the original, but the organic parts of the work as a whole. In this translation, Novruz tried hard to carry over the artistic and expressive tools found in Vasilyev's poem.

Necə də az yaşadı,

necə tez öldü Cəfər.

Nə qədər çox yaratdı

otuz beş ildə Cəfər.

Necə də az yaşadı –

otuz beş il yaşadı. (Vasilyev, 1974, p.54)

Now let us look at a word-for-word (literal) translation of the poem:

Necə az yaşadı şanlı Cəbbarlı

və necə də,

amma,

çox şey edə bilərdi!

Sözlər dən kimi, təsbeh kimi dairəvi.

Dil elastik

ciddi heca gözəldir

Necə az yaşadı

Vur-tut otuz beş il. (Literal translation – KH.M.)

When we compare the word-for-word translation with the poetic translation, we can clearly see that there are many differences between them.

Results and Discussion

The findings of this study underscore that language proficiency alone is insufficient for effective intercultural communication; translation serves as the vital mechanism that operationalizes cultural dialogue and societal growth.

A successful translator must balance several competing elements:

- **The Universal vs. The Specific:** Capturing global human emotions while preserving national nuances.
- **The Explicit vs. The Subtext:** Sensing and conveying the hidden meanings between the lines.
- **The Objective vs. The Subjective:** Staying true to the original author's intent while utilizing the unique artistic tools of the translator's own language.

Comparative Analysis of Poetic Approaches

The practical execution of these theoretical concepts is vividly illustrated through the Azerbaijani translations of Russian poet Sergey Vasilyev's works. Vasilyev's role as an international promoter of the Azerbaijani satirist Mirza Alakbar Sabir establishes a historical precedent for reciprocal literary exchange.

When analyzing the translations of Vasilyev's poem "*Lyublyu Baku*" (1969) by J. Novruz (1974), M. Ismayil (1975), and R.Z. Khandan (1977), distinct methodological strategies emerge:

Translator	Rhythmic/Stylistic Choice	Artistic Effect
J. Novruz	Free, modern verse	Emphasizes a smooth, natural, and conversational tone resembling a resort environment.
M. Ismayil	Compositional focus	Prioritizes the emotional and structural evokes of the content.
R.Z.Khandan	Classical <i>Aruz</i> meter	Infuses a traditional Eastern poetic rhythm, localizing the Russian text for Azerbaijani sensibilities.

Furthermore, J. Novruz's translation of Vasilyev's poem dedicated to Jafar Jabbarli proves that a literal (word-for-word) translation fails to capture the soul of poetry. While the literal translation provides raw data, Novruz's creative adaptation rearranges lines and establishes rhythm to preserve the organic wholeness, emotional excitement, and expressive tools of the original piece. Ultimately, these examples show that a great translation allows the *mütərcim*'s (translator's) personal style to shine through without compromising the lyrical spirit and melody of the original author.

Conclusion

In conclusion, in today's world, the growing cooperation between peoples in all areas of economic, political, and social life gives translation new dimensions and importance. In these fields, the purpose of translation does not end with beautiful expression alone. What matters most is that the full meaning of the translated text is communicated clearly and completely.

Translation is the main way of communication, not only between countries and peoples who live in different parts of the world, speak different languages, and have different worldviews and psychological natures, but also between the past and the present. Translation is a trusted bridge of friendship and brotherhood that keeps the connection alive. That is why translation has always been, and always will be, needed everywhere and at all times.

CHALLENGES IN TRANSLATING CULTURE-SPECIFIC ELEMENTS FROM FRENCH PRESS INTO AZERBAIJANI

Ulfat Zakir IBRAHIM

PhD, Associate Professor, Azerbaijan University of Languages,

E-mail: ulfet.ibrahim@yahoo.com

ORCID ID: 0000-0001-6805-0627

Abstract: This study examines the challenges of translating culture-specific elements from French press discourse into Azerbaijani. Based on examples from contemporary French newspapers, it focuses on realia, idiomatic expressions, and culturally bound references that reflect the socio-political and cultural context of France. The research evaluates the effectiveness of key translation strategies, including adaptation, borrowing, calque, and descriptive translation. Particular attention is given to how these strategies help preserve meaning while ensuring accessibility for the target audience. The findings reveal that no single strategy is sufficient in all cases, and translators must adopt a flexible approach depending on context and purpose. The study also emphasizes that successful media translation requires not only strong linguistic skills but also deep intercultural competence and awareness of discourse conventions. Ultimately, the paper highlights the importance of balancing semantic accuracy with cultural nuance in order to produce effective and meaningful translations of journalistic texts.

Xülasə: Bu tədqiqat fransız mətbuat diskursundan Azərbaycan dilinə mədəniyyətə xas elementlərin tərcüməsi zamanı yaranan çətinlikləri araşdırır. Müasir fransız qəzetlərindən götürülmüş nümunələrə əsaslanaraq, realiyalar, idiomatik ifadələr və Fransanın sosial-siyasi və mədəni kontekstini əks etdirən mədəni istinadlara diqqət yetirilir. Araşdırmada adaptasiya, alınma (borrowing), kalka və təsviri tərcümə kimi əsas tərcümə strategiyalarının effektivliyi qiymətləndirilir. Xüsusi diqqət bu strategiyaların məna qorunmasını təmin etməklə yanaşı, hədəf auditoriya üçün anlaşılqlılığı necə təmin etdiyinə yönəldilir. Nəticələr göstərir ki, heç bir strategiya bütün hallarda yetərli deyil və tərcüməçilər kontekstdən və məqsəddən asılı olaraq çevik yanaşma tətbiq etməlidirlər. Tədqiqat həmçinin vurğulayır ki, uğurlu media tərcüməsi yalnız güclü dil bilikləri deyil, həm də dərin mədəniyyətlərarası kompetensiya və diskurs qaydaları haqqında anlayış tələb edir. Nəticə etibarilə, məqalə semantik dəqiqliklə mədəni çalarlar arasında balansın qorunmasının vacibliyini ön plana çıxarır.

Açar sözlər: tərcüməşünaslıq, fransız mətbuatı, mədəniyyətə xas elementlər, Azərbaycan dili, diskurs təhlili, media tərcüməsi

Introduction

In the context of increasing globalization and intercultural interaction, translation has become an essential tool for the dissemination of information across linguistic and cultural boundaries. In particular, media translation plays a crucial role in shaping public understanding of international events and socio-political realities (M.Baker, 2018). French press discourse is characterized by a high degree of cultural specificity, stylistic richness, and implicit references to shared national knowledge. Newspapers such as *Le Monde*, *Le Figaro*, and *Libération* frequently employ idiomatic expressions, socio-political terminology, and culturally embedded metaphors that may not be directly transferable into other languages.

The translation of such elements into Azerbaijani presents significant challenges, primarily due to differences in cultural frameworks, institutional systems, and linguistic structures. Culture-specific elements, including realia and idioms, often lack direct equivalents in the target language, requiring the translator to employ various compensatory strategies. The aim of this study is to analyze the main challenges involved in translating culture-specific elements from French press into Azerbaijani and to evaluate the effectiveness of different translation strategies in preserving both meaning and cultural nuance. The concept of culture-specific elements has been widely discussed in translation studies. These elements, often referred to as realia, denote objects, institutions, and phenomena that are unique to a particular culture. In the context of media discourse, realia frequently appear in references to political systems, educational structures, and social practices (P.Newmark, 1988).

In addition to realia, idiomatic expressions and culturally loaded metaphors constitute a significant part of journalistic language. Such expressions are often used to enhance the expressiveness and persuasive impact of the text, but they pose considerable difficulties for translation.

A number of translation strategies have been proposed in the literature to address these challenges: adaptation, which involves replacing a source-language element with a culturally equivalent target-language expression; borrowing, where the original term is retained in the target text; calque, or literal translation of the source expression; descriptive translation, which explains the meaning of the source element.

The choice of strategy is influenced by several factors, including the target audience, the communicative purpose of the text, and the degree of cultural distance between the source and target languages (S.Bassnett, 2014).

Materials and Methods

French press texts frequently refer to national institutions and socio-political concepts that are deeply rooted in French culture. For example “Le gouvernement a lancé une réforme du baccalauréat.” The term *baccalauréat* refers to a standardized national examination in France, which has no exact equivalent in Azerbaijani educational systems. Translation: “hökumət orta məktəb buraxılış imtahanı ilə bağlı islahat başlatdı”. Strategy: descriptive translation

This approach ensures comprehension but reduces cultural specificity. Example: “Les diplômés des grandes écoles occupent des postes clés.” The expression *grandes écoles* denotes elite higher education institutions. Translation: “nüfuzlu ali məktəblərin məzunları əsas vəzifələri tutur. Strategy: adaptation

Idiomatic expressions are widely used in French press to convey evaluation and emotional nuance. Example: “Face aux critiques, le ministre a donné sa langue au chat.” This idiom implies surrender or inability to respond. Translation: “nazir tənqidlər qarşısında təslim oldu”, “Une partie

de la population commence à avoir le cafard.” Translation: “əhalinin bir hissəsi ruhdan düşməyə başlayır” The metaphorical meaning is preserved, while the original imagery is lost. “Le candidat a posé un lapin à ses électeurs.” Translation: “namizəd seçicilərlə görüşə gəlmədi” Strategy: descriptive. “Dans l’Hexagone, les tensions sociales augmentent.” The term Hexagone is a metonymic reference to France. Translation: “Fransada sosial gərginlik artır”. “Ce n’est pas Versailles ici !” Used metaphorically in media discourse to criticize wastefulness. Translation: “bu qədər israf etməyin!”. “La situation dans les banlieues reste préoccupante.” The term banlieue carries socio-economic connotations beyond its literal meaning. Translation: “şəhər kənarı ərazilərdə vəziyyət narahatedici olaraq qalır”, “Beaucoup de Français font le pont.” Translation: “bir çox fransız əlavə istirahət günləri götürür”, “Un véritable coup de foudre politique.” Translation: “əsl siyasi ani təsir effekti”

Results and Discussion

The analysis demonstrates that translating culture-specific elements from French press into Azerbaijani involves a constant negotiation between fidelity to the source text and accessibility for the target audience. Journalistic discourse is inherently context-dependent, relying heavily on shared cultural knowledge and implicit meanings. Adaptation emerges as the most frequently employed strategy, particularly in the translation of idiomatic expressions and metaphors. This strategy enhances readability and ensures that the translated text functions effectively within the target culture. However, it often leads to the loss of stylistic and cultural nuances present in the source text.

Descriptive translation proves useful in rendering institutional realia, but it may compromise the conciseness and stylistic density characteristic of journalistic language. Borrowing and calque, while preserving formal features of the source text, are less effective in media translation due to their potential to hinder comprehension.

Therefore, the translator must adopt a flexible approach, taking into account both linguistic and extralinguistic factors. Cultural competence and awareness of discourse conventions play a crucial role in achieving an adequate translation.

The translation of culture-specific elements from French press into Azerbaijani represents a complex and multifaceted task. The study has shown that realia, idiomatic expressions, and cultural references pose significant challenges due to the lack of direct equivalence between the two languages. The findings suggest that no single translation strategy can adequately address all cases. Instead, translators must employ a combination of strategies, guided by the communicative purpose of the text and the expectations of the target audience.

Ultimately, effective media translation requires not only linguistic proficiency but also a deep understanding of cultural context and discourse practices. Further research may involve corpus-based analysis or comparative studies across different language pairs.

The findings of this study highlight the inherently complex nature of translating culture-specific elements in media discourse. Unlike technical or purely informational texts, journalistic language operates at the intersection of information delivery, persuasion, and cultural representation. As such, the translator is not merely transferring meaning but also reconstructing a communicative act within a different cultural framework.

One of the central issues identified is the asymmetry between French and Azerbaijani cultural and institutional systems. This asymmetry often results in the absence of direct lexical or conceptual equivalents. For instance, references to the French educational or administrative systems require the

translator to make interpretive decisions that balance precision with comprehensibility. In such cases, descriptive translation becomes a practical solution, yet it inevitably alters the brevity and stylistic sharpness typical of press discourse.

Another important observation concerns the role of implicit cultural knowledge. French media texts frequently assume a shared background among readers, including familiarity with political figures, historical events, and socio-cultural norms. Azerbaijani readers, however, may not possess this implicit knowledge, which necessitates a degree of explicitation in translation. This process, while enhancing clarity, may lead to over-translation and reduce the rhetorical impact of the original text.

Idiomatic expressions and metaphors present a particularly challenging category. These elements are deeply embedded in the source culture and often carry evaluative or emotional connotations that are difficult to reproduce. While adaptation allows the translator to convey the intended meaning, it often results in the loss of imagery and stylistic uniqueness. This trade-off raises an important question in translation studies: should priority be given to semantic accuracy or to stylistic fidelity? The answer largely depends on the communicative purpose of the text and the expectations of the target audience.

Furthermore, the study underscores the importance of genre conventions in media translation. Journalistic texts are expected to be concise, dynamic, and accessible. Strategies such as borrowing or calque, although useful in certain contexts, may disrupt the natural flow of the target text and create cognitive barriers for readers. Therefore, their use in media translation should be carefully evaluated.

The analysis also suggests that translation is influenced by pragmatic considerations, including editorial policies and ideological positioning. Media institutions often have specific guidelines regarding tone, terminology, and audience engagement. As a result, translators may need to adjust their strategies to align with institutional expectations, which adds another layer of complexity to the translation process.

The results of this study have several practical implications for translators working with media texts. First, it is essential for translators to develop not only linguistic competence but also intercultural competence. A deep understanding of both source and target cultures enables more informed decision-making and reduces the risk of misinterpretation.

Second, translators should adopt a flexible, context-sensitive approach. Rather than relying on a single strategy, they should be prepared to combine multiple techniques depending on the specific challenges presented by each text. For example, an institutional term may require descriptive translation, while an idiomatic expression may be better rendered through adaptation.

Third, continuous exposure to authentic media discourse in both languages can significantly enhance translation quality. Familiarity with current socio-political developments, journalistic style, and discourse patterns allows translators to produce more natural and contextually appropriate translations. Finally, collaboration between translators and editors can improve the overall effectiveness of media translation. Editorial feedback can help refine stylistic choices and ensure that the translated text meets the expectations of the target audience.

Conclusion

In conclusion, the translation of culture-specific elements from French press into Azerbaijani is a multifaceted process that requires careful consideration of linguistic, cultural, and pragmatic factors. The study demonstrates that while strategies such as adaptation and descriptive translation

are particularly effective, they are not without limitations. Each translation decision involves a degree of compromise between preserving the source text's cultural identity and ensuring accessibility for the target audience. The dynamic nature of media discourse further complicates this task, as translators must respond to evolving language use, emerging cultural references, and shifting audience expectations. Therefore, successful media translation should be viewed as an interpretive and creative act rather than a purely mechanical process. Future research could expand on this study by incorporating a larger corpus of media texts or by examining audience reception of translated materials. Comparative analyses involving other language pairs may also provide valuable insights into the universality and specificity of translation challenges in media discourse. Ultimately, the role of the translator in this context is not only to bridge linguistic gaps but also to facilitate intercultural understanding in an increasingly interconnected world.

TRANSLATION PROBLEMS OF LITERARY AND SPECIALIZED TEXTS: A COMPARATIVE-FUNCTIONAL ANALYSIS

Nazli Ahmed BAYRAMOVA

Azerbaijan State University of Economics, Zagatala branch

E-mail: nazli-bayramova@unec.edu.az

ORCID ID: [0009-0005-6272-6338](https://orcid.org/0009-0005-6272-6338)

Abstract: The article examines translation problems arising in literary and specialized texts on the basis of a comparative-functional approach. The central idea of the study is that translation difficulty is not limited to the transfer of words from one language into another; rather, it is directly related to text function, reader expectations, cultural context, terminological system and communicative purpose. In literary texts, the main challenge is to preserve imagery, authorial style, rhythm, emotional effect and culture-specific units. In specialized texts, terminological accuracy, normative adequacy, syntactic clarity and the prevention of information loss play a decisive role. The article analyzes typical translation situations taken from literary, technical, medical and legal texts; it also demonstrates the applicability of literal translation, stylistic compensation, terminological normalization, functional equivalence and explicitation strategies. The findings indicate that translation strategy should be selected according to the dominant function of the text: aesthetic-expressive adequacy should be treated as the main quality criterion in literary texts, whereas terminological-informative adequacy should be prioritized in specialized texts.

Introduction

Under the conditions of globalization, academic mobility, international cooperation and digital communication, translation has become a process of reconstructing texts with different functions in a way that is appropriate for the target audience. In this process, the translator is not merely a mediator between two languages, but also a decision-making agent who evaluates the purpose of the text, reader expectations, the terminological system and cultural signs. In translation studies, the influence of text type on translation decisions is widely explained within Reiss's text typology, the functionalist approach and skopos theory. According to these approaches, the method of translation cannot be determined independently of the dominant function of the text (Reiss, 1981; Nord, 2018; Munday et al., 2022).

Literary and specialized texts impose particularly different requirements in this respect. The primary function of a literary text is not only to provide information, but also to create an aesthetic impression, construct imagery, and convey the author's individual style and the emotional energy of the text to the reader. In specialized texts, however, the aim is mainly to transmit accurate, verifiable and normatively reliable information. In the translation of a technical manual, medical text, legal contract or academic article, an inaccurate terminological choice is not merely a stylistic defect; it may also create practical, legal and safety-related risks (Byrne, 2014; Cao, 2007; ISO, 2015).

The purpose of this article is to analyze the translation problems of literary and specialized texts comparatively, to demonstrate types of problems through concrete examples and to justify the importance of selecting a strategy appropriate to the text type. The research question is formulated

as follows: how does the functional type of a text influence the translator's choice of strategy, and in what concrete forms does this influence appear in literary and specialized texts?

Theoretical Framework and Literature Review

Text Typology and the Functional Approach

In translation theory, text typology provides an important theoretical basis for selecting translation strategy. Reiss distinguishes between informative, expressive and operative texts and emphasizes that the main criterion in the translation process is the dominant function of the text (Reiss, 1981). From this perspective, literary texts mostly have an expressive-aesthetic function, while technical and scientific texts have an informative function. As the function of the text changes, the translation priority also changes: in literary texts the question “how is it said?” comes to the fore, whereas in specialized texts the question “what exactly is being stated?” becomes central.

The functionalist approach further develops this idea by explaining translation as a purposeful activity. In Nord's approach, translation quality is measured not only by formal loyalty to the source text, but also by the ability of the target text to fulfil its communicative purpose (Nord, 2018). Therefore, the same text fragment may be translated differently for different purposes: for example, a cultural term may be explained in a museum catalogue, while in a literary novel the same term may be retained through a foreignization strategy.

Main Theoretical Problems of Literary Translation

In literary translation, equivalence cannot be understood only at the level of denotative meaning. Figurative expression, metaphor, rhythm, sound patterning, dialogue tone and cultural associations require special sensitivity in translation. Nida and Taber's concept of dynamic equivalence foregrounds the creation of an effect on the target reader that is close to the effect produced on the source reader (Nida & Taber, 1969). Newmark's distinction between semantic and communicative translation is also significant in this respect: in some parts of a literary text, proximity to the figurative structure of the source text may be more important, while in other parts a natural-sounding target-language expression may be more important (Newmark, 1988).

Baker explains equivalence problems at the levels of word, expression and text, showing that the translator does not merely find a dictionary equivalent; rather, the translator reconstructs collocation, idiom, grammatical structure and the distribution of information within the text (Baker, 2018). Venuti's distinction between domestication and foreignization provides an important framework for translating cultural realia in literary texts: domestication increases fluency for the target reader, while foreignization preserves the distinctiveness of the source culture (Venuti, 1995).

Terminological and Normative Requirements in the Translation of Specialized Texts

In specialized texts, the main indicator of translation quality is terminological consistency and the accurate transfer of information. ISO 704 relates the principles of terminology work to the systematic definition of concepts and the precise management of terms (ISO, 2022). ISO 17100 defines process, resource and quality requirements for translation services and emphasizes the importance of the translation, revision and review stages in professional translation (ISO, 2015).

In technical translation, the main purpose is to help the user perform an action correctly. Therefore, terms such as “operation”, “maintenance”, “calibration”, “failure” and “warning” must be rendered consistently and in accordance with the field-specific context (Byrne, 2014). In legal translation, a term is not only a lexical unit, but also a concept that produces legal consequences. For example, incorrect translation of units such as “liability”, “obligation”, “shall”, “may” and

“without prejudice to” may lead to a misunderstanding of contractual obligations, legal responsibility or the difference between permission and normative obligation (Cao, 2007).

Table 1. Comparison of Translation Priorities in Literary and Specialized Texts

Criterion	Literary texts	Specialized texts
Dominant function	To create aesthetic, expressive and emotional effect	To transmit accurate, verifiable and functional information
Main risk	Loss of imagery, authorial style and cultural association	Terminological error, information loss and normative inadequacy
Translation criterion	Stylistic-expressive adequacy and reader effect	Terminological-informative adequacy and structural clarity
Strategy	Stylistic compensation, cultural adaptation, foreignization/domestication	Terminological normalization, explicative translation, syntactic simplification
Revision focus	Tone, rhythm, metaphor, imagery and naturalness of dialogue	Terminological consistency, units of measurement, modal verbs and legal/technical precision

Methodology

The study was conducted on the basis of qualitative comparative-descriptive analysis. Micro-examples frequently encountered in real translation practice in literary, technical, medical and legal texts were selected as material. In the literary examples, units such as metaphorical expression, urban imagery, psychological description and cultural realia were analyzed; in specialized examples, constructions expressing technical instruction, medical warning, data security and legal liability were examined.

The analysis criteria were defined in five directions: 1) semantic accuracy; 2) stylistic-expressive adequacy; 3) transfer of culture-specific units; 4) terminological consistency; 5) readability and normativity of the target text. The study is not a full corpus analysis; its purpose is not to measure problem types on a broad statistical basis, but rather to demonstrate analytically how translation decisions change according to text type.

Analysis and Discussion

The Problem of Imagery and Stylistic Compensation in Literary Texts

In literary texts, literal translation may often seem possible at the level of meaning, but it weakens emotional and aesthetic effect in the target language. For example, translating the expression “He carried winter in his voice” as “O, qışı səşində daşıyırdı” formally preserves the source metaphor, but in Azerbaijani it sounds weak in terms of naturalness and emotional effect. The version “Onun səşində qışın sərtliyi duyulurdu” partly explicates the metaphor, preserves the imagery and creates a more natural psychological description in the target language. This shows the importance of balancing semantic loyalty and functional effect in literary translation.

The examples in the table show that in literary translation “loyalty to the word” may sometimes conflict with “loyalty to the text”. A literal version that sounds artificial in the target language weakens the aesthetic function of the source text. Therefore, the literary translator should focus not on the formal structure of the metaphor, but on the effect it creates within the text. This

situation is especially evident in psychological descriptions, nature metaphors and fragments that figuratively represent the relationship between the city and the individual.

Table 2. Translation Problems and Strategy Selection in Literary Texts

Source expression	Literal or weak version	Functionally appropriate version	Problem and strategy
He carried winter in his voice.	O, qışı səşində daşıyırdı.	Onun səşində qışın sərtliyi duyulurdu.	When the metaphor is preserved formally, it sounds strange in the target language; emotional effect is preserved through stylistic compensation.
The city swallowed him whole.	Şəhər onu bütöv uddu.	Şəhər onu tamamilə öz içində itirdi.	The urban image is preserved, while mechanical calque is avoided; the metaphorical meaning is expressed naturally.
Her silence was louder than the storm.	Onun sükutu fırtınadan daha ucadan idi.	Onun sükutu fırtınadan da güclü təsir bağışlayırdı.	The issue is not loudness of sound but psychological effect; the connotative meaning is retained through explicitation.
He spoke with a smile that did not reach his eyes.	O, gözlərinə çatmayan bir təbəssümlə danışdı.	O, gözlərinə yansımayan bir təbəssümlə danışdı.	The English idiomatic description is rendered through fluent Azerbaijani syntax.
It was the best of times, it was the worst of times.	Bu, ən yaxşı zamanlar idi, ən pis zamanlar idi.	Bu, həm ən yaxşı, həm də ən ağır zaman idi.	The rhythm of parallel structure is preserved, while syntactic compactness in the target language is increased.

Culture-Specific Units: Choosing Between Domestication and Foreignization

The translation of culture-specific units creates a separate problem in literary texts. Words such as “samovar”, “Novruz table”, “khancha”, “chaykhana”, “ashug” and “meykhana” do not merely name an object or phenomenon; they carry social memory, ritual behavior and cultural identity. Three main solutions are possible in translating such units: transliteration, explicative translation and functional substitution. For example, rendering “xonça” simply as “tray” may be partly correct from an informational point of view, but it loses the ceremonial and symbolic content.

The explicative variant “khancha, a decorated ceremonial tray used in festive rituals” presents both the object and its function to the target reader.

This choice depends on the text type. In a novel or short story, retaining the word “khancha” through transliteration and clarifying it through context preserves the atmosphere of the source culture. In a tourism brochure, however, explanation is more appropriate because the target reader expects informational clarity. Thus, the same cultural unit requires different strategies in literary and informative texts.

Terminological Accuracy and Normativity in Specialized Texts

In specialized texts, the translator's main task is to preserve the relationships between concepts in the source text correctly. A term is used not as a simple word equivalent, but as a unit designating a specific concept within a field. Therefore, the same term should be rendered consistently within the same document, and synonymic variation should be used only when it does not damage the normativity of the text. For example, translating the verb “calibrate” in a technical manual as “kalibr etmək” in one place, “tənzimləmək” in another and “ölçüyə salmaq” elsewhere may disrupt the user's conceptual consistency.

These examples show that errors in specialized texts often arise not from the basic dictionary meaning of a word, but from failure to consider its contextual field-specific meaning. The use of “operation” as “istismar” in technical texts and as “cərrahi əməliyyat” in medical texts demonstrates the decisive role of context. Similarly, although “liability” may generally be translated as “responsibility”, in legal texts it should be specified as “legal liability” or, depending on context, “civil liability”.

Table 3. Typical Errors and Revised Versions in Specialized Texts

Field	Source sentence	Weak version	Accurate version	Rationale
Technical	The system shall be calibrated before operation.	“Sistem əməliyyatdan əvvəl kalibr olunmalıdır.”	“Sistem istismara verilməzdən əvvəl kalibrəlməlidir.”	Here “operation” does not mean medical operation, but technical use/operation; “shall” indicates normative obligation.
Medical	Adverse effects may occur in patients with renal impairment.	“Böyrək qüsuru olan xəstələrdə pis təsirlər ola bilər.”	“Böyrək funksiyası pozulmuş xəstələrdə arzuolunmaz əlavə təsirlər müşahidə oluna bilər.”	The medical register is preserved; “renal impairment” is rendered through a clinical expression rather than everyday wording.
ICT	Data must be stored in an	“Məlumatlar şifrələnmiş	“Məlumatlar şifrələnmiş	“Stored” implies keeping data,

Field	Source sentence	Weak version	Accurate version	Rationale
	encrypted environment.	mühitdə saxlanmalıdır.”	mühitdə mühafizə olunmalıdır.”	while “encrypted environment” refers to a security regime; “mühafizə” strengthens the legal-technical nuance.
Legal	Failure to comply may result in legal liability.	“Uyğun gəlməmək hüquqi məsuliyyətlə nəticələnmə bilər.”	“Tələblərə əməl edilməməsi hüquqi məsuliyyət yarada bilər.”	Legal syntax is normalized; “comply” means “to comply with/observe requirements”, not “to correspond”.
Academic/statistical	The results are statistically significant at the 5% level.	“Nəticələr 5% səviyyədə statistik əhəmiyyətli.”	“Nəticələr 5 faiz əhəmiyyətlik səviyyəsində statistik baxımdan əhəmiyyətlidir.”	The statistical term is fully specified; “significant” here does not mean generally “important”, but indicates a statistical test result.

Syntactic Clarity and the Prevention of Information Loss

In specialized texts, long and complex sentences increase the risk of information loss or incorrect linkage during translation. Nominalizations and passive constructions are widely used in English; however, mechanically preserving the same structure in Azerbaijani may produce a heavy, unnatural and sometimes inaccurate text. For example, the sentence “The implementation of the procedure shall be documented by the responsible officer” may be rendered as “Prosedurun həyata keçirilməsi məsul şəxs tərəfindən sənədləşdirilməlidir”, but a clearer version is “Məsul şəxs prosedurun icrasını sənədləşdirməlidir”. Here meaning is not lost; on the contrary, the actor and action become clearer.

In legal and administrative texts, however, not every simplification is possible. For instance, translating “shall” as “may” in contractual clauses weakens the meaning of obligation. Therefore, in specialized translation, syntactic clarity must be ensured without compromising terminological and legal precision. This is a key decision point that requires both linguistic and field-specific competence from the translator.

Hybrid Texts: Dual Function in Tourism, Museum and Cultural Heritage Texts

Some texts are neither purely literary nor purely specialized. Tourism brochures, museum exhibit descriptions, cultural heritage catalogues and promotional materials both provide information and attempt to create an emotional-aesthetic effect. For example, a sentence such as “The ancient walls of the fortress still whisper the memory of the Silk Road” contains both historical information and literary imagery. Translating this sentence as “Qalanın qədim divarları hələ də İpək Yolunun xatirəsini pıçıldayır” preserves the literary effect, but for an official tourism catalogue the variant “Qalanın qədim divarları İpək Yolu dövrünün tarixi yaddaşını bu günə daşıyır” may be more appropriate. Here the purpose of the text changes the strategy.

In hybrid texts, the translator should first determine the dominant function: if the text is promotional, emotional effect may be strengthened; if it has an academic-catalogue character, terminological and factual accuracy should be prioritized. For this reason, a single strategy is not sufficient in hybrid texts; literary expressiveness and informative accuracy should be combined.

Table 4. Translation Decision Matrix by Text Type

Text type	Dominant purpose	Main translation strategy	Control question
Literary novel/short story	Aesthetic and emotional effect	Stylistic compensation, natural syntax and preservation of cultural realia	Does the target reader feel the emotional effect of the source text?
Technical manual	Correct performance and safety	Terminological consistency, accurate rendering of modal verbs and short sentences	Can the user perform the action without error?
Medical text	Accurate communication of risk and instructions	Normalization of clinical terms and cautious modal expressions	Does a possible misunderstanding create a risk for patient safety?
Legal document	Accurate transfer of legal consequences	Normative syntax, conceptual precision and system compatibility	Are obligation, right and liability clearly distinguished?
Tourism/museum text	Providing information and generating interest	Functional explanation plus limited literary expressiveness	Is the text both clear and engaging?

Conclusion and Recommendations

The study shows that literary and specialized texts cannot be assessed according to the same criteria. In literary translation, the main problem is the adequate reconstruction of authorial style, imagery, emotional effect and culture-specific units in the target language. Literal translation often weakens the effect of the source text; a more appropriate approach is stylistic compensation, functional equivalence and preservation of the aesthetic mechanism of the text.

In specialized texts, translation quality is determined by terminological accuracy, normative adequacy, syntactic clarity and the prevention of information loss. In technical, medical and legal texts, the incorrect rendering of a single term or modal verb may have practical consequences. Therefore, field terminology, term bases, revision and quality control should be considered necessary in the translation of such texts.

Three practical recommendations can be proposed on the basis of the analysis. First, the dominant function of the text should be determined before translation begins. Second, stylistic-expressive adequacy should be taken as the main criterion in literary texts, while terminological-informative adequacy should be prioritized in specialized texts. Third, in hybrid texts - especially tourism, museum and cultural heritage materials - informative accuracy and aesthetic effect should be balanced. This approach increases both the academic and practical quality of translation.

PROBLEMS AND SOLUTIONS IN THE TRANSLATION OF ARTISTIC TEXTS

Shafa Rabil HUNBATOVA

Lecturer, Department of Foreign Languages, Mingachevir State University

E-mail: Shafa.humbatova@mdu.edu.az

ORCID ID: 0009-0004-8960-3955

Abstract: This study examines the main problems and solutions in the translation of literary texts in the context of modern translation studies. Literary translation is not only a linguistic process, but also a complex cultural and aesthetic act that requires the preservation of meaning, style, emotional impact, and authorial individuality. The study emphasizes that literary texts are characterized by imagery, emotional expressiveness, stylistic uniqueness, polysemy, and cultural specificity, which makes their translation particularly difficult. The study identifies the main categories of translation problems, including lexical, stylistic, cultural, semantic, pragmatic, and intertextual difficulties. Lexical problems often arise from the lack of direct equivalents, while stylistic problems are related to the preservation of the author's voice and aesthetic structure. Cultural differences create additional obstacles due to the presence of culture-specific realities, while semantic and pragmatic issues affect meaning and reader response. Intertextual references make translation even more difficult because they depend on literary and historical knowledge. To address these challenges, the study discusses various translation strategies such as contextual translation, functional equivalence, domestication, externalization, and transformation methods including modulation and adaptation. Analysis of practical examples shows that successful translation depends on the balance of meaning and form while maintaining communicative effect. The findings show that literary translation is a creative interpretive process in which the translator acts as a cultural mediator. Despite advances in artificial intelligence and translation technologies, human creativity remains essential to preserve stylistic and emotional depth. The study concludes that literary translation should be considered as both linguistic transfer and cultural reconstruction.

Keywords: literary translation, translation problems, cultural equivalence, stylistic features, lexical issues, semantic analysis, pragmatics, translation strategies.

BƏDİİ MƏTNLƏRİN TƏRCÜMƏSİNDƏ PROBLEMLƏR VƏ HƏLL YOLLARI

Şəfa Rabil HÜNBƏTOVA

Müəllim, Xarici Dillər Kafedrası, Mingəçevir Dövlət Universiteti

E-mail: Shafa.humbatova@mdu.edu.az

ORCID ID: 0009-0004-8960-3955

Xülasə: Bu tədqiqat müasir tərcümə tədqiqatları kontekstində ədəbi mətnlərin tərcüməsindəki əsas problemləri və həll yollarını araşdırır. Bədii tərcümə təkcə dil prosesi deyil, həm də mənanın, üslubun, emosional təsirin və müəllif fərdiliyinin qorunmasını tələb edən mürəkkəb mədəni və estetik bir aktdır. Tədqiqat ədəbi mətnlərin obrazlılıq, emosional ifadəlilik, stilistik unikalıq, polisemiya və mədəni spesifikasiyalarla xarakterizə olunduğunu vurğulayır ki, bu da onların tərcüməsini xüsusilə çətinləşdirir. Tədqiqatda leksik, stilistik, mədəni, semantik, pragmatik və intertekstual çətinliklər də daxil olmaqla tərcümə problemlərinin əsas kateqoriyaları müəyyən edilir. Leksik problemlər çox vaxt birbaşa ekvivalentlərin olmamasından yaranır, stilistik problemlər isə müəllif səsinin və estetik strukturunun qorunması ilə əlaqədardır. Mədəni fərqlər mədəniyyətə xas reallıqların mövcudluğu səbəbindən əlavə maneələr yaradır, semantik və pragmatik məsələlər isə mənaya və oxucu reaksiyasına təsir göstərir. Intertekstual istinadlar ədəbi və tarixi biliklərdən asılı olduqları üçün tərcüməni daha da çətinləşdirir. Bu çətinlikləri həll etmək üçün tədqiqat kontekstual tərcümə, funksional ekvivalentlik, evcilləşdirmə, xariciləşdirmə və modulyasiya və uyğunlaşma da daxil olmaqla transformasiya metodları kimi müxtəlif tərcümə strategiyalarını müzakirə edir. Praktiki nümunələrin təhlili göstərir ki, uğurlu tərcümə kommunikativ effekti qoruyarkən məna və forma balansından asılıdır. Tapıntılar göstərir ki, bədii tərcümə tərcüməçinin mədəni vasitəçi kimi çıxış etdiyi yaradıcı bir interpretasiya prosesidir. Süni intellekt və tərcümə texnologiyalarında irəliləyişlərə baxmayaraq, insan yaradıcılığı stilistik və emosional dərinliyi qorumaq üçün vacib olaraq qalır. Tədqiqat bədii tərcümənin həm lingvistik köçürmə, həm də mədəni yenidənqurma kimi qəbul edilməli olduğu qənaətinə gəlir.

Açar sözlər: bədii tərcümə, tərcümə problemləri, mədəni ekvivalentlik, stilistik xüsusiyyətlər, leksik məsələlər, semantik təhlil, pragmatika, tərcümə strategiyaları.

Introduction

In the conditions of modern globalization, familiarization with the literary heritage of different peoples is mainly carried out through translation. In this regard, literary translation does not only belong to the field of linguistics, but also plays an important role in the development of intercultural relations (Pym.A. 2021). Translation of world literature into different languages strengthens mutual understanding between peoples, creates conditions for the spread of new ideas and aesthetic values.

However, the translation of literary texts differs significantly from other types of translation. While the main goal of scientific and technical texts is the accurate transmission of information, in literary texts the main focus is on preserving the aesthetic impact, emotional charge and author's style. For this reason, the translator must be not only a linguist, but also a literary critic, stylist and cultural expert (Venuti.L. 2021).

1. Theoretical foundations and characteristics of literary translation

The theory of literary translation has been formed on the basis of various approaches. The main goal of these approaches is to preserve both the content and function of the text.

The main characteristics of literary texts are as follows:

- Imagery and metaphoricity - enrichment of language with artistic means
- Emotional-expressiveness - power of influence on the reader
- Stylistic individuality - language features specific to the author
- Polysemy - words acquire different meanings in different contexts
- Cultural codes - reflection of national characteristics and values

These characteristics complicate literary translation and indicate that standard translation methods are insufficient.

2. Main problems in the translation of literary texts

2.1. Lexical problems

Lexical problems are mainly related to the lack of correspondence between words or differences in meaning. Some words are specific to a particular culture and do not have a complete equivalent in another language.

For example, the translation of idiomatic expressions poses particular difficulties:

- "Break the ice" → "to start communication"
- "Spill the beans" → "to reveal the secret"

Direct translation of such expressions creates semantic inconsistency.

2.2. Stylistic problems

The author's style reflects his individual creative characteristics. Syntax, vocabulary, rhythm and intonation are the main components of this style. It is difficult to preserve these characteristics during translation (House.J.2023).

For example, in poetic texts, maintaining rhyme and rhythm often requires a compromise with meaning.

2.3. Cultural problems

National realities, customs, food, clothing and social relations occupy a large place in literary texts. The following difficulties arise when translating these elements:

- Lack of understanding of cultural differences
- The reader is left out of the context
- Lack of appropriate equivalents for realia words

2.4. Semantic problems

Polyse-meaning words and metaphors create serious problems during translation. Choosing the correct meaning of a word depends on the context.

2.5. Pragmatic problems

The pragmatic aspect is related to the effect of the text on the reader. It is not always possible to create the same emotional and stylistic effect in the source language in the target language.

2.6. Intertextual problems

Fictional texts often refer to other literary works, mythology, and historical events. In order to correctly convey these references, it is important for the translator to have extensive literary and cultural knowledge.

3. Problem-solving methods and strategies

3.1. Contextual translation

Word-to-word translation should be abandoned and the general meaning of the text should be taken into account. This approach gives a more adequate result (Munday. J. 2022).

3.2. Functional equivalence

Appropriate expressions should be selected based on the function of the text and its impact on the reader.

3.3. Domestication and foreignization

- Domestication - adapting the text to the target culture
- Foreignization - preserving the characteristics of the source culture

A balanced use of these strategies gives optimal results.

3.4. Transformation methods

Various transformation methods are used in translation:

- Transposition - grammatical change
- Modulation - changing the point of view
- Adaptation - cultural adaptation

3.5. Interpretation and explanation method

Explaining cultural elements helps the reader to better understand the text.

3.6. Professional competence of the translator

For effective literary translation, the translator must have the following skills:

- High language level
- Knowledge of literature and culture
- Analytical and creative thinking
- Stylistic sensitivity

4. Extensive analysis of practical examples

The practical application of theoretical approaches in literary translation is of particular importance.

Example 1:

“It’s raining cats and dogs” → “leysan yağır”

Here, semantic equivalence is preserved, but the form changes.

Example 2:

“She has a heart of stone” → “Onun qəlbi daş kimidir”

The metaphor is preserved and presented appropriately in the target language.

Example 3 (cultural element):

“Thanksgiving dinner” → given with explanation or adaptation

These examples show that the main goal during translation is to preserve meaning and effect.

5. The role and development directions of literary translation in the modern era

In the era of globalization, literary translation performs the following functions (F. Zanettin 2022) :

- Creates intercultural dialogue
- Disseminates world literature
- Introduces national literature at the international level

New directions have also been formed in modern translation studies:

- Cognitive translation theory
- Corpus-based research
- Application of artificial intelligence

However, human creativity is still indispensable in literary translation.

Materials and methods

This study was conducted to systematically study the problems encountered in the process of translating literary texts and to identify ways to solve them. The study is based on a complex methodological framework that combines both theoretical and empirical approaches.

6.1. Research materials

The main material base of the study is literary texts translated from various languages (especially from English and Russian into Azerbaijani). The selected materials are divided into the following groups in order to ensure diversity in terms of genre and style:

- Classical literary examples (novels and short stories)
- Contemporary literary examples
- Short stories and novellas
- Poetic texts (poems, fragments of poems)
- Dramatic texts (fragments from plays)

These texts were purposefully selected so that the problems arising at different levels of literary translation (lexical, semantic, stylistic and cultural) could be analyzed in a comprehensive manner.

At the same time, both the original texts (source language) and their translated versions (target language) were studied in parallel for comparison.

6.2. Approach framework of the study

The study is interdisciplinary in nature and combines approaches from the following fields:

- Translation studies
- Linguistics (semantics and pragmatics)
- Literary studies
- Intercultural communication theory

This approach allows us to substantiate that literary translation is not only a linguistic process, but also an act of cultural and aesthetic interpretation.

6.3. Methodological approaches

The following methods were used in the study in a comprehensive manner:

1. Descriptive (descriptive) analysis method

This method describes and categorizes the lexical, stylistic and cultural problems encountered in literary translation examples.

2. Comparative analysis method

By comparing the source and target texts in parallel, the following:

- changes in meaning
 - stylistic differences
 - cultural transformations
- were identified.

3. Contextual analysis

Not only the lexical, but also the functional meaning of words and expressions within the text was investigated (E.A. Nida 2001). This method was used especially in the analysis of idioms and metaphors.

4. Interpretive approach

The reasons and logic of the strategies chosen by the translator are justified, their cultural and stylistic motivation is explained.

5. Case study method

Selected specific text fragments are analyzed in depth and how translation problems are solved in real practice are shown.

6.4. Analysis stages

The study was conducted in the following stages:

1. Selection of literary texts and formation of the corpus
2. Parallel reading of source and target texts
3. Identification of problematic language units (word, expression, metaphor)
4. Classification of problems into categories
5. Determination of translation strategies
6. Systematization and interpretation of results

6.5. Reliability and limitations

The reliability of the study was ensured by using texts selected from various genres and styles. However, there are some limitations of the study:

- The analysis was conducted only within certain languages (English and Russian → Azerbaijani)
 - It was not possible to cover all possible literary genres
 - Subjective interpretation of translation samples is inevitable to some extent
- Nevertheless, the methodology used ensures that the overall results are scientifically sound.

Discussion

The results of the study show that the translation of literary texts is a multi-level, dynamic and highly interpretative process. In this process, differences between language systems manifest themselves not only at the formal, but also at the semantic, stylistic and cultural levels.

7.1. Main research results

The general results of the study are grouped as follows:

1. The dominance of lexical and semantic problems

The study shows that the most common difficulties in literary translation are related to the ambiguity of words and expressions, idiomatic structures and lack of equivalents. In particular, direct translation of idioms often leads to loss or distortion of meaning.

2. The impact of cultural differences

The differences between the source and target cultures directly affect the quality of translation. National realities, customs and social codes often do not find a direct counterpart in the target language, and this necessitates the translator to resort to adaptation strategies.

3. Partial preservation of stylistic adequacy

Although it is practically impossible to fully convey the author's style, it is possible to create a similar aesthetic effect on the reader through methods such as functional equivalence and modulation. However, in some cases, a compromise between content and form is inevitable.

4. Interpretive role of the translator

The translation process is not just a language conversion, but also an act of selection and interpretation. The translator acts as a "second author" of the text, and his decisions have a significant impact on the final result.

7.2. Discussion of the results

The results of the study are generally consistent with existing theories of translation studies and confirm a number of important points.

7.2.1. The relative nature of the concept of equivalence

The study shows that "full equivalence" does not exist ideally in literary translation. The functional equivalence approach of Nida and other theorists proves itself in practice as a more realistic and applicable model.

7.2.2. Balance of domestication and foreignization

Analysis of translation strategies shows that using only one approach (full adaptation or full alienation) can negatively affect the natural perception of the text. The optimal result is achieved by maintaining a balance between these two strategies.

7.2.3. The problem of cultural transfer

Literary translation is not only a language transfer, but also a cultural transfer process. However, it is not always easy for the target audience to perceive cultural elements. Therefore, methods of explanation, interpretation and adaptation play an important role.

7.2.4. Subjectivity and the creative factor

Subjectivity is inevitable in the translation process. Different interpretations of the same text by different translators bring the creative aspect of translation to the fore. This turns literary translation into an act of "creative reconstruction" rather than a mechanical process.

7.3. The impact of modern approaches

In modern translation studies, artificial intelligence, corpus linguistics and automatic translation systems have begun to be widely used. However, the study shows that:

- Although automatic translation systems are effective at the lexical level,
- They do not provide sufficiently accurate results at the stylistic, emotional and cultural levels

Therefore, the role of the human factor in literary translation still remains indispensable.

7.4. Scientific and practical significance

The results of the study are significant both theoretically and practically:

- Contribute to the development of the theory of translation studies

- Create a practical direction in the selection of translation strategies
- Help improve the level of professional training of translators

7.5. General conclusion

In general, it can be concluded that literary translation is a complex, multi-layered and creative process. In this process, language, culture and style factors are closely interconnected.

The main goal of literary translation is not only to transmit the text, but also to convey its aesthetic and emotional impact as close as possible to the target reader. Therefore, the translator acts as both a linguist, a cultural mediator and a creative interpreter.

Conclusion

The analysis shows that the translation of literary texts is a multi-level and complex process. In this process, various factors such as language, style, culture and pragmatics interact.

The problems encountered in literary translation can be overcome with the right strategy and professional approach. The translator acts not only as a transmitter of text, but also as a creative interpreter.

Consequently, literary translation should be assessed not only as a process of language translation, but also as a transmission of cultural and aesthetic values.

THE ROLE OF LITERARY TRANSLATION IN INTERCULTURAL COMMUNICATION: A TRANSLATION EXAMPLE FROM GERMAN INTO AZERBAIJANI TURKISH

Naila Ismikhana HUSEYNOVA

Senior Lecturer, Department of German Lexicology and Stylistics

Azerbaijan University of Languages (AUL)

E-mail: nail_af@mail.ru

ORCID ID: [0009-0001-7668-3747](https://orcid.org/0009-0001-7668-3747)

Abstract: This study examines the role of literary translation in intercultural communication through an example of translation from German into Azerbaijani Turkish. The study emphasizes that language is not only a means of communication but also a fundamental structure that carries cultural memory, social values, and aesthetic sensitivity. In this context, literary translation is considered not as a mechanical transformation of language that merely transfers meaning between cultures, but as a creative and interpretative process that reconstructs the historical, cultural, symbolic, and aesthetic dimensions of the source text within the target language. The structural differences between German and Azerbaijani Turkish-particularly in terms of the article system, sentence structure, compound words, idioms, and cultural references-make the translation process more careful and multilayered. The study also focuses on foreignization and domestication strategies, the translator's role as a cultural mediator, and the preservation of meaning, context, and stylistic integrity in literary texts. As a result, literary translation is evaluated as an important field of communication that contributes to the recognition of cultural identities, the strengthening of intercultural dialogue, and the development of empathy and mutual understanding.

Keywords: intercultural communication, literary translation, German, Azerbaijani Turkish, cultural transfer.

MƏDƏNİYYƏTLƏRARASI ÜNSİYYƏTDƏ BƏDİİ TƏRCÜMƏNİN ROLU: ALMAN DİLİNDƏN AZƏRBAYCAN DİLİNƏ TƏRCÜMƏ NÜMUNƏSİ

Xülasə: Bu tədqiqat alman dilindən Azərbaycan türkcəsinə edilmiş bədii tərcümə nümunəsi əsasında ədəbi tərcümənin mədəniyyətlərarası ünsiyyətdəki rolunu araşdırır. Tədqiqatda dilin yalnız informasiya ötürən vasitə olmadığı, eyni zamanda xalqın mədəni yaddaşını, ictimai dəyərlərini, dünyagörüşünü və estetik düşüncə tərzini yaşadan əsas daşıyıcı olduğu vurğulanır. Bu baxımdan bədii tərcümə fərqli mədəniyyətlər arasında sadə dil çevrilməsi deyil, mənbə mətnin tarixi, mədəni, simvolik və estetik xüsusiyyətlərinin hədəf dildə yenidən qurulduğu yaradıcı və interpretativ proses kimi qiymətləndirilir.

Alman dili ilə Azərbaycan türkcəsi arasındakı struktur və semantik fərqlər, xüsusilə artikl sistemi, cümlə quruluşu, mürəkkəb sözlər, idiomatik ifadələr və mədəni reallıqların ötürülməsi baxımından tərcümə prosesini daha mürəkkəb və çoxqatlı edir. Tədqiqatda həmçinin yadlaşdırma və yerliləşdirmə strategiyalarının xüsusiyyətləri, tərcümənin mədəniyyətlərarası vasitəçi

funksiyası, eləcə də bədii mətnlərdə məna, kontekst və üslubi bütövlüyün qorunması məsələləri geniş şəkildə təhlil olunur.

Nəticə etibarilə, bədii tərcümə müxtəlif mədəniyyətlər arasında qarşılıqlı anlaşmanı gücləndirən, milli-mədəni kimliklərin tanınmasına şərait yaradan, empati və mədəni dialoqu inkişaf etdirən mühüm kommunikasiya sahəsi kimi dəyərləndirilir.

Açar sözlər: mədəniyyətlərarası ünsiyyət, bədii tərcümə, alman dili, Azərbaycan türkcəsi, mədəni transfer.

Introduction

Intercultural communication is a process of meaning-making, sharing, and interpretation that occurs among individuals or communities with different historical experiences, value systems, belief patterns, linguistic structures, and social norms. This process is not limited to the encounter of two different languages; it also involves the mutual recognition of different cultural codes, symbols, ways of thinking, and lifestyles. Therefore, intercultural communication should be regarded not as a simple transfer of information, but as a multilayered negotiation of meaning. When individuals encounter another culture, they are confronted not only with new words but also with the historical memory, social values, emotional associations, and symbolic meanings embedded behind those words. In this context, language is the most fundamental tool of intercultural communication; however, it is never an independent and neutral system separate from culture. Language functions as the carrier, protector, and reproducer of culture and constitutes one of the most powerful elements of collective social memory (Hofstede, 2001).

Culture can be considered as the sum of values, beliefs, norms, traditions, symbols, behavioral patterns, and aesthetic understandings that a society has developed throughout its historical process. Language, on the other hand, is the primary means through which this cultural accumulation is both expressed and transmitted from one generation to another. Therefore, there exists a reciprocal and dynamic relationship between language and culture. While culture shapes language, language ensures the continuity of culture. The proverbs, idioms, folk narratives, mythological elements, literary works, and everyday speech patterns of a society reveal how that society perceives the world and interprets reality. For this reason, learning a language or translating from that language does not merely mean knowing the lexical equivalents of words; it also requires familiarity with the cultural universe to which that language belongs (Sapir, 1921; Whorf, 1956).

Literary translation occupies a special place within the process of intercultural communication. This is because literary translation makes visible, in another language, the ways of thinking, emotional experiences, aesthetic values, and collective memory of different cultures. Literary works are not only artistic productions of a society but also textual spaces that reflect its cultural identity. Through novels, short stories, poems, theatrical texts, and essays, the historical experiences, everyday life practices, family relationships, belief systems, social conflicts, and individual sensitivities of societies are conveyed. The translation of these works into other languages enables societies to recognize one another and facilitates the construction of bridges of meaning between different cultural worlds (Bassnett, 2002; Venuti, 1995).

Methodology and Materials. This study is a qualitative research examining the role of literary translation in the context of intercultural communication through translation examples from German into Azerbaijani Turkish. In the study, literary translation is considered not merely as a technical process that transfers meaning from the source language into the target language, but as a

multilayered field of communication in which cultural values, aesthetic structures, symbolic meanings, and collective memory are reconstructed.

The methodological basis of the study is founded on a descriptive and interpretative analysis approach. In this regard, the linguistic and cultural differences between German and Azerbaijani Turkish have been evaluated comparatively. In particular, the article system, sentence structure, compound words, idioms, metaphorical expressions, and cultural references have been examined as the main problematic areas encountered during the translation process.

The materials of the research consist of selected examples from German literary texts and their renderings into Azerbaijani Turkish. The selected examples were analyzed in terms of meaning, context, style, and cultural transfer, while particular attention was paid to the mediator role of the translator between the source and target cultures. Within this framework, the effects of translation decisions on the cultural identity and aesthetic integrity of the text were discussed by taking into consideration both foreignization and domestication strategies.

Discussion. Literary translation differs significantly from other types of translation. In technical, legal, or scientific translations, the primary objective is generally to convey information in a clear, accurate, and terminologically consistent manner. In literary translation, however, transferring meaning alone is not sufficient. The aesthetic structure of the text, its style, rhythm, emotional tone, narrative atmosphere, and cultural connotations must also be reconstructed in the target language. In the translation of a poem, not only the meaning of the words but also the sound patterns, rhythm, imagery, and associative fields are important. In a novel, the ways characters speak, their social positions, the narrator's language, spatial descriptions, and cultural references are integral components of the translation process. Therefore, literary translation is not merely a linguistic transfer but also a creative process of re-creation (Nida, 1964; Newmark, 1988).

The role of literary translation in intercultural communication is directly related to the position of the translator. A translator is not a person who performs a mechanical transfer between two languages; rather, the translator is a cultural mediator who reconstructs the meaning, aesthetic value, and cultural context of the source text within the target language. For this reason, the translator is often regarded as a "second author." However, this notion of second authorship does not imply rewriting the source text arbitrarily. On the contrary, it refers to preserving the spirit, aesthetic integrity, and cultural identity of the source text in the target language as effectively as possible. In this process, the translator carries two fundamental responsibilities: to represent the source culture accurately and to construct a narrative that the target culture reader can understand and adopt. This dual responsibility transforms literary translation into not only a linguistic but also an ethical and cultural activity (Lefevere, 1992; Baker, 2011).

Theories of intercultural communication provide important theoretical frameworks for understanding this function of literary translation. Edward T. Hall's distinction between high-context and low-context cultures clearly demonstrates the importance of cultural context in the translation process. In high-context cultures, meaning is often constructed not through explicitly stated words but through context, implication, tradition, social relationships, and nonverbal cues. In low-context cultures, communication tends to be more explicit, direct, and verbally structured (Hall, 1976). Literary translation requires establishing a balance of meaning between these two different communication styles. A cultural meaning that is implicitly conveyed in the source text may not have the same level of clarity in the target culture. In such cases, the translator may resort to strategies such as explanation, adaptation, or preserving the foreignness of the text.

Hofstede's cultural dimensions theory is also important for understanding the value systems of cultures during the translation process. Cultural dimensions such as individualism versus collectivism, power distance, uncertainty avoidance, masculinity versus femininity, and long-term orientation influence societies' communication styles, perceptions of hierarchy, family relationships, and social behaviors (Hofstede, 2001). In a literary text, characters' attitudes toward authority, their positions within the family, their ways of making individual decisions, or their responses to social expectations cannot be considered independently of these cultural dimensions. Therefore, literary translation attempts to transfer not only the words in the text but also the cultural behavioral codes carried by those words into the target language.

Literary translation from German into Azerbaijani Turkish requires a particularly careful approach in this context. This is because German and Azerbaijani Turkish are not only different languages but also products of different historical and cultural worlds. German belongs to the Germanic branch of the Indo-European language family and is an inflected language. Azerbaijani Turkish, on the other hand, belongs to the Turkic language family and is an agglutinative language. This structural difference indicates that the two languages possess distinct systems in terms of word formation, sentence construction, meaning production, and stress patterns. In German, inflection, the article system, gender categories, compound words, and subordinate clause structures are prominent features. In Azerbaijani Turkish, however, agglutinative structure, vowel harmony, suffixation, and subject-object-verb order are more characteristic. These differences often make it insufficient to search for word-for-word equivalence during the literary translation process.

The classification of nouns into three gender categories-masculine, feminine, and neuter-in German represents a grammatical feature that does not exist in Azerbaijani Turkish. This situation may create challenges, especially in conveying the associations attributed to objects, concepts, or individuals in literary texts. Although the use of articles in German may appear to be merely a grammatical necessity, in certain literary contexts gendered structures may influence the associative field of the text. Since such a system does not exist in Azerbaijani Turkish, the translator may attempt to convey this meaning through alternative word choices, contextual explanations, or stylistic preferences.

There are also significant differences between German and Azerbaijani Turkish in terms of sentence structure. In German, the basic sentence structure is generally based on subject-verb-object order, while in subordinate clauses the verb moves to the end, allowing long and complex nested structures to be formed. In German literature, particularly in philosophical, psychological, or descriptive narratives, long sentences are frequently encountered. In Azerbaijani Turkish, however, expression is largely organized around a suffix-based structure with the verb placed at the end of the sentence. Therefore, when translating a German literary text into Azerbaijani Turkish, the translator must reconstruct long sentences in accordance with the natural flow of the target language. However, this restructuring must be carried out in a way that does not disrupt the rhythm of the text or the author's stylistic voice.

Word structure and semantic fields are also among the fundamental issues that require attention in translation from German into Azerbaijani Turkish. Compound words are highly common in German. Long structures formed by combining multiple words often carry dense meaning within a single lexical unit. In Azerbaijani Turkish, the same meaning is often expressed through word groups, phrases, or suffixes. Therefore, in translating German compound words into Azerbaijani Turkish, semantic equivalence becomes more important than formal equivalence. The

translator may express a concept that is represented by a single word in the source language through a more explanatory structure in the target language. The objective here is not to preserve the form of the word but to maintain its function and semantic intensity within the text.

In terms of semantic fields, direct equivalence between the two languages is not always possible. A word may have a broad range of associations in one language, while in another language it may possess a narrower or entirely different semantic field. Cultural concepts, expressions of emotion, words describing social relationships, and vocabulary related to everyday life practices require particularly careful consideration during translation. Concepts that emerged from specific historical or social experiences in German may not have direct equivalents in Azerbaijani Turkish. Likewise, concepts belonging to Azerbaijani culture such as "*ağsaqqal*" (respected elder), "*xonça*" (decorative ceremonial tray), "*elçilik*" (marriage proposal visit), "*namus*" (honor), and "*qohumluq*" (kinship) must be considered not only through their dictionary meanings but also through the social and cultural weight they carry when translated into other languages.

Idioms and cultural references constitute one of the most complex areas of literary translation. Idioms often convey meanings that differ from the sum of their individual words and reflect the historical experiences, sense of humor, daily life, and values of the cultures to which they belong. For example, the German expression "*Tomaten auf den Augen haben*", when translated literally, results in a meaningless phrase such as "to have tomatoes on one's eyes"; however, its idiomatic meaning refers to being unable to see or notice something. Similarly, Azerbaijani Turkish expressions such as "*gözü yolda qalmaq*" (to wait anxiously for someone), "*ürəyi yanmaq*" (to feel deep sorrow or compassion), or "*dil tapmaq*" (to establish mutual understanding) may not create the same effect in the target language if translated literally. Therefore, in translating idioms, equivalence should be sought not at the word level but at the level of meaning and communicative effect (Jakobson, 1959; Newmark, 1988).

The transfer of cultural references similarly requires strategic choices. A German text may contain references to Christian symbols, historical events related to German history, local festivals, food culture, social institutions, or literary allusions. When translating these references into Azerbaijani Turkish, the translator must consider the knowledge level and cultural familiarity of the target reader. In some cases, the translator preserves elements belonging to the source culture, allowing the reader to encounter a foreign cultural context; in other cases, explanatory additions are provided to clarify meaning; and sometimes an equivalent element that performs a similar function in the target culture is used. These choices are commonly discussed within translation theory under the strategies of *foreignization* and *domestication* (Venuti, 1995).

The foreignization strategy ensures that elements of the source culture remain visible in the target text. This approach enables readers to encounter another culture and preserves the cultural authenticity of the text. However, excessive foreignization may make it difficult for the target reader to establish a connection with the text. The domestication strategy, on the other hand, makes the text more understandable and fluent for the target culture reader. Yet excessive use of this strategy may lead to the erasure of culturally specific elements belonging to the source culture. Therefore, a successful approach in literary translation requires maintaining a balanced position between these two strategies. The translator must both preserve the cultural identity of the source text and ensure that the target reader can understand the text.

In the process of literary translation from German into Azerbaijani Turkish, the transfer of meaning is directly related to the preservation of textual context. In literary texts, meaning emerges not only through words but also through plot structure, relationships between characters, spatial descriptions, narrative perspective, and the overall atmosphere of the text. Therefore, the translator must evaluate each sentence within the integrity of the entire text. A word in the source text may acquire different meanings depending on context. The same word may serve ironic, emotional, critical, or symbolic functions. If the translator fails to interpret these functions accurately, semantic shifts may occur in the target text. For this reason, literary translation requires skills of close reading, interpretation, and rewriting.

Preserving textual context also means preserving style. Every author possesses a unique mode of expression, rhythm, sentence structure, and choice of vocabulary. If, during translation, this style is completely reduced to the conventional expression patterns of the target language, the literary identity of the source text may be weakened. Conversely, if the structure of the source text is preserved mechanically, the target text may become artificial and difficult to understand. Therefore, the translator must reconstruct the author's style within the natural expressive possibilities of the target language. This process of reconstruction constitutes the creative dimension of literary translation.

The issue of cultural identity holds particular importance in literary translation. Cultural identity is shaped through the connection that individuals and societies establish with the culture to which they belong. Literary works are among the domains in which this identity becomes visible. The literature of a society reflects its historical sufferings, joys, traditions, social conflicts, moral values, and aesthetic sensibilities. Translating these works into other languages enables cultural identity to be represented on an international level. However, how cultural identity is represented during the translation process is crucial. If elements belonging to the source culture are weakened or obscured, the identity of the text may also diminish. Conversely, if a text remains closed to the target culture and excessively foreign, its communicative function may become limited. Therefore, literary translation is a process in which cultural identity is both preserved and reinterpreted within a new context.

Literary translation from German into Azerbaijani Turkish has the potential to enhance mutual understanding between the two cultures. German literature possesses a broad cultural background that includes European intellectual history, experiences of modernization, individual–society relations, philosophical inquiry, Romanticism, Realism, Modernism, and post-war literature. Translating this body of literature into Azerbaijani Turkish contributes to Azerbaijani readers' understanding of German culture, historical experiences, and intellectual traditions. At the same time, such translations enable new forms of expression, themes, and aesthetic approaches to be discussed within Azerbaijani literary and cultural spheres.

Intercultural interaction achieved through literary translation is not one-directional. Translation from one culture to another does not merely introduce the source culture; the target culture also reinterprets the translated text within its own intellectual and aesthetic framework. Therefore, translated works may acquire new meanings within the target culture. When a German literary text is read in Azerbaijani Turkish, it exists not only as a product of German culture but also as a text reconstructed within the interpretative world of Azerbaijani readers.

Literary translation also makes a significant contribution to the development of cultural understanding. Reading texts belonging to different cultures enables individuals to move beyond the

boundaries of their own cultural frameworks and to understand alternative ways of life. Unlike abstract cultural information, literary works convey human experience through concrete characters, events, and emotions. As a result, readers do not merely observe another culture from the outside; they enter the world of the text and experience the people, values, and conflicts of that culture from within. This experience strengthens empathy and contributes to the reduction of prejudice. In this respect, literary translation functions as one of the most effective tools of intercultural dialogue.

Another contribution of literary translation to intercultural dialogue lies in making universal human experiences visible. Themes such as love, death, loneliness, freedom, justice, belonging, migration, war, the search for identity, and social pressure may be expressed differently across cultures, yet they point to shared domains of human experience. Literary translation demonstrates how these common themes are treated in different cultures, revealing both differences and similarities.

By enabling the international circulation of literary works, literary translation also contributes to the preservation of cultural diversity. Translating a work into other languages does not merely allow it to reach a wider readership; it also helps the source culture gain visibility within world literature. This is particularly important for literary works produced in languages with limited distribution, as their circulation through translation supports cultural pluralism.

Literary translations between German and Azerbaijani Turkish are also significant in terms of language learning and cultural awareness. Translated works contribute not only to readers' familiarity with another literature but also to their understanding of the modes of thinking and cultural references embedded in the source language. Such translations constitute rich resources for language learners because literary texts contain metaphorical expressions, varied stylistic levels, character dialogues, and cultural contexts that go beyond everyday language.

However, the process of literary translation also carries certain risks. Loss of meaning, cultural erasure, excessive adaptation, decontextualization, and the weakening of aesthetic effect are among the most significant challenges. Particularly in culturally dense texts, translators must carefully determine which elements to preserve, which to explain, and which to adapt. These decisions are not only linguistic but also ethical in nature, as translation determines how the source culture will be represented in the target culture. Incorrect or incomplete representation may lead to superficial or misleading perceptions of the source culture.

Within this framework, the fundamental approach that should be followed in literary translation from German into Azerbaijani Turkish is to establish a balance among linguistic accuracy, cultural sensitivity, and aesthetic integrity. The translator must analyze the source text in detail; understand its historical, cultural, and literary context; use the expressive possibilities of the target language creatively; and present a text that is both comprehensible and aesthetically powerful to the reader. In this process, dictionary equivalents alone are not sufficient. The translator must reconstruct the spirit of the text, its rhythm, symbolic structure, and cultural memory within the target language.

Conclusion

This study has demonstrated, through translation examples from German into Azerbaijani Turkish, that literary translation is not merely a linguistic transfer process but also a multidimensional field of communication in which cultural, aesthetic, and intellectual elements are reconstructed. The findings of the research reveal that, during the translation of literary texts, preserving not only meaning but also context, cultural references, modes of expression, and

aesthetic structure is of great importance. In particular, the structural differences between German and Azerbaijani Turkish make the translation process more complex and interpretative.

The study also concludes that the translator is not simply a person who performs a technical transfer between two languages, but rather a cultural mediator who builds bridges of meaning between the source and target cultures. The translator's ability to reconstruct the spirit, rhythm, symbolic structure, and cultural memory of the text in the target language has been considered one of the fundamental conditions of successful literary translation. In this context, it has been observed that a balanced approach between foreignization and domestication strategies should be adopted. Excessive domestication may weaken the originality of the source culture, whereas excessive foreignization may make it difficult for the target reader to establish a connection with the text.

The research has further shown that literary translation makes significant contributions to the development of intercultural understanding, the strengthening of empathy, and the preservation of cultural diversity. Translations from German into Azerbaijani Turkish not only contribute to the recognition of German literature by Azerbaijani readers, but also create opportunities for new intellectual and aesthetic discussions within Azerbaijani literary and cultural circles. In this respect, literary translation is regarded as an important field of cultural interaction that strengthens mutual understanding among different societies.

Abstract: This article provides a comprehensive overview of the theoretical and practical perspectives of Machine Translation (MT) within the field of computational linguistics, focusing on its historical development, dominant methodological approaches, and contemporary challenges. The study traces the evolution of MT from its early conceptual foundations to its current status as a core technology in global digital communication. Although early rule-based systems achieved limited success by relying on predefined grammatical rules and lexical resources, they faced significant challenges in handling linguistic ambiguity, idiomatic expressions, and contextual meaning.

The article then discusses the emergence of Statistical Machine Translation (SMT) in the late twentieth century as a data-driven alternative to rule-based models. SMT systems introduced probabilistic methods based on large bilingual corpora, enabling more flexible and scalable translation. While SMT improved fluency and expanded language coverage, it continued to struggle with syntactic accuracy, semantic coherence, and the translation of culturally embedded meanings. These shortcomings paved the way for the development of Neural Machine Translation (NMT), which represents a major paradigm shift in the field.

The article also reviews major methods for evaluating translation quality, distinguishing between automatic and human-based approaches. Automatic metrics such as BLEU, METEOR, TER, and BERT Score are discussed in terms of their efficiency and consistency, as well as their limitations in capturing semantic depth, discourse coherence, and cultural appropriateness.

In conclusion, the article argues that while Neural Machine Translation has significantly transformed the landscape of translation by increasing speed, accessibility, and general linguistic quality, it cannot fully replace human translators and therefore it makes the existence of hybrid translation.

Keywords: Machine Translation; Neural Machine Translation; Statistical Machine Translation; Rule-Based Translation; Post-editing; Translation Quality; Human–Machine Interaction.

Xülasə: Bu məqalə, kompüter dilçiliyi sahəsində Maşın Tərcüməsinin (MT) nəzəri və praktik perspektivlərinə geniş baxış təqdim edir, onun tarixi inkişafına, dominant metodoloji yanaşmalarına və müasir çətinliklərinə diqqət yetirir. Tədqiqat MT-nin erkən konseptual təməllərindən global rəqəmsal rəhbərlikdə əsas texnologiya kimi mövcud statusuna qədər təkamülünü sərf-nəzər edir. İlk qayda əsaslı sistemlər əvvəlcədən müəyyən edilmiş qrammatik qaydalara və leksik resurslara əsaslanaraq məhdud uğur qazansalar da, linqvistik qeyri-müəyyənlik, idiomatik ifadələr və kontekstual məna ilə işləməkdə ciddi çətinliklərlə üzləşirlər.

Daha sonra iyirminci əsrin sonlarında qayda əsaslı modellərə məlumatlara əsaslanan alternativ kimi Statistik Maşın Tərcüməsinin (SMT) ortaya çıxması müzakirə olunur. SMT sistemləri sonralar daha çevik və miqyaslı tərcüməyə imkan verən böyük ikidilli korpuslara əsaslanan ehtimal metodlarını təqdim etdi. SMT səlisliyi yaxşılaşdırsa və dil əhatə dairəsini genişləndirsə də, sintaktik dəqiqlik, semantik uyğunluq və mədəni cəhətdən yüklü mənalara tərcüməsi ilə qarşı-qarşıya durmaqda davam etdi. Bu çatışmazlıqlar MT sahəsində böyük bir paradigma dəyişikliyi təmsil edən Neyron Maşın Tərcüməsinin (NMT) inkişafına yol açdı.

Məqalədə həmçinin tərcümə keyfiyyətinin qiymətləndirilməsi üçün əsas metodlar nəzərdən keçirilir, avtomatik və insan əsaslı yanaşmalar arasında fərqlər araşdırılır. BLEU, METEOR, TER və BERT Score kimi avtomatik metriklər onların səmərəliliyi və ardıcılığı, eləcə də semantik dərinliyi, diskurs uyğunluğunu və mədəni uyğunluğu hədəfləmək kimi məsələlər müzakirə olunur.

Nəticə olaraq, məqalədə iddia edilir ki, Neyron Maşın Tərcüməsi sürəti, əlçatanlığı və ümumi linqvistik keyfiyyəti artırmaqla tərcümə mənzərəsini əhəmiyyətli dərəcədə dəyişdirsə də, insan tərcüməçilərini tam əvəz edə bilməz və bu, gələcəkdə hibrid tərcüməsinin labüdüdür.

Açar sözlər: Maşın Tərcüməsi; Neyron Maşın Tərcüməsi; Statistik Maşın Tərcüməsi; Qayda əsaslı tərcümə; Post-redakt; Tərcümə keyfiyyəti; İnsan–maşın qarşılıqlı əlaqəsi.

Introduction

Machine Translation (MT) is the automated process of converting spoken or written text from one language to another using computational systems and linguistic models. This field, part of computational linguistics, has evolved remarkably over the past seven decades. Thus, the automatic process of translating speech or text between languages using computer programs and language models is known as MT. So, over the past 70 years, this area of computational linguistics has advanced significantly. In contrast, its main purpose remained much simpler: “to simplify cross-

language communication and reduce the workload for human translators” (1, p. 12). Although the idea of automatic translation predates computers, practical experiments began only in the mid-20th century, with the rapid growth of computing technology.

Early research in the 1940s–1950s explored how computers could assist in language analysis. A landmark experiment took place in 1954 when Georgetown University and IBM demonstrated a system that translated over sixty Russian sentences into English. While this proved that automated translation was possible, it also revealed the weaknesses of rule-based systems, which relied heavily on grammar rules and dictionaries (1, pp. 34–36; 2, pp. 5–7). Progress slowed after 1966, when the Automated Language Processing Advisory Committee (ALPAC) report concluded that “MT was less efficient, less accurate, and more costly than human translation” (8, p.19).

By the 1980s and 1990s, Statistical Machine Translation (SMT) gained popularity. Instead of hand-crafted rules, SMT used large bilingual corpora to predict translations. This “data-driven approach improved fluency but still struggled with grammar, idioms, and contextual meaning”. (9, pp. 263–270)

In the 21st century, Neural Machine Translation (NMT) revolutionized the field. Around 2014, models such as “the Transformer architecture began producing translations that were far more natural and fluent” (7, pp. 5998–6000). NMT systems analyze entire sentences as sequences of meaning, learning complex patterns from massive datasets and often approaching human-level quality.

Today, MT plays an important role in global communications, business, education, and technology. His story, from rule-based methods to statistical and neural models, shows how people overcome language barriers. The future of MT depends on a combination of artificial intelligence, human knowledge, and ethical considerations to further improve communication across multiple languages. It will inevitably involve preferential usage of hybridity in translation.

Machine Translation (MT) is an important technology in today’s multilingual world. It enables people to communicate, learn, and share information across languages using computers. MT is fast, cost-effective, and widely accessible, but it also faces challenges with accuracy, ethics, and cultural understanding.

One of the main strengths of MT is its speed. Automated systems can translate large amounts of text in seconds, saving time compared to human translators. This efficiency benefits organizations, governments, and individuals who work with multiple languages. Online platforms like Google Translate and DeepL provide affordable or free translations, allowing students and small businesses to access content in different languages easily. MT also helps people from different language backgrounds share ideas, supports education, tourism, and emergency communications, and provides speakers of less common languages access to online resources.

However, limitations remain. Even advanced neural systems may misinterpret grammar, idioms, or cultural references. Within this context, culturally loaded words pose particular difficulty, making translations sound unnatural or even inappropriate in some contexts. That is why such kind of biasness in training data can lead to inaccurate or insensitive translations, especially “humour, politeness, and cultural nuance are often lost, resulting in unnatural or misleading outputs” [2, pp. 210–215]. It is obvious that MT offers clear advantages in speed, cost, and accessibility, but human translators are still needed to ensure accuracy, cultural sensitivity, and meaningful communication. The best results come from combining technology with human judgment.

Methodology

To illustrate how different MT systems perform in practice, a short literary passage was translated using **DeepL**, **Google Translate**, and a **GPT-based translation model**. The selected passage contained emotional tone and irony, providing an opportunity to evaluate how each system handles nuance and stylistic subtlety.

Original Text:

"He didn't say any more, but we've always been unusually communicative in a reserved way, and I understood that he meant a great deal more than that. In consequence, I'm inclined to reserve all judgments, a habit that has opened up many curious natures to me and also made me the victim of not a few veteran bores." (Some minor human interventions are involved in translation processes into Azerbaijani)

DeepL Translation:

"O, bundan savat heç nə demədi, bununla belə biz həmişə ehtiyatlı və həddən-ziyaddə ünsiyyətdürlümüzdən mən başa düşdüm ki, o, bundan qat-qat çoxunu umurdu. Nəticədə, mən bütün mühakilələri təxirə salmaq meyliyəndim; bu vərdiş mənə bir çox marqlı təbiətləri kəşf etdirib və eyni zamanda mənə az sayda olmayan darıxdırıcı veteranların qurbanına çevirib."

Google Translate Translation:

"O, daha heç nə demədi, amma biz həmişə qeyri-adi şəkildə təmkinli şəkildə ünsiyyətdürlümü və başa düşdüm ki, o, bundan daha çox şey demək istəyirdi. Nəticədə, mən bütün mühakilələri təmkinli qəbul etməyə meyliyəm, bu vərdiş mənə bir çox marqlı təbiəti açdı və eyni zamanda bir çox veteran darıxdırıcılarının qurbanı oldum."

GPT-Based Translation:

"O daha heç nə demədi, amma biz həmişə bir qədər təmkinli şəkildə də olsa, qeyri-adi dərəcədə açıq olmuşuq və mən onun bununla çox daha dərin bir şey demək istədiyini başa düşdüm. Nəticədə, mən bütün mühakilələrimi saxlamaq meyliyəm — bu vərdiş mənə bir çox marqlı xarakterləri tanımaq imkanı verib, amma eyni zamanda bir neçə köhnə, yorucu insanların qurbanına da çevrilmişəm."

Developments

Comparing the outputs, **DeepL** offers a smooth and grammatically accurate translation, but softens the original's emotional tone. **Google Translate** maintains structural fidelity but lacks contextual awareness, producing repetitive phrasing such as *"təmkinli şəkildə ünsiyyətdürlü"*. The **GPT-based translation**, however, better preserves the emotional nuance and interpretive tone of the passage. It reflects irony and restraint with natural phrasing, as seen in *"bir qədər təmkinli şəkildə də olsa, qeyri-adi dərəcədə açıq olmuşuq"*.

DeepL excels in fluency, **Google Translate** in syntactic precision, and **GPT** in contextual and stylistic understanding. This comparison demonstrates that while machine translation systems continue to evolve, a hybrid approach that combines the precision of automated translation with human post-editing may produce the most reliable results for complex or literary texts.

Rule-Based and Statistical Approaches

Rule-based Machine Translation (RBMT) was the earliest method, relying on linguistic rules and dictionaries. Besides, "it worked reasonably well for structurally similar languages but struggled with ambiguity and idiomatic expressions. Its transparency was an advantage, but rule creation was costly and time-consuming" (1, pp. 90–95).

Statistical Machine Translation (SMT) emerged to address these issues, using probability models and bilingual corpora. It “improved fluency and expanded language coverage, but often produced grammatically inconsistent sentences and failed to capture emotional tone” (2, pp. 122–130).

Neural Machine Translation (NMT) marked a turning point. Unlike previous systems, NMT employs artificial neural networks to learn (a) context, (b) semantics, and (c) linguistic structures. NMT systems such as Google Translate, DeepL, and GPT-based models have redefined translation by focusing on contextual meaning rather than word-for-word equivalence. So, by employing artificial neural networks, tools like Google Translate, DeepL, and GPT-based models focus on meaning rather than word-for-word equivalence, producing smoother, more natural translations (5).

Despite technological progress, human involvement remains crucial. Thus, “post-editing is the process of editing, modifying and/or correcting pre-translated text...” (3, p. 297). The level of post-editing required depends on the quality of the MT output and the intended use of the text (3, p. 298). It means that machines can generate fast translations, but they still lack a full understanding of linguistic nuance, emotion, and cultural context. Corrected translations can even be fed back into systems to enhance future performance. “In this scenario, translators correct the raw MT output to obtain a text of publishable quality” (4, p.60). Therefore, human intervention-especially through post-editing and proofreading-plays a crucial role in refining automatically produced translations and making them fit for publication or professional use. That is why we definitely rely much more on a future hybrid form of translations rather than separately on machines and individuals.

Post editing

Post-editing refers to the process in which a human translator reviews and corrects the output of a machine translation system. The goal is to improve accuracy, fluency, and style while maintaining the efficiency advantages of automation. There are generally two levels of post-editing: light post-editing, which corrects only major errors and ensures the text is understandable, and full post-editing, which focuses on grammar, tone, and natural flow so that the translation reads as if written by a human. In practice, this is often described as ranging from light post-editing, which focuses on basic comprehensibility, to full post-editing, which aims at producing publication-quality text. The choice of approach depends on the purpose of the translation. For example, technical manuals may only need light editing, while marketing or literary texts require deeper revision. Moreover, post-editing helps train future systems: corrected translations can be reused to improve machine translation performance over time (10, p. 5).

However, challenges also exist. Post-editing can be mentally demanding, as translators must constantly monitor errors produced by the system and resist the influence of inadequate machine output. This phenomenon, known as machine bias, may lead editors to accept unnatural phrasing simply because it appears in the automated version (11, p. 3). Additionally, the quality of the raw MT output determines the level of human effort required. Poor machine translation may require almost complete retranslation, thereby reducing the expected efficiency gains. Another issue concerns the ethical and economic impact, as the increasing use of MT with post-editing has led in some cases to reduced payment rates for translators (12, p. 1).

Alongside post-editing, proofreading remains a crucial stage. It ensures that the final text is free from grammatical errors, mistranslations, and formatting issues, and that it reflects the intended tone and style. Proofreading is especially important when translations are prepared for publication, marketing, or legal purposes, where even minor inaccuracies may affect meaning or credibility [10,

p. 6]. In many cases, proofreading is carried out by a different specialist, providing a fresh perspective and helping to identify overlooked errors.

In summary, human intervention through post-editing and proofreading bridges the gap between machine speed and human quality. While machines provide efficiency, humans contribute cultural understanding, emotion, and critical thinking. The partnership between humans and MT technology is not a competition but a collaboration, one that is essential for achieving translations that are both accurate and meaningful. Evaluation remains essential for assessing translation quality (6, pp. 517–520).

Conclusion

Despite the multifaceted features of MT, in all evolved systems of MT, human involvement will remain vivid, i.e. “challenges remain in handling idioms, cultural nuance, and stylistic elements” (2, pp. 271–275). That is why “human participation ensures translations retain emotional depth and cultural relevance” (6, pp. 540–545).

Abstract: The advances in neural machine translation (NMT) systems over the last several years have not yet been satisfactorily translated into performance improvements for low-resource languages. In this project case study, our area of analysis is the development of NMT systems to translate into the Azerbaijani and Turkish languages by Google, Microsoft, and Meta. Morphological complexity and lack of training materials create unique difficulties for these projects. Despite the tendency of modern NMT systems to work well with higher resource languages, results are often unpredictable for language structures with extensive suffixes that are characteristic of agglutinative morphology. In 2025, translation results from Google Translate, Microsoft Translator, GPT, and Meta were collected from different types of text- technical manuals, visuals and so on-for the purpose of assessing how contextually adaptable those NMT system outputs were. Each individual translation output was reviewed manually with a similar level of detail used in the analysis of NMT system producing errors. However, the way that structure is expressed continues to create area(s) for error(s) when translating between languages. In particular, forms of possession can consistently have the incorrect structure related to other grammatical structures in translation, and errors in global syntax also occur due to language mismatch/affinity. Similar types of problems exist with respect to differences in word order between Azerbaijani, Turkish, and English due to differences in syntax. Overall, results from this project illustrate the limitations of existing NMT systems in low resource but very agglutinative languages and highlight the need for morphology-sensitive designs of models and optimization of systems for specific domains.

Keywords: Neural Machine Translation, Azerbaijani and Turkish languages, low-resource languages, agglutinative morphology, translation evaluation, error analysis

AZƏRBAYCAN VƏ TÜRK DİLLƏRİ ÜÇÜN NEYRON MAŞIN TƏRCÜMƏ SİSTEMLƏRİNİN MÜQAYISƏLİ TƏHLİLİ

Xülasə: Son bir neçə il ərzində neyron maşın tərcüməsi (NMT) sistemlərindəki irəliləyişlər hələ də aşağı resurslu dillər üçün performans təkmilləşdirmələrinə qənaətbəxş şəkildə çevrilməmişdir. Bu layihə nümunəsində təhlil sahəmiz Google, Microsoft və Meta tərəfindən Azərbaycan və türk dillərinə tərcümə etmək üçün NMT sistemlərinin hazırlanmasıdır. Morfoloji mürəkkəblik və təlim materiallarının olmaması bu layihələr üçün unikal çətinliklər yaradır. Müasir NMT sistemlərinin daha yüksək resurs dilləri ilə yaxşı işləmək meylinə baxmayaraq, aqqlutinativ morfolojiya üçün xarakterik olan geniş şəkilçilərə malik dil strukturları üçün nəticələr çox vaxt gözlənilməz olur. 2025-ci ildə Google Translate, Microsoft Translator, GPT və Meta-dan tərcümə nəticələri bu NMT sisteminin nəticələrinin kontekstdə nə dərəcədə uyğunlaşa biləcəyini qiymətləndirmək üçün müxtəlif növ mətnlərdən - texniki təlimatlar, vizual materiallar və s.-dən toplanmışdır. Hər bir fərdi tərcümə çıxışı səhvlər yaradan NMT sisteminin təhlilində istifadə edilən oxşar səviyyəli təfərrüatla əl ilə nəzərdən keçirilmişdir. Bununla belə, strukturun ifadə üsulu dillər arasında tərcümə zamanı xəta(lar) üçün sahə(lər) yaratmağa davam edir. Xüsusilə, sahiblik formaları tərcümədə ardıcıl olaraq digər qrammatik strukturlarla əlaqəli yanlış struktura malik ola bilər və qlobal sintaksisdə səhvlər də dil uyğunsuzluğu/yaxınlıq səbəbindən baş verir. Sintaksisdəki fərqliliklərə görə Azərbaycan, türk və ingilis dilləri arasında söz sırasındakı fərqlərlə bağlı oxşar problemlər mövcuddur. Ümumilikdə, bu layihənin nəticələri aşağı resurslu, lakin çox aqqlutinativ dillərdə mövcud NMT sistemlərinin məhdudiyyətlərini göstərir və modellərin morfolojiyaya həssas dizaynlarına və xüsusi domenlər üçün sistemlərin optimallaşdırılmasına ehtiyacı vurğulayır.

Introduction

The field of artificial intelligence has dramatically changed the way people use language through the use of new technologies, such as machine translation, providing a very notable achievement in the machine translation area. In the past, early machine translation relied solely on printed dictionaries, then evolved as we developed statistical models and more recently developed methods based on deep learning using neural networks. Unfortunately, this rapid advancement in technology has not impacted all languages equally. The quality of modern machine translation systems relies on the availability of data; therefore, the level of machine translation proficiency is much lower for languages that have smaller digital presence than for resource-rich languages that are continually enhanced with new data. This discrepancy is particularly evident in Azerbaijani and Turkish languages. Because they are very agglutinative, rather than using separate words to indicate case, possession, or tense, multiple affixes (suffixes) are affixed to a single root form of a word. This makes direct word-for-word translation of Azerbaijani and Turkish languages to other languages impossible. The successful machine translation of them requires that the translator have an understanding of the structure of the morphological relationships between the suffixes and how they relate to one another, which is further complicated by the lack of any well-structured parallel corpus. Therefore, as automated translation becomes more integrated into the daily operations of many businesses and governments, the growing number of individuals and organizations that rely on these services continues to grow and evolve. Mistranslations in these contexts could result in legal ambiguity or a serious misinterpretation; as a result evaluating technologies to produce Azerbaijani and Turkish languages is a technological accountability issue rather than an academic interest. Although large technology firms report wide language coverage, independent evaluations of these types of systems for Azerbaijani and Turkish languages are infrequent and traditional automated metrics often miss the subtle errors specific to morphologically complex languages from which they are generated. Therefore, human evaluation is required to determine the actual quality of

the translations. This research provides a systematic assessment of existing neural machine translation systems used to translate those languages by conducting a controlled comparison of the output from these systems with each document category. By comparing the generated outputs across all document categories, this research finds multiple common weaknesses and error patterns in the outputs and highlights the lack of consideration given to adverse grammatical differences in the largest multilingual systems.

Literature Review

Neural Machine Translation (NMT) has enhanced fluency of translations due to advances in deep learning models that allow for simultaneous processing of all elements of a sentence or phrase so that the final product is more comprehensive than translations produced using traditional rule-based systems (Yuna et al., 2026; Qəbulol, 2026); however, low-resource languages are unlikely to have much success with translating using NMT or deep learning technologies because of data scarcity and limitations in generalization, which affect translation quality (Gessler et al., 2025; Tonja et al., 2023; Wang et al., 2021). The lack of adequate data resources proves to be particularly challenging when developing translations from and to Turkic languages because of the unique morphological patterns exhibited among these languages (Mirzakhlov et al., 2021). Agglutinative in nature, Azerbaijani has of richness in base word formation; thus, it involves complex phonological processes which hinder the development of robust neural network models that can effectively handle these morphological traits (Namazova, 2023; Temiroğlu, 2024). In contrast, many researchers recommend incorporating automated systems (e.g., stemming experts) to analyze complex root verbs for better accuracy; however, they are in the developmental stage for Azerbaijani (Mursaliyev, 2023; Qasimova, 2022). Therefore, developers have turned to using technology to work around the structural issues. Studies have focused on using transfer learning and cross-language training methods to improve the accuracy of machine translation (Tukeyev et al., 2025; Yazar & Kiliç, 2025) and the development of more Turkic dialects (TUID, 2024) by major technology companies. However, compared to other major global languages (Mammadova, 2025), the use of linguistic engineering to build proper databases for Azerbaijani and Turkish languages remains limited. In addition, users in academia are typically very dependent on using automated translation services (Orujova, 2025) and usually overestimate the accuracy of the automated translation software they use. Over-reliance on automated translation services combined with inadequate metrics to evaluate the accuracy and reliability of the software fails to identify structural errors in current systems. Therefore, there is a need for empirical research to evaluate the structural errors that occur in real-world translations using visual methods instead of relying solely on automated score methods.

Table 1: The progression of machine translation systems through several stages, starting with rule-based methods.

Source: Neural machine translation and multilingual NLP: A survey of methods, architectures, and applications. <https://www.preprints.org/manuscript/202601.0244> (01.06.2026)

Methodology and Variables: This study utilizes a comparative back-translation experiment to evaluate whether different major NMT systems (e.g. Google Translate, Microsoft Translator, Meta/Facebook's NMT, and a GPT-like NMT) can provide accurate translations of some morphological aspects of Azerbaijani and Turkish languages and how these morphological rules may differ from one another. Each of four major NMT systems performed an initial translation of some Azerbaijani and Turkish text into English. After all translations were completed, each NMT system again translated their English back into Azerbaijani/Turkish languages (a closed-loop translation), and thus directly enabled comparison, placing all NMT systems inside a feedback loop for evaluation. A group of several human raters with high English proficiency, including individuals who currently hold a valid IELTS or equivalent language test certificate, were also used to evaluate the NMT translation outputs. The four types of metric evaluations that were used (n-gram precision with BLEU; similarity of meaning with METEOR; total number of edits required with TER; and chrF, an F-based accuracy measure suitable for morphologically rich languages) are all included. Qualitatively, in evaluating gender-neutral Azerbaijani to English translated sentences, probes were also utilized to ascertain what gender pronoun would be assigned to a translated gender-neutral Azerbaijani sentence in which no explicit pronoun indicator occurs. Both syntactic and semantic aspects should be considered in this evaluation.

Discussion

Quantitative metrics show that all tested NMT systems have different results when looking at precision or required editing time and semantic similarity. The highest precision result is from Microsoft Translator, with a BLEU score of 22.91 and a TER of 67.05, meaning it needs the least amount of human editing to make structurally accurate translations. In contrast, Meta had the lowest BLEU score of 2.28 along with the highest TER of 90.17 and yet was also the highest rated with a METEOR score of 0.518. Therefore, while Meta's NMT model did well at capturing the meaning of words (including any synonyms), it struggled to match the exact syntactic alignment and structural word order of Azerbaijani.

Table 1. NMT Performance Metrics for Azerbaijani

	BLEU	METEOR	TER	chrF
Google	9.53	0.473	70.52	46.79
Microsoft	22.91	0.506	67.05	48.52
GPT	9.71	0.490	71.10	47.99
Meta	2.28	0.518	90.17	47.77

Source: Author's Research Results (2026)

Through this qualitative analysis, we found evident socio-cultural & systematic biases, particularly a reliance on word-for-word translation rather than the contextual meaning of each word in a sentence. Since "o" is the gender-neutral pronoun used in Azerbaijani, NMT systems are forced to infer the gender of the pronoun when translating to English and do so with social assumptions. A perfect example of this is when Meta AI automatically assigned a masculine gender to the gender-neutral sentence "Ondan sonra mən səhranı gəzə biləcəyəm, çünki orada mənə baxa biləcək bir insan-cins yoxdur," resulting in a translation of "After that, I will wander around the desert because there is no male there to look at me." The models also demonstrated considerable

gender bias by generating default male pronouns for any technical or leadership role, and the models consistently misgendered or misidentified non-gendered names based on their contextual use. AI systems that translate idiomatic sentences focus more on literal mapping than naturally expressing idioms. For example, Google Translate translated the sentence "Biz çox qarışıq bir sinif idik" literally as "We were a very mixed class," whereas a human literary translation would yield "We were a very mixed lot," travelling beyond just a mixing of different races or ethnicities but capturing overall social and cultural differences. Another example is "Bərk qəhqəhə qopdu." Here, Google Translate interpreted the direct (a); thus, it translated to: "A loud laugh broke out." By comparison to Microsoft's translated fragment "Burst out laughing," GPT models attempted to reinterpret the original implicit structure and added an explicit subject; thus, they translated to: "He/She burst into laughter," which shifts the focus from a collective reaction (impersonal) to a single individual (personal). Meta AI is the translator closest to achieving the natural equivalence between the two examples; thus, it translated the idioms to: "Loud laughter erupted" and "A burst of laughter broke out." Misinterpretation regarding semantics and structure will be a significant challenge for literary and formal documentation within today's existing multilingual architectures and current limitations.

Google Translate:

Performance: Moderate Performance (19.53/0.473/70.52/46.79).

Morphology: Requires additional improvement for the treatment of agglutinative suffixes (chrF low).

Syntax: Needs improvement to reduce instances of literal translation, and to provide more idiomatic restructuring of sentences.

Semantics: Requires more context-based interpretation of expressions.

Bias: Needs to address neutral gender assignment in pronouns.

Microsoft Translator:

Performance: highest BLEU (22.91/67.05/48.52), with slightly lower METEOR.

Morphology: retain or refine performance, while improving how complex suffixes interact.

Syntax: improve the way structural flexibility is applied in complex or literary structures.

Semantics: increase the range of synonyms or variations used.

Bias: minimize default gender assignment.

GPT based NMT:

Performance: Moderate Structure (19.71); Strong Semantics (0.490); Higher TER (71.10).

Morphology: Improve consistency with implicit grammatical markers.

Syntax: Eliminate unnecessary subject insertion; continue using impersonal sentence structures.

Semantics: Maintain scope of meaning; prevent reduction of meaning through added agents.

Bias: Prevent the use of gendered pronouns when gender is not present in the original text.

Meta NMT:

Performance: Highest METEOR (0.518); Lowest BLEU (12.28); Highest TER (90.17);

Moderate chrF. Morphology: Improve alignment between form and structure.

Syntax: Main issue = improve word order and structural accuracy.

Semantics: Maintain strength of meaning while integrating with accurate syntax.

Bias: Eliminate gender over-specification; maintain neutrality.

Table 2. NMT Performance Metrics for Turkish

	BLEU	METEOR	TER	chrF
GPT	0.47	0.0498	112.8	112.65
Google	0.44	0.0387	115.85	112.48
Microsoft	0.44	0.035	117.68	112.44
Meta	0.75	0.0423	114.02	111.48

Source: Author's Research Results (2026)

By analyzing using quantitative approaches Turkish outputs reveals a distinct discrepancy between word-level precision and morphological accuracy. The analysis shows that Meta produced strong exact-word overlap (BLEU 0.75), however, it simultaneously recorded the lowest chrF score (11.48). This means that the system has a critical limitation in handling morpheme boundaries in agglutinative Turkish, for example frequently retrieving the correct base word but failing to attach the appropriate case suffix or tense suffix. The GPT NMT system provided the best balance and had the highest score for METEOR (0.0498) as well as chrF (12.65) among all Turkish outputs. Thus, it can be concluded that the GPT NMT system has been generating Turkish translations at a higher level with respect to preservation of meaning, as well as sub-word morphological structure compared to the Meta system. The results from manual error classification demonstrate that there are several recurring structural vulnerabilities across all System Architectures for each of the Systems investigated. For example, in the technical domain, syntactic errors were pervasive because there are a number of Models that struggled to restructure English SVO sentences into the mandatory Turkish SOV sentences because many Verbs are stranded in the middle of the Sentence due to the use of Complex Clauses in each Sentence. An example of a morphological failure can be found in Translations made for "kullanıcı sözleşmesinin feshi" (the Termination of the User Agreement) in English. Furthermore, with respect to Genitive and Possessive Suffixes (-nin and -i), GPT successfully maintained the genitive-possessive chain, whereas both Google Translate and Microsoft's Translation systems produced literal mappings that severed the morphological relationship between the nouns; therefore, it rendered the sentence grammatically broken.

6. *Google Translate*: Based on the performance measurements, the entire set of performance metrics has been evaluated and found to perform moderately well (0.44/.0387/115.85/12.48). Therefore, there is a need to improve the accuracy of suffix attachments, especially when applying to noun cases and complex verbs, which would contribute to the improvement of the morphological layer. In terms of performance improvements at the syntactic level, improving the accuracy of direct translations (e.g., not using direct translation patterns) and improving the clarification of word order within SOV structures would positively contribute to the performance of members of the syntactic layer. Also, for an accurate semantic translation, there is still a need to develop additional contextually based interpretations of idiomatic phrases in Turkish. Indefinite gendered third-person singular pronouns are identifiable (can be found in the database of Google Translate). Therefore, it is recommended to correct the biased default gender assignment to third-person singular pronouns.

7. *Microsoft Translator*: Microsoft Translator produces the lowest METEOR (0.035) score and the highest TER (117.68) rating and requires the most Post-Edit work performed on the translation due to the overall need for improvement, particularly in morphological agreement between noun and verbal phrases. The foremost of the major problems with the translation is that they typically rearranged the order structure of the individual components of the sentence. Therefore, one would normally have a construction that does not syntactically match that of a native speaker. Semantically there is a need to use as many different forms of lexicon words (i.e.,

synonyms) as practical so that the translation includes a rich diversity of meaning within each translated sentence, and the default gender assignment in pronoun selection should be minimized to reduce bias in favour of one party.

8. *GPT-based NMT*: The highest score for METEOR is 0.0498; the highest scores for chrF are 12.65 and also 10.77; and the lowest score for TER is 112.8, giving the GPT-based NMT system the best overall balance of these metrics. The following areas that need to be improved upon will help contribute to an overall improvement of the above metrics. Morphological problems could be resolved by improved handling of Turkish agglutinative suffixes (e.g., by using appropriate agglutinative suffix forms instead of unsuitable morphological forms). This could also further improve the chrF value. The system can also improve its TER score by reducing over-literal word order (both intra-word and inter-word) and, when possible, increasing the consistency of providing verb-final sentences. Additionally, the system demonstrates the strongest semantic preservation (i.e., preservation of all meaning) among all evaluated systems, and this strength should be maintained while improving fluency. The system should avoid inserting gendered pronouns where the Turkish source is gender-neutral, as this is the area in which it currently commits the least amount of gender bias.

9. *Meta NMT*: In terms of performance, The Meta NMT produced the highest score (0.75) for the BLEU metric while producing the lowest score for chrF (11.48), which indicates that it produced a good deal of word-level overlap, but produced weak character-level accuracy. Morphological-wise, the main weakness is that although there is good whole-word matching, there is very poor suffix level matching. Therefore, morpheme boundary detection could be greatly improved. Syntactically, although there is a higher degree of words being ordered correctly, which accounts for the very high BLEU score, the word orders will still be an issue in complex clause structures. The semantics show that there is a trade-off between their meanings being preserved, and structural matching, so the goal should be to find some balance between the two. The natural gender neutrality of Turkish pronouns should be preserved by eliminating gender over-specification rather than sacrificing gender-neutral expressions.

Conclusion

Neural machine translation (NMT) technologies have developed a substantial ability to capture an extensive range of different meanings from the inputs of the source language, however, they still fundamentally struggle with the sociocultural characteristics and structural nuances of the source language(s). The Turkish and Azerbaijani languages are both highly agglutinative and have limited available resources, further stressing this issue. A number of different NMT systems (including Google Translate, Microsoft Translator, META and GPT) have been reviewed to determine a consistent trade-off between semantic preservation and structural accuracy and, consequently, the effect on the ability of the system(s) to provide NMT sentences/phrases with a high degree of accuracy. For example, although META was the system with the most semantic overlap between its source and target languages (as demonstrated by strong METEOR scores), META frequently failed at accurate suffix attachment and syntactic alignment, yielding the lowest structural scores. In contrast, the systems that provided the best structural accuracy provided NMT sentences/phrases that were rigidly and literally aligned with the respective source language sentence/phrase structures and failed to retain any of the more complicated relationships, for instance, the Turkish genitive-possessive relationship, thus severing the mandatory restructuring from English SVO into Turkish SOV order. Based on qualitative evaluation methods, all of the

evaluated platforms showed significant contextual and systematic biases. Therefore, all of the evaluated platforms only provided word-for-word translations from the source language into the target language and rendered unnatural-sounding English sentences for culturally specific idiomatic expressions. The systems studied were all consistently biased in their gender representations through pronoun usage. All evaluated NMT systems used masculine pronouns by default to identify people in a technical work environment and as leaders due to harmful social stereotypes and misgendered subjects based on context. Thus, as Turkish and Azerbaijani both use a gender-neutral pronoun, this incorrect assignment of gendered pronouns occurred despite the gender-neutral nature of both languages. These ongoing semantic, structural, and sociocultural misinterpretations highlight the limitations of applying generalized multilingual models to morphologically complex languages. Therefore, when constructing these models, the developers who create them must shift focus away from merely expanding the volume of training data, and instead focus on better designing morphology-aware algorithms capable of processing complex suffix boundaries as well as optimizing systems for specific domain contexts, such as legal and technical documentation, thus enhancing the development of future language technology. The enhancement of the development of linguistic technology will also include implementing rigorous de-biasing protocols for linguistically gender-neutral language, thereby ensuring that future language technologies do not perpetuate cultural stereotypes.

STRUCTURAL-SEMANTIC TRANSFORMATION OF ANGLICISMS IN MODERN FRENCH

Ilaha ASHRAFOVA

Nakhchivan State University

E-mail: ilahaashrafova@ndu.edu.az

ORCID ID: 0009-0000-2127-3487

Abstract: The influence of English on contemporary French has increased considerably in recent decades due to globalization, technological innovation, digital communication, and intercultural interaction. As a result, anglicisms have become an important component of modern French vocabulary and are widely used in media discourse, business communication, advertising, technology, and everyday language. The present study examines the structural-semantic transformation of anglicisms in modern French and investigates the mechanisms through which English-origin lexical units are integrated into the French linguistic system.

The research aims to identify the principal structural adaptation patterns and semantic transformation processes that occur during the incorporation of anglicisms into French. The study is based on descriptive, comparative, and analytical methods and draws examples from contemporary French media discourse and other communicative contexts. Particular attention is devoted to direct borrowings, hybrid formations, compound structures, and pseudo-anglicisms, as well as to semantic phenomena such as semantic narrowing, semantic broadening, semantic shift, and contextual reinterpretation.

The findings demonstrate that the integration of anglicisms into French is not a random phenomenon but a systematic process governed by the internal grammatical and semantic principles of the language. Borrowed lexical units undergo various forms of adaptation and frequently acquire new meanings and functions within French discourse. The study further reveals that anglicisms contribute significantly to lexical enrichment, terminological development, and communicative efficiency while preserving the structural integrity of the French language. The results confirm that structural-semantic transformation represents one of the key mechanisms through which contemporary French responds to global linguistic influences and evolving communicative needs.

Key words: anglicism, structural transformation, semantic change, French language, language contact, globalization, lexical borrowing, media discourse.

MÜASİR FRANSIZ DİLİNDƏ ANQLİSİZMLƏRİN STRUKTUR-SEMANTİK TRANSFORMASIYASI

İlahə ƏSRƏFOVA

ORCID ID: 0009-0000-2127-3487

Xülasə: Son onilliklərdə qloballaşma, texnoloji yeniliklər, rəqəmsal kommunikasiya və mədəniyyətlərarası qarşılıqlı əlaqələrin genişlənməsi nəticəsində ingilis dilinin müasir fransız dilinə təsiri əhəmiyyətli dərəcədə artmışdır. Bunun nəticəsi olaraq, anqlisizmlər müasir fransız dilinin lüğət tərkibinin mühüm hissəsinə çevrilmiş və media diskursunda, işgüzar ünsiyyətdə, reklam sahəsində, texnologiyada və gündəlik danışq dilində geniş şəkildə istifadə olunmağa başlamışdır. Təqdim olunan tədqiqat müasir fransız dilində anqlisizmlərin struktur-semantik transformasiyasını araşdırır və ingilis mənşəli leksik vahidlərin fransız dil sisteminə inteqrasiya mexanizmlərini təhlil edir.

Tədqiqatın məqsədi anqlisizmlərin fransız dilinə daxil olması zamanı baş verən əsas struktur uyğunlaşma modellərini və semantik transformasiya proseslərini müəyyənləşdirməkdir. Araşdırma təsviri, müqayisəli və analitik metodlara əsaslanır və müasir fransız media diskursundan, eləcə də müxtəlif kommunikativ mühitlərdən seçilmiş nümunələr üzərində aparılmışdır. Tədqiqat çərçivəsində birbaşa alınmalar, hibrid formalar, mürəkkəb konstruksiya və psevdanqlisizmlər, həmçinin semantik daralma, semantik genişlənmə, semantik sürüşmə və kontekstual reinterpretasiya kimi semantik hadisələr təhlil edilmişdir.

Tədqiqatın nəticələri göstərir ki, anqlisizmlərin fransız dilinə inteqrasiyası təsadüfi deyil, dilin daxili qrammatik və semantik prinsipləri ilə tənzimlənən sistemli bir prosesdir. Alınma leksik vahidlər müxtəlif uyğunlaşma mərhələlərindən keçir, yeni məna və funksiyalar qazanaraq fransız diskursunda fəal şəkildə işləyir. Araşdırma həmçinin göstərir ki, anqlisizmlər lüğət tərkibinin zənginləşməsinə, terminoloji sistemin inkişafına və kommunikativ səmərəliliyin artmasına mühüm töhfə verir. Nəticələr struktur-semantik transformasiyanın müasir fransız dilinin qlobal dil təsirlərinə və dəyişən kommunikativ ehtiyaclara uyğunlaşmasının əsas mexanizmlərindən biri olduğunu təsdiq edir.

Açar sözlər: anqlisizm, struktur transformasiya, semantik dəyişmə, fransız dili, dil əlaqələri, qloballaşma, leksik alınmalar, media diskursu.

Introduction

In the contemporary era of globalization, technological progress, and intensive intercultural communication, language contact has become one of the most significant factors influencing linguistic development. English, which currently functions as the dominant international language in science, technology, business, education, and media, exerts a considerable influence on many national languages, including French. As a result of this influence, a large number of English-origin lexical units, commonly referred to as anglicisms, have entered the French language and become an integral part of modern communication.

The growing presence of anglicisms is particularly noticeable in media discourse, digital communication, advertising, economics, and information technologies. According to Ashrafova (2024), the widespread use of English-origin lexical units in contemporary French reflects not only the impact of globalization but also the increasing need for new terminological resources capable of describing rapidly changing social and technological realities. Consequently, anglicisms have become one of the most actively discussed issues in modern French linguistics.

The process of borrowing is not limited to the simple transfer of words from one language into another. Borrowed lexical units often undergo significant structural and semantic modifications while adapting to the grammatical, lexical, and communicative norms of the recipient language. As noted by İbrahim (2021), lexical borrowing is a dynamic process in which foreign elements are gradually integrated into the language system through adaptation and reinterpretation. Therefore, the study of anglicisms provides valuable insights into the mechanisms of language contact, linguistic innovation, and lexical change.

Furthermore, the integration of anglicisms into French demonstrates the language's ability to preserve its structural integrity while simultaneously responding to external linguistic influences. In many cases, borrowed words acquire new meanings, develop new grammatical forms, or become components of hybrid lexical constructions. İsmaylova (2022) emphasizes that the adaptation of English-origin words often reflects the communicative needs of speakers and the functional requirements of contemporary discourse.

The present study aims to investigate the structural-semantic transformation of anglicisms in modern French. Particular attention is devoted to the analysis of structural adaptation patterns, semantic changes, and the role of anglicisms in the enrichment and development of contemporary French vocabulary. The research also seeks to demonstrate how borrowed lexical units become integrated into the linguistic system while maintaining a balance between linguistic innovation and national language identity.

Materials and Methods

The present study is based on a qualitative and descriptive approach to the analysis of anglicisms in contemporary French. The research focuses on the structural and semantic transformation of English-origin lexical units that have become integrated into the French language under the influence of globalization, technological development, and intercultural communication. The main objective is to identify the mechanisms through which anglicisms adapt to the grammatical, lexical, and semantic system of French and to determine the role they play in contemporary linguistic development.

The empirical material of the study consists of anglicisms collected from contemporary French media discourse, including online newspapers, magazines, advertising texts, social networking platforms, television broadcasts, and digital communication channels. These sources were selected because they represent the areas in which English influence is most visible and where new lexical innovations emerge most rapidly. According to Ashrafova (2024), media discourse serves as one of the primary channels for the dissemination and normalization of anglicisms in modern French.

Several research methods were employed throughout the study. The descriptive method was used to identify and classify anglicisms according to their structural and semantic characteristics. The comparative method enabled the examination of differences between the original English forms and their corresponding French adaptations. In addition, the analytical method was applied to investigate the processes of lexical integration, semantic modification, and functional usage within various communicative contexts. As emphasized by İbrahim (2021), a comprehensive analysis of lexical borrowing requires consideration of both linguistic structure and communicative function.

The collected examples were grouped into several categories, including direct borrowings, hybrid formations, compound structures, and pseudo-anglicisms. Particular attention was paid to the identification of semantic transformation processes such as semantic narrowing, semantic broadening, semantic shift, and contextual reinterpretation. These categories were selected because they represent the most common forms of adaptation observed in contemporary French discourse. İsmaylova (2022) notes that semantic modification is one of the key indicators of successful lexical integration and reflects the interaction between the donor and recipient languages.

Furthermore, the study adopts a language-contact perspective in order to explain the adaptation of English lexical units within the French linguistic system. This theoretical framework makes it possible to examine borrowing not as a simple transfer of vocabulary but as a complex process involving structural adjustment, semantic reinterpretation, and functional integration. The selected methodology provides a systematic basis for understanding the dynamic relationship between English influence and the internal development of contemporary French.

Results and Discussion

The analysis of contemporary French media discourse demonstrates that anglicisms have become an essential component of modern French vocabulary. Their widespread use reflects the increasing influence of globalization, technological innovation, international trade, and digital communication on language development. The collected data reveal that English-origin lexical units undergo various structural and semantic transformations while being integrated into the French linguistic system. These transformations indicate that borrowing is not a passive process but an active adaptation mechanism through which French incorporates foreign elements while preserving its linguistic identity.

One of the most common forms of structural transformation is direct lexical borrowing. Numerous English words are incorporated into French with little or no formal modification. Examples such as marketing, streaming, coaching, management, and networking have become widely accepted in contemporary French. Although these units retain much of their original form, they function according to French grammatical rules and are assigned grammatical gender. Ashrafova (2024) notes that such borrowings represent the initial stage of linguistic integration and demonstrate the openness of French to international lexical influence.

Another important category includes hybrid formations, where English lexical bases combine with French morphological elements. Examples such as *customiser*, *digitalisation*, *upgrader*, and *rebooster* illustrate the productive interaction between English vocabulary and French word-formation mechanisms. These hybrid structures demonstrate that borrowed elements are actively adapted rather than merely reproduced. According to İbrahim (2021), hybrid formations represent a higher level of integration because they become part of the recipient language's derivational system.

The study also reveals the significant role of compound structures in modern French. Expressions such as *fake news*, *social media*, *start-up nation*, and *open space* are frequently encountered in media and professional discourse. These multi-word units satisfy terminological needs in rapidly developing fields and often become standardized over time. Their popularity reflects the growing internationalization of communication and the need for concise terminology capable of conveying new concepts efficiently.

Particular attention should be paid to pseudo-anglicisms, which constitute one of the most interesting outcomes of language contact. Words such as *parking*, *footing*, and *relooking* appear English in form but possess meanings that differ from those found in native English usage. These lexical items illustrate the creative role of French speakers in reshaping borrowed elements according to local communicative requirements. Such examples demonstrate that language contact often results in innovation rather than simple imitation.

The semantic analysis further reveals several transformation mechanisms. Semantic narrowing occurs when a borrowed unit acquires a more specialized meaning in French than in English. Conversely, semantic broadening allows certain anglicisms to develop wider or more abstract meanings. Semantic shift and contextual reinterpretation are also common, particularly in media discourse where words frequently acquire new pragmatic functions. As emphasized by İsmayilova (2022), semantic transformation reflects the dynamic interaction between linguistic structure, communicative needs, and social context.

Overall, the findings indicate that structural-semantic transformation is a systematic process governed by the internal principles of the French language. The adaptation of anglicisms contributes to lexical enrichment, facilitates communication in specialized domains, and reflects the ability of French to respond to contemporary global challenges while maintaining its linguistic distinctiveness.

Conclusion

The present study has demonstrated that the structural-semantic transformation of anglicisms in modern French constitutes a complex and multidimensional linguistic phenomenon that reflects the growing impact of globalization, technological advancement, and international communication on language development. The increasing presence of English in various domains of contemporary life has accelerated the incorporation of English-origin lexical units into the French language, making anglicisms one of the most visible manifestations of language contact in the modern era.

The research findings indicate that the integration of anglicisms into French is not a random or uncontrolled process. On the contrary, borrowed lexical units undergo systematic adaptation in accordance with the grammatical, morphological, and semantic principles of the recipient language. The analysis of contemporary French discourse has shown that anglicisms appear in various structural forms, including direct borrowings, hybrid formations, compound structures, and pseudo-

anglicisms. Each of these categories reflects a different stage and degree of linguistic integration and demonstrates the capacity of French to accommodate foreign lexical elements while maintaining its internal structural coherence.

The study has further revealed that semantic transformation plays a crucial role in the adaptation process. Numerous anglicisms experience semantic narrowing, semantic broadening, semantic shift, or contextual reinterpretation after entering the French language. These changes occur as a result of communicative needs, socio-cultural factors, and the influence of specific discourse environments. Consequently, borrowed lexical units often develop meanings and functions that differ significantly from those found in their original English context. Such transformations highlight the active role of the recipient language in reshaping and reinterpreting foreign elements rather than merely adopting them in their original form.

Another important finding of the research is that the spread of anglicisms contributes significantly to the enrichment of contemporary French vocabulary. In specialized fields such as technology, business, marketing, media, and digital communication, anglicisms frequently fill lexical gaps and facilitate the expression of new concepts and innovations. At the same time, they serve as indicators of modernity, internationalization, and social prestige within contemporary discourse. This dual linguistic and sociocultural function explains their increasing popularity among French speakers and their growing presence in everyday communication.

The findings also suggest that the structural-semantic transformation of anglicisms should not be viewed as a threat to the French language. Rather, it demonstrates the flexibility, adaptability, and vitality of French as a living linguistic system capable of responding to changing communicative realities. The ability of the language to modify, reinterpret, and integrate foreign lexical elements confirms its dynamic nature and its capacity for continuous development. While external influences contribute to lexical innovation, the internal mechanisms of French ensure that borrowed units become harmoniously integrated into the existing linguistic framework.

Furthermore, the study contributes to a broader understanding of language contact theory by illustrating how global linguistic influences interact with national language systems. The French language provides a valuable example of how a recipient language can simultaneously preserve its linguistic identity and embrace lexical innovation. The adaptation of anglicisms demonstrates that borrowing is not merely a process of lexical transfer but a complex phenomenon involving structural adjustment, semantic reconstruction, and functional integration.

In conclusion, the structural-semantic transformation of anglicisms in modern French represents an ongoing process that reflects both global linguistic trends and the internal evolution of the French language. The study confirms that anglicisms have become an integral component of contemporary French vocabulary and play an important role in the development of modern discourse. Future research may focus on large-scale corpus analysis, comparative studies of borrowing in other Romance languages, and the investigation of emerging anglicisms in digital communication environments. Such studies would further contribute to understanding the mechanisms of lexical borrowing and the dynamic relationship between language change and globalization.

Abstract: In the contemporary era of globalization, translation has become an indispensable tool for communication across linguistic and cultural boundaries. It plays a key role in enabling interaction between nations, supporting international cooperation, and ensuring access to global knowledge. This article examines the role of translation in facilitating intercultural communication and promoting the exchange of information in various fields such as education, business, diplomacy, and media.

The study explores both theoretical and practical aspects of translation, emphasizing the importance of cultural awareness and contextual accuracy in the translation process. It also addresses the main challenges faced by translators, including the difficulty of preserving meaning, adapting cultural elements, and maintaining linguistic equivalence.

Furthermore, the impact of technological advancements, particularly machine translation and artificial intelligence, is discussed. Although these tools enhance speed and accessibility, they often fail to capture cultural nuances, which highlights the continuing importance of human translators.

Overall, the article concludes that translation is not only a linguistic activity but also a social and cultural practice that plays a crucial role in globalization and global integration.

Xülasə: Müasir qloballaşma dövründə tərcümə dillər və mədəniyyətlər arasında ünsiyyətin qurulmasında mühüm rol oynayır. Tərcümə müxtəlif xalqlar arasında əlaqələrin inkişafına, beynəlxalq əməkdaşlığın genişlənməsinə və qlobal biliklərə çıxışın təmin olunmasına xidmət edir. Bu məqalədə tərcümənin mədəniyyətlərarası ünsiyyətin formalaşmasında və müxtəlif sahələrdə – təhsil, biznes, diplomatiya və mediada informasiya mübadiləsində rolu araşdırılır.

Məqalədə tərcümənin həm nəzəri, həm də praktik aspektləri təhlil olunur, xüsusilə mədəni kontekstin düzgün ötürülməsi və məna dəqiqliyinin qorunmasının əhəmiyyəti vurğulanır. Tərcüməçilərin qarşılaşdığı əsas problemlər – məna itkisi, mədəni fərqlərin uyğunlaşdırılması və dil ekvivalentliyinin qorunması məsələləri geniş şəkildə izah edilir.

Bundan əlavə, maşın tərcüməsi və süni intellekt kimi texnologiyaların təsiri də nəzərdən keçirilir. Bu texnologiyalar sürəti artırsa da, mədəni incəlikləri tam ötürə bilmədiyi üçün insan tərcüməsinin əhəmiyyəti qalmaqdadır.

Nəticə etibarilə, tərcümə yalnız dil fəaliyyəti deyil, həm də qloballaşma prosesində mühüm rol oynayan sosial və mədəni praktikadır.

Açar sözlər

Introduction

Globalization has transformed the modern world into a highly interconnected system where communication across languages and cultures has become essential. As international relations, trade, and digital communication expand, the need for accurate and effective translation continues to grow. Translation acts as a bridge that connects different linguistic communities and enables the exchange of knowledge and ideas.

In various fields such as science, literature, politics, and media, translation plays a crucial role in ensuring that information reaches a global audience. Without translation, the dissemination of knowledge would remain limited to specific linguistic groups. Therefore, translation is a fundamental component of global communication and cultural interaction. In today's interconnected world, the influence of translation extends far beyond simple language conversion. It has become an essential instrument for creating mutual understanding among people from different cultural and linguistic backgrounds. Every day, millions of documents, books, websites, and official reports are translated into different languages, allowing information to circulate rapidly across national borders. This continuous exchange of information strengthens international relations and contributes to the development of a more informed global society.

Translation also plays an important role in preserving cultural heritage while making it accessible to the international community. Literary masterpieces, historical documents, philosophical works, and traditional folklore can reach readers worldwide through accurate translation. As a result, people gain a deeper understanding of other cultures without losing the originality of the source material. In this way, translation supports cultural diversity and encourages respect for different traditions and values.

Furthermore, globalization has increased the demand for multilingual communication in almost every professional field. International organizations, multinational companies, educational institutions, healthcare systems, and legal authorities rely heavily on translation to ensure effective communication. Accurate translation minimizes misunderstandings, improves cooperation, and allows people from different countries to work together efficiently. Consequently, translation has become one of the key factors supporting international development.

The digital revolution has further expanded the significance of translation. Online education, electronic commerce, scientific databases, and social media platforms are used by billions of people every day. Translating digital content enables equal access to knowledge and information regardless of linguistic background. This demonstrates that translation is not only a linguistic process but also an important element of technological and social progress in the twenty-first century.

Materials and Methods

This research is based on qualitative analysis of academic literature related to translation studies and globalization. Various scholarly sources, including books and research articles, were examined to identify key concepts and trends.

Descriptive and comparative methods were used to analyze the role of translation in different sectors such as education, business, and media. The study also considers real-life examples and the impact of modern translation technologies.

The research also takes into account the interdisciplinary nature of translation studies by examining the relationship between language, culture, and communication in the process of globalization. Particular attention is given to the influence of social, cultural, and technological factors on translation practices in different contexts.

To ensure the reliability of the study, information from recognized academic publications and theoretical works in translation studies was compared and analyzed. The selected sources provide comprehensive perspectives on the role of translation in intercultural communication and global interaction. This approach made it possible to identify common views as well as different opinions regarding the challenges and development of translation in the modern world.

Moreover, examples from contemporary translation practice were considered to illustrate how translation contributes to international cooperation and the exchange of knowledge. These examples support the theoretical discussion and demonstrate the practical importance of translation in various professional fields. As a result, the research presents a balanced analysis based on both theoretical foundations and practical observations.

Discussion

Translation plays a central role in globalization by facilitating communication between individuals and communities speaking different languages. It supports international cooperation in business, education, and diplomacy.

In business, translation is essential for entering global markets and communicating with customers. In education, it allows access to international knowledge and research. In media, translation helps distribute information worldwide and promotes cultural exchange.

However, translation requires not only linguistic knowledge but also cultural understanding. Translators must consider context, idiomatic expressions, and cultural differences. One of the main challenges is balancing accuracy with cultural adaptation.

Technological tools such as machine translation have improved efficiency but still cannot fully replace human translators due to their inability to understand cultural nuances.

In addition to these fields, translation has become increasingly important in healthcare, law, tourism, and international organizations. In healthcare, accurate translation ensures that patients clearly understand medical instructions, treatment procedures, and healthcare policies. Even a small translation mistake may lead to serious consequences for patient safety. Similarly, in legal contexts, contracts, court documents, and international agreements require highly accurate translation to preserve their legal meaning and prevent misunderstandings.

Another area where translation plays a significant role is tourism. Millions of tourists travel abroad every year, and they rely on translated travel guides, hotel information, restaurant menus, transportation systems, and public signs. High-quality translation improves visitors' experiences and helps countries promote their cultural and historical heritage more effectively. Therefore, translation also contributes to the economic development of many countries through the tourism industry.

The entertainment industry has also benefited greatly from translation. Films, television series, documentaries, books, video games, and online streaming platforms reach international audiences through subtitles, dubbing, and localization. These translation methods allow people to enjoy foreign cultural products without language barriers. At the same time, translators must carefully preserve humor, emotions, idiomatic expressions, and cultural references so that the translated content creates a similar impression on the target audience.

Moreover, professional translators are expected to possess not only excellent language proficiency but also extensive knowledge of the subject they translate. Scientific, medical, legal, technical, and financial translations each require specialized terminology and deep understanding of the relevant discipline. Continuous professional development, cultural awareness, and critical thinking remain essential qualities for successful translators in today's rapidly changing world.

Although artificial intelligence and machine translation systems continue to improve every year, they still face significant limitations when interpreting context, irony, humor, figurative language, and culturally specific expressions. Human translators can evaluate the communicative purpose of a text and make appropriate decisions depending on the target audience. For this reason, modern translation technologies should be regarded as valuable supporting tools rather than complete replacements for professional human translators.

Conclusion

Translation is a vital element of globalization, enabling communication and cooperation across cultures. It promotes cultural exchange and supports global development.

Despite technological advancements, human translation remains essential due to its ability to convey meaning and cultural context accurately. Translation will continue to play a key role in the future of global communication.

HARDSIHPS OF LITERARY TRANSLATION

Nargiz Qulu ALIYEVA

Student, Department of Foreign Languages, Mingachevir State University

E-mail: nargiz.aliyeva@mdu.edu.az

ORCID ID: [0009-0009-5362-3205](https://orcid.org/0009-0009-5362-3205)

Abstract: Translating a literary work is a task that requires not only linguistic knowledge, but also emotional competence. The translator must have the same writing skills to translate the text from one language to another with accuracy. The translator's goal is to convey the emotional coloring that makes up the content of the original and to expose that inner world and worldview as a whole in his translation. One of the difficulties of translation is accuracy, because one pronunciation can have several translations at once and each translator can raise his interpretation according to his linguistic and literary knowledge, including the worldview of the translator himself. After all, the translator is a direct intermediary between the writer and the reader, since some elements of the original text may lose their meaning when translated, and this is only left to the discretion of the "mediator" himself, his main job is the clarity and naturalness of the translation. Hence, the question and problem of transmission arises precisely by creating harmony between its emotional coloring and linguistic accuracy in the content of the translation of the text and its relationship between the original.

The purpose of this article is to consider the important points of difficulty in presenting emotional content in artistic translation, as well as the gap between the worldviews of the writer and the translator.

Key words: equivalence, translation, adequacy, emotiveness, stylistics, pragmatics, intertextuality, translation transformation.

ПРОБЛЕМЫ ЛИТЕРАТУРНОГО ПЕРЕВОДА

Наргиз Кулу АЛИЕВА

Студентка, Кафедра Иностранных Языков, Мингечаур Государственный Университет

E-mail: nargiz.aliyeva@mdu.edu.az

ORCID ID: [0009-0009-5362-3205](https://orcid.org/0009-0009-5362-3205)

Аннотация: Перевод литературного произведение – это задача которая не только требует языковые знания, но и эмоциональной компетенции. Переводчик должен иметь те же самые навыки писательства чтобы перевести текст с той языка на другую с точностью. Цель переводчика включается в том чтобы передать ту эмоциональную окраску который составляет содержания оригинала и выставить тот внутренний мир и мировоззрение в целом в своем переводе. Один из трудностей перевода является точность, потому что у одного произвидение может быть сразу несколько переводов и каждый переводчик может приподнести свою интерпретацию соответственно его языковым и литературным знаниям, включая мировоззрение самого переводчика. Ведь переводчик является прямым посредником между писателем и читателем так как некоторые элементы оригинального текста может потерять свой смысл при его переводе и это только остается на предусмотрение самого "посредника", его главная работа — это понятность и естественность перевода. Отсюда и появляется вопрос и проблема передачи именно создавая гармонию между его эмоциональной окраской и лингвистической точности в содержимом переводе текста и его взаимоотношения между оригиналом.

Цель данной статьи – рассмотреть важные моменты трудности при подношения именно эмоциональной содержания в художественном переводе, также пробел между мировоззрениями писателя и переводчика.

Ключевые слова: эквивалентность, адекватность перевода, эмотивность, стилистика, прагматика, интертекстуальность, трансформация.

Introduction

The process of the translation is a complicated process the translator may come across with difficulties of the translation such as choosing the right equivalence for the word. Translator should consider that every word wrong chosen expression may change the whole meaning of a sentence the main difficulty of the translation itself to maintain the translator should emphasize with a text and should include every nuance of translation. To emphasize with the text considering the emotional capacity of it and the linguistic accuracy as a whole there is a big pressure on a translator and one mistake can lead to a massive criticism to the Interpreter. Every word may have more than one synonym and each of the synonyms may add a different emotional coloring to the sentence. A translator should also consider the correct placement in punctuation also the grammatical difference of one language to another, but after all, a perfect translation is not easy to achieve.

Methodology and Materials

Roman Jakobson argues that there cannot be a wholly accurate translation “Languages differ essentially in what they must convey and not in what they may not convey” (1). He approaches the process of translation in a more philosophical sense arguing that we understand the sentence only in a linguistic way or the way he says in a “semiotic” way. Coming up with the example of a sentence such a “cheese” we may understand the meaning of the sentence only in a linguistic sense it is the “signatum” that makes a point that there cannot be a signatum without a “signum”. A list of linguistic signs is needed to make the sentence as accurate as possible whether it's a camembert or any other type of a cheese that's where we start to understand the whole meaning of “translation”. Translations require not only the linguistic aspect but also the emotional coloring to it. Some translators don't make the translation not in an accurate way just to make the sounding of the text in a more colorful way. Vladimir Nabokov on his translation of “Eugene Onegin” said “O, Pushkin, for my stratagem: I traveled down your secret stem, And reached the root, and fed upon it; Then, in a language newly learned, I grew another stalk and turned your stanza patterned on a sonnet, Into my honest roadside prose- All thorn, but cousin to your rose.” (2). Boris Pasternak in his essay on translating “Shakespeare” has mentioned “The demand for simple and readable translations is great and seemingly inexhaustible. Every translator flatters himself with the hope that he, more than others, will succeed in meeting it. I have not escaped the common fate. Nor are my opinions on the aims and problems of translating literary works exceptional. I believe, as do many others, that closeness to the original is not ensured only by literal exactness and similarity of form: the likeness, as in a portrait, cannot be achieved without a lively and natural method of expression. As much as the author, the translator must confine himself a vocabulary which is natural to him and avoid the literary artifice involved in stylization. Like the original text, the translator must create an impression of life and not of verbiage.” (3). Here comes the vast difference between in styles of two interpreters, Nabokov who thinks accuracy of a translation is more important, and Pasternak who thinks making the translation as emotionally accurate as possible is more important. Both interpreters with their translations show us their outlook to the word through their works. But here occurs the question how it is morally correct to use the method of “emotional coloring” because we

are accustomed to make the translation as accurate as possible and it may come across with some criticism but we should take into consideration some words doesn't have the accurate translation from language to language the Russian expression "rocka" Mostly translated as sadness longing or melancholy but it is not the accurate meaning of the expression at all. Walter Benjamin also argues that translation is not merely an interpretation but also the "transformation" of the text, saying no translation would be possible if its ultimate essence it strove for likeness to the original". (4) This argument challenges the traditional way of the translation process as whole. Saying a translation cannot be reduced to its linguistic form only. Instead he turns the whole process of translation into a concept which reveals the connection between the languages what he calls the "afterlife" (Fortleben) of the text. In this situation he argues that through translation text goes through an evolution in linguistically and in culturally. As a consequence the style in a both emotional and in linguistic way, the element are not lost but also reshaped in an inevitable way, each language carries its own structure, connotation and emotional expressiveness. This makes the conclusion that the translator not only makes a connection between the original but also makes a new emotional essence different from the original. R. F. Kuang in her famous literary piece "Babel" says "Translation means doing violence upon the original means wrapping and distorting it for foreign unintended eyes. So then where does that leave us? How can we conclude except by acknowledging that necessarily always an act of betrayal?" (5)

Discussion

To me "act of betrayal" towards the original sounds rather dramatic. Maybe the translation may not be identical towards the original in all senses but we get the chance of exploring different points of view of the interpreter and get the chance of hearing out of his version. Through that the interpreter also may become as the critique to the author's thoughts and. And by that he reader also starts analyzing the original translation and his own thoughts because in our day critical thinking becomes a very rare thing and a translation itself provides a critical outlook. And in my opinion having a thought of your own about a literary piece which you may have is fascinating. Because of that even if you have read the original text you should once in a while try to read it in a translation. To me the idea of reading Russian classics in an English translation sounds strange but interesting in a way. Watching the way English speaking experts discuss different Russian classics is curious to me. The most widespread Russian classic in the West is "crime and punishment". Many literary experts across the world still discuss it till this day, for example about Raskolnikov's philosophy and the existentialism of the whole book. Dostoyevsky's works as whole is known even to non-Russian speakers and it shows how important translating is to the world. The others popular Russian classic is "Master and Margarita" the complexity of the book is a discussion to this day. The hunger for knowledge is what keep the occupation of a translator at all. The need for the different outlooks on the world, through translation the reader gets the chance of being a mediator between the author and the translator and the difference of a cultural point of view so that makes us gain as more knowledge as we can through both of them. So it makes the translation a both cultural and even a historical "relic" so our job is to show the appreciation to the every interpretation as much as we can because the interpretation sometimes the only cultural connection we can get of another language. It's no secret sometimes the lack of a translation can be a big problem it shows through the comparison between the Azerbaijani towards Russian and English sources. It not only reflects to us linguistically and emotionally but also in an educational sense. Some students may come across with the hardships of studying and preparing for tasks because of the lack of Azerbaijani resources

we have in our hands. And because of that we have such a weak educational capacity in our country. The interpreters should be encouraged to make translations on scientific and educational resources for people and the youth should be encouraged to learn more languages. In our day when the Russian speakers are discriminated makes the job of learning a language more difficult because people make knowledge of language a personality trait, but it is not, it is the peak of knowledge it is main trait of a tolerant person because by learning a language you also show respect to the native speakers of the language. And in my opinion those who discriminate a person just because of his linguistic knowledge is ignorant and I deeply resent ignorance. But I deeply respect the translators if we consider the fact that there are even translators of ancient languages such as Greek as we know The Greeks were rich in their culture, literature, and philosophy as whole the interpreter must be shown the upmost respect to his work. Because depicting the emotional coloring of an ancient text is a whole another work, and a very difficult one if one should confess it takes a whole lifespan to master a language, but mastering an ancient language is more than difficult, like in Latin. The Latin language focuses more on the emotions rather than the translation you should feel the translation of a Latin sentence. Because of that even to this day Latin is so widespread across the world because the human kind still remain dependent on emotions rather than the accuracy, and I think it's beautiful, because language as whole is a human trait only a human can speak so because of that we remain as the highest empathetic creation as whole so it makes us the most highest beings.

Conclusion

In conclusion I would like to say that translation process should not be underestimated and should not be reduced to its linguistic accuracy. Therefore appreciation towards the translation is important its not only an linguistic appreciation but also a cultural and a philosophical appreciation even though some interpretations may come across as wrong we should not refuse its outlook and emotional capacity criticizing a translation does not equal to "rejecting" it in the contrary we embrace the translation and we think on it we think of the process we rethink every sentence of it and the most importantly we show the respect to the language that it was translated it reading a translation once in a while makes us connect to the two different worlds of the both two languages. The interpreter helps us to realize how different is the human kind is and how different is the human mind is. So when reading a translation think of the emotions which the translator that went through think of the effort that he put it into about the difficulties of it of the time that it took to make it reach to the level of perfection that the reader requires of the people who put effort in learning your language at all. Because learning a language does not only demands your memorization of grammar and words but also your empathy and respect towards its culture, and towards the native speaker.

TRANSLATION OF ENGLISH PHRASEOLOGICAL UNITS INTO RUSSIAN PROBLEMS AND STRATEGIES

Tatyana Stanislav MIROSHINA

Student, Department of Foreign Languages, Mingachevir State University.

E-mail: miroshinatatyana@mail.ru

ORCID ID: 0009-0000-3909-1729

Abstract: This paper examines the challenges of translating phraseological units from English into Russian. Phraseological units, including idioms and fixed expressions, often carry meanings that cannot be understood literally, which makes their translation particularly complex. The study focuses on the main difficulties translators face, such as cultural differences, lack of direct equivalents, and the risk of losing stylistic and emotional meaning in the target language. It also analyzes different translation strategies, including literal translation, equivalent substitution, descriptive translation, and contextual adaptation. The aim of the research is to identify which methods are most effective in preserving both meaning and expressiveness of phraseological units. The findings show that successful translation requires not only linguistic knowledge but also cultural awareness and sensitivity to context. This work highlights the importance of a balanced approach in translating idiomatic expressions to ensure accuracy and naturalness in the target language.

Key words: phraseological units, idioms, translation, equivalence, cultural differences.

İNGİLİS DİLİNDƏKİ FRAZEOLÖJİ VAHİDLƏRİN RUS DİLİNƏ TƏRCÜMƏSİ PROBLEMLƏR VƏ STRATEGİYALAR

Tatyana Stanislav MIROŞİNA

Tələbə, Xarici Dillər Departamenti, Mingəçevir Dövlət Universitet.

E-mail: miroshinatatyana@mail.ru

ORCID ID: 0009-0000-3909-1729

Xülasə: Bu məqalə ingilis dilindən rus dilinə frazeoloji vahidlərin tərcüməsi zamanı yaranan çətinlikləri araşdırır. İdiomlar və sabit ifadələr daxil olmaqla frazeoloji vahidlər çox vaxt hərfi mənada başa düşülə bilməyən mənalar daşıyır, bu isə onların tərcüməsini xüsusilə mürəkkəb edir. Tədqiqat tərcüməçilərin qarşılaşdığı əsas çətinliklərə- mədəni fərqliliklər, birbaşa ekvivalentlərin olmaması və hədəf dildə üslubi və emosional mənənin itirilməsi riskinə -fokuslanır. Həmçinin müxtəlif tərcümə strategiyaları təhlil edilir: hərfi tərcümə, ekvivalent əvəzləmə, təsviri tərcümə və kontekstual uyğunlaşdırma. Tədqiqatın məqsədi frazeoloji vahidlərin mənasını və ifadəliliyini qorumaq üçün ən effektiv metodları müəyyən etməkdir. Nəticələr göstərir ki, uğurlu tərcümə yalnız dil biliyi deyil, həm də mədəni məlumatlılıq və kontekstə həssaslıq tələb edir. Bu iş idiomatik ifadələrin tərcüməsində dəqiqlik və təbiiliyi təmin etmək üçün balanslı yanaşmanın vacibliyini vurğulayır.

Açar sözlər: frazeoloji vahidlər, idiomlar, tərcümə, ekvivalentlik, mədəni fərqliliklər.

Introduction

The translation of phraseological units from English into Russian is a complex and highly relevant area of modern translation studies. Phraseological units, including idioms, set expressions, and fixed collocations, often carry meanings that cannot be understood literally, which makes their translation particularly challenging. The relevance of this topic is determined by the growing importance of intercultural communication and the increasing demand for accurate translation of expressive language in literature, media, and everyday speech. Despite numerous studies in translation theory, phraseological units remain one of the most difficult elements to translate due to their cultural specificity and lack of direct equivalents. The aim of this research is to analyze the main problems that arise in the translation of English phraseological units into Russian and to identify the most effective strategies for preserving their meaning and expressiveness. The study is based on the analysis of theoretical sources in translation studies and phraseology, as well as the classification of translation strategies used for idiomatic expressions.

Methodology and Materials

This study employs a qualitative approach in order to investigate the translation of English phraseological units into Russian and to analyze the main problems and strategies involved in this process. (Baker, 1992; Newmark, 1988) The research is based on both theoretical (secondary) sources and practical language material to ensure a comprehensive understanding of phraseological translation. The study relies on comparative and descriptive methods. The comparative method is used to identify differences between English phraseological units and their Russian equivalents, while the descriptive method is applied to classify translation strategies such as literal translation, equivalent substitution, descriptive translation, and contextual adaptation. The material of the research includes examples of English phraseological units taken from conversational speech, film dialogues, and commonly used idiomatic expressions in everyday communication. These examples were selected to reflect authentic language use and to demonstrate how meaning and expressiveness change depending on context. The theoretical basis of the study consists of works in translation studies and phraseology that support the analysis.

Discussion

The analysis of English phraseological units and their translation into Russian demonstrates that this field remains one of the most problematic areas in translation studies. The study is based on a qualitative approach with the application of comparative and descriptive methods. The comparative method allows the identification of structural and semantic differences between English phraseological units and their Russian counterparts, while the descriptive method helps classify translation strategies used in real contexts. This methodological basis makes it possible to analyze not only the form of expression but also its communicative and cultural function.

Phraseological units represent fixed expressions whose meanings are often non-compositional. As Baker (1992) notes, idiomatic meaning cannot be derived from the individual meanings of words, which explains why literal translation is rarely effective. Instead, translators must rely on contextual interpretation and functional equivalence. One of the most frequent problems is the lack of direct equivalents in Russian. For example, the idiom "it's raining cats and dogs" cannot be translated literally («идёт дождь из кошек и собак»), as this would not convey any understandable meaning for Russian speakers. Instead, the expression «лёт как из ведра» is used. (Baker, M. 1992).

This translation does not preserve the original imagery but fully maintains the communicative function and intensity of the statement. This shows that functional equivalence is more important

than formal similarity. In addition, it is important to note that phraseological units often carry not only semantic meaning but also stylistic and emotional connotations. As Nida (1964) suggests, the concept of dynamic equivalence emphasizes the importance of preserving the effect of the original message on the target audience rather than its exact linguistic form. This is particularly relevant in the translation of idioms, where the translator must consider not only what is said, but how it is perceived by the reader or listener. Another example is “break the ice”, meaning to initiate communication in a socially tense situation. The Russian equivalent «растопить лёд» demonstrates partial equivalence. In this case, the metaphor is preserved, but adapted to the target language’s stylistic norms. This indicates that phraseological translation often operates on a continuum between literal preservation and full adaptation.

Cultural specificity is another key factor influencing translation choices. The idiom “to carry coals to Newcastle” is based on a historical and geographical reference, since Newcastle was traditionally associated with coal production. A literal translation would not be meaningful in Russian. Therefore, the culturally equivalent expression «ездить в Тулу со своим самоваром» is used. According to Vinay and Darbelnet (1958), such cases represent cultural substitution, where the translator replaces the source culture reference with a target culture equivalent that conveys the same pragmatic meaning. In situations where no idiomatic equivalent exists, translators apply descriptive translation. For instance, “to spill the beans” means “to reveal a secret.” In Russian, it can be translated as «раскрыть секрет» or «проболтаться». Here, the metaphorical structure is lost, but the semantic content is fully preserved. This reflects a shift from phraseological equivalence to lexical explanation.

Similarly, “once in a blue moon”, meaning something that happens very rarely, is translated as «очень редко» or «раз в сто лет». In this case, the idiomatic structure is replaced by an adverbial or comparative expression. This demonstrates that phraseological meaning can be preserved even without maintaining idiomatic form. Some expressions allow partial equivalence. For example, “to let the cat out of the bag” (to accidentally reveal a secret) is translated as «проговориться». While the Russian version is less metaphorical, it preserves the pragmatic meaning and communicative effect of the original expression. This shows that translation often involves reduction of imagery while maintaining function.

Additional examples (inserted naturally):

Another example is “to hit the nail on the head”, which means to describe a situation or problem exactly and correctly. In Russian, it is translated as «попасть в точку», which demonstrates clear functional equivalence despite different imagery.

The idiom “piece of cake”, meaning something very easy, corresponds to «проще простого» or «как дважды два». Here, the metaphor is completely replaced by a descriptive expression, showing the use of contextual adaptation.

The expression “cost an arm and a leg”, meaning something very expensive, is translated as «очень дорого стоить», where the figurative imagery is reduced in favour of neutral description.

“Burn the midnight oil”, referring to working or studying late at night, is translated as «работать допоздна» or «засиживаться за работой ночью», which preserves meaning but loses metaphorical structure.

Finally, “under the weather”, meaning feeling unwell, is translated as «плохо себя чувствовать», again demonstrating a shift from idiomatic to descriptive translation.

The analysis confirms that literal translation is the least effective strategy. It is also crucial to emphasize that the choice of translation strategy is highly context-dependent. The same phraseological unit may be translated differently depending on the communicative situation, genre, and target audience. For example, in literary translation, preserving imagery may be more important, while in everyday communication clarity and simplicity are prioritized. This highlights the flexible and adaptive nature of phraseological translation. However, literal translation frequently results in unnatural or incomprehensible expressions in the target language.

Therefore, translators tend to rely on a combination of equivalent substitution, descriptive translation, and contextual adaptation. The choice of strategy depends on linguistic context, cultural relevance, and communicative purpose. As Kunin (1970) emphasizes, phraseological translation requires both linguistic knowledge and cultural competence, since idioms reflect the worldview and cognitive patterns of native speakers. Without this understanding, accurate translation is impossible. Overall, the findings of this study suggest that phraseological translation should be viewed as an interpretative process rather than a mechanical one. The translator evaluates each expression individually and selects the most appropriate strategy based on meaning, context, and cultural compatibility.

In many cases, hybrid strategies are applied, combining elements of substitution and description to achieve both accuracy and naturalness in the target language.

Conclusion. This research investigated the translation of English phraseological units into Russian, focusing on the main difficulties that arise in this process and the strategies used to overcome them. The study was introduced by outlining the relevance of the topic, which is connected to the growing importance of intercultural communication and the need for accurate translation of idiomatic expressions in different types of discourse, including everyday speech and media language.

The methodological framework of the research was based on a qualitative approach, supported by comparative and descriptive methods. This choice was justified by the nature of the research object. The comparative method allowed the identification of structural and semantic differences between English phraseological units and their Russian equivalents, while the descriptive method made it possible to classify translation strategies and analyze their use in real examples. The materials of the study included phraseological units taken from conversational language, film dialogues, and commonly used idiomatic expressions, which ensured that the analysis was based on authentic and context-dependent language data.

The results of the analysis confirm that phraseological units are one of the most complex elements in translation due to their non-literal meaning and strong cultural specificity. As shown in the Discussion section, literal translation is rarely effective because it fails to preserve the intended meaning and communicative function.

In contrast, strategies such as equivalent substitution, descriptive translation, and contextual adaptation proved to be more productive, as they allow translators to maintain the functional meaning of expressions.

The examples analyzed in the study demonstrate that successful translation depends not on formal similarity between languages but on functional equivalence and contextual adequacy. Furthermore, the results of this study support the concept of dynamic equivalence proposed by Nida (1964), according to which the primary goal of translation is to produce a similar effect on the target audience. This principle is especially relevant in the translation of phraseological units, where

preserving meaning alone is not sufficient without maintaining the expressive and communicative impact of the original expression. (Nida, E. A. 1964).

In addition, the analysis confirms that the choice of translation strategy is strongly influenced by context, genre, and the intended audience. This means that phraseological translation requires flexibility and the ability to adapt linguistic and cultural elements to specific communicative situations. Idiomatic expressions often require cultural interpretation, since their meaning is closely connected with the worldview and experience of native speakers. In cases where no direct equivalent exists, translators prioritize clarity and communicative effectiveness over stylistic or metaphorical preservation. Thus, the research objectives stated in the Introduction have been achieved: the main problems of translating phraseological units have been identified, and the most commonly used translation strategies have been analyzed. The study confirms that phraseological translation is not a mechanical process but an interpretative activity that requires both linguistic knowledge and cultural competence.

Conclusion

In conclusion, it can be stated that effective translation of phraseological units is achieved through a balance between accuracy, naturalness, and cultural adaptation. Further research may expand this topic by analyzing phraseological translation in different genres, such as literary texts, audiovisual translation, and social media discourse, where contextual variation plays an even greater role.

ORCID ID: 0009-0001-9032-4732

Xülasə: Məqalədə qloballaşma şəraitində ekoloji terminologiyanın lokallaşması problemi nəzəri və praktik aspektlərdə geniş şəkildə araşdırılır. Müasir dövrdə iqlim dəyişikliyi, biomüxtəlifliyin azalması, tullantıların idarə olunması, yaşıl iqtisadiyyat, alternativ enerji mənbələri və dayanıqlı inkişaf kimi məsələlərin beynəlxalq gündəmdə ön plana çıxması ekoloji terminlərin müxtəlif dillərə sürətlə daxil olmasına səbəb olmuşdur. Elmi məlumat axınının intensivləşməsi, beynəlxalq təşkilatların hesabatları, rəqəmsal media və qlobal kommunikasiya vasitələri bu prosesi daha da sürətləndirmişdir. Bu proses milli

dillər qarşısında iki əsas vəzifə qoyur: bir tərəfdən beynəlxalq elmi diskursla uyğunluğun qorunması, digər tərəfdən isə milli dilin terminoloji sisteminin zənginləşdirilməsi və funksional imkanlarının genişləndirilməsi. Tədqiqatda ekoloji terminologiyanın lokallaşmasının əsas mexanizmləri – tərcümə, kalkalama, semantik uyğunlaşdırma, fonetik adaptasiya, terminoloji standartlaşdırma və yeni söz yaradıcılığı sistemli şəkildə təhlil edilir. Azərbaycan dili materialları əsasında “carbon footprint”, “green economy”, “renewable energy”, “sustainable development”, “climate neutrality” kimi terminlərin milli dilə keçid xüsusiyyətləri və işlənmə variantları göstərilir. Müəyyən olunur ki, uğurlu lokallaşma yalnız dilçilik prosesi deyil, həm də terminoloji planlaşdırma, təhsil siyasəti, elmi kommunikasiya və ictimai maarifləndirmə məsələsidir. Əgər terminlər aydın, anlaşıqlı və normativ şəkildə təqdim olunarsa, onların cəmiyyət tərəfindən qəbulu daha sürətli baş verir. Məqalədə terminoloji vahidliyin təmin olunması, sahəvi lüğətlərin hazırlanması, elektron termin bazalarının yaradılması, ali təhsil müəssisələrində terminoloji təlimin gücləndirilməsi və rəqəmsal platformalarda vahid istifadənin təşviqi ilə bağlı təkliflər irəli sürülür. Araşdırma nəticəsində sübut olunur ki, ekoloji terminologiyanın lokallaşdırılması həm elmi ünsiyyətin səmərəliliyini artırır, həm də cəmiyyətin ekoloji şüurunun, dil mədəniyyətinin və davamlı inkişaf dəyərlərinin formalaşmasına mühüm təsir göstərir.

Açar sözlər: qloballaşma, ekoloji terminologiya, lokallaşma, dil siyasəti, terminologiya, Azərbaycan dili, ekodilçilik

QLOBALLAŞMA KONTEKSTİNDƏ EKOLOJİ TERMINOLOGİYANIN LOKALLAŞDIRILMASI

Nigar Mürvət XANALIYEVA

Sumqayıt Dövlət Universiteti

E-mail: xanaliyeva999@gmail.com

ORCID ID: 0009-0001-9032-4732

Abstract: The article comprehensively examines the problem of localization of ecological terminology in the context of globalization from both theoretical and practical perspectives. In the modern era, the prominence of issues such as climate change, biodiversity loss, waste management, green economy, alternative energy sources, and sustainable development on the international agenda has led to the rapid entry of ecological terms into different languages. The intensification of scientific information flow, reports of international organizations, digital media, and global communication tools have further accelerated this process. This process places two major tasks before national languages: on the one hand, preserving compatibility with international scientific discourse, and on the other hand, enriching their terminological systems and expanding their functional capacities. The study systematically analyzes the main mechanisms of ecological terminology localization, including translation, calquing, semantic adaptation, phonetic adaptation, terminological standardization, and new word formation. Based on Azerbaijani language materials, the article demonstrates the adaptation features and usage variants of such terms as “carbon footprint,” “green economy,” “renewable energy,” “sustainable development,” and “climate neutrality” in the national language. It is determined that successful localization is not only a linguistic process, but also a matter of terminological planning, educational policy, scientific communication, and public awareness. If terms are presented in a clear, understandable, and normative manner, their acceptance by society becomes faster. The article puts forward proposals related to ensuring terminological unity, preparing specialized dictionaries, creating electronic terminology databases, strengthening terminology training in higher education institutions, and promoting unified usage on digital platforms. The research proves that the localization of ecological terminology increases the efficiency of scientific communication and also has a

significant impact on the formation of ecological awareness, language culture, and sustainable development values in society.

Key words: globalization, ecological terminology, localization, language policy, terminology, Azerbaijani language, ecolinguistics

Introduction

The twenty-first century has transformed environmental discourse into one of the principal domains of international communication, public policy, and scientific cooperation. Issues such as climate change, biodiversity loss, environmental degradation, sustainable resource management, renewable energy transition, and ecological security are now discussed not only within academic institutions but also across political organizations, educational systems, civil society networks, and global media platforms. As a consequence, ecological terminology has become one of the most dynamic and rapidly expanding lexical fields in many world languages (Crystal, 2019). The accelerated production of environmental concepts reflects both the growth of ecological sciences and the urgent need to communicate complex sustainability challenges to diverse audiences.

The rise of globalization has substantially intensified the cross-border circulation of scientific knowledge, professional vocabulary, and conceptual frameworks. International organizations such as the United Nations, UNESCO, the European Union, and the Intergovernmental Panel on Climate Change (IPCC) regularly produce multilingual reports that introduce and standardize new ecological terminology worldwide (IPCC, 2023). Simultaneously, digital technologies, transnational academic publishing, and social media platforms have shortened the time required for specialized terms to move from expert communities into public discourse. As a result, ecological terms frequently enter national languages before stable local equivalents are developed. This phenomenon increases the pressure on national terminological systems to respond quickly and systematically.

At present, English functions as the dominant language of international science and environmental governance. A considerable number of ecological concepts initially emerge or gain global recognition through English-language publications, conferences, policy papers, and databases (Phillipson, 2017). Expressions such as green economy, carbon neutrality, net zero emissions, climate resilience, renewable energy, and circular economy have become internationally recognized lexical units. Their rapid dissemination often leads to direct borrowing or partial translation into other languages. While such borrowing may facilitate international communication, uncontrolled lexical transfer can also create inconsistency, semantic overlap, and reduced transparency for local language users.

From a linguistic perspective, terminology localization refers to the adaptation of international concepts to the phonetic, lexical-semantic, grammatical, orthographic, and sociocultural norms of a specific language community. Localization is not merely a process of literal translation; it involves the creation of functionally equivalent terms that are accurate, comprehensible, and compatible with native linguistic structures (Cabr , 1999). In specialized communication, a term must satisfy several criteria simultaneously: conceptual precision, structural conformity, brevity, ease of pronunciation, and acceptance by professional users. Therefore, successful localization requires collaboration among linguists, subject specialists, translators, educators, and policymakers.

In ecological discourse, localization possesses particular strategic importance because environmental knowledge must be accessible not only to experts but also to the broader public. Environmental policies can only be effectively implemented when citizens understand the

terminology used in legislation, education, and media communication. If ecological terms remain foreign, opaque, or inconsistent, public awareness campaigns and sustainability programs become less effective (UNESCO, 2023). For example, concepts such as carbon footprint reduction, waste sorting, biodiversity conservation, and energy efficiency require terminological clarity in order to influence everyday behavior. Thus, ecological terminology performs not only a nominative but also an educational and persuasive function.

Another important factor is the close relationship between terminology and language policy. In many countries, the growth of English-based scientific vocabulary has generated debates about linguistic sovereignty, lexical modernization, and the preservation of national language identity. Haugen's classical theory of language planning identifies corpus planning, particularly terminology development as a central mechanism through which languages adapt to modern functional demands (Haugen, 1983). In this regard, ecological terminology becomes part of broader efforts to ensure that national languages remain capable of expressing contemporary scientific realities without excessive dependence on foreign lexical material.

For the Azerbaijani language, this issue has strategic significance. In recent years, Azerbaijan has expanded its environmental agenda in areas such as renewable energy, green growth, restoration of liberated territories, sustainable urban planning, and climate diplomacy. Consequently, concepts such as green transition, carbon neutrality, circular economy, renewable energy, climate adaptation, and sustainable development increasingly appear in legislation, university curricula, journalistic texts, and official discourse. However, the emergence of parallel variants, inconsistent translations, and occasional unnecessary borrowings indicates that terminological regulation remains incomplete. Without systematic standardization, such variation may weaken terminological coherence and reduce communicative efficiency.

The Azerbaijani language possesses significant internal resources for successful terminology formation, including productive word-building models, compound structures, semantic derivation, and historical experience of scientific lexicon development. Terms equivalent to sustainable development, green economy, renewable energy, and climate change demonstrate that well-designed native equivalents can achieve both conceptual precision and public acceptance. Nevertheless, newer concepts such as greenwashing, net zero, carbon offset, and nature-based solutions still require terminological discussion and standardization.

The purpose of this article is to analyze the linguistic mechanisms, functional significance, and current challenges of ecological terminology localization in the context of globalization, with particular attention to Azerbaijani linguistic practice. The study aims to identify the principal strategies of adaptation, evaluate their effectiveness, and propose recommendations for strengthening ecological terminology planning in the Azerbaijani language.

Materials and Methods

The present research is grounded in an interdisciplinary methodological framework that combines approaches from terminology studies, applied linguistics, sociolinguistics, ecolinguistics, translation studies, and discourse analysis. Since the localization of ecological terminology is a multidimensional process involving lexical adaptation, semantic transfer, language planning, and communicative practice, the study employs qualitative, descriptive, and comparative-analytical procedures. Such an integrated methodological model makes it possible to investigate not only the structural features of ecological terms but also their functional role in scientific and public communication.

The empirical material of the research consists of several categories of sources. First, international environmental reports and policy documents published by authoritative institutions were examined. These include materials issued by the United Nations (UN), United Nations Environment Programme (UNEP), UNESCO, Intergovernmental Panel on Climate Change (IPCC), European Commission, and World Bank. These documents were selected because they serve as the principal channels through which ecological terminology is standardized, codified, and disseminated globally. Second, academic publications in the fields of environmental science, linguistics, terminology management, and translation studies were analyzed. Peer-reviewed journal articles, monographs, conference proceedings, and specialized reference works published in English, Azerbaijani, Turkish, and Russian were included in the corpus. This multilingual corpus enabled a broader comparative perspective on term adaptation processes across different linguistic systems. Third, terminological dictionaries, glossaries, encyclopedic resources, and official lexicographic publications were studied in order to identify recommended equivalents, parallel variants, and the degree of terminological standardization. Fourth, Azerbaijani-language media discourse was used as a practical corpus for observing real usage patterns. News portals, ministry websites, online newspapers, television transcripts, educational resources, and public awareness campaigns published between 2020 and 2026 were reviewed. This period was selected because ecological themes became especially visible due to the intensification of global climate policy, renewable energy initiatives, and sustainability agendas.

The sampling procedure was purposive and criterion-based rather than random. Approximately 150 ecological lexical units frequently occurring in both international and Azerbaijani discourse were selected for detailed analysis. The sample included terms related to climate policy, renewable energy, waste management, biodiversity conservation, green economy, environmental governance, sustainable development, and ecological risk communication. Lexical items were chosen according to recurrence frequency, conceptual significance, visibility in Azerbaijani sources, and the presence of translation or adaptation variability.

Several complementary research methods were applied during the analytical process. The comparative-analytical method was used to compare source-language ecological terms, primarily English units, with their Azerbaijani equivalents. This made it possible to determine whether target forms were produced through direct translation, semantic calque, borrowing, hybrid formation, paraphrasing, or native lexical innovation. The descriptive method was employed to classify ecological terms according to structural type, semantic field, grammatical form, and communicative function. Terms were grouped as simple, derived, compound, multi-word, borrowed, or hybrid lexical units. Structural-semantic analysis was used to examine the internal composition and conceptual transparency of terms, especially complex expressions such as carbon footprint, circular economy, net zero emissions, greenwashing, and nature-based solutions. This method helped reveal the extent to which Azerbaijani equivalents preserve semantic accuracy and linguistic naturalness.

Elements of discourse analysis were also incorporated to determine how ecological concepts function in public communication. Particular attention was given to whether terms were used in explanatory, persuasive, legislative, informative, educational, or symbolic contexts. Media discourse was especially relevant for evaluating whether specialized terminology had entered broader public vocabulary or remained limited to expert circles. In addition, a functional evaluation model was applied to assess the quality of localized terms according to five criteria: conceptual precision, linguistic acceptability, brevity, consistency across sources, and public comprehensibility.

This evaluative framework enabled the distinction between stable and successful equivalents and unstable or problematic variants.

All collected lexical items were manually coded, categorized, and compared across source types. Repeated variants were examined to identify dominant adaptation tendencies, synonymic competition, inconsistencies in usage, and emerging standard forms. Where necessary, contextual interpretation was supported through cross-source comparison. Although the study is limited to written discourse and does not include spoken-language corpora or large-scale sociolinguistic surveys, the selected corpus provides a reliable and representative basis for identifying the principal tendencies in the localization of ecological terminology within the Azerbaijani linguistic environment.

Results and Discussion

The results of the study indicate that the localization of ecological terminology is a complex and continuous process shaped by linguistic structure, international scientific communication, institutional language policy, and public discourse. The expansion of global environmental vocabulary has intensified the need for national languages to develop precise, standardized, and socially acceptable equivalents. The Azerbaijani language demonstrates considerable adaptive capacity in this sphere; however, the degree of successful localization varies according to the conceptual complexity, frequency of use, and sociolinguistic prestige of individual terms.

The analysis demonstrates that ecological terminology is localized primarily through five major mechanisms: direct translation, calquing, semantic adaptation, phonetic borrowing, and native word formation. Direct translation remains one of the most productive strategies because it preserves semantic transparency while ensuring accessibility for users. For example, renewable energy has been effectively rendered as *bərpa olunan enerji*, where the lexical components correspond closely to the conceptual structure of the source term. Similar successful examples include climate change - *iqlim dəyişikliyi*, green economy - *yaşıl iqtisadiyyat*, and waste management - *tullantıların idarə olunması*. Such equivalents are widely comprehensible and function efficiently in both scientific and public communication.

Calquing also occupies an important position in terminology transfer. This method reproduces the semantic model of the source expression through native lexical material. The term carbon footprint translated as *karbon izi* illustrates this tendency. Although structurally concise and conceptually transparent, calqued terms may initially require explanatory support until they become established in public consciousness. Similar examples include food chain - *qida zənciri* and greenhouse effect → *istixana effekti*. The effectiveness of calques depends largely on their semantic clarity and frequency of institutional use.

Semantic adaptation is particularly significant when a source-language concept has no direct equivalent in the receiving language. In such cases, an existing lexical unit may be semantically expanded or modified. The English term sustainability appears in Azerbaijani mainly through variants such as *dayanıqlılıq* and *davamlılıq*. The coexistence of parallel forms demonstrates both lexical productivity and terminological instability. In official policy discourse, the phrase *dayanıqlı inkişaf* has become dominant as the equivalent of sustainable development, largely due to long-term use in UN and governmental documentation. This suggests that repeated institutional usage strongly influences terminological stabilization.

Phonetic borrowing represents another mechanism, especially when international terms enter discourse rapidly through media or technological channels. Examples include recycling, resilience,

and offset, which sometimes appear in semi-adapted forms such as resaykling or untranslated English variants. However, the research indicates that direct phonetic borrowing is less productive and less preferable in Azerbaijani ecological discourse because such forms often reduce intelligibility for the general public and may conflict with native phonological norms. Borrowed units are more common in expert circles than in mass communication.

Native word formation constitutes an important internal resource for terminology development. Azerbaijani possesses productive derivational and compounding mechanisms capable of generating accurate ecological equivalents. This strategy strengthens linguistic autonomy and reduces unnecessary lexical dependence. The successful creation of terms such as *su ehtiyatları*, *hava çirklənməsi*, *torpaq eroziyası*, and *biomüxtəliflik* demonstrates that native lexical resources can adequately express modern ecological realities when systematically planned.

The study further reveals that globalization generates substantial terminological pressure on national languages. International organizations such as the United Nations, UNESCO, UNEP, and the IPCC actively disseminate ecological vocabulary through reports, conventions, educational materials, and digital campaigns. As a result, expressions such as net zero, green growth, climate resilience, energy transition, and nature-based solutions often enter Azerbaijani discourse before normative equivalents are officially approved. This creates a transitional period characterized by parallel variants, hybrid forms, and inconsistent translations. In many cases, journalists, translators, academics, and institutions use different renderings of the same concept simultaneously. Such variation weakens terminological coherence and may confuse non-specialist audiences.

The influence of digital media significantly accelerates this process. Online news portals and social networks frequently reproduce English-language environmental terminology without adaptation, especially during international climate summits or global policy discussions. The speed of information exchange often exceeds the speed of lexicographic regulation. Consequently, spontaneous borrowing may become widespread before language-planning institutions intervene. This confirms the broader sociolinguistic principle that terminology development in the digital age is increasingly decentralized and media-driven.

Within the Azerbaijani context, several ecological terms already demonstrate successful and stable localization. Units such as *dayanıqlı inkişaf* (sustainable development), *yaşıl iqtisadiyyat* (green economy), *bərpa olunan enerji* (renewable energy), *iqlim dəyişikliyi* (climate change), and *biomüxtəliflik* (biodiversity) are now common in legislation, educational texts, academic publications, and journalistic discourse. Their success can be explained by conceptual clarity, linguistic naturalness, repeated institutional use, and relevance to national development priorities.

Nevertheless, the analysis also identifies a group of newer expressions that remain unstable or insufficiently standardized. Terms such as carbon offset, greenwashing, biodiversity credits, net zero pathway, and loss and damage finance still lack widely accepted Azerbaijani equivalents. Different translations coexist, while some sources simply retain the English form. This indicates that terminology planning has not fully kept pace with the rapid emergence of new environmental concepts.

The findings suggest that effective ecological terminology localization requires stronger cooperation among linguists, ecologists, translators, media professionals, and policymakers. Standardized glossaries, regularly updated digital term banks, academic review mechanisms, and coordinated public communication strategies are necessary to ensure terminological consistency. In

addition, universities and teacher-training institutions should integrate environmental terminology literacy into language and translation curricula.

Overall, the research confirms that successful localization depends not only on linguistic accuracy but also on institutional support, frequency of use, educational dissemination, and public acceptance. Where these factors operate together, ecological terms become stable components of the national lexicon. Where they are absent, terminological fragmentation and communicative inefficiency persist.

Conclusion

The conducted research demonstrates that the localization of ecological terminology in the context of globalization is not merely a linguistic phenomenon, but a strategic process directly connected with scientific communication, language planning, environmental education, and public awareness. The rapid international spread of concepts related to climate change, renewable energy, green economy, carbon neutrality, and sustainable development has created new lexical demands for national languages, including Azerbaijani. In this regard, the formation of accurate, understandable, and standardized ecological equivalents becomes an important condition for effective knowledge transfer.

The findings indicate that the most productive localization mechanisms in Azerbaijani are direct translation, semantic adaptation, and native word formation. These methods preserve conceptual precision while maintaining linguistic naturalness and accessibility for users. At the same time, excessive phonetic borrowing and uncontrolled parallel variants may weaken terminological consistency and reduce clarity in public communication. Therefore, terminology development should be based on systematic linguistic principles rather than spontaneous media usage.

The study also confirms that globalization exerts significant terminological pressure through international organizations, academic publications, and digital platforms. Since new environmental concepts often enter discourse faster than official equivalents are developed, national terminology systems must respond more dynamically. This requires stronger institutional coordination among linguists, environmental specialists, translators, educators, and policymakers.

For the Azerbaijani language, ecological terminology localization has both practical and symbolic significance. Practically, it improves the quality of legislation, education, research, journalism, and environmental campaigns. Symbolically, it strengthens the ability of the national language to function as a full medium of modern scientific thought. Terms such as *dayanıqlı inkişaf*, *yaşıl iqtisadiyyat*, *bərpa olunan enerji*, and *iqlim dəyişikliyi* already demonstrate that successful localization is achievable when linguistic accuracy and public comprehensibility are balanced.

In conclusion, the localization of ecological terminology contributes not only to the efficiency of scientific discourse but also to the formation of ecological culture and sustainable development values in society. Future progress in this field depends on continuous lexicographic work, digital terminology databases, interdisciplinary cooperation, and active integration of ecological vocabulary into education and media discourse.

Abstract: The article examines the main challenges that arise when translating economic and agricultural terminology used in Azerbaijan’s modern business environment into English. In particular, it analyzes the semantic features, functional meaning nuances, and cultural-contextual aspects of terminological units formed within the framework of the sustainable development concept. During the research, terminological inconsistencies and translation difficulties were identified in the process of selecting English equivalents for such concepts as “sustainable development,” “agricultural resources,” “management strategies,” “regional economic potential,” “food security,” and “innovative agriculture.” The article also explains how lexical gaps, polysemy, and stylistic appropriateness influence the quality of translation in economic and agricultural texts. As a result, the study justifies the importance of establishing a terminological base, applying a context-based approach, and using international terminological standards in order to ensure more accurate and standardized translation in these fields.

In addition, the article emphasizes that direct translation of certain terms may lead to loss of meaning in English, which creates the need for interpretative translation methods. At the same time, in the context of globalization, accurate translation of economic texts plays a significant role in presenting Azerbaijan in the international investment environment and shaping the country's economic image.

Keywords: sustainable development, business environment, agricultural terminology, economic terms, translation challenges, terminological equivalence.

AZƏRBAYCAN BİZNES VƏ AQRAR TERMINOLOGİYASININ DAVAMLİ İNKİŞAF KONTEKSTİNDƏ İNGİLİS DİLİNƏ TƏRCÜMƏSİNDƏ ÇƏTİNLİKLƏR

Xülasə: Məqalədə Azərbaycanın müasir biznes mühitində istifadə olunan iqtisadi və aqrar terminlərin ingilis dilinə tərcüməsi zamanı yaranan əsas çətinliklər araşdırılır. Xüsusilə dayanıqlı inkişaf konsepsiyası çərçivəsində formalaşan terminoloji vahidlərin semantik xüsusiyyətləri, funksional məna çalarları və mədəni-kontekstual məqamları təhlil edilir. Tədqiqat zamanı "dayanıqlı inkişaf", "aqrar resurslar", "idarəetmə strategiyaları", "regional iqtisadi potensial", "ərzaq təhlükəsizliyi", "innovativ kənd təsərrüfatı" kimi anlayışların ingilis dilində ekvivalentlərinin seçilməsi prosesində meydana çıxan terminoloji uyğunsuzluqlar və tərcümə problemləri müəyyənləşdirilmişdir. Məqalədə həmçinin iqtisadi və aqrar mətnlərin tərcüməsində leksik boşluqların, çoxmənalılığın və üslubi uyğunluğun tərcümə keyfiyyətinə təsiri izah olunur. Nəticə olaraq, qeyd olunan sahələr üzrə tərcümənin daha dəqiq və standartlaşdırılmış şəkildə aparılması üçün terminoloji baza yaradılmasının, kontekst əsaslı yanaşmanın və beynəlxalq terminoloji standartlardan istifadənin vacibliyi əsaslandırılır.

Bundan əlavə, məqalədə vurğulanır ki, bəzi terminlərin birbaşa tərcüməsi ingilis dilində məna itkisinin yaranmasına səbəb olur və bu zaman interpretativ tərcümə üsullarına ehtiyac meydana çıxır. Eyni zamanda, qloballaşma şəraitində iqtisadi mətnlərin düzgün tərcüməsi Azərbaycanın beynəlxalq investisiya mühitində təqdimatına və ölkənin iqtisadi imicinin formalaşmasına mühüm təsir göstərir.

Açar sözlər: dayanıqlı inkişaf, biznes mühiti, aqrar terminologiya, iqtisadi terminlər, tərcümə problemləri, terminoloji ekvivalentlik, Azərbaycan dili, ingilis dili.

Introduction

In the context of globalization and international economic integration, translation plays a significant role in ensuring effective communication between countries and institutions. Azerbaijan, as a developing economy with increasing international cooperation, has expanded its presence in global markets through investment initiatives, agricultural reforms, and sustainable development

strategies. These processes have led to the active use of specialized economic and agrarian terminology in official documents, business reports, policy texts, and academic research.

However, the translation of Azerbaijani economic and agrarian terminology into English presents various difficulties. Such challenges arise due to lexical gaps, differences in conceptual frameworks, semantic ambiguity, and the absence of direct equivalents in English. Terminological inconsistency can affect the accuracy of translated texts, potentially causing misunderstandings in international communication, investment negotiations, and policy interpretation.

Sustainable development discourse, which has become central to modern economic planning, further intensifies translation complexities. Concepts such as food security, regional economic potential, innovative agriculture, and management strategies are frequently used in Azerbaijani policy discourse, yet their translation requires both linguistic competence and subject-specific knowledge. The accuracy of these translations is crucial for presenting Azerbaijan's economic priorities to international audiences and ensuring effective intercultural communication.

This article aims to analyze the main translation challenges in rendering Azerbaijani business and agrarian terminology into English within the sustainable development context. It also explores strategies for achieving terminological equivalence and improving translation quality in specialized texts.

Materials and methods

The study is based on qualitative research methodology. The research materials include Azerbaijani economic policy texts, agricultural development programs, and sustainable development-related reports, as well as their English translations available in public sources. In addition, relevant academic literature on translation studies and terminology was reviewed to support theoretical analysis.

The methods applied in this research include:

Comparative linguistic analysis, which was used to compare Azerbaijani terms with their English equivalents and identify semantic and functional differences.

Terminological analysis, focusing on the structural and conceptual features of business and agrarian terminology.

Contextual analysis, aimed at examining how terms function within sentences and discourse structures.

Descriptive approach, applied to interpret translation problems and propose strategies for improving accuracy.

The research also draws on key translation theories, including equivalence theory and functionalist approaches, which emphasize the role of context and communicative purpose in translation (Baker, 2018; Newmark, 1988).

Results and discussion

1. Lexical Gaps and Non-Equivalent Terms

One of the major difficulties in translating Azerbaijani economic and agrarian terminology is the existence of lexical gaps. Certain concepts in Azerbaijani socio-economic discourse do not have a direct lexical equivalent in English. For example, the term "aqrar resurslar" is often translated as "agrarian resources" or "agricultural resources." While both options appear acceptable, the latter is more common in international discourse and aligns with standard English terminology.

Similarly, “regional iqtisadi potensial” may be translated as “regional economic potential,” which is a direct equivalent. However, the semantic scope of the term in Azerbaijani often includes demographic, infrastructural, and environmental aspects. Therefore, translators may need to clarify the meaning through extended phrases depending on the context.

Lexical gaps require translators to adopt compensation strategies such as paraphrasing, borrowing, or descriptive translation (Vinay & Darbelnet, 1995).

2. Polysemy and Semantic Ambiguity

Many Azerbaijani economic terms demonstrate polysemy, creating ambiguity during translation. For instance, the word “idarəetmə” may correspond to “management,” “governance,” or “administration” in English. Each of these carries different institutional implications. In sustainable development contexts, “governance” may be more appropriate when referring to public administration and policy frameworks, while “management” is typically used in corporate or organizational contexts.

Another example is the term “strategiya.” In Azerbaijani discourse, it may refer broadly to long-term planning at national or regional levels. In English, however, “strategy” is often interpreted in business or military frameworks. Therefore, translators must carefully examine context to ensure semantic precision.

As noted by Catford (1965), translation shifts often occur due to differences in linguistic systems, which becomes especially visible in specialized vocabulary.

3. Cultural and Institutional Context Differences

Economic and agricultural terminology is often shaped by national institutions and socio-political frameworks. Terms like “dövlət proqramı” are frequently translated as “state program” or “government program.” While both are linguistically correct, the phrase “government program” is more widely used in English-speaking policy documents.

Additionally, Azerbaijan’s agricultural policies are influenced by post-Soviet administrative traditions. Certain concepts related to land use, subsidies, and regional development may reflect institutional realities not fully identical to Western systems. This can result in translation mismatches and misinterpretation if translators ignore cultural context.

According to House (2015), intercultural translation requires not only linguistic competence but also pragmatic awareness and cultural sensitivity.

4. Terminological Standardization Problems

A common issue in Azerbaijani-English translation is inconsistency in terminology. The same term may be translated differently across various documents. For example, “ərzaq təhlükəsizliyi” is sometimes rendered as “food safety” instead of “food security.” In international sustainable development discourse, “food security” refers to the availability and accessibility of food, while “food safety” refers to hygiene and food quality standards. Such mistranslation can significantly distort meaning and create confusion in policy interpretation.

In sustainable development reports, terms such as “yaşıl iqtisadiyyat” are translated as “green economy,” which is globally standardized. Yet, other terms like “dayanıqlı inkişaf” may appear as both “sustainable development” and “stable development.” The second option is incorrect because it fails to capture the established conceptual meaning of sustainability in international discourse.

The importance of terminological standardization is strongly emphasized in specialized translation research (Cabr , 1999).

5. Functional Style and Register Issues

Economic and agrarian texts often require formal academic or bureaucratic style. Translators may face difficulty in preserving the stylistic register of Azerbaijani official discourse in English. Azerbaijani texts may include long, complex sentences and formal expressions, whereas English academic style tends to prefer clarity, conciseness, and structured argumentation.

For example, Azerbaijani official documents frequently use repetitive formal phrases such as “həyata keçirilən tədbirlər nəticəsində” which is literally “as a result of the measures implemented.” Excessive literal translation may make English texts heavy and unnatural. A more functional translation would simplify the phrase to “as a result” or “due to implemented reforms.”

This aligns with Nida’s (1964) view that functional equivalence should be prioritized to ensure naturalness and communicative effectiveness.

6. Sustainable Development Terminology and Global Discourse Compatibility

Sustainable development terminology has a strong international conceptual base, especially due to the influence of the United Nations Sustainable Development Goals (SDGs). Therefore, Azerbaijani terms related to sustainability must be translated in accordance with internationally recognized equivalents.

For example:

dayanıqlı inkişaf → sustainable development

bərpa olunan enerji → renewable energy

ərzaq təhlükəsizliyi → food security

yaşıl iqtisadiyyat → green economy

When translators deviate from global terminology norms, the translated texts may lose credibility and fail to align with international academic and policy discourse. This problem becomes critical when Azerbaijan’s economic strategies are presented to international organizations, investors, and academic audiences.

Conclusion

The translation of Azerbaijani business and agrarian terminology into English within the sustainable development context involves significant linguistic and conceptual challenges. The study identifies major difficulties such as lexical gaps, semantic ambiguity, institutional-cultural differences, lack of terminological standardization, and register mismatch.

The findings suggest that accurate translation in this field requires not only linguistic competence but also interdisciplinary knowledge of economics, agriculture, and sustainability discourse. Terminological consistency should be ensured through the development of specialized bilingual glossaries and alignment with internationally recognized terminology, especially in sustainable development-related texts.

Moreover, translators should apply functional and context-based strategies rather than relying solely on literal translation. Improving translation quality in economic and agrarian discourse can contribute to more effective intercultural communication and strengthen Azerbaijan’s representation in global investment and policy environments.

Abstract: Communication is a fundamental process that affects all aspects of human life, with language serving as its primary vehicle. Over time, however, the reliability of language has been compromised by the limitations of memory and physical distance, leading to the proliferation of errors. In response to these challenges, written forms of communication were developed to ensure a more accurate and durable transmission of knowledge.

Although oral communication allows for quick responses and direct interaction, it has drawbacks such as lack of confidentiality and the possibility that immediate reactions may lead to wrong decisions. Written communication, on the other hand, enables revisiting documents and sharing them more easily, but responses take longer and there is no instant feedback.

Today emails are one of the most common ways to communicate in business. It's important to avoid harsh words or unprofessional tone in emails, as they can cause emotional reactions. Writing polite and clear emails helps achieve the goal of the message and makes communication more effective.

Digital etiquette is a set of rules for communicating effectively and respectfully online. Since there is no body language or tone of voice in digital communication, it is important to pay attention to every word. People sometimes write things they can't say face-to-face, but it's important to consider how the other person will understand the message. Therefore, always review your message and fix any mistakes before sending it.

Key words: communicative modality, means of communication, correspondence formatting, concept of digital writing, digital etiquette

MƏDƏNİYYƏTLƏRARASI KOMMUNİKASIYA VƏ DİL AMİLLƏRİ RƏQƏMSAL YAZIŞMALARDA NƏZAKƏT: ELEKTRON POÇT ETİKETİ VƏ ƏLAQƏLİ DAVRANIŞ NORMALARI

Yeganə Nurəddin ƏLİYEVƏ

Müəllim, Beynəlxalq əlaqələr şöbəsinin mütəxəssisi

Bakı Dövlət Universiteti

Xülasə: Kommunikasiya insan həyatının bütün aspektlərinə təsir göstərən fundamental prosesdir və dil onun əsas vasitəsi kimi çıxış edir. Lakin zaman keçdikcə yaddaşın məhdudluğu və fiziki məsafə kimi amillər dil vasitəsilə ötürülən məlumatların etibarlılığına mənfi təsir göstərmiş və nəticədə səhvlərin artmasına səbəb olmuşdur. Bu problemlərin aradan qaldırılması məqsədilə biliklərin daha dəqiq və uzunmüddətli şəkildə ötürülməsini təmin edən yazılı kommunikasiya formaları inkişaf etdirilmişdir.

Şifahi kommunikasiya sürətli cavab verməyə və birbaşa qarşılıqlı əlaqəyə imkan yaratsa da, məxfiliyin təmin olunmaması və ani reaksiyaların yanlış qərarlara səbəb ola bilməsi kimi müəyyən çatışmazlıqlara malikdir. Yazılı kommunikasiya isə sənədlərə sonradan yenidən müraciət etməyə və onları daha asan şəkildə paylaşmağa imkan verir. Bununla belə, bu kommunikasiya formasında cavablandırma prosesi daha uzun çəkir və ani əks-əlaqə imkanı məhdud olur.

Müasir dövrdə elektron poçt biznes sahəsində ən geniş yayılmış kommunikasiya vasitələrindən biridir. Elektron məktublarda sərt ifadələrdən və qeyri-peşəkar üslubdan istifadə etməkdən çəkinmək vacibdir, çünki bu cür ifadələr qarşı tərəfdə emosional reaksiyalara səbəb ola bilər. Nəzakətli və aydın şəkildə hazırlanmış elektron məktublar mesajın məqsədinə çatmasına və kommunikasiyanın daha effektiv həyata keçirilməsinə kömək edir.

Rəqəmsal etiket internet mühitində effektiv və qarşılıqlı hörmətə əsaslanan ünsiyyəti təmin edən qaydalar toplusudur. Rəqəmsal kommunikasiyada bədən dili və səs tonu kimi qeyri-verbal ünsiyyət vasitələri mövcud olmadığından, istifadə olunan hər bir sözə xüsusi diqqət yetirmək vacibdir. İnsanlar bəzən üz-üzə ünsiyyət zamanı ifadə edə bilmədikləri fikirləri yazılı şəkildə bildirirlər. Lakin mesajın qarşı tərəf tərəfindən necə qəbul ediləcəyi mütləq nəzərə alınmalıdır. Buna görə də mesajı göndərməzdən əvvəl onu diqqətlə nəzərdən keçirmək, mümkün səhvləri müəyyənləşdirmək və düzəlişlər aparmaq zəruridir.

Açar sözlər: kommunikativ modalıq, kommunikasiya vasitələri, yazışmaların formatlaşdırılması, rəqəmsal yazı anlayışı, rəqəmsal etiket.

Introduction

The primary source of motivation for humans to live collectively is communication skills. Communication is the means through which a person conveys their feelings, thoughts, and needs to others, and understands others in return. In this respect, the philosopher B.Spinoza's statement, "To understand is the beginning of liking," points to the depth and effectiveness of communication. "Regardless of its content, for a problem to be solved, people must exchange ideas – in other words, they must engage in communication" (Cuceloglu, 2007, p.12). The Turkish psychologist Prof. D.Cuceloglu refers to communication as an "Reciprocal comprehension" between two people. For communication to occur, there must be at least two individuals, one being the source and the other the recipient. Once they are defined, a process of exchanging information, emotions, and thoughts begins between them (Cuceloglu, 2000, p.76-79).

Communication is an event that encompasses every aspect of our lives and significantly influences them. Language is the most important means of communication used to create understanding and cooperation among people. However, over time, issues such as transferring knowledge to new generations and increasing geographical distances have reduced the effectiveness of language. Moreover, the exclusive dependence on human memory for knowledge transfer, given its inherent unreliability, has led to information loss as well as the dissemination of erroneous content. For this reason, humans have developed writing as a long-lasting form of communication by enriching the oral language system with signs and symbols to transfer knowledge to future

generations. After the invention of writing, the position of the oral tradition began to weaken, and after a while, this tradition was forced to yield its place to the written tradition (Arvas, p.111-118)

Communication has, over a long period of time, gone through various stages to reach its advanced form today. In the earliest times, humans communicated only physically through body language, and later began to communicate by speaking and writing. As human society developed, individuals felt an increasing need to communicate and share their ideas and experiences with others. This was considered an essential factor for enabling people to establish better connections with different cultures and societies. Consequently, over time, humans have strived to obtain information quickly and accurately, and the speed of news dissemination has become one of the most important characteristics of communication.

Materials and methods

Writing is a fundamental component of learning and is closely connected with the four main language skills (listening, reading, writing and speaking). In addition, to ensure accuracy in writing, it is necessary to consider several parameters, ranging from punctuation marks to meaningful and appropriate structure and spelling rules. The writing process also includes issues such as word choice, language proficiency, correct use of connectors, and the overall structure of the text (introduction, body, and conclusion). In this regard, writing is considered one of the most difficult skills, requiring significant effort to develop. While language errors in speech are often not given much attention, they are important in written language. This is because “the impact and response of speech are immediate, whereas the impact of writing is lasting” (Yılmaz, 2012, p.13).

As the famous philosopher and writer F.Bacon stated, “Reading makes a full man, conversation a ready man, and writing an exact man”. During the writing process, emotions and thoughts pass through a certain cognitive filter and are transformed into written text in accordance with language rules.(Gunesh, 2007).

From a linguistic perspective, it can be observed that in various languages, words meaning “to write” are etymologically related to verbs expressing actions such as “to draw,” “to engrave,” “to carve,” “to scratch,” or “to cut,” which correspond to early forms of writing. In this respect, it is also suggested that in Turkish, the verb *yaz-* originated through a phonetic change in the final “r” sound of the verb *yar-* (meaning “to carve, engrave, hollow out, ornament, or draw”), which shifted to “z,” thus acquiring the meaning of “to write” (Shirin, 2004, p.570). As a more extensive example of early written artifacts, the Orkhon-Yenisei inscriptions are widely accepted. These texts, dedicated to Bilge Kağan, Kül Tigin, and Tonyukuk, were created by engraving onto stone surfaces using sharp tools (Shirin, 2004, p.566). For this reason, writing is considered an important stage in the process of civilization and the history of communication. Initially used for commercial record-keeping, writing gradually evolved into a significant means of communication.

Unlike other forms of communication, written communication provides the writer with the opportunity to think, revise, and make changes in the text between the time of composition and transmission. However, this time interval also places greater responsibility on the writer. In this sense, the proverb “The word flies, the writing remains” serves as a clear illustration of this idea.

Letters are the most commonly used form of written communication. The word “*mektûb*,” which originated from Arabic and is widely used in Turkish, has equivalents in Turkish and Persian such as “*betik (bitig)*” and “*nâme*” [Demiray, 1998, s.564]; Devellioglu, 2013, s. 724]. **Address by title** – This form of address is used when writing to individuals holding high positions: *Dear Mr. President!*, *Dear Mr. Minister!*

1. **Address by surname:** *Dear Mr. Məmmədov!, Dear Ms. Qurbanova!*
2. **Address by first name and patronymic:** *Dear Mr. Elman!, Dear Lyudmila Viktorovna!*

This form of address is most commonly used in business correspondence and reflects a closer relationship between the sender and the recipient. The form beginning with “*Dear ...!*” is used in cases where friendly and warm relations exist. Such a form of address should only be used when the writer is confident that the correspondence will be interpreted correctly, as in cases where communication between the parties is rare and strictly formal, it may cause confusion or discomfort for the recipient.

The salutation gives the letter a personal character, attracts the recipient’s attention, and expresses the writer’s polite attitude toward the addressee. The absence of a salutation may be perceived as disrespectful by the recipient.

Greeting is the starting point of a politeness formula and enables the establishment of contact in order to initiate a mutual dialogue. In official business letters, greetings are generally not used between organizations, as in such correspondence the greeting is replaced by a standard salutation such as “*Dear Name Surname!*”. In personal business correspondence and in everyday communication within organizations, however, greetings should be used, since although this type of communication is less formal, it still requires adherence to basic rules of politeness.

The letter continues with information provided by the writer about their own situation. In the main body, the intended message and requests are conveyed in detail. For the purpose of rapid information exchange, it is important that the text of the letter be short and concise. If the letter contains different pieces of information, these should be separated into paragraphs to ensure easier comprehension. The clarity and effectiveness of the letter, as well as the clear presentation of information, are essential. The aim here is not only the quick delivery of the message, but also the establishment of correct and positive communication between the parties. The conclusion part is completed with sentences expressing greetings, respect, or feelings of longing.

In this section, the concluding expressions of the letter, along with the signature, serve both to identify the sender and to ensure compliance with rules of politeness in correspondence. In addition, including the sender’s position, contact phone number, and organizational address makes it possible to establish contact, clarify the issues mentioned in the letter, or provide additional information. For this purpose, an automatic signature function is also used.

In electronic letters, expressions such as “*Sincerely,...*”, “*With deep respect,...*”, and “*Best regards,...*” are commonly used at the end. Among colleagues who have close and friendly relations, forms such as “*Yours,...*”, “*With respect and affection,...*”, and “*Yours sincerely,...*” are used as concluding formulas.

At present, the development of technology and the emergence of faster communication tools such as telephones have further narrowed the scope of letter usage, since writing a letter requires more effort and time. However, it remains more reliable in terms of preserving information.

In the modern era, one of the most widely used tools in establishing professional relations in virtual environments is correspondence via electronic mail. Recently, the widespread use of smartphones, tablets, and portable computers (laptops) has given rise to the concept of “digital/electronic writing.”

A business letter is a short document used to ensure the rapid exchange of information between institutions and their departments regarding specific matters. This definition applies not only to paper-based business letters but also to electronic correspondence. However, electronic

letters have certain distinctive features in their preparation. Since email enables rapid message exchange, simplification is observed in the text of the letter; a number of standard elements (such as address details, greetings, etc.) are often omitted, resulting in a less formal style of correspondence.

Despite these changes, although the form of the letter has evolved over time due to technological development, its structure has been preserved, and adherence to this structure remains essential regardless of the type of letter or the relationship between sender and recipient. The main components of an email (subject, salutation, address, body, closing formulas, and signature) are important not only structurally but also ethically, as their presence reflects the sender's politeness and writing culture. This approach also helps maintain sincere and productive professional relations among colleagues (Kojeko, 2015, p.249)

The use of harsh expressions and unethical approaches may lead the recipient to react emotionally. In contrast, letters written with polite and detailed explanations positively contribute to achieving the purpose of correspondence and encourage a more sincere and professional response from the recipient. The composition of correspondence, the careful selection of expressions, and adherence to politeness formulas are of great importance in maintaining positive relationships and ensuring the effectiveness of communication.

To establish successful communication with the recipient, the use of apology, gratitude, and other politeness formulas is beneficial. A timely apology, such as "I apologize for my delayed response" or "Please forgive me for not being able to attend the meeting with you," is one of the key means of preventing potential conflicts and maintaining communication.

Results and discussion

Throughout history, humanity has used its intellect and skills to develop more effective methods of communication. From the earliest periods, people have sought different ways to establish interaction, improving both their abilities and means of communication. For this purpose, they used smoke during the day or fire at night, drew images on cave walls, and attempted to convey their messages using animal horns, pigeons, and many other tools that are uncommon to us today (Sullu, 2018, p.132). With the emergence of new communication technologies that have transformed communication practices, people – in other words, users – have entered an era in which they can interact with other users almost anywhere in the world.

Etymologically, the word "etiquette" originates from the French word "ticket". If one knows the etiquette rules of a particular group or society, this can be considered as a "ticket" granting access to that community (Shea) Digital etiquette, or netiquette, has now become an essential skill for everyone. Digital etiquette refers to a set of behavioral rules in the digital environment aimed at ensuring effective, respectful, and safe online communication (Vedomosti, 2025).

In electronic communication, where non-verbal cues such as intonation, gestures, and facial expressions are absent, greater attention must be paid to written words. Each word should have a precise meaning and should not create ambiguity for the recipient. Due to the distance in digital communication, people sometimes express ideas in writing that they would not say face-to-face. However, it should not be forgotten that the recipient is also a human being with emotions. For this reason, before sending a message, it is important to read it from the recipient's perspective and to correct any spelling errors. In addition to tone, even grammatical mistakes can create a negative impression on the recipient. Furthermore, if work-related matters are not urgent, it is advisable to avoid sending messages after working hours.

Conclusion

Digital etiquette is not merely a set of rules; it is also an expression of respect for the other party and a sense of responsibility for every written word (Vedomosti, 2025). By developing these etiquette rules within ourselves, we can positively influence the quality of our relationships.

THE ROLE OF THE SEMANTIC-COGNITIVE APPROACH IN TRANSLATION STUDIES

Hagigat HAJIYEVA

PHD in Philology, Associate professor, Department of Foreign Languages

Azerbaijan University of Languages

E-mail: Hagigat.hajiyeva1969@gmail.com

ORCID ID: 0009-0003- 4485-5748

Abstract: Translation is not merely a linguistic transfer between two language systems; it is a complex cognitive and communicative act requiring the translator to process meaning at multiple levels. The semantic-cognitive approach, rooted in cognitive linguistics and prototype theory, provides a powerful framework for understanding how meaning is constructed, transformed, and re-expressed across languages and cultures. This paper examines the theoretical foundations of the semantic-cognitive approach and investigates its practical implications for translation, with particular attention to conceptual metaphor, frame

semantics, and prototype effects. The study concludes that integrating semantic-cognitive principles into translation practice leads to more accurate, culturally attuned, and communicatively effective translations.

Keywords: semantic-cognitive approach, translation studies, conceptual metaphor, frame semantics, cognitive linguistics, meaning construction, prototype theory.

TƏRCÜMƏ ARAŞDIRMALARINDA SEMANTİK-KOQNİTİV YANAŞMANIN ROLU

Həqiqət HACIYEVA

Xülasə: Semantik-koqnitiv yanaşma tərcümə nəzəriyyəsi və praktikasında əhəmiyyətli bir irəliləyişi təmsil edir. Tərcüməni mental təmsillər, konseptual metaforalar, çərçivələr və prototiplər kimi koqnitiv proseslərə əsaslandıraraq səthi linqvistik ekvivalentliyin ötəsinə keçir və məna inşasının daha dərin məsələsinə toxunur. Bu yanaşma, sırf linqvistik modellərin qeyri-kafi qaldığı, yüksək mədəni ayrılma kontekstlərindəki tərcümə problemlərinin həllində xüsusilə dəyərlidir.

Gələcək tədqiqatlar tərcüməçilərin semantik-koqnitiv strategiyaları necə sezgisel şəkildə tətbiq etdiyinin korpusa əsaslanan araşdırmalarına, həmçinin ingilis-Azərbaycan kimi spesifik dil cütlüklərinə uyğunlaşdırılmış koqnitiv məlumatlı tərcümə pedaqogikasının inkişafına yönəlməlidir. Bu dil cütü iki dil arasındakı struktur, mədəni və konseptual məsafəyə görə bu cür araşdırma üçün xüsusilə zəngin bir sahəni təmsil edir.

Açar sözlər: semantik-kognitiv yanaşma, tərcüməşünaslıq, konseptual metafora, çərçivə semantikasi, koqnitiv dilçilik, məna quruluşu, prototip nəzəriyyəsi

Introduction

The question of meaning has always been central to translation theory and practice. Classical equivalence-based models—from Nida's (1964) dynamic equivalence to Catford's formal correspondence—grappled with transferring meaning between source and target texts. These approaches, however, treated meaning as a largely static entity embedded within linguistic forms, overlooking the dynamic, embodied, and culturally situated character of meaning as understood by modern cognitive science.

The semantic-cognitive approach, emerging from the broader field of cognitive linguistics pioneered by Kövecses (2002) and Fillmore (1982), offers a more nuanced model. (Fillmore, 1982, p. 111-137). It posits that meaning is not simply encoded in words and sentences but is constructed through mental representations, cognitive schemas, and conceptual structures grounded in human bodily experience and cultural context. This shift from text-centred to mind-centred analysis carries profound implications for translation.

This paper aims to: (1) outline the key principles of the semantic-cognitive approach as they relate to translation; (2) demonstrate how conceptual metaphor, frame semantics, and image schemas can guide translation decisions; and (3) discuss the pedagogical implications for translator training programmes.

Theoretical Foundations

1.Cognitive Linguistics and Meaning Construction

Cognitive linguistics departs from the Chomskyan tradition by rejecting the modularity of language and instead treating linguistic structures as reflections of general cognitive processes. At its core is the claim that language is an instrument for organising, processing, and conveying information (Langacker, 1987). Meaning, in this view, is encyclopaedic—it draws on vast networks of conceptual knowledge rather than being reducible to discrete semantic features.

Conceptual Metaphor Theory (CMT), introduced by Lakoff and Johnson (1980) in *Metaphors We Live By*, “demonstrates that abstract concepts are systematically understood through more concrete domains”. (Kövecses, 2002). The metaphor ARGUMENT IS WAR, for instance, structures how English speakers conceptualise argumentation (“He attacked every weak point in my argument”). This is not merely a stylistic device but a cognitive one—and it varies significantly across cultures, with direct consequences for translators.

2. Frame Semantics

Fillmore’s (1982) frame semantics argues that words evoke entire knowledge structures—“frames”—that provide context for their interpretation. (Lakoff & Johnson, 1980). The word “buy” activates a commercial transaction frame involving a buyer, a seller, goods, and payment. Translators must therefore not only find lexical equivalents but ensure the target-language word activates a comparable frame in the target culture. Where frames diverge, the translator faces a genuine cognitive reconstruction task, not merely a linguistic substitution.

3. Prototype Theory and Categorisation

Rosch’s (1975) prototype theory holds that categories are not defined by necessary and sufficient conditions but are organised around prototypical members. This has significant implications for translation, as prototype structures differ across languages. The Azerbaijani word “ev” may evoke a different prototype than the English “home” or “house”—with distinct spatial, familial, and emotional associations—requiring translators to make deliberate choices about which aspects of the concept to foreground.

Application in Translation Practice

1. Translating Conceptual Metaphors

One of the most challenging tasks for translators is handling conceptual metaphors. When source-language metaphors are mapped to target-language contexts, three strategies are typically available: (a) finding a parallel metaphor in the target language; (b) substituting a different metaphor that conveys the same conceptual meaning; (c) replacing the metaphor with a non-metaphorical paraphrase. The choice depends on whether the underlying conceptual mapping is shared across the two cultures.

The English expression “time is money” shares a close conceptual parallel in Azerbaijani (“vaxt puldur”), reflecting shared modern economic frameworks. However, metaphors tied to specific cultural experiences—such as spatial or sensory metaphors for emotional states—may lack direct equivalents, requiring the translator to engage in deeper cognitive-cultural analysis before arriving at a solution.

2. Frame Mismatches and Cultural Schemas

A significant challenge arises when source and target cultures possess different frames for the same conceptual domain. Legal, medical, and literary texts are especially prone to such frame mismatches. A translator working with texts involving concepts of honour, kinship, or social hierarchy—areas where Azerbaijani and English cultural schemas diverge substantially—must reconstruct the frame for the target reader rather than simply substituting a lexical equivalent.

The semantic-cognitive approach offers a diagnostic tool here: by explicitly mapping the frames activated by source-text words and comparing them against potential target-language equivalents, the translator can identify where reconstruction is necessary and plan a strategy accordingly.

3. Prototype Effects in Lexical Translation

The approach also illuminates why one-to-one lexical translation is frequently insufficient. The Azerbaijani concept of "həsərət" -a deep longing for something or someone lost, often the homeland-requires careful navigation in English, where no single word carries the same prototypical associations. (Orucov & Musayev, 1976). Translating it as mere "nostalgia" or "longing" loses the cultural depth embedded in the prototype. A semantically informed translator would acknowledge this gap and compensate through contextual expansion, a translator's note, or careful semantic framing in the surrounding text.

Pedagogical Implications

Understanding the semantic-cognitive approach equips trainee translators with tools that go beyond bilingual competence. Rather than approaching translation as a word-for-word operation, students learn to identify the conceptual structures underlying source texts and to seek functionally equivalent conceptual structures in the target language.

Practical activities informed by this approach include: conceptual metaphor mapping exercises across language pairs; frame analysis of culturally specific terminology; and prototype comparison tasks that develop sensitivity to semantic range differences. These exercises cultivate metalinguistic awareness and cultural competence-two capacities increasingly recognised as central to professional translation quality.

Conclusion

The semantic-cognitive approach represents a significant advance in translation theory and practice. By grounding translation in cognitive processes-mental representations, conceptual metaphors, frames, and prototypes-it moves beyond surface-level linguistic equivalence to address the deeper question of meaning construction. This approach is particularly valuable in contexts of high cultural divergence, where purely linguistic models prove inadequate.

Future research should focus on corpus-based investigations of how translators deploy semantic-cognitive strategies in practice, as well as on the development of cognitively informed translation pedagogy tailored to specific language pairs. The English–Azerbaijani pair represents a particularly rich area for such investigation, given the structural, cultural, and conceptual distance between the two languages.

CLASSIFICATION AND METHODS OF TRANSLATING REALIAS INTO OTHER LANGUAGES

Laman Shamil HAJIHASANOVA

Teacher, Department of Practical Foreign Languages, Ganja State University

E-mail: laman.hajihasanova@gdu.edu.az

ORCID ID: 0009-0005-3156-7741

Abstract: The translation of realias in literary works is one of the most complex and interesting areas of intercultural communication. Realias are words and expressions that reflect the everyday life, history, customs, social life and national characteristics of a particular people. These units express concepts that do not have a direct equivalent in other languages or are only partially compatible.

The main feature of realias in literary translation is that they carry not only lexical, but also cultural load. Here, the translator must convey not only the word, but also the national color and emotional shade behind it. Therefore, the translation of realias requires a more creative and contextual approach than ordinary words.

According to the classification of Russian linguist V.S. Vinogradov, several methods are used in the translation of realias:

- *Transliteration or transcription* – the word is kept as it is (for example, tomahawk - tomoqavk, wigwam-viqvam). This method helps to preserve the national flavor.
- *Descriptive translation* – realia is given by explanation (for example, tomahawk – “a type of ax used by the Indians”).
- *Functional substitution* – it is replaced by a local concept with a similar function.
- *Partial correspondence (hyponymic or generalizing translation)* – a word with a more general or close meaning is chosen.
- *Calque* – a partial translation of a word or phrase.

In literary texts, the translator often combines these methods. For example, at the beginning of the work, realia is given by transliteration, and in subsequent uses it can be used without explanation. This approach both ensures the reader's understanding and preserves the artistic and aesthetic value of the text.

Consequently, in order to translate correctly, translators must first of all be aware of the cultures in which both the source and target languages are spoken. In order to overcome the difficulties that may arise at this time, translators must broaden their worldview as much as possible, be aware of various translation methods, and be able to use words that are considered foreign to our native language correctly when encountering them.

Key words: realia, translation, term, linguistics, language, artistic literature, classification

REALİLƏRİN TƏSNİFATI VƏ BAŞQA DİLLƏRƏ TƏRCÜMƏ ÜSULLARI

Laman Şamil HACI HƏSƏNOVA

Müəllim, Praktiki Xarici Dillər Kafedrası, Gəncə Dövlət Universiteti

E-mail: laman.hajihasanova@gdu.edu.az

ORCID ID: 0009-0005-3156-7741

Xülasə: Bədii əsərlərdə realilərin tərcüməsi mədəniyyətlərarası ünsiyyətin ən mürəkkəb və maraqlı sahələrindən biridir. Realilər müəyyən bir xalqın məişətini, tarixini, adət-ənənələrini, sosial həyatını və milli xüsusiyyətlərini əks etdirən söz və ifadələrdir. Bu vahidlər başqa dillərdə birbaşa qarşılığı olmayan və ya yalnız qismən uyğun gələn anlayışları ifadə edir.

Bədii tərcümədə realilərin əsas xüsusiyyəti onların yalnız leksik deyil, həm də mədəni yük daşımasıdır. Tərcüməçi burada yalnız sözü deyil, onun arxasında duran milli kolorit və emosional çaları da ötürməlidir. Bu səbəbdən realilərin tərcüməsi adi sözlərə nisbətən daha çox yaradıcılıq və kontekstual yanaşma tələb edir.

Rus dilçi alim V.S. Vinogradovun təsnifatına görə realilərin tərcüməsində bir neçə üsuldən istifadə olunur:

- Transliterasiya və ya transkripsiya – söz olduğu kimi saxlanılır (məsələn, tomoqavk, viqvam). Bu üsul milli koloritin qorunmasına kömək edir.
- Təsviri tərcümə – reali izah yolu ilə verilir (məsələn, “hinduların istifadə etdiyi balta növü”).
- Funksional əvəzləmə – oxşar funksiyaya malik yerli anlayışla əvəz edilir.
- Qismən uyğunluq (hiponimik və ya ümumiləşdirici tərcümə) – daha ümumi və ya yaxın mənə verən söz seçilir.
- Kalka – söz və ya ifadənin hissə-hissə tərcüməsi.

Bədii mətnlərdə tərcüməçi çox vaxt bu üsulları kombinə edir. Məsələn, əsərin əvvəlində reali transliterasiya ilə verilir, sonrakı istifadələrdə isə izahsız işlədilər bilər. Bu yanaşma həm oxucunun anlayışını təmin edir, həm də mətnin bədii-estetik dəyərini qoruyur.

Nəticə olaraq, tərcümə zamanı düzgün tərcümə edə bilmək üçün tərcüməçilər ilk növbədə həm məxəz, həm də hədəf dillərin danışıldığı mədəniyyətlərdən xəbərdar olmalıdır. Bu zaman qarşıya çıxacaq çətinliklərin öhdəsindən gələ bilmək üçün tərcüməçilər mümkün qədər dünyagörüşlərini genişləndirməli, müxtəlif tərcümə metodlarından xəbərdar olmalı və ana dilimiz üçün yad hesab edilən sözlərlə rastlaşarkən onlardan düzgün şəkildə istifadə etməyi bacarmalıdır.

Açar sözlər: reali, tərcümə, termin, dilçilik, dil, bədii ədəbiyyat, təsnifat

Introduction

The transfer of a certain text from one language to another is one of the ancient and complex problems of translation work. The translation of realias and the study of their lexical-semantic features is an important area of translation science. Research has been conducted in this area both in world and Azerbaijani linguistics. It has been illuminated from various aspects in the studies of Russian linguists A.V. Fyodorov, S. Vlahov and S. Flogin. Valuable and interesting scientific works have been written by Azerbaijani linguists A. Yusifova, A. Guliyeva and G. Bayramov.

Methodology and materials

In this research material are used scientific works of Russian linguist V.S.Vinogradov. The study is based on realias, their methods of translating into the target language and classification.

Discussion

The word *realia* (*lat.realis*) originally belongs to the old Latin language. It literally means true, correct, genuine concepts. Realias – in translation studies, are groups of words that are preserved as they are when translating words that denote objects and concepts that are part of the everyday life, history, and geography of a certain people into another language. It is impossible to find a translation or equivalent of *realia* in other languages. *Realia* denote the names of objects, concepts, and abstract entities of a national nature, related to everyday life, and their translation is considered impossible. For this reason, realias can be considered lexical units without equivalents.

In each language, there are certain words and expressions, the abbreviation or replacement of which in the translation process does not violate the integrity of the text or speech. These words and expressions can be slang, proverbs, dialectical expressions. *Realia* also occupies a special place in this process.

Realias – are special words or expressions that denote specific names, objects, concepts, notions, and phenomena belonging to a specific geographical region, culture, country, tribe, or historical period. Since these word groups have no equivalent in other languages, their normal translation is considered impossible, and in order to complete the translation process, these groups of words are transmitted in a special order.

It is necessary to distinguish the concept of *realia* from the concept of term. Realias are characteristic of the sublanguage of fiction and mass media, are inextricably linked with the culture of a certain people, are widely used in the language of that people and are considered alien to other languages. Terms, on the other hand, are devoid of national content, belong mainly to the field of science, are artificially created to name any object or event, and with their spread acquire wide application possibilities.

Scientists emphasize that there are a number of methods for translating realias into target languages, but the most widespread classification is the five methods proposed by the Russian linguist V.S.Vinogradov.

I *Transliteration and transcription* - is the rendering of given realias in letters in accordance with the translated language. The method of transliteration in the translation of realias is the rendering of the letters or sound composition of the word in the same or similar way as in the alphabetic graphics of the target language. This method is usually used for terms, names and special terms that have passed from other languages.

II *Periphrastic, descriptive* - rendering of given realias in new or complex words with the help of elements existing in the language. This method is to express a single word or phrase in English with a word combination that explains its meaning in the target language.

III *Rendering* with the help of words that are somewhat close to realias in terms of function

IV *Hyponymic* - translation that is partially close to the translation of realias.

V *Calque* – a partial translation of a word or phrase. (Виноградов, 2001)

V.S. Vinogradov based his classification of realias on the classification of S. Vlahov and S. Florin, but with numerous corrections and additions:

1. *Domestic realias*: housing, property; clothing, attire; food, drinks; types of work and occupations; money, units of measurement; musical instruments, folk dances and songs, performers; folk holidays, games; addresses;

2. *Ethnographic and mythological realias*: (ethnic and social communities and their representatives; deities, fabulous creatures, outstanding places);

3. *The realia of nature*: (animals, plants; landscape);

4. *The realia of the administrative bodies and public life*: (state institutions, administrative units; public organizations; industrial and agricultural enterprises, commercial establishments; military and police units; professions and titles). (Виноградов, 2001)

Conclusion

The use of realias in literary translations creates a broad impression on the reader about the life and lifestyle, customs and traditions, and worldview of the people to which they belong. It preserves the aesthetic value of the translated work and creates a bridge between cultures. To translate the given text correctly, translators must first be aware of the cultures in which both the source and target languages are spoken. In order to overcome the difficulties that may arise, translators must broaden their worldview as much as possible, be aware of various translation methods, and be able to use words that are considered foreign to our mother tongue correctly when encountering them.

A COMPARATIVE STUDY OF MACHINE TRANSLATION AND HUMAN TRANSLATION IN THE CONTEXT OF GLOBALIZED COMMUNICATION

Leyla Vagif ALIZADE

PhD in philology, senior teacher, Tourism and Management University

E-mail: leyla.alizada@atmu.edu.az

ORCID ID: 0000-0002-8360-973X

Abstract: The rapid expansion of globalization has significantly increased the need for fast, accurate, and reliable translation across different languages and cultures. As interactions between countries, international organizations, businesses, and individuals continue to grow, translation has become a key factor in ensuring effective communication and mutual understanding. This paper explores the changing relationship between machine translation and human translation, focusing on their main advantages, limitations, and practical areas of use. It also analyzes recent technological advancements and current translation practices in order to understand how both approaches support global communication in different

contexts. The study further investigates whether machine translation and human translation should be considered competing methods or complementary tools within the translation process. The findings indicate that machine translation provides significant benefits in terms of speed, cost-effectiveness, and large-scale text processing, while human translation remains indispensable for capturing cultural nuances, contextual meaning, and emotional depth. Therefore, a hybrid approach that combines both methods is emerging as the most effective solution in today's globalized world.

ORCID ID: 0000-0002-8360-973X

Xülasə: Qloballaşmanın sürətli genişlənməsi müxtəlif dillər və mədəniyyətlər arasında sürətli, dəqiq və etibarlı tərcüməyə olan ehtiyacı əhəmiyyətli dərəcədə artırmışdır. Ölkələr, beynəlxalq təşkilatlar, bizneslər və fərdlər arasında əlaqələrin artması tərcüməni effektiv ünsiyyətin və qarşılıqlı anlaşılanın əsas vasitələrindən birinə çevirmişdir. Bu məqalə maşın tərcüməsi və insan tərcüməsi arasındakı dəyişən münasibəti araşdırır, onların əsas üstünlüklərini, məhdudiyyətlərini və tətbiq sahələrini təhlil edir. Eyni zamanda müasir texnoloji inkişaf və mövcud tərcümə təcrübələri nəzərdən keçirilərək hər iki yanaşmanın qlobal kommunikasiya prosesinə necə töhfə verdiyi qiymətləndirilir. Tədqiqat həmçinin maşın tərcüməsi ilə insan tərcüməsinin rəqib, yoxsa bir-birini tamamlayan sistemlər olub-olmadığını müəyyənləşdirməyə çalışır. Nəticələr göstərir ki, maşın tərcüməsi sürət, miqyas və iqtisadi səmərəlilik baxımından üstünlüklərə malikdir, lakin insan tərcüməsi mədəni incəliklərin, kontekstual mənanın və emosional çalarların düzgün ötürülməsi üçün əvəzolunmazdır. Buna görə də müasir qloballaşan dünyada ən effektiv yanaşma hər iki metodun birləşdirildiyi hibrid model hesab olunur.

Açar sözlər: maşın tərcüməsi, insan tərcüməsi, qloballaşma, tərcümə tədqiqatları, neyron maşın tərcüməsi, mədəniyyətlərarası ünsiyyət, hibrid tərcümə sistemləri.

Introduction

Globalization has fundamentally transformed the ways in which societies communicate, interact, and exchange knowledge across linguistic and cultural boundaries (Cronin, 2003). As international cooperation expands in areas such as trade, education, diplomacy, and digital communication, the demand for effective translation has increased significantly. Language is no longer merely a medium of expression but a critical factor in global connectivity. In this context, translation serves as a bridge that enables mutual understanding among diverse populations, making it a central component of globalization processes.

The rapid development of digital technologies has further accelerated the need for translation. With the growth of the internet, social media, and global digital platforms, vast amounts of multilingual content are generated daily. Machine translation has emerged as a key tool in managing this volume of information, offering immediate and automated translation solutions (Koehn, 2020). Systems based on artificial intelligence, particularly neural machine translation,

have improved the fluency and accessibility of translated texts, allowing users worldwide to access information across language barriers (Vaswani et al., 2017).

Despite these advancements, machine translation remains limited in its ability to fully capture meaning, context, and cultural nuance. Language is inherently complex and often context-dependent, involving idiomatic expressions, cultural references, and implicit meanings that are difficult for machines to interpret accurately (House, 2015). While machine translation can produce grammatically correct output, it may fail to convey the intended message appropriately, especially in sensitive or specialized contexts such as legal, literary, or diplomatic communication.

Human translation, in contrast, continues to play a vital role in ensuring accuracy and cultural relevance. Human translators bring interpretative skills, contextual awareness, and cultural competence that allow them to adapt content effectively for different audiences (Baker, 2018). They are able to recognize subtleties in tone, style, and meaning, making them indispensable in situations where precision and nuance are required. Furthermore, human translators act as cultural mediators, facilitating not only linguistic transfer but also intercultural understanding (Venuti, 2017).

The relationship between machine translation and human translation has therefore become a central topic in translation studies. Rather than viewing these approaches as mutually exclusive, recent research suggests that they can function in complementary ways (Pym, 2010). Machine translation offers speed and scalability, while human translation provides depth and reliability. This dynamic interaction reflects broader changes in the translation profession, where technology is increasingly integrated into human workflows.

This study aims to explore the comparative roles of machine translation and human translation in the age of globalization. By examining their respective strengths, limitations, and areas of application, the paper seeks to determine how these approaches can be effectively utilized in different contexts. Ultimately, the research contributes to a better understanding of how translation practices are evolving in response to technological innovation and global communication demands (Kenny, 2022).

Materials and Methods

This study adopts a qualitative, comparative research design aimed at examining the performance, applicability, and limitations of machine translation and human translation in different real-world contexts.

The materials used in this research were carefully selected to represent diverse text types that reflect common translation demands in a globalized environment.

Legal texts require precision and consistency (Šchäffner, 2004), marketing texts require cultural adaptation (O'Hagan & Ashworth, 2002), while literary texts demand creativity and interpretation (Bassnett, 2014). For example:

Legal: "The parties agree to comply with all applicable regulations..."

Marketing: "Experience the ultimate comfort and style..."

Literary: "The city slept under a blanket of stars..."

Everyday: "I'll get back to you as soon as I can..."

Methods:

1. Literature Review: A review of translation studies and machine translation research was conducted (Baker, 2018; Pym, 2010). Studies show that machine translation performs well in structured contexts, while human translation is superior in handling nuance and ambiguity (House, 2015).

2. Comparative Text Analysis: Texts were translated using both machine systems and human translators. Outputs were compared based on accuracy, fluency, and cultural adaptation.

Research in neural machine translation highlights improvements in fluency but acknowledges persistent challenges with context (Koehn, 2020; Wu et al., 2016).

3. Evaluation Criteria: Translations were evaluated based on:

- 1) Semantic accuracy (Baker, 2018)
- 2) Grammatical correctness
- 3) Cultural sensitivity (Venuti, 2017)
- 4) Fluency and readability

4. Contextual Evaluation: Different use cases were analyzed:

- 1) Real-time communication → machine translation preferred (Kenny, 2022)
- 2) Legal/diplomatic contexts → human translation required (House, 2015)
- 3) Large-scale content → hybrid approach (Bowker & Fisher, 2010)

Results and Discussion

The comparative analysis of machine translation and human translation reveals a complex relationship shaped by efficiency, accuracy, context, and technological development. Rather than producing a single “winner,” the findings demonstrate that each approach performs differently depending on the communicative purpose, text type, and situational demands (Cronin, 2003; Pym, 2010).

Efficiency and Speed. One of the most evident advantages of machine translation is its speed. Machine systems can process thousands of words within seconds, enabling real-time communication across languages (Kenny, 2022). This is particularly valuable in contexts such as customer service chats, social media interaction, and rapid information dissemination during global events. For example, in multilingual customer support environments, machine translation allows companies to respond instantly to user inquiries. A customer message written in one language can be translated and answered almost immediately, significantly improving response time and user satisfaction.

Human translation, by contrast, is inherently slower. Translators must read, interpret, and revise texts carefully, often consulting references or verifying terminology (Baker, 2018). While this process ensures higher quality, it limits scalability. In time-sensitive situations, relying solely on human translation may not be practical.

However, speed should not be equated with effectiveness. The results indicate that while machine translation excels in rapid output, it often requires post-editing by humans to ensure reliability, especially in professional contexts (Bowker & Fisher, 2010).

Accuracy and Contextual Understanding. Accuracy remains one of the most critical criteria in evaluating translation quality. The findings show that machine translation performs well in straightforward, factual, and repetitive texts, such as technical manuals or simple informational content (Koehn, 2020). In such cases, sentence structures are predictable, and vocabulary is consistent, allowing algorithms to generate relatively accurate translations.

However, machine translation struggles with context-dependent meanings. Words with multiple interpretations, ambiguous phrases, and idiomatic expressions often lead to errors. For instance, a phrase like “break the ice” may be translated literally rather than interpreted as initiating conversation.

Human translators demonstrate a clear advantage in this area. They consider the broader context, including the purpose of the text and the intended audience (House, 2015). This allows them to resolve ambiguity and produce translations that accurately reflect the original meaning.

In legal and academic texts, where precision is essential, even minor inaccuracies can have serious consequences. The analysis confirms that human translation remains the preferred option in such high-stakes contexts (Schäffner, 2004).

Cultural Sensitivity and Localization. Globalization involves not only linguistic exchange but also cultural interaction. Translation must therefore account for cultural differences, values, and expectations (Cronin, 2003).

Machine translation systems typically operate based on statistical patterns or neural networks trained on large datasets. While this enables them to produce fluent sentences, they lack true cultural understanding (Venuti, 2017). As a result, they may generate translations that are grammatically correct but culturally inappropriate or ineffective. For example, marketing slogans often rely on humor, wordplay, or cultural references. Machine translation tends to render these elements literally, which can reduce their impact or even cause confusion.

Human translators, on the other hand, act as cultural mediators. They adapt content to ensure that it resonates with the target audience (Bassnett, 2014). This process, known as localization, involves modifying not only language but also tone, style, and cultural references (O'Hagan & Ashworth, 2002).

The results highlight that in fields such as advertising, media, and literature, cultural sensitivity is crucial, and human translation significantly outperforms machine-generated output.

Fluency and Readability. Fluency refers to how natural and coherent a translated text appears in the target language. Advances in neural machine translation have improved fluency considerably, producing outputs that often resemble human writing at first glance (Vaswani et al., 2017).

Despite these improvements, closer analysis reveals limitations. Machine-generated texts may contain subtle inconsistencies, awkward phrasing, or unnatural word choices, especially in longer texts (Wu et al., 2016).

Human translators excel in producing fluent and readable texts. They ensure logical flow, maintain stylistic consistency, and adjust sentence structures to suit the norms of the target language (Baker, 2018). This is especially important in creative and narrative texts.

The findings suggest that while machine translation can produce acceptable drafts, human revision is often necessary to achieve publication-quality results.

Cost, Accessibility, and Scalability. Cost and accessibility are key factors influencing the choice between machine and human translation. Machine translation tools are widely available and often low-cost, making them accessible to individuals and organizations (Bowker & Fisher, 2010).

This accessibility supports the democratization of information, allowing users to access content in multiple languages without significant financial investment.

Human translation, while more expensive, provides higher quality and reliability. Professional translators require training and expertise, contributing to higher costs (Baker, 2018).

The results indicate that scalability is a major advantage of machine translation. Large-scale projects would be impractical using only human translators. A combined approach-machine translation followed by human editing-offers a practical solution (Kenny, 2022).

Technological Advancements and Limitations. Recent developments in artificial intelligence have significantly enhanced machine translation systems (Koehn, 2020). Neural models can learn from large datasets and produce more natural language outputs (Vaswani et al., 2017).

However, limitations remain. Machine translation depends heavily on training data quality and lacks true cognitive understanding. This limits its effectiveness in complex or ambiguous contexts (Wu et al., 2016).

Human translators rely on cognitive and cultural knowledge, allowing them to interpret meaning more effectively (Venuti, 2017). Technology enhances their productivity but does not replace their role.

Domain-Specific Performance. The effectiveness of translation methods varies significantly across domains:

Technical and Scientific Texts: Machine translation performs relatively well due to standardized terminology (Koehn, 2020).

Legal and Official Documents: Human translation is essential due to precision requirements (House, 2015).

Marketing and Advertising: Human translators are preferred for cultural adaptation (O'Hagan & Ashworth, 2002).

Everyday Communication: Machine translation is sufficient for informal use (Kenny, 2022).

This variation reinforces that no single method is universally superior.

The Emergence of Hybrid Models. One of the most important findings is the growing adoption of hybrid translation models. Machine translation generates initial drafts, which are refined by human translators (Kenny, 2022).

This method combines speed and scalability with accuracy and cultural sensitivity (Bowker & Fisher, 2010). It is widely used in global industries such as e-commerce and publishing.

The results suggest that hybrid models represent the most practical solution in globalization.

Overall Evaluation. The comparative analysis demonstrates that machine translation and human translation are complementary tools rather than competing systems (Cronin, 2003).

Machine translation excels in speed and scalability, while human translation ensures depth and accuracy. The choice depends on context, purpose, and audience (Pym, 2010).

Ultimately, the future of translation lies in integrating technological advancements with human expertise.

Conclusion

This study has explored the roles of machine translation and human translation within the context of globalization, showing that translation today is shaped by both technological innovation and cultural interaction (Cronin, 2003). Machine translation has become essential due to its speed, scalability, and accessibility, enabling real-time communication and large-scale multilingual content production (Kenny, 2022). However, despite significant progress, it still faces limitations in understanding context, nuance, and cultural meaning (Koehn, 2020).

Human translation remains crucial in addressing these limitations. Human translators provide interpretative depth, cultural awareness, and contextual accuracy that machines cannot fully replicate (House, 2015). Their role is especially important in sensitive and high-stakes fields such as legal, academic, and literary translation. At the same time, the profession is evolving, with translators increasingly working as editors and cultural mediators in collaboration with technological tools (Pym, 2010).

Overall, the findings confirm that machine and human translation are not competing but complementary approaches. Hybrid models that combine machine efficiency with human expertise offer the most effective solution in a globalized world (Bowker & Fisher, 2010). The future of translation lies in this integration, where technology enhances communication while human insight ensures accuracy, meaning, and cultural relevance (Venuti, 2017).

THE FUTURE OF TRANSLATION IN THE ERA OF ARTIFICIAL INTELLIGENCE

Aydan Javanshir AHMEDZADE

Student, Department of Foreign Languages, Mingachevir State University

E-mail: aydan.ahmedzade@mdu.edu.az

ORCID ID: [0009-0001-9436-4459](https://orcid.org/0009-0001-9436-4459)

Abstract: In recent years, translation has undergone major transformations due to the rapid development of artificial intelligence (AI) technologies. Machine translation tools such as Google Translate, DeepL, and AI-powered language models have significantly improved the speed and accessibility of translation. These innovations have raised important questions about the future of the translation profession, particularly whether AI can fully replace human translators.

This study explores the impact of AI on translation practices and examines both the advantages and limitations of machine translation. AI systems are highly effective in processing large volumes of text quickly, reducing costs, and providing immediate translations for everyday communication. They are especially useful in technical, informational, and repetitive translation tasks.

However, despite technological progress, AI still faces significant challenges in translating cultural nuances, idiomatic expressions, humor, emotional tone, and context-specific meanings. Human translators possess creativity, critical thinking, and intercultural competence that allow them to adapt language according to audience, purpose, and context. Literary translation, legal documents, diplomatic communication, and creative content particularly require human expertise.

The study also considers the changing role of translators in the AI era. Rather than being replaced, human translators are increasingly working alongside AI tools through post-editing, quality assurance, and localization. This collaborative approach enhances productivity while maintaining translation quality.

Overall, the findings suggest that artificial intelligence is unlikely to completely replace human translators, but it will continue to reshape the profession by transforming the skills and responsibilities required in modern translation practices.

Keywords: artificial intelligence, translation, machine translation, human translators, language technology, post-editing, localization

SÜNİ İNTELLEKT DÖVRÜNDƏ TƏRCÜMƏNİN GƏLƏCƏYİ

Aydan Cavanşir ƏHMƏDZADƏ

Tələbə, Mingəçevir Dövlət Universiteti

E-mail: aydan.ahmedzade@mdu.edu.az

ORCID ID: [0009-0001-9436-4459](https://orcid.org/0009-0001-9436-4459)

Xülasə: Son illərdə süni intellekt texnologiyalarının sürətli inkişafı tərcümə sahəsində böyük dəyişikliklərə səbəb olmuşdur. Google Translate, DeepL və AI əsaslı dil modelləri kimi maşın tərcüməsi alətləri tərcümənin sürətini və əlçatanlığını əhəmiyyətli dərəcədə artırmışdır. Bu yeniliklər süni intellektin gələcəkdə insan tərcüməçilərini tamamilə əvəz edib-etməyəcəyi sualını aktuallaşdırmışdır.

Bu məqalədə süni intellektin tərcümə fəaliyyətinə təsiri, onun üstünlükləri və məhdudiyyətləri araşdırılır. AI sistemləri böyük həcmdə mətnləri sürətlə emal etmək, xərcləri azaltmaq və gündəlik ünsiyyətdə operativ tərcümə təmin etmək baxımından olduqca effektivdir. Xüsusilə texniki, informativ və təkrarlanan mətnlərdə bu texnologiyalar faydalıdır.

Lakin texnologiyanın inkişafına baxmayaraq, süni intellekt mədəni incəliklər, idiomatik ifadələr, yumor, emosional ton və kontekstə bağlı mənalara düzgün çatdırmaqda çətinlik çəkir. İnsan tərcüməçilər yaradıcılıq, tənqidi düşüncə və mədəniyyətlərarası kompetensiya sayəsində dili auditoriyaya, məqsədə və situasiyaya uyğun şəkildə adaptasiya edə bilirlər. Bədii tərcümə, hüquqi sənədlər, diplomatik ünsiyyət və yaradıcı məzmun xüsusilə insan təcrübəsi tələb edir.

Tədqiqat həmçinin AI dövründə tərcüməçilərin dəyişən rolunu araşdırır. İnsan tərcüməçilər tamamilə əvəz olunmaq əvəzinə, daha çox post-editing, keyfiyyət yoxlanışı və lokalizasiya sahələrində AI ilə əməkdaşlıq edirlər. Bu yanaşma məhsuldarlığı artırmaqla yanaşı, keyfiyyəti də qoruyur.

Ümumilikdə, nəticələr göstərir ki, süni intellekt insan tərcüməçiləri tam əvəz etməyəcək, lakin müasir tərcümə fəaliyyətində tələb olunan bacarıq və məsuliyyətləri dəyişdirərək peşəni yenidən formalaşdıracaqdır.

Açar sözlər: süni intellekt, tərcümə, maşın tərcüməsi, insan tərcüməçilər, dil texnologiyası, post-editing, lokalizasiya

Introduction

Over the past few decades, translation has become one of the most significantly transformed fields due to advancements in digital technology and artificial intelligence. Traditionally, translation was considered a human-centered profession requiring linguistic expertise, cultural understanding, and interpretative ability. However, the emergence of machine translation systems such as Google Translate, DeepL, and neural network-based AI models has dramatically altered the translation landscape. According to Hutchins (2005), machine translation has evolved from rule-based systems to sophisticated neural models capable of producing increasingly accurate outputs.

This rapid technological progress has generated debates about whether AI will eventually replace human translators. While AI offers speed, efficiency, and cost-effectiveness, scholars such as Pym (2013) argue that translation is not merely word substitution but a complex communicative act shaped by context, culture, and human intention. Therefore, the future of translation depends on understanding both technological possibilities and human limitations.

From a broader perspective, translation involves not only transferring language but also preserving meaning, tone, style, and cultural significance. House (2015) emphasizes that successful translation requires intercultural mediation, a process that remains difficult for AI systems. Thus, examining the relationship between AI and human translators is essential for understanding the future direction of the translation profession.

Research

Research on artificial intelligence in translation has increasingly focused on the capabilities and limitations of machine translation technologies. AI-powered translation systems, particularly neural machine translation (NMT), have demonstrated remarkable improvements in grammatical accuracy, lexical choice, and processing speed. According to Koehn (2020), NMT systems outperform earlier statistical models by using deep learning to predict contextually appropriate translations. This makes AI particularly effective for technical manuals, customer support, and standardized informational texts.

One of the major advantages of AI translation is efficiency. Machine translation can process thousands of words within seconds, making it highly beneficial for global communication, international business, and multilingual digital platforms. Furthermore, AI significantly reduces translation costs, allowing organizations to localize content more quickly and economically. O'Brien (2012) notes that post-editing machine translation has become a major component of professional translation workflows.

Despite these benefits, AI has notable limitations. Translation is deeply connected to cultural context, metaphorical language, humor, and emotional expression. Newmark (1988) explains that language contains cultural references and semantic subtleties that often require human interpretation. AI systems may struggle with ambiguity, irony, or culturally sensitive phrases because they rely heavily on patterns rather than genuine understanding.

For example, literary texts require preserving artistic style, symbolism, and authorial voice. Human translators make interpretative decisions based on context and readership, while AI often

produces literal or awkward translations. Similarly, legal and diplomatic documents require precision, confidentiality, and ethical responsibility that machines alone cannot guarantee.

Another important factor is the role of creativity. Human translators often function as cultural mediators who adapt messages for specific audiences through transcreation and localization. Cronin (2013) argues that globalization increases the importance of human translators in managing cultural diversity rather than diminishing it.

The role of translators is therefore shifting rather than disappearing. Modern translators increasingly use AI as an assistive tool for terminology management, first-draft generation, and productivity enhancement. This collaborative model positions human translators as editors, quality controllers, and cultural specialists. Bowker and Buitrago-Cirio (2019) suggest that future translators will require digital literacy alongside linguistic and intercultural competence.

Additionally, ethical concerns surrounding AI translation remain significant. Issues such as data privacy, algorithmic bias, and mistranslation in sensitive contexts highlight the need for human oversight. In healthcare, law, and diplomacy, inaccurate translation can have serious consequences, reinforcing the necessity of professional human intervention.

Overall, current research indicates that AI is transforming translation by automating routine tasks while increasing demand for specialized human expertise. Rather than replacement, the future points toward cooperation between human intelligence and artificial intelligence.

Conclusion

In conclusion, artificial intelligence has revolutionized translation by increasing speed, accessibility, and efficiency. However, despite significant technological progress, AI cannot fully replicate the creativity, cultural awareness, emotional intelligence, and contextual understanding of human translators. The findings suggest that while AI will continue to automate repetitive and technical translation tasks, human translators will remain essential in areas requiring interpretation, creativity, and intercultural communication. Therefore, the future of translation is more likely to involve collaboration between AI and human professionals rather than complete replacement.

BARBARISMS IN CHRISTINE BROOKE- ROSE'S NOVEL "BETWEEN" AND THE CHALLENGES OF TRANSLATION INTO AZERBAIJANI

Emiliya Natig ALIYEVA

Azerbaijan University

E-mail: Emiliya.Aliyeva@au.edu.az

ORCID ID: 0000-0002-0275-8419

Abstract: The research paper deals with the Christine Brooke-Rose's experimental novel "Between" (1968) as a landmark of interlingual fiction, focusing specifically on the linguistic phenomenon of barbarisms – foreign words and phrases that intrude upon the primary linguistic texture of the text. The novel follows an unnamed simultaneous interpreter trapped in transit between countries, cultures, languages, and identities. Through a detailed analysis of barbarisms drawn from French, German, Latin, Italian, Spanish, Russian, and other languages, this study demonstrates how Brooke-Rose uses foreign lexical intrusions to enact her protagonist's fragmented consciousness, professional reality as a translator, and existential displacement. The article also provides Azerbaijani translations of selected barbarisms, highlighting the challenges these interlingual elements pose for translation into non-European languages. Drawing on the theoretical framework of poststructuralist linguistics and translation studies, this analysis positions "Between" as a pioneering text that anticipates contemporary debates about multilingualism, translanguaging, and the limits of translation.

Keywords: Christine Brooke-Rose, Between, barbarisms, literary translation, multilingualism

KRİSTİN BRUK-ROUZUN "BETWEEN" ("ARASINDA") ROMANINDA BARBARİZMLƏR VƏ ONLARIN AZƏRBAYCAN DİLİNƏ TƏRCÜMƏSİ PROBLEMİ

Emiliya Natiq qızı ƏLİYEVƏ

Azerbaijan University

E-mail: Emiliya.Aliyeva@au.edu.az

ORCID ID: 0000-0002-0275-8419

Xülasə: Tədqiqat işi Kristin Bruk Rouzun "Between" (1968) eksperimental romanını dillərarası bədii ədəbiyyatın nümunəsi kimi araşdırır və xüsusi diqqəti barbarizmlər adlanan linqvistik fenomenə – mətnin əsas dil quruluşuna müdaxilə edən yad söz və ifadələrə yönəldir. Roman, ölkələr, mədəniyyətlər, dillər və kimliklər arasında sıxışmış adsız bir sinxron tərcüməçinin hekayəsindən bəhs edir. Fransız, alman, latın, italyan, ispan, rus və digər dillərdən götürülmüş barbarizmlərin ətraflı təhlili vasitəsilə bu tədqiqat Bruk Rouzun yad leksik müdaxilələrdən öz qəhrəmanının parçalanmış şüurunu, tərcüməçi kimi peşəkar reallığını və ekzistensial sürgünlüyünü canlandırmaq üçün necə istifadə etdiyini nümayiş etdirir. Məqalə həmçinin seçilmiş barbarizmlərin Azərbaycan dilinə tərcüməsini təqdim edir və bu dillərarası elementlərin Avropa mənşəli olmayan dillərə tərcüməsi zamanı yaratdığı çətinlikləri vurğulayır. Poststrukturalist dilçilik və tərcüməşünaslığın nəzəri çərçivəsinə əsaslanan bu təhlil "Between" romanını müasir dövrdə çoxdillilik, translinqvizm və tərcümənin məhdudiyyətləri haqqında gedən mübahisələrə qabaqcadan cavab verən öncül mətn kimi mövqeləndirir.

Açar sözlər: Kristin Bruk Rouz, Arasında romanı, barbarizmlər, bədii tərcümə, çoxdillilik

Introduction

Christine Brooke-Rose (1923-2012) is one of the most daring experimental writers of twentieth-century British literature. Growing up between England, Switzerland, Belgium, and Germany, she acquired multiple languages as a natural part of her childhood. This early exposure to linguistic diversity became the defining feature of her entire literary career. She later worked as a code-breaker at Bletchley Park, deciphering German Enigma messages – an experience that taught her to treat language not as transparent communication but as opaque material to be manipulated and decoded. After the war, she became a professor of comparative literature in Paris, working alongside poststructuralist thinkers such as Gilles Deleuze and Hélène Cixous.

Her novel "Between" (1968) stands as the most radical expression of her interlingual aesthetic. The novel follows an unnamed female protagonist who works as a simultaneous interpreter, translating speeches from French into German while navigating a life of perpetual transit – airports, airplanes, hotels, conference halls, and taxis. She is married to an English man, yet her professional life unfolds in French and German. She moves constantly between European cities, never settling anywhere long enough to establish a stable sense of home. The narrative mirrors this liminal existence through a prose style that refuses to settle into any single linguistic register. Sentences begin in English and end in French; German syntactic structures intrude upon English word order; Latin phrases appear without translation; Italian and Spanish exclamations interrupt the flow of thought. The protagonist's condition of "being between" – between flights, between languages, between sleeping and waking, between life and death – is what the novel seeks to capture through its experimental form.

Due to its high stylistic peculiarities, translating Brooke-Rose's novels is exceptionally challenging. Her pervasive multilingualism, deliberate grammatical deviations, and avoidance of the verb "to be" create obstacles that are often impossible to replicate in languages with different grammatical structures. This paper will analyze several examples of barbarisms in "Between" and address the challenges of transferring them into Azerbaijani.

Materials and Methods

The term "barbarism" derives from the Greek "barbaros" (βάρβαρος), meaning "foreign" or "non-Greek." In ancient Greece, the word was used to describe anyone who did not speak Greek; the term was onomatopoeic, suggesting that foreign languages sounded like unintelligible "bar-bar" sounds to Greek ears. Over time, the concept evolved. In classical rhetoric and grammar, a "barbarism" came to refer to any linguistic error or deviation from accepted norms – a mispronounced word, an incorrectly formed grammatical construction, or, most significantly, a foreign word that had not been properly assimilated into the target language.

In modern linguistics and stylistics, barbarisms occupy a more specific and theoretically interesting position. A barbarism is a word or phrase borrowed from a foreign language that retains its foreign character and has not been fully integrated into the receiving language's phonological, morphological, or orthographic systems. Unlike loanwords that have been naturalized (such as English "restaurant" from French or "algebra" from Arabic), barbarisms remain visibly and audibly foreign. They stand out from the surrounding text, creating a rupture or interruption in the reader's experience. Linguists often distinguish between several types of barbarisms: (1) lexical barbarisms – individual foreign words introduced into a text; (2) phrasal barbarisms – foreign phrases or whole sentences that appear without translation; (3) orthographic barbarisms – foreign spellings retained within a text; and (4) syntactic barbarisms – foreign grammatical structures imposed upon the host language.

In literary contexts, barbarisms serve multiple functions. They can create verisimilitude by representing the actual linguistic diversity of multilingual environments. They can produce estrangement, forcing the reader to experience the same alienation as a protagonist who does not fully command the language. They can assert cultural identity, as when postcolonial writers incorporate indigenous words into colonizing languages. They can generate humor through linguistic incongruity. They can also function as what translation theorists call "foreignization" – a strategy that deliberately retains foreign elements in translation to remind the reader that the text originated in another language and culture.

Christine Brooke-Rose's use of barbarisms in "Between" draws on all these functions, but she adds a further dimension specific to her protagonist's profession. As a simultaneous interpreter, the protagonist hears and produces multiple languages on a daily basis. The barbarisms in the text are not decorative exoticisms; they are the accurate representation of how her mind processes linguistic input. She does not translate every foreign word she hears into English because her work requires her to hold foreign words in her short-term memory while formulating their equivalents. The barbarisms thus perform a mimetic function: they make the reader's experience approximate the protagonist's professional reality.

Results and Discussion

To understand the function of barbarisms in "Between", it is necessary to situate the novel within Brooke-Rose's broader literary project and her intellectual biography. As noted earlier, Brooke-Rose grew up in a polyglot household, moving between English, French, and German from an early age. In her autobiography "Remake" (1996), she describes this experience with characteristic wit:

"Back to London, back to Geneva, back to London, back to Brussels, back to back. Forgetting French, forgetting English, relearning French, relearning English, learning Flemish, learning German, forgetting Flemish, relearning English not really forgotten, etc." (Brooke-Rose, 1996, p. 10)

This passage captures the dizzying, circular quality of a childhood spent oscillating between linguistic environments. The repetition of "back to" and the rapid enumeration of languages suggest not a smooth acquisition of multiple codes but a disorienting experience of constant loss and recovery. The comma that separates "relearning English not really forgotten" creates a syntactic barbarism of its own – a pause that acknowledges the paradox of having simultaneously learned and forgotten the same language.

Brooke-Rose's wartime experience at Bletchley Park deepened her understanding of language as code. Working on Enigma, she learned to treat German messages not as meaningful communication but as patterns to be deciphered through mathematical and statistical analysis. This mechanization of language perception – the reduction of meaningful discourse to physical marks to be processed – is precisely the condition that "Between" explores through its interpreter protagonist.

The novelist's academic career, particularly her years at the experimental University of Vincennes, exposed her to the leading theoretical currents of poststructuralism. She worked alongside Jacques Derrida, whose work on deconstruction challenged the assumption that language could ever achieve stable, transparent meaning. She knew Gilles Deleuze, whose concept of the "rhizome" offered a model of non-hierarchical, multiple connections. These intellectual influences are discernible in "Between", which systematically dismantles traditional narrative conventions –

linear plot, coherent character psychology, transparent language – and replaces them with a fragmented, multi-perspectival, linguistically unstable structure.

The novel's plot, insofar as one can speak of plot, is minimal. The unnamed protagonist travels from one international conference to another, translating speeches on topics ranging from agriculture to artificial intelligence. She interacts with other interpreters, conference attendees, hotel staff, taxi drivers, and fellow passengers. She remembers fragments of previous relationships – a husband, a lover, perhaps a child. She experiences moments of physical illness, vertigo, and exhaustion. She falls in and out of sleep, producing dream sequences that merge with waking perception. The narrative does not progress so much as oscillate, circling back to the same motifs, the same phrases, the same linguistic puzzles.

The novel's language is its real subject. Brooke-Rose often said that her discovery as a writer was that she could use language not as a window onto reality but as a material to be shaped and reshaped. In "Between", she pushed this principle to its limit. The text incorporates over a dozen languages – English, French, German, Latin, Greek, Italian, Spanish, Hungarian, Turkish, Russian, and others. Words appear in their original orthography, complete with diacritical marks, forcing the English alphabet to accommodate foreign scripts. Sentences break off mid-thought. Punctuation is eccentric or omitted entirely. The effect is immersive and disorienting: the reader, like the protagonist, must constantly switch between linguistic frames, never quite certain what language the next word will be in.

Based on the analysis of the novel's text the barbarisms in "Between" can be classified by language of origin, grammatical integration, and semantic function. The following tables and discussion present these barbarisms along with their Azerbaijani translation equivalents.

French, le mensonge vital, həyatı yalan, the vital lie

French, fin amor, incə məhəbbət, refined love

French, lonhtano (Provençal), uzaq, distant

French, Enfin! Nəhayət!, Finally!

French, douce dame aux yeux de vair, boz-yaşıl gözlü zərif xanım, sweet lady with eyes of vair

French, Votre merveilleuse lettre m'a rendu fou de joie, Möhtəşəm məktubunuz məni sevincdən dəli etdi, Your wonderful letter made me mad with joy

French, la vérité, la justice, l'humanité, həqiqət, ədalət, insanlıq, truth, justice, humanity

German, die Lebenslüge, həyatı yalan, the life-lie

German, Du lieber Gott! Ey rəhmli Tanrı! Oh dear God!

German, Liebes! Əzizim! Darling!

German, Morgen, Sabah, Morning

German, etwas anderes, başqa bir şey, something else

German, Haben Sie Butter, bitte? Zəhmət olmasa, kərə yağı varmı? Do you have butter, please?

Latin, sanctus sanctorum, müqəddəslər müqəddəsi, holy of holies

Latin, Defensor Vinc, müdafiəçi (ad), Defender (name)

Italian, non si ricorda esattamente, dəqiq xatırlanmır, one does not remember exactly

Italian, Il piccolo chalet, kiçik dağ evi, the little chalet

Italian, e allora, elə isə, and so

Spanish, buenos días, sabahınız xeyir, good morning

Spanish, dígame, buyurun, tell me

Spanish, Agua Mineral, mineral su, mineral water

Russian, niet (нет), yox, no

Greek, kalimera (καλημέρα), sabahınız xeyir, good morning

Invented/Deformed, Lirrrechr (mənasız), (nonsense word)

Invented/Deformed, Bata? (mənasız), (nonsense word)

Invented/Deformed, MÁVIGZAG-TŐSÁG (macar görünümlü), (Hungarian-looking)

Translation challenges for azerbaijani

The Azerbaijani translations of barbarisms presented above reveal several specific challenges that arise when rendering Brooke-Rose's interlingual effects into a non-European language:

Challenge 1: Agglutinative vs. Fusional Morphology

Azerbaijani is an agglutinative language, meaning it adds suffixes to roots to express grammatical relationships, while English and the European languages in "Between" are fusional. The sharp, staccato effect of switching between "yes," "oui," "ja," and "si" in English prose cannot be directly replicated in Azerbaijani, where words are longer and more "sticky." The quick alternation of short words across languages becomes, in Azerbaijani translation, a slower alternation of longer morphological units.

Challenge 2: Script and Orthography

Azerbaijani uses the Latin alphabet (since 1991), which is an advantage for rendering European barbarisms. However, the presence of Cyrillic (Russian "niet"), Greek ("kalimera"), and German umlauts ("MÁVIGZAG-TŐSÁG" includes Hungarian-style diacritics) creates visual heterogeneity that is difficult to preserve. The Azerbaijani translations in the study sometimes transliterate these words (e.g., "niet" written in Latin letters), losing the shock of script-switching that the original English text produces for readers accustomed to the Latin alphabet.

Challenge 3: Cultural Distance

Many barbarisms in "Between" assume a European cultural competence that an Azerbaijani reader may not share. "Provençal" requires knowledge of Southern French troubadour culture; "sanctus sanctorum" requires biblical literacy; "fin amor" requires familiarity with courtly love traditions. The Azerbaijani translator faces a choice: domesticate (replace with Azerbaijani equivalents, losing the interlingual effect) or foreignize (retain with footnotes, interrupting the flow). The student analyses adopt a mixed strategy: barbarisms are retained but glossed in parentheses or footnotes, preserving the interlingual texture while sacrificing the original's demanding assumption that the reader simply knows these languages.

Conclusion

Christine Brooke-Rose's "Between" does not merely describe interlingual experience but enacts it through its linguistic fabric. The barbarisms drawn from French, German, Latin, Italian, Spanish, Russian, Greek, and invented languages are structural necessities, representing the protagonist's reality as a simultaneous interpreter suspended between languages and identities. As Emiliya Əliyeva notes in her analysis of "The Sycamore Tree", preserving such foreign elements through transcription and transliteration is essential for maintaining the author's stylistic color (Aliyeva, 2023). The analysis has demonstrated that barbarisms in "Between" serve mimetic, hierarchical, resistance, and play functions simultaneously. Their translation into Azerbaijani reveals challenges arising from morphological differences between agglutinative and fusional languages, as well as cultural distance between literary traditions. As Ulviyya Aliyeva and her co-

authors observe, interdisciplinary collaboration between literary critics, translators, and digital humanists is essential for addressing such complex challenges (Aliyeva et al., 2025, p. 3). Future research should extend this analysis to Brooke-Rose's other experimental novels, while the emergence of Azerbaijani-language scholarship on her work signals the globalization of modernist literary studies.

CHALLENGES OF CONVEYING CULTURAL CONTEXT IN LITERARY TRANSLATION

Mahira HAJIYEVA

Doctor of Sciences in Philology, Professor, Azerbaijan University of Languages

E-mail: m.haciyeva@adu.edu.az

ORCID ID: [0000-0002-6922-4286](https://orcid.org/0000-0002-6922-4286)

Abstract: This study examines the challenges of conveying cultural context in literary translation with particular focus on Pakistani English literature as a representative example of postcolonial and multicultural writing. Due to the global expansion of English through colonialism, contemporary English literature has

evolved into a multicultural literary space shaped by diverse linguistic and cultural traditions. Pakistani English writers such as Bapsi Sidhwa, Mohsin Hamid, Surayya Khan and Kamila Shamsie incorporate local languages, customs, religious practices, and social realities into their works, creating texts that are culturally rich yet difficult to translate accurately.

The research analyzes how culturally bound elements, including indigenous lexical items, idiomatic expressions, and historical or religious references, challenge translators in preserving the original meaning and cultural atmosphere of literary texts. Using qualitative and comparative methods, the study evaluates different translation strategies applied to culture-specific concepts within selected literary works. The findings demonstrate that literary translation requires not only linguistic competence but also deep intercultural awareness and sensitivity. The study concludes that successful translation of postcolonial literature depends on the translator's ability to preserve the cultural identity and ideological nuances embedded in the source text.

Key words: literary translation, cultural context, postcolonial literature, Pakistani English literature, cultural sensitivity, translation strategies, intercultural communication.

ƏDƏBİ TƏRCÜMƏDƏ MƏDƏNİ KONTEKSTİN ÖTÜRÜLMƏSİ PROBLEMİ

Mahirə HACIYEVA

Filologiya elmləri doktoru, professor, Azərbaycan Dillər Universiteti

E-mail: m.haciyeva@adu.edu.az

ORCID ID: [0000-0002-6922-4286](https://orcid.org/0000-0002-6922-4286)

Xülasə: Məqalə ingilisdilli Pakistan ədəbiyyatı nümunəsində bədii tərcümədə mədəni kontekstin ehtiva olunması ilə bağlı qarşıya çıxan çətinliklərdən bəhs edir. İngilis dilinin kolonial işğal nəticəsində global dilə çevrilməsi bu dili müxtəlif mədəni və linqvistik ənənələrin formalaşdırdığı çoxmədəniyyətli bədii mühitə çevirmişdir. Bapsi Sidhwa, Mohsin Həmid, Surəyya Xan və Kamilə Şəmsi kimi yazıçılar öz əsərlərində yerli dilləri, adət-ənənələri və sosial reallıqları əks etdirərək mədəni baxımdan zəngin, lakin tərcüməsi heç də asan olmayan bədii mətnlər yaratmışlar.

Məqələdə mədəni elementlər – yerli leksik vahidlər, idiomatik ifadələr, tarixi və dini istinadlar – tərcümə prosesində orijinal mənənin və mədəni atmosferin qorunması baxımından təhlil edilir. Təhlil zamanı müqayisəli metoddan istifadə edilərək seçilmiş mətnlərdə mədəni spesifik elementlərin tərcümə vasitələri araşdırılır. Xüsusi olaraq tərcüməçinin mədəni bilikləri, interpretasiya bacarığı və mətnin sosial-tarixi kontekstinə dair məlumatlılığı ön plana çəkilir, çünki bu sahədə biliyin çatışmazlığı mənənin təhrif olunmasına və ya itirilməsinə səbəb ola bilər. Nəticələr göstərir ki, bədii tərcümə təkcə dil bilikləri deyil, həm də yüksək mədəni həssaslıq və interkultural şüur tələb edir. Tədqiqatın yekununda vurğulanır ki, postkolonial ədəbiyyatın uğurlu tərcüməsi əsasən tərcüməçinin orijinal mətnin mədəni identikliyinə və ideoloji çalarlarını dərk edib qoruma qabiliyyətindən asılıdır.

Açar sözlər: bədii tərcümə, mədəni kontekst, postkolonial ədəbiyyat, ingilisdilli Pakistan ədəbiyyatı, mədəni həssaslıq, tərcümə üsulları, mədəniyyətlərarası ünsiyyət.

Introduction

The cultural background of an author, reflected through references, idioms, customs, historical experiences, and social norms, constitutes an inseparable core element of any literary work. This aspect is particularly prominent in postcolonial literature, where texts are often deliberately and strategically infused with the culture, values, traditions, and worldview of the author. In this regard, Pakistani English literature serves as a significant example, as it frequently

incorporates rich cultural and historical elements that reflect the complexities of postcolonial identity and society.

The global expansion of English as a result of colonialism led to the formation of a highly multicultural literary tradition. Consequently, contemporary English literature no longer refers exclusively to the works of canonical British writers but also includes a wide range of postcolonial and diasporic voices representing different cultural, ethnic, and historical backgrounds who produce literary works in English while simultaneously preserving the linguistic and cultural realities of their native societies. As a result, English-language literature has evolved into a multicultural space in which language carries not only narrative meaning but also cultural identity, historical memory, and ideological perspective.

This multicultural nature of postcolonial literature creates significant challenges for literary translation, particularly in conveying cultural context accurately. Although these works are written in English, they are often deeply rooted in local traditions, customs, belief systems, and social practices that may be unfamiliar to international readers and translators alike. The frequent use of indigenous words, culture-specific expressions, and references to local history reflects a deliberate stylistic and ideological choice by authors seeking to preserve cultural authenticity and resist linguistic homogenization. Therefore, translators must go beyond linguistic equivalence and engage with the broader cultural environment from which the text emerges.

In postcolonial literature, language, culture, and ideology are inseparably interconnected, making the translation process especially complex. Cultural meanings embedded within idioms, forms of address, religious references, and social conventions often lack direct equivalents in the target language. Consequently, the translator acts not only as a linguistic mediator but also as a cultural interpreter responsible for preserving the unique identity of the source text. Any attempt to simplify or generalize these culturally specific elements may result in the loss of important nuances and weaken the representation of the author's cultural worldview. Therefore, conveying cultural context remains one of the central challenges of literary translation, especially in the case of postcolonial and multicultural literary works.

In order to examine the challenges of conveying cultural context in literary translation more closely, this study will primarily focus on Pakistani English literature, which represents one of the most culturally layered and linguistically hybrid branches of postcolonial writing. Pakistani authors writing in English frequently combine the English language with elements derived from Urdu and other local languages, while also incorporating references to regional customs, religious practices, historical events, and social norms. Such features make their works particularly valuable for analyzing the difficulties translators encounter when attempting to preserve cultural meaning and authenticity in translation.

The study will concentrate on selected works by prominent Pakistani English writers such as Bapsi Sidhwa, Mohsin Hamid, Surayya Khan and Kamila Shamsie. These authors are known for their extensive use of culture-specific vocabulary, multilingual expressions, local imagery, and postcolonial themes, all of which contribute to the richness and complexity of their literary style. Their novels often portray the intersection of Eastern and Western cultural values, questions of identity and migration, and the social realities of postcolonial Pakistan, making them particularly relevant to discussions of cultural transfer in translation.

By analyzing selected examples from their works, this research aims to explore the strategies used to translate culturally bound elements and to evaluate the extent to which the original cultural

atmosphere can be preserved in the target language. Special attention will be paid to the translation of indigenous lexical items, idiomatic expressions, religious and historical references, and culturally specific concepts that do not have direct equivalents in other languages. Through this analysis, the study seeks to demonstrate that literary translation involves not only linguistic competence but also deep intercultural awareness and sensitivity.

Materials and methods

This study is based on the analysis of selected works of Pakistani English literature written by prominent postcolonial authors such as Bapsi Sidhwa, Mohsin Hamid, Surayya Khan and Kamila Shamsie. The primary materials of the research consist of novels and literary excerpts containing culturally specific elements, including local lexical items, idiomatic expressions, religious references, customs, traditions, and historical or social allusions. These texts were selected because they represent the multicultural and hybrid nature of postcolonial Pakistani literature and provide rich examples of culture-bound language.

The research employs a qualitative comparative method focused on the analysis of cultural context in literary translation. Selected passages from the original texts and, where available, their translated versions are compared in order to identify the main difficulties encountered in transferring cultural meaning from the source language into the target language. Particular attention is paid to the translation of indigenous words and expressions borrowed from Urdu and other local languages, as these elements often carry meanings and connotations that cannot be conveyed through direct linguistic equivalence.

In addition, the study applies descriptive and interpretative approaches in order to examine the strategies used by translators when dealing with culturally specific concepts. These strategies may include transliteration, adaptation, omission, domestication, or foreignization. The analysis also draws upon theories of postcolonial translation and intercultural communication to evaluate how effectively the cultural identity and ideological background of the original text are preserved in translation.

Through textual and comparative analysis, the research aims to demonstrate that successful literary translation requires not only linguistic accuracy but also a deep understanding of the historical, social, and cultural environment in which the literary work is produced.

Results and Discussion

As we mentioned above, the representation of customs and the successful conveyance of cultural context require a high degree of cultural sensitivity on the part of the translator. However, one of the most significant challenges in literary translation is associated with the use of words and expressions taken directly from local languages. The inclusion of such lexical items instead of their English equivalents is often a deliberate and meaningful choice made by authors. Through this strategy, writers seek to preserve cultural authenticity, emphasize national identity, and reflect the social and linguistic realities of their communities.

Therefore, these culturally bound terms should not be treated as ordinary linguistic units during the translation process. They frequently carry symbolic, historical, and emotional connotations that may not have direct equivalents in the target language. As a result, translators must approach such elements with particular care and attention in order to maintain both the semantic meaning and the cultural significance intended by the author. Failure to do so may lead to the loss of important cultural nuances and weaken the connection between the literary text and its original cultural setting.

It should be noted that in former colonial countries, English is not identical to Standard British English. Rather, it has undergone significant transformation by acquiring local features, semantic nuances, and structural variations, thereby developing into distinct localized varieties. The emergence of English as an international language can be attributed, on the one hand, to the global nature of colonialism and imperialism, as well as technological advancement, and on the other hand, to the unexpected continuity of English even after the formal end of colonial rule. Despite the dissolution of colonial systems, English has not only retained its global position but has also undergone processes of “nativization,” resulting in the formation of new localized variants.

In this regard, the observation of Bapsi Sidhwa is particularly relevant, as the influence of this linguistic and cultural hybridity can be seen in the creative works of writers who, regardless of their national or ethnic backgrounds, choose English as their medium of artistic expression, “And this useful language, rich also in literature, is no longer the monopoly of the British. We, the ex-colonized, have subjugated their language, and molded it to our requirements. Let the English fret and fume: the fact remains that in adapting English to our use we have given it a new shape, substance, dimension, and in making it ours, we have enriched it” (Sidhwa, 2012, p. 14).

In Bapsi Sidhwa’s novel “Ice Candy Man” the use of national customs, culturally embedded expressions—both explicated and left untranslated—clearly demonstrates the process through which English is localized and reshaped within a postcolonial context. Through such linguistic and stylistic choices, the English language is effectively “nativized,” acquiring Pakistani cultural resonance and expressive patterns.

These strategies of localization emerge from the writer’s attempt to assert cultural identity through a foreign language, using English as a medium to articulate belonging and lived experience. The deliberate retention of indigenous terms and culturally specific references functions as a means of preserving authenticity while simultaneously resisting complete linguistic assimilation. In this sense, the text becomes a site where cultural identity is negotiated and reaffirmed within a non-native linguistic framework.

This phenomenon can be seen as a “threshold” moment in Pakistani English literature, where culturally untranslatable elements become central to meaning-making. It is precisely at this point that literary expression transcends straightforward translation equivalence, revealing a space in which national identity is encoded in ways that cannot be fully transferred into another language without loss of cultural depth and nuance.

It must also be mentioned that, in the case of Pakistani English literature, the issue is not limited to a single linguistic or cultural challenge, but rather involves a complex interaction of multiple local languages, ethnic identities, and cultural traditions. This multilingual environment creates significant difficulties for translators, as different cultural groups are represented through distinct linguistic codes and expressive styles, each carrying its own semantic and emotional weight. As Bapsi Sidhwa explains in relation to her own creative practice, “I feel, perhaps in common with most trilingual or bilingual writers, fortunate in having access to these languages. I am free to take what I wish from the riches each offers: the earthy gusto of Punjabi, the poetry and delicacy of Urdu, the wealth of choice which makes for exactitude and nuance in English, the comedy, farce, burlesque and sheer energy that erupts so spontaneously out of Gujarati as it is spoken and maltreated by the Parsees, and the body of meaning encapsulated in many of the single words of these South Asian languages – and juggle them to my advantage” (Sidhwa, 2012, p. 16).

This multilingual “juggling” of linguistic resources demonstrates the depth of cultural layering in Pakistani English texts. For translators, this presents a significant challenge, as conveying such nuanced interplay requires not only linguistic competence but also exceptional cultural awareness. The translator must be sensitive to the embedded meanings, emotional undertones, and cultural associations carried by each language in order to preserve the integrity and richness of the original text.

In addressing this challenge, one practical strategy that can be adopted is the retention of original culturally specific terms in the target text, accompanied by explanatory notes or contextual clarification. Although this approach may sometimes make the reading process more demanding for the reader, it is considered necessary in order to preserve the author’s stylistic intention and cultural authenticity.

The decision to keep the original lexical items reflects an attempt to maintain the semantic density and cultural specificity embedded in the source text. Many of these expressions are deeply rooted in South Asian traditions and linguistic practices, and direct translation often fails to capture their full connotative and cultural meaning. For instance, terms such as “shalwar-kameez”, “ayah” (Sidhwa, 1989, p. 29, 93) appear throughout the novel and are retained in their original form due to their strong cultural associations and the absence of a fully equivalent expression in English. Similarly, a range of other culture-specific words and expressions are preserved across the text, each carrying meanings that extend beyond their literal definitions.

Supplementary explanations can therefore be provided to support reader comprehension without erasing these cultural markers. This approach aligns with a foreignization strategy in translation studies, where elements of the source culture are intentionally made visible within the target text. Although it may reduce fluency to some extent, it ensures that readers remain exposed to the cultural and linguistic richness of the original work. In this way, a balance is achieved between readability and cultural fidelity, while still respecting the author’s deliberate use of multilingual and culturally embedded expression.

Overall, cultural identity in literary works is expressed through both linguistic and thematic aspects. In this regard, as we analyzed above, Bapsi Sidhwa typically represents national identity through linguistic means, while the use of culture-specific vocabulary and expressions plays a central role in constructing meaning. Mohsin Hamid, in contrast, places greater emphasis on thematic and structural elements, where issues such as identity, globalization, and migration become the core focus of the narrative. Kamila Shamsie combines both linguistic and thematic approaches, thereby creating a more complex and balanced representation of cultural hybridity.

Strategic placement in literary texts plays a particularly significant role in conveying cultural and identity-related meanings. For instance, in Mohsin Hamid’s novel “The Reluctant Fundamentalist”, where Urdu borrowings are almost entirely absent throughout the narrative, the protagonist Changez, who initially perceives himself as a true American, encounters a Pakistani shopkeeper in a restaurant in New York. This interaction is presented as follows: “My friend”, he said, spreading his arms in welcome. “Jenaab”, I replied, bowing my head” (Hamid, 2007, p. 44).

In this dialogue, the Pakistani speaker’s address is rendered in English, while Changez’s response appears in Urdu. Considering that the novel consistently avoids Urdu usage even in scenes set in Pakistan, this brief linguistic shift acquires particular semantic significance. It symbolically highlights Changez’s identity crisis and his fluctuating sense of belonging between two cultural

worlds. Thus, the strategic insertion of language elements functions not merely as a stylistic choice but as a powerful marker of hybrid identity and postcolonial tension.

This semantic nuance is particularly evident in other examples of Pakistani English literature, especially in forms of address used within family relationships. In Sorayya Khan's novel *Noor*, the interaction between Saajida and her unborn child is presented as follows: "Ammi", she called in a high pitched voice of a young child registering an all consuming need for her mother" (Khan, 2003, p.11). Similarly, in Kamila Shamsie's novel *Burnt Shadows*, Raza responds to his father's advice: "Yes, Aba" Raza said automatically. Every father in this neighbourhood of migrants, each with stories of all they had lost and all they had started rebuild after Partition, made a similar speech to his son" (Shamsie, 2009, p. 136).

In both examples, the use of Urdu terms such as "ammi" and "aba", instead of their English equivalents "mother" and "father," is not accidental. This linguistic choice carries a strong semantic and emotional weight, as it reflects intimacy, cultural belonging, and familial identity. These terms go beyond simple translation equivalents, functioning instead as culturally embedded markers that preserve the emotional depth and social meaning of relationships within South Asian contexts.

Again, in cases like this, the most appropriate approach is usually a foreignization strategy combined with selective use of transliteration and contextual explanation. This means that culturally loaded terms such as "ammi" and "aba" are kept in their original form (transliteration preserved) rather than replaced with neutral equivalents like "mother" or "father." The reason is that these words carry not only denotative meaning but also emotional intimacy, cultural identity, and social belonging, which would be weakened if fully domesticated. At the same time, to ensure reader comprehension, this strategy can be supported by brief contextual clarification, either within the text or through footnotes/glosses. In this way, the translator preserves the cultural "foreignness" of the source text while still making meaning accessible to the target reader.

Therefore, the preferred solution in such cases is a balanced foreignization approach, where cultural markers are retained but strategically supported with explanation. This allows the translation to maintain both semantic accuracy and cultural depth, without reducing emotionally and culturally significant expressions to overly general equivalents.

Conclusion

After analyzing the importance of cultural context in literary translation, it can be concluded that culture-specific elements play a central role in shaping meaning, identity, and stylistic depth in Pakistani English literature. The study has shown that such elements often cannot be fully transferred through direct equivalence due to their strong cultural, emotional, and contextual embeddedness.

The findings indicate that a foreignization strategy combined with selective use of transliteration and contextual explanation is the most suitable approach for translating culturally rich literary texts. This method allows the preservation of original cultural markers while at the same time ensuring that the target reader can access and understand their meaning. Although this approach may sometimes affect fluency, it ensures the retention of cultural authenticity and semantic depth.

Moreover, the research highlights that successful literary translation requires more than linguistic competence. A translator must not only understand the linguistic peculiarities of the source language but also demonstrate cultural sensitivity and full awareness of the local cultural environment in which the text is produced. Only through such intercultural competence can the

translator effectively mediate between languages while preserving the cultural identity and ideological nuances of the original work.

THE EVOLUTION OF TRANSLATION STUDIES: AN INTERCULTURAL PERSPECTIVE ON LITERARY EQUIVALENCE

Turqut HAZIYEV

Young researcher, Department of Foreign Languages, Mingachevir State University

E-mail: turqut.haziyevev.de23@mdu.edu.az

ORCID ID: 0009-0000-8565-3171

Abstract: This article explores translation as a complex intercultural activity shaped by the “cultural turn” in translation studies, drawing mainly on Susan Bassnett’s theoretical framework. It argues that translation is not a mechanical word-for-word substitution but a culturally embedded process that involves negotiating meaning between different linguistic and social systems. The study traces the historical development of translation theory, from Roman approaches emphasizing sense-for-sense translation to the religious and ideological significance of Bible translations in shaping national languages. A key focus is Bassnett’s critique of equivalence, particularly the distinction between formal and dynamic equivalence, and the problem of cultural untranslatability. The article also examines loss and gain in translation, highlighting that while certain linguistic features may be lost, translation enriches target cultures by extending the life of texts. Special attention is given to poetry and prose translation, emphasizing issues of form, rhythm, and cultural context. The study further discusses ideological and ethical dimensions of translation, including domestication, foreignization, and translator visibility. Finally, it considers modern challenges such as audiovisual translation and machine translation, arguing that human translators remain essential due to their cultural sensitivity and interpretative creativity in conveying meaning across cultures.

Keywords: Translation theory, cultural turn, equivalence, cultural untranslatability

Xülasə: Bu məqalə tərcüməni mədəniyyətlərarası mürəkkəb bir fəaliyyət kimi araşdırır və Susan Bassnett-in nəzəri çərçivəsinə əsaslanaraq "mədəni dönüş" (cultural turn) anlayışını izah edir. Məqalədə göstərilir ki, tərcümə sadəcə sözlərin mexaniki əvəzlənməsi deyil, müxtəlif dil və sosial sistemlər arasında mənanın mədəni kontekstdə ötürülməsi prosesidir. Tədqiqat tərcümə nəzəriyyəsinin tarixi inkişafını izləyərək, romalıların "məna-məna üzrə tərcümə" yanaşmasından başlayaraq, İncil tərcümələrinin milli dillərin formalaşmasında ideoloji və mədəni roluna qədər olan mərhələləri təhlil edir. Bassnett-in "ekvivalentlik" anlayışına verdiyi tənqid, xüsusilə formal və dinamik ekvivalentlik arasındakı fərq və mədəni tərcüməolunmazlıq problemi əsas müzakirə mövzudur. Məqalə həmçinin tərcümə prosesində itki və qazanc məsələlərini araşdırır və göstərir ki, bəzi dil xüsusiyyətləri itirilsə də, tərcümə mətnlərin həyatını davam etdirərək qəbul edən mədəniyyəti zənginləşdirir. Poeziya və nəsr tərcüməsinə xüsusi diqqət yetirilərək forma, ritm və mədəni kontekst problemləri vurğulanır. Tədqiqat tərcümənin ideoloji və etik aspektlərini, o cümlədən domestikasiya, xaricləşdirmə və tərcüməçinin görünürlüyü məsələlərini də əhatə edir. Nəticə olaraq, müasir dövrdə audiovizual və məşin tərcüməsi kimi yeniliklərə baxmayaraq, insan tərcüməçilərinin mədəni həssaslıq və interpretativ yaradıcılıq baxımından əvəzolunmaz olduğu vurğulanır.

Açar sözlər: Tərcümə nəzəriyyəsi, mədəni dönüş, ekvivalentlik, mədəni tərcüməolunmazlıq

Introduction

For decades, translation was viewed as a secondary, mechanical activity – a mere substitution of words from one language to another. However, the late 20th century saw a paradigm shift known as the "cultural turn." As Susan Bassnett (2002) asserts in her seminal work *Translation Studies*, translation is not a marginal activity but a "*primary shaping force in intellectual history*" (p. 12).

The relationship between language and culture is the cornerstone of this study. No language can exist in a vacuum; it is deeply embedded in the historical, social, and emotional context of its speakers. Therefore, when a literary work is translated, it is not just the words that are being moved, but an entire cultural framework. The challenge of the 21st-century translator is to navigate these "cultural gaps" while maintaining the aesthetic and functional integrity of the original text.

The Historical Development of Translation Theory

To understand the current state of intercultural communication, one must examine how translation has evolved. Bassnett divides the history of translation into distinct periods, each reflecting the societal values of its time.

1. The Romans and the Early Practitioners

The Romans were among the first to recognize translation as a creative act. Cicero and Horace famously argued against "word-for-word" translation (*verbum e verbo*), advocating instead for "sense-for-sense" translation. They believed that the goal was to produce a text that had the same aesthetic impact on the Roman reader as the original had on the Greek reader. This was the earliest form of what we now call "Domestication."

2. The Bible and the Question of Authority

During the Middle Ages and the Renaissance, translation became a matter of life and death, particularly regarding religious texts. The translation of the Bible into vernacular languages (like Wycliffe's or Luther's translations) challenged the authority of the Church. Bassnett notes that these translators were not just changing words; they were democratizing knowledge and shaping the linguistic identity of modern nations.

The Concept of Equivalence: Beyond Linguistic Sameness

The most significant contribution of Bassnett's *Translation Studies* is the critique of "equivalence." In many linguistic circles, equivalence was seen as a search for "sameness." Bassnett (2002) deconstructs this by stating:

"Equivalence in translation should not be approached as a search for sameness, since sameness cannot even exist between two TL versions of the same text, let alone between the SL and the TL" (p. 36).

1. Formal vs. Dynamic Equivalence

Drawing on Eugene Nida's work, Bassnett discusses two types of equivalence:

1. **Formal Equivalence:** Focuses on the message itself, in both form and content. It aims for a literal match.
2. **Dynamic Equivalence:** Aims for "equivalent effect." The goal is that the relationship between the target receiver and the message should be the same as that which existed between the original receiver and the message.

2. Cultural Untranslatability

There are certain concepts that simply do not exist in the target culture. Bassnett identifies this as "cultural untranslatability." For instance, the Azerbaijani word "halallıq" or the English "privacy" carry specific cultural weights that cannot be captured by a single word in the opposing language. In such cases, the translator must decide whether to use a footnote (Foreignization) or to find a cultural substitute (Domestication).

Loss and Gain in the Translational Process

A common misconception is that translation is a process of inevitable loss. While it is true that some phonetic or rhythmic nuances are lost, Bassnett argues that there is also a "gain." A translation allows a text to live on in a new context, reaching audiences that the original author could never have imagined.

- **The Loss:** Nuances of dialect, social class markers, and specific historical references.
- **The Gain:** The enrichment of the target language with new concepts and the "afterlife" (as Walter Benjamin called it) of the literary work.

Specific Problems of Poetry Translation

Poetry is often considered the most difficult genre to translate due to its reliance on form, meter, and sound. Susan Bassnett (2002) dedicates a significant portion of her research to the "untranslatability" of poetic structures. She argues that a poem is a complex system where the semantic meaning and the physical form are inseparable.

1. The Conflict Between Form and Content

When translating poetry, the translator faces a dilemma: should they preserve the rhyme and rhythm (the "vessel") or the literal meaning (the "content")? Bassnett (2002) analyzes several methods:

1. **Phonemic Translation:** Attempting to reproduce the sounds of the source language.
2. **Literal Translation:** Focusing strictly on the word-for-word meaning, which often destroys the poetic essence.
3. **Verse Translation:** Finding a dominant structure in the target language that mimics the original.

Bassnett argues that the best poetry translations are "transcreations," where the translator creates a new poem in the target language that functions as an equivalent to the original. For

instance, translating a Shakespearean sonnet into Azerbaijani requires more than just translating words; it requires finding a rhythmic structure (like the *Heca* or *Əruz* meters) that evokes the same emotional weight as the iambic pentameter.

Translating Prose: The Narrative Structure

Unlike poetry, prose translation is often mistakenly viewed as a simpler task. However, Bassnett points out that prose has its own complex "rhythm."

1. The Micro-level and Macro-level Analysis

A prose translator must not focus only on individual sentences (micro-level). They must consider the entire narrative structure (macro-level). If a translator changes the tone of a narrator in the first chapter, it affects the coherence of the entire novel. Bassnett highlights that the translator must identify the "prose rhythm" – the way the author uses sentence length, punctuation, and pauses to create atmosphere.

2. Cultural Context in Prose

In prose, cultural barriers often appear in the form of social titles, idiomatic dialogue, and descriptions of the setting. For example, a character's way of speaking in an English novel might indicate their social class. If an Azerbaijani translator uses standard literary language for a character who speaks a specific English dialect, the "sociological equivalence" is lost.

Case Study: Cross-Cultural Negotiation in Literary Texts

To demonstrate the theories of Bassnett, let us examine the practical challenges of translating classical English literature into the Azerbaijani context.

1. Idiomatic Equivalence

Consider the English idiom "*to be in the same boat*." A literal translation into Azerbaijani ("*eyni qayıqda olmaq*") might be understood, but it lacks the natural idiomatic force. A dynamic equivalent would be "*dərdimiz birdir*" or "*eyni vəziyyətdəyik*." Bassnett (2002) suggests that the translator must look for the "functional equivalent" rather than the "formal" one.

2. Translating "Realia" in Classical Texts

When translating works by Charles Dickens or William Shakespeare, translators encounter objects and social customs that have no counterpart in Azerbaijani culture.

- Case of Shakespeare: The metaphors related to English flora (flowers and plants) in *Hamlet* carry symbolic meanings. If the translator replaces an English willow tree with a local plant, they might change the symbolism of grief associated with the scene.
- Case of Dickens: The Victorian legal terms and social hierarchies require the translator to either use "Foreignization" (keeping the term and adding a footnote) or "Domestication" (finding a similar local social rank).

The Ethics and Ideology of Translation

Translation is never a neutral act. Every choice a translator makes—what to include, what to omit, and what to emphasize—is an ideological one. Bassnett argues that translation can be a tool for cultural "colonization" if the dominant culture's norms are forced upon the minority culture. In the context of globalization, the translator has an ethical responsibility to protect the "voice" of the original author while making it accessible to the new audience.

1. The Power Dynamic Between Languages

Bassnett (2002) points out that translation has historically been used as a tool for cultural hegemony. When a "dominant" language (like English) translates a text from a "minority" language, there is often a tendency to "smooth over" the cultural differences to suit the dominant culture's

tastes. This process, which Lawrence Venuti calls "Domestication," can lead to the erasure of the original author's cultural identity. For an Azerbaijani scholar, this means that translating national literature into English requires a strategic "Foreignization" to ensure that the unique Azerbaijani spirit is not lost in translation.

2. The Translator's Responsibility

The ethical responsibility of the translator, according to Bassnett, is to remain "visible" in certain contexts. The translator must decide when to intervene in the text to protect the source culture's integrity. This is particularly important in post-colonial contexts where translation serves as a means of reclaiming national identity.

Translation in the 21st Century: Globalization and Technology

The digital age has brought new challenges to the theories established by Bassnett. While the core principles of "Cultural Equivalence" remain, the medium through which we translate has changed fundamentally.

1. The Rise of Audiovisual Translation (AVT)

In the context of globalization, translation is no longer limited to the printed page. Subtitling and dubbing have become primary forms of intercultural communication. Bassnett's theories on "Prose Rhythm" are now applied to the synchronization of dialogue in films and series. The challenge here is "constrained translation," where the translator must respect the time and space limitations of the screen while conveying deep cultural meanings.

2. Machine Translation vs. Human Creativity

One of the most debated topics in modern translation studies is the role of Artificial Intelligence (AI). Can a machine achieve the "Equivalence" that Bassnett describes?

- The Linguistic Success: Machines are excellent at "Formal Equivalence" – matching dictionary definitions.
- The Cultural Failure: Machines lack what Bassnett calls "cultural intuition." They cannot perceive irony, subtle metaphors, or the emotional weight of a historical reference. Therefore, the human translator in the 21st century is moving from a "generator" of text to a "cultural editor" who ensures that the AI-generated output aligns with the nuances of human emotion and cultural history.

Practical Case Study: Detailed Comparative Analysis

To truly fulfill the academic requirements of a 10-page paper, we must look at concrete examples of literary negotiation.

1. Translating Metaphors of Nature

In English literature, nature is often depicted through specific flora and fauna (e.g., the "Daffodils" of Wordsworth or the "Oak tree" as a symbol of strength). When translating these into an Azerbaijani context, a literal translation might fail because the emotional connection to these plants is different.

- **Case:** If a poem uses a "Cuckoo" to represent the arrival of spring, in some cultures, this bird might have negative connotations (cuckoldry). The translator must navigate this "semantic minefield" by either keeping the bird and adding a note or finding a local bird that carries the same "Spring" symbolism.

2. Social Hierarchies and Forms of Address

English is a relatively "informal" language compared to Azerbaijani or Turkish. The use of "You" in English covers both formal and informal contexts. However, in Azerbaijani, the

distinction between "Sən" and "Siz" is crucial for defining the relationship between characters. Bassnett (2002) argues that the translator must "read between the lines" of the English text to determine the level of intimacy or respect intended by the author and reflect it accurately in the target language.

Conclusion

As we have explored through the lens of Susan Bassnett's *Translation Studies*, translation is a complex, multi-layered discipline that sits at the intersection of linguistics, sociology, and history. The journey from the source text to the target text is fraught with cultural obstacles, yet it is through this very struggle that intercultural communication is made possible.

The role of the translator has evolved from a "copyist" to a "cultural ambassador." Whether dealing with the rigid structures of poetry or the flowing rhythms of prose, the translator must always remember that they are not just translating words; they are translating a way of life. In the words of Bassnett, translation is a "primary shaping force," and as we move further into a globalized world, the need for skilled, culturally aware translators will only continue to grow.

INTERCULTURAL COMMUNICATION IN ENGLISH LANGUAGE TEACHING: PROMOTING TOLERANCE AND MULTICULTURAL AWARENESS

Turkan Mustafa SEYIDOVA

Mingachevir Tourism College

E-mail: turkanm1908@gmail.com

ORCID ID: 0009-0002-8033-9110

Abstract: This thesis examines intercultural communication in English language teaching and focuses on its role in promoting tolerance and multicultural awareness among learners. In the contemporary educational environment, English is not only a means of linguistic communication but also a bridge between

different cultures, values, beliefs, and social practices. Therefore, the process of teaching English should go beyond grammar, vocabulary, and pronunciation, and should also develop learners' ability to understand cultural diversity and communicate respectfully with people from different backgrounds.

The thesis highlights that intercultural communication contributes to the development of communicative competence by helping learners interpret cultural meanings, avoid stereotypes, and participate in dialogue with openness and empathy. It also discusses how teachers can foster tolerance through authentic materials, comparative cultural tasks, classroom discussions, project-based learning, and inclusive teaching strategies. The study emphasizes that multicultural awareness enables students to recognize similarities and differences between cultures, respect alternative perspectives, and use English appropriately in international contexts. Overall, the paper concludes that intercultural communication is an essential component of effective English language teaching and should be systematically integrated into language education.

Key words: intercultural communication, English language teaching, tolerance, multicultural awareness, communicative competence

Xülasə: Bu tezis ingilis dilinin tədrisində mədəniyyətlərarası kommunikasiyanı araşdırır və onun tələbələrdə tolerantlığın və multikultural şüurun formalaşdırılmasındakı rolunu vurğulayır. Müasir təhsil mühitində ingilis dili yalnız lingvistik ünsiyyət vasitəsi deyil, həm də müxtəlif mədəniyyətlər, dəyərlər, inanclar və sosial davranış modelləri arasında körpü rolunu oynayır. Buna görə də ingilis dilinin tədrisi yalnız qrammatika, lüğət və tələffüzün öyrədilməsi ilə məhdudlaşmamalı, həmçinin tələbələrin mədəni müxtəlifliyi anlamaq və fərqli mənsubiyyətə malik insanlarla hörmət əsasında ünsiyyət qurmaq bacarığını inkişaf etdirməlidir.

Tezis göstərir ki, mədəniyyətlərarası kommunikasiya tələbələrin kommunikativ kompetensiyasının inkişafına töhfə verir, onların mədəni mənaları düzgün şərh etməsinə, stereotiplərdən uzaqlaşmasına və dialoq prosesində açıq fikirli, empatik mövqe nümayiş etdirməsinə kömək edir. Burada müəllimlərin autentik materiallar, müqayisəli mədəni tapşırıqlar, sinif müzakirələri, layihə əsaslı öyrənmə və inklüziv tədris strategiyaları vasitəsilə tolerantlığı necə inkişaf etdirə biləcəyi də müzakirə olunur. Tədqiqat vurğulayır ki, multikultural şüur tələbələrə mədəniyyətlər arasındakı oxşar və fərqli cəhətləri tanımağa, alternativ baxışlara hörmət etməyə və ingilis dilindən beynəlxalq kontekstlərdə uyğun şəkildə istifadə etməyə imkan verir. Ümumilikdə, məqalə nəticə olaraq bildirir ki, mədəniyyətlərarası kommunikasiya ingilis dili tədrisinin mühüm komponentidir və dil təhsilinə sistemli şəkildə inteqrasiya edilməlidir.

Açar sözlər: mədəniyyətlərarası kommunikasiya, ingilis dili tədrisi, tolerantlıq, multikultural şüur, kommunikativ kompetensiya

Introduction

In the twenty-first century, English has become one of the most widely used languages for international communication, education, diplomacy, tourism, science, and digital interaction. As learners use English to communicate with people from different cultural backgrounds, the aim of English language teaching has expanded beyond the development of grammatical accuracy and

fluent speech. Modern language education increasingly focuses on preparing learners to participate in intercultural communication, where meaning is shaped not only by words but also by cultural values, social norms, beliefs, gestures, and expectations.

Intercultural communication refers to the process of interaction between individuals or groups who have different cultural experiences and interpretive frameworks. In English language teaching, this concept is closely connected with intercultural communicative competence, which includes the ability to understand cultural differences, interpret unfamiliar behavior, respect diversity, and communicate appropriately in various contexts (Byram, 1997). Learners who develop such competence become more capable of using English as a tool for dialogue, cooperation, and mutual understanding.

The importance of intercultural communication is especially evident in multicultural societies and global learning environments. Students often encounter cultural content through textbooks, films, online platforms, social media, international projects, and academic exchanges. If these cultural encounters are not guided pedagogically, learners may rely on stereotypes or incomplete assumptions. Therefore, teachers play a central role in helping students analyze cultural information critically and develop tolerance toward different ways of life (Kramsch, 1993).

This paper aims to explore the role of intercultural communication in English language teaching, explain how it promotes tolerance and multicultural awareness, and discuss practical strategies that teachers can use to integrate intercultural learning into the classroom.

Materials and Methods

This study is based on a qualitative review of theoretical and pedagogical literature related to intercultural communication, English language teaching, tolerance, and multicultural awareness. Books, journal articles, and studies by scholars in applied linguistics and intercultural education were analyzed through descriptive and comparative methods. The selected sources were examined in order to identify the main principles of intercultural language teaching and the classroom strategies that support learners' intercultural development.

The theoretical basis of the study includes the concept of intercultural communicative competence, which emphasizes knowledge of cultures, skills of interpretation and interaction, attitudes of openness, and critical cultural awareness (Byram, 1997). This framework is useful for English language teaching because it shows that successful communication depends not only on language proficiency but also on the learner's ability to recognize cultural meanings and respond appropriately.

The study also considers multicultural education as an important dimension of language teaching. Multicultural awareness involves understanding that cultures are dynamic, diverse, and internally varied rather than fixed or homogeneous. According to Deardorff (2006), intercultural competence develops through respect, openness, curiosity, and the ability to view situations from more than one cultural perspective. These qualities are directly connected with the promotion of tolerance in the English language classroom.

Results and Discussion

Intercultural communication can significantly enrich English language teaching by making lessons more meaningful and socially relevant. When learners study cultural practices, traditions, social behavior, forms of politeness, idioms, values, and communication styles, they begin to understand that language is inseparable from culture. This understanding helps students avoid

mechanical language use and encourages them to communicate with greater sensitivity and awareness.

One of the most important outcomes of intercultural language teaching is the promotion of tolerance. Tolerance does not mean ignoring differences; rather, it means recognizing differences and responding to them with respect. In the English classroom, tolerance can be developed through discussions about cultural diversity, comparison of local and foreign customs, analysis of real-life communication situations, and reflection on stereotypes. Such activities allow students to see culture from multiple perspectives and reduce prejudice.

Authentic materials are particularly useful for developing multicultural awareness. Newspapers, short videos, interviews, podcasts, literary texts, advertisements, and online resources expose learners to real cultural contexts and different varieties of English. These materials help students understand how people express identity, politeness, disagreement, humor, gratitude, and respect in different societies. At the same time, teachers should guide learners to analyze these materials critically rather than accept cultural representations as absolute truths (Liddicoat & Scarino, 2013).

Comparative cultural tasks also play an important role in intercultural learning. For example, students may compare greeting forms, family traditions, educational practices, holidays, communication styles, or classroom behavior in their own culture and in English-speaking or international contexts. Such tasks encourage learners to identify both similarities and differences. They also help students understand that no culture should be viewed as superior or inferior, because each culture reflects its own historical and social experience.

Project-based learning can further support intercultural communication. Students may prepare presentations about different cultures, conduct interviews, create posters, participate in online exchanges, or work collaboratively on multicultural topics. These activities increase learner autonomy and create opportunities for meaningful English use. Moreover, they support empathy, cooperation, and respect for different opinions, which are essential qualities for intercultural dialogue.

The teacher's role is crucial in this process. Teachers should create an inclusive classroom atmosphere where students feel safe to express their views, ask questions, and discuss cultural differences without fear of criticism. They should avoid presenting culture in a simplistic or stereotypical way. Instead, they should encourage students to think critically, question generalizations, and understand that individuals within the same culture may have different identities, beliefs, and lifestyles (Risager, 2007).

Integrating intercultural communication into English language teaching also improves learners' communicative competence. Students become more aware of context, audience, tone, politeness, and non-verbal communication. As a result, they are better prepared to use English not only accurately but also appropriately in academic, professional, and social situations. This demonstrates that intercultural awareness is not an additional element of language teaching but a necessary part of effective communication.

Conclusion

In conclusion, intercultural communication plays a fundamental role in English language teaching because it connects language learning with cultural understanding, tolerance, and global citizenship. In a world where English is used by people from diverse linguistic and cultural

backgrounds, learners need more than vocabulary and grammar. They need the ability to interpret cultural meanings, respect differences, and communicate responsibly across cultures.

Teachers can promote tolerance and multicultural awareness by using authentic materials, comparative tasks, reflective discussions, project-based activities, and inclusive classroom practices. These strategies help learners move beyond stereotypes and develop openness, empathy, and critical cultural awareness. As a result, students become more confident and respectful participants in intercultural communication.

Ultimately, the integration of intercultural communication into English language teaching contributes to the formation of learners who are linguistically competent, culturally aware, and socially responsible. Therefore, intercultural education should be considered an essential component of modern English language teaching and should be systematically included in curricula, teaching materials, and classroom practice.

TRANSLATION PROBLEMS OF LITERARY AND SPECIALIZED TEXTS: A COMPARATIVE-FUNCTIONAL ANALYSIS

Nazli Ahmed BAYRAMOVA

Azerbaijan State University of Economics, Zagatala branch

E-mail: nazli-bayramova@unec.edu.az

ORCID ID: 0009-0005-6272-6338

Abstract: The article examines translation problems arising in literary and specialized texts on the basis of a comparative-functional approach. The central idea of the study is that translation difficulty is not limited to the transfer of words from one language into another; rather, it is directly related to text function, reader expectations, cultural context, terminological system and communicative purpose. In literary texts, the main challenge is to preserve imagery, authorial style, rhythm, emotional effect and culture-specific units. In specialized texts, terminological accuracy, normative adequacy, syntactic clarity and the prevention of information loss play a decisive role. The article analyzes typical translation situations taken from literary, technical, medical and legal texts; it also demonstrates the applicability of literal translation, stylistic compensation, terminological normalization, functional equivalence and explicitation strategies. The findings indicate that translation strategy should be selected according to the dominant function of the text:

aesthetic-expressive adequacy should be treated as the main quality criterion in literary texts, whereas terminological-informative adequacy should be prioritized in specialized texts.

Keywords: literary translation, specialized text, functional equivalence, terminological accuracy, cultural realia, translation strategies

BƏDİİ VƏ İXTİSASLAŞMIŞ MƏTNLƏRİN TƏRCÜMƏ PROBLEMLƏRİ: MÜQAYİSƏLİ-FUNKSIONAL TƏHLİL

Nazlı Əhməd BAYRAMOVA

Xülasə: Məqalədə bədii və ixtisaslaşmış mətnlərin tərcüməsində yaranan problemlər müqayisəli-funksional yanaşma əsasında araşdırılır. Tədqiqatın əsas ideyası ondan ibarətdir ki, tərcümə problemi yalnız sözlərin bir dildən digərinə keçirilməsi ilə məhdudlaşmır; problem mətnin funksiyası, oxucu gözləntisi, mədəni kontekst, terminoloji sistem və kommunikativ məqsədlə birbaşa bağlıdır. Bədii mətnlərdə əsas çətinlik obrazlılığın, müəllif üslubunun, ritmin, emosional təsirin və mədəni-spesifik vahidlərin qorunmasıdır. İxtisaslaşmış mətnlərdə isə terminoloji dəqiqlik, normativ uyğunluq, sintaktik aydınlıq və informasiya itkisinin qarşısının alınması həlledici rol oynayır. Məqalədə bədii, texniki, tibbi və hüquqi mətnlərdən götürülmüş tipik tərcümə situasiyaları nümunə kimi təhlil edilir; sözbəsöz tərcümə, üslubi kompensasiya, terminoloji normallaşdırma, funksional ekvivalentlik və izahlı tərcümə strategiyalarının tətbiq imkanları göstərilir. Nəticə olaraq müəyyən edilir ki, tərcümə strategiyası mətnin dominant funksiyasına uyğun seçilməli, bədii mətnlərdə estetik-ekspressiv adekvatlıq, ixtisaslaşmış mətnlərdə isə terminoloji-informativ adekvatlıq əsas keyfiyyət meyarı kimi götürülməlidir.

Açar sözlər: bədii tərcümə, ixtisaslaşmış mətn, funksional ekvivalentlik, terminoloji dəqiqlik, mədəni realiyalar, tərcümə strategiyaları

Introduction

Under the conditions of globalization, academic mobility, international cooperation and digital communication, translation has become a process of reconstructing texts with different functions in a way that is appropriate for the target audience. In this process, the translator is not merely a mediator between two languages, but also a decision-making agent who evaluates the purpose of the text, reader expectations, the terminological system and cultural signs. In translation studies, the influence of text type on translation decisions is widely explained within Reiss's text typology, the functionalist approach and skopos theory. According to these approaches, the method of translation cannot be determined independently of the dominant function of the text (Reiss, 1981; Nord, 2018; Munday et al., 2022).

Literary and specialized texts impose particularly different requirements in this respect. The primary function of a literary text is not only to provide information, but also to create an aesthetic impression, construct imagery, and convey the author's individual style and the emotional energy of the text to the reader. In specialized texts, however, the aim is mainly to transmit accurate, verifiable and normatively reliable information. In the translation of a technical manual, medical text, legal contract or academic article, an inaccurate terminological choice is not merely a stylistic defect; it may also create practical, legal and safety-related risks (Byrne, 2014; Cao, 2007; ISO, 2015).

The purpose of this article is to analyze the translation problems of literary and specialized texts comparatively, to demonstrate types of problems through concrete examples and to justify the importance of selecting a strategy appropriate to the text type. The research question is formulated as follows: how does the functional type of a text influence the translator's choice of strategy, and in what concrete forms does this influence appear in literary and specialized texts?

Theoretical Framework and Literature Review

Text Typology and the Functional Approach

In translation theory, text typology provides an important theoretical basis for selecting translation strategy. Reiss distinguishes between informative, expressive and operative texts and emphasizes that the main criterion in the translation process is the dominant function of the text (Reiss, 1981). From this perspective, literary texts mostly have an expressive-aesthetic function, while technical and scientific texts have an informative function. As the function of the text changes, the translation priority also changes: in literary texts the question “how is it said?” comes to the fore, whereas in specialized texts the question “what exactly is being stated?” becomes central.

The functionalist approach further develops this idea by explaining translation as a purposeful activity. In Nord's approach, translation quality is measured not only by formal loyalty to the source text, but also by the ability of the target text to fulfil its communicative purpose (Nord, 2018). Therefore, the same text fragment may be translated differently for different purposes: for example, a cultural term may be explained in a museum catalogue, while in a literary novel the same term may be retained through a foreignization strategy.

Main Theoretical Problems of Literary Translation

In literary translation, equivalence cannot be understood only at the level of denotative meaning. Figurative expression, metaphor, rhythm, sound patterning, dialogue tone and cultural associations require special sensitivity in translation. Nida and Taber's concept of dynamic equivalence foregrounds the creation of an effect on the target reader that is close to the effect produced on the source reader (Nida & Taber, 1969). Newmark's distinction between semantic and communicative translation is also significant in this respect: in some parts of a literary text, proximity to the figurative structure of the source text may be more important, while in other parts a natural-sounding target-language expression may be more important (Newmark, 1988).

Baker explains equivalence problems at the levels of word, expression and text, showing that the translator does not merely find a dictionary equivalent; rather, the translator reconstructs collocation, idiom, grammatical structure and the distribution of information within the text (Baker, 2018). Venuti's distinction between domestication and foreignization provides an important framework for translating cultural realia in literary texts: domestication increases fluency for the target reader, while foreignization preserves the distinctiveness of the source culture (Venuti, 1995).

Terminological and Normative Requirements in the Translation of Specialized Texts

In specialized texts, the main indicator of translation quality is terminological consistency and the accurate transfer of information. ISO 704 relates the principles of terminology work to the systematic definition of concepts and the precise management of terms (ISO, 2022). ISO 17100 defines process, resource and quality requirements for translation services and emphasizes the importance of the translation, revision and review stages in professional translation (ISO, 2015).

In technical translation, the main purpose is to help the user perform an action correctly. Therefore, terms such as “operation”, “maintenance”, “calibration”, “failure” and “warning” must

be rendered consistently and in accordance with the field-specific context (Byrne, 2014). In legal translation, a term is not only a lexical unit, but also a concept that produces legal consequences. For example, incorrect translation of units such as “liability”, “obligation”, “shall”, “may” and “without prejudice to” may lead to a misunderstanding of contractual obligations, legal responsibility or the difference between permission and normative obligation (Cao, 2007).

Table 1. Comparison of Translation Priorities in Literary and Specialized Texts

Criterion	Literary texts	Specialized texts
Dominant function	To create aesthetic, expressive and emotional effect	To transmit accurate, verifiable and functional information
Main risk	Loss of imagery, authorial style and cultural association	Terminological error, information loss and normative inadequacy
Translation criterion	Stylistic-expressive adequacy and reader effect	Terminological-informative adequacy and structural clarity
Strategy	Stylistic compensation, cultural adaptation, foreignization/domestication	Terminological normalization, explicative translation, syntactic simplification
Revision focus	Tone, rhythm, metaphor, imagery and naturalness of dialogue	Terminological consistency, units of measurement, modal verbs and legal/technical precision

Methodology

The study was conducted on the basis of qualitative comparative-descriptive analysis. Micro-examples frequently encountered in real translation practice in literary, technical, medical and legal texts were selected as material. In the literary examples, units such as metaphorical expression, urban imagery, psychological description and cultural realia were analyzed; in specialized examples, constructions expressing technical instruction, medical warning, data security and legal liability were examined.

The analysis criteria were defined in five directions: 1) semantic accuracy; 2) stylistic-expressive adequacy; 3) transfer of culture-specific units; 4) terminological consistency; 5) readability and normativity of the target text. The study is not a full corpus analysis; its purpose is not to measure problem types on a broad statistical basis, but rather to demonstrate analytically how translation decisions change according to text type.

Analysis and Discussion

The Problem of Imagery and Stylistic Compensation in Literary Texts

In literary texts, literal translation may often seem possible at the level of meaning, but it weakens emotional and aesthetic effect in the target language. For example, translating the expression “He carried winter in his voice” as “O, qışı səşində daşıyırdı” formally preserves the source metaphor, but in Azerbaijani it sounds weak in terms of naturalness and emotional effect. The version “Onun səşində qışın sərtliyi duyulurdu” partly explicates the metaphor, preserves the imagery and creates a more natural psychological description in the target language. This shows the importance of balancing semantic loyalty and functional effect in literary translation.

The examples in the table show that in literary translation “loyalty to the word” may sometimes conflict with “loyalty to the text”. A literal version that sounds artificial in the target language weakens the aesthetic function of the source text. Therefore, the literary translator should focus not on the formal structure of the metaphor, but on the effect it creates within the text. This situation is especially evident in psychological descriptions, nature metaphors and fragments that figuratively represent the relationship between the city and the individual.

Table 2. Translation Problems and Strategy Selection in Literary Texts

Source expression	Literal or weak version	Functionally appropriate version	Problem and strategy
He carried winter in his voice.	O, qışı səşində daşıyırdı.	Onun səşində qışın sərtliyi duyulurdu.	When the metaphor is preserved formally, it sounds strange in the target language; emotional effect is preserved through stylistic compensation.
The city swallowed him whole.	Şəhər onu bütöv uddu.	Şəhər onu tamamilə öz içində itirdi.	The urban image is preserved, while mechanical calque is avoided; the metaphorical meaning is expressed naturally.
Her silence was louder than the storm.	Onun sükutu fırtınadan daha ucadan idi.	Onun sükutu fırtınadan da güclü təsir bağışlayırdı.	The issue is not loudness of sound but psychological effect; the connotative meaning is retained through explicitation.
He spoke with a smile that did not reach his eyes.	O, gözlərinə çatmayan bir təbəssümlə danışdı.	O, gözlərinə yansımayan bir təbəssümlə danışdı.	The English idiomatic description is rendered through fluent Azerbaijani syntax.
It was the best of times, it was the worst of times.	Bu, ən yaxşı zamanlar idi, ən pis zamanlar idi.	Bu, həm ən yaxşı, həm də ən ağır zaman idi.	The rhythm of parallel structure is preserved, while syntactic compactness in the target language is increased.

Culture-Specific Units: Choosing Between Domestication and Foreignization

The translation of culture-specific units creates a separate problem in literary texts. Words such as “samovar”, “Novruz table”, “khancha”, “chaykhana”, “ashug” and “meykhana” do not merely name an object or phenomenon; they carry social memory, ritual behavior and cultural identity. Three main solutions are possible in translating such units: transliteration, explicative translation and functional substitution. For example, rendering “xonça” simply as “tray” may be partly correct from an informational point of view, but it loses the ceremonial and symbolic content. The explicative variant “khancha, a decorated ceremonial tray used in festive rituals” presents both the object and its function to the target reader.

This choice depends on the text type. In a novel or short story, retaining the word “khancha” through transliteration and clarifying it through context preserves the atmosphere of the source culture. In a tourism brochure, however, explanation is more appropriate because the target reader expects informational clarity. Thus, the same cultural unit requires different strategies in literary and informative texts.

Terminological Accuracy and Normativity in Specialized Texts

In specialized texts, the translator's main task is to preserve the relationships between concepts in the source text correctly. A term is used not as a simple word equivalent, but as a unit designating a specific concept within a field. Therefore, the same term should be rendered consistently within the same document, and synonymic variation should be used only when it does

not damage the normativity of the text. For example, translating the verb “calibrate” in a technical manual as “kalibr etmək” in one place, “tənzimləmək” in another and “ölçüyə salmaq” elsewhere may disrupt the user’s conceptual consistency.

These examples show that errors in specialized texts often arise not from the basic dictionary meaning of a word, but from failure to consider its contextual field-specific meaning. The use of “operation” as “istismar” in technical texts and as “cərrahi əməliyyat” in medical texts demonstrates the decisive role of context. Similarly, although “liability” may generally be translated as “responsibility”, in legal texts it should be specified as “legal liability” or, depending on context, “civil liability”.

Table 3. Typical Errors and Revised Versions in Specialized Texts

Field	Source sentence	Weak version	Accurate version	Rationale
Technical	The system shall be calibrated before operation.	“Sistem əməliyyatdan əvvəl kalibr olunmalıdır.”	“Sistem istismara verilməzdən əvvəl kalibrlənməlidir.”	Here “operation” does not mean medical operation, but technical use/operation; “shall” indicates normative obligation.
Medical	Adverse effects may occur in patients with renal impairment.	“Böyrək qüsuru olan xəstələrdə pis təsirlər ola bilər.”	“Böyrək funksiyası pozulmuş xəstələrdə arzuolunmaz əlavə təsirlər müşahidə oluna bilər.”	The medical register is preserved; “renal impairment” is rendered through a clinical expression rather than everyday wording.
ICT	Data must be stored in an encrypted environment.	“Məlumatlar şifrələnmiş mühitdə saxlanmalıdır.”	“Məlumatlar şifrələnmiş mühitdə mühafizə olunmalıdır.”	“Stored” implies keeping data, while “encrypted environment” refers to a security regime; “mühafizə” strengthens the legal-technical nuance.
Legal	Failure to comply may result in legal liability.	“Uyğun gəlməmək hüquqi məsuliyyətlə nəticələnə bilər.”	“Tələblərə əməl edilməməsi hüquqi məsuliyyət yarada bilər.”	Legal syntax is normalized; “comply” means “to comply with/observe requirements”, not “to correspond”.
Academic/statistical	The results are statistically significant at the 5% level.	“Nəticələr 5% səviyyədə statistik əhəmiyyətlidir.”	“Nəticələr 5 faiz əhəmiyyətlik səviyyəsində statistik baxımdan əhəmiyyətlidir.”	The statistical term is fully specified; “significant” here does not mean generally “important”, but indicates a statistical test result.

Syntactic Clarity and the Prevention of Information Loss

In specialized texts, long and complex sentences increase the risk of information loss or incorrect linkage during translation. Nominalizations and passive constructions are widely used in English; however, mechanically preserving the same structure in Azerbaijani may produce a heavy, unnatural and sometimes inaccurate text. For example, the sentence “The implementation of the procedure shall be documented by the responsible officer” may be rendered as “Prosedurun həyata keçirilməsi məsul şəxs tərəfindən sənədləşdirilməlidir”, but a clearer version is “Məsul şəxs prosedurun icrasını sənədləşdirməlidir”. Here meaning is not lost; on the contrary, the actor and action become clearer.

In legal and administrative texts, however, not every simplification is possible. For instance, translating “shall” as “may” in contractual clauses weakens the meaning of obligation. Therefore, in specialized translation, syntactic clarity must be ensured without compromising terminological and legal precision. This is a key decision point that requires both linguistic and field-specific competence from the translator.

Hybrid Texts: Dual Function in Tourism, Museum and Cultural Heritage Texts

Some texts are neither purely literary nor purely specialized. Tourism brochures, museum exhibit descriptions, cultural heritage catalogues and promotional materials both provide information and attempt to create an emotional-aesthetic effect. For example, a sentence such as “The ancient walls of the fortress still whisper the memory of the Silk Road” contains both historical information and literary imagery. Translating this sentence as “Qalanın qədim divarları hələ də İpək Yolunun xatirəsini pıçıldayır” preserves the literary effect, but for an official tourism catalogue the variant “Qalanın qədim divarları İpək Yolu dövrünün tarixi yaddaşını bu günə daşıyır” may be more appropriate. Here the purpose of the text changes the strategy.

In hybrid texts, the translator should first determine the dominant function: if the text is promotional, emotional effect may be strengthened; if it has an academic-catalogue character, terminological and factual accuracy should be prioritized. For this reason, a single strategy is not sufficient in hybrid texts; literary expressiveness and informative accuracy should be combined.

Table 4. Translation Decision Matrix by Text Type

Text type	Dominant purpose	Main translation strategy	Control question
Literary novel/short story	Aesthetic and emotional effect	Stylistic compensation, natural syntax and preservation of cultural realia	Does the target reader feel the emotional effect of the source text?
Technical manual	Correct performance and safety	Terminological consistency, accurate rendering of modal verbs and short sentences	Can the user perform the action without error?
Medical text	Accurate communication of risk and instructions	Normalization of clinical terms and cautious modal expressions	Does a possible misunderstanding create a risk for patient safety?
Legal document	Accurate transfer of legal consequences	Normative syntax, conceptual precision and system compatibility	Are obligation, right and liability clearly distinguished?
Tourism/museum text	Providing information and generating interest	Functional explanation plus limited literary expressiveness	Is the text both clear and engaging?

Conclusion and Recommendations

The study shows that literary and specialized texts cannot be assessed according to the same criteria. In literary translation, the main problem is the adequate reconstruction of authorial style, imagery, emotional effect and culture-specific units in the target language. Literal translation often weakens the effect of the source text; a more appropriate approach is stylistic compensation, functional equivalence and preservation of the aesthetic mechanism of the text.

In specialized texts, translation quality is determined by terminological accuracy, normative adequacy, syntactic clarity and the prevention of information loss. In technical, medical and legal texts, the incorrect rendering of a single term or modal verb may have practical consequences. Therefore, field terminology, term bases, revision and quality control should be considered necessary in the translation of such texts.

Three practical recommendations can be proposed on the basis of the analysis. First, the dominant function of the text should be determined before translation begins. Second, stylistic-expressive adequacy should be taken as the main criterion in literary texts, while terminological-informative adequacy should be prioritized in specialized texts. Third, in hybrid texts - especially tourism, museum and cultural heritage materials - informative accuracy and aesthetic effect should be balanced. This approach increases both the academic and practical quality of translation.

ORCID ID: [0009-0008-6607-448XE](https://orcid.org/0009-0008-6607-448XE)

Abstract: This article examines the role of translation in the modern globalized world. Today, communication between different countries is growing rapidly, and translation helps people understand each other despite language differences. It plays an important role in many areas such as education, business, science, and literature. Translation allows the exchange of ideas, information, and cultural values across borders. At the same time, the process of translation is not always easy and includes several challenges. Translators often deal with cultural differences, difficult expressions, and specialized terminology. This study discusses both the importance and the difficulties of translation. It also shows that translation is not only about changing words from one language to another, but also about transferring meaning and cultural context. In conclusion, translation is an essential part of globalization and helps build connections between people around the world.

Xülasə: Bu məqalə müasir qloballaşan dünyada tərcümənin rolunu araşdırır. Bu gün ölkələr arasında ünsiyyət sürətlə artır və tərcümə insanların dil fərqlərinə baxmayaraq bir-birini başa düşməsinə kömək edir. Tərcümə təhsil, biznes, elm və ədəbiyyat kimi sahələrdə mühüm rol oynayır. O, ideyaların, məlumatların və mədəni dəyərlərin ölkələr arasında ötürülməsini təmin edir. Eyni zamanda, tərcümə prosesi həmişə asan olmur və bir sıra çətinliklər yaradır. Tərcüməçilər tez-tez mədəni fərqlər, çətin ifadələr və ixtisaslaşmış terminlərlə qarşılaşırlar. Bu tədqiqatda tərcümənin həm əhəmiyyəti, həm də çətinlikləri izah olunur. Həmçinin qeyd olunur ki, tərcümə yalnız sözlərin dəyişdirilməsi deyil, həm də mənə və mədəni kontekstin ötürülməsidir. Nəticədə, tərcümə qloballaşmanın vacib hissəsidir və dünyada insanlar arasında əlaqələrin qurulmasına kömək edir.

Introduction

In the modern world, globalization has become a very important process. Countries are more connected than before, and people communicate across borders every day. They travel, study abroad, work in international companies, and use information from different parts of the world. Because of this, language differences can create serious communication problems.

Translation helps solve this problem. It allows people who speak different languages to understand each other. Translation is not only important for individuals but also for organizations, companies, and governments. Without translation, it would be very difficult to share knowledge, cooperate internationally, and build relationships.

Another important point is that translation connects cultures. Every language reflects its culture, traditions, and way of thinking. When a text is translated, it also carries cultural meaning. That is why translation plays a key role not only in communication but also in cultural exchange.

Methodology and Materials

This study is based on a qualitative research method. Different academic sources such as books, articles, and online materials about translation and globalization were analyzed. The information was collected and explained in a simple and clear way.

1. The research mainly focuses on three main aspects: the role of translation in globalization, the problems in translation, and the importance of intercultural communication. Comparative analysis was used to understand differences between languages and cultures. The goal of this study is to give a general understanding of how translation works in real-life situations. (Cronin, 2003).

Discussion

Translation plays a very important role in many areas of life. One of the main areas is education. Students often use books, articles, and research materials written in foreign languages. Translation helps them understand these materials and learn new information. Without translation, access to knowledge would be limited.

Another important area is business. Today, many companies work internationally. They communicate with foreign partners, customers, and investors. Translation helps companies enter global markets and build strong relationships. For example, product descriptions, contracts, and advertisements all need to be translated correctly.

Translation is also important in literature. People can read books, stories, and poems from other cultures thanks to translation. This helps them understand different traditions and ways of thinking. It also increases cultural awareness and respect.

However, translation is not always easy. One of the main challenges is cultural differences. Some words or expressions do not have exact equivalents in another language. For example, idioms, jokes, and cultural references are often difficult to translate. If the translator does not understand the culture well, the meaning can be lost or changed.

Another challenge is the translation of specialized texts. Fields such as medicine, law, and technology use specific terminology. Translators need to have knowledge in these areas to translate correctly. Even a small mistake can cause serious problems.

Language structure is also a problem. Different languages have different grammar rules and sentence structures. Translators must adapt the text while keeping the original meaning. This requires skill and experience.

Intercultural communication is one of the most important factors in translation. A translator should not only know the language but also understand the culture behind it. This helps to avoid misunderstandings and ensures that the message is clear and accurate.

Conclusion

In conclusion, translation plays a very important role in the context of globalization. It helps people communicate, share knowledge, and understand different cultures. Translation connects countries and supports international cooperation.

Despite the challenges, translation remains a necessary and powerful tool. Translators must be careful, responsible, and skilled in their work. They should focus not only on words but also on

meaning and cultural context.

Overall, translation helps bring people closer and makes the world more connected. In the future, its importance will continue to grow as globalization increases.

THE ROLE OF EMOTIONAL AND CULTURAL FACTORS IN TRANSLATION: CHALLENGES AND STRATEGIES IN INTERCULTURAL COMMUNICATION

Tarlan Asaf ALIYEVA

Student, Department of English Language and Translation, Nakhchivan State University

E-mail: eliyevatarlan72@gmail.com

ORCID ID: 0009-0009-4506-8846

Abstract: Translation is not merely a linguistic activity but a complex process of intercultural communication shaped by emotional and cultural factors. This study explores how emotional expressions, cultural references, and value systems influence the translation process and affect the quality of translated texts. Particular attention is given to literary and context-sensitive texts, where emotions and cultural nuances play a crucial role in meaning construction. The research employs a qualitative methodology based on comparative textual analysis of selected source texts and their translations.

The findings indicate that emotional meanings are often deeply embedded in language and culture, making them difficult to transfer accurately. Translators frequently encounter challenges in preserving emotional tone, stylistic features, and implicit cultural meanings. As a result, shifts in meaning, tone, or reader perception may occur. Cultural elements such as idioms, metaphors, traditions, and social norms further complicate the process, requiring translators to make interpretative decisions.

The study identifies key translation strategies, including domestication, foreignization, and cultural adaptation, which are used to address these challenges. It is argued that no single strategy is universally effective; instead, translators must adopt a flexible and context-dependent approach. The paper emphasizes that successful translation requires not only linguistic competence but also intercultural awareness and emotional sensitivity. Overall, the research highlights the importance of integrating cultural and emotional considerations into translation practice and contributes to the development of translation studies within applied linguistics.

Xülasə: Tərcümə yalnız dil vahidlərinin bir dildən digərinə ötürülməsi deyil, eyni zamanda emosional və mədəni faktorların təsiri altında formalaşan mürəkkəb mədəniyyətlərarası kommunikasiya prosesidir. Bu tədqiqat emosional ifadələrin, mədəni istinadların və dəyər sistemlərinin tərcümə prosesinə necə təsir etdiyini və tərcümə keyfiyyətinə hansı şəkildə təsir göstərdiyini araşdırır. Xüsusilə emosional çalarların və mədəni nüansların mühüm rol oynadığı bədii və kontekst-asılı mətnlərə xüsusi diqqət yetirilmişdir. Tədqiqat çərçivəsində seçilmiş mətnlər və onların tərcümələri müqayisəli şəkildə təhlil edilmiş, keyfiyyət yönümlü metodologiyadan istifadə olunmuşdur.

Araşdırmanın nəticələri göstərir ki, emosional məna çox zaman dil və mədəniyyətə sıx bağlı olur və bu səbəbdən onun dəqiq ötürülməsi çətinlik yaradır. Tərcüməçilər emosional tonun, üslub xüsusiyyətlərinin və gizli mədəni mənalara qorunmasında tez-tez problemlərlə qarşılaşırlar ki, bu da məna və təsir dəyişikliklərinə səbəb olur. Bundan əlavə, idiomlar, metaforalar, ənənələr və sosial normalar kimi mədəni elementlər tərcümə prosesini daha da mürəkkəbləşdirir və tərcüməçidən interpretativ qərarlar tələb edir.

Tədqiqatda bu çətinliklərin aradan qaldırılması üçün domestikasiya, foreignizasiya və mədəni uyğunlaşdırma kimi əsas strategiyalar müəyyən edilmişdir. Nəticə etibarilə vurğulanır ki, uğurlu tərcümə yalnız dil bilikləri ilə deyil, həm də mədəni kompetensiya və emosional həssaslıqla bağlıdır.

Açar sözlər: Tərcümə, qloballaşma, ünsiyyət, mədəniyyət, dil, mədəniyyətlərarası əlaqələr

Introduction

In the contemporary globalized world, translation has become an essential tool for communication across linguistic and cultural boundaries (Nida, 1964). With the increasing interaction between societies, the demand for accurate and meaningful translation has grown significantly in fields such as education, literature, media, and international relations (Baker, 2018). However, translation is not a purely mechanical or linguistic process; rather, it is a complex activity that involves the transfer of meaning shaped by cultural context, emotional expression, and social norms (Katan, 2014).

One of the central challenges in translation lies in conveying emotional content. Emotions expressed in language are often deeply rooted in cultural conventions and may not have direct equivalents in another language (Newmark, 1988). For instance, expressions of humor, irony, politeness, or empathy can vary considerably across cultures, making it difficult for translators to preserve the intended tone and effect. As a result, even when the literal meaning is accurately translated, the emotional impact on the target audience may differ from that of the original text.

In addition to emotional factors, cultural differences play a significant role in shaping translation outcomes. Cultural references such as idioms, metaphors, traditions, beliefs, and social practices are often culture-specific and may be unfamiliar to the target audience (Venuti, 1995). This creates a dilemma for translators: whether to preserve the original cultural elements or adapt them to the target culture for better understanding. This issue is particularly evident in literary translation, where cultural depth and stylistic richness are crucial.

The relevance of this study is closely connected with current trends in applied linguistics and intercultural communication, which emphasize the importance of cultural awareness and communicative competence. Within the framework of modern translation studies, there is a growing

recognition that successful translation requires not only linguistic accuracy but also the ability to interpret and convey cultural and emotional nuances.

Therefore, the main aim of this research is to examine the impact of emotional and cultural differences on translation and to identify effective strategies for dealing with these challenges. By analyzing selected texts and their translations, the study seeks to contribute to a deeper understanding of translation as a multidimensional process and to highlight its role in facilitating intercultural dialogue.

Materials and Methods

This study employs a qualitative research design to investigate the impact of emotional and cultural differences on translation. The primary method used is comparative textual analysis (House, 2015), which enables an in-depth examination of how meaning, emotional tone, and cultural elements are transferred from source texts into target texts. A qualitative approach is particularly suitable for this research, as it allows for detailed interpretation of linguistic and cultural nuances that cannot be fully captured through quantitative methods.

The research material consists of carefully selected literary and non-literary texts originally written in English, along with their corresponding translations. The selection criteria were based on the presence of emotionally expressive language and culturally bound elements such as idioms, metaphors, proverbs, and references to social norms, traditions, and value systems. Literary texts were included due to their rich emotional, stylistic, and figurative language, which often reflects deeper cultural meanings. In contrast, non-literary texts were analyzed to observe how emotional and cultural factors function in more formal, academic, or informational contexts, where clarity and accuracy are typically prioritized.

The analysis process was conducted in several stages. First, emotionally charged expressions and culturally specific references in the source texts were identified and categorized. Second, their equivalents in the target texts were examined through a comparative approach, focusing on similarities and differences in meaning, tone, and stylistic impact. Particular attention was given to cases where shifts occurred, including loss, addition, or modification of emotional and cultural content. Third, the translation strategies applied by translators—such as domestication, foreignization, and cultural adaptation—were identified, classified, and evaluated in relation to their effectiveness in preserving meaning and communicative intent.

In addition, the study draws on established theoretical frameworks in translation studies, including equivalence theory and intercultural communication models (Jakobson, 1959; Nida & Taber, 1969), to interpret the findings. These frameworks provide a solid conceptual foundation for understanding how meaning is negotiated across languages and cultures, and why translators make specific linguistic and cultural choices.

Overall, the chosen methodology allows for a comprehensive exploration of the complex relationship between language, culture, and emotion in translation. It also supports the identification of practical and context-sensitive strategies that can contribute to improving translation quality and effectiveness in intercultural communication.

Results and Discussion

The analysis of the selected texts demonstrates that emotional and cultural factors have a substantial impact on translation outcomes. (Newmark, 1988). One of the most prominent findings is that emotional expressions are often language- and culture-specific, which makes their accurate transfer particularly challenging. Elements such as irony, humor, sarcasm, and emotional intensity

do not always have direct equivalents in the target language. (Baker, 2018). As a result, translators frequently modify or reinterpret these expressions, which can lead to shifts in tone and reader perception. In some cases, the emotional depth of the original text is reduced, while in others it is unintentionally exaggerated. (Katan, 2014).

Cultural references also emerged as a major source of difficulty. Idiomatic expressions, metaphors, and culturally bound concepts often require more than literal translation. (Venuti, 1995) For instance, idioms rooted in everyday life or historical experience may lose their meaning when translated word-for-word. In such cases, translators tend to replace them with culturally similar expressions in the target language or provide approximate equivalents. However, this process can alter the original cultural context and reduce authenticity.

The study identified three main strategies used by translators to address these challenges: domestication, foreignization, and cultural adaptation. Domestication was commonly used in non-literary texts to ensure clarity and accessibility for the target audience. Foreignization, on the other hand, was more frequently observed in literary texts where preserving cultural uniqueness is important. Cultural adaptation appeared as a flexible strategy, particularly when direct equivalence was not possible.

The findings suggest that there is no single optimal strategy for all translation situations. Instead, the choice depends on factors such as text type, target audience, and translation purpose. A balanced and context-sensitive approach is therefore essential to maintain both emotional impact and cultural meaning in translation.

Conclusion

The present study has demonstrated that emotional and cultural differences play a decisive role in shaping translation processes and outcomes. Translation is not limited to the accurate transfer of linguistic units; rather, it involves the interpretation and reconstruction of meaning within a different cultural and emotional framework. The findings reveal that emotional expressions and culturally bound elements often resist direct equivalence, which creates challenges for translators in preserving both meaning and effect. (Katan, 2014).

It has been shown that difficulties arise particularly in conveying emotional tone, stylistic nuance, and implicit cultural references. These challenges frequently lead to shifts in meaning, tone, or reader response in the target text. At the same time, the study confirms that translators actively employ various strategies—such as domestication, foreignization, and cultural adaptation—to manage these issues. Each of these strategies offers certain advantages, but none can fully resolve all translation problems on its own. (Baker, 2018)

Therefore, the research highlights the importance of a flexible and context-sensitive approach to translation. Translators must consider the purpose of the text, the expectations of the target audience, and the cultural distance between languages when making decisions. In addition to strong linguistic competence, intercultural awareness and emotional sensitivity are essential skills for achieving high-quality translation (Nida, 1964).

In conclusion, this study contributes to a deeper understanding of translation as a multidimensional and dynamic process. It emphasizes the need to integrate cultural and emotional considerations into both translation practice and translator training, particularly within the broader field of applied linguistics and intercultural communication.

CHALLENGES IN TRANSLATING AZERBAIJANI IDIOMS INTO ENGLISH: CULTURAL AND LINGUISTIC BARRIERS

Gulay Sardar HASANOVA

Bachelor's student, Department of Humanities, Mingachevir State University

E-mail: hsnovagulay17@gmail.com

ORCID ID: [0009-0000-7385-315X](https://orcid.org/0009-0000-7385-315X)

Abstract: This study provides a comprehensive investigation into the complexities and multifaceted challenges involved in translating Azerbaijani idiomatic expressions into the English language. Idioms, as unique linguistic phenomena, are deeply embedded in a nation's historical, social, and cultural identity, making their transfer between structurally and culturally diverse languages a highly demanding task. The primary objective of this research is to identify the specific linguistic and cultural barriers that frequently lead to significant meaning loss or semantic distortion during the translation process. By employing a qualitative and comparative-descriptive methodology, the study analyzes a variety of Azerbaijani idioms, ranging from somatisms to those reflecting traditional lifestyles. The research evaluates the effectiveness of various translation strategies, including literal translation, functional equivalence, and paraphrasing, based on established linguistic theories. The findings emphasize that literal translation is generally ineffective for idiomatic units, as it fails to convey the underlying metaphorical sense. Instead, the results suggest that a translator must function as a cultural mediator, prioritizing functional equivalence and cultural substitution to ensure that the communicative intent and emotional resonance of the original text are preserved. Ultimately, this study highlights the necessity for deep cultural awareness and a flexible approach to linguistic adaptation in the field of intercultural communication and translation studies.

Keywords: Translation, Azerbaijani idioms, Cultural barriers, Linguistic barriers, Functional equivalence.

AZƏRBAYCAN İDİOMLARININ İNGİLİS DİLİNƏ TƏRCÜMƏSİNDƏ ÇƏTİNLİKLƏR: MƏDƏNİ VƏ LİNGVİSTİK MANEƏLƏR

Güləy Sərdar HƏSƏNOVA

Bakalavr tələbəsi, Humanitar fənnlər kafedrası, Mingəçevir Dövlət Universiteti

Xülasə: Bu tədqiqat Azərbaycan frazeoloji birləşmələrinin ingilis dilinə tərcüməsi zamanı ortaya çıxan mürəkkəbliklərin və çoxşaxəli çətinliklərin hərtərəfli araşdırılmasını təqdim edir. İdiomlar, unikal linqvistik fenomenlər kimi, xalqın tarixi, sosial və mədəni kimliyinə dərinlən bağlıdır, bu da onları struktur və mədəni baxımdan fərqli dillər arasında keçidini olduqca çətin bir vəzifəyə çevirir. Tədqiqatın əsas məqsədi, tərcümə prosesində tez-tez əhəmiyyətli məna itkisinə və ya semantik təhrifə səbəb olan spesifik linqvistik və mədəni maneələri müəyyən etməkdir. Keyfiyyətli və müqayisəli-təsviri metodologiyadan istifadə edərək, tədqiqatda somatizmlərdən tutmuş ənənəvi həyat tərzini əks etdirən müxtəlif Azərbaycan idiomları təhlil edilir. Araşdırmada tanınmış dilçilik nəzəriyyələrinə əsaslanaraq hərfi tərcümə, funksional ekvivalentlik və parafraza kimi müxtəlif tərcümə strategiyalarının effektivliyi qiymətləndirilir. Tədqiqatın nəticələri vurğulayır ki, hərfi tərcümə frazeoloji vahidlər üçün ümumiyyətlə qeyri-effektivdir, çünki o, ifadənin altında yatan məcazi mənanı ötürə bilmir. Bunun əvəzinə, nəticələr göstərir ki, tərcüməçi orijinal mətnin kommunikativ məqsədini və emosional təsirini qorumaq üçün funksional ekvivalentliyə və mədəni əvəzləməyə üstünlük verərək mədəni vasitəçi kimi çıxış etməlidir. Yekun olaraq, bu tədqiqat mədəniyyətlərarası kommunikasiya və tərcüməşünaslıq sahəsində dərin mədəni məlumatlılığın və linqvistik adaptasiyaya çevik yanaşmanın zəruriliyini ön plana çıxarır.

Introduction

Idioms represent the most conservative and culturally dense layer of a language's lexicon. As noted by Baker (2018), an idiom is not merely a linguistic unit but a "frozen" conceptual metaphor that encapsulates a nation's historical experience. In the Azerbaijani context, idiomatic expressions function as a "national-cultural code." They are deeply intertwined with the Azerbaijani "worldview" (*dünya mənzərəsi*), reflecting the transition from a nomadic, pastoral lifestyle to a sedentary, urbanized society.

The primary challenge in translating between Azerbaijani and English lies in their fundamental typological divergence. Azerbaijani, as an agglutinative Turkic language, relies on suffixal structures to build complex semantic layers within a single word, whereas English, an analytic Indo-European language, utilizes word order and auxiliary elements. This structural gap, combined with what Newmark (1988) describes as "cultural distance," makes the search for formal equivalence nearly impossible. When an Azerbaijani speaker says "*Can qoymaq*" (to put one's soul into something), they are utilizing the concept of "**Can**"—a metaphysical term that lacks a one-to-one equivalent in Western thought, encompassing soul, life, energy, and physical presence simultaneously. Therefore, the translator's task shifts from "decoding words" to "decoding cultures," where the goal is to bridge the gap between the Eastern collective identity and the Western individualistic linguistic framework.

According to Baker (2018), the main problem in translating idioms is twofold: the ability to recognize and interpret an idiom correctly, and the subsequent challenge of finding a suitable target language (TL) equivalent that carries the same emotive and stylistic force. In Azerbaijani linguistics, idioms are often described as the "**memory of the language**" or "national treasures." They carry a specific "national coloring" (*milli kolorid*) that is deeply rooted in the Azerbaijani worldview, pastoral history, and traditional values. As Newmark (1988) suggests, the more an

expression is tied to the ecological, social, or religious fabric of a specific culture, the more difficult it becomes to find a functional substitute.

Furthermore, the translation of idioms is not merely a linguistic transfer but a **cultural mediation**. Azerbaijani idioms frequently utilize somatisms (body parts) and metaphors involving local fauna or flora that do not have direct parallels in the English-speaking world. For instance, the concept of "can" (soul/breath/spirit) in Azerbaijani idioms represents a complex psychological state that often evaporates during literal translation.

The relevance of this study stems from the increasing need for high-quality literary and diplomatic translation between Azerbaijan and the West. A failure to translate idioms effectively leads to "semantic void" or "cultural alienation," where the reader understands the words but misses the intended sentiment. This study, therefore, aims to analyze these multifaceted difficulties through a comparative lens and propose a hierarchical model of solutions-ranging from functional equivalence to paraphrasing-for translators working between these two distinct cultural spheres.

Methodology and Materials

This research utilizes a qualitative, comparative-descriptive methodology designed to evaluate the limits of translatability. To ensure a rigorous analysis, the study draws upon a corpus of 100 Azerbaijani idioms categorized into three primary thematic groups:

1. Somatisms: Idioms involving body parts (e.g., *baş, göz, ürək, ayaq*).
2. Zoonyms: Expressions involving animals that reflect local pastoral history (e.g., *dəvə, qoyun, at*).
3. Ethno-cultural Realia: Idioms rooted in traditional Azerbaijani customs, cuisine, and social hierarchy.

The analytical process follows a three-tier evaluation model based on Nida's (1964) theory of dynamic equivalence:

- Identification Phase: Detecting the idiomatic unit and its metaphorical "source" in Azerbaijani.
- Contrastive Analysis: Mapping the Azerbaijani idiom against potential English lexical sets to identify semantic voids or overlaps.
- Strategic Selection: Testing the effectiveness of three specific strategies—Functional Equivalence (finding a matching English idiom), Cultural Substitution (replacing a local metaphor with a target-culture metaphor), and Paraphrasing (descriptive translation). The success of each strategy is measured by its ability to preserve the "illocutionary force"—the intended emotional impact on the target reader.

Results and Discussion

Linguistic barriers in idiomatic translation are often rooted in the **agglutinative nature** of the Azerbaijani language. In Azerbaijani, a single verb root can undergo multiple transformations through suffixation, creating an idiomatic action that English must express through an entire phrase. This often leads to "grammatical overloading" in translation.

According to Mammadov (2021), the difficulty is particularly evident in **verbal idioms**. For instance, the Azerbaijani expression "*Gözü su içməmək*" presents a complex barrier:

- Syntactic Level: The relationship between the noun (*göz* - eye) and the negative verbal form (*içməmək* - not to drink) creates a unique internal logic.

- Semantic Level: A literal English translation ("His eye does not drink water") results in a complete breakdown of communication because the English "mental lexicon" does not associate "eye-drinking" with "distrust."

Furthermore, Veisalli (2022) emphasizes that the valency of words (the way they combine with others) differs significantly. In Azerbaijani, the word "*baş*" (head) can be combined with over 50 different verbs to create distinct meanings (e.g., *baş çıxarmaq*, *baş düşmək*, *baş aparmaq*). In English, the word "head" has a much narrower idiomatic range. This "asymmetry of collocations" means that a translator cannot simply swap one word for another; they must restructure the entire sentence to accommodate the English language's preference for analytic clarity over metaphorical synthesis.

Cultural Barriers Cultural barriers are more profound. They involve the "worldview" of the people. In Azerbaijani culture, certain concepts like "spirit" (*can*) or "head" (*baş*) are used in ways that do not overlap with English concepts (Veisalli, 2022). *Example*: "*Canına azatlıq!*" Literal translation: "Freedom to your soul!" Cultural equivalent: "Bless you!" (after sneezing) or simply a congratulatory remark depending on context. The loss of the word "soul/spirit" (*can*) in English illustrates a cultural gap where the target language focuses on a different aspect of the situation.

Strategies for Restoring Meaning The goal of translating idioms is to transfer the "emotional load" and "communicative intent" rather than the literal words. Deep and Chen (2025) suggest that modern translation is a "re-creative process." To restore meaning in English, the following strategies are employed:

Functional Equivalence

This involves finding an English idiom that serves the same purpose, even if the imagery differs.

Example: "*Dəvə dəlləklik edir*" (The camel is acting as a barber) refers to clumsy, inappropriate behavior. Its English functional equivalent is "*A bull in a china shop*." The core meaning is preserved through a different cultural animal metaphor.

Cultural Substitution

The translator replaces a source-culture reality with a target-culture image that evokes the same feeling. Newmark (1988) argues this is the most effective way to produce an equivalent effect on the reader.

Example: For idioms involving specific local traditions, the translator might use an English idiomatic expression related to Western social norms to ensure the reader "feels" the context immediately.

Paraphrasing and Descriptive Translation

When no equivalent idiom exists, the translator must explain the meaning. While the metaphor is lost, the semantic core is saved.

Example: "*Burnunun ucu göynəmək*" expresses a sharp, stinging sensation of longing. In English, this is best restored through a descriptive phrase like "*To feel a sharp pang of nostalgia*" or "*To yearn deeply for someone*."

Conclusion

The systematic investigation into the translation of Azerbaijani idioms into English reveals that this process is far more than a simple linguistic exchange; it is a complex act of cultural negotiation. Throughout this study, it has been demonstrated that idioms serve as the primary repositories of a nation's historical and social memory, making them uniquely resistant to literal

translation. The structural divergence between the agglutinative nature of Azerbaijani and the analytic framework of English creates significant morphosyntactic barriers that a translator must navigate with precision. One of the most critical findings of this research is that literal translation is almost universally ineffective for idiomatic units, as it leads to a complete breakdown of the metaphorical internal logic.

Furthermore, the study highlights that cultural barriers, particularly those involving somatisms and local realia, present the most formidable challenges to achieving semantic transparency. The concept of "national coloring" is deeply embedded in Azerbaijani idioms, requiring the translator to possess not only linguistic proficiency but also profound cultural empathy. As the results suggest, the successful restoration of meaning often necessitates a departure from the source text's formal structure in favor of its communicative intent. The application of functional equivalence has proven to be the most successful strategy for maintaining the emotional resonance of the original expression. However, in cases where no direct equivalent exists, the strategic use of paraphrasing and descriptive translation ensures that the cognitive core of the message is not lost.

The research also underscores the role of the translator as a cultural mediator who must balance the preservation of the source culture's "flavor" with the linguistic expectations of the target audience. It is concluded that the "semantic void" created by cultural gaps can be bridged through a hierarchical approach to translation strategies. This study emphasizes that deep cultural awareness is a non-negotiable prerequisite for anyone engaged in intercultural communication between Azerbaijan and the West. The findings suggest that future pedagogical frameworks for translation studies should place a greater emphasis on idiomatic competence and cognitive linguistics.

Moreover, as the field of translation evolves, the integration of context-aware methodologies becomes essential to avoid "cultural alienation" in translated texts. The analysis of idioms like "*canına azatlıq*" or "*gözü su içməmək*" serves as a clear indicator that language is a living organism shaped by its environment. Ultimately, this research contributes to the broader field of Turkic-English translation by providing a structured model for overcoming linguistic and cultural barriers. The necessity for a flexible, re-creative approach to translation is perhaps the most vital takeaway from this investigation. By prioritizing the "spirit" of the idiom over its "letter," translators can ensure that the beauty and wisdom of Azerbaijani oral traditions are accurately conveyed to the global community. In conclusion, the successful translation of idioms remains a benchmark for the highest level of linguistic mastery and intercultural understanding.

CHALLENGES IN TRANSLATING PHRASEOLOGICAL UNITS WITH GENDER COMPONENTS IN THE AGE OF ARTIFICIAL INTELLIGENCE

Gunel Elmir MAMMADOVA

PhD Candidate, teacher, Department of Foreign Languages, Lankaran State University

E-mail: Gunel2017m@gmail.com

ORCID ID: [0000-0002-2168-6350](https://orcid.org/0000-0002-2168-6350)

Abstract: Phraseological units containing gender components represent one of the most culturally embedded and linguistically complex layers of any language. The emergence of artificial intelligence-driven translation tools has transformed the landscape of translation practice, yet the rendering of gender-marked idioms and fixed expressions remains a persistent challenge. This article examines the specific difficulties that arise when translating gender-component phraseological units using AI-assisted tools, with a focus on English-Azerbaijani and English-Turkish language pairs. Drawing on corpus examples and a comparative analysis of outputs from leading AI translation platforms, the study identifies recurrent error patterns including semantic distortion, cultural loss, gender-neutral rendering of gendered expressions, and the reinforcement of stereotypical connotations. The article further discusses theoretical perspectives from feminist translation studies and cultural linguistics that help frame these challenges. It concludes that while AI tools offer speed and accessibility, they lack the socio-cultural competence required to handle the pragmatic and ideological dimensions of gender phraseology accurately. Human intervention and post-editing remain indispensable for high-quality translation of such units. The findings contribute to ongoing debates on the role of AI in literary and cultural translation.

Introduction

Language is not gender-neutral. Across cultures, idioms, proverbs, and fixed expressions encode social attitudes toward gender, reflecting historical power dynamics, cultural norms, and

ideological positions. Phraseological units — conventionalized multi-word expressions with holistic meaning — are particularly saturated with gender ideology. Expressions such as "the weaker sex," "man up," or their Azerbaijani counterparts embed implicit assumptions about masculinity and femininity that are difficult to transfer across languages without cultural loss or distortion.

The rapid proliferation of artificial intelligence (AI) translation tools - including neural machine translation (NMT) systems such as Google Translate, DeepL, and large language model-based assistants — has prompted both optimism and skepticism in translation studies. These tools excel at processing high-frequency linguistic patterns but consistently underperform on culturally dense, idiomatic, and ideologically charged language (Koehn & Knowles, 2017). Gender-marked phraseological units sit at precisely this intersection of culture, ideology, and linguistic complexity.

This article investigates the specific challenges AI translation tools face when rendering phraseological units with gender components, using English-Azerbaijani and English-Turkish translation as primary case studies. It draws on feminist translation theory, cultural linguistics, and empirical corpus data to diagnose recurrent failure modes and suggest directions for improvement.

Materials and Methods

The study employs a mixed-method approach combining corpus analysis, comparative translation assessment, and theoretical review. A corpus of 120 phraseological units with identifiable gender components was compiled from English, Azerbaijani, and Turkish lexicographic sources, including Merriam-Webster's Dictionary of Idioms, the Azerbaijani Phraseological Dictionary (Hüseynzadə, 2003), and the Turkish Idioms Dictionary (Aksoy, 2014). Units were selected to represent a range of gender categories: female-marked, male-marked, neutral-but-gendered, and stereotypically loaded expressions.

Each unit was submitted to three AI translation platforms - Google Translate, DeepL, and ChatGPT (GPT-4) - for translation from English into Azerbaijani and Turkish. The outputs were evaluated by two bilingual translation experts using a rubric adapted from Nida's dynamic equivalence framework (Nida & Taber, 1969) and Venuti's concepts of foreignization and domestication (Venuti, 1995). Error categories were coded inductively and then grouped into four major types: semantic distortion, cultural erasure, gender neutralization, and stereotype reinforcement.

Discussion

Semantic Distortion in AI Outputs

Semantic distortion was the most frequently observed error type, occurring in 47% of analyzed translations. AI systems consistently attempted literal or near-literal rendering of gender-marked idioms, producing semantically incoherent or misleading target-language outputs. For instance, the English idiom "an old wives' tale" - meaning a superstitious or unfounded belief - was rendered by Google Translate into Azerbaijani as "qoca arvadların nağılı" (literally, "the story of old women"), losing the idiomatic meaning entirely. The gendered and culturally pejorative dimension of the source expression - which implicitly trivializes knowledge attributed to women - was similarly lost.

Such failures illustrate a fundamental limitation of current NMT architectures: their training on parallel corpora optimizes for surface-level correspondence rather than pragmatic and cultural equivalence (Bahdanau et al., 2015). Phraseological meaning is holistic and non-compositional, meaning the semantic output cannot be derived from the sum of its parts, a principle that gradient-based learning models struggle to internalize.

Cultural Erasure and the Loss of Gender Ideology

Cultural erasure was observed in 38% of cases, particularly in translations involving culturally specific gender roles. The Azerbaijani expression "qız kimi utanmaq" (to be shy/modest like a girl) encodes a specific cultural expectation of female comportment. When translated into English by AI tools, it was rendered variously as "to feel shy," "to be embarrassed," and "to blush" - all semantically adjacent but culturally stripped of the gender ideology embedded in the original. The feminist translation theory principle that translation involves not just language transfer but ideological negotiation (Simon, 1996) is illustrated acutely here.

Conversely, English gender-marked idioms translated into Azerbaijani or Turkish lost their source-cultural connotations and absorbed the target culture's gender norms, a process Venuti (1995) terms domestication. While domestication can aid reader comprehension, when applied automatically by AI without critical awareness, it risks erasing culturally significant feminist or critical-gendered content in the source text.

Gender Neutralization

Gender neutralization - the rendering of a specifically gendered expression in a gender-neutral form - was observed in 29% of cases. This tendency was especially pronounced in GPT-4 outputs, likely reflecting the model's training adjustments to reduce gender bias. For example, the English expression "man-made" was consistently translated into Azerbaijani as "süni" (artificial) rather than "insan tərəfindən yaradılmış" or a gendered equivalent, neutralizing the masculine default embedded in the source. While this may be considered a progressive translation choice in some contexts, it constitutes inaccuracy in technical or historical texts where the gender specificity of the source is meaningful.

This finding aligns with Savoldi et al. (2021), who demonstrate that modern NMT systems exhibit systematic gender biases that lead to both under- and over-representation of gendered forms, depending on training data composition.

Stereotype Reinforcement

Stereotype reinforcement - where AI translations intensified or added gendered stereotyping not present or less salient in the source - was documented in 19% of cases. This occurred most frequently when AI tools selected target-language equivalents from culturally conservative registers. The Turkish idiom "erkek gibi konuşmak" (to speak like a man, meaning to speak decisively), when back-translated from AI Azerbaijani output, was rendered in a way that amplified the implied gender hierarchy, associating decisiveness exclusively with masculine identity. Such outputs are consistent with documented gender biases in large language models trained on unbalanced corpora (Bolukbasi et al., 2016).

Conclusion

This study has demonstrated that AI translation tools - despite remarkable advances in general-purpose translation - remain substantially limited in their handling of gender-component phraseological units. The four identified failure modes (semantic distortion, cultural erasure, gender neutralization, and stereotype reinforcement) are not incidental but reflect structural deficiencies: the absence of socio-cultural competence, ideological awareness, and pragmatic sensitivity in current AI architectures.

From a practical standpoint, these findings underscore the continued necessity of human translators and post-editors for texts dense in cultural and gendered idiomaticity. From a theoretical

standpoint, they call for the integration of feminist translation theory and cultural linguistics into the evaluation frameworks used to assess AI translation quality.

Future research should explore the potential of culturally augmented training data and phraseological databases to improve AI performance on gender-marked fixed expressions. The development of domain-specific post-editing protocols for gender-sensitive texts also represents a valuable practical research direction.

Xülasə: Folklor materiallarını tədqiqat obyektinə çevirən dilçilər və ədəbiyyatşünaslar çox vaxt eyni dil ailəsinə və ya eyni dil arealına daxil olan dillər üzərində müqayisəli araşdırmalar aparırlar.

Azərbaycan və ingilis dillərində cümlə quruluşu, söz sırası, leksik və qrammatik sistem, həmçinin üslubi və semantik xüsusiyyətlər bir-birindən əhəmiyyətli dərəcədə fərqlənir. Bu fərqlər xüsusilə folklor

mətnlərində daha aydın şəkildə müşahidə olunur. Lakin bu fərqlərin öyrənilməsi hədəf dilə adekvat mətn yaratmaq və tərcümə prosesində uyğun struktur həlləri tapmaq baxımından mühüm əhəmiyyət kəsb edir.

Azərbaycan folklorunda qəhrəmanlıq, ailə dəyərləri və təbiət motivlərinin üstünlük təşkil etməsi epik əənəninin güclü olması ilə əlaqədardır. Bu xüsusiyyətlər xalqın tarixi yaddaşını və kollektiv kimliyini əks etdirir. Digər tərəfdən, ingilis folklorunda sehr, fantastika və əxlaqi-didaktik məzmun daha geniş yayılmışdır ki, bu da Qərb nağıl əənəsinin simvolik xarakteri ilə bağlıdır. Bu da hər iki dildə mürəkkəb cümlə şəklində olan folklor nümunələrinin təhlilində və tərcüməsində müxtəlif istiqamətləri ortaya qoyur.

Eyni zamanda tərcümə prosesində bu strukturlar müxtəlif sintaktik transformasiyalara məruz qalır. Azərbaycan dilində aqqlütinativ quruluşun mövcudluğu səbəbindən bəzi mürəkkəb cümlə modelləri feili bağlama və feili sifət tərkibləri vasitəsilə ifadə olunur, ingilis dilində isə əlaqələndirmə əsasən bağlayıcı sözlər və bağlayıcı əvəzlilər vasitəsilə həyata keçirilir.

Açar sözlər: mürəkkəb cümlə, folklor, müqayisə, sintaktik quruluş, məna, tərcümə.

COMPARATIVE ANALYSIS OF COMPLEX SENTENCE STRUCTURES IN ENGLISH AND AZERBAIJANI FOLKLORE TEXTS AND TRANSLATION ASPECTS

Jamila Mazahir IBRAHIMOVA

Teacher, Department of Foreign Languages, Lankaran State University

E-mail: c.ibrahimova@lsu.edu.az

ORCID ID: [0009-0004-5182-4525](https://orcid.org/0009-0004-5182-4525)

Abstract: This research investigates the main translation and analysis aspects and direction of the examples from both English and Azerbaijani folklore materials. Linguists and literary critics who turn folklore materials into an object of research often conduct comparative studies on languages belonging to the same language family or the same language area.

Sentence structure, word order, lexical and grammatical system, as well as stylistic and semantic features in Azerbaijani and English languages differ significantly from each other. These differences are especially clearly observed in folklore texts. However, studying these differences is of great importance in terms of creating an adequate text for the target language and finding appropriate structural solutions in the translation process.

The predominance of heroic, family values, and nature motifs in Azerbaijani folklore is due to the strong epic tradition. These features reflect the historical memory and collective identity of the people. On the other hand, magic, fantasy, and moral-didactic content are more widespread in English folklore, which is associated with the symbolic nature of the Western fairy tale tradition. This also reveals different directions in the analysis and translation of folklore examples in the form of complex sentences in both languages.

These structures undergo various syntactic transformations in the translation process. Due to the presence of agglutinative structure in Azerbaijani, some complex sentence models are expressed through verb-adjective and verb-adjective constructions, while in English, coordination is mainly carried out through linking words and linking pronouns.

Key words: complex sentence, folklore, comparison, syntactic structure, meaning, translation.

Introduction

The historical past, culture, and customs of each nation are reflected in its literature. Even nations that do not have written sources for the study of history have examples of oral folk literature-folklore that are passed down from generation to generation, from language to language, and remain in memory and are absorbed into the veins. Here, not only the pearls of word art, literature, and culture of each nation come to mind, but also the language and speech system.

Linguists and writers who take folklore as their research materials often conduct observations and research on languages belonging to the same language area or the same language families. Because comparing related languages serves the purpose of revealing similarities and historicity between them. However, comparative research of languages belonging to different language families can also yield important scientific and practical results. Such research not only reveals structural differences between language systems, but also helps to determine the characteristics of the interlingual communication and translation process. Comparative analysis of Azerbaijani and English languages is also of particular interest in this regard.

A comparative analysis of Azerbaijani and English folklore shows that the themes and motifs of folklore texts in different cultures are closely related to the worldview of those societies. The predominance of heroic, family values, and nature motifs in Azerbaijani folklore is associated with the strength of the epic tradition. These features reflect the historical memory and collective identity of the people. On the other hand, the widespread use of magic, fantasy, and moral lessons in English folklore is explained by the symbolic and didactic character of the Western fairy tale tradition.

The development of folklore in such different directions is explained by the concept of "oikotype" (culturally specific form) put forward by Alan Dundes. Dundes notes that although folklore has universal motifs, it manifests itself in different forms in each culture (Alan Dundes, 2020). For example, "Cindrella", "Золушка", "The Tale of Goychek Fatima", "Kül kedisi", etc. belonging to different peoples and periods are similar in terms of content. Although they are expressed in different languages, the similarity in content indicates that there are the same regularities in sentence structures and style of expression.

In English folklore, complex sentences used in sentence structures provide artistic-expressive style and semantics. In order to reveal the similarities and differences of complex sentence structures used in folklore texts in Azerbaijani and English, it is necessary to conduct a comparative analysis based on specific text examples. In this regard, the examples allow us to trace the syntactic features of both languages in parallel.

Methodology and Materials

The idea that syntactic structure in folklore texts not only carries semantic meaning, but also creates a phonetic and rhythmic effect is widely accepted in modern linguistics and folklore studies. This approach is justified, in particular, by Roman Jakobson's theory of the functions of language. According to Jakobson's concept of "poetic function", attention in speech is focused not only on the content, but also on the form of expression; that is, the selection and arrangement of language units (including syntactic structures) creates a special rhythmic and phonetic effect. (Roman Jakobson . 1960 p.70) In this regard, parallel constructions, repetitions and complex sentence models in folklore texts have the function not only of transmitting information, but also of creating an aesthetic effect.

This idea is also confirmed by the studies conducted by Milman Parry and Albert Lord, the founders of the theory of oral tradition. According to their research, folklore texts (especially epics) are built on formulas, fixed expressions and syntactic parallelisms. (Albert Lord, 1960 p.45), These elements not only serve to build the content, but also form a rhythmic and acoustic structure, making it easier to remember and transmit the text orally.

For example, let's take the English folklore tale "Jack and the Beanstalk": "Back goes Jack home, and as he hadn't gone very far, it wasn't dusk by the time he got to his door." (Joseph Jacobs)

- a complex sentence consists of 4 simple sentences. The means of connecting the sentences are intonation and conjunctions. The simple sentence "...and as he hadn't gone very far..." is connected to the first part of the independent complex sentence, which also includes the first sentence, with the conjunction "and", and at the same time it is connected to the second part of the subordinate complex sentence, which forms the second part of the sentence, with the conjunction "as". Here, the "as" conjunction can be thought of in two meanings in terms of the meaning it expresses: the temporal meaning given by the "When" conjunction and the causal meaning given by the "because" conjunction. Also, the sentence "...it wasn't dusk by the time he got to his door.", which constitutes the second part of the sentence, is itself a complex sentence in terms of its structure and its constituent parts are connected by the "by the time" conjunction, which provides a temporal relationship. According to its structure, this sentence can be considered as a subordinate complex sentence. In Azerbaijani, its meaning is – –“Cek geri evə qayıtdı və o, çox uzağa getmədiyi üçün evinə çatanda hələ hava qaralmamışdı.” “..as he hadn't gone very far...” → “çox uzağa getmədiyi üçün” is given as a causal branch sentence, “...it wasn't dusk by the time he got to his door.” → “because he hadn't gone very far.” is given as a time + consequent branch sentence.

Let us pay attention to the analysis of the example taken from the Azerbaijani folklore example “The Tale of Malikmammad”. “...Durub ağacın dalında gizləndi ki, görsün bu nədir. Bir vaxt gördü ki, bir div gəlir, boyu minarə kimi, adam baxanda bağı yarılr, elə bilirsən, bir dağ qopub gəlir.” (9, p. 14) Although the sentence presented here is also an unsubordinated complex sentence composed of complex and simple sentences connected by a sequence relationship, it contains a complete branch sentence connected with the conjunction “ki” (Once he saw a giant coming..). In the tale “Jack and the Magic Bean Stalk”, a similar event (meeting with a mythical hero) is shown in the sentence “When Jack climbed the beanstalk, he saw a giant who lived in a castle.” (Jacobs J. 2003) The sentence is connected with the time conjunction “when”, and a definite clause is also used, which is combined with the conjunction “who”. Here, the conjunction “who” explains the omitted definition by describing the giant as living in the castle. In the Azerbaijani translation, “Cek lobyə saplağına qalxanda, qalada yaşayan bir divi (nəhəng) gördü.”, the complex sentence that means time in English is expressed with a verb conjunction, and the second part, given in the form of a definite clause, is translated with a verb-adjective structure.

“But aren't you the youngster who came here once before? Do you know, that very day, my man missed one of his bags of gold.” (Jacobs J. 2003) - The first, structurally simple part of the sentence is a simple sentence used in the form of a question, and the second part is a definite clause closed with the pronoun “who”. In the Azerbaijani translation, the clause expressed by the definite clause is translated with a verb-adjective structure as “Bəs sən əvvəl bir dəfə buraya gələn o cavan deyilsən? Bilirsənmi, elə həmin gün mənim ərim qızıl dolu kisələrindən birini itirmişdi.”

Let's pay attention to the structural differences and translation aspects of proverbs, which are pearls of oral folk literature: There are both similarities and differences between Azerbaijani and English proverbs. These mainly arise from the common or different life experiences of the peoples.

“Don't trouble trouble until trouble troubles you.” (10; p. 8) – the proverb is used with the conjunction “until” meaning the time of action or event. While one side of the complex sentence is used in the negative form of an imperative sentence, the second side is expressed by a structurally simple sentence in the present simple tense. In Azerbaijani translation, it can be given as “Gəlməmiş bəlanın qabağına çıxma” or “Qaşınmyan yerdən qan çıxarma.” The proverb “A wise man changes his mind, a fool never will” is translated into our language as “Ağıllı səhvindən dərs

alar, nadan bildiyini doğru sanar.” This sentence is simply connected with intonation. The sentence that makes up the first part of the complex sentence contains the information processed in the present simple tense. On the other hand, only the auxiliary verb is used, which ensures the thought of the corresponding verb. Equivalently, “The wise learns from his mistake, the ignorant believes that what he knows is true.” The translation, preserving parataxis, is more suitable for the last option. Thus, this concept (parataxis) is a style of expression consisting of the use of syntactic units alongside each other, the subordination of one sentence to another is not reflected by grammatical-formal means. (Adilov M. et. Baku-2020. Pg. 426) The components of the presented subordinate complex sentence are not connected to each other by syntactic elements. “He who would catch fish must not mind getting wet.” - the proverb is a branch sentence in the main clause. The composition of this complex sentence consists of two simple sentences. The sentences “Who would catch fish” and “He must not mind getting wet.” are connected by a connecting word. The Azerbaijani equivalent can be given as “Könlü balıq istəyənin quyruğu suda gərək.” Although it is used in a complex sentence in English, the Azerbaijani translation is “Kim balıq tutacaqsa, islanmağa etiraz etməməlidir.”

Discussion

In order to create an adequate text for the target language, the original language is presented as a source and linguistic regularities are taken as a basis. The similarity in English and Azerbaijani folklore materials may be insignificant, but for learning and practical purposes, even in the most difficult moments, finding an equivalent is essential. Naturally, the difference in sentence structures is manifested in all types of folklore texts in both languages.

“Acığından qan Koroğlunun beyninə vurmuşdu, gözləri qıp-qırmızı qızarmışdı.” (“Koroglu” epic, Baku-2005, p.138) - the sentence is a complex sentence with a coordination clause related to clarification, belonging to Azerbaijani folklore. Although it is connected through intonation, the meaning of clarification is felt. The grammatical basis is involved on both sides. Let's compare the sentence of the same type in terms of structure with the idea that the negative hero "Grendal" in the epic "Beowulf" in Old English literature is described in anger and hunger: "His eyes burned with gruesome light, and a hideous hunger seized his soul." (Beowulf - p.15) Here, the distributive relationship is described and this relationship is provided by the conjunction "and". Although Koroghlu is a positive literary hero who makes khans and pashas bleed, and Grendal is a negative monster, in folklore studies such moments of self-destruction of both characters are considered motifs typical of ancient epic epics. The theme of Robin Hood ballads standing with the people and making the oppressive representatives of the upper class bleed has similarities with the Koroghlu epic. Among them, in the ballad “Robin Hood and Guy of Gisbourne”, the feelings experienced by Robin Hood during his merciless battle with his opponent can be compared to this state of Koroghlu: “Robin was reach and wroth, and out his bright sword he drew.” —“Robin tamamilə qəzəb və hiddət içərisində idi, və parıldayan qılıncını qınından çəkdi.” Although the Azerbaijani translation uses two news items related to the same subject, the English sentence has a complex structure. That is, while there is a subordination relationship between the parties, there is a non-subordination relationship between the two main clauses. The sentence “Robin was reach and wroth” means “to reach the peak of anger, to become very angry”, where “wroth” – translated from Old English – means “anger, anger, rage” and is followed by the conjunction “and” as a continuation of the corresponding sentence, “out his bright sword he drew.” connected the sentence

with the previous sentence. Inversion is allowed in the structure of the last sentence. This expression describes the hero drawing his shining sword in anger. (11; p.33)

“Koroglu was walking on the Kirat, with a saz on his shoulder, and behold, Mahbub Khanum was still looking with a cold smile.”- the sentence is from the “Koroglu’s Journey to Rome” branch of the “Koroglu” epic. Here, the modal word “işə bax ki” is used among the connected sentences. There are semantic relations that express time and style. (“Koroglu” epic, Baku-2005, p.146) Let us pay attention to a sentence with the same structure and motif used in the episode “Sir Gawain and the Green Knight” in the “Robin Hood Ballads”: “Sir Gawain rode forth in shining armor, his shield gleaming, as the cold wind whispered through the hills.”– (12; p.34) “Sir Gawain rode forth in shining armor, his shield gleaming, as the cold wind whispered through the hills.” “Ser Qavayn parlayan zirehdə işıldayan qalxanla atını dördnala çapırdı ki, soyuq külək də təpələrdən pıçıldayırdı” The simple sentence used on the first side of the compound sentence is connected to the sentences used on the second side by the tense conjunction "as".

Conclusion

Thus, the mentioned examples show that practically the structure of the examples in both languages and the connection of structural units serve for a more complete, emotional and artistic expression of the theme and content of the ancient folklore examples. Also, the complex sentence structure in folklore materials serves for the chain presentation of events and the increase of imagery. Since the Azerbaijani language is an agglutinative language, one side of the complex sentences translated with suffixes verb conjugation and verb-adjective compounds is expressed in the form of a simple sentence in English. In English, this structure is limited and connecting pronouns and words are used in the connection. While the word order in Azerbaijani is free, it is fixed in English.

BEYOND LINGUISTIC PROFICIENCY: CONTEMPORARY FRAMEWORKS AND DIGITAL SOLUTIONS FOR ASSESSING INTERCULTURAL COMPETENCE IN EFL HIGHER EDUCATION

Aynur Ph. MIRIYEVA

Lecturer, Foreign Languages Center, Azerbaijan State Pedagogical University

E-mail: miriyeva575@gmail.com

ORCID ID: 0000-0003-3155-464X

Abstract: The rapid globalization of the 21st century has redefined the objectives of English Language Teaching (EFL), shifting the focus from purely linguistic proficiency to the development of Intercultural Communicative Competence (ICC). However, assessing ICC remains a significant challenge due to its multi-dimensional and subjective nature. This article provides a comprehensive analysis of the theoretical frameworks of ICC, primarily focusing on Michael Byram's Multimodal Model and Darla Deardorff's Process Model. It examines the pedagogical barriers to effective assessment, such as the lack of standardized metrics and the dominance of traditional testing. The paper proposes contemporary, evidence-based solutions including digital portfolios, scenario-based evaluations, and the integration of Natural Language Processing (NLP) tools for monitoring student progress. The study concludes that a holistic, formative approach is essential for preparing students to function as effective "intercultural speakers" in a globalized academic environment.

Keywords: intercultural communicative competence (ICC), EFL pedagogy, formative assessment, Byram's model, critical cultural awareness, digital portfolios.

Xülasə: Müasir qloballaşma dövründə ingilis dilinin xarici dil kimi tədrisinin (EFL) əsas hədəfi yalnız linqvistik bacarıqların ötürülməsi deyil, həm də tələbələrdə mədəniyyətlərarası kommunikativ səriştənin (MKS) formalaşdırılmasıdır. Lakin bu səriştənin qiymətləndirilməsi onun çoxşaxəli və subyektiv təbiəti səbəbindən pedaqogikanın ən çətin məsələlərindən biri olaraq qalır. Təqdim olunan məqalədə MKS-in qiymətləndirilməsi sahəsində mövcud olan nəzəri çərçivələr, xüsusilə Maykl Bayramın Multimodal Modeli və Darla Deardorfun Proses Modeli dərinlən təhlil edilir. Tədqiqatda ənənəvi test üsullarının çatışmazlıqları və mədəni fərqiəndəlik kimi qeyri-maddi bacarıqların ölçülməsi zamanı yaranan pedaqoji maneələr araşdırılır. Məqalə bu problemlərin həlli üçün rəqəmsal portfeliolar, ssenari əsaslı qiymətləndirmə (SBA) və tələbə inkişafının monitorinqi üçün süni intellekt (NLP) alətlərinin tətbiqi kimi müasir və elmi əsaslı həll yollarını təklif edir. Nəticədə qeyd olunur ki, tələbələrə qloballaşan akademik mühitdə effektiv "mədəniyyətlərarası natiq" kimi hazırlamaq üçün mütləq formativ və holistik qiymətləndirmə yanaşmalarından istifadə edilməlidir.

Açar sözlər: mədəniyyətlərarası kommunikativ səriştə (MKS), EFL pedaqogikası, formativ qiymətləndirmə, Bayram modeli, tənqidi mədəni məlumatlılıq, rəqəmsal portfeliolar.

Introduction

The transition from “communicative competence,” as famously conceptualized by Hymes (1972), to “intercultural communicative competence” (ICC) represents a profound paradigm shift in foreign language education. In the traditional English as a Foreign Language (EFL) classroom, pedagogical success was historically measured by the “native-speaker ideal” - a student's ability to mimic the linguistic, syntactic, and phonological norms of a native speaker (Chomsky, 1965). However, as English has evolved into a lingua franca (ELF), the socio-linguistic landscape has shifted. The primary goal is no longer mere linguistic perfection but the ability to mediate between diverse cultural perspectives (Seidlhofer, 2011).

Intercultural Communicative Competence is defined as the complex of abilities, knowledge, and attitudes needed to perform effectively and appropriately when interacting with those who are linguistically and culturally different from oneself (Byram, 1997). In the context of modern higher education, the classroom must serve as a “third space” (Bhabha, 1994), where learners negotiate their own cultural identity alongside that of the target language. This requires more than just learning vocabulary; it demands a cognitive restructuring that allows for empathy, cultural decentering, and the suspension of ethnocentric judgments.

Despite the universal inclusion of ICC in global educational standards, such as the Common European Framework of Reference for Languages (CEFR), a significant “assessment gap” persists. While educators have robust tools to evaluate grammar and vocabulary, the measurement of “interculturality” - the internal growth of cultural awareness - remains elusive and under-researched. Many practitioners still rely on outdated binary testing methods that fail to capture the fluid and developmental nature of intercultural skills (Deardorff, 2006). This paper aims to explore this gap by reviewing contemporary theoretical literature, analyzing the limitations of standardized testing, and proposing a comprehensive didactic model tailored for the 21st-century academic environment. By synthesizing the core tenets of Byram’s and Deardorff’s models, this study seeks to provide actionable contemporary solutions for the objective evaluation of subjective cultural growth.

Theoretical Framework: The Evolution of ICC Models

To develop a robust assessment mechanism for Intercultural Communicative Competence (ICC), it is imperative to deconstruct the theoretical evolution of the concept. The transition from linguistic-centric models to socio-cognitive frameworks reflects the growing complexity of global communication.

Byram’s Multimodal Model: The Five Savoirs

Michael Byram’s (1997) model remains the most influential framework for ICC, particularly within the European educational space. He argues that ICC is not a single skill but a constellation of five interdependent dimensions, often referred to as the “Five Savoirs.”

Savoir être (Attitudes): This is the foundation of interculturality. It involves “curiosity and openness, readiness to suspend disbelief about other cultures and belief about one's own” (Byram, 1997, p. 34). Assessment at this level focuses on the learner's ability to decenter—to step outside their own primary cultural framework.

Savoirs (Knowledge): This dimension encompasses knowledge of social groups and their products and practices in one's own and in one's interlocutor's country. Crucially, it includes knowledge of the processes of societal and individual interaction.

Savoir comprendre (Skills of interpreting and relating): This is the ability to interpret a document or event from another culture, to explain it and relate it to documents or events from one's own. In an assessment context, this is often measured through comparative analysis tasks.

Savoir apprendre/faire (Skills of discovery and interaction): This involves the ability to acquire new knowledge of a culture and cultural practices and the ability to operate knowledge, attitudes, and skills under the constraints of real-time communication and interaction.

Savoir s'engager (Critical cultural awareness): Perhaps the most academically rigorous dimension, it refers to an ability to evaluate, critically and on the basis of explicit criteria, perspectives, practices, and products in one's own and other cultures.

Deardorff's Pyramid and Process Models

Darla Deardorff (2006) introduced a more dynamic, developmental perspective on ICC. Unlike previous linear models, Deardorff's Process Model illustrates ICC as a continuous cycle of movement from the individual level (requisite attitudes) to interactional outcomes.

Requisite Attitudes: Respect, openness, and curiosity serve as the starting point.

Knowledge and Comprehension: Deep understanding and knowledge of culture, including socio-linguistic awareness.

Internal Outcomes: An internal shift in frame of reference, characterized by adaptability, flexibility, and an ethno-relative view.

External Outcomes: The effective and appropriate behavior and communication in intercultural situations.

Deardorff's contribution is vital for assessment because it highlights that internal outcomes (which are often invisible) must precede external outcomes (visible communicative success). This distinction allows researchers to design assessment tools that target the psychological shifts within the learner, rather than just their linguistic output.

The Developmental Model of Intercultural Sensitivity (DMIS)

Bennett's (1993) DMIS model provides a diachronic lens through which student progress can be measured. The model tracks the shift from Ethnocentrism (denial, defense, minimization) to Ethnorelativism (acceptance, adaptation, integration). In an EFL setting, this framework allows educators to categorize student reflections and journals into specific developmental stages, providing a semi-quantitative metric for an otherwise qualitative growth process.

Critical Pedagogy and the "Intercultural Speaker"

Contemporary research has moved towards the concept of the "Intercultural Speaker" (Kramsch, 1993). This theoretical stance rejects the native-speaker norm as a benchmark for assessment. Instead, it posits that a successful learner is one who can navigate the "Third Space" - a metaphorical zone where different cultural identities intersect and are negotiated. Assessing success in this space requires looking at how learners manage misunderstandings and how they use language to bridge cultural gaps, rather than how many idioms they have memorized.

Challenges in Assessing ICC

Assessing Intercultural Communicative Competence (ICC) is fraught with pedagogical and ontological difficulties that distinguish it from the assessment of formal linguistic structures. Unlike syntax or phonology, where a response can be objectively categorized as "correct" or "incorrect" based on prescriptive rules, ICC involves internalized values, belief systems, and social attitudes.

The Problem of Subjectivity and the "Teacher's Lens"

One of the most persistent hurdles is the inherent subjectivity of intercultural traits. When an educator assesses a student's "openness" or "readiness to suspend disbelief," they are inevitably viewing these traits through their own cultural and ideological filters. This creates a risk of "normative bias," where the teacher might reward cultural perspectives that align with their own and penalize those that do not, regardless of the student's actual cognitive growth (Sercu, 2004).

Linguistic vs. Intercultural Overlap

In an EFL environment, it is notoriously difficult to decouple linguistic proficiency from cultural competence. A student may possess a highly sophisticated, ethnorelative worldview but lacks the grammatical or lexical range in English to articulate it. Conversely, a linguistically fluent student might demonstrate "surface-level" politeness while harboring deep-seated ethnocentric biases. Standardized exams often fail to resolve this "overlapping" variable, resulting in scores that reflect language level rather than intercultural depth (Fantini, 2009).

Static vs. Dynamic Assessment

Traditional exams are designed as a "snapshot" - a singular measurement of performance at a specific point in time. However, ICC is a dynamic, longitudinal state of being. A student's intercultural awareness may fluctuate depending on the context, the interlocutor, or the specific cultural topic. Static tests fail to capture the developmental trajectory of a learner, ignoring the vital process of "becoming" an intercultural speaker (Byram, 1997).

Methodology and materials

The methodology of this study employs a multi-dimensional analysis, synthesizing qualitative and quantitative metrics to create a holistic evaluation framework.

Quantitative Metrics (The Psychometric Approach): The study analyzes the Intercultural Development Inventory (IDI), based on Bennett's Developmental Model of Intercultural Sensitivity. This quantitative tool measures the transition from ethnocentric stages (Denial, Defense) to ethnorelative stages (Adaptation, Integration), providing a statistically valid baseline for student growth.

Qualitative Metrics (The Reflective Approach): The research incorporates the evaluation of "critical incidents" - short, problematic scenarios depicting cultural misunderstandings. Students' written responses to these incidents are coded using thematic analysis. Additionally, student reflection journals are used to track internal shifts in perspective over a 15-week semester.

Digital and Computational Tools: A novel aspect of this methodology is the investigation of Natural Language Processing (NLP). By using AI-driven sentiment analysis and keyword extraction, we examine transcripts of student interactions to identify markers of "negotiation of meaning" and "empathy," providing an objective layer to qualitative data (Belz & Thorne, 2006).

Discussion

The shift from "testing knowledge" to "assessing growth" requires innovative, longitudinal solutions that empower the learner.

Portfolio-Based Formative Assessment: The "Living" Evidence

The Intercultural Portfolio acts as a dynamic repository of the student's journey. Unlike a final exam, it allows for the accumulation of varied evidence: reflective essays on foreign cinema, comparative reports on intercultural interviews, and digital "check-ins". This supports the development of *savoir s'engager* (critical cultural awareness) by forcing the student to look back at their own previous biases and document their evolution (Kohonen, 2001).

Scenario-Based Evaluation (SBE) and "Critical Incidents"

Contemporary SBE moves away from testing “cultural facts” (e.g., What do people eat in London?) toward testing “cultural mediation” (e.g., How do you respond when a colleague from London refuses your invitation?). By resolving real-life cultural paradoxes, students demonstrate their ability to apply empathy and adaptability in practice. This method bridges the gap between theoretical knowledge and pragmatic performance.

Virtual Exchange (VE) and AI-Enhanced Feedback

Telecollaboration projects between universities in Azerbaijan and Turkey provide a fertile ground for real-time intercultural dialogue. The integration of AI tools allows for the analysis of “collaborative dialogue” transcripts. AI can identify moments where a student successfully navigates a linguistic or cultural breakdown, providing the teacher with concrete data on the student's communicative appropriateness in high-stakes environments.

Conclusion

Assessing Intercultural Communicative Competence is an indispensable component of the modern EFL curriculum, yet it requires a departure from traditional, reductionist testing methods. While the challenges of subjectivity and linguistic overlap remain significant, the transition toward formative, portfolio-based, and scenario-driven assessment offers a more valid and ethical way forward. For the pedagogical environment of Azerbaijan, adopting these contemporary models provides a strategic framework for aligning national higher education with the standards of the European Higher Education Area (EHEA). Ultimately, the goal of ICC assessment is not just to assign a grade, but to ensure that our students graduate as competent global citizens, equipped with the critical awareness to navigate a complex, multicultural world.

LEXICAL UNITS WITHOUT EQUIVALENTS IN LITERATURE

Aygun Shahin EMINOVA

Teacher, Department of Foreign Languages, Mingachevir State University

E-mail: aygun.eminova@mdu.edu.az

ORCID ID: [0009-0009-2458-0250](https://orcid.org/0009-0009-2458-0250)

Abstract: Language is the basis of literature. As literature and language are constantly interacting, changes in language also affect literature. Language makes literature accessible. On the other hand, the presence of incomprehensible words in the language makes it difficult to understand correctly the meaning of a literary text. During the teaching of foreign-language literature, the translation of some lexical units in literary texts into the language in which the teaching is carried out is impossible. In the course of teaching foreign-language literature, there are some words and phrases, the translation or substitution of which in the translation process does not violate the integrity of the text or speech. These words and phrases can be slang, patronymic words, dialectical expressions. Such words are the names of things, games, food, rank, monetary units, etc., which are associated with the way of life of that people. An equivalence-free lexicon is a lexical unit that cannot be accurately compared with a foreign concept. It is impossible to find a word or a combination of words that expresses the true meaning of this lexical unit in any other language, since this linguistic phenomenon is the main indicator of the psychology, uniqueness of the language, history, culture, indigenous people. The processing of equivalent lexical units in a work teaches to be mentally flexible, to comprehend other points of view-to put aside personal perspectives in order to see life through the eyes of someone of another age, class or race.

Key words: untranslatables, reality, lacuna, ethnolinguistics, language, transliteration, literature, heuristic or partial search method

ƏDƏBİYYATDA EKVİVALENTSİZ LEKSİK VAHİDLƏR

Xülasə: Dil ədəbiyyatın əsasıdır. Ədəbiyyat və dil daima qarşılıqlı əlaqədə olduğuna görə dildə baş verən dəyişikliklər ədəbiyyata da təsir edir. Dil ədəbiyyatı əlçatan edir. Digər tərəfdən dildə anlaşılmaz sözlərin olması, ədəbi mətnin mənasını düzgün anlamağı çətinləşdirir. Xarici dilli ədəbiyyatın tədrisi zamanı ədəbi mətnlərdəki bəzi leksik vahidlərin tədrisin aparıldığı dilə tərcüməsi mümkün olmur. Xarici dilli ədəbiyyatın tədrisi zamanı bəzi söz və ifadələr var ki, tərcümə prosesində onların tərcümə edilməsi və ya əvəzlənməsi mətnin və ya nitqin bütünlüyünü pozmur. Bu söz və ifadələr jarqonlar, ata sözləri, dialektik ifadələr ola bilər. Belə sözlər həmin xalqın həyat tərzilə bağlı olan əşya, oyun, yemək adları, rütbə, pul vahidləri və s. ola bilər. Ekvivalentsiz leksika xarici anlayışla dəqiqliklə müqayisə etmək mümkün olmayan leksik vahiddir. Bu leksik vahidin digər hər hansısa bir dildə əsl mənasını ifadə edən söz və ya söz birləşməsi tapmaq mümkün deyildir, çünki bu dil hadisəsi dilin, tarixin, mədəniyyətin, yerli xalqın psixologiyasının, özünəməxsusluğunun əsas göstəricidir. Ekvivalentsiz leksik vahidlərin əsərdə işlənməsi zehni çevik olmağa, başqa nöqteyi-nəzərləri dərk etməyə – həyatı başqa yaşda, sinifdən və ya irqdən olan birinin gözü ilə görmək üçün şəxsi perspektivləri kənara qoymağı öyrədir.

Açar sözlər: ekvivalentsiz leksika, realia, lakuna, etnolinqvisitika, transliterasiya, dil, ədəbiyyat, evristik və ya qismən axtarış metodu.

Introduction

The way of evolution that each subject goes through has its own characteristics. Teaching literature as a science has a two-hundred-year history. Nevertheless, even today, its personal content and goals remain the subject of controversy. The basis of literature is language. Language is one of the principal carriers of culture. Literature is the art created by language. The only material of literature is language. Literature doesn't need other materials. The author transmits through language the emotions and thoughts he wants to express. For this purpose, he uses various types of literary art. Therefore, language is very important for literature. There is no literature without language. Since literature is an art created by language, the writer also benefits from all possibilities of language. People also use language for everyday needs, but the language used for everyday needs and the language used in literary works are different from each other. The language used in everyday life is simple. Writers enrich this language adding new forms of expressions. Thus, literature expresses feelings and thoughts more strongly and beautifully than everyday language. Literati decorate the topic they touch with a variety of rhetoric, literati work effectively and excitingly. Therefore, literary works order, deepen and develop emotions. (Ozkan, 2010, p.74)

The modern world consists of various types of activities and situations. As a result of the development of science and technology, new words are constantly emerging. These words or concepts arise in one language, but do not have full equivalents in other languages. The emergence of the equivalent of newly formed words in other languages is also needed. This regularity applies not only to newly formed words, but also to those that have existed in the language for a long time. In every language there are concepts for which it is impossible to find a word that fully expresses

their meaning. This event is a clear proof of the uniqueness of each language. In the following paragraphs, we will discuss the types of lacunae and realia of non-equivalent lexicon, their connection with literature, and the role they play in literary texts.

Methodology and materials

Lexical units without equivalents are not simply supplemented with lacunae. We can also often find realia when working with literary texts. Realia is more widespread than a lacuna, it is used in examples of literature written in different languages. Realia are special words or expressions denoting specific names, objects, concepts, perceptions, phenomena belonging to a certain geographical region, culture, country, tribe, as well as a certain historical period. (Guliyeva, 2008, p.24) Since these groups of words have no equivalent in other languages, their normal translation is considered impossible, and these groups of words are transmitted in a special order to complete the translation process. The large-scale book by E. Allahverdiyeva provides detailed information about reality. She writes that realia are determined in the interweaving of two languages at the lexical level, or in the process of translation from one language to another. Words denoting the name of objects belonging to the material culture, life, geographical environment, social historical features of that people used in the language of one people, not used in another language.

The translation of them requires explanation, in relation to the object, the source of the reality existing in the language. (Allahverdiyeva, 1997, p.71) to make it clearer, let's look at a few examples:

Sixty-five *pounds* seventeen *shillings*. I will not touch on a single *penny*. (Christie, 2010, p.219)

Indeed, the *spaghetti* he cooked was much better than the pictures he drawn. (Somerset, 2014, p.72)

They say that after the release of the year of the deceased, *miss* Ferrars will marry Roger Ekroy. (Christie, 2010, p.71)

From his appearance, you immediately notice that he is not a *Creole*. (Reid, 1995, p.12)

As you can see from the examples, although novels, plays and texts written in a foreign language are translated into our language, we cannot find the equivalent of some words or combinations of words in our language. In this case, in order not to have difficulty understanding the full meaning of the text, it is necessary to try to understand the meaning of these non-equivalent units by other methods and methods. Those methods are as follows:

Comparative-historical method-this method is based on the principle of comparing non-equivalent words encountered in foreign-language literature with other expressions in the learners' native language. This principle created the basis for determining the similarities and differences of the literature of the peoples of the world, and became a factor that stimulated the development of literature in the direction of human values. If we look at the study of this method during literature lessons, for instance explaining students the works of the 18th-19th centuries, we can glorify some lacunae with the help of other lacunae belonging to us at that time. For example: at the beginning of the 18th-19th centuries, in England, intelligent men put "top hat" on their heads. The meaning of this word can be brought to the attention of students by comparing it with the "arakhchin" that our noble men put on their heads. The comparative-historical method is highly significant not only in literary studies, but also in history, sociology, linguistics, ethnography and psychology.

Research method-this method is based on the study of the meaning of the word, determining how it originated, finding the definition of the word. Thus, it becomes easier to explain to the reader the meaning of words without equivalents in literary texts. During the teaching of literature, teachers provide students with an understanding of the meaning of the word by honoring the root, the history of its origin in order to glorify the equivalent lexical units that they encounter. For example: In Anne Hollander's book, we find the word "tuxedo", which we can explain to students both by the research method and by the illustrative method. If we want to explain by the research method, we can say that this is the jacket worn by the gentlemen who attended the banquet in the 19th century England when these gentlemen were entering a room reserved for the use of tobacco products so that the smell of tobacco does not pass to them.

Reproductive method - a method of recalling the information learned from previous subjects and assimilating new information. Teachers achieve better assimilation of the new word by the requirements of recalling the literary expressions encountered in literary texts during previous literature lessons. An example is the word pound, which is a word found in many English-language texts. The teacher, recalling the previous texts to the student, manages to reveal the meaning of the word.

Illustrative method-sometimes in foreign-language literature we come across words that are more efficient to explain students in a visual way. With the help of this method, during the teaching of literature, it is possible for teachers to clarify the meaning of the phrase in question, showing it to students in a visual form. This method is more effective for underage students. Among the listed methods, it can be considered the simplest and most effective. For instance: It is more appropriate to use illustration to explain the word ball in Jane Austin's "pride and prejudice."

Heuristic or partial search method-heuristic interview consists in the fact that the teacher puts a problem before the students, when they do not have the strength to do so, he divides the problem into questions, one of which arises from the other, that is, related to each other, which are steps to solve the problem. Meanwhile, most of the questions act in the role of half-problems of the problem posed for the first time. As a result of all the steps dictated by the teacher, but performed independently by the students, the students achieve the solution of the previously given problem. In other words, in Literature lessons, not only teachers, but also students take part in a more accurate understanding of the meaning of the word and the essence of the work. When the word Christmas comes across in any literary text, the work of finding information about its meaning, features is carried out by students.

Discussion

As we said above, language is the basis of literature. As literature and language are constantly interacting, changes in language also affect literature. Language makes literature accessible. On the other hand, the presence of incomprehensible words in the language makes it difficult to correctly understand the meaning of a literary text. During the teaching of foreign-language literature, the translation of some lexical units in literary texts into the language in which the teaching is carried out is impossible. In the course of teaching foreign-language literature, there are some words and phrases, the translation or substitution of which in the translation process does not violate the integrity of the text or speech. These words and phrases can be slang, patronymic words, dialectical expressions. Such words are the names of things, games, food, rank, monetary units, etc., which are associated with the way of life of that people. An equivalence-free lexicon is a lexical unit that cannot be accurately compared with a foreign concept. It is impossible to find a word or a

combination of words that expresses the true meaning of this lexical unit in any other language, since this linguistic phenomenon is the main indicator of the psychology, uniqueness of the language, history, culture, indigenous people. An example is words that denote the names of objects, concepts, abstract entities of a national nature, related to everyday life, and are considered impossible to translate. Therefore, these expressions can be considered as lexical units without equivalents. Lacunae and realia are more often found in English literature.

What role do inequivalent lexical units play in literary texts? Lacunae, realia create conditions for studying the era, the origin of the people, their history, way of life, geographical environment, culture, which are mentioned in literary works. While teaching foreign-language works in a literature lesson, the teacher tries to reveal the meaning of words without equivalents through the above methods of learning. At this time, the idea that the author is talking about, the period he wants to describe, the culture and other issues related to it, reach the students more clearly. Thus, reading literature takes us out of our present context, removes the boundaries of time and space. Interaction with characters throughout place and time reduces our ignorance about the history, culture and lifestyle of other peoples. The processing of equivalent lexical units in a work teaches us to be mentally flexible, to comprehend other points of view-to put aside personal perspectives in order to see life through the eyes of someone of another age, class or race.

Conclusion

Any language has certain words and expressions, which translation or replacement in the process of work does not change the integrity of the text or speech. There are certain groups of words denoting objects and concepts that have come into everyday life, history, vocabulary of a particular people and these words are preserved in the same way as in the original language during translation. The language and literature are closely connected disciplines. Studying fiction literature, we often face non-equivalent lexis. Non-equivalent lexis consists not only of lacunas, but also of realities. These lexical units help to preserve the individuality of works and save author's style. Teacher with the help of different methods can explain the meaning of these units to students.

TRANSLATION INTERCULTURAL COMMUNICATION-MACHINE VS HUMAN

Aynur Elim KERİMOVA

Student, Department of Foreign Languages, Mingachevir State University

E-mail: aynur.karimova@mdu.edu.az

ORCID ID: 0009-0001-4381-2303

Abstract: Translation functions as a core medium of intercultural communication, facilitating the exchange of knowledge, values, and cultural identities across language boundaries. In the contemporary digital era, machine translation has developed into a powerful resource, providing fast and easily accessible solutions for multilingual communication. (Baker, M. (2018). In Other Words: A Coursebook on Translation. Routledge.) However, its increasing use raises important concerns about how effective it is when compared to human translation. This article explores the connection between translation and intercultural communication, with particular attention to the differences between machine-produced and human-mediated translation processes. Drawing on qualitative analysis and theoretical perspectives from translation studies, the paper assesses accuracy, contextual understanding, and cultural sensitivity as central criteria. The findings indicate that although machine translation performs well in terms of speed and efficiency, it often lacks the interpretive depth required to convey culturally embedded meanings. Human translators, in contrast, show a stronger ability to deal with linguistic ambiguity and cultural nuance. (Catford, J. C. (1965) A Linguistic Theory of Translation. Oxford University Press) The study concludes that machine translation should not be seen as a replacement, but rather as a complementary tool that strengthens, rather than reduces, the role of human translators in intercultural communication.

Keywords: intercultural mediation, human agency in translation, neural machine translation, pragmatic meaning

TƏRCÜMƏ VƏ MƏDƏNİARASI KOMMUNİKASIYA – MAŞIN VƏ İNSAN

Aynur Elim KƏRİMOVA

Tələbə, Xarici Dillər Departamenti, Mingəçevir Dövlət Universiteti

E-mail: aynur.karimova@mdu.edu.az

ORCID ID: [0009-0001-4381-2303](https://orcid.org/0009-0001-4381-2303)

Xülasə: Tərcümə dil baryerlərini aradan qaldıraraq biliklərin, dəyərlərin və mədəni kimliklərin ötürülməsini təmin edən mədəniyyətlərarası ünsiyyətin əsas vasitəsidir. Rəqəmsal dövrdə süni intellektlə tərcümə, çoxdilli ünsiyyət üçün sürətli və əlçatan imkanlar təqdim edən güclü alət kimi meydana çıxmışdır. Lakin onun geniş yayılması insan tərcüməsi ilə müqayisədə yetərliyi ilə bağlı mühüm suallar doğurur. Bu məqalədə tərcümə ilə mədəniyyətlərarası ünsiyyət arasındakı əlaqə araşdırılır və süni intellekt tərcüməsi ilə insan tərcüməsi arasındakı fərqlər təhlil edilir. Keyfiyyətə müqayisəli analiz və tərcümə nəzəriyyələrinə əsaslanaraq dəqiqlik, kontekstual anlayış və mədəni həssaslıq əsas meyar kimi qiymətləndirilir. Nəticələr göstərir ki, süni intellekt tərcüməsi sürət və effektivlik baxımından üstün olsa da, mədəni məna qatlarını tam şəkildə çatdırmaqda çətinlik çəkir. İnsan tərcüməçiləri isə dilin çoxmənalılığını və mədəni incəlikləri daha uğurla ötürürlər. Tədqiqatın nəticəsinə görə, süni intellekt tərcüməsi insan tərcüməsini əvəz etmir, əksinə onu tamamlayan vasitə kimi çıxış edir.

Açar sözlər: millətlərarası vasitəçilik, tərcümədə insan amili, neyron maşın tərcüməsi, pragmatik məna

Introduction

The growing interconnectedness of the modern world has significantly increased the need for effective intercultural communication. As individuals, institutions, and societies interact beyond linguistic boundaries, translation becomes essential for achieving mutual understanding. (Nida, 2001) However, translation should not be viewed as a purely linguistic activity; rather, it is a complex interpretive process that involves conveying cultural meanings, social norms, and contextual nuances.

The development of machine translation, especially neural machine translation systems, has reshaped the field of translation practices. Automated translation tools have made multilingual communication quicker and more accessible than ever before. Nevertheless, reliance on these technologies raises concerns about their ability to accurately reflect cultural and contextual subtleties.

This article aims to critically examine the roles of both machine and human translation in intercultural communication. It questions whether technological progress can replicate the interpretive abilities of human translators and considers the broader implications of this development for global communication.

Materials and Methods

This study employs a qualitative and comparative research approach. A set of texts containing idiomatic expressions, culturally specific references, and context-dependent meanings was selected for analysis. These texts were translated using both machine translation systems and professional human translators.

The analysis was based on three main criteria: linguistic accuracy, contextual coherence, and cultural appropriateness. Machine-generated translations were compared with human translations in order to identify differences and limitations.

In addition, the study includes a review of key theoretical frameworks in translation studies, such as functionalist approaches and equivalence theory. This theoretical perspective provides a foundation for interpreting the observed differences between machine and human translation.

Discussion

The comparative analysis shows that machine translation is effective when dealing with straightforward informational texts that have clear structure and minimal ambiguity. Its main advantages include speed, consistency, and cost-effectiveness. In the case of technical and repetitive materials, machine translation offers practical benefits that should not be ignored. However, important limitations become evident when processing culturally embedded language. Machine translation systems often struggle to accurately interpret idiomatic expressions, metaphors, humor, and pragmatic meaning. These weaknesses result from their dependence on statistical patterns rather than true understanding. Human translators, in contrast, demonstrate a much higher level of competence in such situations. Their ability to go beyond literal meaning allows them to communicate the intended message while preserving cultural nuances. (Koehn, 2020). For example, culturally specific elements that require adaptation instead of direct translation are handled more effectively by human translators. In addition, intercultural communication often requires sensitivity to social norms, politeness strategies, and contextual appropriateness. Human translators are able to make informed choices that match the expectations of the target audience. Machine translation, on the other hand, lacks this level of adaptability. (Pym, 2014) Despite these differences, it is important to recognize that both approaches can complement each other. Machine translation can be used as an initial step, producing draft versions that are later refined by human experts. This combined approach improves efficiency while maintaining quality.

Conclusion

The findings of this study highlight the essential role of translation in intercultural communication and emphasize the distinct contributions of both machine and human translation. Although machine translation offers clear advantages in terms of speed and accessibility, it remains limited in conveying culturally nuanced meanings.

Human translators continue to play a vital role in ensuring accurate, contextually appropriate, and culturally sensitive communication. Their interpretive abilities and cultural awareness cannot yet be fully reproduced by current technological systems.

Instead of viewing machine and human translation as opposing forces, it is more appropriate to see them as complementary elements within a single translation system. Combining technological efficiency with human expertise represents the most effective way to meet the demands of global communication in the twenty-first century.

THE DUALISM OF TRANSLATION: NAVIGATING LITERARY AESTHETICS AND TECHNICAL PRECISION IN ENGLISH-AZERBAIJANI DISCOURSE

Ismat Allahverdi JAFAROVA
Lecturer, Nakhchivan State University
E-mail: ismetceferova6@gmail.com
ORCID ID: 0009-0007-4137-5246

Abstract: The process of linguistic transposition between English and Azerbaijani, encompassing both literary and technical discourses, represents a complex cognitive operation that transcends the simplistic boundaries of mechanical word-for-word substitution. This research conducts a rigorous interrogation into the dualistic nature of translational challenges, specifically focusing on the delicate equilibrium required to safeguard aesthetic resonance in creative prose while simultaneously upholding stringent functional precision in specialized nomenclature. In the literary domain, this study investigates the inherent friction generated by “culture-bound” metaphors and deeply rooted idiomatic structures. It argues that a reliance on rigid literalism frequently compromises the emotional integrity and the stylistic nuances of the source text when adapted into the Azerbaijani linguistic milieu.

Conversely, the investigation into specialized translation frameworks highlights a persistent tension between the necessity for terminological stability and the rapid, fluid evolution of contemporary professional jargon. This particular challenge is further exacerbated by significant lexical voids currently existing within Azerbaijani technical corpora, which often force the translator to engage in ad-hoc terminological creation. Through a comprehensive qualitative assessment of comparative English and Azerbaijani texts, this paper delineates the specific cognitive, structural, and sociolinguistic constraints encountered by the modern translator. The empirical findings of this research advocate for a bifurcated methodological framework: a strategic prioritization of Nida’s “dynamic equivalence” to capture the subtle narrative nuances of literature, and the application of “formal correspondence” to ensure the reliability and veracity of technical documentation. Ultimately, this article proposes a structured framework of strategic interventions, effectively

repositioning the translator not merely as a linguistic conduit, but as both a cultural mediator and a specialized architect of meaning in the cross-cultural exchange.

Keywords: Translation hermeneutics, English-Azerbaijani discourse, technical nomenclature, literary aesthetics, linguistic mediation, cross-cultural semantics, Azerbaijani linguistics, translational equivalence.

TƏRCÜMƏNİN DUALİZMİ: İNGİLİS-AZƏRBAYCAN DİSKURSUNDA ƏDƏBİ ESTETİKA VƏ TEXNİKİ DƏQİQLİYİN UZLAŞDIRILMASI

Xülasə: İngilis və Azərbaycan dilləri arasında həm bədii, həm də texniki diskursları əhatə edən linqvistik transformasiya prosesi, mexaniki sözbəsöz əvəzləmənin bəsit sərhədlərini aşan mürəkkəb bir koqnitiv əməliyyatdır. Bu tədqiqat, tərcümə çətinliklərinin dualist (ikili) təbiətini ciddi şəkildə araşdırır; burada əsas diqqət bədii nəsrə estetik rezonansın qorunması ilə ixtisaslaşmış nomenklaturada sərt funksional dəqiqliyin təmin edilməsi arasındakı zərif tarazlığa yönəldilir. Bədii müstəvidə tədqiqat, "mədəniyyətə bağlı" metaforaların və kök salmış frazeoloji strukturların yaratdığı daxili ziddiyyətləri təhlil edir. İddia olunur ki, sərt hərfi tərcüməyə arxalanmaq, mənbə mətnin Azərbaycan linqvistik mühitinə adaptasiyası zamanı onun emosional bütövlüyünə və üslubi incəliklərinə xələl gətirir.

Əksinə, ixtisaslaşmış tərcümə çərçivələrinin tədqiqi terminoloji sabitlik zərurəti ilə müasir peşəkar jarqonun sürətli və dəyişkən təkamülü arasındakı davamlı gərginliyi ön plana çıxarır. Mövcud çətinlik Azərbaycan dilinin texniki korpusunda rast gəlinən əhəmiyyətli leksik boşluqlarla daha da kəskinləşir ki, bu da tərcüməçini çox vaxt operativ (ad-hoc) termin yaratma prosesinə cəlb olunmağa məcbur edir. Müqayisəli ingilis və Azərbaycan mətni nümunələrinin hərtərəfli keyfiyyət qiymətləndirilməsi vasitəsilə bu məqalə müasir tərcüməçinin qarşılaşdığı spesifik koqnitiv, struktur və sosiolinqvistik məhdudiyyətləri müəyyən edir. Tədqiqatın empirik nəticələri ikili (bifurkasiyalı) metodoloji çərçivənin tətbiqini təklif edir: ədəbiyyatın incə narrativ çalarlarını tutmaq üçün Nidanın "dinamik ekvivalentlik" nəzəriyyəsinə üstünlük verilməsi və texniki sənədlərin etibarlılığını təmin etmək üçün "formal uyğunluq" prinsipinin tətbiqi. Nəticə etibarilə, məqalə tərcüməçini sadəcə bir dil vasitəçisi deyil, mədəniyyətlərarası mübadilədə həm mədəni vasitəçi, həm də mənanın ixtisaslaşmış memarı kimi yenidən xarakterizə edən strateji müdaxilə çərçivəsi təqdim edir.

Açar sözlər: Tərcümə hermenevtikası, İngilis-Azərbaycan diskursu, texniki nomenklatura, bədii estetika, linqvistik vasitəçilik, mədəniyyətlərarası semantika, Azərbaycan dilçiliyi, tərcümə ekvivalentliyi.

Introduction

The contemporary conceptualization of translation has transitioned through a significant evolutionary shift, moving beyond the traditionally restrictive paradigms of literal word-for-word substitution toward a more holistic definition as a multifaceted cognitive, neolinguistic, and cross-cultural communicative act. Within the current landscape of rapid hyper-globalization, the demand for high-fidelity translation between English-the dominant global lingua franca-and Azerbaijani has expanded with unprecedented intensity. Azerbaijani, defined by its complex agglutinative morphology and a profound cultural heritage rooted in Turkic traditions, presents a formidable set of linguistic challenges when positioned against the analytic and syntactic structures of the English language. This structural divergence implies that the trajectory from the source text (ST) to the target text (TT) is rarely a linear path; rather, it is a complex negotiation of linguistic obstacles that

fluctuate according to the specific functional requirements of the discourse. As Peter Newmark (1988) accurately posited, the essence of translation lies in the perpetual and strategic selection of functional equivalents, a process that necessitates a constant balancing act between semantic precision and pragmatic utility.

The translation of creative and literary works remains arguably the most intellectually demanding sphere of linguistic mediation. This domain requires the translator to penetrate beneath the surface of literal semantics to capture the intangible "essence" or "soul" of the original narrative—the rhythmic cadences, nuanced metaphors, and delicate socio-cultural markers that define an author's unique stylistic identity. A primary hurdle in this creative endeavor is the phenomenon of "untranslatability," particularly regarding culturally specific realia-items and concepts deeply embedded in the historical and daily fabric of the source culture. When attempting to bridge the gap between English and Azerbaijani, the radical systemic differences between the Indo-European and Turkic language families create additional friction in maintaining aesthetic integrity and emotional resonance (Bassnett, 2013). In such instances, the translator's role evolves into that of a "cultural architect," tasked with managing the delicate tension between source-culture fidelity (foreignization) and target-language accessibility (domestication). The goal is to produce a translated text that feels linguistically organic to the Azerbaijani reader while preserving the artistic sanctity of the original work.

In stark contrast, the translation of specialized texts—which includes the medical, legal, scientific, and technical spheres—operates under a fundamentally different set of epistemological constraints. While literary discourse permits a degree of interpretive latitude, specialized translation is strictly governed by the mandates of terminological rigor, absolute semantic clarity, and stylistic objectivity. The central problematic in this field is the "lexical void" or the "terminological gap," where the accelerated pace of global scientific innovation often outstrips the rate at which standardized Azerbaijani terminology can be officially codified. Consequently, translators frequently find themselves in a precarious methodological position, forced to choose between the integration of international loanwords, which may appear linguistically alien, and the creation of indigenous neologisms, which may lack institutional recognition. This ongoing tension underscores an urgent requirement for a more robust and systematic approach to technical lexicography within the Azerbaijani academic and professional frameworks.

This article provides a rigorous critical analysis of these two divergent translation trajectories, examining them through the theoretical lenses of modern translation studies and comparative linguistics. By deconstructing both the systemic linguistic and extra-linguistic barriers inherent in the English-Azerbaijani translational pair, the study aims to identify and evaluate specific methodologies designed to harmonize the "naturalness" required for creative prose with the "accuracy" and "neutrality" essential for technical science. Through this comprehensive dual-lens approach, the research repositions the translator as a pivotal, multifaceted bridge—an intellectual mediator capable of balancing the subjective artistry of the literary world with the objective, data-driven precision of technical inquiry. The overarching objective is to ensure that the final translational product remains ethically authentic to its source while being fully functional, accessible, and resonant for an Azerbaijani audience in a globally interconnected discourse.

Materials and Methods

The architectural design of this research is predicated upon a sophisticated, multi-layered methodological framework, specifically curated to dissect the intricate linguistic, cultural, and

terminological frictions inherent in the English-Azerbaijani translational continuum. To ensure alignment with the rigorous exigencies of contemporary international scholarship, this study adopts a multidimensional qualitative paradigm, synthesized from the seminal works of descriptive and applied translation theorists, notably Susan Bassnett (2013) and Jeremy Munday (2016). This methodological synthesis allows for a holistic exploration of translation not merely as a linguistic transfer, but as a socio-cognitive event.

1. Data Selection and Corpus Stratification

The heuristic value of this investigation is anchored in the representativeness and strategic diversity of its analytical corpus. A purposive sampling strategy was employed to isolate texts representing the polar extremes of the translation spectrum: the fluid, subjective nuances of literary discourse and the rigid, objective imperatives of specialized communication.

1.1. Literary Corpus Architecture: The primary data for the literary segment includes meticulously selected excerpts from the masterpieces of 20th-century English prose—specifically focusing on the modernist, stream-of-consciousness syntax of Virginia Woolf and the minimalist realism of Ernest Hemingway—paired with their canonical Azerbaijani counterparts. Following Mona Baker's (2018) conceptualization of "equivalence above word level," this corpus facilitates an in-depth examination of metaphors, idiomatic clusters, and cultural realia. The analysis spans an extensive dataset of approximately 5,000 words, aimed at uncovering systemic patterns of "semantic attrition" and the complexities of "cultural transposition" during the shift from Indo-European to Turkic structures.

1.2. Specialized and Technical Corpus: To provide an analytical balance to the creative dataset, the specialized corpus integrates academic abstracts from high-impact, Scopus-indexed journals in the fields of medicine and linguistics, alongside technical manuals for clinical neurophysiology instrumentation. In accordance with the criteria established by Hatim and Munday (2004), these materials allow for a rigorous critique of specialized registers where "thematic consistency" and terminological fixity are non-negotiable and essential for scientific veracity.

2. Comparative-Contrastive Analytical Matrix

The operative core of this study is the Comparative-Contrastive Linguistic method. This approach facilitates a micro-level, side-by-side examination of the Source Text (ST) and Target Text (TT) across a three-tiered analytical hierarchy:

Syntactic and Structural Layer: This involves a profound analysis of word order reconfigurations, specifically the transition from the English SVO (Subject-Verb-Object) model to the Azerbaijani SOV (Subject-Object-Verb) typology. Drawing upon the Prague School's "Functional Sentence Perspective" (FSP), the study evaluates how "communicative dynamism" and information flow are preserved despite the radical structural shifts between the two language families.

Lexical-Morphological Interface: The research investigates the phenomenon of "lexical interference" and the fidelity of terminological mapping. Utilizing the taxonomies proposed by Vinay and Darbelnet (1995), the study identifies strategic deployments of calque, transposition, and modulation as they manifest within the complex agglutinative morphology of Azerbaijani.

Pragmatic and Socio-Cultural Layer: This dimension assesses the mediation of cultural contexts and "politeness markers." Through the lens of Julianne House's (1997) Model of Translation Quality Assessment, the analysis determines whether the "functional profile" of the source text survives the transition into the target cultural milieu without losing its pragmatic force.

3. Theoretical Anchor: Nida's Duality of Equivalence

To provide a robust theoretical foundation, the study operationalizes Eugene Nida's (1964) Equivalence Theory. Each identified translation unit is subjected to a dual evaluation: **Formal Correspondence** is analyzed in contexts where the translator prioritizes a quasi-mathematical mirroring of the source form—a necessity in the precision-heavy domains of medical and legal discourse; while **Dynamic (Functional) Equivalence** is evaluated in instances where the priority shifts toward achieving an "equivalent effect" on the Azerbaijani reader, often necessitating profound structural mutations to maintain the "soul" of the work. (Hatim, B., & Munday, J. (2004).)

4. Systematic Procedural Protocol

The research proceeded through a rigorous, four-phase execution cycle:

Phase I: Identification & Cataloging: Isolating "problematic units," such as phrasal verbs and technical neologisms, that lack direct lexical equivalents in Azerbaijani.

Phase II: Taxonomy Formulation: Classifying these units into cultural, syntactic, or terminological barriers to ensure a structured analytical flow.

Phase III: Strategic Evaluation: Critically comparing the efficacy of adaptation versus literalism across the divergent genres to determine the optimal translational path.

Phase IV: Synthesis & Generalization: Applying the Descriptive Translation Studies (DTS) approach of Gideon Toury (1995) to move from isolated phenomena to the identification of broader translational norms in the English-Azerbaijani linguistic landscape.

5. Linguistic Integrity and Ethical Standards

In strict observance of international academic ethics, all text fragments are rigorously cited and analyzed within their original context. To validate the "human-centric" quality of the proposed linguistic models, findings were cross-referenced with modern Azerbaijani corpora and specialized academic dictionaries, ensuring that this study contributes tangibly to the ongoing standardization of technical Azerbaijani terminology and offers a reliable roadmap for future translational research.

Results and Discussion

The granular analysis of the selected literary and specialized corpora elucidates that translation between English and Azerbaijani is not a sterile process of lexical substitution, but rather a high-stakes negotiation between two fundamentally divergent cognitive and cultural infrastructures. The empirical findings suggest that the barriers encountered are multi-layered, necessitating a bifurcated strategic approach that harmonizes artistic ingenuity with technical exactitude.

1. Literary Discourse: The Dialectics of Cultural and Aesthetic Mediation

In the literary domain, the results underscore that the most formidable challenges manifest at the pragmatic and stylistic interfaces. In alignment with Susan Bassnett's (2013) thesis, the efficacy of a literary translation is contingent upon its capacity to reconstruct the source text's aesthetic "aura" within the target cultural landscape.

1.1. The Complexity of Phraseological Units and the "Conceptual Void": A substantial portion of this investigation focused on the translatability of fixed expressions. It was observed that Azerbaijani translators frequently confront a profound "conceptual vacuum" when addressing English idioms rooted in Western maritime or historical contexts. To circumvent this, the predominant strategy identified was descriptive expansion. While this method effectively safeguards the denotative meaning, it inevitably results in "textual inflation," thereby compromising the laconic, punchy rhythm characteristic of modernist authors like Hemingway. This leads to a

structural "heaviness" that, according to Mona Baker's (2018) framework, alters the original narrative velocity and shifts the emotional impact on the target audience.

1.2. Morphological Density and Agglutinative Constraints: The structural tension between English analyticity and Azerbaijani agglutination creates what this study terms "morphological saturation." The analysis reveals that the Azerbaijani reliance on suffixation to denote aspect, mood, and voice often renders the translated prose more formal and "architectural" compared to the fluid English source. This is particularly salient in dialogue; the mandatory choice between the familiar (*sən*) and the formal (*siz*) imposes a sociolinguistic hierarchy that is non-existent in the universal English "you." Thus, the translator is forced into the role of a social arbiter, interpreting power dynamics and interpersonal distances that are absent in the Source Text (ST).

2. Specialized Discourse: Terminological Volatility and Structural Rigor

The results for specialized translation—encompassing academic, linguistic, and technical registers—diverge sharply from literary findings, prioritizing what Peter Newmark (1988) labels "semantic precision" over aesthetic resonance. (Venuti, L. (2017))

2.1. The Crisis of Terminological Instability: A pivotal finding of this research is the pronounced instability within the Azerbaijani academic lexicon, particularly in modern linguistics and clinical neurophysiology. The absence of a unified, peer-reviewed database leads to fragmented translations of identical English concepts. Our analysis identified a tri-part strategy currently in use:

a) Systemic Borrowing (Internationalisms): The direct use of terms like *discourse* or *paradigm*, which ensures global alignment but risks "lexical alienation" for the local reader.

b) Calquing: Creating organic equivalents like *mənbə mətn* (source text).

c) Functional Paraphrasing: Employed when a concept lacks a historical anchor in Azerbaijani, though this significantly increases the "cognitive load" of scientific communication.

2.2. Syntactic Simplification as a Methodological Imperative: English academic prose often utilizes complex nested subordination. When transposed into the Azerbaijani SOV (Subject-Object-Verb) structure, these sentences become "top-heavy," distancing the predicate too far from the subject. The research identifies syntactic decoupling—breaking complex structures into independent, digestible units—as the most effective strategy for maintaining technical rigor without sacrificing clarity.

3. Comparative Case Study: Analytical Samples

To bridge the gap between theory and practice, specific instances were scrutinized to evaluate translator behavior:

Literary Axis: The idiom "*to be in the same boat*" demonstrated that 65% of translators prefer functional adaptation (*eyni dərdi bölüşmək*) over literalism (*eyni qayıqda olmaq*). While the former preserves the pragmatic effect, the latter is often rejected as "semantically alien" to the Azerbaijani ear.

Specialized Axis: The term "*Translation Memory*" revealed a critical lack of standardization, with versions ranging from calques (*tərcümə yaddaşı*) to descriptive forms. This inconsistency underscores the urgent need for institutional academic intervention to stabilize technical nomenclature in Azerbaijani.

4. General Discussion: Towards a Hybrid Translational Model

The synthesis of these findings corroborates Gideon Toury's (1995) "**Law of Interference**," which posits that the prestige of a global source language (English) inevitably reconfigures the syntactic and lexical norms of the target language. This interference is visible in the gradual

adoption of Western-style sentence patterns and the influx of specialized loanwords into Azerbaijani academic writing.

Ultimately, the discussion confirms that a monolithic translation strategy is obsolete in the face of modern linguistic diversity. Instead, the findings advocate for a hybrid methodological model:

1. **Dynamic Equivalence (Nida, 1964):** To be deployed in literary contexts to safeguard emotional and cultural "flavor."
2. **Formal Correspondence:** To be strictly maintained in specialized domains to ensure academic veracity and terminological standardization.

The research concludes that for Azerbaijani translation to achieve international parity, there must be a strategic emphasis on developing standardized academic lexicons and integrating deep linguo-cultural analysis into university-level curricula, moving beyond simple bilingualism toward true translational expertise.

Conclusion

The multidimensional inquiry into the multifaceted exigencies of translating literary and specialized discourses between English and Azerbaijani confirms that the act of linguistic mediation has evolved into a sophisticated cognitive negotiation, far transcending the archaic paradigm of mechanical lexical conversion. As evidenced through the rigorous comparative analysis of divergent corpora, the translator functions at a critical, and often precarious, intersection—a space defined by conflicting grammatical architectures, distinct cultural ontologies, and the relentless evolution of professional nomenclature. The synthesis of this research yields several foundational postulates that are indispensable for both contemporary academic scholarship and the progressive evolution of professional translation praxis.

The Primacy of Aesthetic Integrity in Literary Discourse: In the literary sphere, this research reaffirms that the paramount challenge resides in safeguarding the “aesthetic essence” and idiosyncratic authorial intent of the source text while navigating the systemic structural constraints of the Azerbaijani language. The profound shift from the English analytic model—predicated on syntactic word order—to the Azerbaijani agglutinative framework inevitably induces a state of “morphological density” and textual expansion. To circumvent the creation of rigid, formal, or “robotic” prose, it is imperative for the translator to champion dynamic equivalence over rigid formal correspondence. Achieving an organic, human-centric cadence in Azerbaijani demands not only linguistic virtuosity but also the creative audacity to reconfigure metaphors and phraseological clusters so they resonate within the target audience’s emotional and cultural milieu. The findings suggest that the translator must operate as a “co-authorial mediator,” ensuring that the original narrative’s vital stylistic nuance is not suffocated by the saturation of suffixes required by the target morphology. (Munday, J. (2016))

Terminological Stability and Technical Rigor: Conversely, the translation of specialized texts—specifically within the academic, linguistic, and technical registers—is currently stifled by a significant degree of terminological volatility. The absence of a centralized, peer-reviewed, and dynamically updated repository for modern Azerbaijani terminology compels the translator into the involuntary role of an ad-hoc neologist. This instability not only fragments the academic discourse but also compromises the precision essential for scientific veracity. This study concludes that for specialized domains, the strategic imperative must be a transition toward terminological standardization and syntactic decoupling. By deconstructing complex English subordinate structures

into independent, transparent Azerbaijani units, the technical integrity of the original can be preserved, ensuring that Azerbaijani remains a competitive and reliable medium for global scientific exchange.

The Dialectics of the Law of Interference: Furthermore, the research underscores the palpable presence of the “Law of Interference,” whereby the global hegemony of English as a lingua franca reshapes the syntactic and lexical norms of the Azerbaijani language. While this influx facilitates linguistic enrichment through the introduction of novel conceptual frameworks, it necessitates a vigilant, scholarly approach to protecting the unique identity and internal logic of the Azerbaijani tongue. Translators, therefore, act as the vanguard of linguistic equilibrium, filtering exogenous influences through the rigorous sieve of native linguistic rules to prevent structural erosion.

In a broader sense, the obstacles identified in this research are not insurmountable barriers, but rather imperatives for institutional reform and deeper academic inquiry. This article advocates for a hybrid translational model: one that celebrates artistic intuition and “invisible” mediation in literature, while demanding uncompromising technical discipline in science. To catalyze the advancement of translation studies, there is an urgent necessity for synergistic collaboration between academic institutions and national linguistic bodies. The development of high-fidelity academic corpora and specialized dictionaries is no longer a luxury but a professional exigency. By bridging these systemic voids and cultivating a new generation of translators equipped with both cultural empathy and technical mastery, we ensure that the Azerbaijani language continues to flourish as a sophisticated conduit between the perennial beauty of global literature and the accelerated frontiers of modern science.
